KUTR in Arab geometry (1) the diameter of a circle or of any section of a cone in the diameter of a cone; (2) the diagonal of a parallelogram or of any quadrilateral; (3) in trigometry, the hypotenuse of the so-called umbratriangle; as such it is either the secant or the cosecant of an angle, according in the side opposite it is the tangent or cotangent of this angle; in the first will it is called hutr al-yill al-avosal ("hypotenuse of the first umbra"), in the second case kutr al-yill al-Dani ("hypotenuse of the second umbra").

Bibliography: M. Soulssi, La langue des mathématiques en arabe, 283-5. (H. SUTER) KUTRABBUL, a place name of 'Irak, Also given - Katrabbul, the name is regarded - Persian in origin. (1) Yākût lists a village (karya) of that name which was situated between Baghdad and 'Ukbara. This Kutrabbul was reportedly frequented by pleasure seekers, who recognised the quality of the local wine. As a result, the village is often mentioned by such poets as Abū Nuwās [q.e.] and in tales comparing the virtues of different wine-bearing locations. (2) Kutrabbul also refers to one of the four major administrative subdistricts (http://di. and in Yāķūt, also Aura) of the greater urban area of Baghdad. The sub-districts, which also included Bādūrayā, Nahr Būk and Kalwädhä, were in existence before the Islamic occupation of the area and may have continued to serve some administrative function after the construction of the Islamic city. Kutrabbul and Baddraya occupied the lands west of the Tigris River with the Sarat Canal serving as a boundary between them. The geographers speak of Bådûrayā being east of the Canal and Kutrabbul to the west, though it would perhaps be more correct to speak in terms of south and north. Kutrabbul thus came to represent the area which comprised the Round City of al-Mansür (q.r.) and the northwestern suburbs, including the military cantonments of al-Harbiyya.

(J. LASSNER)

KUTRUB, the werewolf. The Arabic word goes back to Syriac kanfrópos (or kanfrópd), which was subsequently transformed into the Arabic kufrub in this same way mother names of animals, like djundub "locust" or kunfudu "hodgehog". Καυβτόρος itself is the Syriac transcription of Greek λυκάνθρωντος.

The saga of the werewolf is by itself indigenous to Areadia in the central Peloponnesus (see Pausanias, viii, 2), but has many parallels amongst the Romans, Celts, Teutons and Stavs. Originally it was unknown to the Orient, and the Arabs came to know the figure of the werewolf in the 2nd/8th century at the earliest. According to an oft-repeated anecdote, Sibawayh once described his pupil Muhammad b. al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania al-Mustania

article). The poet Abb Dulama called his mother khavāt al-kutrub (Aghānti, ix, 133, ix, 250), but atteged earlier evidence for the word in 'Abd Allah b. Mas'ud (d. 32/652-3) (Zamakhshari, Fa'ik, il, 177/360 Bidjawl) and Imru' al-Kays (ed. Muhammad Abu 'l-Fadt Ibrāhim, no. 76, 36) is forged. Al-Diābia does not seem to refer to the kutrub, but al-Mas'0dI (Murūdi, iji, 310 = { 1203) mentions | amongst several fabulous beings. Muhammad b. 'Abd Allah b. Zafar (d. ca. 56a/2160) apparently confuses it with the 'udar (see al-Djahir, Hayamin, index, and al-Massudi. loc. cit.). Atthough the werewolf was integrated into the demonological world of the Arabs, it never attained the popularity which was always enjoyed by the dinn, the ghal, the 'ileit and the shayfan.

The Greeks, however, saw in the werewolf not only a fabulous creature, but also the manifestation of a mental disorder. Following Marcellus of Side, Oribasius (Synopsis ad Enstathrum, viii, 9), Actius of Amida (vi. 11), Paul of Aegina (jil, 16) and later Byzantino physicians described lycanthropy as a kind of melancholia which caused the diseased person to shun the company of mankind, to seek out solitude and frequent cemeteries, and to roam about aimlessly with hollow eyes and lost in gloom. Through the translations of the works of Paul of Aegina in the artifoth century and of Actius of Antida in the following one. the Arabi likewise came to know about this alleged illness. Paul of Aegina's information is quoted by Muhammad b. Zakariyya' al-Razi (Kitāb al-Hātel, l, Hayderabad 1935, 203 ff., 222), and Actius's chapter was the model for the descriptions of 'Ali b. al-'Abbas al-Madjusi (Kainut al-sina'a al-tibbiyya, i. 333), of Abu 'l-Kāsim al-Zahrāwī (Kitāb al-Tasrif. Ms. Chester Beatty 4009, fols. 110-11), and of Ibn Sina (Kāuāu, Rome 1303, i, 315/Būlāk 1294, ii, 71).

Finally, the term butrub is also a component of the plant name siridij al-kutrub (a translation borrowed from the Syriac siridigh dh-kantripos), mostly used to indicate the mandrake root (yabrūk).

(M. DELMANN)

KUTRUB, the cognomes of Abû Ali Muhammab 8. Al-Mustasia, grammarian and lexicographer of Basra in the and/8th century, the freedman of Salim b. Ziyad. He was born in Basra, where he studied not only grammar with the founders of that science, 'Isa b. 'Umar, Yûnus b. Habîb and Sibawayh (who is said to have given him his nickname), but also theology with the famous Mu'tazifi authority al-Nazzam. He became the tutor to the son of the military commander and minister Abû Dulaf al-'Idjil [see Al-Kāsim 8. 'Isā, Abû nulap], and died at Baghdād in 206/821. According to Ibn al-Sikkit, his pupit, he was not to be regarded as a reliable authority for lexicography.

Furthermore, Kutrub seems to have held original

ideas about syntax. Al-Zadidiādil in his K. al-Idāb (ed. M. al-Mubārak, 70, 77) states that Kuṭrub, — opposed to all the other Başran grammarians, did not believe that the ifrāb alfected nouns in order to show their different functions and to distinguish them from each other; he averted that there are nouns with the same ifrāb, whose function differs, and nouns with differing ifrāb but with the same function, and accordingly held that ifrāb only affects a noun in order to distinguish two grammatical states, so, at the end of a speech unit, without a final vowel, — mark pause (waēf), and within a speech unit, with a final vowel, to mark liaison (wasf) with the succeeding word.

Of the 18 works listed by Ibn al-Nadim in his Fibrist and which dealt with exegesis and theology as much as grammar and lexicography only four have survived: the K. al-Muthallath, ed. E. Wilmar, Marburg 1857, and R. Souissi, Tunis 1398/12978; the K. mā hhālafa fibi 'l-insān al-bahīma, ed. R. Geyer, in SBAK IVien, ov (1888), 380-91; the K. al-Addād, ed. H. Kofler, in Islamica, v (1931), 241-84, 385-461, 493-344; and the K. al-Azmīna, still unedited.

RUTTAB (A., plural haidith), itself probably plural of hātib ("scribe"), a type of beginners' or primary school. The term is frequently synonymous with mahtab in Arabic and Persian and mekteb in Turkish. In Ottoman it was also called mekteb-hhāte mekteb i sibyán mi sibyán mehtebi, ("children's school"); later, in the Tanyimit era, it was more generally referred to as ibtidá'i mekteb ("beginner's school") and then ith mehteb ("primary school"). European writers have often called it "Kur'anic school".

The kuitab was formerly widespread in Islamic lands. Although the appellation was almost universally applied to Muslim beginners' schools, kuttab has also been known to designate Jewish heder-type schools in Arabic-speaking countries. While there are no precise indications as to when they were first established, they spread during the Umayyad era in the wake of the conquering armies, and the kuttāb system was already wide-spread in early 'Abbasid times. There is some evidence that the structure and teaching methods of the kuttab were modelled: on the Byzantinie primary school (Lecomte, in Arabica, i [1954], 324 ff.), but its curriculum was purely Islamic and Arabic. The early kuttab and important agent for socialising different ethnic groups into the Islamic faith and its way of life. Later, in the Ottoman Empire, it served as vehicle for transmitting the values of the Ottoman Islamic society from generation to generation. The kutidb provided a common educational basis for all who attended it. It was homogeneous in its aims and methods, and thus differed from the indigenous traditions of education, which displayed remarkable diversity. Until the penetration of Western models of education in modern time, the kultab === the only vehicle of public instruction for young Muslim children. Even up to the present, it has displayed remarkable staying-power by continuing to compete tenaciously with other educational institutions in many Islamic countries.

Since basic education [see TARBIYA] was usually imbued with a religious spirit, and its professed goal was to produce a true believer, much of man closely connected with the mosque [see MASDID]. Consequently, the kutlab was frequently attached to a mosque, whose officials also provided further instruction.

508 KUTTÅB

The kuttab itself was located in any sort of available, a tent in the desert m even (as in Uganda) in the open. If specially constructed, a kutteb sisted (in the Ottoman Empire, at least), of a large domed, unadorned hall in which all the pupils sat cresslegged on mattresses in a rough semi-circle, usually next to low desks. Such buildings were generally erected by philanthropists (through a work) otherwise) or by the pupil's parents, who also provided the teacher's fees (in money and food). In the Middle Ages, wealthier families sometimes set up a private Autido for their children. The state hardly intervened until well into the roth century. that fees, physical arrangements and the curriculum were agreed upon between teachers and parents alone. There we even recorded instances of teachers volunteering their services without pay, though in many other cases they were underpaid, and some had to send their pupils to collect aims for them (as in Nigeria, in the late Middle Ages). In other instances (mostly in Africa and possibly in Iran), schoolchildren performed all sorts of tasks for their teacher in lieu of school fees.

Boys formed the overwhelming majority of pupils in the kathtib, while girls studied, if at all, separately (although there are recorded cases of coeducation, chiefly in Iran and India). Attendance was voluntary, and there was no precise age-limit; pupils enrolled at age four or above and, in general, studied for between two and five years. All the pupils studied in the same room-there was seldom, if ever, a division into groups by age-and each pupil progressed at his own rate. Instruction was usually carried out from sunrise to sunset (or carlier) daily; Fridays (and Thursdays in the Maghrib) as well as some festivals, like Ramadan, were free days. The kuttab was open throughout the year, except when economic needs (such as hervesting) or natural calamities (like floods) prevented attendance. Due to the character of the kuttdb, its student body was almost exclusively Muslim. There were, however, infrequent cases of others attending, as in Iran even during the reign of al-Mutawakkii (who forbade the attendance of non-Muslim children) and in Egypt, where a few Copts attended in the late roth century.

The teacher was called mudarris or mulallim and later maladdib in the Arab lands (in some cases, the mm'addib was a higher rank, namely the more learned or the private tutor); hhôdja in Turkey; maktabdår in Iran; mollah in some parts of Central Asia; lebbe in Ceylon; and mallam (from mufallim) in Nigeria and ather areas in Africa. He was popularly referred to = fiki, or fkik, probably the vernacular for fakik. In the larger katātib he was sometimes aided by assistant (mu'ld, literally "repeater"), or, in other cases, by a senior pupil ('arl/, literally "monitor"). All these persons frequently adopted the carrot-andstick approach: beatings [see FALAKA] were administered to the lazy munruly, while the meritorious, who had mastered a large section of the Kur'an by heart (khaima [q.v.]), were offered prizes, usually sweets - even the honour (in Morocco and Hadramawt) of being led around as a camel.

At first, when books were very difficult to acquire, the teacher used to dictate the material, which his pupils wrote down with pen or reed (kalem) on a tablet (laseh). Afterwards, the pupils read the material aloud, with the teacher correcting their errors and elaborating on some points. Emphasis min generally laid on memorising. Since independent thinking was frowned upon, as liable to lead to the weakening of belief and disobethence, learning by rote was custom-

ary. This method was, to a large extent, self-defeating, as it meant studying difficult subject-matter in s barely understood language. Literary Arabic was hardly known even by Arab children, not to speak of non-Arab Muslims. Even among the latter, however, the Kur'an was initially taught in Arabic. although it was clear that the pupils could not understand the language. Only later were difficult passages sporadically explained in the local language. such as Turkish, Persian or Urdu. The teaching of Arabic per se in these schools was instituted in the Ottoman Empire only I 1781, by Sultan 'Abd al-Hamld I (Persian was added then, also, but not Turkish!). However, this revolutionary innovation was in effect introduced in only a few schools; it became more widely accepted, along with other reforms. in the Tansimat era (beginning in 1846, the study of Turkish was also added, selectively).

While the general aims of the huttab were universally identical—to impart the rudiments of instruction required for the formation of a good Muslim—there were obvious qualitative differences between the towns and countryside, as well as substantive variations in emphasis in the curriculum. The Kur'an was studied in all the katatib, with stress laid on memorising and absolute accuracy. The teacher began with the Fatiha, then proceeded to the shortest, the 114th, sura (al-Nas) and continued back until the class reached the longest, the 2nd, sura (al-Baḥara). When a pupil had mastered all this, he began to practise his recitation in the correct

As a general rule, the early-morning hours, considered the best time of the day, were earmarked for studying the Kur'an. At other times, prayer and religious rituals were imparted regularly. In the eastern Arab lands (Egypt, Palestine, Syria and 'Irak), Arabic grammar and poetry were usually studied = well. This was likewise the case in Muslim Spain, where composition was also added to the curriculum. While in Algeria, Morocco and among the Muslims of Africa south of the Sahara, little was learned besides the Kur'an, in Tunisia Audith was generally included as well. Some calligraphy and a smattering of arithmetic were added in some katátáb in Turkey well as in Iran, where Islamic history and fragments of Persian poetry (e.g. from Saidl and Hafiz) were occasionally included, from the 7th/x3th century onwards. A little Persian poetry was also taught in the katātīb of Afghānistān and the parts of Central Asia ruled by Imperial Russia. In some katālib in Ceylon, Arabic grammar, elementary arithmetic and the writing of Tamil in Arabic characters was practised in addition to the Kur'an. All considered, one may surmise that although the kullāb's curriculum laid a basic foundation for further study, many of the pupils who ended their education at this level were hard to put to mit profitably, except for prayer.

Since the mid-19th century, the kuttāb has exhibited signs of change. Some reform has been promoted from above, as in the Muslim parts of the French possessions south of the Sahara, where the authorities initiated a campaign supervise these schools and improve their quality (their success has not always been evident). Elsewhere the kuttāb stood in competition to the newly-imported Western-type primary schools, which also imparted a Muslim education but in more efficient ways. The kuttāb has held its own in Egypt, partly because this must the first Arab country that attempted to adapt it to modern requirements and integrate it into the state system.

An inspector of these schools (Mufattish al-makarib) was first appointed III 1835; imm 1867, the Ministry of Education has been officially empowered to inspect these schools regularly (in the Ottoman Empire, a Ministry of Education to supervise the hatatib and other schools was established by an irade in 1846). By 1890, official supervision of katátib was fairly widespread in Egypt, and its effectiveness was increased by governmental grants-in-aid. Later, Muhammad 'Abduh [q.v.] was instrumental in expanding their curriculum (which today includes object lessons). Indeed, there are recorded cases of soth century Egyptian children attending an elementary school in the morning and the kuitāb in the afternoon, or going to the kuttab in the early morning before school.

The fortunes of the huilds in the 20th century have accordingly varied. In the Sudan, it has coexisted with the more general schools introduced by the British soon after they had defeated the Mahdist [q.v.] forces, In Zanzibar, in 1907, the British director of education decided to make the Kur'an a basic component of the general curriculum and to integrate the katātīb into the school network. In India (e.g. in Bengal) the British rulers tried to increase the number of katdith and raise their standards by introducing secular studies (The Reform Scheme, 1914). The same trend was evidenced in the British administration of Arab education in Palestine after the First World War. In Syria, in the 1943-4 school year, there were still 1,229 katātib, with an enrolment of 34,440 children; more recently, however, the bulk of Islamic education is carried out in secular government schools. Although in Iran western influences began to affect the kuttāb adversely in the 1890s, and a Ministry of Education was set up in rozo to foster modernism. as late = 1939 there ==== still 2,356 katātīb, compared to 1,218 state primary schools.

In recent times, the fortunes of the hatatib have as a rule suffered wherever Muslims and is a minority. e.g. in the Soviet Union, where all these schools closed by the authorities in 1928. Much the same occurred in Yugoslavia in 2946. In India, however, they made a comeback after Partition, sponsored by active Muslim organisations. The kuttab is me the decline (although no detailed statistics are available) in countries undergoing modernisation, especially in urban areas. The extreme instance is Republican Turkey, which disestablished these schools in 1924 and closed them down in 1926—although some have continued to function surreptitiously in remote villages. The opposite case is to be found in theocracies like the former monarchical Libya or in Saudi Arabia. where the huttib (sometimes under other names) has long provided the only type of basic instruction in both the desert and rural areas; modernised primary schools have gradually been introduced there only recently,

In _____ other Islamic countries, the huttlb has survived thanks to efforts towards raising its level and enriching its curriculum and to the generosity of various philanthropists. In yet others, the huttlb flourished for a while due to the importance ascribed to it by anticolonialist movements. In Morocco during the 1930s, the prestige of the huttlb (called msid, from masdid) increased because it served as a focus for nationalist propaganda against the French Protectorate. In Algeria during the 1930s, an Association of 'ulama' set out to revive the hatdith and increase their number __ a means of protecting the younger generation against the modernising influences of the French. Later, in January 1964—less than two years

after independence—a decree reorganised basic Missim education to suit the missistance. Elsewhere, too, kuitāb instruction still continues to have current relevance; im 1962, for example, an Upper Volta politician in search of Muslim votes claimed that he had studied in such a school.

Practically all newly-independent Arab states, as well = Pakistan, Malaya and Indonesia, have attempted to incorporate the halath into the national school system, to supervise them and to provide them with a better-organised curriculum, including regular class hours, examinations and grades. While the integration of the halath into the state systems of education may well ensure their continued existence, particularly in rural areas, state supervision is gradually altering their original character. This is especially so since in all Islamic lands the study of the Rur'an and of Islam has become a standard part of the core curriculum of basic instruction.

AL-KUTUBI, ARD SARD ALLIE MUSTAMMAD B. SHARIR AL-DARANT AL-DIMASERT (686[?]-764] 1287-1363), Syrian historian. The date of his birth is uncertain, since only one ms, of Ibn Hadiar's Durar fills the blank that was to contain it. It is plausible, however, and neither confirmed nor contradicted by the fact that a highly personal obituary notice in the "Uyun (Ms. Cambridge 509, fols. 7b-8a, anno 735) speaks of a young scholar born in 706/1306 as "our friend" (sāhibunā). Born apparently in Dărayyă în the Ghūța, he spent all his later life in Damascus, He possibly went there to study with farnous hadith scholars such in Ibn al-Shihna (apparently), Ahmad b. Abi Tālib al-Ḥadjdjār, ca. 624[?]-730) and al-Mizzi (654-742), but, being very poor, he went into the book trade and acquired a sizeable fortune. He had personal contact with the great al-Dhahabi, who quoted verses to him ("Uyan, anno 748). A fellow historian, Ibn Kathir (q.v.), took part in the funeral service for him on Saturday afternoon, 11 Raniadān 764/24 June 1363.

If there is practically nothing known about his life, this is due to the fact he did not occupy any major official position in the scholarly-political establishment. His two surviving works were, however, highly esteemed and much used. His large history '(l'yan al-taudrikh, is represented in many libraries but usually only by individual volumes (presumed autograph in Topkapisarayi, Ahmet III 2022, cf. Cat. Karatay, iii, nos. 3853-65; O. Spies, Beitrage, in Abh. 1. d. Kunde d. Morgenlandes, xix/3 [2932], 76). It has been little studied and not yet been edited, possibly on the a priori assumption that most of its contents is known from other sources. It does contain valuable information; see, e.g., F. Sayyid's introd. to Fadl al-iYizāl, Tunis 1393/1974, 43-5, for the bibliography of Abu 'l-Kāsim al-Kabl al-Balkhl, That al-Kutubī considered new information not to be found elsewhere as the hallmark of a successful history is shown by his statement to this effect in connection with al-Diazarl ("Uyon, anno 739), even I this statement should turn out not to be original with him (cf. Thu al-Imad, Shadhardt, vi, 124). The value of the "Hyde's contemporary section, preserved in Cambridge 600 (Add. 2021) and Ahmet III 2022, vols. 22, 24. has been stressed by E. Ashtor. It contains al-Kutubl's own observations, principally on Syrian intellectual and religious life. The close relationship of the "Uvan, for its last two decades (years 741-250/60), to Ibn Kathir's Biddya (cf. also Hadidil Chaitle, 1185 L), has been tentatively explained by Ashtor being the result of al-Kutubi having used Ibn Kathle's original notes; however, despite first-person references in Ibn Kathir, it could well have been the other way round, especially it al-Kutubl was so much older than Ibn Kathle.

Al-Kutubi's other work, Famis al-wajassis, has been edited repeatedly (Büläk 1283, 1299; ed. M. M. Abd al-Hamid, Cairo 1951; ed. Ihsän Abbäs, Beirut 1973-4, utilising autograph volumes written in 753/1352, Ahmet III 2921, cf. Cat. Karatay, iii, nos. 6405-7). Following Ibn Khallikan and using al-Şafadi's Wâfi, it contains a wealth of biographical and literary information, mainly on Syrian litterateurs, which is noteworthy for its uniqueness and for the intimate glimpses it offers of Syrian cultural life.

Bibliography: Ibn Raff, from his Wafayds, cf. E. Ashtor, in Scripta Hisrosolymitana, ix (1961), 25, n. 106; Ibn Hadjar, Durar, iv, 71 f. (Cairo 1385-7); al-Sakhāwi, 196n, t. R. Rosenthal, A history of Muslim historiography?, 496; Ibn al-Imad, Shadhardt, vi, 203, quoting Durar; Brockelmann, I, 400, II, 60, S II, 48; E. Ashtor, in Israel Oriental Studies, i (1978), 277-84; S. al-Munadidid, Musdian al-musarithin al-dimashkiyyin, Beirut 1390/1978, 183-6. A. J. Arberry's identification of the copyist of Ms. Chester Beatty 3495 with al-Kutubl (MMIA, xxiv (1949), 234 f.) was silently retracted in Arberry's catalogue of the Chester Beatty collection.

[F. Rosenthal]

AL-KUTUBIYYA [See MARRARUSH]. KUTUPHANE [See MAKTABA].

KUTUZ, AL-MALIK AL-MUZAFFAR SAFF AL-DIR AL-MU'IZZI, third Mainlük sultan of the Dawlat al-Turk or Babri dynasty. A nephew of the Kh'arazm-Shāh Djatāl al-Din, Kutuz (whose original Muslim name was Mahmūd b. Maindūd) was taken prisoner by the Mongols and sold to a Damascus merchant who, in turn, sold him to the Mamlūk amir Aybak in Caira. Aybak, as the husband of Shadjar al-Durr, became in 648/1250 al-Malik al-Mu'izz, from which title Kutug derived his nisba, al-Mu'izz, from which title Kutug derived his nisba,

While still a youth, Kutuz claimed on the basis of various prophecies that he would rule Egypt and avenge his uncle by defeating the Mongols. A major step toward fulfilling that ambition was taken in 650/1252 when Aybak deposed his Ayyübid co-sultan al-Mulik al-Ashraf Musă and appointed Kuțuz viceroy of Egypt (na)ib al-salfana). In the following year Kutuz was and of those mamidits who assassinated Aybak's rival to the throne, Aktay, a leader of the Bahri regiment. When Aybak was himself murdered in 655/1257 at the instigation of Shadjar al-Derr and was succeeded by his young son al-Mansür 'All, Kutuz retained the viceroyship and managed the affairs of state. In 655-6/2257-8 he led expeditions against Bahriyya amirs and their Syrian Ayyübid allies. In the following year (657/1259), however, Kutuz and the Babriyya were reconciled and Joined

forces to combat m Mongol invasion of Syria. In addition, claiming that al-Manşūr 'All was too immature to defend Muslim territory, Kutuz deposed him and had himself proclaimed suitan. Thus Kutuz was the first of many mandūhs m depose the son of his usidah in order to make himself sultan, thereby setting, according to Ibn Taghribirdi (Cairo, vii, 56) "an evil precedent which led to the decline of affairs in Egypt".

Kutuz promised those awirs who protested against this act of usurpation that he would step down from the sultanate once the Mongols had been defeated. To secure the co-operation of the Ayyubids of Syria, Kutuz proffered his allegiance to al-Malik al-Nasir of Damascus and Aleppo and volunteered to defend him against the Mongols. To Hülegü himself, however, Kutuz offered only defiance and in 658/1260 out to death the envoys whom Hülegü had sent to damand his submission. Proclaiming a dishad. Kutuz led army from Egypt into Palestine. Although the Mamlak amies were rejuctant to join battle against the Mongols, Kutuz succeeded in persuading them to march with him and sent Baybars al-Bundukdarl, the future sultan, at the head of an advance force. Kutuz first secured the neutrality of the Franks at Acre and then met, and defeated, the Mongol army at 'Ayn Djälüt, After the battle Kutuz marched to Damascus, which he used as a base from which to clear Syria of Mongol troops and to establish Mamiûk rule in the province, appointing his own amirs to some key posts and retaining Ayvubids in others. During the march back to Egypt, Kutuz was murdered at al-Kuşayr, near al-Şâlihiyya. Though the court historian Ibn Abd al-Zahir claims that Baybars was the sole assallant, it is clear from other sources that this historian was attempting to establish Baybars' unique claim to the sultanate according to "the law of the Turks' which states that man gatala molikan kana huwa al-malik. (Shāfi' b. 'Alf, quoted in al-Rawd alzáhír, ed. al-Khowaitic, 31),

There is also disagreement over the motivation for the assassination. Several historians claim that Kutuz reneged on his promise to award Baybars the vicerovship of Aleppo after 'Ayn Dialut, but Ibn al-Dawadazi says that Kutuz had already aroused Baybars' enmity by rebuking his brother amirs for cowardice during the battle. Ibn 'Abd al-Zähir claims that Kutuz offended Baybars by refusing to share the glory of the dishad with him. In any event, it is clear, as Baybars al-Mansûrî points out, that the enmity between Kutuz and the Bahriyya was of long standing, and Bahriyya ambitions for the sultanate were undoubtedly a factor. The disposition of the body of Kutuz is also a point of dispute, with Ibn Taghribirdi claiming that Baybars transferred it from the original grave when it became a site of pilgrimage, while others merely say that It was buried in Cairo. Be that as it may, the sources virtually unanimous in haifing Kutuz as a hero of Islam for the victory at 'Aya Dialut.

Bibliography: The fullest contemporary source that has been published is Ibn 'Abd al-Zāhir's al-Rand al-zāhir fī sirat al-Malik al-Zāhir, ed. A. A. al-Khowaitir, Riyadh 1976, we index; a shorter version of this source was edited and translated by Fatima Sadeque, Baybars I of Egypt, Dacca 1956, Index. See also the 8th/14th century historians: Baybars al-Mansūrī, Zubdat al-fikra, British Museum MS. Ar. 1233, fols. 11a-16a; Ibu al-Dawàdāri, Kana al-darar, viii, ed. U. Haarmann, Freiburg 1971, index; Kutb al-Din al-Yūnlal, Dhaylmir'dt al-samān, i. Hyderabad 1954, 379-81; and

9th/x5th century historians; al-Makrisi. Kitāb al-Sulūk, i/2, ed. M. M. Ziada, Cairo 1936. 427-35; and Ibn Taghribirdi, al-Nuditim al-adhica, vii, Cairo 1938, 72-89. There are biographies of Kutuz in Ibn al-Sukas, Tall Kitab Wafayat al a yan, ed. and tr. Jacqueline Sublet, Damascus 1974, no. 205; and Ibn Shakir al-Kutubi, Faudi al-wasayat, ed. M. M. Abd al-Hamid, Cairo 1951, ii, no. 353; ed. l. "Abbās, Beirut 1973-4, iii, 201-3. See also A. A. al-Khowaitir, al-Matik al-Zähir Baybars, Riyadh 1976, 18-26; idem, Baibars the first; his endoawurs and achievements, London 1978, 15-25; M. M. Zinda, The Mamille sultans to 1923, in A history of the Crusades, ed. K. M. Setton, li, Philadelphia, 1962, 735-58. (D. P. LITTLE) KU'UD (A.), the verbal noun Ka'ada "to sit". which developed into a technical term. (1) In the \$4 ldf [q.v.] it indicates the sitting posture which is the penuitimate component of a rak's (q.v.). For descriptions and illustrations, Lane, Manners and customs of the modern Egyptians, 3rd edn., London 1842, i, 107, postures 7 and 13, and T. P. Hughes, A distionary of Islam, London 1885, 467. (2) In early Islamic history it is the designation of the political attitude of a faction of the Kharidils, the ha ada (also called hu ad, ha idin and simply ha ad after the analogy of Adris, pl. haras). This designation is sometimes taken to refer to "self-declared nonrebels" (M. A. Shaban, Islamic history A.D. 600-750 (A.H. 132), Cambridge 1971, 151), although the generally accepted notion is "quietism". This notion may have been derived from the pre-Islamic custom with the Arab tribes to "abstain from" warfare, raiding, etc. (in Arabic: ba'ada 'en) during Dhu I-Katda, one of the four sacred months.

The quietist is extolled in a probably spurious tradition dating possibly from the end of the first century A.il.; "There will be a fina [q.v.]; he who does not take an active part in it /kārīd) is better than he who does (kārīm)", cl. Cencordance, v, 439, left column, first trad., where Ibn Hanbal, i, 169 and 185, may be added to the list of references.

(G. H. A. JUYNBOLL)

AL-KUWAYT (conventionally spelled Kuwait),
the capita) city, situated in lat. 29°20′ N and long
47°39′ E, of an amirate of the mamme name
situated in the Arabian shore at the head of the
Persian Gulf. The mainland state is bounded by
'Irak to the north and west and by Saudi Arabia
to the south. Kuwayt also owns a number of islands
and islets, the largest and most important of which
are Büblyan, Warba and Faylaka. The total area
of the state is approximately 6,000 sq. miles.

t. Geography and economy

At least two explanations have been suggested for the origins of the name; we is that it is a diminutive form of Adf ("fort"), and this in turn is said to refer to the existence of a small Portuguese defensive settlement there in the late roth century. The other less general derivation suggests that in local usage Kuwayi means "a number of small wells", and that these exist near the low sandstone ridge called Ra's Adjara, which is where the modern town was founded in the early 18th century. European sources usually refer to this settlement was Grane Graine, which is probably a corruption of al-Kurayn, an islet in the bay about four miles west of the centre of the town, to which there was a good anchorage.

The bay is the targest in the Persian Gulf, with a maximum length of 20 miles (east-west) and 2 maximum breadth of 10 miles (north-south). It is the only

good natural harbour near the head of the Gulf, The terrain is mainly flat and arid with occasional low hills; the highest point in the country, less than 1,000 ft. in elevation, Ill in the south-west. The coastlands and low and sometimes marshy. Natural vogetation is very sparse and consists of scrub and stunted bushes. Spring rains sometimes produce a short-lived cover of gress. Oases are few; the largest al-Diahra. some 18 miles west of the capital city. Permanent surface water does not exist, neither do springs. In the past drinking waters - drawn from wells which were often brackish, and it was also brought by boat from Başra. Some drinking water now comes by pipeline from the Shatt al-'Arab, but a large sta-water distillation plant is the most important source of supply. The underground water table near al-Rawdatayn in the north is also tapped for additional supplies.

The climate | hot, but often less humid than at other places in the Gulf. Summer daytime shade temperatures usually reach 105° F. to 110° F., but temperatures of over 120° F. have been recorded. The coldest month is January, when the daily maximum shade temperature is usually about 60 F. to 65° F. but temperatures as low as 24° have been recorded inland. Frosts sometimes occur in the desert but almost unknown at the coast. Rainfall occurs chiefly between October and March and is slight; the average is under 5" per year. Winds in winter are generally from the north-west and are relatively cool. Southerly winds in the spring and early summer are mainly hot and dry, those from the south-west later in the year are also hot but are often damp. Sandstorms more often occur during the winter than during the SUMMER.

Before the discovery and exploitation of oil, the chief coastal occupations were trading, pearl and other fishing, and boat building. In the interior, nomads herded sheep, goats and camels and there a little settled cultivation. The port served much of north-eastern Arabia, as well as acting as an entrepot for trade with the south of 'Irak and southern Persia. Horses, unimal products, fish and pearls formed the major traditional export items. Imports were chiefly foodstuffs and piece goods. In 1904, 460 pearling boats worked out of Kuwayt and their crews numbered about 9,200 men. In the winter, about a third of these went to Ceylon for the pearling season there. The world-wide economic depression which began in 1929, and the introduction of cultured pearls from Japan, greatly reduced the demand for Gulf pearls. Boat-building using wood and fibre from India employed about 300 men in 1904, but this number obviously increased, for in 1912-13 m many as two pearling boats were reported to have been built. In 1904 the population of the town was estimated to be about 35 000. Of that number, about 1,000 Persians, up to 200 Jews and the Negro population was said to be about 4,000. By 1952 the population of the state had risen to about 152,000. Since that date it has grown very rapidly, because of changes which spring from the development of the oil industry. According to the census of April 1975, the population of the state was over 900,000. This very sharp use and due chiefly to immigration, but the native birth rate is also very high. The same census reported that non-native-horn residents made up 52.6% of the population; many of these were Palestinians - other Arabs, but immigrant workers have also entered Kuwayt in large numbers from Iran | the Indian subcontinent. There is a significant European and American community.

AL-KUWAYT

The first oil exploration concession was granted in December 1934, and oil mediscovered in 1938 at al-Burkan, but the Second World War halted the development of these fields. The Kuwait Oil Company, which held the concession, was owned jointly and equally by the Anglo-Persian Oil Company (later the British Petroleum Company) and the Gulf Oil Corporation of the United States of America. Production began in 1946, and in that year approximately six million tons of oil were exported. The Abadan crisis of 1951 and the resulting embargo on oil supplies from Iran gave much impetus to the development of the oil industry in Kuwayt. In 1956 production exceeded 54 million tons, and Kuwayt was at that time the largest oil producer in the Middle East, By 1972 production had reached 148 million tons, but Kuwayt was no longer the leading regional producer. baving given way to Sa'ûdl Arabia and Iran, In January 1973 the Kuwalt Oil Company and the Government of Kuwayt reached an agreement under which the state was ■ acquire immediately ■ 25% share in the Company, and by 1082 this would have risen to # 51% controlling interest. The Kuwayti National Assembly, however, expressed strong disagreement with these terms, and there were demands for the immediate nationalisation of the Company. Further negotations were held and in December. 1975 a new agreement was signed which transferred full ownership of the Company to the Government with retrospective effect from March of that year. During the War of October 1973, Kuwayt joined other Arab countries in restricting production, and for the first time since oil had been produced output showed a decline. The sharp increase in oil prices in 1973 encouraged the authorities to give increased attention to the question of conservation in order to extend the life of the oil reserves, the country's only known natural asset. A limit on production has been established of two million barrols per day, equivalent to about one hundred million tons per year; I this rate, it has been estimated that the state's known reserves should last at least until the middle of the next century. Kuwayt was a founder member of both the Organisation of Petroleum Exporting Countries (established in 1960) and of the Organisation of Arab Petroleum Exporting Countries (established in 1968). The latter institution has its headquarters in Kuwayt and the Kuwayti authorities have taken an important and active part in the work of both bodies.

The recent development of the oil industry has had some striking economic and social effects. From being a relatively poor society of traders, fisherfolk, boatbuilders and herdsmen, the country now (1976) has one of the highest levels of income per capita in the world, and the state provides an impressive array of social services. Kuwayt has become, despite its barsh environment, one of the most highly-urbanised states in the world. The dependence on oil is overwhelming. with over 90% of government income currently being derived from oil production. The pearling and boat-building industries are no longer of economic importance. Fishing has been modernised and catches of shrimp are sold in Japan, Western Europe and the United States of American rather than locally. Agriculture is of little significance; mile than 3% of the land is regarded as cultivable and only about 1% is actually in me imports now consist of construction materiais, consumer goods and industrial equipment as well in foodstuffs and textiles. Exports, apart from oil and related products such as petrochemicals and fertilisers, are negligible. Ships of all the major maritime nations now **the port**; the airport is served by many daily international flights; and the most modern means of international telecommunication are widely available. Oil revenues have enabled the government to offer significant amounts of financial aid to poorer states, both Arab and non-Arab. By 1977 loans worth over US **1**,300 million had been provided.

573

2. History

Archaeological excavations on Faylaka island have revealed traces of settlements dating back to 2500 B.C., but relatively little is yet known of the history of Kuwayt prior to the 18th century and the assumption of power by the first members of the present ruling dynasty of Al Sabāh in about 1170/1756.

The Sasanid King Shapur I is said to have had a great ditch dug from Hit on the river Euphrates to the northern shore of Kuwayt bay to protect the Sawad [q.v.] from Arab raids, and it was in the neighbourhood of Kuwayt that Khalid b. al-Walld is reported to have defeated a force of Persians in 12/633. The foundations of the modern state date from about the end of the 17th century when a group of 'Utub Arabs, who claimed to be a branch of the Anaza confederation [q.v.], migrated into the area. According to local tradition the three clans-the Al Sabab, the Al Khalifa, and the Al Dislahimawere expelled from their previous settlements near Umm Kasr by the Ottomans because of their acts of brigandage and piracy. By the middle of the 18th century, the Al Sabah had achieved a position of local dominance. The Al Khallfa [q.v.] left Kuwayt in 1179-80/1766 and migrated to Zubara in Katar before taking control of Bahraya in 1197/1783. The Al Djalahima left Kuwayt later and they too went to Katar.

The first mention of Kuwayt by European is that of E. Ives, who refers to it as Grane, but he does may give the name of the ruling shayth at the time of his visit in 1758. Niebuhr refers to the town as having a population of 10,000, but he noted that during the hot months the number declined to about 3,000. He reported that the harbour contained 800 ships and that the inhabitants were employed in fishing and pearling; but like Ives, he does not give the name of the ruler.

Kuwayt grew in prosperity after Karlin Khan Zand had seized Başra in 1190/11776, for during the three-year Persian occupation, the East India Company used Kuwayt instead of Başra as the terminal point for its caravan route from Halab (Aleppo) to the Gulf. According to Capper, who did not visit the town, the ruler of Graine was very friendly towards local British officials in 1193/1779; and in 1207/1793, after a quarrel with the Ottoman authorities in Başra, the East India Company's Agency was moved from there to Kuwayt. The Agency returned to Başra in 1210/1795. It was at this period that Kuwayt was often threatened by Wahhābi raiding parties.

The next century-and-a-quarter of Kuwayt's history was to be shaped by three sets of circumstances and by the relations between them. Those circumstances were threats from Northern and Central Arabia, the uncertain and varying nature of the relations between Kuwayt and the Ottoman Empire, and the emerging interest of first Great Britain, and later of other European powers, in this large natural harbour at the head of the Persian Gulf.

The temporary eclipse of Wahhabi power in Nadid and al-Hasa after their conquest by Muhammad 'All in 1232-4/1817-19 reduced the threat to Kuwayt for a time. When a British officer visited Kuwayt in x252/ 1816, he found that Egyptian envoys were present in the town, and the re-entry of Muhammad AIFs forces into Eastern Arabia shortly afterwards increased British suspicions about the extent of Egyptian ambitions. An officer of the Indian Navy surveyed the island of Faylaka in 1255/1839 as a possible base for British military forces, but it was concluded that the island was unsuitable. The harbour at Kuwayt was also surveyed at this time. The withdrawal of Egyptian forces in 1236/1840 meant that British interest began to wane. The fact that Kuwayt had not been heavily involved in plracy meant that the truclal system of relations, which had been established by Britain from 1820 with Bahrayn and the other shavindoms of the lower Gulf, was not extended to Kuwayt, Although Kuwayt was involved in the slave trade, the anomalous nature of her relations with the Sublime Porte meant that the British government was reluctant to seek engagements for the suppression of that trade from Kuwayt similar to those which had been secured from the Arab rulers of the lower Gulf.

The economic fortunes of Kuwayt fluctuated throughout the 19th century. Stocqueler, who visited the town 1216-7/1812 estimated that its population was only about 4,000. Some revival appears to have occurred, for Palgrave, who was in Arabia in 1278-9/ 1862-3 but who did not visit Kuwayt, reported that the town was well-governed and that trade was flourishing. The same author described Kuwayt the natural maritime outlet for the trade of the Diabal Shammar area, and Guarmani, who visited that region in 1280/1864, reported that many horses were exported from there to India via Kuwayt. The possibility of building a railway line from the Eastern Mediterranean to the Euphrates and onwards to the head of the Persian Gulf had been suggested as early as 1856, but the construction and opening of the Sucz Canal in 1869 put a temporary end to such plans.

The relationship between the rulers of Kuwayt and the Sublime Porte had varied ever since the Al Sabah had established themselves in Kuwayt, but it was rarely anything other than vague and nebulous. Occasionally, as in 1871, the Ottoman authorities in Trak were able to exercise some sort of sovereignty over the Shaykh of Kuwavt, and the town was then used briefly as a staging post for the Ottoman annexation of al-Hasă, Kuwayti boets being employed to transport some of the troops. In May 1896 the ruler of Kuwayt, Muhammad b. Şabâh, was murdared and he was succeeded by his half-brother Mubarak. There was much suspicion that Mubarak was implicated in the death, and intense family rivalries threatened the position of the new Shaykh. In order to consolidate his authority, Mubarak tried to secure the recognition and support of both the Ottoman and the British governments. The former showed some signs of seeking to extend its influence over Kuwayt. The latter initially declined Muhárak's invitations, but when it became known that a Russian entrepreneur, Count Kapnist, was seeking a concession from the Ottoman government to build a railway line from the Eastern Mediterranean to the Persian Gulf, with Kuwayt = the suggested sailhead, British interest quickly revived. The concern of the British government also increased by the belief that the Russian government might be seeking permission to construct a coaling station on Kuwayt Bay, and in Ramadan 1316/-January 1899 an agreement was reached under which Shaykh Mubarak gained British support in return for a promise not to cede, sell, lease, mortgage or otherwise dispose of territory to a foreign government or national without specific permission from the British government, increased international interest in Kuwayt became even more apparent in 1900 when a party of German railway engineers visited the area to seek a suitable site for the terminus of a possible extension to the Persian Gulf of the projected Berlin-Baghdad railway, Shaykh Mubarak opposed these plans, believing in part that they would tend to lead to an increase in Turkish control over Kuwayt. After a prolonged period of diplomatic negotations, the British and Ottoman authorities completed in 1913 a draft convention concerning their interests in the Persian Gulf, Under article t of this convention, Kuwayt was recognised as autonomous sada' within the Ottoman Empire. That document also laid down the land frontiers of Kuwayt, but the outbreak of the First World War prevented the draft convention from being ratified. In 1914 the British government sought the support of Shaykh Mubarak against Turkish forces in Southern Irak, and among other reassurances the ruler was informed that the British government recognised Kuwayt as an independent government under British protection.

The Ottoman authorities were not the only threat to the independence of Kuwayt at the end of the 19th century. The value of that port as an outlet for the trade of Diabal Shammar attracted the attention of the rulers of the Al Rashid [q.v.], and that clan was engaged in open rivalry with the Al Sa'0d [q.v.]. Much turbulence was caused in Northern Arabia in the late 19th and early 20th century by that contest for power, 'Abd al-Rabman b. Favsal Al Safud and his son 'Abd al-'Aziz took refuge for a time with Shaykh Mubarak, and a raiding force from Kuwayt was defeated by the forces of 'Abd al-'Aziz b. Rashid near Haril in March 1901. The recapture of al-Rivad by the Al Safud and the curbing of the power of the Al Rashild reduced the immediate threat to Kuwayt, but as the power of the Al Sacud increased it looked as if they rather than the Al Rashid would now pose a danger to Shaykh Mubarak.

In 1913 'Abd al-'Aziz b. 'Abd al-Rahman Āl Sa'ūd succeeded in expelling the Turks from al-Hasā and In gaining an outlet to the Persian Gulf. This meant that Kuwayt was now encircled to the west and the south by the territory of the Al Sasud. In December 1915 the British authorities signed a treaty at al-Ukayr with 'Abd al-'Aziz b. 'Abd al-Rahman Al Sa'6d, among the provisions of which was a promise by the latter not to attack Kuwayt. Shortly before the signature of this document, Shaykh Mubarak had died and there was renewed family rivalry over the succession. Mubărak's eldest son Djabir became the staykh, but he died in February 1917, and was succeeded by Mubārak's second son Sālim. Sālim was by means as prudent as his father had been In his relations with either the British or with the Al Safud. He allowed the harbour of Kuwayt to be used for the transport of supplies to the Turkish army and from February 1918 the port was blockaded by ships of the British navy. This blockade was lifted in the autumn after the cessation of hostilities between the Allied Powers and the Ottoman Empire.

The lack of a defined frontier meant that relations between the Ål Sabab and the Ål Sabab were unlikely to be easy or harmonious, but the activities of the Ihhndw [q.v.], and particularly their building of a hidira at Karya al-Ulya, made matters worse. In 1920 'Abd al-'Azīz b. 'Abd al-Rabman Ål Sa'ûd

imposed an embargo in trade with Kuwayi and this ban lasted until 1937, doing much harm to the prosperity of Kuwayi. Fear of in light attack prompted the building of a defensive wall around the city and in October 1920 in force of Immain led by Faysal b. Sultan al-Dawish, the leader of the Mutayi tribe, attacked the nearby oasis of al-Djahra. This attack did not succeed, but Ikhwan raids continued to pose a threat to the security of this part of north-easiern Arabia until the movement was finally suppressed by 'Abd al-Kala.' Alsa'id in 1930 after it had rebelled against his authority.

Shaykh Salim died in February 1921 and he was succeeded by Ahmad b. Diabir, the eldest son of the previous ruler. Shaykh Ahmad endeavoured to iniprove relations with the Al Sa'od, and in December 1922 a Convention was signed at al-'Ukayt in which a fixed frontier between the two states was established. The new territory of Kuwayt was very much smaller than that which had been allotted to it in the draft Anglo-Ottoman convention of 1913, and Shayhh Ahmad believed that the British authorities had not supported his claims against those of 'Abd at 'AzIz b. 'Abd al-Rahman Al Safud as strongly as they should have done. This belief was an important factor in Shaykh Abmad's reluctance to grant an exclusive oil concession to the Anglo-Persian Oil Company; and it strengthened his later determination. to secure the involvement of an American company in the development of Knwayt's oil resources. (The growth of the oil industry has been treated in section 1 above.)

In 1920 Great Britain had been awarded the Mandate over 'Irak by the League of Nations. April 1923 the British High Commissioner for Irak recognised the frontier between Kuways and Trak as being that which had been laid down in the Anglo-Ottoman draft convention of 1913. There have, however, been disputes about this boundary. The most serious occurred in June 1961, when the 1899 agreement between Great Britain and Kuwayt was terminated and Kuwayt became a fully-independent state. The Government of Trak immediately claimed that Kuwayt was rightfully an integral part of Trak. The culer of Kuwayt, Shaykh Abd Allah b. Salina (who had succeeded Shaykh Ahmad in 1950) appealed to Britain for military assistance. This request was granted and the dispute - debated by the Security Council of the United Nations, On 20 July Kuwayt was admitted to the League of Arab States and that body resolved to preserve the independence of its new member. In 1963 Kuwayt became a member of the United Nations.

In November 1962 a new constitution was promulgated and elections for a 50-member legislative assembly mem first held in January 1963. The Constitution was suspended in August 1977 as a result of internal political difficulties.

(R. M. BURRELL)

guwwa (pl. Kamd), Arabic term denoting
"strength power".

1. Lexicographical study. Ibn Sida defined the word known as the opposite of weakness (nabid al-4a4), cf. Kur'an XXX, 54: "It is God who has created you from weakness (min dail) and who then, after weakness, has given you strength [\$uwwa]" It is thus the concept of strength and of vigour which is paramount. A man is described as ¿awi when he is strong in himself, and as muchoi when he owns a robust mount. On the other hand, like the word take (which also has the sense of "ability to act"), known denotes a thread which is part of a rope. As may be read in a hadith of Ibn Daylami; "Islam is unravelled link by link, = a rope is unravelled thread by thread (humwaten hummaten)". Abū 'Ubayda observes that when such threads become loose (fuklish), the rope is liable to be broken. This may be seen a further example of the idea of strength and solidity. Thus it is primarily a physical force that the term knows evokes in the language.

Numerous words in Arabic have similar meanings. Attention has been drawn above to fake, defined in LA as power over something (al-kudra 'ald skay'). The term hudra in itself given as a synonym of humen (ibid.); it is employed, as masdar of the verb kadara, in the expression kndara 'aid 'l-thay' kndraten, with the sense of possessing (malaka) something. Possession in the exercise of a power, either physical or judicial. Furthermore, just as the idea of power-to-act implies possibility and aptitude, so knows has been likened on the me hand to imhān (possibility) and to isti'dad (disposition). Knows in the sense of possibility is, according to al-Tahānawi, the power or the faculty which is a preparation (takeyya') to produce a thing is its opposite, whereas istichad is limited to preparation for production of a single effect.

2. Knows in the Kur'an. A quite frequent is that which gives this word the meaning of power in the sense of capacity to act, to fight, to win, and which applies it either to communities or to individuals. Thus in IX, 69, there is reference to "those who before you were stronger than you in power (askadds minkum knowner) and were richer in goods and offspring". Speaking of man at the Day of Judgment, God says (LXXXVI, to): "He will then have for himself neither strength nor succour". A second use of a more moral nature is to be found in where there is the injunction to "take" the Revelation "with strength" (bi-limme)" (cf. among other verses, II, 63 and 93; VIII, 145), Al-Zamakhshari explains the word with the expression:

"with effort and firmness" (bi-didd wa-'anima). Finally and most importantly, known is attributed to God with the sense of kndra; for example in L1, 58, where it is said: "God is the Provider of all good things: He is the unshakable Master of power (dis 'I-known' 'I-matin')" and in XLI, 15: "God, who has readed them, is stronger than them in power (aghadus minhum knownatss); elsewhere we find "There is no power but through God (lif knownats illā bi-llāh)" (XVIII, 39).

3. Kumus in theology, In the discussion by the Multazila concerning the attributes, and with regard to the doctrine of tactil which stripped the divine essence of all its attributes, by reducing them either to this very essence, or to simple names, it was necessary to stress that the revealed Book speaks of the power (****** cf. above), = well as of the knowledge ('ilm) of God. In the Makdidt al-Islamiyyin, al-Ash arl notes that one group of Mu'tazila, on the basis of XLI, 15, "claim that in saving that God has power, we are led to say that He is powerful (kidir). They take kutowa murely and simply as a synonym of kndra. But they maintain this point of view only in regard to knows and film, being two substantives which occur definitively in the Book of God, and not in regard to the other attributes of the essence such as life (hayat), sight (basas) and hearing (same)." This is, according to al-Ash art, the doctrine of al-Nazzām and the majority of the Mu'tazila of Basra and Baghdad. A second group understands "knowledge" in the sense of the object of knowledge (ma'lim), and "power" in the sense of the object of power (maidir). To say that God has a power (hudra = humos), therefore signifies, not that there exists in Him such an attribute, but that created beings depend on Him is such a fashion that they could be called makduras. This is why, when Muslims see rain, they say; "That is the power of God". meaning that it is a makdur. These theologians reserve this explanation, among the attributes of the essence, for knowledge and power, for a purely scriptural reason, as has been seen in the case of the preceding group. A third group assert that God has a power which is identical to Himself (kudra kiya huwa), and the same applies to His knowledge; but they extend this interpretation to all the other attributes of the essence: this is the thesis of Abu 'l-Hudhavl and his disciples. A third group comprises the disciples of 'Abbad b. Sulayman, who is known to have sacrificed the texts to the requirements of reason; it can neither be said that God has knowledge and power, nor that He does not have them. This contradicts the formal declaration of the Kur'an.

Ibn Hazm, in addition to the verse XLI, 15, quotes a hadith. When instructing his Companions bow to formulate a prayer to obtain a favour (ishikhdra), the Prophet says: "O my God! I ask You for this favour through Your knowledge; I ask You for it through Your power" (hudra - humps). Then Ibn Hazm puts power on the same level m knowledge: kumma and hudra, like 'ilm, belong to God really and not metaphorically; they are nothing other than He, although it cannot be said that they God, because if power were God, God would be power, which is false. The same applies to knowledge. These terms play the same role in the word mais (soul) in the verse VI, 17: "It is He Himself (his soul) that ordains mercy". The expression "soul of God" is a "description of Him (ikkbär 'anku)", but indicates nothing at all other than Him.

4. Kuwwa in philosophy. In his Istilähät affulüm al-islämiyya, al-Tahanawi gives a penoramic KUWWA 577

survey of the question. Knows is the origin of the act (mabda) al-fi'l), whether or not it is differentiated, and whether or not it is accompanied by awareness (thusar) and by will (irida). In this general sense, duures is dependent at the same time on nature (fabl'a), the principle of involuntary movement, and on the soul, the principle of voluntary movement. There is thus a distinction between the power of the spheres (al-kuunea al-falakiyya) which produces a unique act, and the power of the elements (al-known of-tunsuriyya) which produces acts that are differentiated in terms of the various combinations of elements, and which has also been called al-furms al-sukhriyya, executive power of imposed labour, = a way of recalling that all power to act comes from God, taking inspiration from, among others, the verse XXII, 65: "Have you not seen that God has pressed into your service (sakkkara lakum) all that is on the earth?" Nevertheless, in the Kur'an, this term is also applied to the stars, as in XIII, 2, since the Book makes no ontological distinction between the firmament and the sublunary world. After elemental power come vegetative power, the faculty of the vegetal soul, and animal power, the faculty of the soul of animals. Finally, the term human is also applied to the origin of the change that is produced in one thing, transforming it into something else (mabda) al-taghayyur fi shay? ahhar min haythu huwa ahhar).

By origin is understood the cause (sabab), whether it is efficient (fafil) or not, in effect, the power can be active or passive, engendering qualities or receiving them (habill). As the origin of the change, it can be applied solely to its receptacle (majull), as is the case with the form (sura) of the air which demands the production of bumidity in the matter which it pervades. It can also be the origin of change in its receptacle first, then in another thing: this is the case with the form of fire which produces heat and dryness in its matter and transmits these features to neighbouring objects. But the power of change and act from the start in something other than a receptacle: this is the case with the rational soul which acts immediately on a thing other than itself in producing a change in the body.

According to Fakhr al-Din al-Rāzl. powers bave substantial forms (succer distributive), such as the power of fire; others have a basis in socidents which happen to the substance. Consequently, there is no generic notion of known, as it is impossible to unite substance and accidents in a single genre.

5. Kuwwa in medicine. As an extension of its philosophical usage, this term is frequently employed in medicine. Al-Tabanawi indicates that the physicians introduced three divisions; natural power; animal power; and psychical power. The natural and animal powers include powers served by others (makhdama) and powers which serve them (hhadima). The first are, in the realm of the living, those which operate with a view to the preservation of the individual, the faculty of nutrition and the faculty of growth, or with a view to the preservation of species, generative power (muwallida) and plasmatic power (musatewisa). The second are four in number: the power of attraction [djadhiba], the power of retention (māsika), the power of digestion (hadma) and the power of repulsion or 🛍 evacuation (da/i*a). These four faculties are served in their turn by heat and cold, dryness and humidity. As for psychical powers, they are divided into two types: the power of perception (mudrika) and the power of motion (muharrika). Perceptions are external (pihira), in the case of the five senses, or external (bations), in the 6. Kuwwa in human psychology. This is the faculty of deliberate voluntary action. It operates in accordance with a certain order; first there is a representation of the movement to be executed, then a desire, then a will to achieve the end envisaged, and finally the realisation of the movement and the act, Certain philosophers introduce an intermediary between the faculty of desire and the active power: they call it iditimat, a term which seems to correspond to the Soyxarbedic (consent) of the Stoics. It is the decision (djasm) which follows after = hesitation (tarraddud) between action (fill) and nonaction (tark), = a result of which == of the two parties prevails (yataradidiah). According to others, there is no intermediary, but a desire which may continue to grow until the decision and the act put into effect. Iditima' is nothing more than this desire at its maximum intensity. As for the followers of Ibn Sina, they reckon that signima' depends on will and that there is a great difference between desire will.

A position of eminence is given to the power of the intellect (al-humma al-cakila). All theories concerning the intellect, from the end of Antiquity, throughout the Hellenistic period and until the time ill the falisifa, depend on interpretations of the third book of Aristotle's Treakis in the ideal.

7. The notion of suws and Greek influences on lalsafa. The numerous meanings applied to the term humas in philosophy may be examined, with we view to comparison with Greek thought, from two points of view. The concept divaguage has two opposites in the writings of Aristotles. Addivaguage (la-humas or daf, inability or weakness); 2. Evippena (fill, activity, reality). Kumas in the former sense is dealt with in the Categories and Metaphysics (v. 12), in the latter mainly in the Metaphysics, vilicia. It may be here observed that inability is to be distinguished from impossibility (difference mentators) or mustabil).

A. Kuwwa, to be more accurate human fabl'iyya (productive ability), being the second species of the category of quality (notóv [cf. MAKOLÁT]) is defined, with Aristotle, - that arrangement by which some one or some thing comes into action quickly and easily, while ld-humms predisposes to undergo something easily and quickly. Activity and passiveness are here to be conceived as opposites, which exclude one another. They cannot be present at the same time in one and the man subject. Knows in this is the positive capability for a definite activity or, in the Stoics expressed it: the qualities of things active forces, agencies. The orthodox kalām referred this doctrine only to the activity of God. Muslim theologians said for example-of. Christian dogmatics-that God's qualities (sifát) are the sources (masadir) of his actions. The philosophers, however, referred it in the first place to the workings of nature. Nature is endowed with many forces and abilities and each ability has a corresponding inability. Inability, however, is nothing positive but a deprivation (στέρησις, sadom) or a decay (oftopo, fasad). La-knowa is not an absolute nothing but a non-existing of what according to Aristotle

528 KUWWA

belongs to a thing from its nature. It ill especially emphasised that the transition from suggest to idhummo (or from active to passive) takes place not continuously but without intermediary, i.e. suddenly, timelessly. The Muslim philosophers are, for the rest, usually content to explain these sometimes very questionable assertions with the examples given by Aristotle. In the Logic (Categories) these are with reference to living beings health (ability) and sickness (inability), and in the organic world, hardness and softness. In addition, in other branches of knowledge, rest is sometimes defined as deprivation of motion, blindness as a want of ability to see, wickedness in the non-existence of good, and so on. All these deprivations (στερήσεις) are regarded with Aristotle as accidents of matter. Hence the practice iat least since Ibn Sina [cl. Tist rasavil, 64] who probably follows a Greek exposition) of distinguishing 'adam as accidental principle from the essential principles; matter and form.

Al-Fărăbi (Abhandlungen, ed. Dieterici, 87, fr. 21) first discussed the question whether suffering (πάοχειν), in the term is used under the category of quality, meant the same in suffering in the last (roth) of the categories. Perhaps he in led to this by a passage in Aristotle (De anima, 417b) in which "suffering" is said to have two meanings: x, it is a kind of decline (φθορά) through the opposite (see above); and z, the preservation (σωτηρία) of the possible through what is active, and in this way that thereby a natural basis is evolved for its own being. Instead of in decline we have here in question not only of a mere survival but also of a higher development, a suffering in bonum partern, in endurance (passive, receptive, contemplative) of higher

influences [see ATHAR].

B. More important than the contrast between knowwe and la-known for the history of philosophical terminology became the distinction between known and fill, or, to use the language of the schools, power and action, commonly found in the formulae bi 'lkuwisa (δυνάμει) and 5i 7-fs9 (ένέργεια). Both expressions are closely connected with the two fundamental conceptions of Aristotelian philosophy, matter and form. Power is peculiar to matter, action to form. Power and action are called δπάρχοντα (Arab. laudhik, attributes) of matter and form. Aristotle sought in this way to reconcile a static with a synamic consideration of the world. Matter and form [see SABAB] are names for the constituents of the existing, power and action for the stages of development of the becoming. These fundamental conceptions cannot be defined more exactly. Like Aristotle, the Muslim philosophers endeavour illustrate them by examples.

The development from power to action presupposes a continuous world of becoming, time and change. According to one principle of Aristotle, which was taken over by the Muslim thinkers, at least with reference to the world, the infinite cannot be real. But in time, especially if it is conceived without beginning and without end, lies the unending possibility of all that possesses its limited reality in any particular moment. Under definite conditions, if there is no obstacle I the way, the possible advances to full realisation by stages. Possibility and realisation to be regarded as termini of a development taking place within time. This process, the development from power to action, is called by Aristotle motion (xlungts, haraka) which is defined as the realisation (everyrix) of the possible as such. The end (to be bi 'I-fi'l) is called in Arabic also hamal (perfection) just as Aristotle uses everyeen and everkeyeng synonymously.

The concept of an originally pure (i.e. without quality) possibility which can to course of time become everything, is according to Aristotle a conceivable abstraction. Everything becoming is already more or less formed, realised; deprivation is accident of matter, not as the neo-Platonists asserted. matter itself. Aristotle himself did not succeed in carrying through logically his distinction between the principle of deprivation (fadam) and matter as pure possibility. The Muslim thinkers who were under neo-Platonic influences were naturally still less able to do so. They often identified falam and humans. Usually however, they endeavoured to represent world of becoming as a hierarchy of positive forces or powers. The process of becoming is then to be conceived as a co-operation, a working late one another of active and passive. With Aristotle, the Stoics, etc., they talk of active and passive, moving and moved, ruling and serving forces, which by no means rule one another out. Two aspects of one and the same process are thus described. One and the same power may therefore be active, moving, ruling with respect to what is below it in the order of stages of being but passive, receptive, contemplative with respect to those above it. In other words aware and HI are used in the correlative sense exactly like matter and form. A material more or less formed, e.g. clay, is matter for bricks and the formed brick is material for a building. Similarly, in the sperm there is the potentiality to become a boy, in a boy a potentiality to become a man. In other words, the sperm possesses the immediate potentiality for a boy, a remote potentiality for a man.

Amongst the Isma'lli thinkers, the problem of power is equally put forward in another form, in the shape of the idea of receptiveness (hubil). Whilst the Primal Intellect receives at a single stroke (daffatan makida) everything which rightfully makes up its being, the "creatures" inferior to it are incapable of this. Hence they receive successively in the course of time the characters and qualities which belong rightfully to their essence and which make up their secondary perfection. This explains why these latter gradually become transformed according to the different kinds of movement. It is through this that the power of generation (Assen) is explicable. when they have reached their perfection, certain beings tied down to matter are unable to keep and decline into final corruption (fasad); in this way, the force of destruction may be explained.

The whole theory is closely connected with the dynamic view of the existence of the world. Thus in Aristotle, in the Muslim philosophers physics, including psychology, me developed into a hierarchical system of natural forces and faculties of the soul. In place of faculty we sometimes find parts of the soul (μέρη, adisa"; Platonic terminology, also used by Aristotle). Galenic influences may be traced, in the doctrine of the faculties of the soul especially and their localisation (in al-Fărâbl, Ibn Sīnā and al-Ghazāli). Al-Fārābi deals with this in his Fusas (i.e. Abhandlungen, ed. Dietericl, 72 ff.; wrongly ascribed to Ibn Stat in Tis' rase'il, 42 ft.); cf. his "Model State" (ed. Dieterick, 34 ff.). Ibn Sina (Kitab al-Nadidt, Cairo 1913, 158 ff.; cf. Isharat, ed. Forget, 123 ff.) enumerates some 25 kund from the highest faculty of the reasoning soul to the powers of the simplest bodies. Al-Ghazall [Takafut, ed. Bouyges, index) is acquainted with week 30 hmed; but some are synonyms.

As briefly explained above, in the world of becoming bewere is earlier in time than 69, but 69 so his Muslim successors teach following Aristotleis always the earlier in the sense of the higher. What is potential cannot of itself devolve into actuality. God who is the perfectly real, according to the Muslim philosophers, brought the world from non-existence ("adam) to existence (audited) or from humme to if (ikhrādi). The spirits ('ukūl) which act as intermediaries between God and the world are usually called real. It is the activity of the last heavenly spirit, the 'akl fa'cal, which as Ibn Sina, following al-Fărâbi, expresses it, gives everything earthly its form (wakib al-suwar; cf. for this expression Ennead:, v. 9, 3), or, as 1bn Rushd prefers to say, brings everything potential here into actuality. This is however not a distinction in principle between the two philosophers: with Aristotle they regard matter and form as substances, potentiality and activity as their attributes (lawahik).

C. In the Theology of Aristotle (ed. Dieterici, oa) is the following remarkable passage: "In this (sensual) world, action is preferable to potentiality, in the higher (intelligible) world, however, potentiality is preferable to action". This pregnant sentence is not found in the Enneads but corresponds completely to the utterances of Plotinus (Ewn., v. 1. 6 f.; 3, 15 f.; 4, 1 f.; 5, 13 f.] According to a general principle of Plotinus-not however always logically carried through—the categories and main conceptions of Aristotelian philosophy are only to be referred to the sensual world. If they are applied to the spiritual world, they have another but higher meaning. The higher survey is an intensification of the productive faculty discussed under A. In addition. there is an exchange of value in the factors potentiality and actuality.

According to Plotinus, the first and only principle of all things (in the Theology of Aristotle = God) is raised above the logos of the Stoics (kalima, active force) and above the energeia of the Peripatetics (fi'l). It is true that one can say III the νοῦς ('akl), the first created thing, it is λόγος καί everyers of the First, but the First himself is from his nature 80valus, i.e. power, all-power. With the uniqueness of the First (also called, as e.g. by Plato, the absolute good) only one quality, that of omnipotence, is compatible. All activity bowever, whether it is thinking or acting, presupposes multiplicity and effort, which cannot be ascribed to the absolutely simple Being. On this definition of the First as Dynamis, cf. Plato's utterance (Soph., 247 E): "I define the being of the existing in this way, that it is nothing but a Dynamis".

Excluding the Mutazila, it may be said that this emphasis on the omnipotence in the being of the Unique (God) must have been much more natural to the Muslim theologians-although traditionally they deal with God's knowledge before his power-than the Aristotelian view that God is pure Energeia.

which manifests itself only in thinking,

FUZAH [see KAWS BUZAH].

KWANADI (self-designation-Kwanti hekua or Bago'al; Russian designation-Bagulali, but Kvanadinskiy yatlk for language), a people of the eastern Caucasus, Kwanadi forms, with Andi, Akhwakh, Botlikh, Camalal, Godoberi, Karata and Tindi, the Andi division of the Avar-Andi-Dido group of the Ibero-Caucasian languages. Their population was 1,044 according to the road Soviet census.

The Kwanadi inhabit the aufa of Khushtada, Kwanada (Tsumada region), Gimerso, Tisi, Tlibisho (Akhwakh region) south of the bend of the Andi Koysu in the Däghistan A.S.S.R. Living in isolated mountain valleys, the Kwanadi have maintained many patriarchal customs. The Kwanadi are Sunnis of the Shafi'l school. Their traditional economy was based = sheep and goat herding and related activities,

and on agriculture.

There are two dialects of Kwanadi, sc. Bagulal and Thisi, both of which me purely verpacular. Avar and Russian serve in literary languages. The Kwanadi are being culturally and linguistically assimilated by the Avars, and they appear as Avar-speaking Avars in the 1959 and 1970 Soviet censuses (see also ANDI. AVAR. DÁGHISTÁN, AL-KABK).

EWATTA, QUETTA, a town and district of northern Balüčistan, now in Pakistan. In both the former British India and now in Pakistan, Quetta and Pishin, me miles to its north, have formed an administrative district. The region is geologically complex and is very mountainous, with peaks rising up to nearly 12,000 feet/3,850 metres, and it is centred upon the basin of the Pishin-Lora river and its tributaries. The climate is temperate, with cold winters. Crops—wheat being the chief rabit or spring grop and sorghum the chief kharif or autumn one-can only be grown in the alluvial river bottoms, and then by irrigation; at present, there are about 300 kartis or kandis (a.v.), plus a reservoir and a canal, for this. The surrounding mountains furnish chromits and also coal (in the Sor range near Quetta and at Mac in the Bolan Pass area), whose exploitation now employs several thousand men, including Swati migrant labour and Pathan and Balüc nomads in the offherding seasons.

In mediaeval Islamic times, the history of the Quetta-Pighin region was closely connected with that of Kandahar [g.u.], some 130 miles/210 km, to the north-west with which it is connected by an ancient route through Camen just on the Pakistan side of the modern border with Alghanistan. The town of Quetta (whose name may stem from Pashto kwate "heap, hill", or from kots "room, fortress", ultimately from Hindi kolka) was more commonly known till the 19th century, and is still known by the local people, as Shāl or Shālkot; Mountstuart Elphinstone in 1800 calls it "Shawl" (An account of the kingdom of Caubal", London 1839, ii, 225). In 884/1470 Husayn Mîrză Baykarā [q.u.], the Timūrid rulet of Harāt, awarded Shal, Mustang and Sibi to Dhu 1-Nun Beg Arghun of Kandahár (see ARGNUN). These places passed after Dhu 'l-Nun's death in 913/1507 to his progeny, and in 930/1524 Shah Husaya Beg b. Dhi I-Nan acknowledged the Mughal Babur's suzerainty. After a brief Safawid occupation of 963-6/1556-9,

RWATTA

they were incorporated in the Mughal empire. The Afin-i Abbaeff, tr. H. S. Jarrett, ii, Calcutta 2949, states that the Quette-Pighin region supplied the Emperer Akbar with 2,500 cavalry and 2,500 infantry, plus grain, sheep and 38 tumins in money. After to3z/z6zz it came under Safawid control again, and Shāh 'Abbās I [q.u.] conferred Shāl, Mustang and Sibl on the Pathan chief Shir Khan Tarin. In the 18th century, the Quetta-Pishin region was disputed by Ghilgay Pathens and the Brahuis of Kniat, but after 1112/1758-9, Ahmad Shah Durrant [q.r.] left Nastr Khān of Kalāt - ruler in Quetta in return for a contingent of troops, at a time when the Afghan ruler's position in India was being threatened by the Mahrafas. Henceforth, Quetta was controlled by the rulers of Kalāt, whose seat was the town of that meet name 103 miles/182 km. to the south [see KILAT]; Pishin and Shorarud, however, remained in Afghan hands till 1879 (see below).

580

The importance of Quetta in recent times has arisen from its commercial role as an emporium for trade between southern Aighānistān and the lower Indus valley, but above all, from its strategic position. It lies at a point where a north-south route runs from Kandahar and the southern Afghanistan frontier via Quetta and the Bolan Pass to Jacobabad and the Indus at Shikarpur in Sind, and where a transverse route many from the middle Indus at Dera Ghazi Khān (see pāranjār) and runs westwards through Quetta to the Persian border. These factors became especially operative in the 19th century after the annexation by Britain of Sind (1843) and the Pandjab (1849). During the First Afghan War (1839-42), when Shāh Shudiās ai-Mulk was placed on the throne in Kabul [see AFGHĀNISTĀR. v. History], Quetta occupied by British forces during these years; the town was used as a forward base for operations in the Kandahar region, and a political agent, Capt. Bean, installed there. It was, nevertheless, still only a small place, with a mud wall pierced by two gates and the governor's fort or miri on artificial mound; C. Masson in the late 1820s said that "Shall" possessed "about 300 houses and a fair bazaar" (Norvaine of various journeys in Balochistan, Afghanistan and the Purejab, London 1842, i, 327-30); and W. Hough described it in 1839 as "a most miserable mud town, with a small castle on a mound, on which there was a small gun, on a rickety carriage" (A narrative of the march and operations of the army of the Indus in the expedition into Afghanistan, London 1840). Three decades later, A. W. Hughes still estimated its population at only ca. 4,000 (The country of Balechistan, its geography, topography, ethnology and history, London 1877, 67, 73-4).

After 1842, when Quetta reverted to the Khan of Kalāt's control, voices in the Government of India, such as that of General Sir John Jacob in 1856, urged Its permanent occupation as a vital strategic point and also its being linked with Sind and Karaci by railway (The views and opinions of General John Jacob, ed. L. Pally, Bombay 1858, 149). It was, however, feared. that such a distant place, as it then was, in the heart of the tribal area of northern Baltičistan, would be difficult to hold in times of crisis, and the proponents of "masterly inactivity" carried the day until the 1870s. Fears arising from the Russian advance against the Central Asian khanates and possible pressure on Afghānistān led, however, to the adoption now of a "Forward policy", and in 1876 a decision was made to occupy Quetta. The Treaty of Jacobabad between the Viceroy Lord Lytton and the Khan of Kalat renewed the right of Britain, already secured in 1854, to send troops Into Kalat territory in times of stress and made Kalat into a protected native state. Quetta was occupied, and Major (later Sir) Robert Sandeman became the first Agent there to the Governor-General.

Quetta's military value was soon proved in the Second Afghan War (1878-80), when troops moved through the Bolan Pass and via Quetta into the Kandahar region. By the Treaty of Gandamak of 1879 with the Afghan Amir Ya'kub b. Shir 'All, Sibl and Pishln, with the land up to the Kh*adja 'Amran Mts., the so-called "assigned districts", were ceded to Britain, to form with Quetta in 1887 the nucleus of British Balūčistān; in 1883 Quetta was formally leased to the Government of India by the Khan of Kalat in return for an annual payment of 25,000 rupees. It was at this time that the administrative District of Quetta and Pishin was formed. After 1879 a broad-gauge railway was built from a point near Sukkur to Pighin via the Harnai Pass, and Quetta now became linked with the North-West Railway system of India. Later, during the First World War, a lengthy branch (441 miles/830 km.) was constructed through British Balüčistan westwards to a railhead in Persian territory at Zähidan.

Quetta town is situated in lat. 30°10' N. and long. 67°1' E., and lies at an altitude of 5,508 feet./1,770 metres at the northern end of the Shal valley. Under British rule, it became a very important military centre, the headquarters of the 4th Division of the Western Command, and the seat of the Staff College. In 1896 it became municipality. Quetta lies in an earthquake zone, and was severely hit by the earthquake of 1935, when tens of thousands of people died: buildings subsequently erected there have had to be earthquake-proof (see R. Jackson, Thirty seconds at Questia, the story of m earthquaks, London 1960). It possesses a good amount of local industry, and in 1972 had mestimated population of 139,800 (swollen in summer-time by temporary residents), comprising the cantonment and the civil area. The population of Quetta itself is now somewhat mixed, though still largely Pathan. The surrounding areas are, to the north, overwhelmingly Pathau and Pashtospeaking (Kākais, Tarins and Āčakzays); this Pashto is close to that of Kandahar, i.e. of the southwestern group (for specimens in the Pashto of Kandahar and Pighin, see Linguistic survey of India, 2, 105-12). To the south of the town, the Brahui area begins. Quetta accordingly straddles the ethnic and finguistic boundary between Pathans and Brahuis-Balüč.

In the present administrative organisation of Pakistan, Quetta is the centre of Quetta-Pishin District, continuing the former British arrangement here (area 5,314 sq. miles/13,763 km.*), and also, since the re-organisation of 1955, when Balüčistin was merged into the single western unit of Pakistan, the centre of the Quetta Division, comprising the Districts of Quetta-Pishin plus those of Zhob, Loralai and Sibi to the east, and Chagai to the west (area 53,115 sq. miles/137.567 km.*).

L

LA'AKAT AL-DAM "lickers of blood", the name given to a group of claus of Kuraysh. According to tradition, Kusayy [q.v.] had allocated to the different subdivisions || Kuraysh the quarters which they were to occupy in Mecca and had entrusted to the Banû "Abd al-Dâr various local offices: administration of the dâr al-nadara and bearing the standard (limā"), the turnishing of provisions (sifāda) and drink (sikāpa) to the pilgrims, and custodianship of the Kasha (kidābā [see KASA]). However, the Banū "Abd Manāt thought themselves more worthy of these privileges, and Kuraysh (with the exception of the B. 'Amir b. Lu'ayy and Muḥārib b. Fihr, who stayed neutral) split into two hostile factions.

The B. Asad b. 'Abd al-Uzzā, the Zuhra b. Kilāb, the Taym b. Murra and the al-Ḥārith b. Fibr joined the side of the B. 'Abd Manāf, and the five clans swore to aid each other and not to abandon each other's cause mā balla baḥr sifa, i.e. till the end of time. In order to make binding the oath, a vessel full of perlume was brought into the Ka'ba, and the participants dipped their hands in it and then dried them on the walls of the shrine. Thus they became known as the Muṭayyabūn "perfumed ones".

In the opposing group, the B. 'Abd al-Dar had the support of the B. Malchzum, the Sahm, the Diumah and the 'Adi b. Ka'h, and these five claus took the same oath and became known as the Ahlaf "allies". The two sides were ready to come to blows when an appeal for reconciliation was made, and peace was kept by the 'Abd al-Dar's conceding to the 'Abd Manai the sikäya and the rifäda.

The composition of the respective two groups is given identically in the old sources, but the Ahlai are not always given, and Ibn Kutayba, for instance, speaks only of the Mutayyabûn (Ma'arif, 604). Nevertheless, in his rescension of the dimm of Hassan b. Thabit (ed. W. Arafat, London 1971, ii, 200), Muhammad b. Habib cites a passage of al-Kalbt which attributes also the name lafaket al-dam to the Ahlai, and m his Muhabbar, 166, this same author states that this group slaughtered a camel and plunged their hands into its blood; since one member of the B. Adi licken this blood, the rest of the Kuraysh present imitated him and were therefore called latakat al-dam. A parallel version is given by Ibn Sa'd (Tabaka, ed. Beirut 1380/1960, i, 77), with the difference that we only have mention of a vessel containing and no reference to the sacrifice of a camel. The author of the Kāmūs (s.v. l. c. h) echoes this tradition and gives the name of la'akat al-dam to the five class mentioned above, giving the detail that in order to seal the oath they killed a camel and either licked its blood m dipped their hands into it; he does not however say anything about the circumstances surrounding this ceremony.

Now, for its part, the Sira indeed sets forth the difference between the Mujayyabûn and the Ahlaí over the public duties in Mecca (i, \$31-2), but does

not mention here the name la abat al-dam, which it (i, 196-7) for see of the two groups formed at the time of the dispute among Kuraysh about the positioning of the Black Stone during the rebuilding of the Kasba. It relates that the B. Abd al-Dar brought in a vessel filled with blood and dipped their hande in it, swearing, together with the 'Adl b. Kab, to fight to the death; it was at this time that they became called latakal al-dam, but the Sira does not say whether other clans joined with the 'Abd al-Dar and the 'Adl nor anything about the licking of fingers. In any case, it was a member of Makhzum who advised the two opposing sides to submit to the arbitration of the first person who entered the Kaba by the door of the Banu Shayba. and as is well-known, this was the Prophet. We find exactly the same version as the Sira's one in al-Tabari, 1, 1138.

A little later, al-Mas'cidl [Muralli, iii, rig-2t = §§ 958-70) enumerates the factions making up the Ablat and Mutayyabûn, but gives the name of lataket al-dam to the ten class belonging, in his view, to the Kuraysh al-Bitāh and made up, apart from two exceptions, of the united body of the two factions involved.

It appears clearly from all the pieces of evidence mentioned here and agreeing about the Mutayyabûn and Ahlāi of Mecca, but disagreeing about the episode of the lafatai ai-dam, that we have such a vague tradition that one wonders whether the story of the hands dipped in blood and licked has not been invented in the interests of symmetry by traditionists anxious to find a parallel with the perfume of the Mutayyabûn. It is furthermore the only attestation of a practice involving the taking in of a few drops of blood [see DAN in Suppl.] which im possess, and the LA makes no allusion to it when it cites, in regard to the oath called ghamás [s.v. gt. m. s.], the ashes, perfume and blood in which the oath-takers steeped their hands.

LASB [see LASTR].

LABĀB (from Pers. lab-i āb "riverside"), the irrigated region along the banks of Amū Daryā [q.v.] in its middle course. The same, though of Persian origin, became known apparently only in modern times, when this region became one of the main centres of the settlement of the Turkmens. The exact limits of the region have never been defined; it that it extended as far as Darghān (the southernmost town of Kh arazm [q.v.]) in the north and if as as Kālif [q.v.] in the south. In pre-Mongel times a narrow tract of cultivated land stretched along both the left and the right banks of the river, though on the left bank conditions for artificial irrigation were better; the uniformly cultivated tract began to the north of Amul [q.v.].

in the post-Mongol period, the irrigation system fell into decay, and both banks of Amu Darya were inhabited by nomads, except for several townships with their surroundings. After the middle of the 17th century, a number of Turkmen tribal groups began to migrate to Labab from Western Turkmenia through Khwaraum, and in the 18th century the region was inhabited mainly by Turkmens who became sedentarised and built a network of irrigation canals. In the 18th and 19th centuries, Labab belonged to the Khanate of Bukhara and was administratively divided between two wildysts, Cardiuy (former Amul) and Kerkl. In the 19th century, Labāb was the most densely populated region among all those inhabited by the Turkmens, and lack of irrigated lands brought about considerable emigration to Afghanistan and Eastern Bukhara. The most numerous among various Turkmen groups of Labab have been the tribes Salur [q.v.] to the north-west of Čārdjūy, Sakar to the south-east of Cardiny, and especially Ersari [q.v. in Suppl.] further to the south, up to Kälif. Besides them, there have been in Lahab almost 30 other tribal groups of Turkmens interspersed with each other and, in the vicinity of Cardidy, with Uzbeks. Now Labab belongs to the Turkmen Soviet Republic of the U.S.S.R., forming the core of the oblast' (province) of Cardiay.

LABBAI (Tamil ilappai, thought by Tamil culama to derive from labbayka, the pilgrims cry [see Talsiya]), a community of Tamil-speaking Muslims residing in or originating from Tamilnadu State, South India. Labbai is a generic term incorporating four subdivisions, the Marakkayar, Kayalar, Rawther and Labbai. All four groups are Sunnis, the first two predominantly of the Shāfi'i school, while the latter two are Hanafts. The Marakkayars and Kayalars predominate in the southern coastal regions of Tamilnadu, while Rawthers and Labbais reside in greater numbers in the state's north and its interior. Urbanisation has led to the geographic mixing of these communities, but in the countryside usually only one group lives in a particular location.

Each subdivision is associated with a distinctive tradition. The Marakkayars claim to be the descendents of Arab im traders and have a reputation dealers in gems and pearls and im smugglers. Kayalars are said to originate from Kayalpatinam, once an important port on the southern Coromandel coast. These two groups once published books and newspapers written in the Tamil language and using the Arabic script. The Rawthers claim a heritage as cavalrymen and horse-traders, while the subdivision

of Labbais are said to be the descendents of Kur²anic scholars. In Madural District, Rawthers refer to the employees of their mosques as Labbais.

The four Labbai subdivisions are effectively endogamous, although they accept no ideology that would dictate this. On the contrary, they are adamantly egalitarian and do not accept any caste ranking of their groups, despite being surrounded by caste Hindus. The small amount of intergroup marriage that does occur in the cities substantiates this egalitarianism, since these marriages are considered socially acceptable.

The Labbais are more urban than rural, and consider mercantilism to be their occupational forte. In 1961 approximately 55% of the Muslim population of Tamilnadu was urban compared to 26.7% of the total state population. This latter figure is commensurate with a society based an agricultural economy. The 55% figure is high and reflects the non-agricultural basis of the Muslims' livelihood. Throughout the state they are recognised as astute businessmen and traders. A few familles have achieved wealth, but most operate petty businesses.

In search of I livelihood, Labbais have travelled over much of the Asian world, especially over Southeast Asia. For centuries they were Important economic and political force in Malacca, and they are found in numbers in Malaysia, Thailand and Singapore. Prior to World War II, some had business in Japan. Wherever they go, they are primarily merchants.

Despite the Labbais' far-flung wanderings, India remains a homeland for them and ties as maintained with kinsmen in India. Often, overseas Labbais maintain households and families in India to which they periodically remit money and return home. It is clear that, despite their wanderings and attachment to Islam, they identify themselves at Tamilians.

The Labbais identify strongly with Tamil cultura and society. For most of them, Tamil is the language both within and without the mosque. The Tamilspeaking Muslims are proud of their contributions to Tamil literature, the sine que non of Tamil culture. The Labbais of the countryside dress in a fashion which is more similar to the Hindu mode than do most of their urban fellows. Their celebration of the 'Abd al-Kādir Dillani 'Urs commemorating the death of 'Mohaiyadeen Abdul Kadar Andakai Jilani" is in many features similar to the Hindu cart festivals. Saint worship centred around this 'Urs forms an important popular undercurrent to the strict orthodoxy of urban religious leaders. Many Labbais do not eat beef because they have been socialised to Hindu custom, but not to Hindu religious ideology.

In the northern part of Tamilnadu and in Madras City, the Labbais have undergone process of Islamisation with a stress on Sunni orthodoxy. Saint worship is frowned upon as ghirk by religious leaders, and when it occurs is much less flamboyant than the gala events of the countryside and is accompanied by conscious attempts to avoid skirk. Labbai dress is distinctively Muslim, and many have acquired Urdu = second language because they consider it the language of Indian Muslims and akin. Arabic, if only in script. Some mosques in this northern part of the state recognise the importance of the Dar al-Ulim at Deoband as a centre of religious learning, and hire haffigs from there during Ramadan. The impulse towards Islamisation is part of a process of de-parochialisation. As Muslims have become urbanised, their desire to become

recognised m good Muslims as well as good Tamilians has increased.

LABBAYKA [See TALBIVA].

LABIBI, the pen-name of a Persian poet who lived at the end of the 4th/11th and the beginning of the 5th/12th century. His personal name as well as almost any other particulars of his life are unknown. The Tardjuman al-balagha has preserved an elegy by Labibi on the death of Parrukhi [q.v.], which that the former was probably still alive in 429/1037-8. A kasida attributed to him by 'Awil is addressed to a mamdah by the name of Abu 'l-Muzaffar, who in that source is identified with a younger brother of the Ghaznavid Sultan Mahmild. But it is more likely that he was a member of the Al-i Muhtadi, the rulers of Caghaniyan, who was also a patron of Farrukhi's poetry (see C. E. Bosworth, The rulers of Chaghaniyan in early Islamic times, in Iran, JBIPS, xix [1981], 11-12). In the Madima" al-fusaha? (i, 445) the poem is in fact presented as a work of the latter, but it also occurs In manuscripts of the Diwax of Manucibri and in works of other poets. The attribution to Labibi was rejected by Rypka and Borecky, but is defended by most modern Iranian scholars. Apart from this poem, the remaining poetry of Labibl consists of fragments only, mostly single lines quoted in evidence by lexicographers. Some of these lines belonged to mathnawi-poems, the subject of which - no longer be ascertained.

Though his work fell into oblivion quite soon, Labible must have been a poet of meet distinction in his own age. Baybaki, writing about 450/1058, appreciated him as an ustad-i sukhan; and so did Mat'üd-i Sa'd-i Salmān, who also styled him sayyid al-shu'ara' and imitated an of his kasidas (Diwan, ed. R. Yasimi, Tehran 1339/1960, 37t). The many quotations contained in the Lughat-i Furs of Asadi prove that his poems were still circulating in the later part of the 5th/11th century.

Bibliography: The remnants of Labibl's postry were collected and studied most com-

prehensively by J. Rypka and M. Borecký, in ArO, xiv (1943), 261-307; other collections were published by Muhammad Dabir-Siyaki, in Mihr, viii (1331/1952), 310-2, 367-71, 650-3, Labibi wa ash ar ii, Tehran 1932/1939, and Gundi-i bās yāsta, i, Tehran 1334/1955, 1-34. See

LABID s. RABI'A, ABO 'Agil, Arab poet of the mukhadram. He belonged to the family of Banû Djaffar, ■ branch of the Kilāb, who belonged to the Banú 'Amir b. Sa'sa'a (see Ibo al-Kalbi-

Caskel, Tab. 93 and Register, ii, 374-5).

1342/19634, 547-50.

According to Ibn Sa'd, vi, z1, be died in 40/660-1 in the night on which Mu'awiya arrived in al-Nukhayla to conclude peace with al-Hasan b. 'All. Others, like Ibn Hadlar, iii, 657, whom Nöldeke (Fünf Mo'allagdi, ii, 51) thinks ought to be followed, give 4r A.H., others again 42. He is said to have reached unusually great age (al-Sidjistani, K. al-Mu'ammarin, ed. Goldziher, § 61). In fact, he makes several allusions to this in his poems. The date of his birth can only be approximately fixed. Even before 600 A.D. he seems to have attained a prominent position in his tribe by his command of language. As guite a young man, he is said to have accompanied deputation from his tribe to the court of king Abû Kābūs Nu mān of al-Hīra (cs. 580-602), and when the latter incited against the Banû Amir by his friend Abu Rabi' b. Ziyad al-'Absi (of the tribe to which Labid's mother belonged), Labid succeeded with a satirical radias poem (Diwin, no. 33) in so ridiculing him to the king that he restored his favour to the Bann 'Amir. A verse from Na'man's answer to his courtier, who sought to defend himself from the lampoon on him in this radias poem, became proverbial (cf. al-Mufaddal, al-Fākhie, i, 41-2; al-'Askari, Amthal, on the margin of al-Maydani, ii, 117, 7-18; al-Maydani, ii, 33; K. al-Aghani, xv. 94 L; 3xvi, 22 L; Abd al-Kadir, Khizanat al-adab, ii, 79 ff., iv, 171 ff.). In his later poems Labld also often prides himself on having helped his tribe by his elequence. He remained loyal to his tribe even when m famous poet, and scorned mm profession of a wandering singer, practised by his contemporary al-'Asha. But the coming of the Prophet Muhammad threw him out of the usual groove. We do not know the exact date of his conversion to Islam. As early as Dimnada II of the year 8 Sept.-Oct. 629, the chiefs of the tribe of 'Amir b. Sa'sa'a, sc. 'Amir b. Tufay! and Arbad b. Kays, ■ stepbrother of Labid, seem to have negotiated in Medina about the aribesion of their tribe to the new community, but without reaching any result (see Caetani, Annali, ii, 90 ff.). Both men am said to have man afterwards come to an

untimely end, "Amir from plague and Arbad from a lightning stroke; the latter story seems to find confirmation in Labid's lament for him (Diwön, no. 5). The accusation on the other hand that Arbad attempted to kill the Prophet is quite incredible. In the year 9/630-z, the tribe again sent m deputation to Medina which included the poet, and an agreement was reached. Labid is said on this occasion to have become a Muslim. He later migrated to Kûta, where he died. Of his family, only m daughter is mentioned who is said to have inherited his talent (see al-Maydani, ii, 49, 23 ff.; al-Ghuzült, Majdii' al-budür, i, 52, 7 ff.).

Labid's poems were very highly esteemed by the Arabs. Al-Nabigha III said to have declared him the greatest poet among the Arabs or at least of his tribal group, the Hawazin, on account of his Ma'allaka. He himself is said to have claimed third place after Imru' al-Kays and Tarala, Al-Djumahl (Tabakat al-gjufard), ed. Hell, 29-30) places him in the third class of pagan poets along with al-Nābigha al-Dja'dī, Abū Dhu'ayb and al-Shammakh. Labid showed himself equally master of the kidja', the marthiya and the kasida. One of his kasidas was adopted into the collection of Mu'allahat and is thought by Nöldeke (Fiinf Motallagat, ii, 51) to be one of the best specimens of Bedouin poetry. Labid uses the traditional pictures from the animal world-wild asses and antelopes fleeing before the hunter and fighting with his dogs-as charmingly as the usual complacencies about drinking bouts. He seems, on the other hand, to have cultivated the sasib only because it was traditional. He deals far less with the subject of woman's love than with the description of the attal, which he likes to compare with artistic calligraphy. He is also fond of recalling memories of places of his native district, the palmgroves and irrigation channels which continually move him to charming descriptions; indeed, in one such connection he gives the whole itinerary (Diwan, no. 19, vv. 4 ff.) of a journey from central Arabia to the coast of the Persian Gulf (see von Kremer, op. cit., in Bibl. below, 12). As his almost contemporary Abû Dhu'ayb is fond of doing, in the Mu'allaka, v. 55 ff., he turns however once more to his beloved, and thus combines the natib with the main part of the kasida into an organic whole; but for him this is simply a mode of transition to a new descriptive passage. His poetry is, however, distinguished from that of other poets of the pagan period by a certain religious feeling which seems to have been not exactly rare among his contemporaries, even before Muhammad's mission. While Zuhayr, for example, still expresses his practical wisdom derived from the experience of a long life, in plain though impressive language, Labid m such occasions always strikes a religious note. He certainly did not profess Christianity, nor can we see in him I representative of the socalled hanifs of the Sira, as you Kremer wished to do. In him, rather, we find the belief in Allah as the guardian of morality finding particular expression, a belief already widely disseminated in Arabia. Such passages naturally invited the Muslim traditionists to increase them. Indeed, a later author went so far as to escribe to him a verse by Abu 'l-'Atahiya (fragment 18). But many passages of his Diwas seem to owe their inspiration to the Kur'an. The statement that he wrote no more poetry after his conversion 🖚 Islam is obviously 🖿 invention (see ibn Sa'd, vi, 21, 4, repeated later; e.g. by al-Ghūzūlī, Majāli', i, 52, below); it is contradicted by the simple fact that poems 21 and 53 of the

Diwan were only composed shortly before his death (Aghdess, zvi, zor). The description of Paradise (Diwas, nos. 3, 4) is certainly inspired by the information in the Kur'an, like the idea that precedes it, that a record is kept of the doings of men. Under the influence of Islam in nos. 39 and 41 (v. 11 of which, as Ibn Kutayba (K. al Skier, 153, 5) already points out, certainly must be written after his conversion, if it is not to be considered interpolation), he replaces the nasib by pious admonitions. Thus he creates a new artistic form, that of poetical paraenesis on the transitoriness of human life; besides the Kur'an, he may of course have been influenced by the Christian preaching in the works of 'Adl b. Zayd. He only follows older models in this connection when he combines admonition with the averting of blame from a woman in no. 14, as in Tarala's Mulallaka, vv. 56 ft., 63-5 (cf. Caskel, Das Schicksel, 9), where this is, however, only an episode in the kasida.

Labid's Dimin was edited, according to the Fihrist, 158, by several of the greatest Arabic philologists, al-Sukkarl, Abū 'Amir al-Shaybānt, al-Asma'i, al-Tūsl and Ibn al-Sikkit. Of these recessions, only balf of that of al-Tūsl, together with a commentary, has survived in the manuscript of al-Khālidi (see below) from the year 389/1193. All other manuscripts are much later, e.g. those in Leiden and Strasbourg, and that in Cairo not yet utilised, which also contains the Dimin of Abū

Dhu'ayb, ed. by J. Heli.

LABIN or Link (coll.; singular labina, libna) designates in Arabic the unfired brick whose min in building dates back to the earliest antiquity; to speak only of the present domain of Islam, some traces have survived above-ground on the Iranian plateau, in Mesopotamia, Palestine and Egypt, where this material was used in the Pharaonic period to build palaces and royal tombs as well as poor hovels; it is certain that it was also in use in the Arabian peninsula and North Africa. The hog-backed bricks of Mesopotamia appear to be m longer used, and the labina generally has a geometric, fairly regular shape, that of a parallel-sided rectangle, whose variable dimensions are at the largest those of a bond-stone and often have the ratio 4 × 2 × 2 (e.g. length 56 cm., width 28, thickness 14, or 42 × 21. × 10.5. LABIN

36 x 28 x 9, 32 x 26 x 8; but 45 x 35 x 5 in South Arabia). This unfired, rough and fairly economical brick is composed essentially of dampened, shaped clay, which is then turned into a wooden mould (milban) without a bottom or cover, packed tight and finally dried in the sun; the clay is fined down, depending on the region, with sand, gravel, chopped straw, and potsherds in fixed proportions to prevent its crumbling and cracking. Once taken out of the mould, the bricks are left for a while longer in the sun and sometimes stockpiled before being used in the construction of buildings which can reach a considerable height; this was notably the case of the ziggurats of Mesopotamia, and it is still that of the houses, several storeys high, which are built in South Arabia (the technique of manufacture and construction is explained by M. Bataoth and I. Chelhod, Notes preliminaires sur l'architecture de Shibam, in St. Isl., li [1980], 195-6). At Shibam, the foundations to a depth of 3 m. are of stone; however, the trench intended for them, usually wider than the wall, may only be filled up with beaten earth and ballast. In low houses and enclosures the walls are sometimes supported by wooden posts driven into the ground with regular spaces between them. The building can be strengthened, at least in its lower part, by means of two thicknesses of bricks placed alternately longwise and crosswise; the walls erected are generally thicker at the bottom than the top, which, on the outside, gives the impression that they are leaning dangerously. Houses of unfired brick have the advantage of being warm in winter and cool in summer, and there are countries, such as Egypt, where labin is preferred to fired brick. But the large buildings form great masses of thick walls (as much as 10 m. in antiquity), pierced with a few narrow apertures.

This material m in current use, either because of its low cost, m because, in the region, clay is readily exploitable, and stone is rare, hard to extract or too heavy; but rainfall must m be very plentiful, for heavy rains cause severe deterioration of the walls to the point of making them disintegrate, even if they are lined with a coating of earth mixed with lame or plaster. The ancients took some supplementary precautions against erosion, by providing

gutters, drains, reed beds, etc.

Unfired bricks are pointed with a mortar made of earth with an admixture of lime ash (the use of bitumen, as in ziggurats, does not seem to be current). This mortar, like the coating mentioned above, is called madar (see [.A. s.v.) in Classical Acabic, but this term (which one hesitates to connect with materia) seems clearly to be applied also to construction of earth and labin, to judge at least by the expression all al-madas which designates the sedentaries as opposed to ahl al-wabar "the people of the camel skin" = tents, i.e. the nomads, even allowing for the Arab taste for paronomasia; a fairly strong indication is supplied by the meaning of madara "a village built of labin". However, the ambiguity of the vocabulary does not always enable us to distinguish clay or mud from unfired brick, for Arabic texts give the impression that the same term was used for the different techniques; but it is probable that the Prophet's house in Medina was actually of unlived brick and that the akl al-madas lived in dwellings of the same kind, while the expression is also applied, by extension, to some citizens living in stone houses.

Another difficulty arises from the uncertainty of the terminology. Although Ibn Mangur (LA, s.v.)

classifies 16b as a synonym of adjust "fired brick" (see below) and this word still has this meaning in Egypt for example, it designates in the Muslim West lump of earth or an unfired brick, and it is furthermore in this latter sense that it has been adopted and preserved in Spanish in the form adobe. But 1bn Khaldun (Mukaddima, Bk. i, Ch. v. 25) states that the farmed is the mason who builds a wall in clay. At first sight, this craft name appears to be derived directly from 18b with the meaning of "clay", but it is quite possible that a telescoping may have taken place with fdb(i)ys "clay, mud" which, on the other hand, comes from the Spanish tapia (see Doxy, Suppl., s.v.). This borrowing leads us to think that the clay technique, well-known in antiquity, notably in Mesopotamia, was imported into the Maghrib from Spain. Tabya, which is still in use today in Algeria and Morocco, is used by Ibn Khaldun, when he speaks (loc. cit.) of bind2 bi 'I-turab') and describes in detail the way a clay wall is built, according III a process which has not changed since then (cf. a description in Berber in E. Laoust, Mots et choses berbires, Paris 1920, 24). The masons, generally specialists belonging to particular tribes, use a frame made of two boards (lawh) of variable dimensions, but on average 150 to 180 cm. long by 80 wide, which they place face-to-face at a distance equal to the width of the wall under construction; the frame is held in place by cross-pieces and ropes and closed at both ends. The earth, prepared as for natired brick, is mixed with lime, gravel etc. and carried in baskets; soon as it is ready to be turned into the frame, is beaten with a kind of ranmer (miskar, pl. marakis). The workmen generally arrange several frames so as to be able to carry out their work horizontally, then vertically with superimposed coats until the work is completed. Clay, which can form a really solid concrete, is used for the construction of all kinds of buildings, which can reach a great height and be very long-lasting. This is the case particularly with ramparts and military works; near Fås a bridge was built of very hard clay reinforced with fired bricks on top of the arches.

The kiln-fired brick is designated in Arabic by the collective adjure, but to judge by the multiplicity of forms which this term assumes (adjur. adjur, yddjur, adjirun, udjurr, etc.; noun of unity adjurra, adjurra, etc.), all at any rate in the LA, it is clear that the Arabs did not possess either the term signifying or the object signified; nor is it known in what period there took place the borrowing from Persian agair which Arab lexicographers freely recognise. It is a fact that fired brick, whose use is widespread throughout the islamic world, was used particularly in Persia and the lands which directly under its influence. It will be recalled, for example, that the Muslims who founded Basca first demarcated the mosque by means of a reed enclosure, then built it in labis and rebuilt it in fired brick a few years later, All the same, a Roman and Byzantine influence was felt to an equal extent in the regions situated further west. The word which is used today with the meaning "tile", kirmid, is a sing, made from kardmid, of which the LA asserts (yex.m.d.) that it designates in Syria the fired bricks (ddjurr) of the baths and comes from the rūmi word hirmidāļi (sie; nepapite, tboc "brick, tile", rather than xépageogl.

The kin (attain) is similar to that of the potters, and consists of a furnace with a firing-room on top of it. Of smaller dimensions than the labin, the fired brick is not nearly thick (3 to 6 cm.). Buildings

in which it is exclusively used are seen (a characteristic example is the Mausoleum of the Samanids at Bukhārā, where the arrangement of the bricks is particularly stylistic); in fact, it is generally bined with other materials (e.g. the Kasr al-Hayr ai-Gharbi [q.v.] consists of a wall of limestone, fired brick and unfired brick at the top); it is used for certain parts of the building (arches, vaults, staircases, etc.) and put to good use by architects wary the decoration of their works. From the 6th/12th century, the glazed block has offered the possibility of obtaining similar effects to those of

(CH. PELLAT)

LABLA, the name given by Arabic authors to NIEBLA, ancient llipla, which was the seat of a bishop in the Visigethic period and which is situated about so miles to the west of Seville in the right bank of the Rio Tinto (in the modern province of Huelva). Certain authors, notably Yakut, also call it al-Hamra' because of the reddish colour of its walls and of its environs. It was the main town of wood the karas of the Gharb al-Andalus (q.v.); it must have been integrated within the great division of $1 \frac{1}{8} h$ biliya $[q.\nu,]$, and separated from it in the course of the administrative reorganisation. The kura was bounded, at 40 miles to the west, by the plain of Ukshunūba; at 20 miles to the east, by the Aljaraie of Seville; at miles to the north, by the hura of Būdia [e.v.] (Beja); and at 6 miles to the south, by the Atlantic. According to al-Udhri, it contained eight districts (akalim), including that of the town Itself, and the total tax revenue in the time of al-Hakam I went as high as 15,627 dindes. The town's population included a certain number of Arab families, amongst whom the Yahşubis were dominant, some Berbers and the descendants of the Hispano-Romans and the Hispano-Visigoths, both Christian and Islamicised.

The soil of Labla (avoured all sorts of agricultural exploitation, thanks to its fertility and to the waters which the three river sources of the Sierra d'Aracena brought down; one of these gave sweet drinking water, another contained alum and the third copper sulphate. The district produced cereals and a wide variety of fruits, with fig trees, numerous olive trees and vineyards which yielded high-quality raisins. Excellent saiflower (fusfür, carihamus tinctarius) was grown which, together with other dyestuffs like cochineal (Sirmir), was used for dying leather and skins. Bovines and horses were reared, and these, plus hunting and fishing, were sources of wealth. It was also a lively commercial centre.

Niebla still retains ancient remains and solid walls from its original foundation. There were dependent on the madina towns and a fortress, notably for m certain period, Huelva (Awbābā, Onaba 🞟 Wānaba), Tejada (Talyāta) and Gibraleon (Diabal al-'Cyūn)

on the Odiel.

According to Ibn al-Shabbāt, it was conquered in 93/712 by Müsä b. Nuşayr or, more feasibly, by his son Abd al-Aziz in the next year. Niebla was the seat of a part of the djund of Hims. In 149/766 there was the rising of Sa'ld al-Matari al-Yabsubl. In 240/844, after having occupied Ishbiliya for some days, the Northmen - Madjus [g.v.] went on to Labla, sacked it and carried off the inhabitants.

In 284/897 occurred another rising, whose suppression the amir of Cordova entrusted to his son Aban. Between this date and 304/976 it must have risen yet again, for on m Ramadan 304/17 March 917 the hadjib Badr b. Ahmad occupied it when it was in the power of a certain Uthman b. Nasr. At the fall of the caliphate, it became a td3ifs principality. actually set up in 414/1023-4 when Abu 'l-'Abbas Ahmad b. Yahyā al-Yahsubi, Tādi al-Dawia, up and was proclaimed ruler, this being recognised by the people of Gibraleón. His brother and successor (in 433/1041-2) had difficulties with al-Muftadid of Seville. For some time, al-Muzaffar of Badajoz provided the ruler of Labla with help, but in the end the latter had to shelter under the protection of Abu 'I-Walld Ibn Diahwar [see MAHWARIDS], with whom he sought refuge in 433/1052-3. Labla remained under the rule of his nephew, Fath b. Khalaf b. Yahya, Naşir al-Dawla, who made a treaty with al-Mu'tadid; but the latter ravaged his territories and in 445/1053-4 Fath b. Khalaf had to flee to Cordova, where he died.

In the middle of the year 484/1091, Labla passed into the hands of the Almoravids. In co. 538/2244, the doctrines of Ibn Kasi [q.v.] of Mériola caused a certain amount of anxiety. Being hostile to Almoravid power, Yüsuf b. Ahmad al-Bitrüdil defended the town against Ibn Ghaniya until the time when it submitted, in 540/1146, to the Almohad Barraz al-Masúff. Eight or nine years later, the latter rebelled, and Labla had to be taken in 549/1154 by Yahyā b. Yaghmūr, who conducted a great massacre of the populace. The Injante Don Sancho of Portugal and Portuguese troops passed by Labla in 574/1178 and 578/1182. Under Ibn Mahfüz, it was to form, in the 7th/13th century, an independent principality comprising Huelva, Saltés and part of the Algarve, and recognised the suzerainty of Ferdinand II of Castile. It was besieged for several months by

Alfonso X, and capitulated in 660/1262.

([. Bosch Villa) LACCADIVES, a group of coral Islands in the south-eastern Arabian Sea lying off the Malabar Coast of India between lat. 8º and 12°30' N., and between long, 71° and 74° E. Under British Indian rule these were formerly the Laccadive Minicov and Amindivi Islands; but in 1956 the group was brought under a single administration to form the Indian Union Territory of Lakshadweep (Sanskrit: Laksadolpa "the hundred thousand islands10). There are in all 27 islands and islets of which ten-Maliku, Kalpeni, Kavrathi, Androth, Agathi, Amini, Kadmat, Kütan, Bitra and Chetlat inhabited. Maliku, which is separated from the rest of the group by the 114 mile-wide Nine Degree Channel and from the Maidive Islands [q.e.] by the 71 mile-wide Eight Degree Channel, is attached Lakshadweep politically, but belongs ethnically and culturally to the Maldives. In this article it is considered separately from the "Leccadives Proper".

The Laccadives were originally settled (possibly early as the and century A.D., but certainly by the rett/rth century) by Hindu groups (Nambudiri, Nayar and Tiyyer) from North Malabar. Little is known of the early history of the islands. They were conquered by the Chola Rādjās of South India in the 4th/roth century. By ca. 1500 they had passed under the rule of the Kölatiri Rādjās of Kölattunād (North Malabar), by whem they were given in didgir [q.w.] to the Ali Rādjās of Kaunanūr [q.v.] in the mid-roth/roth century. The Ali Rādjās were the leading family of the Malabar Muslim community or Māppilas [q.w.], and under their rule the Laccadive Islands' coir trade became the monopoly of the Kannanūr Māppilas.

In 1786 the inhabitants of the northern (Amindivi) islands of Amini, Chetlat and Kiltan rose in protest against the coir monopoly and the harshness of Kannanur rule. They appealed for protection to Tipo Sultan of Mysore [q.v.], and as a result were transferred to his rule in 1787; they passed to the East India Company after the fall of Seringapatam in 1799. The Southern (Laccadives) group remained under Kannandr until they were finally sequestrated by the British in 1875 (though the Bibi of Kannanur retained a nominal sovereignty until 1908). Both groups of islands remained under British rule until India attained independence in 1947. Today the capital of the Union Territory of Lakshadweep is Ravrathi Island, and the population (including Maliku) is 32,810 [Census of India, 1971, Series 29 (Lacendive, Minicoy and Amindini Islands, part

The people of the Laccadives are linked ethnically and culturally with the Malayalam-speaking Dravidian people of Kerala, especially with the Mappitas of North Malabar. There has also been a sustained Arab—particularly Yemeni—influence the islands which lie in the path of the direct sea route between Arabia, South India and the Far East; certainly the mediaeval Arab navigators were familiar with the Laccadives, which they knew as the Divarial fidition of (collectively with the Maldives) as the Dibagist (G. R. Tibbetts, Arab navigation in the Indian Ocean before the coming of the Partuguese, London 1971, 458-50). As a result of this Arab

influence, ill islanders speak Malayalam with an admixture of Arabic, and write in the Arabic script.

The Laccadives were converted to Islam in ca. the 7th/13th century, according to legend by "Ubayd Allah, an Arab castaway whose tomb on Androth island is particularly venerated. The islanders are overwhelmingly Sunni Mustims III the Shāfi'i madkhab, but there are also followers of the Rifá'i and Kādirī tarīkas, and of the Wahhābi-oriented Mudjāhid movement (which is active in Kerala). The women do not observe purdas and may (as in the neighbouring Maldives) have their own mosques with a female imâm (Ellis, A short account of the Laccadive Islands and Minicoy, Madras 1924, 66).

Unusually for an Islamic society, the Laccadivea are predominantly matrilineal. The people follow the Malabar system of matrilineal descent (Malayalam; Maramakkathāyam). The community is organised in exogamous matrilineal groups known as taravāds. There is a duolocal residence pattern (i.e. after matriage the wife remains in her maternal home and is "visited" by her husband). Descent is traced through the mother, and family (taravād) property is passed on through the mother's line. The self-acquired property of the father is passed according to the Islamic family law, Monogamy is usual, but divorce is common.

The Laccadive Islanders are divided into three caste-like endogamous groups, in hierarchical order the Koyas (the land-owners); the Malmis (from the Arabic murallim, traditionally the sailing class); and the Melacheris (the occount workers—originally the agricultural serfs of the Koyas). Today both the traditional caste-structure and the maximak-makayam system — breaking down under the impact of modernisation.

Maliku (corrupted by Europeans to Minicoy, perhaps from the Arabic Milikai), is an isolated island within the Maldivian cultural sphere which by the mid-roth/roth century had fallen under the control of the Alt Radjas of Kannanur. Maldivian political control has never been re-established. The inhabitants - Indo-European, speak the Maldivian language Diviki (though it is known on Maliku as Mabl), and use the Maldivian script Tana. Originally Theravada Buddhist, the Islanders are today Sunni Muslims of the Shafift mudhkab. They were probably converted in the mid-6th/12th century. Descent is patrilineal, but women occupy a respected and powerful position in society. They do not observe purdah, but sometimes wear a head-veil called the burkga. As in traditional Maldivian society the people are divided into four hierarchical, caste-like groups; see MALDIVES.

LADÄKH, a region of the extreme north of India. It lies between lat, 32° and 36° N and long. 75° and 80° E, and is bounded the north and east by the Chinese territories of Sin-kiang and Tibet, the south by the Indian province of Himacal Pradesh, on the north-west by Baltistan, and muthe west by Kashmir, of which it now constitutes a province, covering an area of 30,220 sq. miles. Its capital is Leh.

Ladākh is known to the Tibetans as Mangyāl or Maryul. The population may be divided into four racial groups, Campas, Ladakhis, Baltis and Dards, of whom the first three are of Tibetan stock and the last Aryan. There is a small Muslim community, but the majority are Buddhist, whence the name Bhottas traditionally given to the inhabitants of Ladakh by their neighbours.

The indigenous chronicles furnish little more than a list of rulers with the merest sketch for each reign (see K. Maex, Three documents relating to the history of Ladahh, in JASB, Ix [1891], 97-135; lxiii [1894], 94-107; lxxi [1902], 21-34), but from time to time references in external sources provide =

valuable landmark. In the 8th century A.D., through the medium of Kashmir, then vassal to the Tang, Ladakh briefly drawn into the Chinese sphere of influence, after which there is a long gap until around 1400, when Leh received = embassy from the great Tibetan reformer Tsong-kapa. At this time there were two main principalities in Ladakh, but in the mid-roth/roth century we find the country reaching its greatest extent and united under ruler. Its size was temporarily reduced through subsequent wars with its neighbour 'All Mir [see BALTISTAN], and late in the rith/17th century it was invaded from Tibet by the Diungarian Mongols [see KALMUK]. This threat Ladakh withstood by calling in the aid of the Mughal Emperor, who made it a condition that the ruler should become a Muslim. His successors were again Buddhists, but from this time dates the penetration of the country by Islam.

In 1834 it was invaded by Zurāwar Singh, the general of Maharādjā Gulāb Singh of Djammū, and was obliged to pay tribute. There ensued a series of risings and intrigues until 1841, when Ladakh seized its opportunity to revolt following the defeat of the Dögräs in Tibet, but was soon crushed by a fresh army from Djammu. It was now defi-nitively annexed to Djammu [q.v.], thus becoming In 1846 part of Kashmir, For its subsequent history, SEE KASHMIR..

Francke, A history of Western Tibet, London 1907; Imperial gazetteer of India, new ed., Oxford 1907-9, xvi, 88-94; for mentions of Ladakh in the Kashrair sources, see Pandit D. R. Sahni and A. H. Francke, References to the Bhotlas or Bhauttus in the Rajatarangini of Kashmir, in Indian Antiquary, xxxvii (1908), 181-92.

(P. JAGKSON) LADHIK, the name of several Anatolian towns, and the Turkish form, phonetically identical, of the name of Laodicea (Agodingta), which, since the imperial period often appears in inscriptions with the form Andlucia, accented on the second syllable (cf. Robert, Villes d'Asie Mineure t, Paris 1962, 283); Modern Turkish orthography Ladik.

g. Lachik near Denizli, Laodicea of Lycos, or Landicea of Phrygia. The rulas are located at a place called Eski Hisar, 8 km. to the north of the centre of Denizli, the acropolis standing on a hill which dominates the valley of the Lycos (Çürük Su), a left-bank affluent of the Great Meander. Captured for the first time by the Turks before 1229 (Cinnamus, Bonn ed., 5), this date saw the restoration of the town's defences by John Commenus (Nicetas, John Commenus, Bonn ed., iv, 17), but the town was abandoned before 1156, at which period its population was dispersed into the surrounding countryside (idem, Manuel Commenus, iti, 163). It survived, however, for some time, following a shift in location, transferring to a more remote and more defensible site close to the foothills of the Baba Dağ (in pede altiszimi montis, Ausbert, Historia de expeditione Frederici imperatoris, in Fontes terum Austriacurum (Scriptores, v), Vienna 1863, 58), where the fortified strongholds perhaps survived until the end of the 13th century. But a parallel development was the growth in the immediate neighbourhood of the Turkish urban settlement of Denizli, where the first epigraphical datings go back to the second third of the 13th century. The latter had no direct connection with Laodicea, but nevertheless bore the name of Ladhik concurrently with its own. It is also found separately (for example in the work of Ibn Bibl who, writing in 679/1280-7, speaks exclusively of Lādhik) until the 8th/14th century (in Mustawfi, Ta'rikh-1 gusida, ed. Browne, 444, 483, and on the coinage of the Inandi Oghullarl and the Germiyan Oghullarl until the year 760/1360), then as the equivalent of the new name until the 1sth/18th century, at least in the work of Western writers (Kātib Celebi, Disān-niend, tr. Annain, 620, in L. Vivien de Saint-Martin, Histoire des deconcres..., iii, Paris 1848: "Degnith ou Lazakish"), but this was nothing than a scholastic tradition; the original text does not give the name of Lādhik.

Bibliography: X. de Planhol, Lo cadre géographique: le pays de Laodicte-Denizli. in. De Laodicte de Denizli, 403-13, in Jean des Gagniers (ed.), Laodicte du Lycos. Le Nyuphée, campagues 1961-1963, Quebec-Paris 1969, which presents a detailed discussion of the problem and the solutions previously offered (Ramsay, Philippson, Akça) regarding the relationship between the two lowns.

together with a full bibliography.

a. Ladhik near Konya, Laodicea Katakekaumene. Currently a large village, 35 km. to the north of Konya, in the kaza of Kaduhani, nakiye of Sarayonii, on the road leading towards Afyon Karabisar and Eskischir. The ancient name (Accoδίκεια ή κατακεκαυμένη, Lundicea Combusta, which passed into the Islamic sources with the form Ladhik Sukhta, "the burnt L."), no doubt referred not, as Is the opinion of J. A. Cramer (A geographical and historical description of Asia Minor, Oxford 1832, il, 33), to the volcanic nature of the terrain (as in the case of Phrygia Katakemaumene), which here is primarily calcareous, but definitely to the existence of ancient mining or metallurgical workings. There is no need to retain the form "Yorgan Ladik" (from yorgan, quilted covering fixed = the upper bed-sheet), recorded by the Western travel literature of the 19th century (and the works which derive from It, EP, art. s.v.), starting with W. M. Leake, Journal of a tour in Asia Minor, London 1824, 43, and explained by the textile industry (coverings, carpets) which was active in the locality. What has happened, as has been shown by Besim Darkot (art. Ladik in IA), is a mis-reading of the form given in the Djihan-suma, which should يوركان لاديق be interpreted as Yürükka Ladik ("Ladik of the Yuruk or nomads", with Persian suffix). The form "Ladik-el-Tchaus", also given by Leake (loc. cit.) appears incomprehensible. The village, which Ewliya Celebi (Seyahat-name, ed. Zuhuri Danışman, iv, Istanbul 1970, 87) describes as having suffered ravages on the part of the Diefalls (see DIALALT in Suppl.], is cited by Katib Celebi as a small town which is nevertheless the administrative centre of a subsidiary district of Konya (tr. M. Norberg, Lund 1818, ii, 584-5), with numerous shops, and Leake (log. oil) calls it "a large place". Decline must have set in in the 19th century (cf., for a comparison of the population in the 19th and 19th-20th centuries. the figures of W.-D. Hütteroth, Landliche Siedlungen im südlichen Tuneranatolien in den letzen vierkundert Jahren, Göttingen 1968). It had no more than 1,785 inhabitants in 1941 and had no administrative role of any kind.

3. Lightly near Amasya, a large village 40 km. north of Amasya, currently centre of a kara (iic) subsidiary to the vilayet of Samsun. At an altitude of 950 metres, it stands on the edge of a plain, the extremity of the Phazimonitis of antiquity.

the base of which is occupied by a lake (formerly Lake Stiphanus, currently "Lake of Ladik") 9 km. to the east of the town, reduced to a shallow swamp in summer but considerably angmented to the point of overflowing in spring, its waters, at this time, spreading, via the Terdekan Cay, into the Yeall Irmak. According to Ewliya Celebi, who has left us a detailed description of the place (iv, 87-91), the urban area comprised, in the 11th/17th century, 3,020 houses and 400 shops. Its prosperity was owed in particular to the fact that Bayezid II, when he was governor of Amasya (known to be residence of hereditary Ottoman princes in the oth/15th and 10th/ 16th centuries: cf. P. Kappert, Die Osmanischen Prinzen und ihre Residenz Amasya im 15. und 16. lubrhundert, Istanbul 1076), chose it as a summer resort, spending six months of the year there, and embellishing it with numerous monuments and gardens. Important mok/s were constituted there and the village, in the 17th century, still lived practically independently of provincial authority. Being off the main route, it declined when it lost its status as a princely residence. I. Hamilton. Researches in Asia Minor, Pontus and Armenia. London 1813, saw only "a small and miserable place, but called a town because it possesses a royal mosque with two minarets". It had no more than about 1,500 inhabitants at the end of the roth century, rising to a population of 5,054 in 1950.

4-5. Two other localities, in the same region, currently small villages of a few hundred inhabitants, also bear this name: Lädhik near Çekerek, in the nahiya of Kadi-Şehri, hans of Çekerek, 28 km. to the south of Zile, on the southern flank of the Deveci Dağ; and Lädhik near Niksar, 20 km. to the west of this town, to the south of the valley of the Kelkit, on the northern slope of the

Keiner Dag.

All these three localities must correspond to ancient "Laodiceas". Only one is attested in the region: Pontic Laodicea (Accoling Ilovenci), whose existence is, in addition, known only from the coinages in Mithridates Eupator. Although E. Horigmann, in EP, wanted to locate it at Lädhik near Cekerek, it should almost certainly be sought at Lädhik near Amasya, in accordance with the opinion of Ruge, in Pauly-Wissowa, Realencyclopadia, on the basis of the text of Strabo (xii, 560) which identifies near the lake a ruined fortress (litizari) and a royal place (cl. J. G. C. Anderson, A journey of exploration in Pontice, ii) 79-80).

5. Finally, "The Blind Ladhik". (Kör Ladhik) is known exclusively from the works of Ewligh Celebi (loc. cit., 87), who mentions it as a sandist of the province of Van. This locality is cited in no other source, and it may be an error on the part

of Rwliya.

Bibliography: on the overall subject, see the article Ladik by Besim Darkot, in IA, vii. (X. DE PLANHOL)

AL-LADHIRTYYA (European transcriptions: Lattaquié, Latakia), major Syrian port, was known by the Greek name of Λαοδίκεια ή ἐπι θαλάσση, and later by the Latin name of Laodicea ad Mare, whilst the Crusaders called it La Liche. In the second millenium, the settlement bore the pame of Ramitha of the Phoenicians and was dependent, before taking its place, mulgarit, a powerful metropolis lying 8 miles/ra km. to the north. It was in 327 B.C., or six years after the death of Alexander that Seleucus Nicator (301-28) B.C.) founded on this site

a city to which he gave the of Laodicea in honour of his mother Laodice. At the end of the period of Seleucid domination it belonged to the Tetrapolis, a union linking the four most important cities of Syria: Antioch, Apamea, Laodicea and Seleucia, πόλεις ἀδελφαί—the "sister cities". It was for a long time to remain one of the major centres of Greek-Roman Syria.

Conquered by Pompey in 64 B.C., it suffered in the Roman civil wars. Sacked by Pescennius Niger at the end of the 2nd century, it was restored by Septimus Severus. In the 3rd and 4th centuries the

city was dependent - Antioch.

The city is situated in lat. 35° 32° N. and long. 35° 40° E. and is built below a massive rocky promontory pointing towards the south, the Rās Ziyāra, which is surrounded by the on three sides with cliffs. It is principally linked to the dry land towards east, two hills of 60 to 70 m. in height constituting the eastern limit of the ancient fown. On the northern hill two twin castles. The modern city has grown to the west of the mediaeval town. The urban area has been the victim of a number of severe earthquakes, of which the most recent took place in 1822.

The city plan. When Laodicea was founded, Seleucus laid down housing blocks of 112 m. by 57 m., following orthogonal schema, as in other Seleucid foundations. To the original settlement the Romans added identical blocks. It is the remains of four avenues with lateral colonnades which have enabled Jean Sauvaget to reconstruct the ancient plan of the city and discover in the present-day layout of Ladhikiyya some elements of the Seleucid square design. The limits of the ancient city are defined by two large extramural cemeteries to the east and the north. Together with the port, the city covered an area of 220 ha. "The city of Laodices has retained Its straight streets. It is curious that this apparently quite modern design existed in the Middle Ages-It possibly dates back to antiquity, like some straight atreets of Damascus and Jerusalem", observed Max van Berchem (Voyage = Syrie, i, 289).

Around Lādhikiyya stretches a small fertile coastal plain (xhii); it is bounded to the north by the Diabal st-Lukkām (g.v.), to the east by the Diabal Ansāriyya, and enjoys a Mediterranean climate with strong prevailing winds from the west and south-west in January and March; rainfall varies from 750 to 1000 mm annualty, while temperatures reach their average minimum in July at 16°. To the north of the city, olive-trees flourish, while in the hinterland citrous fruits grow in abundance. In the Middle Ages, white and green marble were mined in the vicinity of the town and this material

Mediaeval history. After the revolt of Antioch in 387 A.D., Laodicea returned to imperial favour and enjoyed prosperity in the Byzantine period. Justinian made it the capital of the province of Theodorias, recently founded (528). At the time of the Muslim expansion, the town was captured, after a siege, by troops under the command of 'Ubāda b. al-Ṣāmit al-Ānṣāri. The citadel was stormed. Those of the Christian inhabitants who had taken refuge at al-Busayt were permitted to return peyment of the hardi; they retained their church while 'Ubāda built u mosque which was later enlarged.

was exported to 'Irak.

In 100/719, supported by their fleet, the Byzantines attacked the coast of Lädhikiyys, burnt the city and led the inhabitants away into captivity. 'Umar b.

"Abd al-"Arts organised the restoration of the buildings and the fortifications and ransomed the prisoners. After the death of the Umayyad caliph, his successor and cousin Yazid b. "Abd al-Malik completed the reconstruction of the city, improved its fortifications and reinforced the garrison.

In the golden age of the 'Abbäsid caliphate, Lādhikiyya does seem to have played a particularly distinctive role. In 357/968, Nicephorus Phocas appeared in northern Syria; two years later the city, which was the port of Apamea, seem taken over from the Hāmdanids and became Byzantine. According to Yahya h. Sa'ld (d. 458/1066), the emperor Basil II appointed segovernor of Lādhikiyya in 980 secretain Karmarūk, who distinguished himself in an expedition against the Pāṭimid province of Tarābulus [q.v.]. When the city was attacked by Nazzāl, governor of Tarābulus, Karmarūk was taken prisoner in the course of a sortie and later beheaded in Cairo. In 374/985, Lādhikiyya belonged to the disnad of Hims [q.v.]. Ibn Buṭlān gave a description of the

Byzantine city in 440/1049.

In 479/1085 it belonged to the Band Munkidh [q.v.] of Shayzar, who then ceded it to the Saldigk sultan Malik Shah. On | Ramadan 490/19 August 1007 a fleet of twenty-two ships from Cyprus penetrated the harbour and sacked the town. In 401/1008, Raymond de Saint-Gilles in the course of his journey to Jerusalem left a garrison at Ladhikiyya and returned to establish his base there following the success of the First Crusade. In spring 1200, Raymond set out on the Anatolian crusade: returning to the coast in 1101, Raymond was obliged to renounce his claims to the city, then occupied by the Byzantines. Tancred took control of the city in 1203, after # siege lasting eighteen months, with the aid of a Genoese fleet of forty ships. Ladhikiyya was integrated into the principality of Antioch and at that time was one of the most active ports of the eastern Mediterranean. This port, called by the Crusaders La Liche, used to export the commodities brought by the caravans from the Far East. For a number of years the city was the object of rivalry between the Franks and the Byzantines. In 1104, a fleet commanded by the admiral Cantacuzenus succeeded in forcing the Franks to capitulate. Tancred succeeded. in forcing the Franks to capitulate. Tancred succeeded four years later, after Bohemond had promised it to Alexis Commenus, in recapturing Lådhikiyya with the aid of the Pisans; the latter, like the Genoese before them, were granted - enclave in the city, well as freedom of trade in the ports and markets of the Principality.

In 1134, the princess Alice donated a house to the Knights of the Order of the Hospital [see DAWIYYA and ISBITARIYYA, in Suppl.], who made it their headquarters in Lādhikiyya. In Radiab 330/April 1136, the amir Sawār who governed Aleppo on the authority of Zanki, mounted m raid against Ladhikiyya and devastated it. In 559/1164, Nur al-Din [q.v.], in his turn, invaded the region and

attacked the port.

On 25 Djumādā I 584/22 July 1188, after a rigorous siege, Saladin captured Làdhikiyya; the most beautiful city of the coast, according to 'Imād al-Din Işfahāni, was piliaged, and the marble façades of the houses were ripped off and carried away. The Ayyūbid prince appointed the amir Sunkur al-Khilāţi as governor of the city, which was given a strong Muslim gartison. This was the end of the Frankish occupation. In 1190, at the approach of Frederick Barbarossa, Saladin had the ports of the

Syrian coast dismantled. In October 2191 Bohemond III tried in vain to recapture Lādhikiyya. He renewed the attempt in 1197, but al-Malik al-Zāhir Ghāzi had given the order to make the port unusable; seeing the damage, the prince of Antioch withdraw and shortly after, al-Malik al-Zāhir of Aleppo restored the citadel.

Under the Ayyabids, the district of Ladhikiyya was part of the province of Aleppo. In 601/1204-5, the Franks of Tripoli and the Hospitallers attacked the lown, which was also me embarkation base for expeditions against Cyprus. In 1207 the Venetians, the rivals of the Genoese, received from al-Malik al-Zāhir Ghāzī a concession with a fundul, a hammam and a church. At the end of 620/December 1223, an army sent from Aleppo, fearing it would be unable to resist the forces of the Fifth Crusade, destroyed the defences of Ladhikiyya and dismantled the citadel. In 1261, taking advantage of the defeat of the Muslims at the hands of the Mongols of Hülegü, Bohemond VI took possession of the town with the support of the Hospitaliers, to whom he awarded half of the city and of the surrounding area. The Genoese re-established themselves there at the expense of the Venetians. In 673/1275 there was an exchange of correspondence between Baybars [q.v.] and King Hugo III of Antioch-Lusignan on the subject of Ladhikiyya, On a July 1275 the Franks obtained from the Mamlük sultan the freedom of the city in return for an annual tribute of 20,000 dinars, and continued to exercise authority, but the town was in a state of constant decline to the benefit of Tripoli, Alexandretta and Payas, whither commerce was diverted following the fall of the Principality of Antioch. In 1287, a mean earthquake caused damage to the fortifications and a number of towers, including the Pigeon Tower, the Pier and the lighthouse collapsed; without delay, the sultan Kalawan [g.r.] sent the amir Turuntay, one of his lieutenants, to attack Läghikiyya. The siege machinery completed the destruction of the fortifications; to capture a massive tower built by Bohemond III in order to guard the entry to the harbour, Turuntay was obliged to enlarge the embankment linking it to dry land. On 5 Rable 1 686/20 April 1287, the city fell, putting an | to the presence of the Franks in northern Syria. Laibikiyya soon become the centre of see of the nipabas of the new province of Tarabulus, its navib being an amir of ten with military responsibilities. When Ibn Battūta visited the city in 1355 he was irapressed by its size and by the number of its inhabitants. well as by its fine anchorage. But the city was not slow to decline. În 1366, arriving from Cyprus, Pierre de Lusignan attacked Lathikiyya, pillaged and razed it. In 1436, the sultan Barsbay [q.v.] expelled the Venetian merchants from the town, and in the middle of the 15th century it was less populated than Beirut and Tripoli, and much of it was in ruins. It exported cotton and luxury fabrics (samis) as well as Arabian manna to Europe, and In 1494 was importing its sugar from Cyprus. Until 1516, Lādhikiyya was apparently subject to the viceroys of Hamat.

Ancient and mediaeval monuments. Arab historians and geographers mention a large number of aucient buildings in Ladhikiyya. Ibn al-Athir and Abū Shama praise the "high and beautiful houses and the perfectly straight streets paved with stabs of marble". The baths, the amphitheatre, the hippodrome and the sanctuaries built by Septimus Severus existed at the start of the 5th/11th century only in the memory of the inhabitants.

However, thirteen monolithic columns still mark the location of commercial streets covered in by portices of the Roman period. A number of cisterns in use at the beginning of this century and the remains of aqueduct to the east of the city bear witness to the ancient hydraulic system. The city's ramparts have finally disappeared as a result of earthquakes, innumerable sieges and successive demolitions. The anchorage was designed according to the relief plan which is unconnected with the external shape of the built surface. The gates of the city were situated at the ends of the main arteries, each one flanked by two crenellated towers, if we me to judge by the mural crown worn on Roman coinage by Tyche, the tutelary goddess of the city, There were two gates, that in the east which was the starting point of the road to Afamiya [q.v.] and which proceeded by way of the pass between the hills dominating the town, and the north gate which stood at the end of the colonnaded avenue which passed by the foot of the citadel and continued beyond the walls as the road towards Antakiya [q.v.]. Among the best-known towers are the Tower of the Pigeons that provided the postal service, and the Pier which, in the Middle Ages, protected the narrows of the harbour on the site of mancient lighthouse, probably the new tower constructed by Bohemond in 666/1268. On the northern causeway. at the site of the modern lighthouse, the Fârûs marked the entry to the port. This was, judging by the evidence of numismatic iconography, a round polygonal tower built on a base of two levels with a second smaller tower bearing a tall, draped statue at its summit. This monument existed in the reign of Domitian (1st century A.D.). The Farus gave its name to a famous convent, the Dayr Faras, which was held to be the most beautiful in Syria; situated outside the town according to Ibn Battota, it was much visited by Christians and also attracted large number of Muslims.

At the perimeter of the ancient town there stands an important monumental arch, the Tetrapyle, with its four fully-rounded arches banded between four strong pillars. The east-west thoroughfare to an end at this monument. At a distance of 500 m. from the Tetrapyle there remain four Corinthian columns of a peristyle—doubtless the remains of a temple dedicated to Bacchus which was converted into a church [Kanisas al-mu'allaha].

All the authors speak of two twin castles linked together and built on a hill overlooking the town.

If the north-east, Röhricht (in ZDPV x, 3to) has prepared a list of the buildings that are known to us from the Frankish sources.

The Ottoman period. In the middle of the 16th century, the port of Lathkiyya was part of the lind' of Djabala; cotton and olives min cultivated in the region; wahnuts and molberry trees were of high quality, while vine-growing retained its ancient reputation. In the first half of the 18th century, Lathkiyya was subject to Tarabulus, and was governed by Yasin Bey, son of Ibrahim Pasjia al-'Anm. In Rabi' 1 1143/September 1730, there was a major uprising; the rebals min joined by the troops sent to rescue Yasin Bey, and when a few months later fresh troubles broke out, the 'Agms were removed from all their positions of authority in Syria.

The modern period. In 1914, Lidhikiyya, with a population of 7,000, was nothing more than a small town belonging to the vilâyet of Beirut and administered, according to the Ottoman law of

1294/1877, by a municipality of which the president was chosen by the government in Istanbul from

among the elected councillors.

In 1919, with the arrival of foreign troops, the opposition rallied behind the Shaykh Salih and incited insurrections against the French. On az August 1920, with the establishment of the French Mandate-confirmed by the League of Nations in 1922 and put into effect in 1923-Lādhikiyya became the capital of the autonomous territory of the Alaouites, with a governor under the authority of the mandatory administration. In June 1922 this territory became the State of the Alaouites, composed of two sandjaks: that of Ladhikiyya and that of Tartūs. It received a French governor and was integrated into the federation of mandated states. In 1923, Sulayman Murshid headed an anti-French movement with a religious flavour. In December 1924, General Weygand announced the secession of the State of the Alaouites, proclaiming its independence on x January 1925. In 1930, a fundamental law, published on 14 May by the High Commissioner, created a government of Ladhikiyya. In 1936 this government was integrated into Syria, but benefited from a special administration under the authority of the Syrian government; France was authorised to station troops there for five years. In July 1939, Lach kiyya became the capital of the autonomous territory of the Alaouites, separate from Syria. On 20 June 1942, this territory was once more integrated into Syria. This integration was confirmed in 1946 with the proclamation of independence.

The port. At the present day, the port of Ladhtkiyya is the most important port of Syria. Originally, It was a bay open to the south-west, with no protection from the prevailing winds. The sea-bed is of inferior consistency, but the inlet is well protected from the south winds, Immediately behind rises a range of hills with fertile soil; "it is not the prosperity of the port that has created that of the town, but

the reverse" observes Wettlersse.

The ancient port was "perceptibly more lowlying on the ground than the present-day port". In 1934. Sauvaget noted a depression, which correspended to the ancient docks, gradually covered over by shifting soll, whose outline marked those of the ancient port. The conquering Arabs found a port which had afready lost its prominence. Its economic value remained; the battles fought by Byzantines. Muslims and Crusaders for possession of the town are proof of this. The Arab geographer al-Dimashki (d. 727/1327) describes it as "a very beautiful port, one of the most spacious, always full of great ships".

The expulsion of the Franks led to a decline which lasted until the Capitulations. The port silted up. In the 18th century it could contain no more than four to in small boats. In the 19th century the haven was used only by small sailing boats; European ships anchored out at sea. Nevertheless, the port was very active, and around 1835 more than a hundred ships were visiting it annually. At the end of the 19th century, the volume of traffic using Ladhikiyya placed this port behind Beirut and Tripoli, but well ahead of Sidon and 'Akka [q.vv.]. The annual traffic was 120 steamships (55 of them French) and 570 sail-bosts.

With the establishment of the Mandate, Ladhlkiyya was roused from its lethargy. A restoration of the harbour was undertaken; the north and south moles were rebuilt, the depth of the inner harbour was increased from two to six metres, but these enlargements were still not sufficient for large ships. and merchandise and passengers continued to be disembarked at sea and brought ashore in lighters. In 1932, the scale of Syrian importing and exporting was such as to give rise to speculations that Ladhikiyya might be able to regain its original prosperity. and plan was formulated to double the size of the dock by building an outer harbour and to construct solid embankment further to the west proceeding towards the north, thus creating a deep-water port and an easily-dredged inner harbour.

Ladhikiyya lived "a life without glory and without future" until the day when, after the loss of the sandiak of Alexandretta in 1938, Syria had no other solution to the problem of its commerce than to provide the means of restoration to its sole remaining harbour on the Mediterranean coast. The first plan was prepared in 1944 and then a more extensive project was envisaged in 1948. Lädhikiyya was at that time only a fishing port, with an annual turnover of 300 to 400 tons of fish. The construction of the modern port began in 1950; the following year, 24.6% of overseas trade passed through Ladhiklyya. In 1953, the construction of a large jetty was begun and also a silo of 35,000 tons capacity. In 1955, was realised that the original project no longer responded to the needs of a major port. In 1957 the first stage of the modernisation was completed. If the activity of the port was modest until 1958, it was already handling = less than 52% of overseas trade. The ten-year plan of 1958-68 foresaw important works of infrastructure; thus it was that by 1968 there was a breakwater 1423 m. in length, assuring the protection in all seasons of a dock of 44 ha, a principal quay 600 m, long by 9.50 m, high capable of accommodating five ships at once, a quay 250 m. long beside the old dock, the total length of the quays amounting to 1160 m., and with modern equipment permitting the rapid handling of merchandise. The construction of a railway and of the highway No. 3 leading to Aleppo and the valley of the Euphrates have given a strong impetus to the economic activity of the Lathikiyya, which has become the commercial outlet for Aleppo, northern Syria and the Djazira. In 1967, 1,526 ships visited the port; they imported 1,204,000 tons and exported 331,000 tons of such Syrian products as tobacco, cotton, silk, fruit and eggs. The activity of the port is supplemented by industry represented by asphalt factories, soap factories, cotton processing works, flour-milks. The population of Laghikiyya has expanded remarkably: in 1914, 7,000; in 1931, 20,000; in 1940, 30,000; in 1960, 68,000; and in 1970, 126,000.

(literally "refuge") is the largest, geologically-recent lava-field in the south of Syria, comprising a plain of en. 900 square km. It has roughly the form of a triangle, the base of which is formed in the south by the line Izra Shabba (ca. 45 km.) and the apex of which lies sa. 48 km. to the north Burrak (ca. 50 km, south-east of Damascost. In the north, the was is limited by the Wadi al-'Adjam, in the east by the Ard al-Bathaniyya

Hawrân [q.v.], in the south-west by Djawlân [q.v.] and in the north-west by Djaydur.

Volcanic cones, some more than 1,000 m. high (the highest, 1,159 m., lies west of Shahba), tower up from the volcanic fields, which lie at an average of 600-700 metres above sea level. The fringes of the area are inhabited, as are also a few favoured places in the interior where agriculture is made possible by depressions which are free of stones and which have a diameter of several hundreds of metres. These depressions, called \$45, probably originated from volcanic eruptions of gas. Since springs and underground water are now failing, water is supplied by eisterns (R. Dussaud, Topographic historique de la Syrie antique et médiciale. Paris 1927, 371-81; E. Wirth, Syrien, Darmstadt 1971, 419 ft.].

[see Al-BATHANIVYA], in the south-east by the

Diabal al-Durus, in the south by the Nukra of

The area has borne its contemporary name since the Middle Ages (Yākūt, iv. 350). In antiquity, it was known under the seem of Trachonitis (indicating also the Tuldl al-Said which lie further eastward) [Josephus, Auf. xv, 10,1; Ptolemy, v, 15, 26; Strabo, avi, 2,16 and 20). During the second and first millennia B.C., Trackonitis, itself without any political and economic significance, was under the influence of the Hebrews in the south and the Aramacans of Damascus in the north. In the second century B.C., Trachonitis was annexed to the empire of the Seleuoids and formed the frontier between the spheres of influence of the two Arab peoples, the Nabataeaus in the south and the Ituraeans in the north-west, When in 24 B.C. the region was put by the Romans under the command of Herod, it was inhabited by a rapacious nomadic people without agriculture, who infested both the trade route to Damascus and the Tewish pilgrimage route from Babylonia to Jerusalem. In order to check the Trachonites, who were living with their cattle in the volcanic caves and depressions of the region (Josephus, Ant., xv, 10,1), the town of Bathyra was founded during Herod's reign (its site is disputed, but was probably in the neighbourhood of Şanamayn, Dutsaud, Topographie, 331). Trachonites and the neighbouring regions obtained freedom from taxation and were soon sedentarised.

Between the 1st century B.C. and the 4th century A.D., numerous settlements and towns with theatres, colonnades and several temples founded, like Philippopolis (Shahba) and Shā'ara (the classical

name of which is unknown). A road, traversing the Ladjà' from north-west was south-east, was connected with the Roman road system in Syria. Inscriptions and ruins from the Roman period are found in nearly 20 sites (for the antiquities, with H.C. Buther et alii, Syria, Publ. of the Princeton Univ. Arch. Expedition to Syria in 1904-5. Division I, Leiden 1930, 95 ff.; Division il, Section A, Part 7: The Ladja, Leiden 1907-19).

The post-Roman pattern of settlement in the Ladia1 resembles that of other regions in Syria which are equally disfavoured by nature. Under the Byzantines (4th-7th century A.D.), the density of settlement reached a height that can only be compared with that of most recent times. In nearly 30 sites, Byzantine remains have been preserved, among which is the famous bilingual inscription in Greek and Arabic at Harran in the south of the Ladia? (RCEA, i, no. 3). Not far from Harran, in Busr a)-Hariri (Bosor in ancient times) and Izra* (Andrea Zorava, with the still undamaged St. George's church from 515), lie the most impressive Byzantine rulus of the region. Both sites are also mentioned by the Arab geographers of the 7th/13th century. According to Yakut (il, 921), Izrae (= Zurra or Zure) belonged to Hawran (also in the later Ibn Battota, i. 254). Busr (= Busr al-Hariri), where the tomb of al-Yasas or Hyasas was revered (Harawi, K. al-Ziyardi, 16; Yākūt, i, 621), seems to have been the more important site at the time. The fact that the Ladia' is mentioned only by the later Arab geographers points to a re-settlement in the area at that period. As in other volcanic regions of Syria, repopulation. was caused by the pressure produced by the Mongols on the population to the east of Syria. There is no doubt that the greater part of the Islamic rules, proved to exist in 13 sites of the area, date from the 13th century.

We do not have accurate information on the period. when settlement started to decline after the Middle Ages. With the exception of a few Christian settlements in the borders, the region seems to have been depopulated by the 17th century at the latest. During the 18th and 19th centuries, Druzes immigrated from Lebanon into the eastern and southern parts of the Ladia?, and in the 19th century Bedouins settled in the north and the west. As in pre-Roman times, the Ladia' was considered to be a hiding place for rebels and marauders during extensive periods of Ottoman rule. Notwithstanding the garrisons established on the border of the Ladia, the Ottomans were not able to bring it under control. Only the French mandatory power succeeded in doing this by sending over low-flying aircraft. At present, the Ladjā' is inhabited by peasants who are Muslim, Druzes and Christians (the latter mostly Greek Catholics).

(H. Gaues)

LADJETUN, a small town in the Esdraelon plain in the vicinity of ancient Megiddo, in the north of Palestine, at lat. 32° 34′ N. and long. 35° 21′ E. It was the seat of the sixth Roman legion, on account of which it came in the known in Legio, and Ladjdign is the Arabic adaptation of the Roman name. The town, which is 175 in above sea level, is referred to by early Arab geographers as part of Djund al-Ordunn bordering in the Djund of Palestine. The Islamic geographers emphasise its location on the highway between Damascus in Egypt, and it was also well-connected by roads to other parts of northern Palestine.

When the Mamiluks, after the expulsion of the Frankish Crusaders from Bilad al-Sham (Greater Syria), reorganised the country into a number of mamlahas or provinces, the old Diund al-Urdunn was incorporated into the new province of Safad. Al-Ladidium and Dimla constituted the seventh 'amal or district in this province. Shaykb Sadr al-Din Muhammad b. 'Abd al-Rahman, better known al-Uthmani (d. 780/1379), states that Ledidiun's inhabitants and those of the Esdraelon plain belonged to the Yamani faction (see KAYS SAYLAN. Kays and Yaman in the Ottoman period) and are most likely the descendants of the B. Djudham (q.v.) mentioned in earlier sources as living in that neighbourhood. During the late Mamfük period and during the roth/16th and rith/17th centuries, an indigenous Bedouin clan by the name of the Al Tarabay, sometimes called Al Haritha, emerged in that area. The Mamiluks, as well as the Ottomans, entrusted this family with administrative and fiscal duties.

Ladidjun owed its prominence to its excellent location in metertile plain with abundant water supply, to the influence of the Al Tarabay and to the sanctity of a shrine, attributed to Abraham, which attracted plous people and on the site of which a domed building was constructed. It was also important because the Mamilik sultans and senior officials travelling through the region used to rest there, since the sultan had his own mayloba (an elevated place of land for pitching his pavilion) there. Furthermore, it had its own khân (q.v.) me caravansaray to accommodate travellers and merchants, referred to by Ewilvá Čelebi.

In 945/1538 the town of Ladidjun, mentioned as a karya or village in a tapu defter, had population of 23 Muslim households. One-fourth of its revenue amounted to 4,670 after and formed part of the its of Tarabay. From the list of revenues, it appears that wheat, barley and were grown there, and it had its own two-stone water mill paying a tax of 1,000 afters. The protection-money tax (bidi ghifatah) yielded 30,000 afters, collected annually at the above-mentioned him. As late as 1696, when the English traveller Henry Maundrell was passing this way from Aleppo to Jerusalem, he paid a local Bedouin chieftain "two caphare, of Legune, one of Jenla".

In the second half of the noth/16th century, a new sandjak consisting of four ndhiyes, that of Ladidiun, was set up in northern Palestine, where the village of Ladidiun formed part of the Khāṣṣ-i Pādishāā. The number of its inhabitants had now risen to 4r Muslim households and one-fourth of its revenue amounted to 15,500 abics yearly. The extant imperial firmins addressed to the various officials in both the sandjak itself or in the Province of Damascus, exhibit the suitan's interest in maintaining law and order and in restoring fortifications in the area.

The decline of Ladjdjin is associated with the eclipse of the Ål Țarabay in 1677, and the rising importance of IIII Syrian coastlands, following the creation of the new province of Sidon in 1660 and the benefits arising there from the growing trade with Europe. This fact was recognised by the Bedouin clan of the Ål Zaydänl, who replaced the Ål Țarabay and made Acre their principal town. Ladjdjün remained a centre of the sandjak and had its own mutasarri/ (provincial governor), but nevertheless it continued to lose importance to the coastal villages of Hayfā and Acre. In 1940, the village had 1,103 souls; aline years later, after the establishment of

the state of Israel, a Jewish settlement was established in its environs reviving the old name of Megiddo.

Ladidjūn is further the name of a place to the east of modern al-Karak [q.v.] in Trans-Jordan, described by several geographers as a halting-place on the route to Mecca.

LADIN (Ladin), al-Marik al-Marson Husam at-Din, alias Shukaya al-Ashkar, Turkish Mamlük sultan. Originally a mamluk of al-Malik al-Mansur (Ali b. Aybak, Lādjin was purchased after his master's deposition in 558/1259 by the future sultan Kalāwan [q.v.], on whose accession he was raised to the amirate, and sent to Damascus governor of the citadel (Dhu 'l-Hididia 678/April 1280). His appointment afarmed the provincial governor, Sunkur al-Ashkar, who proclaimed himself aultan. The revolt was suppressed by an expeditionary force from Egypt, and in Rabit 1 679/July 1280 Ladjin was appointed governor of the province. His successful tenure of this office throughout the

remainder of Kalāwūn's reign made him one of the most powerful magnates in the realm at the accession of al-Malik al-Ashraf Khalil in 689/1290, and the two regarded each other with mistrust. Ladjin headed the Damascus contingent at the siege of Acre, during which he was arrested and sent to Safad (Djumādā 1 690/May 1291). He was restored to favour, but in Shawwal 691/September 1292 he fled, fearing arrest, was captured by Arabs, and sent a prisoner to Cairo. Again released, he conspired with the vicegerent (na'ib al-sallana) Baydara al-Mansuri and other malcontent amirs against the sultan, who was murdered during a hunting expedition (Muharram 693/December 1293). The conspirators failed, however, in their further aim of placing Baydara on the throne; he was killed, and Ladjin absconded. Khaill's infant brother, al-Malik al-Nāsir Muhammad, was installed as sultan with the vicegerent Kithugha al-Mansuri = de facto ruler. In Ramadan/August, Ladily emerged from kiding. Under his inspiration, Kutbugha usurped the sultanate (Muharram 694) December 1294), and Lägjin himself was invested as vicegerent. Kutbughā's short reign was marked by dearth and famine in Egypt, and by the settlement in Palestine of numerous Oirat warriors with their families, fugitives from the likhan Chazan after his overthrow of Baydů [q.vo.]. Since Kitbugh's was himself a Mongol, the Turkish and Circassian amirs may have seen this immigration as a threat to their ascendancy. A faction headed by Ladjin deposed Kitbughā and installed Lādiln as sultan in Muharram 696/November 1296.

Recurrent crises of the Mamilik sultanate arose from the inveterate hostility between the mamiliks of the reigning suitan and those of his predecessor, whom the new ruler invariably sought to displace in order to reward his own household and to secure his own position. In an attempt to safeguard themselves, Ladiln's fellow-conspirators made an accession compact with him by which he undertook to renounce the absolute discretion, the essence of the royal autocracy, and not to give his me mambiks power over them. The absence of institutional sanctions for this compact soon rendered it null. In Dhu 'l-Kasda 696/September 1297, the sultan removed his follow-conspirator, Kara Sunkur al-Mansuri, from the vicegerency, which he bestowed on his own manifek, Mankotamur. The tactless exercise of plenary powers by the new vicegerent antagonised the amirs, who had still more reason to be alarmed by the sultan's fiscal reforms. A cadastral survey and redistribution of that's in Egypt (alrauck al-Husami) was carried out in Diumada I-Radiab 697/March-April 1298, the first measure of this kind since Saladin's time (572/1176). The sultan retained the previous categories of beneficiaries, i.e. the privy purse (al-khāss), the amirs and the halks [q.v.], but whereas the allocation to the privy purse unchanged, the other two categories were combined and given a smaller total assignment. The sultan thus left with a surplus, free of the charges in the privy purse, on which he could maintain a new military force-an obvious threat to the power II the amirs. In the following months their resentment led to a conspiracy, and on the night of at Rable II 698/eve of 16 January 1299 Lädin was murdered and Mankütamur put to death. After some days of uncertainty, al-Malik al-Nāşir Muhammad was restored in titular sultan.

LAGHOUAT (AL-AGEWAY), Algerian town and pasis, administrative centre of a wildyt (district), 420 km, to the south of Algiers (long, o° 30' E. [Paris], lat. 33' 48' N. Altitude: 787 m.). It was formerly the administrative centre of wo of the four "Territories of the South" forming the region of Algeria administered under martial law, until the reform instituted by the law of 20 September 1047 (Statut de l'Algéria). On account of its geographical position, dominating the defence of the Sahara, well as memories connected with the dramatic story of its conquest by the French (1844-52), at to mention its attractions as a centre of tourism. Laghouat has been the subject of numerous studies (see Bibl.). On the other hand, the town occupies a position of eminence in the cultural and religious history of contemporary Algeria, especially as one of the very first focal points of orthodox reformism of the Salafiyya [q.v.].

Population. Because of its isolated location, on the fringes of the desert, far removed from the main areas of economic activity in the north, Laghouat has for a long time lived the uneventful life of a self-contained pasis. Its small-scale economy was limited to the cultivation of pain-trees, supplemented by local craftsmanship (weaving wool) and sheep-rearing, according to long-standing practices of association between Laghouatis and Bedouin of neighbouring tribes (Larba' and Mkhaiff). In this phase of economic stagnation, the population only grew at a very slow rate: from 7,000 in 1928, to 11,999 in 1954, a rate of increase lower than that of the remainder of the Muslim population of Algeria. With independence (1962), and in spite of the departure of the Europeans (who numbered about # thousand) and of the Jewish community (about 600), the population of the town underwent a spectacular increase, this being due to the economic influx engendered by the hydrocarbon industry (particularly prospecting and exploitation of natural gas deposits in the and of Hasi Rmel, and heavy road traffic towards the oil-fields of the far south).

Location. The town and the oasis are situated the right bank | the Wadi Mzi, which descends from the Diabal 'Amur and is absorbed into the Shatt Malkhir, in the Constantinian south. The oldest sectors are set out me the two slopes of two rocky outcrops, foothills of the Diabal Tizgrarin. The new town has developed to the north-west of these hills, and is steadily encroaching on the area of palm-plantations. The oasis itself extends in a semicircle to the north-west and south-east of the town. The palms (about forty thousand trees) produce several excellent varieties of dates (but not the famous daglat wile) and constitute one of the main pillars of the local economy. Through its position on the central north-south (Algiers-Sahara) axis, which has become a vital artery for independent Algeria, and its location between the Oranian south and the Constantinian south, at the point of divergence of routes leading, to the west towards the territory of the Awlad Sidi 'l-Shikh, to the east towards the

596 LAGHOUAT

Ziban and the Blakra, to the south towards the bladd territory), then towards the oildelds (Basi Mas'0d) on the one hand, and towards the main highway for penetration of the African continent, the "Trans-Sahara", in the other, Laghount is at the centre of a considerable network of continuations.

History. In the 4th/10th century, there already existed on the banks of the Wadt Mai a locality whose inhabitants, after acknowledging the authority of the Fatimids, took part in the revolt of Abu Yazid al-Nukkāri [ş.r.]. The neighbouring region was man run by Berber tribes belonging to the family of the Maghrawa [e.v.] (cf. 1bn Khaldun, Kutab al- Ibar, Algiers 1851, i, 64, Beirut 1956-9, vil, 96; Baron Mc G. de Slame, Histoire des Berbères. . ., iii, 271). The Hilalian invasion brought into the region other tribes of the same race, notably the Ksel, fugitives from the Zab, who founded a village called Ben Bûta (the misha "al-Būti" is still in use in Laghouat). Several other asour (Bu Mendala, Nadjal, Sidi Mimun, Badla, Kasbat Ftuh) were built by other emigrés, some of Arab origin (Dwawda, Awlad Bu Zayyin), others from the Mzah. This collection of urban centres we known by the Laghwati Laguar, the latter orthography being the only one which corresponds in reality to the current pronunciation in the Laghouati dialect. The modern form al-Aghwa; indicates a concern for conformity with the paradigms of Classical Arabic (cf. the model af'al). Now the classical form ghawijghat, plur. agamai, is totally foreign to the linguistic usage of Laghouat and its surrounding neighbourhood. In spite of the feeling of Arabism which is a feature of the collective consciousness, there is still evidence of an ancient Berber stock, in various forms: personal names: numerous patronyms cited by Iba Khaldan (cf. above) - still borne in Laghouat and its surroundings; toponymy; place-names of Berber consonance in the Laghouat region are too numerous to be mentioned (see the detailed maps); agricultural sphere; the technical vocabulary of palm cultivation includes terms of Berber pedigree, particularly to denote fine varieties of dates (timejuhret, tustamet, taddulet, etc.); social sphere: the (wize (Berber thiwisi) has for a long time been a form of ritualised collective mutual aid (domestic tasks, weaving of wool, seasonal work in the casis or the fields); and folklore: the old antagonism between sedentary Berbers and Arab tribesmen is still expressed in the form of a satirical folklore which perpetuates a more or less caricature image of "Arabs" (meaning Bedouin).

Little is known of the social and political history of Laghouat until the 18th century. At the end of the 16th century, it paid tribute to the king of Morocco. in 1666, the ksour of Badla and Kasbat Ftůb were abandoned, In 1698, a holy man, a native of Tlemcen, Sidi 'l-Hādidi, took up residence in Ben Bûta and sought to reconcile the rival factions. His moral authority extended to the people of three other knowe as well as to the neighbouring tribe of the Larbat. Under his leadership, the people of Laghouat. defeated the inhabitants of the ksar al-'Assaflyya, but found themselves obliged to pay tribute in the sultan of Morocco, Mawlay Isma9l (1672-1727 [4.0.]), who came and camped under the walls of the town in 1708. After the death of al-Hādidi, IIII patron of the town (1151/1738), the history of Laghouat was reduced to that of confrontations between two parties who competed for political and religious superiority: the Awlad Serkin, inhabitants

of the south-west quarter, allied to the Tidianiyya [q.v.] and the Ahlaf, the majority of them affiliated to the Kadiriyya [q.v.]. In the course of these internecine struggles which periodically brought bloodshed to the oasis, the Turks succeeded in having their supremacy recognised. From 1727, the Bey of Titri had, in effect, imposed an annual rent = the people of the ksour. On the other hand, the Mzabis, expelled from the oasis where they had acquired a share of the plantations, formed - confederation with the nomads of the south, over which the Laghouatis triumphed thanks = the support of the Larbis (1754). This memorable episode seems to have put me end to a prolonged religious war, through the definitive elimination of Ibādiyya from an oasis whole-heartedly attached to Maliki orthodoxy, over and above its ancestral discords. Towards the end of the 18th century, the Turks made an effort to reassert their supremacy, from which the Laghouatis had been gradually treeing themselves. Military expeditions were undertaken for the annual collection of taxes, with varying degrees of success, by the Bey of Medea, then by the Bey of Oran (1784 to 1802). In turns, the Ahlal and the Awlad Serkin were the object of favours or reprisals on the part of the Beys.

The two parties were not slow to re-align themselves with their respective allies, and the comfrontations resumed with even greater severity, until the day when the chieftain of the Ablaf, Ahmad b. Sälim, having affied himself through marriage with one of the leading Serkin families, became master III Laghouat and of the neighbouring ksour (1828). After a period of tranquillity, Laghouat became involved in the struggle of the amir 'Abd al-Kādir against the French. The chieftain of the Awlad Serkin, al-Hādidi al-'Arbi (descendant of the patron saint of the town) was appointed khalifa by the emir. But he was unable to maintain his position and was obliged to flee to the Mrab. His successor, 'Abd al-Baki, - more fortunate, although he had a force of 700 regular soldiers and a piece of artillery. His policies met opposition from the civic leaders and caused m riot; he was forced to leave Laghouat (1839). Al-Hādidi si-'Arbi was appointed khalifa for the second time. The same year, when the amir me forced to raise the siege of 'Ayn Madi (after eight months) to regain control of the Tell, Ahmad b. Sälim and his partisans took the opportunity to rally their troops. The **hholife** al-kladidi al-'Arbi was overthrown and then captured, at Ksar al-Hiran, where he was killed (1839). Thus restored to power in Laghoust, Ahmad b. Salim entered into negotiations with the French (Col. Marey-Monge) to ask for recognition of his authority over southern Algeria (March 1844). This protectorate constitutes the first stage in the process of annexation of Laghouat, a process too long to be summarised (cf. R. Le Tourneau, Occupation de Laghouat par les Fronçais (2844-1852), in Études Maghethines. Mélanges Ch. A. Julien, Paris 1964, 111-36). Following several expeditions (1844, 1847, 1852), the town was taken by storm = 4 December 1852, at the cost of heavy losses on both sides (more than 2,500 dead). The taking of Laghouat (on the orders of General Pelissier) was one of the bloodiest episodes in the conquest of Algeria. On the Algerian side, the memory of the martyrs never ceased to be honoured, in the guise of a semi-folkloristic, semi-religious ritual, until the time of independence. After its conquest and fortifications, Laghoust received a permanent garrison and became the operational base of the French in the south.

In its various phases, from the beginnings (4th/ roth century) to the eve of the contemporary period, the dramatic history of Laghouat has been a microof the general history: (a) of the Contral Maghrib, as depicted by the historian Ibn Khaldun: chronic anarchy, with me respite for the population, exhausted by a perpetual struggle for survival independent of any aspiration for economic and cultural order, and any effort towards civilisation; (b) of modern Algeria under Turkish domination. Like all urban centres or tribes escaping direct control = the part of the central authority (Algiers) and of its beyliks (Oran, Medea, Constantine), Laghouat had only the most distant connections with the Turkish administration, which was interested only in the collection of taxes (the regularity of which was determined by the relative strength of the sovereign power and its vassals); and (c) of French Algeria. After a rigorous conquest and m long period of pacification, the casis of Laghouat was, for almost a century, to be oriented towards the Sahara, as administrative centre of one of the four "Territories of the South" under military control. The population of Laghouat and its environs thus lived on the fringe of northern Algeria, without becoming permeated by French influence. In the absence of a political will and sufficient means, the "moral conquest" by means of education and the exercise of republican freedoms would to be a myth incompatible with colonial realities. Until the inter-war period (cf. the celebration of the "Centenary of Algeria" in 1930), the diffusion of French language and culture attained only insignificant proportions, even within the native Jewish community. For this reason, the traditional aspect of the Muslim society of Laghouat were preserved almost intact. With its natural connections with neighbouring Bedouin peoples (on account of pressing economic requirements), with the permanence of specific symbols of religious culture (a dozen mosques, some twenty Kur'anic schools), and the preponderance of shrines and Institutions of religious mystics (Tiglaniyya, Badiriyya, Shadhiliyya, etc.), Laghonat found itself wellequipped in its cultural resistance to the West, These socio-cultural features were to be reinforced, in the nineteen-twenties, by the reformist preachings of the Salaflyya. In fact, thanks to the prestige and the strong personality of the shayer Mubbrak al-Mill (1897-1945), Laghouat became (from 1927) onward) of the strongest centres of the reformist movement in Algeria, under the stimulus of the Association of Algerian Muslim 'Uland' and of its leader, the shayes 'Abd al-Hamid b. Badis [g.v.) [cf. A. Merad, Le réformisme musulman en Algérie..., Paris 1967, 199-200).

LAHAD [see KABR].

LAHAWR (LAHORE), the principal city of
the Pandjab [q.v.], situated on the left bank of the
Bawi about 700 feet above sea level, at let. 31° 35'
N. and long. 74° 20' E. Its strategic location in the

fertile alluvial region of the upper Indus plain has guaranteed it an important rôle in Indian history, very often as a frontier stronghold and more recently as the capital of the Sikh [q.v.] empire. Since 1947 it has been included in the republic of Pākistān, of which it is the second largest city.

t. History. Popular etymology connects the foundation of Láhawr with the mythical Lava (Lőh), son of Råtna, and the forms Lőháwar (cf. Peshāwar) and Lavapura have both been hypothesised by scholars, Cunningham (Ascient geog. of India, i, 1978) identifying it with the place Labokla (< Lavalaka) mentioned by Ptolemy. Yet another possibility, Lahanagar, may have been preserved in the spelling Láhanár which appears in the 7th/13th century Kirán al-sa'dayn of Amír Khusraw. It has also been identified with the anonymous flourishing city which the Chinese pilgrim Hsüan Ts'ang came upon around A.D. 630 on his way to Djálindhar.

At one time confused with Lohara in Kashmir (see Sir M. Aurel Stein, Kalhana's Rajatarangini, Westminster 1900, ii, 293, 298, 363-4), Lâhawr is actually first mentioned in 372/982 in the Hudud al-Salam 1, 89-90, where we read that it was subject, although a city populated exclusively by Hindus, to the Kurayshite ruler of Multan [q.v.]. Possibly this is what underlies a later tradition that at the time of the first Ghaznawic invasion the capital of the Hindushill rulers of the western Pandlab had been moved from Lahawr to Siyalkof [q.v.]; and certainly Birthal, writing shortly afterwards, locates the capital of the Lähawr region at a place called Mandkûkûr (ed. Sachau, 101; cf. the discussing in S. H. Hodivala, Studies in Indo-Muslim history, Bombay 1939-57, i, 53). Lähawr was captured at an uncertain date by Mahmüd of Ghazna [q.v.], who constructed a fortress there and allegedly renamed the city Mahmudpur, though this is doubtful. Under his successors it effectively became, as the administrative centre of the Indian provinces, the second capital of the Ghaznawid empire. The governor Ahmad Ylnattigin rebelled in 424/2033, and in 435/1043-4 Lahawr was subjected to a long and unsuccessful siege by a confederacy of Hindu princes. But it remained firmly in Ghaznawid hands, serving, after the loss of Ghazna itself in 558/r163, as the capital until its capture by the Ghürids [q.v.] in 583/1187 put an end to the dynasty.

On the murder of the Ghürid Mufez al-Dia Muhammad b. Sam in 602/1206, Lähawr became temporarily the capital of the Indian domain ruled by his slave Kuth al-Din Aybak [q.v.], but after his death it was disputed for some time among the other former Ghurld officers Kubača, Vildiz, and Shams al-Din Atulmi<u>sh</u> [q.v.]. Hasan Nizāmī in his *Tād*j al-ma'athir (Brit, Lib. ms. Add. 7,623, fols. 124b-199a) describes 🖿 great length its capture by Ritutmigle's forces in 613/1217, although Djalal al-Din Kh "Arazmshāh (q.v.), who invaded the Pandjāb a few years later, found a son M Kubāča in revolt against his father at Lähawr (Nasawi, ed. Houdas, text 90), and it probably fell definitively to litutmish shortly before Kubáča's overthrow in 625/1228. Under Illutiniah's weak successors [see DIHLE SULTANATE], the govenors of Lähawr were frequently in rebeliion, and Kable Khān Ayāz was virtually independent there in 639/1241, when Lähawr taken and sacked by the Mongols. They did not follow up their victory, abandoning the city immediately, but around 651/1253, in the course of another inroad, they installed at Lahawr the renegado prince Dialal al-Din Mascad b. Iltutmish, Sub598 LÄHAWR

sequently, however, Il appears again as part of the Diali Sultanate under its governor Shir Khan, who is oredited by the historian Barani (Tabrikh-i Firasmahi, ed. S. A. Man, Calcutta 1860-a, Bibl. Indica, 65) with numerous military successes against the Mongols. The city was restored by the Suljan Ghiyath al-Din Balban [q.v. in Suppl.] soon after his accession in 654/1266, but Lahawt was to remain for men decades a frontier region subject 📰 regular Monrol attacks and seems to have been replaced as an administrative centre by Deopalpur. It attained to a temporary prominence once more early in the 8th/ z4th century under the governorship of Ghazi Malik, who himself ascended the throne of Dibli in 720/2320 m Ghiyāth al-Din Turhluk [q.v.]. In the reign of his son Muhammad [q.v.], however, the district ravaged by the Caghatay khan Tarmashirin around 729/1329, and a low years later Lahawr was occupied by m Mongol chief named Hüledü (see nütlicü) in alliance with the Khokars [q.v.]: the brutal reprisals against the populace by Muhammad's forces we mentioned by Ibn Battūta (til, 333). After this, its history is again obscure until the turn of the century, when Shaykha Khokar, who had been appointed governor of Lahawr by Mahmud Shah Tughluk, made a timely submission to Timur (801/1398), but on showing signs of disaffection was suppressed by an army under the conqueror's grandson Pir Muhammad b. Djahängir.

Lähawr was included in the territory conferred by Thour upon Khidr Khan, who in 817/1414 seized power in Dihii and established the Sayyid dynasty. Under his Mubārak Shāh, the city was twice attacked by the Khokars, now led by Shaykha's son Diasrat, while at the same time the Afghan Lodis [q.v.] were beginning to encroach upon the Pandjáb. In 845/t441 Muhammad Sháh Sayyid, in an effort to curb the power of the Khokars, granted Lahawr to Bahlul Lodi, who repaid the Sayyids by supplanting them at Dibli ten years later. During the Lodf era, the province continued to enjoy a quasiindependence. It was the sultan's kinsman Dawlat Khān Lodf, governor of the Pandiab, who encouraged the designs of Babur [q.v.] on Hindustan, leading to the occupation of Lahawr by the Mughals in 930/1524. On the outbreak of the rebellion of Shir Shāh Sūr, Bābur's and successor Humāyūn fled to Labawr, which he had been compelled at an earlier date to code to his brother Kamran Mirza. The two Mughal princes were unable to hold the Pandiab, and abandoned it to Shir Shah (947/1540), with the result that Lahawr man again enjoyed a period of Aighan rule. Shir Shah is said to have regretted on his deathbed that he had not razed the city, in view of its strategic value to an invader from the northwest, a sentiment doubtless echoed by his ephemeral successors when Humayan reoccupied Lahawr in Rabi^c II 962/February 1555.

With the restoration of Mughal rule, Lähawr entered on the era of its greatest prosperity, to which belong also its principal monuments (see below). Abu'l-Fadi in his Abbar-nāma testifies to its flourishing condition under Akbar, who used it as his headquarters for his expeditions against Kaghmlr, Sind and Kandahār in the period 992-1006/1584-98. It was here that he received in 1995 the Portuguese Jesuit missionaries who were later, under his Diahāngir, to build the church and school which were destroyed by Shāh Diahān. Diahāngir actually made Lāhawr his capital from 1031/1623, and it continued such for most in the reign of Shāh Diahān, who was particularly attached to it as his

birthplace, establishing a carpet manufactory and renovating the deviat-hhins. During the period of its apogee, Lähawr continued to serve at intervals as a centre of disaffection. Akbur had to march to its relief when besieged by his half-brother Muhammad Häkim Mirzā in 974/1366-7, and under his successors it was several times used as a base by aspirants to the imperial dignity: by Khusraw at the outset of Diahāngir's reign (1013/1606), by Shāhriyār on the accession of Shāh Diahān (1037/1628), and by Dārā Shukoh mu that of Awrangsīb (1068/1658).

Lähawr's importance declined under Awrangzīb, who resided there less than his predecessors, though it continued to be styled Ddr al-salyana and the emperor was responsible for the construction of the Diami' Masgiid, with which the city's architectural history is usually assumed to have terminated. Bernier, however, visiting Lähawr in 1665, gives the impression that was already decaying and that large were in ruins. And with Awrangzīb's death, the region swiftly became a prey to the rising

power of the Sikhs.

In 1123/1711 the Mughal emperor Bahadur Shah I arrived at Lahawr in the course of a campaign designed to crush the first Sikh insurrection under Banda, which was threatening the city, but died before he could achieve his object. The struggle for the succession between Djahandar Shah and Azim al-Sha'n in re24/1712 was actually fought out in the vicinity of Lahawr, and it was not until the reign of Farrukh-siyar (1124-31/1713-19) that further action could be taken against the Sikhs. They were ruthlessly suppressed in a series of expeditions mounted by the governors of the Pandjāb, 'Abd al-Şamad Khān und his and Zakariyya Khan, the activities of the latter winning Lahawr the nickname of Shahidgandi. Zakariyya submitted to Nadir Shah [g.v.] in Shawwal 1150/January-February 1738, but recovered his independence once the Persian monarch had withdrawn from India. After the governor's death in 1158/1745, however, his sons engaged in a struggle for power, as a result of which the Alghan Ahmad Shah Durrani (q.v.) was able to launch his first invasion of the Pandiab and occupy the city in Muharram 1161/January 1748. On his departure, the court of Dihk entrusted Lahawr to Mulin al-Mulk, surnamed Mir Mannu, son of the waste Kamer al-Din, but he shortly obliged to submit to the Aighans; and following a further invasion by Ahmad Shah in the winter of 1165/1751-2, the Mughal emperor signed a treaty whereby Lahawr passed into the Afghan aphere of influence. This did not prevent the Dihlt weafe Chazt al-Din 'Imad al-Mulk from invading the Pandiab in 1269/1756, seiting Lahawr from Mir Mannu's widow, who had endeavoured to recognition from both Dihll and Kābul, and installing as governor Adina Beg. Ahmad Shah was thereby provoked into reoccupying the city in the following winter and establishing there his son Timar Shah. During this time, the Sikhs are found sesisting Adina Beg and his allies the Marathas against the Alghans. Together they expelled Timux in 1171/1758 and repulsed another Aighan attempt on the city in 1172/1759. When Ahmad Shah decisively crushed the Marathas at Panipat (q.v.) in 1174/1761 and again took Lahawr, it was the Sikhs who were the ultimate beneficiarles of the victory. On his withdrawal, they simply reoccupied the city, and did so again after each of two further Alghan invasions, finally securing it in 1181/1767. For the next thirty years Labour was governed by a triumvirate of Sikh chieftains, whose rule was disturbed

LÄHAWR

only by two temporary Afghān occupations under Ahmad's grandson Zamān Shāh in 1211/1796 and 1213/1798-9. During the second of these invasions, the Sikh chief Randjit Singh negotiated with the Afghāns for the office of sibadār of Lāhawr, but it was not until Şafar 1214/July 1799 that he was able to wrest it from its three Sikh lords, who had meanwhile retaken it in the wake of Zamāu Shāh's retreat.

Under the rule of Rancill Singh, proclaimed mahārādie of the Pandiab in 1802, Lahowr, as his capital, recovered something of its lost prestige. He repaired its walls, and embarked upon a programme of construction works which did much to rehabilitate the city. On him death in 1839, it passed among various members of his family until the accession of Dallo Singh in 1843, but the Sikh government soon became embroiled in its first war with the British, and by the terras of the two treaties of Lihawr, in March and December 1846, Dalip Singh had to accept a temporary British garrison into his capital and a permanent British Resident in the person of Colonel Henry Lawrence. In March :849, as a result of the second war with the British and Dalip Singh's deposition, Lähawr was formally incorporated in the British emplye, The city remained comparatively quiet at the time of the Indian Mutiny in 1857. though it was the scene of numerous disturbances during the twenties and thirties of the present century, with the rise of the Congress Movement and the conflicting claims of the Muslim League. In the partition of 1947, despite Sikh hopes of separate statehood for the Pandjab, the city and most of its district were allotted to Pakistan. From 1955 it me the capital of West Pākistān, and since 1970 it has been the capital of the new province of the Pandjab.

During this century Lahawr has undergone a considerable expansion. In 1901 its population stood at less than a quarter of a million, but at the 1961 census it had reached 1,296,477 and in 1971 was estimated at 1,985,800 (all these figures include the cantonnent). It consists essentially of the old city, the Anglicised quarters and the cantonnent (formerly called Miyan MIr) added during the late 19th and early 20th centuries, and the industrial areas which have grown over the last few decades. First linked by rail Amritsar in 1861, Lahawr is now well integrated into Pakistan's railway network, being situated on the main line from Karači to Peshawar, and is also accessible by air. It is an important educational centre, possessing two universities.

Bibliography: Historical surveys are to be found in the standard descriptive accounts of Lähawr: see Imparial gazetteer of India?, Oxford 1907-9, xvi, 95-115; Imp. gaz. of India. Provincial zeries. Panjab, Calcutta 1908, i; S. M. Laff, Lahore: its history, architectural remains and antiquities, Lähawr 1892, 1-83, contains many chronological inaccuracies, and is in any case mostly derived from the earlier account of T. H. Thornton, dating from 1860 and reproduced in H. R. Goulding, "Old Lahore": reminiscences of a resident, Lähawr 1924, 56-80; see now also M. Bäqir Malik, Lahore past and present, Lähawr 1952 (Panjab University Oriental Publications, 16).

(P. JACKSON) s. Monuments. The architectural history of Lihawr can be traced substantially from the Mughal administration. Tombs remaining from earlier periods have undergone such extensive alteration that their Interest lies mainly in their inscriptions. Among these are the graves of Abu 't-Hasan 'All Hudiwiri (d. 465/1072 [q.v.]), called Data Gandi-bakhsh, Kuth al-Din Aybak (d. 607/1210 [q.v.] near the Lawharf (sic) Gate, Plr Balkhi (d. 637/1239)), of which the small domed hudira may be original, and Sayyid Sul (d. 786/1384); the tomb of Sayyid Muhammad Ishāk Kazaruni, or Miyan Padshah (d. 788/1386) is preserved in the sake of the Masdiid-I Wazir Khan. Of the eighty-four tombs in the city listed by Ciahti, few in fact survive. No trace has been found, either, of the victory tower at the Port and the mud-brick mosque known as Khishti Maediid said by Fakhr-i Mudabbir to have been built by Mahmud of Charna [q.v.], or the Kasr-I Humayuni of Kuth al-Din Aybak. There is, however, an impressive mihrab from the Sultanato period which appears to have been the focus of an 'ideah near Cah Miran. The pichick [q.v.], 7.4 m high, is surrounded by a band of geometric interlace; the semidome within the arch is roticulated to match, as is its central arched recess, and the squinches on either side have simple nets of groins, with hoods in floral relief. This decoration, which shares some features with Timurid work, is carried out in plaster on a brick core. Burnt brick is in fact typical of Lähawr, as of the Pandiāh m a whole, for want of local stone: it is usually covered with a revetment of cut plaster or tilework which conceals the structure, while stressing its main lines.

The Fort (Killa) which still dominates the city centre has been shown by excavations (1950 ff.) to rest on strate dating back to the Ghaznavid occupation; the fort of Gharid times, and those robuilt by Balban and Mubarak Shah in 666/1267 and 825/1422 were presumably on the man site near the northwest corner of the former city wall. The present structure was begun by Akbar (cs. 974/1566) while work at Agra Fort was still in band. He extended the site to the bank of the Rawl in the north, maintaining the level by melaborate undercroft, and enclosing a rectangle of about 340 by 427 m with walls that still exist to the north, east, and south. The twin polygonal towers of the Masdjidi Darwaza (Pandjabl: Masti Darwaza) are panelled in blind arches like the Dihll Gate at Agra, here offset vertically, and their rhythm continues throughout the north wall. Of Akbar's palace we know only that its Dawlet-khana-yi 'Amm bad countyard enclosed by 114 bays (fman [q.v.] or ayman). The Diharokha balcony which still overlooks the site may be of this date. Akbar also built the city wall with its thirteen gates, now largely demolished or replaced. The early phase of building at the Fort was completed by Diahangir in 1027/1018 with a courtyard of private apartments in the same trabeated style, with faceted pillars and intricately 600 LÄHAWR

carved surfaces of Mathura stone; the chadidia brackets with their profusion of elephants, lions and peacocks owe much to Hindu timber-work. The architect responsible for this complex, 'Abd al-Karlin Ma'mur Khan, appears also to have carried out the remarkable and unorthodox cladding of panels in mosaics of out glazed tiles, on the north, and later the west walls, with the semi-octagonal Shah Burj, between 1034/1624-5 and 1041/1631-2. Their brilliant colours, which extend the range previously used in the Pandjab from dark blue, azure and white to include yellows, brown and green, depict courtiers, scenes of hunting, elephant fights, battle and myth. The Diwan-i 'Amm of forty columns ordered by Shahdjahan in 1037/1628 follows the pattern of its contemporary at Agra; its present form was reconstructed by the British in 1846, but fragments of two ceremonial railings survive. Shahdjahan, dissatisfied with the existing scheme, raised the level of the earlier work, and built a new group of private apartments inside the Shah Burdi, including the Shish Mahall of white marble set off with pietra dura inlay of floral motifs, opening onto the court through five bays with paired columns supporting engrailed arches in the fully-developed marble style; it rises to double height, with a ceiling of convex gless set in gypsum plaster (äyina-käri), the walls now being Sikh work. To its west is a marble pavilion, the Bangla (Nawlakha), that reproduces a Bengali but with its gridwork walls and arching roof, again inset with semi-precious stones (partin -karl). In 1043/1633 be had the Diwan-i Khass and Kh "abgah replaced, the former with a marble hall five bays by five, auticipating that - Dihli [q.v.] in layout, with open areades surrounding an inner hall, and a parapet inlaid simulate merions. The Mott Masdid (ca. 1645) makes finely restrained use of marble as the first of the three Pearl Mosques (cf. Agra 1648-54, Dihll ca. 1660); its pishiak frames a four-centred arch that contrasts with the cusped ones on either side, and the three domes rise from strong cavetto mouldings in a rounded profile recalling Humayun's tomb, though crowned with a small pointed lotus. The round towers of Awrangelb's 'Alamgiri Gate (1084/1673-4) rise vigorously from a swelling lotus-petal base in broad gadroons to leaf-like merions, and each is capped with a light thatel to counter the upthrust.

The Mosque of Maryam 2amani, built for Diahangir's mother in 1023/1614, follows the established scheme of a five-arched prayer hall, with a tall semi-domed playlak, and live domes supported on massive brickwork piers. Square towers at the angles carry domed lanterns. The stilled central dome, less overpowering than that at Fathpur Sikri, has an inner shell of stucco; extensive use is made of squinch nets and honeycomb squinches, and the interior has the finest floral painting in Pakistan, on incised plaster. The prayer hall of the Masdild-i Wazir Khan (1044/1634) is of the same type, with four-centred arches, double-shelled domes-albeit of an improved shape-and deep piers separating the façade from the domes. The courtyard is much longer and areaded with stout octagonal minarets, capped with thatris and set on squared bases: the first use of such towers, it seems, for m Mughal mosque. The main gate is enlarged to house the domed, octagonal central chamber III a bazaar street. The brickwork is extensively panelled, and its grids house flat panels of cut mosaic tile [see * AgHI] = the surfaces of = gates, prayer-half and minarets, with flowers, trees, tendrils and

inscriptions in an inventive but strongly Iranian display. The building achieves great distinction in contrasting this vivacious decoration with the cobust composition of the structure, Inside, the mosaic is replaced by paint. A hammam of the same date, and Iranian in type, still exists near the Dibit Gate. These elements - readjusted in the much smaller mosque of Da'l Anga (1045/1633), where the three frontal arches are engrailed, the domes articulated with cavetto mouldings well above the parapet, and the half is limited at either end by the massive square bases for minarets with lanterns that have been rebuilt this century; exceptionally, tile mosaic is used inside as well as out. Its form is close to that of the mosque and its counter-image flanking the Tadi Mahali (ca. 1632-47). The mosque of Muhammad Salih [q.o.] the historian and calligrapher (1070/1659) is also tiled, and remarkable for its inscriptions. The Badshahl Masdid (1084/1673), AwrangsIb's finest building, combines local tradition with experience from the Djamic Masdjid at Dihli (1059/1649) [see DIRLI]. From the former come the octagonal minarets at the courtyard corners, the smaller ones at the angles of the prayer hall, and the recessed panelling; from the latter are drawn the plan, the raised plinth with steps and gateway, the bulbous donies, and the handling of the feçade, The brick structure in faced throughout in red sandstone, and white murble for the domes; the interior is decorated with floral reliefs in lime plaster (munabbat-kdrf), and painted, with almost Rococo delicacy.

Tombs. The tomb of Shaykh Musa Ahangar (cs. 1560?) whose squat dome 🚃 a cylindrical drum rests on a square, panelled cell, provides unique evidence of the tilework in the city; the dome is tiled in green horizontal courses, and the upper part of the walls in square tiles set diagonally, with floral motifs in blue and white. The squared mass of Diahangir's Tomb at Shahdara (completed ea. 1046/1637) is derived from the base of Akbar's tomb [see ACRA], with the same number of arches and projecting bays at the centre of each side. Its red stone façades are inlaid with white and black marble in magpie elegance within the usual grid, and the tall octagonal corner towers are patterned in chevrons of white and yellow between four balconies. The absence of a central pavilion on the roof destroys the composition: the original arrangement is uncertain. A finely inscribed cenotaph fies in an octagonal central chamber with floor and walls all in superb pietra dura. This single-storey form is repeated at half-size in the tomb of his empress Nürdjahän (d. 1055/1645) nearby, built by herself; no vestige of its original surface remains on the brickwork Da' I Anga's Tomb (1082/1671-2) in the Gulahi Bägh is also square, with gridwork walls and a square that on each corner; the plan however incorporates a cross-shaped tomb chamber, with calligraphy by Muhammad Salib in the coving, and an ambulatory with octagonal corner cells. A central dome shaped like those of Wazir Khan's Mosque is patterned in chevrous of white and dark blue tiles, and its tali drum with floral motifs.

A series of octagonal tombs begins with that of Anārkall (2024/1615), built by Djahāngir for a former love. It has octagonal, panelled corner towers with Chatrles at roof level, arched walls rising through two stories, and a dome of this same profile. It suffered various alterations when adapted for a church in 1851. Entrances formerly alternated with octagonal corner cells around a central octagon,

with the cenotaph, carved in bold relief, at the middle. The tomb of Asai Khan (d. 1051/1641 [q.v.]) at Shahdara has a single octagonal chamber, and semi-domed arched war on each external face around it. The reveals once had dados of square painted tiles, unique in this reign, and the squinch nets were enhanced with mosaic tile; the tall bulbous dome, now stripped of its white marble, was contemporary with that of the Tadi Mahall. The cenotaph is modelled on that of Diahangir, below a munabbatkári vauk. 'Ali Mardán Khán's tomb (ca. 1650), built for his mother, is similar in plan, but is crowned with a dome of the earlier type on a tall drum, balanced, Süri-style, by a chatri set above every angle of the octagon. Once more the veneers have been stripped by the Sikhs, but there are traces of a floral marble inlay on the dome. The Mausoleum of Sharaf al-Nisā' Bēgam (d. 1158/1745), called Sarwwālā Makbara, is a low tower, square in plan, whose walls are relieved by a frieze of cypress trees (sarw) 2.2 m high in glazed tilework around a tomb chamber at the upper level, surmounted by a Chadidia and a hipped square dome. That of Sir Muhammad l k bāl, designed by Nawwäb Zayn Yārdiang Bahādur in 1951, is a severe orthogonal cell with battered walls, set off by mouldings around a strong plinth and Thadidia, and deep openings, reminiscent of Tughluk building yet somewhat Germanic; the white marble autorior is carved in ornamental relief and lines from his Zahar i Adjum.

The gardens associated with these buildings, all but obliterated and requiring extensive restoration on Lord Curzon's Initiative, have lost their original planting, but still display the thirbagh layout, with causeways patterned in local brickwork set between regularly-spaced cypresses. The first, planted by Mirzā Kāmrān on 📟 bank of the Rāwl (ca. 1530-40) has disappeared, but its summerhouse, a baraduri, survives in midstream. Nürdiahān's Bāgh-i Dilkushā, adapted for her husband's tomb at the centre, has each of the four quarters subdivided into four square plots, with canals and tanks at the intersections, within a huge walled enclosure. The Bagh-i Shalimar (see austas, ii), completed in 1052/1642, and like its namesake at Dibli inspired by the eponym in Kashiult [q.v.] was originally entered at the lowest terrace, allowing movement, in the palace, through successively more private areas, past cascades backed by famp-niches, a takhi-gak set in a tank, and 450 fountains. The Hadur I Bagh, formerly a sardy built by Awrangzib, is apparently Sikh work.

Three gateways clad in mosaic tile have survived the gardens to which they once led. The Cawburdji (1056/1645), with four corner towers like those ill Wazir Khân's mosque, but more attenuated and lacking their chatris, has cleanly-cut archways set in a gridded surface. The Gulābī Bāgh Gate (1056/1655) follows is similar scheme, but with angle-shafts in place of the towers, and with cusping of the upper arches. The undated gate at Nawānkāt (ca. 1650) has the panelled corners left unbroken as support (or its twelve-pillated chairis, remarkable for their gadrooned, green-tiled domes.

Bibliography: See hind for general works including references to Lähawr; of these Sir R. E. Mortimer Wivecier, Fire thousand years of Pakistan, London 1950, 75-93, is the most comprehensive. (P. A. ANDREWS)

LARD... colloquially called Lahidi, m town and area of south-western Arabia, now situated in the second governorate of the People's Democratic Republic of Yemen. The town, also known as

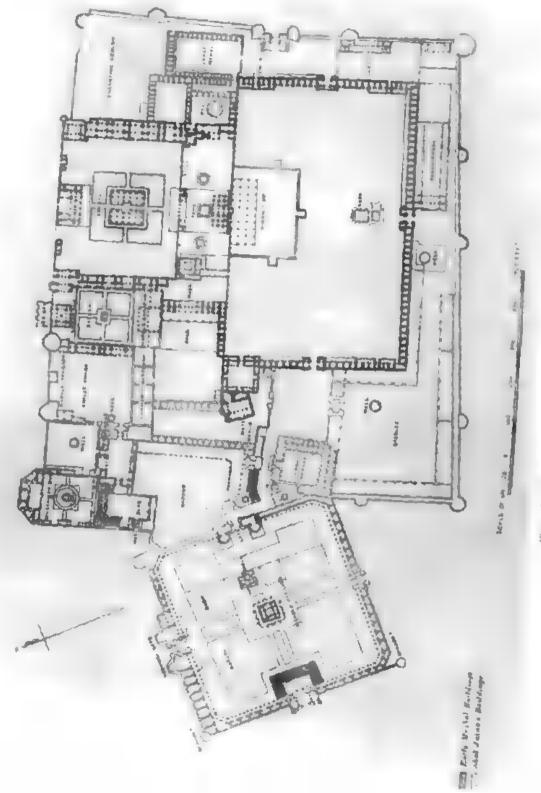

PLATE XXXI

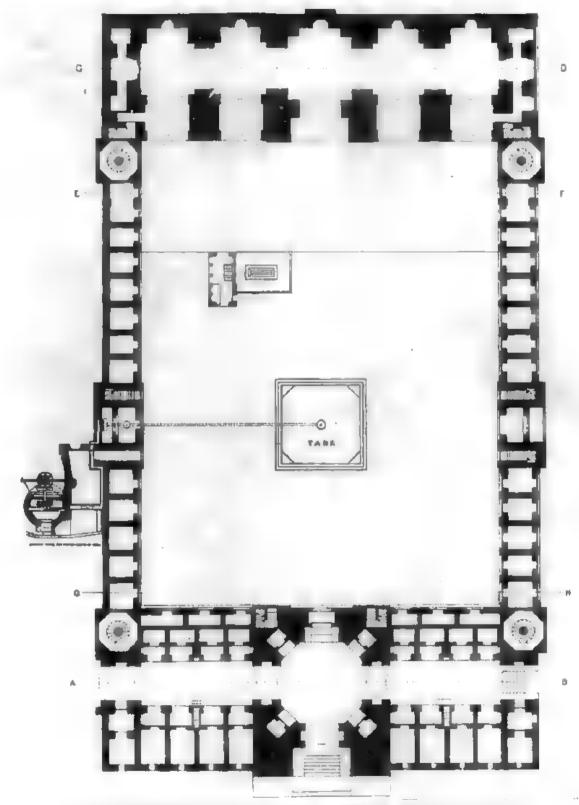

Fig. 2. Plan of the Masdid-I Wazle Khan. (From M.A. Chaghatai, The Wasir Khan Mosque, Lahore)

al-Hawta, lies between the two tributaries of the Wisci Tuban, al-Wadi al-Kabir and al-Wadi al-Saghir, about 25 miles north-west of Aden. The town is surrounded by a fertile area which is cultivated by means of an elaborate system of irrigation using the water of the wadis and also of wells. Date-palms abound, m well as careal crops and vegetables. In fairly recent years too, cotton has become an important addition to the local agricultural economy.

Definition. In early Islamic, mediaeval and later times, Labdi comprised a whole area to the north and north-west of Aden and formed a joint fief with Abyan which at that time must have extended much further westwards to the north and north-east of Aden than the present-day area of the mann name. Perhaps Labdi and Abyan in those times might have been divided by a line drawn due north from Aden, with the former in the western side and the latter on the eastern. It was that the area of Lahdi remained as described above until the late 19th century, when the then sultan of Labdi occupied the territories of the Subayba, the tribal group inhabiting the territory between Lahdi proper and Bab al-Mandab. Thus the Landi sultanate was composed of historic Lahdi and Subaybi territory. History. The genealogists connect the geo-

graphical name with the Himyar, Lahdi b. Wa'll b. al-Ghawth b. Katan b. 'Arib b. Zuhayr b. Abyan b.

al-Humaysa'.

After the Yemen had been won for Islam, Lahdi shared the fortunes of this extensive province of the Arab empire. Lahdi thus passed with the Yemen to the Umayyads and then to the 'Abbasids, though in early times governors in San'a' and Hadramawt must have had little control in the In 203/818-19 the caliph al-Ma'mun appointed Muhammad b. "Abd Allah b. Ziyad as governor of the Yeman. He was the founder of the Ziyadid dynasty and built the Tihama town of Zabld, which was to 🔤 their capital until 402/1011-12. Lahdi, with Aden, Abyan, Hadramawt and al-Shibr, passed into the bands of the Band Maca in the time of the Abyssinian slaves who ruled Ziyādid territory when the dynasty came to an end. In 454/2062-3, Aden came under the control of the Isma'lli 'All b. Muhammad al-Sulayhl, though the Masnida were left in effective control until his death in 473/1080-1, when his son, al-Mukarram Ahmad, reclaimed the area. Ahmad installed as rulers of Aden and the neighbouring al-'Abbas and al-Mas'ud, the two Zuray'ids, in return for their past services to the Isma'ill cause in the Yemen on behalf of the Sulaybids. The Zuray'ids remained in power until the entry of the Ayyabids from Egypt into the Yemen in 569/1173. Labdi, with Aden and indeed the rest of the Yemen, thus came under the control III the Ayyübids (569-626/1173-1228) and their successors, the Rasolids (626-858/1228-1454), who were followed by the Tahárida (858-ca. 954/1454-ca. 1547).

The expeditionary force led by Husayn al-Mushrif which the Mamhūk Sultan Kānsawh al-Ghawri sent at the request of the Tähirid Sultan 'Amir b. 'Abd al-Wahhūb to prevent the encroachment of the Portuguese in the Red Sea, and which conquered a great part of the Yemen, only paved the way for the Turks. In 945/1536 the Turkish governor of Kuizum, Sulaymān Pasha, set out with a fleet and took Aden, which thus belonged to the Turkish empire until in 1045/1635 the Turka had to leave the Yemen to the Zaydi Imāms.

In 1141/1728, however, the 'Abdail tribal leader, Fadi b. 'All b. Fadi b. Şâlib b. Sâlica, made himself

independent of the Zaydis and made Labdi the capital of his territory. Thus the area remained under the 'Abdall house down to the evacuation of southwestern Arabia by the British in 1967. With the arrival of the British under Captain S. B. Haines in 1839, when the Labdj sultan also controlled Adea, the latter was ceded to the Government of Bombay. As already mentioned, the vast area of the Subayba fell under their sway in the late 19th century. By the time of the formal signing of the agreement with the British Government to inaugurate the Federation of the Amirates of the South in 1959, the Labdi sultan Fadi b. 'Ait, as ruler of the senior state in the Western Adea Protectorate, held the key portfolio of Federal Minister of Defence and continued iii that post until the collapse of the Federation and declaration of the new Republic in 1967.

LAMIDIAN. r. A town in the Caspian coastal province of Gilán (q.v.) in north-western Persia, in long. 50° o' 20° fl. and lat. 37° 12′ 30° N. It is situated on the plain to the east of the lower reaches of the Safid-Rúd and to the north of the Dulfek mountain, and on the small river Com-khala Purdesar, but at some 14 miles/20 km. from the Caspian Sea shore.

Lähidjän does not seem to have been known as such to the earliest Arabic geographers, though legend was to attribute its foundation to Lahldi b. Sam b. Nüh. It does, however, appear in the Persian Hudüd al-falem (372/982) = Lâfdjan, one of seven "large districts" (i.e. it was not yet a town) of the south-eastern part of Gilân, that known locally as Biya-pish ("this side of the water", biya cognate with Avestan vaidhi "water-course") as opposed to Biya-pas ("beyond the water") on the north-western side of the Safid-Rud, which had Fuman [q.v.] and Rasht [q.v.] as its centres (tr. Minorsky, 137, \$ 32. 25, comm. 388-90; on this passage of the Hudad al-falom, see Barthold, in Investing Kavkas. Istor .-Arkheol. Instituta, vl [1927], 63-6). In ancient times, the Safid-Rud or Amardus River [see gizit Ozza] had formed the frontier between the Amardol or Mardi to the east and the Gelai or Kadusioi to the west; see F. C. Andreas, in Pauly-Wissowa, i/2, 1729-33, s.v. Amardor.

During the middle years of the 3rd/9th century, Lähfdian district formed part of the dominions, stradding Glan and the mountainous hinterland of Daylam [q.v.], of the Diastanid = Diustanid Wahsüdän b. Diastani still alive in 239/873, according to al-Tabari, iii, 1880; see also Sayyid Ahmad Kasravi, Shahhriydrani gum-nam, Tehran 1333/1936, i, 25); the rulers of Bira-pish were generally able to extend

their power up from the plain into the mountains, and even at times over them to the south of the Blburz (as was to be the with the Kar-Kiya'' Sayyids, see below).

There then arose in Biya-pish a family ruling from Kûtum or Hûtum in the Rân-i Kûh district, whose centre E Langarud to the east of Lahlidjan. This line was founded by the 'Alid Nasir al-Din al-Hasan b. 'All al-Uţrūsh (d. 304/917) [q.m], who introduced Zaydł Shl'ism into the Caspian region; the eastern part of Glian, sc. Biya-plsh, thus became strongly affected by Shifism, whereas Sunui doctrines, including Hambalism, remained dominant in Biya-pas. The wider political authority of al-Utrūsh's family shrank during the middle decades of the 4th/10th century, and became concentrated more on Tabaristan or Mazandaran to the east, but the Nasirid Sayyids remained influential in the Casplan region because of their religious prestige. The history of Lähidjän in the succeeding period is obscure; but it is probable that the Djastanids re-asserted their authority there after the highland region of Daylam had passed into the hands of the Musafirids or Sallarids or Langarids (the latter form better than "Kangarids") of Tarum [see MUSAFIRIDS and TARUM], and it was the Djastanid "king of Daylam" who submitted at Kazwin to the incoming Saldiak Toghtl Beg in 434/1042-3 (Ibn al-Athle, ix, 348).

Subsequently, in find a family of local origin called the Nasirwands ruling Biya-plsh from Lähidian. The story of their origin from Mahmud of Ghazna's brother Nāsir al-Dawla b. Sebliktigin retailed by Abu 'l-Käsim 'Abd Allah b. 'Ali Käshänl in his Tarithei Oldjeytii is wholly fanciful, and the name Nășirwand obviously relates to a connection, real or supposed, with Nășir al-Din al-Uţrûsh's tenure of power there. In the time of the Mongol ll-Khān Hülegü, the Nāsîrwand Djamāl al-Din Şa'lük b. Şa'lük was ruler in Lahidjan; some decades later, in Öldjeytu's reign, the family was divided into two branches, that of Şaflük b. Salar in Kütum, and that of Naw-Pādishāh or Shāb-i Naw in Lāhldjān. The latter submitted to the II-Khanid when he appeared in Gilan and at Lahldian specifically in 706/1306-7, receiving in marriage the daughter of a Mongol commander and being granted suzerainty over the other local princes of Gilan; Rashid al-Din also testilies to Naw-Pādishāh's riches and prestige at this time. Lähldian itself flourished, and Hamd Allah Mustawli describes Libidian and Fûman as the two chief towns of Gilan: in the vicinity of Lahidian silk cultivation and weaving were actively pursued. and corn, rice, oranges and other sub-tropleal fruits were grown (Nushat al-build), ed. Le Strange, 162-3, tr. 158-9; R. B. Serjeant, Islamic textiles, material for a history up to the Mongol conquest, Beirut 1972, 71).

Biya-pish was racked by warfate between the various local chiefs during the course of the 8th/xath century, and by 792/1300 the rule of the Nāṣirwands, already once interrupted in Lāhldiāu, foundered completely, and Sayyid Hādī Kiyā became master of Biya-pish. The Kar-Kiyā'i Sayyids ruled there from 769/1367-8 (with a brief revanche shortly after this by the last Nāṣirwands) till 1000/1592, the first of the family to make himself completely independent being Sayyid Anir Kiyā (for a genealogical table of the family, see H. L. Rabino, in JA, ccxxxvii [1949], at pp. 323-3]. His son Sayyid 'Ali Kiyā, with the help of the Mar'ashi Sayyids of Māṣandarān, made himself master of all Biya-pish, and extended as far as Kaxwin, Tārum and Shamirān; and Sayyid; and sayyid

Radī Kiyā (d. 829/1426) chased out of the mountains south of Lāhīdjān the local family of Hazācāspids and the Ismā'lis, Likewise, Mirzā 'All b, Sultān Muḥammad Kiyā (883-911/1478-1506) at the zenith of his power controlled Kazwin, Tārum, Sultāniyya, Sāwa, Zandjān, Fīrūzkūh, Tehran, Rayy and Warāmin.

From the end of the 9th/15th century, the information of the local Caspian chroniclers like Tahir al-Din Mar^cashi may be supplemented by that of the Safawid chronicles, the interest of the latter being focussed on the region because of the crucial role played by Mirza 'All Kiya in sheltering the young Şafawid İsma'li b. Haydar (see isma'lı i). The future ruling family of Persia already had close links with the Lahidian district, for in the village of Shaykhanbar on the Lahldian-Langarud road lay the tomb of Shaykh Ibrahim Zahid (d. 714/1314) the pir and murskid of Shaykh Safi 'I-Din Safawi (cf. Sylvia A. Matheson, Persia: m archaeological guide, London 1972, 71). When Isma'll was a fugitive from the Ak Koyuniu in 899/1494, he fled eventually from Ardabil to Lähldjän, Mirzä 'All welcomed him there, refused in 902/1497 to extradite him to the Ak Koyunlu leader Rustam Mirzā (allegedly after receiving a vision of the caliph 'All enjoining him to protect the young prince), and assigned for his education a tutor, the Lähidjan scholar Shams al-Din. Then early in 905/later 1499, when he was still not quite 11 years old, Ismā'il left Lāhīdjān for the bid for power which was to end in the defeat of the Ak Kovuniu and Isma'll's conquest of Adharbaydjan (see E.D. Ross, The early years of Shah Isma'il, in JRAS (1896], 249-340; W. Hinz, Irans Aufsteig zum Nationalstaat im fünfzehnten Jahrkundert, Berlin-Leipzig 1936, 98-100; Minorsky, Tadhkirat al-mulük, a manual of Safavid administration (circa 1137/1725), London 1943, Appx. 11, 191 ff.)

During the 10th/16th century, Biya-pish and the Kar-Kiya's became vassals of the Safawids from 909/1503-4 till the region's final incorporation in the Salawid empire in 1000/1592. At first, a Kizil-Bāsh [q.v.] governor was appointed to overtee the Kar-Kiya'is, and then in the middle years of the century, royal princes acted 🖿 governors, including a brother and two sons of Shah Tahmasp I (in 943/1536-7 and 985/1577-92). The Kar-Klyan Sayyid Abmad b. AR (943-75/1536-67 and 985-1000/1577-92) introduced at Shah Tahmasp's behest the official Safawid Twelver or Djattari form of Shitism in place of the Zaydi one; but he fell from favour when he started intriguing with the Ottomans, inviting them to send troops into Shirwan and to Lahldjan for an attack on Bazwin, so that in 975/1567 Tahmasp invaded Gilan and deposed Abmed. He was restored nine years later, and was formally adopted in brotherhood (akkani) by Shahs Isma'll II and Muhammad Khudabanda. But he continued to have relations with the Ottomans, and In 1000/1592 Shah 'Abbas came to Lähidian, whilst Ahmad fled to Shirwan and then Istanbul, where he ended his days (cf. You Hammer, GOR, is, 562, 576). All Glian was now placed under a centrally-appointed waste, and after the death of the grantee of the province Farhad Khan in 1008/ 1600, it became till the end of the Safawid period one of the crown domains (mahāll-i khāṣṣa); see K. M. Röhrborn, Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert, Berlin 1966, 19, 44, 83. 87, 93, 105, 121).

Since then, Lähldjan's history has been only sporadically eventful. Under Shah Sulayman I there took place in South Russia the Cossack revolt of

Stepan Razin (1668-71), with raids expected against Persian territory along the Caspian coasts; hence troops were mustered in Biya-pigh, the Ghāriyān-54/1. During the Russian occupation III Gliān 1736-46/1724-34, the Russians built two forts at Lāhiḍjān, and the town was once more under Russian domination during the local Soviet Republic of Gliān in 1920-1. According to the traveller Gmelin, who was in Gliān in 1772, Lāhiḍjān had seven years previously submitted to Hidāyat Khāa of Fūman. Ķāḍjār control was subsequently established there, but the last hereditary governor of Lāhiḍjān, Mīrzā Aḥmad Khān, Sālār-i Mu²ayyad, was dismissed by the constitutionalist government in 1907.

In recent times, Lähldjän has lost most of its administrative importance to Rasht, but still has considerable commercial importance a centre for the local Glän silk and cotton industries and as a centre for citrus fruit growing; tea was first introduced into the Caspian region in 1914, and later, Ridä Shäh Pahlavi employed Chinese experts to start new plantations near Lähldjän in the lower foothills adjoining the coastal plain (see Admirally handbook, Persia, London 1945, 148, 464).

The antiquities of the town include various graves of the Kar-Kiya'l Sayyids. Administratively Lahldian is now the centre of a stdaristan or district of the same name, in the first province of Iran; according to the took census, it had a population of 25,725 and ca. 5,573 houses (see Razmara, ed., Farhang-i diaghrófiya-yi Iran, ii. 270-1, and L. W. Adamec, ed., Historical gazties of Iran, i Tehran and Northwestern Iran, Graz 1976, 410).

 Soveral districts in Persia have however derived from the stems Lan and Lar [q.v.]: Lahīdi, an important little town in Transcaucasia west of Shanākha [see sulnwân]; Lahīdiji, a village in

the canton of Kurbal in the province of Fars; Lähldjän, a canton of Mukri Kurdistan [see sawns-BULAK), which the Sharaf-name of Sharaf al-Din Biditsl, ed. Veliaminof -Zernof, St. Petersburg :860-2, i, 280, calls Lardian. There is a village of Lahldian near likhiči, south of Tabriz, and a village of Laridian south of the Araxes about 12 miles above the mouth of the river of Ardabil (Kara-Su). The forms Lah and Lar may both come from "Ladh (cf. the Old Persian Mada, which gave Mah in Persian and Mar-kh in Armenian). According to the dictionaries (e.g. Vullers) the old name of the town of Lar [q.v.] was Lad, Ladh; the silk called ladh is also known as lah (lah however may equally well be explained by iss). The change of d (dh) = r is attested in the Caspian dialects (it is regular in Tatl; Melgunof, Das südliche Ufer des Kaspischen Meeres, 221). The fact that we have districts of Labidjan and Låridjan in the adjoining provinces of Gilan and Måzandarån is remarkable, but still **en s**ignificant is the fact that Labidi of Shirwan represents an island of Iranian Tax surrounded by Turks (the Tät are now found scattered throughout Daghistan, the country round Tehran, Adharbaydjan, etc.). Their present name has a rather general and vague character, see TAY. The colony of Lahldi may have retained the original dialect formerly spoken in the metropolis. The name of the silk ladkflah suggests the former existence of a place called Lad, which produced siik (cf. Yākūt, s.v. Lāhidi; he says that Lahidi produces the silk called "Lahidil" which it not of high quality). With the suffix -if, the word Lak-ic would mean the people of Lad". It remains to be seen if the region of Labidian is not the ancestral home of numerous Lahidi colonies. At the present day there is spoken in Lahidjan-although with certain local pecularities-the Gliaki dialect, but this parent dialoct has here exercised a levelling influence, of which the foreign Turkish was incapable in the case of the people of Lahldi of Shirwan. As to Lähldjän of Kurdistän, we may recall the hypothesis of Audreas that the name "Dimla" by which the 2aza call themselves (north of Diyarbakr) is a metathesis of Delam (Daylam). The emigrations from Glian, still very obscure, certainly penetrated far to the west. Finally, to the names mentioned one might add perhaps that of Kal'a-yi Lahudi in Khūzistān (1); cf. Mustawft, Tabriah-i guzida, (V. MINORSKY) GMS facs., 240,

LÄHIDII, the nisbs of several eminent persons connected with Lähidjän [q.v.] in the Caspian region of Persia, among whom the following may be mentioned.

t. Shams al-Dir Muhammad b. Yahya Gilant, theologian, mystic, and poet of the Timurid-Safawid period and a renowned shay M of the Nurbakhshiyya Şüfi order in Shiraz. He joined his master Sayyid Muhammad Nurbakhsh in 849/1445, and during a period of 16 years, under Nurbakhsh's spiritual direction, accomplished considerable progress along the Suff path. After the death of Nurbakhsh (869/1464), or slightly before then, Lahidii retired to Shiraz, where he founded a Nori (= Nürbakhshi) Manakik [q.v.], and spent much of his time in mystical exercises and teaching \$0ff doctrines. During this period of retirement, he was held in great respect not only by scholars such as Dawäsi [q.v.] and Djämi [q.v.], but also by the Şafawid <u>Sh</u>āh Ismā¶i I, who paid him a visit at his khānakāk in 909/1503 in Shīrāz.Nevertheless, 📟 biographical data which we can glean from his own writings are minimal; a six-months' stay in Tabriz

prior to his master's death; a pilgrimage to Mecca in 882/1477; and a short sojourn in Yemen, where in the course of his way back home from Mecca, be made an investiture of Nürbakhshi kkirkas to a couple of disciples-a father and son-in Zabid, for whom he also wrote a concise idjūza in Arabic, with traditional Saff instructions. His death, according to an off-cited chronogram (= Mādda to'v(Ah), occurred in 912/1506. Other dates, including 980/1572 (cited by Pertsch, Persische Handschriften, 830) and 869/1464 (H. Corbin, Trilogie ismarlienne, Tehran-Paris 1961, index) are definitely incorrect. Lähldif's literary output, including his Dieder, with Asiri as his pen-name, and a didactic mathraud called assar of-shudad, contains a theosophical prose work called Mafaille al-i'diaz (an extensive commentary on the well-known Gulsham-i ras of Mabmūd-i Shabistari [q.v.]), together with = number of shorter tracts with comments on the difficult verses of some old poets. His own poetry, although of considerable theosophical value, is of rather mediocre literary quality. His son PidaT-yi Lahidit (d. 927/1521), better known as Shaykhzāda, was also a poet and reportedly a Nurbakhsh) shaykk well.

Bibliography: (in addition to works mentioned in the text): Nor Allih-l Shushtarl, Madjālis al-ma'minin, lith. Tabriz, 306-9; Ridh Kull Khān-l Hidayat, Riyād al-ʿārīfis 1, 63; Ma'sa'm 'All-Shāh, Jard'ik al-lakd'ik, it, 143; iti, 55-6; Ibn-l Yūsul-l Shīrārl, Fibrist-i Kitābkhāna-yi Madrasa-yi 'Alt-yi Sipahsālār, Tehran 13181939, ii, 559-60; Mudarris-i Khiyābānl, Rayhānat al-adab 1, ii, 125-6; Kaywān-i Saml'l, preface to his edn. of the Mafailh al-i'djās. Tehran 133711938. For an analysis of some of Lāhldil's personal mystical experiences, see H. Corbin, in Eransonal finishācher (1959); the Divān-i Asīrā-yi Lābīdil, together with his minor tracts, edited by Dr. Barāt-i Zandjāni, is iii press.

2. ABD AL-RAZZÁK E ALÍ 8. HUSAYN GILANI, theologian, philosopher and poet of the late Safawid period and a leading master of the so-called philosophical school of Isfahan. Although a favourite pupil and a son-in-law of Mulla Sadra Shirazi, he did not share his master's philosophical teachings over several lopics. Among these one may mention Mulla Sadra's belief in the movement of substances (= al-harakat al-djawhariyya) and his opinion on the basicality of being (= aşālat al-wudşūd). Lāhidji spent the latter part of his life in Kumm, where he died in 2072/1662, leaving behind him a considerable literary output. His own philosophy was of a rather eclectic character, owing much to Ibn Sina's and Nasir al-Din Tusi's thought. His works include the Hāshiya-yi Kitāb-i Ishārāt, being glosses upon Tūsi's commentary on Ibn Sina's Kitab al-Ishavat ma 'l-tashbihit, and the Shandrik al-ilham, a concise but original commentary on Nașir al-Din Tusi's Tadirid al-'akā'id. He wrote also ■ commentary on Shihab al-Din Yahya Suhrawardi's Hayakil al-nur, along with other theological works. Among these are two Persian books dealing with the elements of Shiff theology: the Gawhar-i murad, which he dedicated to Shah 'Abbas II ca. 1052/1642, and Sarmayiyi imds which he composed in 1058/1648 at the request of a friend. Lahidit's poetical pen-name was Fayyad, under which he composed a diwan of no less than 5,000 verses. He is said to have had personal connections with contemporary poets, such as \$4'ib-i Tabrizi and others. His own poetry contains gnostic ideas, though Lähldif had no sympathy for

the Suff skayāhs of his time. Although equally criticised by some fanatical 'ulamā' of his epoch, Lāhīdji has been considered as in general more acceptable to orthodox Shl'ism than his teacher Mullā Ṣadrā was. Lāhīdji's soms Mirzā Ibrāhīm and Mirzā Idasan were also theologians of some repute. The latter, who died in 1121/1709, left behind no less than twelve books on theological problems.

Bibliography; later authors have sometimes confused Shams al-Din Lähldji and 'Abd al-Razzák Lähldil, so that they have called the commentator of the Gulshan-i rdz 'Abd ai-Razzāk (see e.g. E. G. Browne, LHP, iv, 148), or Muhammad 'Abd al-Razzák, which is but a forged name (see Corbin, Histoire de la philosophie islamique, Paris 1964, 56). Concerning the philosophical school | isfahān. see Corbin, En Islam iranien, iv, Paris-Tehran 1972, 9 ff.; A. Bausani, La Persia religiosa, Milan 1959, 386 ff.; S. H. Nast, in M. Sharif's A history of Muslim philosophy, 1966, ii, 904 ff. For an analysis of the philosophical teachings of 'Abd al-Razzāķ-i Lāhldji, see S. Dj. Ashtīyani's Anthologie des philosophes iraniens, textes persanes . arabes, Introduction analytique par H. Corbin, Tehran-Paris 1972, i. index. For his life and works, see Brockelmann, II, 590; C. Rieu, Cat. of Persian manuscripts, Suppl., 205-6.; Browne, LHP, tv, 408-9, 435; Mudarris-i Khiyabani, op. cit., iv. 362-3. (A. H. ZARRINKOOB)

LAHN AL-'AMMA, "errors of language made by the common people", is an expression which characterises a branch of lexicography designed to correct deviations by reference to the contemporary linguistic norm, as determined by the purists. The treatises which could be classed under this heading, correspond, broadly speaking, to "do not say . . . but say...", the incorrect form generally being introduced by "you say" = "they say - one says" (takul, yakulun) and the correct form by wa 'lsaudb... "whereas the norm is..."; they are most often intitled Kudb Lahn al-'amma or Kudb ma talhani yaihan fihi 'l-'amma, but may also be Kitab an taghlaf fihi 'I-famma, Kildh ghalafat al-fawamm, Kitáb Tatkķif al-lisán, etc., although this range of titles does not necessarily imply a significant difference in the manner of presentation of linguistic facts or a particular method of choosing the material m be considered. These works give evidence of the development of current usage and can, to a certain extent, serve as a means of tracing the history of the language, especially from the time that a standardisation of the 'arabiyya [q.v.] come into operation through the efforts of the philologists.

Under the heading AL-KHASSA WA 'L-CAHMA, reference has been made to the 'dmma of the grammarians, without any attempt to define it and determine its limits. 'Abd al-'Azlz al-Ahwani, who has considered this point (in RIMA, lii/t [1376/1956], 133 ff.), relies quite rightly on a passage of al-Djahiz (Baydn, i, 137) who writes: "When you hear me speak of the 'awamm, I do not refer to the peasants, the lower orders, the artisans and the tradesmen, nor the Kurds of the mountains m those who dwell on the islands in the sea. . . the 'awamm who belong to me nation and our religious community and possess our culture and morals constitute a class endowed with intelligence and qualities superior to those categories cited above, without however attaining the level of our hhāssa. It should be noted, in addition, that the hhassa is also divided into hierarchical strata". It will be seen from this passage that al-Diabie, without making a decisive contribution to the problem posed by the definition of the Massa will of the Samma, excludes from the latter, from a linguistic point of view at least, the lower orders of society and the foreign elements whose language was not regarded as belonging to the Sarabiyya, as strictly defined, and he includes among the Sarabiyya, as strictly defined, and he includes among the Sarabiyya are needlum social class who, at a time when literary Arabic and dialectal Arabic, as we call them, had not been irretriovably divorced, were expressing themselves in a language which was already less formal, but still fairly close to that of the Massa, of the intellectual clite, or the upper schelons of the latter, theoretically guardians of the norm of the past, of the innate and spontaneously respected fastalia [q.v.].

Al-Zubaydl provides a number of definitions in this context when he writes in the introduction to his Lahn al-laudimm (cf. al-Ahwani, art. cit., 133; G. Krotkoll, The "Lahn al-'awamm" of Abu Bukr al-Zubaydt, in Bull. of the College of Arts and Sciences, Baghdad, it [1957], 6-7); "I have examined the language employed in our time and in me fand (Muslim Spain) and here I have found phrases which cited neither by Abû Hêtim (al-Sidjistânî; see below) nor by other lexicographers; it is a question of alterations, owed to our 'amma, which has modified the pronunciation (of certain words) or adapted the meaning, and has been followed in this practice by a great many people, to the point where these incorrect usages have infiltrated into the works of poets, and the most eminent scribes and functionaries include them in their correspondence and make use of deprayed expressions in their conversations. I have therefore deckled it appropriate to draw attention, in my turn, iii these faults, to indicate the correct form which corresponds and to devote a book to the inaccuracies which I have observed . . . while teaving aside those that are committed by the mass of the people... and concentrating on those which may expect to find in the language of the ghassa." His treatise is however intitled Lakn al-'audmm, and one gains the distinct impression that this last term, or its singular famma, in the titles considered in this connection, is pure euphemism designed to disguise the truth and spare the feelings of the khāssa, while laying the responsibility for linguistic deviations upon the latter. In fact, if he was referring to the uneducated people of whom al-Diahiz speaks, the works which belong me this genre would be descriptions of dialects, of the type which are known today as 'ammi or 'dinmiyya; now this is far from being the case, were if dialectal forms did infiltrate the usage of the scholars who constituted a faction of the khāssa. Furthermore, authors are well aware that their works will not be read by "the man in the street" and it is not a part of their objective to induce illiterates totally separated from their roots, or, which is more to the point, arabophones of foreign origin, to express themselves like the Arabs of the Djahiliyya who merit the qualifying adjective of fasth. In reality, all the treatises of which we shall attempt a fully inventory in due course address themselves to a fairly closely-defined kháspa whose practices are in need of correction, and al-Hariri is one of the few authors who has the courage to break with tradition and tell the truth, when he intitles his book Durrat al-ghawwas ft awhâm alkhawās (s).

in this case, auhām, elsewhere khaja', shalati ghalatat or sakatat—"errors, faults, lapses"—are often substituted, in the titles of treatises, for laha, which is the time-honoured term. This technical

expression has been the object of a vigorous semantic study on the part of J. Fück, in an appendix to his history of the Arabic language, 'Arabiya (Berlin 1950, 128-35; Fr. tr. Cl. Denizeau, Paris 1955, 195-205). Apart from its ancient connotations such as "word with double meaning, obscure allusion", "intelligence" etc., between which a subtle line of association may be traced, take also appears have signified, originally, "manner of speaking" "use of a word - pronunciation of a phonem peculiar to an individual or an ethnic group", in such a way that it could be considered an equivalent of the word lughe, adapted by the grammarians to take on the technical meaning of "dialectical or regional variation". These peculiarities were not, in themselves, reprehensible, but they were observed and sometimes derided by Arabs who, rightly or wrongly, stimulated by a spirit of purism and regarding themselves as defenders of the fasaha, judged them contrary to their instinctive conception of the norm. Lahn was not slow, however, with the establishment of normative grammar, to be applied to any deviation with regard to the rule and, in the first Instance, to the abandonment of the 47db [q.v.], of which an illustration or a relic may be perceived in the use of the word mailtun [q.v.] to designate a form of popular poetry. It is thus that lake takes on the sense of "deed of committing faults of language", then of "perverted use (solecism, barbarism, maiapropism, etc.,1", as opposed to idiomatic usage and simple regionalism. Having become a synonym of kkate', it is with this meaning that it figures twice in the Kitab of Sibawayh (i, 262, 349; see G. Troupeau, Lengue-index du Kithb de Slbawayh, Paris 1976, 188). In the following century, the me of the term in this precise man had become so widespread that al-Diahiz himself, commenting on a verse in which lake signified "word with double meaning, obscure allusion", spontaneously, but erroneously, gave it the meaning of "fault" (see Filck, op. laud., 131-2; Fr. tr., 200-1; Pellat, in Arabica, xxi/2 [1974], 183-4).

The norm to which reference has been made above it nothing more than an ideal to which the grammatical schools are at pains to pay attention in their application of criteria which sometimes lead to contradictory results. In addition to differences in viewpoint, there is no shortage of regional peculiarities, as is to be expected in a region as vast as the Arabic-speaking world, which serve to explain both the relative abundance of works of laha alfamua and the divergent tendencies of which they is sometimes the expression.

In the course of the last hundred years, more less detailed inventories of these works have been compiled, completed, and corrected by both Eastern and Western scholars who have taken a particular interest in this branch of philological study. The earliest is that of H. Thorbecke who, in his introduction to the Durral al-ghawwas of al-Hariri (Leipzig 1871, 7-12) supplied a preliminary list which was soon to be enlarged by I. Goldziner (in ZDMC, xxvii [1873], 155-6); a few years later, the latter devoted an article to the question, Zur Literaturgeschichte des Chaja² al-'dmma (in ZDMG, xxxv (1881], 147-52). In publishing his catalogue of the Arabic mss. of Berlin (vi, 1894, 319), Ahlwardt was to put a considerable store of useful information at the disposal of Arabist scholars. Although two books on the lake al-famma were written during the subsequent period, a gap of some forty years elapsed before the appearance 🕍 a new inventory, this time

in Arabic, compiled by 'Isa Iskandar al-Ma'luf [al-Luhadjat al-'arabiyya, in the Madjalla of the Academy of Cairo, i [1935], 350-68 and iii, 349-71). The following year, 'Izz al-Din al-Tanükhi was to put forward, in the introduction to his edition of the Takmile of al-Diawaliki (in MMIA, xiv [1936], 160-226) a brief list, later to be completed by Salah al-Din al-Munadidjid (in MMIA, xvi [1941], 287), Kurkis 'Awwād (ibid., xvii [1942], 282) and 'Abd al-Kādir al-Maghribi (ibid., xxv [1950], 471-7). In 1953, the IFAO of Cairo published the anonymous Diumana, preceded by an introduction by the editor, H. H. 'Abd al-Wahhab, and containing a list of Maghribl treatises. The most complete inventory is that with which U. Rizzitano prefaced his analysis of the Taihkif al-lisan of Ibn Makki (Studia et documenta orientalia, 5, Centro di studi orientali della Custodia Francescana di Terra Santa, Cairo 1956); this work, which has lost none of its value, will be extensively utilised in the present article. In the same year, there appeared in Cairo a thesis presented in 1953 by Husayn Nassar, al-Mu'djam el-'arabi, which also contains (96-215) a rather muddled list. The history of research on the lakes al-'amma up to the year 1957 has been traced by G. Krotkoff (op. land.), who also corrects and supplements Rizzitano on points of detail. Apart from the editions to which attention will be drawn in due course, the most recent works on this subject are those of 'Abd al-'Azīz al-Ahwānī (in RIMA, iii/1-2 [1376-7/1957], 133-7, 285-321), of Ramadau 'Abd al-Tauwab (Lahn al-anna, Cairo 1961, and Lahn al-'amma i 'l-tajawwwr al-lughawi, Cairo 1967) and of 'Abd al-'Aziz Matar (Lahn al-'dmma fi daw? al-dirásāt al-lughawiyya al-haditha, Cairo 1967); the studies of these three last-mentioned authors are based on the partial or complete editions which they had procured.

The earliest treatise dealing with the genre studied here could well be the Kitāb mā talķan fihi 'l-'awāmm for Risala fi lahn al-amma) attributed to al-Kisal (d. 189/805 [q.v.]) and published by C. Brockelmann (in ZA, xiii, 31-46; cf. Nöldeke, tbid., 111-15), later by al-Maymuni (in Thalath resard, Cairo x344/1968); this work comprises 102 entries in which the correct form is introduced by takat-"you shall say ..." and the incorrect form by ld takal "you shall not say..." (see also Brockelmann, I, 115, S I, 178; Rizzitano, no. 18); the two editors, faced with the question of the legitimacy of the attribution of the text to al-Kisa't, finally decided in favour of its authenticity, but Fuck ('Arabiya, 50-1; Fr. ir. 77) has cast serious doubt un the issue; since Rizzitano indicates (no. 41) that al-Nașiha al-tămma li 'l-khāşşa wa 'l-'amma by a certain Muhammad b. Ahmad b. al-'Ala'i al-Hanafi is a presentation in alphabetical order of the Lahn al-famma of al-Kisa7, this fact would seem to be an argument in favour of authenticity (cf. Krotkoff, 12, n. 13).

In the list of the writings of al-Farrā' (d. 207/822 [q.v.]), there figures matter Kuāb (al-Bakā' fi-)mā talkan fihi 'l-āmma, now apparently lost (see Ihn al-Nadām, Cairo ed., 100; Yākūt, Irskād, vii, 278 = Udabā', xx, x3; Hādidli Khālīfa, v, 357; al-Suyūt, Hughya, 411; Rizzitane, no. 4); Ibn Khāllikān (Wa-fayāt, Cairo 1310, ii, 229) compares it with the Fasik of Tha'lab (see below). In keeping with the chronological order of the authors, by dates of death, it is appropriate to mention next Abū 'Ubayda (d. 209/825) (q.v.]), who is also credited with mattellam fihi 'l-āmma (Ibn al-Nadīm, 80; Yāḥūt, Irskād, vii, 169 = Udabā', xix, 161; Bughya, 395;

Hadidit Khalifa, v, 357; Rizzitano, no. 1) which has not been preserved. The same applies to an article by his compatriot al-Aşına'l (d. 213/828 [q.v.]), bearing the same title and mentioned notably by Ibn Yalish (Shark al-Mufassal, Leipzig 1882-6, i, 8), Ibn Khayr al-Isbbill (Fahrasa, 375), Ibn al-Djawzī (Takwim al-lisan, 97, 175) and Rizzitano (no. 2) but omitted, perhaps inadvertently, from the lists of works of this prolific philologist Abū *Ubayd al-Kāsim b. Sallām (d. 224/838 [q.v.]) is said to be the author, according to the LA (root k-z-z), of n K. ma khālafat fiki 'l-'āmma lughāt al-'Arab (cf. Rizzitano, no. 3). The K. ma yalkan fiki "I-famma of al-Bähili (d. 231/845 [q.v.]) has not yet been recovered (see Ibn 'l-Nadim, 83; al-Kifti, Inbah, i. 36; Bughya, 130; Rizzitano, no.).

A different title, Işlāß al-montik (ed. Shākir and Harūn, Cairo 1949, "1956; ct. Oriens, tii [1950], 325 ft.; Rrotkoff, 13), as chosen by Ibn al-Sikkit (d. 244/858 [q.v.]) to deal with the same subject. Al-Mazini (d. 249/863 [q.v.]) reverted to the traditional title (Ibn al-Nadīm, 85; al-Anbarī Nuska, ed. 'Amir, 172; Inbāh, i, 246; Irīhād, ii, 388 = Udabā', vii, 122; Ibn Makki, Taihšif, 265; Bughya, 202-3; Rizzitano, no. 6), but his treatise is lost. The same fate has befallen that of Abō Ḥātim al-Sidjistām (d. 255/869 [q.v.]), also intitled Mā taihan fiki 'I-lānma (al-Zubaydì, Lahn al-Lavāmm, introd.) Ibn al-Nadīm, 87; Inbāh, ii, 62; Ibn Khayr, Fahrasa, 348; Bughya, 265; Brockelmann, S. I, 167; Yākūt, Irṣhād, iii, 87 = Udabā', xi, 265; Rizzitano, no. 7).

It was no doubt a particular category of the intellectual khāṣṣa which came under attack from "Umar II. Shabba (d. 262/877 [q.v.]) in his K. al-Nahu wa-man kāna yalhan min al-nahwiyyin (Irshād, vi, m = Udabá, xvi, 6r; Buzkya, 36r; Rizzitano, no. 7A); I judge by the title adopted, this work must certainly have covered a less extensive span than those mentioned so far, since the author was apparently obliged to draw attention to individual faults committed, in conversations and lectures, by certain grammarians identified by name in order to chastise them for the bad example that they were setting, not with the object of illustrating the evolution of the language and certainly not to justify a certain degree of informality and abandonment of the i'vāb, as was done by his contemporary al-Djahiz. In imitation of the latter, even an individual as conservative as Ibn Kutayba (d. 276/889 [q.u.]) went on record as arguing "in favour of the introduction of the spoken, or more exactly, vulgarlsing style into the written language, when the context requires that the expression be enlivened or embellished" (G. Lecomte, Ibn Quiayba, 435); It mevertheless true that this author, in the chapter intitled Takuim al-lisan of his Adab al-kâlib, also takes his place among the ranks of the defenders of the purity of the 'arabiyya, His contemporary Abū Hanifa al-Dinawari (d. ca. 281/895, see AL-DINA-WARI) follows the now well-established tradition in writing a K. Lehn al-tamma or mā yalhan fiki 'I-Amma ([bn al-Nadlm, 116; Inbah, i, 42; Irshad, i, 127 = Udabd³, iii, 32; Bug<u>kya,</u> 132; Hādjdji <u>Kh</u>alifa, v. 358; Rizzitano, no. 8), as well as, according to al-Suyūti, an Isidh al-mannik (which is perhaps none other than the Lake al-camma),

To Tha lab (d. 291/904 [g.r.]) there is attributed a K. mā talhan fihi 'l-šāmma (Inbāh, i, 150; Hādjīdjī Khalifa, v, 357; Rizzitano, no. 9), but this title must apply, as is suggested by Krotkoff (op. laud., 12-13, n. 15), to the well-known Fasih (ed. Muhammad 'Abd al-Mun'im Khafādjī, Cairo 1949), which is

concerned with the genre being studied here; this work, with its object of establishing the norm, has given rise to series of commentaries and supplements such as the Fabit of Fasth of Chulam Thadab (d. 345/957 [q.v.]), the Tamba Fasih al-kalam of Ibn Faris (d. 393/1004 [q.v.]) edited by A. J. Arberry, London 1951, the Dhayl Faith al-haldm of al-Ghaznawi (d. 442/1030), the Shark al-Fasth of Ibn Hisham al-Lakhmi (d. 377/2182 [q.v. in Suppl.]), the Dhayl Fasik The lab of 'Abd al-Latti al-Baghdadi (d. 629[1231 [q.v.]) edited with the Shark al-Fasih of al-Harawi, etc. (see Brockelmann, S I, 181).

Abu 'l-Haydham (d. after 300/913) is likewise credited with a K. md talkan fiki 'I-dmma (Ibn al-Nadlm, 122; Irshad, vi. 209 - Udaba', xvji. 21; Buzhya, 382; Hādidil Khalifa, v. 357; Rizzitano, no. 3). Ibn Durayd (d. 321/934 [q.u.]) wrote a Takwim al-lisan, composed in imitation of Ibn Kutayha and left incomplete (Irshid, vi. 89 - Udabi, xviii, 136), but his K. al-Maldhin (Brockelmann, I, 112, S I, 173; Rizzitano, no. 19) I not to I taken into account in this context, since it deals with words of double meaning and not with errors (cf. Krotkoff, 13, n. 15).

As Krotkoff (14) quite correctly points out, reference to mistakes is made in a vast number of works. In that it is difficult to select those which belong to the category of lain al-amma without bearing this specific title or one of the equivalents so far encountered. As far as it is possible to judge, the preceding treatises are concerned essentially with oral usage and its more or less accidental repercussions as they affect the written language, but it is legitimate to include in the present inventory works which draw attention to faults of orthography and errors of transmission or reading which threaten to be repeated on a lasting basis and to damage the integgity of the 'arabivya; after all, authors whose object is undoubtedly to correct what they call the iakn al-'amma do not neglect to devote a chapter to tashtf and to tahrif [q.v.], and it will be noted that even Ibn Makki puts the bab al-tashif at the head of his book. It will therefore be appropriate to mention here al-Tanbih 'ald huduh al-tayhif (ed. A. Talas, Damascus 1968) of Hamza al-Isfahāni (d. after 350/961 [q.v.]), which deals largely with erroneously transmitted verses (cf. Brockelmann, 1, 145, S I, 221; Rizzitano, no. 20) and al-Tanbihdt 'aid arhālītļaghiat ai-ruwāt of Abu 'l-Kāsim al-Başrī (d. 375/985), which deals with errors and inaccuracies of one stratum of the intellectual khassa (on the mas., Brockelmann, S I, 176-7). Also belonging to the same category are the K. al-Tashihlal-Tashij wa 'l-lahrif of al-Dărakuțul (d. 385/995 [q.v.]), mentioned by Krotkoff (14), and the Shark ma yaka fiki 'L taskij wa 'l-takrij (ed. 'Abd al-'Aziz Ahmad, Cairo 1963) of Abu Ahmad al-'Askari (d. 382/993, 800 AL-'ASKARI), where there are studies of words whose similar ductus leads to errors of reading and pronunciation among the thaspo - well as among the "Amma. Also deserving mention perhaps is the Istidrák al-ghalas of al-Zubaydi (d. 379/989 [q.v.]) which corrects the errors of the K. al-'Ayn of al-Khalli (ed. Guidi, in Mem. Acc. Lincol, vi [1890], 414-57).

We return to the subject as such with the K. Laks. al-Sawamm or K. we yalkan fiki sawamm al-Andalus of the same Zubaydi; this work has been analysed by G. Krotkoff (ep. land.) before being published successively by R. Abd al-Tawwab (Cairo 1963) and 'Abd al-'Aziz Matar (Cairo 1966, with the Takurim al-lisan of Ion al-Diawzi and the Tathhif al-lisan of Ibn Makki; see below); for the first time, we encounter - Andelusian author who observes curiously that Abū Hātim al-Sidjistānī (see above) has found In the Orient faults which are not committed by his compatriots, but he adds that the latter are not immune to inaccuracies; it will be noted that another Andalusian, Ibn Hisham, does not hesitate to criticise his predecessor.

Abū Hilāi al-'Askarī (d. 395/2005, see al-'askart) is credited, for his part, with a Lahn al-khāsşa (Bughys, 221) which is mentioned several times by Ibn al-Djawal, but which has not survived. We do however have the K. Tathilf al-lisan wa-talkth al-dianan of Ibn Makki (d. 501/2108 [q.v.]) first analysed by U. Rizzitano (op. land.), then edited by 'Abd al-'Azīz Matar (Cairo 1966, see above). This Sicilian author, who was kdds of Tunis, makes statements analogous m those of al-Zubaydf with reference to the Orient and the Maghrib, and be takes up arms against the degradation of the 'arabiyya which has become so accentuated that people who express themselves correctly are subjected to ridicule; in his opinion, were the few individuals who respect the norm when they read and write cannot resist using the informal language of the common people, that is, distectal Arabic, in their

The Durrat al-ghamous fi awham al-hhawas(s) of al-Harlif (d. 516/1122 [q.v.]) may be considered the most eminent work of this category (ed. H. Thorbecke, Leipzig 1871 and several oriental editions; memory commentaries; see Brockelmann,

I, 277, S I 488).

Salāma b. Ghayyad al-Kaf(a)rta (d. 533/1138) is the author of a K. må talkan fiki 'I-lamma which is now lost (Irshid, iv, 246 = Udabil), xi, 234; Bughya, 259; Rizzitano, no. 12). Besides the celebrated Mu'arrab, al-Djawaiiki (d. 539/1144 [q.v.]) wrote . K. al-Takmila fi-mā yalhan fihi 'l-'amma published by H. Derenbourg (in Festschrift Fleischer, Leipzig 1875, 107-66, under the title K. Khald? si-'awaram), then by 'lgz al-Din al-Tanûkhi (in MMIA, xiv [1936], 163-226, under the title Takmilat islah ma laghlet fiki 'l-'amma'; this is a supplement to the Durras al-ghaveras of al-biariel (see introd. of Tanükhl, 167-8) which al-Suyūtī (Bughya, 401; cf. Rizzitano, no. 24) entitles in fact Telimmet Durrat al-ghavuds, also citing a Md talkan fiki "L'amona, which must be the same work. Besides the commentaries and supplements to which reference has been made above, the treatise of al-Hariri gave rise to several retutations, among which that of Ibu. al-Khashshab (d. 567/1171), the see 'ald Durrat al-ghawwas (Bughya, 276-7), is preserved in the Dar al-Kutub [Madiami', 198]. Al-Diawaliķi (Tahmila, ed. Tanukhi, 167) mentions at-Laks al-khafi of Hisham b. Ahmad al-Halabi (d. 577/1182) also noted by al-Suyutl (Bughys, 406; cf. Rizzitano, no. 13).

Ibn Hisham al-Lakhmi (d. 577/1182 (q.s. in Suppl.]) revises the Lahn al-tawdnum of al-Zubaydi and the Tathet/ al-lisan of Ibn Makki in searching out the ancient attestations of terms rejected by Meso authors and also corrects faults current in Spain in work in two parts intitled al-Radd fala 'I-Zubaydi fi lahn al-'awamm and al-Madkhal ild takeim ol-lisan; 'Abd al-'Aziz al-Ahwani has extracted from it and published in the Milanges Taka Husayn (Cairo 1962, 273-94) the chapter on popular proverbs drawn from more or less corrupt classical verses, and he has also devoted to this author two articles inserted in RIMA, iii/1-2 (1376-7) 1957). On the problems posed by the revision of this

treatise and the successive summaries which have been made of it, see below and IBN HISHAM in the Suppl.; in addition, al-Suyūti (Bughya, 20) cites a Shark al-Fasik (of Thallab) by the same author.

considered to be of high quality.

Ibn Barri (d. 582/1187 [q.v.]) takes issue, in his turn, with the fukaha?, but not without taking precautions since he cutitles his article K. Ghalaff Aghlat al-qu'afa? min al-fukaha? (ed. C. C. Torrey, in Orient. Studien ... Th. Nöhleke. Giessen 1900, 211-24). The K. Ghalafat al-factions of Ibn al-Diawzi (d. 597/1200 [q.v.]), published by Matar (Takwim al-lisăn; see above), in mentioned under mariety of titles.

Nothing is known of al-Tashif wa 'l-tahrif (Krot-koff, 14) of al-Balati (d. 599/1202 [q.v. in Suppl.]), nor do we have any information on the refutation of Ibn Makki by Ibn al-Adjdābi (7th/13th century [q.v. in Suppl.]), al-Radd 'alā Tashif al-lisān, mentioned in the introduction by H. H. 'Abd al-Wahhāb to his edition of the Djunāna and in that by 'Izzat Hasan to that of the al-Azmina wa 'l-anwā' (Damsseus 1964, 22) by the Tripolitanian

philologist (see also Rizzitano, no. 14).

Aba 'Ali 'Umar al-Sakuni al-Ishbili (8th/t4th century) is the author of a Lahn al-sawamm fi-ma yala allah bi-cilm al-halam (Diumana, p. 146), 11. 9; Brockelmann, ii, 250; Rizzitano, no. 30), but this work deals with Ash arism and not with errors of language properly speaking (see J. D. Latham, The content of the Lahn al-awamm of Abu All . . . in Actas del primer Cong. de Estudios Arabes e Islamicos, Madrid 1964, 293-307; it has been published by Abd al-Kadir Zamāma in Remo des manuscrits arabes, xvii/2 (1971), 235-76 and by S. Ghrab, in Hawliyyāt al-<u>Di</u>āmi'a al-Tūnisiyya, xii, (1975). 111-255). The father of the editor of the Ribla of Ibn Battūța, Abu 'l-Kāsim Ibn Djuzayy (d. 741/ 1340), left a K. al-Pawd'id al-tamma filahn al-tamma (see Diumana, p. 1, n. 6; al-Makkari, Nafh al-fib. viii, 29; Rizzitano, no. 15). By another Andalusian, fbn Hani' al-Lakhmi (d. 733/1332), the Irskad al-dawdi(i) wa-inshad al-sauwdi = a revision of the work of Ibn Hisham al-Lakhmi (see above).

Saft al-Din al-Hilli (d. 749/1348 [g.e.]) is the author of an article intitled Aghiat, of which one ms. has survived (Derenbourg, Mss arabes de l'Escarial, 76, no. 123; cf. Brockelmann, II, 296), but it is unclear whether it fits into the category which

concerns us (cf. Rizzitano, no. 31).

The Tashih al-tashif wa-tahrir al-tahrif of al-Şafadi (d. 764/2363 [q.v.]) is a criticism and a resume of nine previous works (of al-Hariri, al-Djawäller, Iha Makki, al-Zubaydi, Iba al-Djawzi, in particular; see Rizzitano, no. 32); a ms. of it exists in the Dâr al-Kutub (37 lugha) and it has been the object of an analysis by 'Abd al-Kādir al-Maghribi (K. Tashih al-tashif li 'I-Şafāh al-Şafadi, in MMIA, xxv [1950], 471-7; see also al-Ahwārī, in RIMA.

1957/1, 133, 0. 1).

Ibn Khātima (d. 770/1369 [q.v.]) restricts himself to a summary, in the lvid al-la'di fi inshād al-dawāl(i) of the work done by Ibn Hāni' al-Lakhmī on the Takwīm al-liaān of Ibn Hishām al-Lakhmī, and his, abridgment has been further edited, anonymously, into the form of a brief article published by G. S. Colin (in Hesptris, xii [1931], t-32). Another unknown western scholar of the 9th-10th/15th-16th century has left a treatise with the revealing the al-Dismāna fi italiai al-satāna which has been edited by H. H. 'Abd al-Wahhāb (PIFAO, Cairo, ix, 1953).

The prolific Suyūţī (d. 911/1505 [q.v.]) was not a

man likely to omit a contribution to the genre, and there remains in Istanbul (see Rizzitano, no. 34)

ms. of his Ghalafat al-'andmm. The same title was given to the Turkish translation (Torditme-i Ghalafat al-'andmm) of al-Tanbih 'all ghalat al-khōmi (or al-didhil) "'l-mabih by Ibn Kamāl Pasha (d. 940/1533, see Kemāl Pasha-zādz), which concerned Arabic words disorted or badly pronounced mainly by the Turks (see also Ghalafāt-i Mesmachal); the Arabic text of the Tanbih has been published by R. 'A. al-'Ubaydl, in al-Maurid, iz/4 (1402/1981), 531-98.

Radī al-Din al-Hambali (d. 971/1563) seems to a certain extent to take the opposite view from that of previous authors in his 'I'd al-halis fi netal halim al-hambals of which one manuscript exists in Istanbul (Rizzitano, no. 3) and his Bahr al-autodin filmid asaba filmi 'I-automam(m) (ed. Tanükhi, in MMIA, xv. 85-139, 165-215). Khusraw-sāde (d. 998/1590) summarises al-Farrā', al-Aşma'l, Abū 'Uhayda, al-Sidjistānī, Ibn al-Sikkit, Ibn Kutayba, Tha'lab, al-'Askarī, etc., in his Ghaladt al-'automm (ms. in Istanbul: see Rizzitano, no. 38) and corrects some linguistic errors in his Tanbik al-anām fit taudīth al-halām (ms. in Berlin; see Brockelmann, ii, 423; Rizzitano, no. 39).

Whereas al-Diawaitki confines himself, in his Mu'arrab, to considering words borrowed from Arabic, al-Khatādji (d. 1069/1659 [q.v.]) gives, in his Shifiā' al-ghalāl fi-mā fi kalām al-'Arab min al-dahāl, numerous examples of commonly-committed

errors.

Rizzitano further mentions (nos. 43-5) some anonymous Sakakāt al-'awdnm, equally anonymous Aghlat al-'awdmm um 'l-khawāss (ms. in Istanbul) and al-Tanbih 'aid 'l-iakn al-diali wa 'l-hhafi by Abu 'l-hasan al-Rāzi (various mss.; on the difference between lakn djalī and lakn hhafi, see al-Tahānawī, Kaykshāf istilāhāt al-funān, lv, 1308).

The attitude of the authors cited above is by no means homogenous. Some of them show an excessive purism and lay down the law without reservation, whereas others take a more liberal line, accept variations and are content to define the form which they consider the most correct in terms of the fanily; the latter applies, in particular, to the work of The lab, in his Fanily. The study of those treatises that have survived enables us to make a few general remarks.

In the first place, as has been stressed above, the philologists are not concerned with purely dialectal usage, which they regard = an adaptation of the 'arabiyya, of the perfect form of Arabic, and not at all as a survival and evolution of ancient speech-patterns influenced by the mixture of ethnic elements well as by the language formerly spoken in that territory and the language of neighbouring areas. It is therefore quite interesting to me for example an Ihn Higham going in search, to justify usages considered erroneous, of attestations of terms rejected by his predecessors with regard to the criterion of the fasaha, but alive and well in the ancient Arabic dialects. The faults to which attention is drawn in the works in question do not however apply exclusively elements of vocabulary, and usages which transgress the norm can be classified in five main categories: 1. The most common applies to phonetics (incorrect vocalisation; lengthening of a vowel; alteration of a consonant by lengthening, emphasis, disemphasis, conorisation, deadening, etc.; metathesis; reduction of a dipthong, etc.); z. Morphology gives rise to remarks on, for example,

the first person singular of the imperfective in n-, but does not figure significantly; 3. The same applies to syntax. 4. Orthography, especially of the hamen, is the object of a few observations; 5. But it is most of all vocabulary which interests these authors (shifts of meaning; neologisms and borrowings which are regarded m superfluous because a proper Arabic term exists; excessive me of dialectal forms, etc.).

The mediaeval authors of treatises of lake aldmma have in the present day some worthy successors, of whom there will be found in the introduction by Salah al-Din S. al-Za balawl to his work entitled Ahhfa'una fi 'l-sukuf wa 'l-dawāwin (Damascus 1358) 1939, 3, 6-9) = critical list, which may be enlarged by a study of the reviews of the various Arab Academies and of publications concerned with the language. Using criteria similar to those of their mediaeval predecessors, these authors are at pains to correct errors current in the press, in administration and in literature; we shall confine ourselves to mentioning Ibrahlm al-Yazidil (1847-1906), Lughat al-diard'id (Calto 1319/1901, As'ad Khaill Daghir, Tadhkiral al-katib (Cniro 1933), al-Za balawi (see above), and Ma'ruf al-Ruşafi (1875-1945) who, in his Daf' al-ki<u>di</u>na fi 'riidä<u>kk</u> al-lukna, drows attention to deviations from Arabic caused by the Turkish domination.

To judge by the way that the language has been degraded, works of lahn al-famma, whether ancient or modern, do not seem to have born fruit, and the efforts of the purists continue to be vain in confrontation with the development of the written and oral usage of so-called "literary" Arabic, which hardly allows interested parties the time to polish their language, even assuming that they are capable of doing so. In addition, it may be asserted that there is a tendency to put into practice the old adage li-kull makém makél and to consider that the faşaha to which me refers is not intangible and that it has the right to evolve it (on this subject see R. Hamzāwi, al-Fasāha jasāhāt, aw al-da'wa ilā dardrat murădia'at al-faşăha (sic), in flauliyyat al-Diami'a al-Tunisiyya, xvi [1978], 45-63).

Bibliography : given in the seticle.

(CH. PELLAT)

LAHNDA, meaning "west" in Pandjabl, was first given wide currency as a linguistic term by Grierson in the Linguistic terms of India, Pollowing this authority, the name is often applied to the Indo-Aryan dialects of the western Pandjab [Pākistān], as opposed to the Pangjāb [q.v.] of the central and eastern districts. The more natural feminine "Lahndi" is now general in South Asian scholarly usage, but neither form has ever achieved popular local currency.

1. Status and dialects. Grierson distinguished the dialects of the westen Pandiab in belonging to a "Labada language" (L.), regarded by him as a pure example of his conservative "Outer Circle" group, from the immediately neighbouring dialects he assigned to Pandiabi proper (P.), described as a member of his innovating "Central Group", which had come to overlay territory formerly occupied by L., although still retaining several L. features. Both the failure of Grierson's division of Indo-Aryan into "Outer" and "Central" groups to find much later support and the absence of any cohesive local consciousness of linguistic unity suggest that L. is to be regarded less as a language than as a convenient linguistic label for a group of dialects. In the latter sease, L. may be quite properly be distinguished

from P. on the basis of such features in the conservative retention of many irregular past participles, the extensive - of pronominal suffixes with verbs (suggesting a parallel with the immediately neighbouring Iranian languages), the presence of a distinctive form of the past substantive verb (L. āhā, hā "was", P. sI), the non-periphrastic formation of the passive (L. sunt: "be heard", P. sunia fa-), or the sigmatic formation of the future (L. sunsi "he will bear", P. sunega); many basic lexical items may also be collectively distinguished, as in the common verbal stems L. ghinn-"take", thi-"become", wanf- "go" (< Sanskrit grhudti, sthiyatë, "vradjeti), for P. lai-, ho., fa- (< tabhatē, bhavati, yāti). The recognition of such differences should not, however, be allowed to obscure the fact that the many similarities between L. and P. make them closer to one another than either to their immediate neighbours, respectively Sindhi and western Hind!.

Grierson's internal division of L. into dialectgroups, based as it was on data of very uneven quality, has been rightly criticised (see bibliography). While much detailed work still needs to be done, at least four such groups probably need to be distinguished.

The main group is that which covers the southwestern Pandjab m either bank of the Indus below the Salt Range, including Multan and Bahawaipur, also the districts of Dêra Isma'll Khān and Dêra Ghāzī Khān. Apparently as the result of earlier Balüč migrations from the latter areas, it is also widely spoken in eastern Balüčistán and upper Sind. In Sind it is called Siráik! (< Sindhi siró "up-river, north"), and this term has recently to be generally current in the Pandjab also, replacing such local terms as "Multani", etc. The absence of separate enumeration in the censuses and the settlement of large numbers of P.-speaking Muslim refugees from India since 1947 in the area makes the number of Sirāiki-speakers impossible to estimate accurately, though a ligure of 15-20 million is often suggested. Both the number of speakers and the fact that Siráiki (Sir.) is the only variety of L. to have been seriously cultivated as a vehicle for literature (see | s. below) go way to support its claim to be considered a separate language. Linguistically, Sir. is the variety of L. most distinct from P., may be most clearly illustrated from typical phonological features. Middle Indo-Aryan initial and medial geminate voiced unaspirates are retained as such in P. and other varieties of L., but become implosive in Sir., as in Sindhl, and are in phonemic contrast with the corresponding explosives (often a result of Perso-Arabic loans, which are very extensive): historical aspiration, whether as & or in the voiced aspirate series, is retained = such in Sir., where it has been reduced to tonal realisation of the adjacent syllables in P.: and, while L. is collectively distinguished from P. by the retention of tr- as an initial cluster (L. trull-, troit- "break", P. Iuli-, 101-), Sir. is further distinguished by retention finally also, without anaptyxis, so Sir. putr "son" (< putra-), but northern L. puttur, Pl. puttur. Three main dislects of Sir. may be distinguished, although the differences are not particularly marked: these are the northern Thall, the central Multani, and the southern Bahāwalpūri.

To the north of Sir., in and above the Salt Range, a number of related dialects are spoken, of which only Awankari has been properly described. This group of dialects is distinguished phonetically by the retention of historical aspiration, in its realisa-

tion as a high-falling tone, but normally without the low-rising tone of P., and morphologically by the use of extension in -ē to mark the singular oblique of unextended masculine nouns. Immediately to the east of this "northern L" group (of which the Hindkö of Peshäwar may be regarded as a member having many innovating features) is found Pothobari, the speech of the Rawalpindl area, which appears be intermediate dialect between it and P. Finally, I the south of this, in the Shahpur area, a complex group, containing features of P., northern L., and Sir. is encountered. This is clearly a linguistic frontier area, and it is unfortunate that Grierson should have chosen it as his standard for the description of L. The number of all speakers of varieties of L. other than Sir. is impossible mestimate accurately, but may amount to about 7 million.

a. Muslim literature. While the L.-speaking region was me of the first in the sub-continent to fall under Muslim political dominance, and the area has long had a large majority of Muslims in its population (now almost total, since 1947), the predominant literary language was naturally always Persian until its replacement by Urdu in the last century. Sir. has, however, also been cultivated for some types of writing, leading to the creation of an

interesting local literature.

The earliest record of Muslim poetry in the Pandiab is in the shalok and hymns attributed to Farid in the Sikh Adi Granth (1604). While their traditional ascription to Farid al-Din Gandy-i Shakar (571-664/ 1175-1265 [q.v.]) is exceedingly doubtful, their language does suggest that a composite kilom, based on the Sir. of Multan, long important = the seat of influential Suff dynasties, and the P. of the political capital of Lahore, was already well established as a local Muslim literary language by the 16th century. This is confirmed by the more reliably transmitted works of such slightly later writers as Mawlawl 'Abd Allah "Abdl" (d. 1075/1664), author of many versified treatises on Islamic law and dogma.

Only in the 18th century, with the collapse of centralised Mughal authority, does a linguistically distinctive tradition of Sir., as opposed to P., Muslim literature properly emerge. This literature is nearly all in verse, and most of its genres and themes are naturally very similar to the contemporary local literatures being cultivated both in P. and in SindhL The largest single category of writing was probably the versified teaching material produced in the form of short treatises on the tenets of Islam, or rhyming Persian-Sir. vocabularies, of little intrinsic literary interest. Adaptations of popular Persian maiknautthenies were also made, the best-known of these poems (locally termed \$1554) being the Sayf al-Mulük by Lutt 'All of Bahawalpur (119/1781) and the Yasuf Zulaykha by 'Abd al-Haklm of Uč (1218/1803). Local legends were also treated in this form, the best early example being from Sind, in the Sassi Punnin by Nabi Bakhsh Laghari (1254/1838).

The chief glory of the literature is, however, its Suff lyrical poetry, whether in the form of the short dohfā, cultivated by All Haydar of Multan (d. 1201/1785), or the longer ha/I, a sung lyric with a refrain repeated after each verse, first brought to perfection by Saccal Sarmast (1152-1242/1739-1827) of Khayrpor in Upper Sind, who wrote with equal fluency and immediacy in Sindhi also. The finest example of the Sir. kafe are to be found in the disease of Khwādja Ghulam Farid (1845-1901), the head of an important Čishti dynasty, who lived at Čāčŕrān in Bahawalpur State. With their subtle blend of a

sensitive handling of local desert scenery, and the most profound Islamic learning, these poems mark both the end and the culmination of Muslim writing in the local languages of the Indus valley.

Mention should be made of the Shift elegies (marthiya [q.v.]) produced in great numbers from Multan since the mid-19th century. These represent interesting local adaptations of the vast store of Shift legendary material found in the popular Persian sources, and are notable stylistically as being typically written in alternating sections of verse and prose (takeir), thus directly reflecting the usual style of performance of the professional didkirs at the local madiālis-i matam.

Traditional genres continue to be cultivated, while in recent years a modern prose literature has begun to created. The problem of a uniform adaptation of the Perso-Urdû nasiasilk script [see KHATT. 4. India] to record the many additional phonemes of Sir, has yet to be fully resolved. In Sind, an longer important as a centre for the production of original Sir. literature, older Sir. texts are published in the Singhl naskly script, with its many additional letters.

There is a much smaller Muslim literature in the northern L. Hindko. Writings produced in the areas of Pothobari and Shahpuri are hardly to be distinguished from the main stream of Muslim

Pandjābi literature (q.v.).

Bibliography; 1. Language, G. A. Grierson, ed., Linguistic survey of India, viii, part 1, Sindhi and Lahudd, Calcutta 1919, has a full bibliography of the earlier sources; H. Bahri, Lahadi phonology, Allahabad 1962, and Lahndi phonetics, Allahabad 1963, are excellent studies of Awankari and valuable correctives to Grierson; his criticisms are partially assimilated in the composite study of Yu. A. Smirnov, Yarik Lendi, Moscow 1970 (tr. as The Lahudi language, Moscow 1975); C. Shackle, The Siraiki language of central Pakistan, London 1976, is a reference grammar of the modern language with m full bibliography of later sources; idem, Problems of classification in Pakistan Panjab, in Trans. of the Philological Soc. (1979) examines the internal divisions of L. more widely.

z. Literature. The best surveys of the literature (in Urdů) are Kayfi <u>D</u>jämpůri, Sirážkí shā'iri, Multān 1969; Fārigh Bukhāri, Hindhö adab, and Hassan al-Haydarl, Siráčki adab, in Tärīkh-i adabiyyāt-i muzulmānān-i Pākistān 8-Hind, ed. Fayyad Mahmud, xiv, part II, Lahore 1971, 210-56, 257-343; there is a general survey of Sir. literature in C. Shackle, Sirdikt and Sirdikt literature, c. 1750-1900, in Upper Sind and South-West Panjab, University of London Ph. D. thesis 1972 (unpublished), while detailed aspects are considered in idem. The south-western style in the Guru Granth Schib, in Journal of Sikh Studies, v/t (1978), 69-87; Styles and themes in the Siraiki mystical poetry of Sind, Multan 1976; The Pilgrimage and the extension of sacred geography in the poetry of Khweja Ghulam Farid, in Attar Singh, ed., Socio-cultural impact of Islam on India, Chandigarh 1976, 159-70; The Multani marsiya, in Ist., lv (1978), 100-28; and [Muhammad Djamal Multāni], Nūr-e-diamai, ed. Mahar Abdul Haq, tr. C. Shackle, Multan 1977. (C. Shacker) LAHORE [see LAHAWR].

LAHOT and NASOT (a.), two terms meaning divinity (or deity) and humanity, and forming a pair which plays important role in the theology of certain Muslim mystics and in the theosophical

conceptions of the extremist Imamate.

1. Philological considerations. The termination -si of these two words may be traced to an Aramaic origin. It is also present in the words malakel (which is Kur'anic, XXXVI, 83), and diabarus which appears in the hadith: "Glory to the One to whom belongs Ruling Power (djabardt) and Kingship (malakst)." So malakst was already Arabised in the time of the Prophet. It is a direct borrowing from Syriac (malkātā), = Ethiopic (malakot), where this word means divinity, the Semitic root ?' (God) being lost and replaced by the composite noun 'égri' abégér ? Is it a difficult question to settle. Muhammad's known relations with Abyssinia would lead one to suppose a Gefez influence. Whatever may be the case, Ibn Mangur, in LA, states, without posing the problem, that "al-malakiit comes from welk (kingdom), just m rakabilt (terrifying nature) comes from rakba (terror)." As for diabarai, he says that it in the fa'alut form of diabr. Consequently, he seems to give these words in -at a right - be nited as Arabic. He is more precise with regard to lähüt: "Sibawayh thinks that lähun is the original form (ast) of the name of God (Allāk)". and he cites a verse of al-A'sha in which lah is understood in the sense of ilah ("god"). Then he adds: "As for lahul, if it is correct that it is a word drawn from the language of the Arabs, it is derived trom laka: läha 'lläh al-khalk, yalühuhum = khalakshum "He created them". The form of this word (wain) is fa'alût like raghabût (e.g. radjul raghabût) a man of desires, naturally carried away by desire) and rahamit ('compassionate nature')." Thus there are several examples in Arabic of words in -2/. The question as to whether they are, as such, of Arabic origin, remains unsettled by the lexicographers. In any case, a Syriac text of Aphraatus (4th century) has shem alohisto, followed by shem malkato, the noun of the Divinity and the noun of the Kingship, and further on rahmonuto | Patrologie Syriaque, i, 794). Alòkût may be the equivalent of landt, although Syriac preserved the alif which is in the name of God, aloko = ilah, and which forms part of the root (cf. the discussions of the grammarians on the formation of the name Allah). Finally, should note that in Syriac, alöhüt designates the essence or nature of God (kyono).

On the origin of másút, by contrast, there is no information available. Al-Tahānawi in his Dictionary of technical terms has not devoted any article to it. Ibn Mangur does not cite this word under the root nds or under the root 'ns from which come ins and its pl. unds, as well as insan. Here, it is wellestablished, according to Abu 'l-Haytham, that the alif is radical (aslivya); this grammarian is also ingenious in showing how safe ("men") could have come from unds, by adding the article of: oi-unds > alunds > annds (al-nds), and, after the dropping of the article, was. This laborious explanation shows that if the form ness raises difficulties, fortiori the form missit. But Syriac has a word (load) (3) noshātā with coculting stroke (m·b·atlānā) under the alif, indicating that his letter must not be pronounced. There is the form nosko without abil. which means "man". This can III compared, in Sermon of the Liber graduum (P.S., iii, 379), with per kumilitatem hypostaseos ejus humanae (da-husimeh d-bas useho "from the hypostasis of the son I man"). So the Syriac origin of the word ndial does not meet to be in doubt; it designates human nature. Doubtless it was also chosen because of its assonance with ldhat.

a. Laker and naser in Christian literature.

Al-Bakillani in the Tambid (Cairo 1366/1947) speaks of the Christians who claim that the union of the Word with the ndsat is mixture and mingling (ihhhild) wa-'minidi) like that of water with wine (the Jacobites) or with milk (the Nestorians). Some claim that the significance of the union of the Word with humanity (wāsāt) which is the body, consists in its taking it me a temple (haykel) and dwelling place | makall) (86). Further on, al-Bāķillānī reports that for the Christians, the name Messiah has two meanings: lahat, God (ildh) and nasali, created man (insan makhlak): the prayers of Christ come from the man, his miracles come from God and not from the man. But, demands the Muslim theologian, could the same not be said of Moses? The production of his miracles comes from the divinity, to the exclusion of his humanity (min #1idhāt, dūn al-ndsūt) (94). For his part, al-Djuwaini, in his Kitch al-Shamil fi usul al-din (ed. al-Nashar, Alexandria 1969, 582), writes with regard to the Christian doctrines concerning the union (ittibéd), that the Christians mean by it the manifestation of dividity in humanity (suker al-label fala 'l-nasel). But he the way in which they conceive of this manifestation, they are divided into three groups. Some say that an object placed in front of a polished body appears there and can be without being transferred there and without dwelling there (wa-lam yahullah); it is in this sense that divinity appears in humanity, thus without huldl. Others take the example of the impression of a seal in wax; it is the seal itself which appears there, although there is no part of it which comes to dwell there. The last group say that the manifestation of divinity in Christ means the same thing as, for Muslims, God's sitting on the throne, all of them agreeing that contact is impossible. Furthermore, they express union with the image of an act of clothing oneself (tadarrus), as if they believe that it is possible and true that the divinity had taken the body of Christ in clothing (dir'). Reference may be into to what H. Corbin wrote (En Islam tranian, iii, 285, n. 102), on al-Simnani (d. 236/1336). III it may be reasonable to suppose that the terms lakut and nasut were borrowed from the Christians who wrote in Arabic using Syriac sources and originals, particularly the Nestorians who had had, m we learn from al-Tawbidl, numerous relations with Muslim thinkers, especially in Baghdad. It is conceivable that the problem of the union of the divinity and humanity in Christ had been able to interest the mystics of Islam, who were faced with an analogous problem, mutatis mutandis. On this subject, the ideas of assuming a garment, indwelling and temple are present in the writings of St. John and St. Paul, and these images were applied not only . Christ, but also to the saints in whom God, Christ and the Spirit are said to reside. An echo is to be found in Syriac literature. Thus one can read in the Liber graduum (Sermon III, P.S., iii, 7x): "And Christ dwells in them" (w-6mar b-hun Mashigo); they are "filled with God" (meimalen men Alōkō). One should note the translation of the passage of St. Paul: "You are the temple of God" (I Cor., iii, 16): Haykeleh a(n)tun d-Aloho. The Arabic language has the word hayhal whose significance, according to the lexicographers, is that of an adjective which has the meaning of "corpulent", "large", "long = high". This qualification is applied to animals and plants, especially the horse when it is "high on its booves" (famil). A building is called haykal, when it is raised like a horse on its hooves (LA); Ibu Manzūr (ibid.) informs us that the haykal

"is stated as being, among the Christians, a temple (bayt) in which there is an idol in the likeness of Mary (fibi sanam sala ghalkat Maryam) or even: "in which there is the efflyy of Jesus and Mary". He adds that this meet is sometimes given to Christian convents. Only lastly does he mention the meaning of an idol temple. So it seems indisputable that the me of the term haykal to designate the place where the ldkut, i.e. the nasus, resides is of Christian origin. As for the image of cicthing, in Christian literature, it has the two senses: the divine nature wears (Phesh) the form (surot) of the earthly man and we wear (nelbesk) the form of the celestial man (Aphraatus, Démonstration vi, 28, P.S., i). As for the Word, it wore (lebesh) a body of dust, and it drew it to its own [divine] nature (la-hnydieh) (Dom. xxiii, 49, P.S. ii). But what is involved here is the Melkite doctrine of God made body (in Arabic: iläh mutadjassid), meaning by body human nature, or even Allah al-muta annis (cf. St. Athanasius, P.G. 26, col. 804, where the incarnation σάρχωσςι, is identified with "humanisation" έναvup warfore. According to the Nestorians, the divine nature of the Word wears an integral human nature and subsists as such in the union, this union being that of two concurrent wills (συνάφεια) in a prosopou of union. In the Book of Herachides of Damoscus (French tr. F. Nau), Nestorius explaines his conception clearly (158, 212-13), and he expands in several ways on the image of the clothing which has its own nature, but which nevertheless is always and everywhere present with that which bears it, for example "on account of the One which is worn, I adore the clothing" (ibid., 159). The image of the temple is also developed: "The temple is passive (παυητός ὁ ναός), but not God who gives it life" (ibid., 207). In the same sense, Ibn al-Diawri writes in Talbis Iblis: "the Christians maintain that Christ in two substances, iiii one eternal, the other created; that he had need of nourishment; that he was crucified; and that this was on account of his humanity" (fu'ila hādhā bi-'l-nāsāt). But, as a good Muslim, Ibn al-Diawal asks "why did not the divine element in him (lahut) oust that from the massit?"

The word librit is used by Arabic-speaking Christians. Thus in the History of the Twelve Patriarchs of the Church at Alexandria, Severus, bishop of al-Ashmünayn (towards the end of the roth century), citing a letter from St. Cyril to Nesturius (Patrologic orientale, i, 434), reports that Christ "died on the cross in his body, while he is living by the force of his divinity" (hayy bi-fraures libritish). He confesses the Trinity by saying that there are three persons (ahānim), one unique nature (tabi'a māhād) and one unique divinity (lāhāi māhād).

3. The pair labat-nasat in the thought of al-Halladj. The preceding discussion may clarify many difficult aspects of Halladjian mysticism. According to L. Massignon (Passion⁴, 1il., 51), ai-Hālladi borrowed from the lexicon of the extremist imami theologians the words taket and maset, "however, profoundly modifying their significance" in a note he states that it is unlikely that he had made this borrowing from the Christians, as was formerly believed: "for him, as for the Ghulat, nāsūt, nūr sha'sha'āni ('resplendent light') and anur ('command') are synonyms, which is in no way Christian". But the argument does not stand up. for the question is that of the origin of the words and not of the origin of their significance; if, even by the confession of Massignon, al-Halladi modified the significance of expressions which he took from the Imamis, why would be not have accompdated to his own thought some terms which he had taken from the Christians? 'Afifi, in his book al-Tasawouf: al-thawra al-rahiyya fi 'l-Isidm (Alexandria 1963, 82-3), followed by Kämll Mustafa al-Shibi in his Sharh Dividu at Hallagi, has upheld the thesis of the Christian origin. But which Christians are concerned? If it is the Nestorlans, it seems that, even going beyond words, similarities in ideas may be detected, allowing for the fact that in al-Halladj there is -Christian christology. In fact, the Halladjian nasilt could be considered the equivalent of the prosopon of union in which the will of God and the will of man are united, which justifies L. Massignon's important remark (ibid., iil, 52): "The only aspect through which divine action takes part in transforming man is not lakul, the creative omnipotence this essential, intelligible word which is at the basis of every command of the Divine ...". Narat, like ame, is actually the place where the wills of the One who commands and the one who obeys are united. As in Nestorianism, there is never any confusion between the divine essence, libit, = as L. Gardet says (Dieu et la destinée de l'homme, 492), "the sealed world of the divine essence" and the human substance. To mark this irreducible distinction of the two natures, al-Haliadj uses the terms hithitiyya and nashtiyya; "My observance of what is properly Yours differs from Your observance of what is properly mine; in fact, Your observance of what is properly mine is divinity (lahitiyya) and my observance of what is properly Yours is humanity (adsūtiyya), and even while my humanity (nāsūtiyya) is lost in Your divinity (fe lāhūtiyyatika) without being confused with it, at the same time Your divinity takes possession of my humanity without baving any contact with it" (Akhbār al-Halladi, no. 1, Arabic text, 8). "He who supposes that lähiitiyya mingles with humanity (bashariyya), or the bashariyya mingles with divinity (ulahiyya) infidel" (ibid., no. 25). The synonymous uluhiyya-lahûtiyya and bashariyya-nasiltiyya allow us an accurate understanding of the meaning of the two terms constructed from laket and naset. Let us note that Ibn al-Farid (Talipya, 455) uses lakul in the sense of labalityya and masar in the sense of adsatiyya; "I am not diverted by lahat from the condition of the place of my appearance, and I do not forget, through adsitt, the place of my wisdom's appearance." If, = for the Nestorians, there is no mingling of the two natures, by contrast, when al-Halladi uses the image of clothing, it is m say "my temporality is beneath the clothing of Your eternity" (hadathi taht mulabis kidamika); (Akhbar, no. 1). "O All of my all . . . The 🖿 of Your All is a clothing worn by my inner significance" (Discon, 2, v. 5: wa kuliu kuliika malbas bi-ma'nd't). The act of wearing this All (labs), that Massignon explains by "the defformity of the sanctified man" (Passion, ili, 356, n. 7), results in the all of the man containing the all of God with which he is clothed. "I contain in my all the All of Your All, O You, my sanctity. You are revealed to me to the point where it is though You were within me" (Dissis, 44, v. z). Indeed, in the order of the stations of mystical ascension, labs immediately after hashf. Finally, there is also to be found in al-Halfadi the image of the hayhal which is the corporeal form: "The keykal remains on earth, putrelled" (Dindn, 63, v. 2). So it is not simply a question of the divine dwelling within him; he must also be transfigured. Al-Halladi asked for "the destruction of the Kaba,

then its rebuilding with wisdom." The Kasba to he destroyed is the "temple of the human body", the haykel "whose transliguration is to be hastened" (Passion, i, 689). As for myself, He does not veil Himself from me for a single moment, until my massitives is lost in His labatives and my body disappears in the lights of His essence" (Akhbar, to; of, Passion, iii, 52-3). Nasūtiyya must then, in so far as it is purely human, be assumed by the nassit, the aspect of God in which union is realised; "Glory be to Him whose nasad manifested the secret of His dazzling lakel's sublimity, in the form of a man who eats and drinks" (Diwan, 9, v. 1).

The origin of the idea of nasat conceived by al-Halladi must be looked for in the word that, in eternity before all creation, God addresses to man, the Word which is contained in the uncreated Kur'an. To this idea of m pre-eternal conversation between God and man is linked all the Halladian dialectic of Me, You and Him, which underlies the relations between lähüt and näsüt, lähütiyya and näsütiyya 🖿 in the following example, "The Yourself which is a Him has borne witness to Me" (au arta ila shahidika 'l-huwi') i.e. that the dialogue between the divine You and the human me, on the level of the nasid, manifests the essence of God (labat) in his ipseity (hu-

wiyya).

4. The pair lahul-nasul in the thought of Ibn 'Arabi. For Ibn 'Arabi, the lahat is the divine aspect in the prophet and saint, - supposed to the nasat which is the human aspect. In a poem concerning knowledge of Jesus (Futühāt, ed. Uthmān Yahya, iii, 41, 68-9), one can read: "His kihūt, which was in the world of the Invisible, was his union (with God: sihr), was a spirit in whose image (ruh mumaththai) God made the secret appear." The term sike (relationship through women) indicates, according to 'Uthman Yahya, that no natural parenthood is concerned, but the result of a divine choice. The spirit is a lifegiver; it is through it that Jesus brought the dead to life. Also, generally speaking, the lähūt is the life infused in things, and the recipient that the spirit brings to life is called násůt (Fuşüş al-bikum, ch. x, where it is Christ; tr. Burckhardt, 110). The same definition is to be found in 'Abd al-Razzāk al-Kāshī (or al-Kāshānī [q.v.]): "The lithut among the Sufis is life which flows into things, and nasut is its place (makall): it is the spirit" (cited by al-Tahanawi, art. Lahūt). Ibn 'Arabi does not make systematic and of these two terms. There are equivalents in his theory of the relation between the two domains of the Kingdom (Mulk) and the Kingship (Malakil), in that of the Light of Muhammad (Nar Muhammad) and the Muhammadan Tree, which is "the totalising, universal human Tree" [R. Deladrière, Ibn 'Arabi: la profession de foi, 62). The Tadhkirat al-khamāşs (ibid., 62, 133) also says: "The letters of the Muhammadan Tree are the human nature of its intelligible truth and the veils of its significance. . .".

5. The pair lahat-nasat in Shi'i thought. According to the Imami conception, different planes of the universe exist (cf. H. Corbin, En Islam iranien, i, 35); lähüt, djabarüt malaküt, näsüt, [sec [ALAM]. Lahut is the world of secrets ('alam al-asrar) and the Unrevealed (tbid., 203). The mystical relations between lähüt and mäsüt express the different aspects of the theophanic conception of the Imam. Al-Tahānawī, who discusses lähūt in his article diabarat, refers essentially to Persian texts. It is thus finally in Iranian thought that the two terms dhat and massi received the widest reception, following what al-Haliadi and Ibn 'Arabi had written on this subject. If comparisons can be made with the Christological doctrines of Christianity, particularly with regard to the image of clothing (cf. H. Corbin, op. laud., iii, 174-5), it must be stated that these two terms were henceforth perjectly integrated in ShI9 imamology.

We shall mention in conclusion a curious etymology given by al-Tahanawi; lähüt originally derives from the formula: la huma illà huma: it is the custom of the Arabs when they a complex formula in speaking to add something to it (bizi siyada kunand, i.e. the final letter to, and to cut something off it (hadh/ hunand: here illa huma). The result in that lahut is the radiance of the essence (tadjalli 'l-dhāt).

Bibliography: given in the article.

(R. ARNALDEZ)

LÄHÜTİ, ABU 'L-KASIM, Persian poet and revolutionary, was born in Kirmanshah 🖿 4 December 1887, the son of a petty shoemaker. As a youth he joined the struggle for constitutionalism in Persia, and in 1908 took part in the fight against the royalist troops in Rasht, following Muhammad "All Shah's attempt to reimpose autocracy. After the restoration of the Constitution in 1909 he entered the gendarmerie and was eventually promoted to the rank of major. There, charged with subversion, he was condemned to death, but he managed to escape taking refuge in the Turkish (now in 'Irak) border town of Sulaymaniyya. In 1915 he returned to his home town, and min drawn in the movement against Allied intervention in Persia. Around this time he also started the periodical Bisutax from Kirmānshāh, and founded a workers' party. In the period that followed, he again came into conflict with the authorities and migrated to Istanbul. While he was there he taught in a Persian school and issued the Persian-French periodical Pars. Towards the end of 1921 he was allowed to return to Persia and was reinstated in the gendarmeric, Not long afterwards he headed an abortive revolt in Tabriz and, after its fallure, fled to the Soviet Union (February 1923).

In the Soviet Union, Lahuti's activities were connected mainly with the political and cultural life of Tadjikistan, where he took up residence after 1925. He served as deputy commissar of education, and was honorary president of the Tadilk Writers' Union. The Soviet government awarded him several honours including the Order of Lenin. He died in

Moscow on 16 March 1957.

Lahûti was the most outstanding Communist poet in Persian, and has been rightly acclaimed as one of the founders of Soviet Tadilk poetry. His early political verse appeared in the periodicals of the Constitutional Period, such as Habl al-matta, Iran-i and Shark. In his poems written before 1922 he often displayed sentiments favouring workers and peasants. Thereafter, his permanent domicile in the Soviet Union strengthened his trend towards Communism, and his art became progressively identified with the literary and political assumptions of the Soviet government. The poem Krem! ("Kremlin"), composed in 1923, was the first notable indication of this development. It recalled Tsarist atrocities and condemned imperialism and capitalist exploitation, welcoming the triumph of the Communist Revolution in Russia. Lähüti's subsequent poems concerned themselves largely with his immediate environment, but themes dealing with Persia were not lacking. The poet employed both conventional and new forms,

and used non-traditional metres, which were apparently inspired by Russian Eterary models. He also composed songs, and wrote the libretto of Ktwa-i dhangar ("Kawa the Blacksmith"), which was the first original opera to be performed in Tädjikistän. His literary endeavours extended to the field of translations, which he rendered from the works of such writers as Shakespeare, Pushkin, Gorky and Mayakovsky. His diction was simple and uncomplicated, and he used a language which

almost verged on ordinary speech. Bibliography: Lahutt, Kulliyat, 6 vols., Dûshanbe 1960-3; REI, vili (1934), 349-35; E. G. (MUNIBUR RAHMAN) LA'IB (Li's, La's), the Arabic word for "play" (also used variously in Persian, against Turkish oyun), in the Muslim world as fundamental a concept of vast sociological and psychological implications in other civilisations. Only a few of its aspects can be briefly discussed here. The "play" character of many important human activities (dance, theatre, music, etc.) does not come under our purview, nor do ritual games as survivals of pre-Islamic religiouslymotivated customs. We find them occasionally mentioned, as, for instance, in references to New Year practices, cf. al-Bironi, Athar, ed. Sachau, ar6, who also mentions the enactment of a Persian religious ceremonial played m seesaws; for a modern example from southern Morocco, M.-R. Rabate, in Objets et Mondes, x (1970), 239-62. The stress here is on children's games, but, in Islam as elsewhere, no clear dividing line separates the games of children from those of adults; there is no typological distinction, the only difference sometimes encountered being certain material factors. Al-Diahit, Hayawan, Cairo 1323-5, iii, 79, may have been aware of this circumstance when he singled out playing with pigeons as best representing the easy potential transition in games from playfulness to seriousness. The various expressions of the human play instinct and the various types of games were all cultivated in the Muslim world. The constant use in literature of metaphors bullt upon combinations with the root "to play" attest to the concept's living strength.

The large role of "play" in Muslim life is all the more remarkable it ran counter to firm religious objections. These objections have indeed greatly coloured the expressed Muslim attitude toward play. They were no doubt effective in curtailing the factual information on games available to us. The Kur'an refers to play (and lake "anusement") as a particularly insidious expression of human unconcern

with man's true task in this world, which is working toward salvation in the other world. Much ingenuity was spent by Muslim intellectuals on condemning it. as attested in innumerable statements such as, for instance, many verses in the subdivyat of Abu 'l-'Athliya or 'All's indignant rejection of being called a til'abs timatha (al-Baladhuri, Ausdo, ii, ed. M. B. al-Mahmudl, Beirut \$394/1974, 151). Not dissimilar to the thought expressed by Anacharsis (Aristotle, Niconnachean Ethics, 1176 b 33), that playing should be tolerated only when it enhances man's ability for more occupations, is the idea that all work and no play dulls the sensitivity of even the greatest and most dedicated minds, and light relaxation, therefore, is to be tolerated (e.g. F. Resenthal, Humor in early Islam, Leiden 1956, 5, and see AL-OJIDD WA 'L-HAZL'), but the authors who quote statements to this effect would hardly have gone so far as to include simple games in what they meant by relaxation. Worldly wisdom required that rulers be warned against excess in playful activity. As a matter of fact, "play" in Islam came m be considered the exclusive prerogative of children, bracketed at times with women also in this respect. In the Greek tradition as represented by Bryson (ed. M. Plessner, Heidelberg 1928, 202; cf. also al-Ghazill, Ihya', riyadat al-nafs, Cairo 1352/1934, iii, 63) and used by such influential thinkers Miskawayh, even children should be permitted moderate playing as relaxation only to be better able to tolerate the hardships of education, or (according to al-Sacada wa 'l-is'ad, od. M. Minovi, Wiesbaden 1957-8, 360) to acquire serious skills. Sometimes, we find statements to the effect that future greatness is foreshadowed in childhood by a disdain shown for playing. References to children are often routinely associated with play. It was quite satural to have the youth killed in the story in Kur'an, XVIII, 74/73, described as having been found playing with others (al-Bukhari, Sabia, cf. Ibn Hadler, Fath al-bari, Cairo 1378-83, i, 232, si, 25, 33; al-Tabari, Tafsir, ad loc.), or to worry that Yusuf's playing in XII, 12 (the only morally neutral reference to "playing" in the Kur'an) might im-plicate his adult brothers (L. Goldziher, Dis Richtungen der islamischen Koranauslegung, Leiden 1920, 28 (.), or to explain datamis applied in the hadith to Muslim Infants in Paradise from their being similar to water bugs (?) because of their playing in the rivers of Paradise (al-Sharif al-Radi, Madjātāt, Cairo 1387/1967, 406). The Prophet as ■ child is said to have engaged in a game called farm ('uzaym) wadddh, described as searching (in the dark) for a very white bone tossed far away, with the finder being allowed to ride upon his playmates [Lane, 2087b, 2947a; Lisan al-Arab, iv, 476; Ibn Zafar, Anbā' nadjubā' al-abnā', Cairo n.d., 24); the Prophet's alleged participation in such a more could easily have struck strict interpreters of the doctrine of isma - objectionable and is, in fact, mentioned only very rarely. The Prophet's uncle al-'Abbas is described as having played buls as a boy, a game mentioned in ancient poetry (Amr b. Kulthum, Labid, cl. T. Nöldeke, Fünf Mo'allagdt, i, Vienna 1899, 47; Sharh Diman Labld, Kuwalt 1962, 81) and described as played with two small wooden boards, one twice as long - the other and the being hit with the other (or with a mikid?), this being in an anecdote intended to show al-"Abbas's innate deceacy (Ibn Zafar, A shā2, 52).

The most influential reference to child's play goes back to the biography of 'A'isha, reported in

many traditions with only slight variations (for instance, Concordance, s.v. 1-6-b; Ibn Said, 40-5; al-Baladhuri, Ansab, i, ed. M. Hamidullah, Cairo 1959, 410-12). It happened when the Prophet saw 'Ā'isha playing on a seesaw (urdjūha, mardjūha) that she first caught his attention, and he once, or on different occasions, came upon her playing with dolls. "Dolls" (banāt "girls", or luba, pl. luab, the typical "plaything") came thus to be discussed intensively in the legal literature. The gist of the Sunni jurists' discussion and the problems of detail they chose to face can best be captured from Ibn Hadiar, Fath, ziii, 143 f. In sum, dolls were usually given very reluctant approval as having educational value for training little girls to become good mothers. The obvious conflict between the prohibition of figurative representations (see El 1 art. suga) and the permissibility of dolls, although often they were not realistic representations of living beings, proved impossible to solve to everybody's satisfaction. The connection with idol worship - only hesitantly mentioned. The hadith also informs us that dolls were made of wool (tihn, Concordance, iv, 409a, 16 f.) to be given to children who were made to fast, in order to divert them (as other toys, such as pole sticks, might be promised to children as incentives for studying, see Ibn 'Aknin, Tibb al-nufits, ms. Bodl, or Hunt. 518, 70b), Some of "A isha's toys had, or were seen by the child's imagination to have, the shape of (winged) borses, with the wings made of cags. In this connection, al-Ghazzāli, Ikya', adab al-samā', ii, 245) speaks of the "imperfect forms" (of toys) fashioned by children from clay and rags as something tolerated by Shall'is, as he also mentions elsewhere (Ikyā', mill al-kasb, ii, 60) animal toys made of clay given to children on festivals.

Numerous names of games were mentioned as being of philological interest and listed because of their strange forms or because of literary connections (e.g. al-'Askari, al-Talkhis fi ma'eifat asma' alashyd2, Damascus 1389-90, 718-24, see F. Rosenthal, Gambling in Islam, Leiden 1975, 65). We also find references to such things as dibindib, dirkila, da ladja (a running, and I catching, game, al-Kall, Amáli, Cairo 1373, is, 315; Lisan al-Arab, iii, 97), or the putting of fidirim into unat (al-Kall, ii, 4 f.). Games are given at times with in the form of noun combinations or tentences, such m al-mu'allim wa 'l-adile "master and hired hand" (T. Hyde, De ludis orientalibus, ii, Oxford 1694, 234-6), dii lukum khudhlini "I have come to you, === me" (Hyde, ii, 240 f.), bhasá ma-saká for even-and-odd, (Turkish) tut Leila "catch Layls" (H. Ritter, Knabenspiele Améra, in Isl., xxvi [1942], 49-57), etc. Characteristically, the names of games change greatly in the course of time so that those found in Hyde from the 17th century and even more so those from modern times (e.g. K. L. Tallqvist, Arabische Sprichmörter und Spiele, Helsingfors 1897, or Ritter) are nearly all different from those known from the mediaeval literature, quite apart from local differences,

The philologians no doubt had often no personal experience of the games they sought to describe. Descriptions are often non-existent, or they are so brief to indicate hardly more than the general type a given game and to be practically useless; this is nothing peculiar to Muslim philologians but something worldwide, since the play instinct required to be satisfied by intricate and volatile rules hard to describe fully. Ambiguities of interpretation are always present. Similarities between modern and mediaeval names, in the rare cases in which they

exist, do not necessarily indicate that the games are the same. Thus, the lab al-hhumaysa mentioned by Ibn Kuzmān (E. Garcia Gómez, Todo Ben Quzmān, Madrid 1972, i, 32/33, 36 n. 6) is hardly the hhemis described by A. Robert from Algeria, in Revue Africaine, Ixii (1921), 69. The ring (hhitam) game of prestidigitators is no doubt the guessing game described by Robert, but hardly represents all the games thus designated (cf. Rosenthal, Gambling, 62; al-Simāwi, "Uyūn al-hahi"ih, ch. 12). The modern game called bilbii may be related to ancient hule as suggested by Ritter, but we have way of knowing how far this relationship, if it in fact exists, extends to details.

the important types of games, we may mention here (1) guessing games such as kharidi; (2) board games of the chess (see SHATRANDI) and backgammon [see MARO] types and of the manhala type which were usually, but not always, played boards, involving the placing of chips into holes, as, for instance, the game of "fourteen" (arbatata 'askera'), the throwing of dice and, of greater antiquity in Arabia, of knucklebones (kath, pl. kitab), also in a way the walnut (diams) game, see also KRARBGA; (3) skill and sports games, such as ball playing, the great favourite of children, often mentioned as done in the streets, also played with balls and (polo) sticks, see al-Ghazall, Ihyd', riyadat al-nafs, iii, 53, further Jumping games, catching games, the seesaw, Imitation lighting games, the egg game, also tops (duwwdsna, khudhrif); dancing with a hobby-horse (kurradi) was apparently not practiced as a children's game, cf. M. Gaudefroy-Demombynes, in Mdl. Wm. Marçais, Paris 1950, 155-50; and (4) "playing" with animals such as small birds, pigeons, dogs (add al-Dlahiz, Hayawan, ii, 28, to Rosenthal, Gambling, 58 n. 242n), = reptiles, either as an innocent pastime or as a gambling, racing, and fighting sport.

Most children's games contain an element of gambling, inasmuch as they entail rewards for the winners and penalties for the losers [see giman]. This added to the scruples raised by the play concept in general and the yare problem of dolls, in cast doubt in the eyes of jurists upon the legality of commercial transactions involving toys, in conjunction with prevailing economic conditions, it probably contributed to keeping toys used by children mostly simple and makeshift.

Bibliography: given in the article, in particular, Hyde, The Indis, and Rosenthal, Gambling. For board games, cf. H. J. R. Murray, Board games, Oxford 1952. (F. ROSENTHAL)

LAK 1. The most southern group of Kurd tribes in Persia. According to Zayn al-'Abidia, their name (Läk, often Läkk) is explained by the Persian word lak (100,000), which is said to have been the original number of families of Lak. The group is of importance in that the Zand dynasty trose from it. The Lak now living in northern Luristan [q.v.] are sometimes confused with the Lur (Zayn al-'Abidin), whom they resemble from the somatic and ethnic point of view. The facts of history, however, show that the Lak have immigrated to their present settlements from lands further north. The Lakki language, according to O. Mann, has the characteristics of Kurdish and not of the Luri dialects [cf. LUR]. Čirikov, Putevoi zhurnal, St. Petersburg 1875, 227, says that "the Lur and the Lak speak different dialects, and hate another".

The Lak appear in the Sharaf-ndma, i, 323, along-

side the Zand, among the secondary Kurd tribes, and as subjects of Persia. According to Rabino, the Lak were settled in Luristan by order of Shah Abbas, who wished in this way to create some support for the new wall of Luristan, Husayn Khan, whom he had chosen from among the relatives of the old Shahwardl Atabes (Tabilhi-i Alam-ara, 369). Of these tribes, the Silsila had formerly lived at Mahidaght (to the south-west of Kirmanshah); the Dilfan take their name from Abu Dulaf [see AL-KASIM B. "ISA], whose fiels in the 3rd/9th century lay in the north of Luristan [see sultanable]; the Badiilan of Zohab - well as Luristan say they come from al-Mawsil and are evidently one tribe. The Lucistan branch seem to have exchanged its Kurmandil dialect for Läkki during its sojourn among the Lak in the time of Shah 'Abbas, Even after Shah 'Abbas there were several Lak tribes outside of Luristan. Zayn al-'Abidin (opening of the 10th century) mentions among the Lak: the Zand, the Mafi, the Bādjilān and the Zangi-vi kāla (?). To the last tribe (according to Houtum-Schindler: Begele) belonged Karim Khān Zand (born in Pariya, the modern Pari, about 20 miles from Dawlatabad on the Sultanabad road). When at Shiraz, Karim Khan sent for the Lak tribe of Baranwand. In 1212/1797 the Bayranwand and the Badjilan actively supported Muhammad Khan Zand in his attempt to seize power from the Kādjārs (Sir Hartord Jones Brydges, A history of Persia, London 1833, 46, 58; R. G. Watson, A history of Persia, London 1866, 16). Under the Kädlars, several Lak tribes were broken up. The Zand have almost completely disappeared; in 1830 remnants of them were to be found among the Badjilan of Khanikin (Khurshid-Efendi, Siyakat-name-yi budad, Russ. 11. 112, 221); there are still a few Zand families in the Dord-Faraman district to the south-east of Klrmaushah (RMM, xxxviii, 39); a section of the 'Amala of Pusht-i Kun claims to be descended from the Karim Khan tribe. At the present day, there - Maff at Waramin, Tehran and Kazwin.

According to m good list compiled by Rousseau at Kirmānāhāh in 1807 (ct. Fundgruben des Orients, Vienna 1813, ili, 85-98), there were considered as Lak the following tribes: Kaihūr, Māft, Nānakī, Djallwand, Pāyrawand, Kulyā'ī, Şūfiwand, Bahrāmwand, Karkūkl, Tawail, Zūyirwand, Kākūwand, Nāniwand, Ahmadwand, Bohtū'l, Zūliya, Harsīni and Shaykhwand.

According to O. Mann and Rabino, the Lak tribes of Luristan are as follows: Silsila (9,000 families), Dilfan (7,470). Tirhan-Amra'i (1,582 families), the Bayranwand (6,000 families) and Dalwand (2,000 families) forming part of the Bala-girlwa group, a total of about 15,000 tents. The Bayranward and Distward live to the east of Khurramābād around the sources of the river which flows through this town; the Sifsila and the Dilfan occupy the beautiful plains of Alishtar and Khawa respectively, while the Tirhan (perhaps - Tarkhan, i.e. "exempt from taxes") live between the left bank of the Saymara and the lower word of its left-bank tributary from Khurramābād. The territory occupied by the Lak, and including northern and north-western Luristan is sometimes called Lakistan.

The cohesion of the Lak tribes is evident from the fact that even before 1914 the Silsifa, Dilfan and Tirhan were united under the authority of Nazar 'Ali Khan of the Amra'l cian. In addition to the bouds of tribe and language, there is that of religion, for all the Dilfan and many of the 'Amala.

of Tirhân belong to the extremist \$\frac{5}{2}\text{if} a sect of the Ahl-i Hakk [q.v.].

Biblographie: E. Beer, Das Tarith-i Zendije, Leiden 1888, pp. xviii, xxvi; Zayn al-iAbidla Shirwani, Bustān al-siyāha, Tehran 1315, 532; O. Mann, Shirne d. Lurdialecte, in SBAk. Wien (1904), 1173-93; O. Mann, Die Mundarten der Lur-Stämme, Berlin 1910, pp. xxii-xiv; to the number of tribes speaking "Läkki", the author adds the Kalbur of Kirmanshāh and the Māki of the Pusht-i Küh; Rabino, Les tribus du Luristan, in RMM (1916); Minorsky, Notes sur la secte des Ahli-Haqq, in RMM, xl (1920), 56.

2. The name given to themselves by the Chāzi-Kumuk, a people living on the eastern Koy-su in contral Daghistan (see the next article and kumuk, also Erckert, Der Kauhasus und seiner Völker, Leipzig 1887, 248-57, and Dirr, Die heutigen Namen der kauhasischen Volker, in Petermanns Mitteil. (1908), 204-121.

On the other hand, the term Lek in Armenian and Luk-i (piural Lek-ebi) in Georgian means the Lezgiflegzi of Daghistan (where the e may certainly designate the value of d/a: Lagzi). This last name seems to have been applied to the highlanders of Kitrd, living in and around the sources of the Samur, and later to have been extended to all the people of Daghistan, although no people of the Caucasus actually call themselves Lezgiflegzi. Marquart, Besträgs wer Geschichte und Sage von Eran, in 2DMG, xlix (1895), has attempted to explain the Arabic al-Lakz by the addition of the Persian suffix vi to the name Lek (or Lak), cf. Sag-zi, "inhabitant of Sistan". (V. Minonsky)

LAK (self-designation: Lak, Lakucu; Russian variants: Lak(tsi), Kazikumukh(tsi); Avar: Tumaw, pt. Tumal; Lezg: Yakholshu; Dargin: Vuluguni, Vulečuni; other: Kazikumukh [from Arabic Ghāzi, warrior for the faith, and Kumukh, the political and cultural centre of the Lak territory, see xumux), a Muslim people of the Caucasus.

The Lak language belongs with Dargin, Kaytak and Kubači [q.w.] to the Dargino-Lak (Lak-Dargwa) group of the Northeast-Caucasian language family. There are five dialects of the Lak language, Ashti Kuli, Baikhar, Vitskh, Vikhli and Kumukh. The Kumukh dialect forms the base of the Lak literary language, . Kumukh was, and is, the cultural and centre of the Lak territory. Lak was originally (since the late 19th contury) written in the Arabic script; this was changed to the Latin script ■ 1928, since 1938 it has been written in the Cyrillic. Prior to the establishment of Lak as a written language. Arabic served as the literary language in the Lak people. Lak is at present one of the nine official literacy languages of the Daghistan ASSR, although it is no longer used as a medium of instruction in the schools (Lak served as a language of education among the Laks until the fifth year, between the late 1920s and the late 1960s; virtually all education since then has been conducted only in Russian).

The Laks are inhabitants of the mountainous central region of the Daghistan ASSR. They live primarily in the basins of the upper Kazikumukh. Tleuserakh, and Khatar Koysu rivers located in Lak and Kuit districts, and in separate settlements in the districts of Tsudakhar, Akusha, Rutul, Kurakh, Caroda, and Dakhadaev. In 1844 many Laks were resettled in the steppes and foothills north of the Andi Ridge in what is now "Novo Lakskiy" ("New Lak") district of the Däghistän ASSR. According

to the 1970 Soviet census, there were \$5,822 Laks in the USSR, of whom 72,240, or 84.2%, fived in Daghistan (1926 population, 40,380; 1959 population, 63,529). Although the Laks are reported to be the most Russianised of all Daghistanis, according to the 1970 most only 3.7% of the Lak population considered Russian their native language, with 95.8% considering Lak their native language.

According to legend, the Laks were conquered by Abh Muslim in 777 [ric] and converted to Islam, making them the first Dāghistān! people to be Islamicised. However, it is more likely that the final conversion did not occur until the 13th century, with some Christian and Jewish traditions surviving up until the 15th century. The Laks are Sunti

Muslims of the Shafffi school.

Legend has it that the Shah-Baala was the first Muslim ruler of all Daghistan and founder of the Shamkhal dynasty, which reigned at Kumukh until the 17th century. At this time Kumukh, which had been established by Abu Muslim as the seat of the ruler of Daghistan, was renamed Kazikumukh. in the 14th century, the rulers of Kazikumukh adopted the title "Shamkhal" (supposed etymology from Sham - Syria, suggesting descent from the former Arab governors). During the 15th and 16th centuries, at the time when the Shamichals ruled a large part of central and coastal Daghistan, a second capital, which also served as winter residence, was established at Tarku in the Kumuk territory. In 1640 the Laks broke away from the rule of the Shamkhalate, replacing it with appointed hhakhlavai (from Arabic khalk "people", and Lak larai "su-preme"). Although appointed administrators, their chief function was that of military leaders, and as such they received land and tribute - payment.

With the death of the last Kazikumukh khān, Agaler, the Lak territory was incorporated in the Dāghistān oblast', and became an integral part of the Russian empire. By 1842 both the Lak territory and Avaristan had come under the control of Shamll [q.v.] and his Murks, and in 1877, during the Russo-Turkish War, the Lak beks, together with other Dāghistāni feudat lords, staged a revolt against Tsarist rule. This revolt was, however, put down, resulting in a greater integration of Dāghistāni into

the Russian empire.

The Laks are reported in have been the first mountaineer Daghistani people to establish a feudal system. Their feudal society was comprised of the khāns; the bagiai (beks), i.e. the khān's family the nobility; the cantri, i.e. children of marriages between beks and women of lower social orders; the uzdental [uzden], i.e. free peasants (the numerically largest class); the rayaf or seris; and the lag art slaves. This lendal system coexisted with a system of free societies based on the patriarchal clan (tukhum), which was made up of one more extended families. These free societies were ruled by the village 'adat. Within the tukhum, there was mutual help in work and family affairs, as well as group responsibility in vandettas, which were under the jurisdiction of the 'adat. Although exogerny was not forbidden, an endogamic marriage system prevailed.

The traditional economy of the Laks was based upon transhumance, with sheep and goat raising, and home industries (leather working, pottery, weaving, gold and metal smithing, etc.). These activities still play a large role in the village economies. Due to the lack of fertile land in the mountainous regions of the Lak territory, agriculture played only a minor role in the Lak economy, and

inigrant working was common (with the highest rate of migrant labour among any Dāghistāni people). In the steppe and foothills of the new Lak territory of northern Dāghistān, horticulture, vineyards, agriculture and silk production are important activities. In the larger towns in the Lak territory, there is mising level of industrialisation

(flour milling, printing, etc.).

The first written documents of the Lak people appear in the 1sth century. A rich religious and didactic literature appears in the 1sth and 19th centuries ('Umar of Balkar, Chāzī Sa'ld Husayn, Hadidil Mosā Hādidil, etc.), lyrical literature in the late 19th century (Yōsur Kādī Murkulinskii), as well as historical (Shāfī Nitsovkrinskii). Lak literature of the Soviet period was established by Hārūn Sa'ldov, who was both the first Daghistāni dramatic author and the author of the first Bolshevik Dāghistāni journal, Illī ("The Messenger"). Other Lak authors include Sa'ld Gabiev, Abutalib Gafurov, Abdurahman Omarov, and Efendi Kapiev (who wrote in Russian only).

LAKAB (A.) nickname, and at a later date under Islam and with m more specific use, honorific title (pl. alhāb). For suggestions about its etymology, see L. Caetani and G. Gabrieli, Onomasticon arabicum. i. Fonte-introduzione, Rome 1915, 144-5; and for its place in the general schema of the composition

of Islamic names, see issu-

The lakab seems in origin to have been a nickname or sobriquet of any tone, one which could express admiration, be purely descriptive and neutral in tenor or be insulting and derogatory. In the latter case, it was often termed nabaz, pl. anddz, by-form labaz; cf. al-Baydāwī on sūra XLIX, 11, "In common usage, wabar is particularised for an unpleasant labab". The grammarians, in their love for schematisation, divided alkāb into simple (mufrad) ones, comprising only one word, and compound (murakhab) ones, comprising two or more words, but this division has neither historical nor semantic significance, beyond the obvious point that - Islamic society developed and became more complex, honorific titles tended to become lengthy and grandiloquent.

r. The pre-Islamic and the earliest Islamic periods. Already in these times, we have many examples of Bedouin leaders, poets, orators, etc. with nicknames, e.g. Akil al-Murār, al-Abras, al-Mutslammis, 'A'id al-Kalb, Mukabbil al-Rih, etc., and from the 'Abbāsid period we have Dik al-Dinn, Sari' al-Ghawani, etc. These names might relate to physical characteristic or defects, in striking lines in a poet's verses, to incidents in the holder's life, but often in events whose significance is now lost in the mists of time. Explanation of the more unusual and bizarre names drew the authors of literary biographical works into much fanciful

LAKAB 619

theorising; cf. Aghāns, ed. Būlāk, xviii, 209, ed. Beirut, xviii, 480-1, on the origins of the Tabbata Sharran, and for museful list of such names, together with explanations drawn from the sources, A.-C. Barbier de Meynard, Surnoms et sobriquets dans la littérature atabe, in JA, Ser. 10, ix (Jan.-June 1907), 173-244, 363-428, m (July-Dec. 1907), 55-118, 193-271.

The giving of nicknames - clearly widespread in early Arab society, where the number of personal names was limited and where there was, in the Arab world today, keen observation of personal foibles, physical peculiarities, etc.; and from the Arabs, the practice spread to the Persian, Turkish and wider Islamic world. The personal connection of such nicknames is presumably behind the oftquoted anonymous line of poetry, "It is rare that you see a man whose character is not revealed, if you consider the matter, in his lakab" Al-Thasalibi, who devotes two out of the ten chapters of his Lafa'if al-ma'arif to the alkab of prominent literary and political figures, quotes this yerse in reference to the philologist al-Mubarrad [q.v.], and makes the curious observation that the people of Daghdad and Nishapur were colebrated for their facility in coining appropriate nicknames; he gives numerous examples from each town, ____ quite grotesque, but unfortunately omitting to explain-if he ever knewthe origins of the names (ed. I. Abyarl and H. K. al-Şayrafi, Cairo 1960, 46, 53-4, tr. C. E. Bosworth. The book of curious and entertaining information. Edinburgh 1968, 63, 66-7).

Some nicknames were clearly given as nomina botti augurii, aimed either at attracting a favourable future for the recipient or else at averting harm. Thus arose the practice of giving antiphrastic and apparently unpleasant and nicknames in order to avoid attracting the evil eye [see SAYN] which might otherwise fix itself on something wholesome and perfect; whilst slaves and other persons of little importance might be given enphemistic and suphuistic names, such as those of flowers, jewels, perfumes, etc. Thus the caliph al-Mutawakkil called one of his slave concubines, the mother of al-Mustasz, Kabiha "the hideous one" because she was famed for her beauty. Euphuism is seen in such names as Yakut (lit. "jacynth, ruby" and Dildiak I Turkish cidek "flower", the slave mother of the callph al-Muktaff), and good example of antiphrasis in the name of Kăfür al-Ikhshidī [q.v.] (kāfür "camphor" being white and fragrant, whereas Kafur was a black eunuch, proverbially noisome and malodorous [see KHASI, i. In the Central Islamic lands]), in these connections, there is an interesting passage In Ibn Durayd's K. al-Ishtikak, ed. Wuslenfeld, 4-5, in which he quotes al-Withi as having once been asked, "How is it that the Arabs give their sons names which are considered unpleasant imustashnata), yet give their slaves names considered pleasant (mustahsana)?" Al-SUtbI replied that the Arabe gave their sons with their enemies in mind, whereas they gave their slaves any names they wanted (i.e. without any ulterior motive). Ibn Durayd then goes on to give examples of given to sons which would augur well against their enemies (la/u/u/m 'ala a'da'ihim), expressing violence, harshness, bellicosity and endurance, e.g. Ghalib, Zalim, Mukbil, Thabit, etc. (see further, M. P. Kister, Call yourself by graceful names..., in Lectures in memory of Professor Martin B. Plessner, Jarusalem 1970). We are here perhaps straying into

the realm of the ism proper rather than the lakab, although the names given to slaves and slavegirls may be considered alkab replacing those persons' first given names.

The fondness of the Arabs, and of Kursysh in particular, for giving satirical and opprobilous nicknames is condemned in Eur'an, XLIN, tt, where there is a warning against the practice of groups of both men and women mocking at each other, "Do not scoff at each other or give each other derisory nicknames (wa-la talmin) anjusakum wa-ld tanabasii bi 'l-alkab)". This sura is accounted late Medinan, from a year or two before Muhammad's death, by Nöldeke (Gesch. des Quedus, 1, 221) and Montgomery Watt (Companion to the Que'an, London 1962, 237); it may m that the Prophet was feeling particularly aggrieved by nicknames given to him in the past by his opponents and by the Hypocrites, like that of al-Abtar "the childless one", even though the sabab al-tansil was, according to the commentators, the women's insults to Muhammad's wife Şafiyya bint Huyayy because of her origin from the Jewish tribe in Medina of al-Nadlr (cf. Sale-Wherry, A compendious commentary on the Quran, London 1896, iv, 70-1).

Yet whilst retaining for some time to come its derogatory and insulting aspects, the lakab tended to be transmogrified into higher roles within Islamic society, in one direction, it evolved into the nomde-plume of authors and artists, the makiday or takhallus [q.e.], above all in the Persian, Turkish and Indo-Muslim worlds, such as we find in the name of the Persian poet Khākāni [q.v.] or the pseudonym adopted by the Safawid Shah Isma'll I for his Azeri Turkish verses [see Isma'll I. 2. His poetry]. Most significantly for the development of Islamic culture, the labab developed from being a nickname of praise or admiration (as in such examples as Mulago al-Asinna "he who played with lances" for the pre-Islamic poet 'Amir b. Malik, famed for his prowess in battle) into becoming - honorific title, conferring status and prestige on its owner, since it frequently implied a specially close relationship to the sovereign or the divinity or else a reward for personal bravery or services to the state. As such, the lakab was to have an extended life-span in the Islamic world-more particularly, in those parts of lying between Egypt and India, though these honorities were also to be found to a more limited extent in Muslim Spain and North Africa, see below, 3-right up to the 19th and early 20th centuries, when floridity and hyperbole went out [slamic titulature just as they did from literature. other aspects of culture.

It is not difficult to discern why such titles became eagerly sought after; the desire to stand out above the rest of mankind is a universal one, Indeed, ai-Kalkashandi, in his Şubh al-a'shā, v, 440, following the line of traditional Islamic awaiil literature writers, traces what he calls the alkab al-madh wamusus back to such figures as Abraham al-Khalil "the friend of God", Moses al-Kalim "the one who spoke with God", Jonah Dhu 'l-Nun "the man in the fish", etc. Within a formalised, hierarchial society such as the Islamic one became in the 'Abbasid period, modes of address, insignia or rank and office, dress, etc. all contributed to the fixing of a man's status in society and the state, and such were prized as the visible and audible symbols of success in the temporal world. In this process of the spread of honorifics, there were -as for other aspects of early Islamic culture-the precedents of

600

the earlier Near Eastern civilisations, the Romano-Byzantine and the Persian ones, to provide element of continuity with the past.

The early Arabs knew from their contacts with the Byzantines me the Syro-Palestinian borders that a complicated system of honoritic titles and modes of address existed for Byzantine civil and military dignitaries. Allies of the Greeks, such as chiefs of the Ghassanida (see GHASSAN) like al-Harith b. Diabata and his son al-Mundhir, were honoured by having the honorary title of patricius bestowed == them; this term found its way into general Arabic usage as bijeik/bajrik [see niralk]. In Achaemenid Persia, the characteristic expression of pomp and magnifleence (μεγαλοπρεπεία) through grandifequent titles was familiar to Herodotus (i, 139), who further mentions (viii, 85) that meritorious servants of the state were enrolled in the list of "the king's benefactors" ('opograyyng). Under the Sasanids, the great men of state were likewise honoured by the award of a wide range of honorifies, e.g. the title busing framadar "chief executive" for the emperor's chief counsellor and minister; Mahlsht "the greatest [of the ruler's servants]"; Hazārmard "[with the strength of] 1,000 men" for military commanders; and various compounds including the sovereign's name, e.g. Zhayedhan Khusraw" "eternal Kh.", Hormuzd Varaz "wild boar of H.", and many with takm "strong" like Tahm Shapur or Tahni Yazdigird. These honours were usually completed by the grant of robes of honour, the later Islamic hhille [q.v.] see Noldeke-Tabarl, Geschichte der Perser und Araber zur Zeit der Sasaniden, 8-9, 443 and n. 1; F. Justi, Iranisches Namenbuch, 318; A. Christensen, L'Iran sous les Sassanides *, Copenhagen 1944, 113-14, 326, 409-11).

2. The period of the caliphate. The wide dissemination of honorific titles in the Islamic world began at the top, with the adoption of regnal titles by the caliphs. Later historians, projecting backwards what had become common practice in their own time, attributed the use of such titles to the Umayyads and even to the Orthodox caliphs. Al-Mas'udi, in his, K. al-Tanbik, 335, tr. 431-3, cites pro-Umayyad traditions in the effect that the Umayyads had honorifies of the theocratic type which had by two centuries later become familiar from 'Abbäsid practices, e.g. al-Nāşir li-bakk Allāh for Mu'awiya, al-Kahir bi-'awn Allah for Maslama b. 'Abd al-Malik and al-Muta'azzız bi'llih for Ibrahim b. Walid b. 'Abd al-Malik; but he rightly rejects these traditions as weak and uncorroborated by the historians and biographers (cf. E. Tyan, Institutions du droit public musulman, i. Le califat, Paris 1954, 486-7], Similarly, the epithets attributed to the Orthodox caliphs, such as al-SiddIk "he who testifies to the veracity of the Prophet's mission" for Abu Bakr, al-Farük "the just" for 'Umar and Dhu 'I-Nūrayn "possessor of the two lights" for "Uthman, are probably of early growth (cf. al-Khwarazmi, Majātih al-Sulām, ed. van Vloten, 105), but must nevertheless have been applied only after the deaths of their owners-

Honorities of a theocratic nature, expressing dependence of God, reliance on Him, or participation with Him in the work of ruling, are really an innovation of the early 'Abbānid period. B. Lewis has stressed the importance of the atmosphere of messlanic expectation around the time of the 'Abbānid revolution, when the workly Realpolitik of the Umayyads and their animus against the Prophet's kinsfolk, the 'Alids, was replaced by what it was

hoped would be the reign of divinely-guided justice; and these feelings favoured the adoption of religiousbased titles by al-Mansur and his first 'Abbasid caliph, Abu 'l-'Abbas al-Saffah, had no formal regnal title, though his partisans may well have attributed to him various with messionic implications. His successor Abū Diafar formally adopted the lakab of al-Mansur bi'llah "he who is helped by God to victory", and the chiliastic tone of early Abbasid titulature is especially clearly seen in the alkab of his successor al-Mahdi bi'llah "the divinely-guided one" and then of al-Hadi ila 'l-bakk "the one who directs towards the divine truth" (cf. Lewis, The regnal titles of the first Abbasid caliphs, in Dr. Zakir Husain presentation volume, New Delhi 1968, 13-22; F. Omar, A note on the lagabs (i.e. epithet) of the early 'Abbasid caliphs, in Abbasiyyat, studies in the history of the early Abbasids, Baghdad 1976, 141-7). In subsequent 'Abbasid usage, the apocalyptic element is less prominent, but the honorifies still express reliance upon and submission to the delty, or confidence in His guiding power, e.g. al-Wathik billah "he who puts his trust in God" and al-Muți bi'llah "he who shows himself obedient to God" (cf. Tyan, op. cit., 483 ff.).

It is notable that the 'Abbasid honorifies up to the later 4th/10th century and the period of Buyid control in Baghdad are formed essentially with participles or adjectives of a passive or reflexive character, thereby emphasising the supremacy of God's controlling power and the vital securing of His favour for the business of ruling in conformity with the Sharifa, the ideal, I not always the practice, of the "Abbasids, A. Abel has noted that the "Abbasids' great rivals in North Africa and Egypt, the Fatimids, had, in order to press their superior claim, as they saw it, to the caliphate and imamate, to adopt a more aggressive and active form of titulature (Le khalife, présence sacrée, in Stud. Isl., vii [1957], 38 ff.). This new type of litulature reflected the role assigned in Isma'lli cosmogony to the Imams in the hierarchy of intelligences emanating from the godhead, and it actively associated the holders of these titles with God's direct working in the world. Thus have al-Kā'im bi-'amr Allāh "he who takes charge of the execution of God's command' for Muhammad; and from the time of al-Mulaz's accession onwards (341/953), the honorifies of the Fățimids are active participles or adjectives emphasising the ruler's decisive part in the implementation of God's will in this world, e.g. al-Håkim, al-Āmir, al-Zālir, etc., usually with a complement like . . . li-din Allāh er . . . hi-amr Allāh.

Not surprisingly, the *Abbasids strove from the latter years of the 4th/10th century onwards to emulate these activist forms of titulature, in order to emphasise their own position as upholders of the Sunna; whence titles like al-Kā'im bl-camr Allāh appear in the middle years of the 5th/tttb century and Ilke al-Nāşīr II-din Allāb and al-Zāhir bi-amr Allah in the early 7th/13th one. In all these cases, the lakab might be adopted 📰 a new regnal title me the caliph's accession; but increasingly, the wali 'I-'and or helr to the throne was given a labab as me as he was invested formally as heir to the reigning monarch, with his own kunya and/or honorifies thereafter appearing on the coinage side-by-side with those of the actual caliph. This lação usually remained with the heir men he acceded to the caliphate proper; but occasionally, the lakab adopted by such an heir-apparent was exchanged for a different, often more grandiloquent one on his obtaining the throne. Thus al-Mutawakkil's original lakab, during the period when he was his brother's heir, was al-Muntaşir, but this was changed on the second day of his succession to the caliphate (232/847) by the chief kadi Abī Du'àd to al-Mutawakkil (al-Mus'ddi, Murādi al-dhahab, vii, 189 — ed. Peliat, § 2872; cf. Tyan, cp. cit., 180, 4861.

If the caliphs could assume splendid and sonorous honorifies themselves, it lay also within their power to confer titles in their servants and supporters, in the first instance to their viziers and secretaries and their military commanders. The process dates from the early 3rd/9th century, and at least until the following century it was practised comparatively sparingly by the 'Abbasids. The Persian secretary al-Fadl b. Sahl (q.v.), former protégé of the Barmakis and eventually visier to the caliph al-Ma'mun. exercised the functions both of wastr and amir. and by 196/811-12 he in found with the honorific Dhu 'I-Riyasatayn "possessor of the two executive functions", sc. of civil administration and military leadership. Around the mine time, the Persian general Tahir b. al-Husayn [q.r.], founder of the line of Tähirid governors in Khurasan and Irak, received the lakab of Dhu 'l-Yaminayn "possessor of two right hands, the ambidextrous" (various explanations for this phrase are in fact given in the sources; it had already been used in the earliest Islamic times as a synonym for "liberal, openhanded", e.g. by the great poetess al-Khansa¹ [q.v.] when elegising her brother Sakhri; al-Fadl b. Sabl's cousin 'All b. Abi Sa'id received that of Dhu 'l-Kalamayn "possessor of the two pens" (either alluding to the two principal government departments of finance and the army, or else to "the two modes of writing", sc. Arabic and Persian); whilst later in the century, in 169/885, the vizler Said b. Mukhallad was granted by al-Muwaffals the title Dhu 'l-Wizaratayn "possessor of the two visierates" (referring either to the two apheres of power, civil and military, or recognising Sasid's role as servant both of al-Muwaffak and the titular caliph at-Mu'tamid) (see D. Sourdel, Le visirat tabbáside, 1, 201-3, 319-20, 11, 678, 681).

This type of lakab containing a dual expression was, however, one known before this time, as is attested by the name Dhu 'l-Nûrayn for the caliple "Uthman and Dhu "I-Shahadatayn, applied to the Companion and partisan of 'All, Rhuzaynia b. Thabit al-Ansari (because the Prophet had promised him double the normal martyr's rewards, see Ibn Hadiar, Isabu, i, 425, and Ibn al-Athle, Usa al-ghaba, ii, 114). The type was, indeed, to enjoy a long life in Islamic titulature, just as dual forms of the simple ism (Muhammadayn, al-Hasanayn) have been current in the Islamic world until the present day. The 'Abbasida' successors in western Persia and that, the Buyids, continued the usage of the caliphs for their own ministers and secretaries; thus we find Ruka al-Dawla's great vitier Abu 'l-Fath b. al-'Amid with the lakeb of Dhu 'l-Kifayatayn "possessor of the two capabilities" (i.e. of the sword and pen), though this title in fact awarded directly by the caliph [see IBN AL-ANID]. In the following period of the Saldjuks, titles in al-bladratoyn, referring to the separate courts I the 'Abbasid caliphs and the Saldink sultans, occur, e.g. Thikat al-Hadratayn "confident of the two courts" and Nizām al-Hadratayn, "support of the two courts", the title by the Nakib al-Nukaba' 'All b. Tarrad al-Zaynabl in Baghdad during the inter decades of the 5th/tth century (1bn Khallikān, ed. Ihsān 'Abbās, Beirut 1968-72, iv. 454, tr. de Slane, iil, 15:1. See for all these types of dual titles, I. Goldziner, Ueber Dualitet, in WZKM, wii (1899), 321-9 — Gesammelle Schriften, Hiidesheim 1967-73, iv. 193-203, and Caetani and Gabrieli, Onomasticon arabicum, i, 167-9.

An interesting fact of usage has recently been highlighted by P. Balog. Pious invocations after names are familiar from the early use of the tasling after the name of the Prophet, the laslim after those of earliet prophets, the lardiyo after the names of the early coliphs, etc. From the latter Umayyad period (from the time of Vazid II b. Abd al-Malik 101-5/720-4) onwards, in regard to the evidence of inscriptions on glass weights and measure stamps from Egypt) onwards, pious invocations like asiahahu Allah "may God set him in the way of rightcousness!", abkāhu Allāh "may God grant him long life!" and ahramaku Allah "may God honour him!" are consistently appended to the names of caliphs and of high officials and governors. It seems that a particular formula like those just mentioned remained with an official or governor throughout his career, unless he were awarded a fresh invocation of higher prestige. Such adiaya (sing, duid) may accordingly be approximated to alkáb as expressions of particular honour awarded by the ruler to a faithful servant. and in the manuals is secretaryship from the Ayyübid and Mamlük periods (see below, section IV), the two types III honoratic are often treated together. See Balog, Pious invocations probably used as titles of office or as honorific titles in Umayyad and Abbasid times, in Studies in memory of Gaston Wiet, ed. M. Rosen-Ayalon, Jerusalem 1977, 61-8.

Characteristic of the 4th/10th century was the appearance and then the growing popularity of compound honorities including me their second elements the terms din "faith" and douls or mulk "secular power", me tess commonly, compounded with umma "religious community" and milla "religion". These titles have been studied in detail by M. van Berchem, Eine arabische Inschrift aus dem Ostfordanlande mu historischen Erläuterungen, in ZDPV, xvi (1893), 84-105; Caetani and Gabrieli, op. cit., 1, 199 if.; J. H. Kramers, Les noms musulmans composés avec Din, in AO, v (1927), 53-67; and A. Dietrich, Zu den mit addin zusammengereitten islamischen Personnamen, in ZDMG, cx (1960), 43-54. The last three of these studies contain extended lists of these types of lakab, for they were to enjoy a popularity which ran for almost a millenium, and Dietrich puts the total of dis titles enumerated by Kramers and himself at 186. The dawlatitles were the earliest to appear, but in the first place, were titles of great honour granted only exceptionally by the caliphs. Thus when al-Muktail honoured his vizier al-Kasim b. Ubayd Allah of the Banū Wahb (vizier 289-91/902-4) by giving to him one of his daughters in marriage, he also awarded him the title Wall 'I-Dawla "friend of the state" as a special mark of intimacy (Sourdel, Visirat, i, 336). În 330/941-2 the Hamdanid of Mawsii Abû Muhammad al-Hasan received from al-Muttaki, as a reward for his services against the omb al-umard) Muhammad b. Rā'ik, the lokeb of Nasir al-Dawia, whilst his brother Abu 'l-Hasan 'Alt of Aleppo obtained that of Sayf al-Dawla. Shortly afterwards, in 334/945, the Daylami Büyids entered Baghdåd and took over the office there of assir al-umara', and the three Buyid brothers Ahmad 'All and Hasan b. Buya received the honorities of Mufaz 522

al-Dawla, 'Imād al-Dawla and Rukn al-Dawla, respectively. All the subsequent Būyid amirs obtained from the caliphs titles of this type, sometimes with a greater degree of elaboration, e.g. the 'Adud al-Dawla wa-Tādj al-Milla of Fanā-Khusraw, the Sharaf al-Dawla wa-Zayn al-Milla conferred on Abu '1-Fawāris Shīrzil by the callph in 376/986, and the Bahā' al-Dawla wa-Diyā' al-Milla wa-Ghiyāth al-Umma of Abū Naṣr Firūz b. 'Adud al-Dawla (see Mez, Die Renaissauce des Islāms, 133, Eng. tr. 135; L. Richter-Bernburg, Amir-malik-shāhānskāk; 'Adud ad-Dawla's titulature re-examined, in Iran, Juai, of the BIPS, kviii [1980],; and Bahk' Al-Dawla in Suppl.).

It may be noted, in connection with the mention of Muhammad b. Rā'ik [see ran ax'ık], that it is in the first half of this century that we have the formal constitution of the office of amir al-umara' [q.v.] as the concomitant of caliphal decadence. In fact, this title, m a similar form like kabir al-umara', appears in the later years of the 3rd/9th century in reference to the commander-in-chief of the caliphal armies; but only with the caliphate of al-Rādī [322-9/934-40] did the holder of the imārat al-umarā' achieve a commanding grip on alfairs, so that it seemed natural for the Buyids to step into the office a few years later (see Tyan. ob. cit., 521-41).

few years later (see Tyan, op. cit., 531-41). Especially interesting, in the light of the significance of the Büyids and the daulat al-Daylam or "reign of the Daylamis" for an attempted reconstruction, in Islamic form, of the ancient kingship of Iran, is their assumption of the ancient imperial title Shahanshah "emperor of emperors". Adud al-Dawla used it widely and with great pride in his titulature and protocol, and indeed the title became so characteristic of the Buyids that the Ghaznawid historian Bayhakî actually refers to them as the Shāhanshāhiyān (Ta'rīkķ-i Mas'ādī, ed. Ghani and Fayyad 1, 41, 400, 438), but it seems possible that use of the title goes back to the very beginnings of the Buyids' setzure of power in western Persia and 'Irak, and was begun by 'Adud al-Dawla's father Rukn al-Dawla or even before that by his uncle 'Imad al-Dawla. Its assumption without caliphal permission clearly indicates a claim to temporal power by the Büyids independent of any caliphal act of delegation; but after 'Adud al-Dawia's death, his weaker and squabbling successors were compelled to seek caliphal support and hence pay more respect to the "caliphal fiction" by seeking validation for the title Shahanshah directly from the 'Abbāsids. As is well-known, al-Kā'im complied over this when asked by Dialal al-Dawla, but when in 429/1038 the title was introduced publicly into the Baghdad khufba for the first time, a near-riot ensured, and the approval of the fukaha' of the three law schools of the East, the Hanafis, the Hanballs and the Shafi'ls, had to be sought before this ostensibly blasphemous (at least in the eyes of the pious) title could safely be re-introduced from the pulpits (see H. F. Amedroz, The assumption of the title Shahanshah by Buwayhid rulers, in Num. Chron., Ser. 4. vol. v [1905], 393-9, and the detailed and important study of W. Madelung, The assumption of the title Shahanshah by the Buyids and "The reign of the Daylam (Dawlat al-Daylam)", in INES, axvii [1969], 84-108, 168-83). Until approximately sie time of the Mongol invasions, Shahanshah remained an exalted regual title, e.g. the Isma'll Grand Master of /Jamut 'Ala' al-Din Muhammad III (618-53/1221-55) is called al-Mawla al-A-zam Shahan-

hah al-Mu'azzam in one inscription (van Berchem,

Epigraphia des Assassins de Syrie, in JA, Ser. 9, vol. ix [1897], 453-501). Subsequently, however, it declined from being a lakab into an ordinary ism amongst Persian princes and those Turkish ones who at times adopted ancient Iranian nomenclature. As we have seen above in regard to dual titles, the Bûyids likewise secured imposing honorities for the great viziers and secretaries who served them. Notable here is the use of the element kāfi "capable one", and al-Birūni singles out such alkāb of Būyid officials as Kāfi 'l-Kufāt, al-Kāfi al-Awbad and Awbad al-Kufāt as "nothing but me great lie" (al-Albār al-bākiya, 134, tr. Sachau, The shronology of ancient nations, 131).

The Samanids [q.v.] in distant Transoxania and then Khurasan were abstemious in the use of honorifics, and al-Birunt, op. cit., praises them for this, comparing them favourably with the Büyids. The epithets of al-Sa'id, al-Sadid, al-Hamld, al-Rida, etc., seem to have been applied to them retrospectively after their deaths, and the only clear instance of a lakab used by one of the Samanida in his own lifetime is that of the last of the fine, Isma'll b. Nub (d. 395/1005), who styled himself al-Muntasir "the one rendered victorious [by God]", perhaps as a hopeful omen--vainty, as events turned out-for the restoration of his dynasty's fortunes. Yet although the Samanids, in practice independent, were usually punctilious in their deference to the 'Abbasids, they did in the second half of the 4th/roth century confer alkab unilaterally in their great commanders; thus Nüh b. Mansür (365-87/976-97) gave the title of Nasir al-Dawla to the commander of the Bukhara ghāzīs, and the Samanids' Turkish commanders in Khurāsān received similar titles, e.g. Husām al-Dawia for Tash Hadjib and 'Amid al-Dawla for Falik Khēssa (see Bosworth, The titulature of the carly Ghaznavids, in Oriens, xv [1962], 214-15).

The successors of the Samanids in eastern Persia and Afghānistān, the Ghaznavids [q.o.], departed, on the other hand, from the path of Samanid simplicity, and from the time of the line's founder, Sebüktigin, onwards, regularly sought from the caliphs numerous honorifies. Those of Sebüktigin were Mufin al-Dawla and Năşir al-Dawla or Năşir al-Din wa 'l-Dawla, perhaps commonly abbreviated to Nāşir al-Din (cf. S. M. Stern, in Paintings from Islamic lands, ed. R. Pinder-Wilson, Oxford 1969, 14-16; the question of the exact form of the labab is of some importance for the first appearance of the compound din-type honorifies, see below). By the time of Ibrahim b. Masfad (451-92/2059-99), the sultans bore a dazzling array of honorities, in this case Zahlir al-Dawla and some twelve others, as well as the ceremonial designation (e.g. for the coinage) of al-Sultan al-Mu'azzam/al-A'zam "highlyexalted suitan", a designation probably adopted under Saldiük influence (details in Bosworth, op. cit., 215 ff., and idem, The later Ghaznavids: splendour and decay, the dynasty in Afghanistan and northern India 1040-1186, Edinburgh 1977, 55-6).

Compound honorities in din appear at a slightly earlier date than the dawls ones, and the award of Nasir al-Din wa 'l-Dawls to Sebüktigin would appear to be the earliest instance of a din title; it is certainly the only lakab of this type listed by al-Birûnî in his Athâr, 133-4, tr. 130-1, under the heading "the holders of alkâb granted by the caliphal court", the remainder being mainly compounded of dawls, mille and umme. (Kramers thought that the linking of din and dawls in titles—see further on this coupling, below—stemmed from a long Islamic tradition

623

in which these two strands of human existence were regarded as interdependent in this temporal life and their fortunes inextricably interwoven; he also thought that the combination of ideas came "incontestably" from Persia, see Les nous musulmans

LAKAB

composés avec Din, 61.)

In the 5th/rith century, usage of the two types of lakab, in dawla and in din, fluctuates, but the coming of the Saldiūks gave a great impetus to the spread of those of the second type. According in the Saldjük historical sources, when Toghril appeared in Baghdad in 449/ro58 for the second time, the caliph al-Karim bestowed on him the honorities of Ruku al-Dawla "pillar of the states" and Malik al-Mashrik "I-Maghrib "king of the east and west" (see Bosworth, in Combridge history of Iran, v, 47); but in practice, Toghrll was generally referred to, in the short period of life remaining to him and also retrospectively, as Rukn al-Din. Dawia titles seem to have fallen into disfavour under the Saldjüks, for the subsequent sultans of the 6th/12th century favoured titles with din or, instead of the frequent alliterative coupling of din and dawle in a title, a further alliteration of din and dunyd; Malik Shab had the honorifies Djalal al-Dawla (whence the name of the Djalālī era [q.e.]) and Musiaz al-Dīn wa 'I-Dunya, whereas his son Muhammad had that of Ghiyath al-Din wa 'l-Dunya, Whether the overshadowing of the dawle titles had any theological significance, as Kramers suggested-a preference for those in dis stemming from the strongly orthodox. religious atmosphere of the Sunni reaction against political Shifism, and an avoidance of the non-Kur'anic term dawla, with its connotations of the changes and vicissitudes of blind fate-is unproven, but seems unlikely. But if dawle titles became less popular, the Saldjüks had no hesitation in the use of compound titles with mulk for their viziers and high military commanders (e.g. Amid al-Mulk for Abû Naşr Kundurî [q.v.] and Nizâm al-Mulk [q.v.] for Abu 'Ali Tusi); and the 'Abbasids themselves came to imitate the Saldjuks in the bestowal of titles expressing the idea of secular power, e.g. al-Muktafi's award of the title Sultan al-'Irak, Malik al-Djuyush to his vizier 'Awn al-Din Ibn Hubayra [q.v.] in 549/1154 as a reward for expelling the Türkmens from Wäsit. Saldjük practice was also the model for the Khwarazni-Shahs of the 6th/12th and early 7th/13th centuries; see L. Richter-Bernburg, Zur Titulatur der Hwerexm-Sake aus der Dynastie Anüstegins, in Archaeologische Mitteilungen aus Iran, N.F. ix (1976), 179-205.

The Shiff Fatimids, the Saldiuks' great opponents in the struggle for influence in the Syrian Desert region and its fringes of Syria and al-Diaztra, did not have this reluctance to use daula titles, at least for their viziers and officials. A standard formula for their viziers was al-Wazīr al-Adjal) "most exalted vizier", awarded for instance to Yackab b. Killis by the caliph al-Musicz in 368/979, but at this same time, compound dawls and other titles appear for the Fatimids' viziers, e.g. Amin al-Milla for Abo Muhammad b. 'Ammar, and for their commanders, governors and vassal princes, e.g. Sayf al-Dawla for the Zirid Yusuf Buluggin in 361/972, and similar titles for Yūsuf's successors Bādīs and al-Mufizz b. Bădis (see H. R. Idris, La Berbérie orientale sous les Zīrīdes Xe-XIIe siècles, Paris 1959, ii, 509; when al-Musizz in 433/104x transferred his allegiance to the 'Abbasids, the Fatimid caliph al-Mustansir awarded the lakeb of his former vassal, Sharal al-Dawla, to al-Musizz's kinsman, the Hammadid al-Kārid, who returned to the fatiniid allegiance); and Murtada 'I-Dawla for the Hamdanid commander Lu'hi's son Mansûr in Aleppo in 300/1008 (see M. Canard, Histoire de la dynastie des H'amdanides, i, 216). An individual feature of Fățimid titulature for their viziers was the use of compound titles in amir al-mu'minin, e.g. Şafl Amir al-Mu'minin wa-Khālişatuhu for Abu "l-Kāsim Ahmad al-Djardjarā", and Mustafa Amir al-Mu'minta for Aba Mangar Sadaka b. Yüsuf al-Fallahl, Very soon the tatulature of these Fatimid officials became remarkably luxuriant and pompons, heralding the later verbosity of Mamlûk titulature in Egypt; thus in 447/1050-t the vizier Abû Muḥammad al-Ḥasan al-Yāzūrī enjoyed the titles of al-Wazīr al-Adjall al-Awhad al-Makin, Sayyid al-Witzara' wa-Tadj al-Asfiya' wa-Kadî 'l-Kudat wa-Dasi 'l-Dusat, 'Alam al-Madid, Khâlisat Amir al-Mit'minin, to which were later added al-Nāşir li 9-Dīn, Ghiyāth al-Muslimīn, the ensemble denoting the wide extent of his powers. not merely as a vizier but also as chief kādī and chief đặci.

But in general, Fățimid procedure over the grant of honorities was on similar lines to that of the Abbäsids, as is attested by the texts of such awards. (called technically knub al-langit "documents conferring eulogy") quoted by al-Kalkashandī from the Mawadd al-bayan of the Fatimid author Ali b. Khalal (a work which was long believed lost, but which has recently turned up in Istanbul, -A. H. Saleh, in Arabica, xx [1973], 192-200, and IBN EMALAN IN Suppl.). Hore a sterotyped formula is set forth, in which the grant of titles is accompanied by other favours such = the gift of a standard, a sword and a fine mount (Subh al-acha, viii, 341). As in the Sunul world, the awarding of honorifics was often proclaimed urbi et orbi by the Fatimids in Cairo, either before the caliphal palece or from the mosque pulpit; thus al-Husayn b. Djawhar was in 390/1000 honoured by al-Hākim, receiving a robe of honour and having his newly-acquired title of Ka'ld al-Kuwwad "supreme commander" read out from the minbar (al-Makrizi, Khitat, ii, 15; see further on l'atimid titulature in general, Hasan al-Bāshā, al-Alkāb al-islāmiyya fi 'l-ta'rīķh wa 'lwathā'ik wa 'l-āthār, Cairo 1958, 65 fl., 92 fl.).

After the Saldjuk period, sc. after the 6th/12th century, the dominance of dist titles was firmly established, not only for rulers and their servants, but also, by what must have been unilateral adoption or else by the general consensus among religious groups, for outstanding spiritual leaders, Suff. shaykhs, etc., e.g. Nadim al-Din Kubrā, Muhyī 'i-Din Ibn al-Arabi, Djalāl al-Din Rūmī and Mu'in al-Din Čishti [q.em.]. In any case, by this time all pretence at the callph's being the sole dispenser of these honours had been abandoned. A consequence of this was that honorifies began to be adopted according to a method of rough conformity with a person's original ism. Al-Kalkashandi bas a passage on this custom in Subh al-a sha, v. 488-90, under the heading of Fi 'l-alkāb al-mujarra'a 'alā 'l-asmā', and the practise clearly dates back to early Mamlük times, if not before. Thus among the Turkish mamlüks, 'Alam al-Din went with the name Sandjar, Djamål al-Din with Ak Kugh, Husâm al-Din with Hasan or Husayn, 'Ala' al-Din with 'Ali, Tadi al-Din with Ibrahim, etc. Even eunuchs had their characteristic combinations of labab and ism, e.g. Shudia al-Din with Anbar, as had the Coptic officlass of the administration in Egypt, e.g. Takl 'I-Din with Wahba (cf. a similar list in al-Suyūți's

624 LAKAB

Risāla fi matrifat al-hulā wa 'l-kunā wa 'l-asmā' wa 'l-alkāb, ed. Şalāh al-Din al-Munadidiid, Une importante Risala de Suyaff, in MFOB, xiviii [2971-4]. 352-4, and also Hasan al-Basha, op. cit., 103-5). This type of usage was carried over into the Ottomen empire, especially emongst the 'ulama' and fukaha'. e.g. Badr al-Din with Mahmud, and the alreadymentioned couplings with Hasan - Husayn, All and Ibrāhīm; the alliterative effect often achieved was obviously a factor favouring the adoption of several of these (cf. F. Babinger, in Isl., xi [1923], 20 m. 3).

Whilst the 'Abbasid caliphate was still a living organism (i.e. till the Mongol sack of Baghd5d in 656/r258), the granting of honorific titles remained, at least in theory, a jealously-guarded privilege of the caliphs. Local rulers or provincial governors who maintained the "caliphal fiction" of Sunni constitutional theory, that all executive authority derived ultimately from the caliph, sedulously sought a grant of honorifies at the outset of their reigns of governorships; and titles expressing personal closeness or a special relationship to the caliph, such - Mawia Amir al-Mu'minte, Wall Amir al-Mu'minin and Kasim Amir al-Mu'minin, were especially sought after (early examples of the designation mawia amir at-mu'minin, say before the beginning of the 3rd/9th century, probably simply expressed a relationship of subordination and dependence, elientship or wold?, between the callph and its bearer, rather than being the grant of an official title; O. Grabur thinks that the attribution of this phrase to the governor of Egypt Ahmad b. Tülün [d.v.] in 265/878-0 still expressed dependence rather than a title of honour, cl. his The coinage of the Talenids, ANS Numismatic notes and monographs

no. 139, New York 1957, 39-40).

Recognition by the callph, involving an investiture charter (fand, manshur), plus the other insignia of power such as honorifies, a righly-caparisoned charger and banners, might give a contender for power in a disputed succession the edge over his opponent. In 421/1030 the Ghaznawid prince Mas'ad b. Mahmud hurried eastwards from western Persia to Afghanistan in order to confront his brother Muhammad, who had been proclaimed sultan by the army in Ghazna. At Nishapur he received from the caliph al-Kädir an investiture diploma for the Ghaznawid empire plus a strong of honorities, nu'di-i sulfani as Bayhald calls them, Nasir Din Allah, Hafiz "Ibad (or "L'bbad) Allah, al-Muntakhn min A'da' Aliah and Zahir Khalifat Aliah Amir al-Mu'minin. Mas'ad ordered that details of the award should proclaimed and publicised in the towns of Khurásan, and it proved to be a valuable propaganda weapon in his successful wresting of the sultanate from Muhammad later that year (Baybaki, cited in Bosworth, The titulature of the early Charnavids, 224.5, and idem, The Charnavids, their empire in Afghanistan and eastern Ivan 944-1040, Edinburgh 1963, 54).

Not surprisingly, the 'Abbands held on their privilege of granting these titles in the SunnI world for as long as possible. The caliph personally was the fount of honours, and the precise form in which they me granted had to be rigorously observed; the Mamiûk author Ibn Fadl Allâh al-Umarî [see PADL ALLAH] states, concerning the correct form of address used by kings for governors and lesser rulers. that there was m inflexible rule in ancient times "that no king was ever addressed except by the precise honorific granted to him from the caliphal

diwan, with addition or omissions", bi 'l-nass min ghaye siyada wala naks (al-Ta'rif bi 'l-mustalak al-sharif, Cairo 1312/1894-5, 86-7). Conversely, the unilateral and unauthorised assumption of alkāb by a person was an act of lise-majesti, a virtual declaration of rebelion against the callph or sovereign, as happened in Khurasan during the late 4th/10th century; the ambitious military commander of the Samanids, Abū 'Alī Sīmdiūrī, in 381/991 rose against his master Nub b. Mansur, appropriated all the revenues of Khurasan and styled himself (talakkaba) Amir al-Umara', al-Mu'ayyad min al-Sama' "the heavenly-guided supreme commander" ("Utbi-Manini, al-Ta'rith al-Yamini, Cairo 1286/1869, i, 155).

Since the granting of such titles and honours created status and prestige for the recipients, it was natural that the 'Abbasids, in the period of penury into which they had fallen by the early 4th/10th century, should expect a return for this services; during the Bûyid period in particular, when the calinhs were reduced to subsisting in strattened circumstances as pensioners of the Buyids, this sale of honours, normally in return for presents, became all the more vital for them. The grants seem to have become in time regulated by something like a fixed tariff. In Bayhakl's Ta'rikh-i Mas'adl. 293, there is an account of the detailed discussion at Masfud of Ghazna's court in 422/1031 about the presents to be sent to the new galiph al-Ka'im, from whom the sultan expected confirmation of his territories plus a grant of fresh alkáb and other insignia of royalty; much of this discussion revolved round what was the usual rasis or practice here. with the adducing of precendents from the Saffärid period.

Inevitably, voices were raised against the overlavish granting of honours and titles, with a consequent cheapening in their value. Already the poet and litterateur Abû Bakr Muhammad b. al-'Abbās al-Kh *arazmi (d. 383/993 or 393/1003 [9.1.]) had complained in a satire.

What do I care that the 'Abbāsids have thrown open the gates of kunā and alkāb?

They have conferred honorifies on a man whom their ancestors would not have made doorkeeper of their privy.

This caliph of ours has few dirhams in his hands, so he lavishes honorities m people.

(al-Tha'alibi, Yatimat al-dahr, Cairo 2375-7/1956-8, iv, 230; cf. Mez, Die Renaissance des Islams, 78-9, Eng. tr. 86-8). Hilál al-Şábi? (d. 448/1056) has a fong passage in his Kitāb al-Wuzurā', ed. 'Abd al-Sattar Faradi, Cairo 1958, 106 ff., lamenting the changes between the time of the viziers Ibn al-Furat and 'Ali b. 'Isa (the latter of whom had refused to increase the designation of a certain governor above the simple wish "May God exalt him"!, although threatened for his obduracy), and even between the time of the viziers of 'Adud al-Dawla and Şamşâm al-Dawla, and the position at the end of his own lifetime. His main gravamen is that social and functional differentiation becomes impossible when titles lose their real meaning, and his conclusion is that "Inevitably, official positions have declined in status where they have been reduced to one level in titulature), and have become cheapened when they have all been made equal. They no longer possess any glory which one can admire, nor any splendour to be prized. Indeed, I have heard our master the caliph al-Ka'im bi-amr Allah-may God prolong his reign!-says that there is no designation

left for a deserving person". Hill's contemporary al-Biruni likewise moralisingly observes that when the Abbäsids started rewarding their adherents with vain dawla titles, extending even to triple ones, their empire foundered: "In this way, the matter became utterly opposed to common sense and clumsy to the highest degree, so that he who mentions them gets tired before he has hardly begun, he who writes them loses his time and writing, and he who addresses [people] with them runs the risk of missing the time for prayer" (al-Athar al-bakiya, 132, tr. 129). By the end of the 5th/11th century, the process of debasement had gone even further in the Muslim East, and the Saldjük vizier Nigam al-Mulk complains volubly, in the section of his Siyasal-nama on titles (ch. xl, ed. H. Darke, Tehran 1340/1962, 189-200, tr. idem. The book of government = ritles for kings, London 1960, 152-63) that "There has arisen an abundance of titles, and whatever becomes abundant loses value and dignity", and that "In these days, the meanest official gets agry and indignant if he is given less than seven or ten titles". In particular, Nigam al-Mulk denounces the confounding of dawls titles, formerly reserved for military commanders and the Turks, with the mulk and other titles used by viziers, governors and other civilian and religious officials and dignituries, so that there results the absurdity of a Turkish general, illiterate, tyrannical and totally ignorant of the Shari'a, being given titles like Tadi al-Din "crown of the faith or Mu'in al-Din "succourer of the faith". He places the time when the floodgates were opened in the Saldjuk empire to the indiscriminate and incongruous granting of honorifies as being the years after Alp Arslan's death (sc. after 465)1072 and the accession of Malik Shah; these strictures on the trends of the latter sultan's reign must be regarded as from a later hand than Nizām al-Mulk's, perhaps from that of his copyist Muhammad Magh-

3. The Muslim West. Most of what has been said so far relates primarily to the central and eastern lands of Islam, sc. Egypt and the lands further east. The vogue for honorifies followed . rather different course in the Muslim West. In general, their use was less developed in the more puritanical West, where there was a tendency to regard elaborate and fancy names and titles as effete and Persianising phenomena. Hence the term alkib maskrikiyya is not infrequently used by Maghribl writers in disparaging references to thom, e.g. by al-Makkari and by the Maghribi traveller to Egypt and Syria just before the Ottoman conquest, 'Ali b. Maymun al-Idrisi. This last shows himself, in his opuscule Bayán zhurbat al-Islám bi-wāsifat şinfay al-mulafakkiha wa 'l-mulafakkira min abl Misr wa 'l-Sham wa-mā yalikā min bilād al-'Adjam (written in 916/1510, see Brockelmann, I 1, 152, S II, 153), = particularly severe against the habit of the religious scholars (the first of the two classes mentioned in the title of his work) of taking honorifies like Shams al-Din and Zayn al-Din, which he stig-matises as bid's "heretical" and shaytans "devilish", in preference to the plain good old sunni names Muhammad and 'Umar, and of insisting on the use of these honorifies in addressing them (see Godziher, All b. Mejmûn al-Magribl und sein Sittenspiegel des Ostlichen Islam, in ZDMG, xxviii [1874]. 306-10 = Gesammelte Schriften, vi, 14-18).

Already the Idrisid shart/s of Morocco, with their claims to 'Alid descent, had styled themselves imams, and the Khāridii Rustamids of Tāhart

utilised not only this last designation but those of "caliph" and amir al-mit mixin also; these powers, of course, rejected the legitimacy of 'Abbasid rule, whereas the Aghlabids of Ifrikiya, faithful in theory at least to the Baghdad connection, never took such liberties in matters of titulature. The rise of the Fățimid da'use în North Africa during the early years of the 4th/10th century nevertheless introduced fully to the Maghrib a titulature with messianic implications and one wholly opposed to the 'Abbasid moral and constitutional position (see above, Section II), and the new trend inevitably had repercussions in Muslim Spain. A dynasty like the Spanish Umayyads, which had to defend itself on the cultural and ideological planes against both the distant 'Abbasids | Haghdad and, more pressingly, against the aggressively Sh"i Fāţimids (on the propaganda offensive of the Fāţimids directed against the Spanish Umayyads and its effects, see M. Canard, I. imperialisme des Fatimides et lour propogande, in AIEO Alger, vi [1942-7], 162-9), could not but be influenced by the political and religious propaganda value of honorific titles. When the greatest sovereign of the family, 'Abd al-Rahman III, adopted after his victory at Bobastro over Ibn Halşûn in 315/927 the lakab of al-Naşir li-din Allah, together with the designations of "caliph" and "commander of the faithful", he thus placed himself firmly within what had now become the mainstream 'Abbasid tradition of theologicallyoriented caliphal titulature. His lesser successors studiously followed his example till the end of the dynasty in 422/1031, m that we find e.g. Hisham II al-Mu'ayyad, Sulayman al-Mustafin, etc., as did the Hammudids who alternated with the last fainéant Umayyads, e.g. al-Ķāsim al-Ma²mūn (see Lévi-Provençal, Hist. Esp. mus., i, 132-3, ii, 21, 215-16). The mulik al-jawa if who followed them during the period of the disorder and fragmentation in the middle decades of the 5th/11th century followed suit, with a disparity between the actual extent of their authority and the grandiloquence of their titles which attracted the satirical or ironic comment of contemporaries. Thus Ibn Khaldun in two places in his Prolegomena quotes verses of the panegyrist of the Zirids, Iba Rashik (q.v.),

What makes me feet humble in Andalus is the made of the names "Mu'taşim" and "Mu'taḍid" there. Royal epithets (alḥāb mamlaha) not in their proper place, like a cat that by puffing itself up imitates the lion.

(Mujaddima, ed. Quatremère, i, 281, 412, tr. Rosenthal, i, 316, 470, attributing the verses to Ibn Sharaf [q.v.]; al-Mu'tasim and al-Mu'tadid were honorifice adopted by princes of the Hammudids of Malaga and the 'Abbadids of Seville respectively). In matters of titulature, the Nasrids of Granada "demeurerent fidèles à la tradition orientale adoptée par les Umayyades de Cordoue, fondée sur l'autorité absolue du souverain et e caractère semi-seligieux" (R. Arjé) Like their contemporaries amongst the rulers of the Muslim West, they used the title of Amir al-Muslimin, known from Almoravid times (see below), although the Mamlük chancery in Egypt simply addressed them in official documents = Şākib Hamrā' Gharnāja, according to 1bn Nazir al-Diaysh, cited by al-Kalkashandi in Subh al-a'sha, vii, 413. Certain Nașrid rulers assumed, - Arié implies, alkāb of the usual theocratic pattern, such as the dynasty's founder, Muhammad I, called al-Ghālib bi'llāh, and on returning from successful expedition against Castlle, Muhammad V assumed that of al-Ghani

bi'llah (Arié, L'Espagne musulmane an temps des Nasrides (1232-1492), Paris 1973, 185-7).

Yet although the trends of the East filtered through to the liberian peninsula in considerable measure, the effect of these trends tended to operate at the highest level only, that of the monarchs themselves. The Spanish Muslim sovereigns much more careful over the bestowal of honorities to their servants, ministers and generals than were the eastern dynasts. Ibn Abl 'Amir of course assumed the title of al-Mansur [q.v.], for which his role in the state at the end of the 4th/roth century befitted him, on his return from the expedition against Leon in 371/981, and he was followed by his son 'Abd al-Malik, styled al-Muzaffar [q.v.]. Other isolated instances occured, such as the award by ai-Hakam II of the title Dhu 'l-Sayfayn in 363/974 to the general Ghalib on his victorious return from a campaign in the Maghrib, and the bestowal of the title Dhu 'l-Wizaratayn in 367/978 to both Ghalib and the Abi 'Amir, one borne previously only by the general charged with defence of the Spanish frontier against the Christians; and over three centuries later, the great vizier of the Nasrida, Ihn al-Khatib (q.v.), was to enjoy the alkab of Lisan al-Din and Dhu 'l-Witaratayn (see Lévi-Provençal, Hist. Esp. mus., ü, 194, 213, 215-16, 228-9).

North Africa remained faithful for a longer period to the puritanical ideals of an equalitarian, carlier form of Islam, in 🔤 disapproval of pompous titles, once the interlude of the rise of the Isma'in Fatimids was over and the domination of Maliki orthodoxy was re-established under the Almoravids. The Almoravids originally recognised 'Abbasid authority, but to mark the reality of their own power in North-West Africa adopted-whether of their own accord or with approval of Baghdad is unclear-the title of Amir al-Muslimin. Thus there was created, from the constitutional point of view, what van Berchem conveniently called a "sub-caliphate", whose rulers recognised an authority higher than their own and did not therefore adopt a titulature proclaiming their total independence and nonrecognition of any superior power. The Almohads, however, came to power in the middle years of the 6th/12th century on a wave of messianic enthusiasm and under a charismatic leader, the Mahdl Muhammad b. Tümart [see iax rümart], and took up again in some measure the pattern of titulature instituted in the Maghrib two centuries before by the Fatimids. During Ibn Tamart's lifetime, his lieutenant 'Abd al-Mu'min was styled the Mahdl's hhalifa and Amir al-Mu'minin, sc. of the Almohad faithful, and on Ibn Tümart's death, he became the imam of the community, with the title of al-K5'in bi-ame Allah; from the reign of Abû Yûsuf Ya'kûb al-Manster (580-95/1184-99) onwards, the Almohad sultans are found with honorities of the familiar theocratic pattern (see van Berchem, Titres calificus d'occident, à propos de quelques monnaies Mérinides et Ziyanides, in JA, Ser. 10, vol. lx [1907], 263-79, and the important section on the title Amir al-Mu'minin in Ibn Khaldun, Muhaddima, i, 408-14, tr. i. 465-72).

The patiern of titulature was in this way established for the sovereigns of the three successor-states in the Maghrib and Spain to the Almohads, so, the Nasrids (for whom see above), the Markids of Morocco and the Hafsids of Hrikiya. The Hafsids' eponymous ancestor and the Mahdl Ibn Tūmart's celebrated companion and partisan, Shaykh Abū Hafs 'Umar, and the Hafsids continued to use in

reference to themselves the term al-Muwahhidun "those who proclaim God's unity" (an assumption admitted by the secretaries of the Mainlik chancery in Cairo, who used the titles Zafin al Muwahhidin "chief of those proclaiming God's unity" and Kudwat al-Muwahhidiu "exemplar of those. . ." in adressing them, Subh al-a'iha, vi. 51, 65). The most significant factor in the pattern of Hafsid titulature, as it evolved in the 7th/13th century, was their claim to the caliphate, put forward by the second ruler of the dynasty, Abu 'Abd Allah Muhammad (647-75/ 1249-77) in 650/1253. This was buttressed firstly by the attempts of the family's apologists to impute to them a Kurashi descent from 'Umar b. al-Kirattab (whose kunya had been Abu Hafs), so that the suitans proudly termed themselves ibn al-ghulajd? al-umara' al-rashidin; and secondly by the recognition of the Sharif of Mecca and, briefly, of the Mamiûks of Egypt even, after the extinction of the 'Abbasid caliphate in Baghdad by the Mongols we before its revival in Cairo. Whence also the Hafsids' adoption of the characteristically calipbal designation of Amfr al-Muhninin (although their rivals, the Mamluks, would only allow them the "sub-caliphal" one of Amir al-Muslimin), and of theocratic alkab on the exact 'Abbasid pattern (al-Mustansir and al-Mutawakkil being especially favoured by various members of the dynasty), in order to demonstrate the genuine nature of their caliphal claims and the continuity of their titulature with the older 'Abbasid practice.

Looking forward to what will be said below about the Ayyubid and Mamfuk usage of such titles, we may also note that the Hafsids, deeply involved in struggles with Christian powers such as Spain and France, seeking a foothold in North Africa, assumed titles reflecting their roles as leaders in the holy war, such as al-Mudiahid I sabil Aliah "he who fights in God's way", and themselves to be addressed impersonally by titles of respect like al-Makam al-fali/al-affa and al-Hadra al-faliyya (the latter expression being used by the Bey of Tunis until the proclamation of the republic there - the equivalent of the European diplomatic forms "His Majesty", "Son Altesse", etc.). See on all these questions of Hafsid usage, von Berchem, Tures califiens d'occident, 283-93; R. Brunschvig, La Berberic orientale sous les Hafsides des origines à fin du XVI siècle, Paris 1940-7, i, 40, il, 7-17.

The Marhuds for long accepted the supremacy of the already-established Hassids, hence they (and also their neighbours of Tlemcen, the 'Abd al-Wadids or Zayyanids) normally used the lesser title of Amkr al-hiuslimin rather than the fully caliphal one of Amir al-Mu'minin; many of the Marinid sultans also bore theocratic-type alkab like the Halsids. But there were episodes when certain sultans did assume the higher title. Fin a short period of 9 month in 708/ 1308-9, Abu 'l-Rable Sulayman adopted it on the coins which he issued conjointly with his Nasrid ally Muhammad III, apparently as an act of defiance to the Hafsicls. Furthermore, Aba Inan Faris al-Mutawakkil (749-59/1348-59) seems to have employed the title as a lever to secure the deposition of his father 'Aif, who had already styled himself in his official documents Amir al-Mu'minin and Kā'id al-Muwaḥhidīn, Almohad titles par excellence fand also Bakiyyat al-Salaf al-Karim in allusion to the Berber Marinid's pretensions to an Arab genealogy). The mention in Ibn Khaldun, Mukaddima, i, 414, tr. i, 472, of the "Zanāta rulers", sc. the Marinids, using the title Amir al-Mu'minin must be a reference to this episode, though subsequent

LAKAB 627

sultans reverted to the lesser title Amir al-Muslimin. The whole question of this alternation of titles was examined in great detail by van Berchem in his Titles califiens d'occident, 245-335.

With the decline of the Marinids and their kinsmen the Wattasids, the Sardi Sharifs from southern Morocco rose to power in the early decades of the noth/roth century on a wave of Moroccan enthusiasm for the expulsion of Turkish Algerian influence and of renewed Islamic maraboutist fervour for djihad against the Portuguese encroachers on the Moroccan coastlands, he an atmosphere which we thus in on religious enthusiasm and popular messianic expectations of a new defender of the Muslims, it is not surprising that the first of these Sharlfs of the Sus, Muhammad (d. 924/1517-13) assumed the chiliastic titles of al-Mahdl and al-Kā'on bi-amr Allāh, remioiscent of Fatimid and then Almohad usage. Similarly religiously-motivated honorities were adopted by several of his successors, e.g. Muhammad al-Mutawakkil, Ahmad al-Mansiir, etc. One should also note the very characteristic forms of address used by both the Saidi sultans and their 'Alawi successors, those of Mawiay/Mūlāy "my master" and Sayyidi/ Sid! "my lord", as also by other high dignitaries, princely and religious, in the Maghrib. The form Mawlana "our master" had been used by the Nasrids during the 8th/14th century, and the Christians of Spain in the 9th/15th century often referred to the guler of Granada - Muley (Arié, L'Espagne musulmane au temps des Nasrides, 1871; whilst both Mawlana and Sayyiduna had been early used by the Hafsids in their official documents. The form with the first person singular pronoun affix, mawidyd > mūlāy apparently appeared amongs: the Ilaísids in the course of the 8th/14th century, but is only at first attested in Christian sources, e.g. the "Muley Bolabes" = Abu 'l-'Abbas Abmad II al-Mustansir of a Latin document of 1391 (cf. Brunschvig, Hafsides, ii, 15-16).

4. The post-caliphal period. With the strengtheming of the grip of Turkish and Kurdish dynasties over the central and eastern lands of Islam from the 5th/11th century onwards, regal, military and infuisterial titulature increased in complexity and grandiloquence. After the extinction of the Baghdad caliphate and the establishment by the Manilûks of a puppet line only of 'Abbasids in Cairo, the granting of titles became in practice the responsibility of the Mamlak chancery or Dirrin al-Ingha?, so that this office became the concentration-point of a great deal of expertise in these questions. In any case, the correct ordering and recounting of all the various components of the titles of rulers and dignitaries had always been vital in epistolary and other official usages. The various manuals for secretaries and officials, stretching back to Fatimid times but reaching their full florescence in a great documentproducing civilisation like that of the Mamlaks, devote much space to forms of address and titulature. In the most monumental of these manuals, al-Kalkashandi's Subh al-asha, the first bab of the third makála (v. 423-506, vi, 1-188, ef. W. Björkman, Beiträge zur Geschichte der Staatskanzlei im islamischen Agypten, Ramburg 1928, 110-13) I devoted to the topic of names of all kinds, but with special reference to alkab, which are traced from the origins of Islam to the author's own time, the 9th/15th century. Al-Kalkashandi has several lists of titles, e.g. of these which he calls "honorifies of more recent times", alhāb muddatha, such as nabb, sahi, mushrif, audjāhi, ustād al-dār, bunduķdār, damādār, amir al-ākķur, etc.—this last class of titles being descriptive of offices rather than alkdb in the true sense of honorifles — we have been discussing them.

Of greater interest for our present purpose are ai-Katkashandi's numerous pages on the protocol of correct address, when addressing the caliph or suitans downwards. Many delicate and subtle distinctions are stressed here: thus al-madilis alsâmijal-sâmiyy (with ya' mu<u>shaddada) in</u> a higher designation than al-madilis al-sami (with single ya'); ul-madilis al-kadā't is higher than al-madilis al-kādī, and al-modifis at-hadowt higher still (Subh at-a sha, vi, 141 ff.; cf. M. Gaudefroy-Demombynes, La Syrie à l'époque des Mamelouks d'après les auteurs arabes, Paris 1923, Introd. LXXXII fl.). Even heathen rulers and notables were not to be denied their honorifies, though these were naturally on a lower level than those accorded to Muslim equivalents: the Mainlük chancery had, of course, a sphere 📓 diplomatic contacts embracing many non-Muslim powers, from the Christian empire of Byzantium and the Latins of the Western Mediterranean to the still-pagen Turkish and Mongol rulers of Inner Asia. As an example, we might cite the titles used in addressing the Doge of Venice (Duk al-Bundukiyya): "al-Dük al-Djalil, al-Mukarram, al-Mubadidial, al-Muwakkar, al-Baṭal, al-Humām, al-Dirghām, al-Ghadantar, al-Khatic, Madid al-Milia al-Nașrâniyya, Fakhr al-'Îsawiyya, 'Îmâd Bani 'l-Ma'mūdiyya, Mufizz Pápá Rúmíyya, Şādik al-Mulük wa 'i-Salatin N.". If such titulature was used for infidels, the luxuriance of contemporary practice for Islamic addressees may be judged!

Only some of the sallent features of Ayyūbid and Mamlūk honorific titulature can be mentioned here; the existing documentation is so rich that a whole monograph could easily be written on the topic, and indeed, much of the material used by Hasan al-Bashā for his book derives from these two periods and from the Syrian and Egyptian milieux; such material from the Mamiūk period has further been used to good effect by Muhammad Bākir al-Husaynī in his study, basad in the first place of coin legends, al-Kunā wa 'l-shahī 'ald muḥūd al-Mamdūk al-Bahriyya ma 'l-Burdjiyya fī Miṣr wa 'l-Shahī, in al-Mawrid, lv/1 (1975), 53-204.

All the Ayyubid sultans, and following them the Mamilik ones, bore honorities of the al-Dunya no T-Din pattern-continuing here Saldjük practice -and these appear in Inscriptions and offical documents, although for less formal usage a shorter form in ai-Din only to have been current. Especially characteristic of the Ayyubids was the use of an honoritic composed of al-Maille plus a laudatory epithet (e.g. al-Malik al-Kamil, al-Malik al-Mufaszam) beginning with Salab al-Din's title of al-Malik al-Nasir bestowed on him by the Fatlmid caliph al-'Adkl when he appointed Salah al-Din as his vizier in succession to Shirkuh in 564/1169. Titles like these had been known in the Fatimid caliphate for mine, and al-Haffa's vizier Ridwan b. Walakshi had already in 531/1137 borne the titles of al-Sayyid al-Adjall al-Malik al-Afdal. The inscription on the ithan al-'Akaba to the south-east of Lake Tiberius by its founder, *122 al-Din Aybak, describes him as al-Maliki al-Mu'aşşami "connected with al-Malik al-Mu'aggam", so, with Sharaf al-Din "Isā b. al-Malik al-'Ādil Sayf al-Din, at that time (610/1213-14) governor of Damaseus for his father and not yet an autonomous Ayyübid prince; these titles were not therefore confined under the Ayyubids to reigning princes only (van Berchem, Eine arabische Inschrift aus dem Ostjordanhands, 89). From the Ayyūbids, titles of this type spread to the Mamlüks, and were used by the sultans, e.g. al-Malik al-Murizz for Aybak and al-Malik al-Kāhir and them al-Zāhir for Baybars. Such titles were also adopted unifaterally by presumptous, often rebellious, amirs and governors, e.g. that of al-Malik al-Mudjāhid assumed by 'Alam al-Din Sandjar al-Halabī after the murder of Kuṭuz in 658/1260, and the fashion spread to powers dependent upon or culturally influenced by the Ayyūbids and Mamiūks, such as the Rasūlids of Yemen, whose rulers, from al-Malik al-Manṣūr Nūr al-Dīn 'Umar onwards in 626/1229, all had honorifies of this type [see al-Bāṣhā, 498 ft.).

The titulature of the Mamiûk rulers and of their omirs was particularly complex. The title Sultan [q.v.], though certainly known in the Ayyabid period, had not been widely used by the Avyübid monarchs, but was now extensively adopted by the Mamiûk ones. Each of the sultans hore honorifies of the characteristic Ayyubid type compounded with al-Malik, as discussed above, and also titles in al-Dunya wa 'I-Din (see also above). But because of their military slave origin, the Mamilik sultans and amirs usually further bore special misbas relating to their ethnic or local origins, their early professional training or their affiliation to the household of their masters. Thus sultan Barkuk [q.v.] had the nisba of al-Yalbughawl because he had been the mamlik of the general Yalbugha al-'Umari, and Baybars [q.v.] that of al-Şâlihî from his original master, the Ayyûbid al-Malik al-Şâlih Nadim al-Dîn Ayyûb; the general Husam al-Din Özdemür was called al-Mudirl from the slave dealer who had sold him; and both the sultan Kalawan [q.v.] and the amir Shams al-Din Sonkur were called al-Alfi because they had been bought for 1,000 (alf) dinars. Although these names are in form technically nisbas, they were not regarded in any way derogatory, but were, rather, a source of pride to the holders and may in this wise be regarded as honorific titles.

One class of lakab borne by some early Mamfük sultans may be characterised "quasi-territorial" or "quasi-territorial" or "quasi-territorial" or "quasi-territorial" or "quasi-territorial" or "quasi-territorial" or "quasi-territorial" or "quasi-territorial" or "quasi-territorial" or "quasi-territorial" peoples. Already al-Malik al-Salib Nadjim al-Din Ayyüb had grandiloquently styled himself Shahriyür al-Salim Sultan al-Mash wa "l-'Adjam Sultan al-Haramayn al-Sharifayn Malik al-Barrayn wa "l-Bahrayn Malik al-Haramayn al-Sharifayn Malik al-Barrayn wa "l-'Adjam Sultan al-Masharik wa "l-'Magharib (RCEA, xi, no. 4308), and in certain inscriptions of the Mamfüks Baybars and Kalawan we find headship over al-'Arab wa "l-'Adjam extending to al-Turk and even al-Daylam (" the Mongols here?) (ibid., xiii, no. 4817, stc.).

A notable feature of the Manilok age was the strongly orthodox Sunni atmosphere, now that the very scat of the 'Abbäsid caliphate had been transferred to Cairo and the Mamilok rulers had become the principal defenders of Islam. This stress orthodoxy appears naturally in the Mamiloks' external policy, against such assailants of the Ddr al-Islâm as the Mongols and the Christian Franks and Armenians, and in their internal policy as repressions of Muslim sectaries like the Nuasyris and Ismā'ilis. Under the stimulus of an increased religiosity, both in official theological circles and in the sphere of popular religion and mysticism, the duty of gliddd was exalted. Whence the frequency

in Mamfük titulature of designations like al-Mudjähid,

al-Muthaghir, al-Murabit, al-Ghaif, al-Mughael, etc., though these had already appeared under the Saldjüks, the Atabegs and the later Fatimids as a reaction to the landings of the Frankish Crusaders (cf. al-Mudishid = a title of the Börid Atabeg Tughtigm in a Damascus inscription of 524/1130, RCEA, viii, 40. 3034, and also at title of 'Izz al-Din Aybak in the Khan al-'Akaba inscription, van Berchem, op. cit., 101-2). The proximity now of the seat of the caliphate and this atmosphere of religious exaltation and bellicosity probably gave an impetus also to the increased popularity of a type of lakab already well-known, that compounded with one of the titles of the caliph or sultan, and expressing close dependence on the supreme ruler, the enjoyment of his favour or support for him and the furtherance of the faith. Thus Salah al-Din, at the time of his recognition as ruler by the 'Abbasid caliph, adopted the title of Khalfl Amlr al-Mu'minin, and others of this type include Thikat Amir al-Muminin, Umdat al-Multik in 'l-Salatin, Nusrat al-Islam wa 7-Muslimin, etc. Those titles which included as one of their elements the caliphal title par excilence, Amir al-Mu'minin, were naturally the highest-regarded, and al-Kalkashandi arranges the different forms which this class of title took in a hierarchy of status. Kaslm Amir al-Mu'minin is the highest, and may only be borne by the sultan's sons or used in correspondence with certain neighbouring Muslim princes; 'Adud Amir al-Mu'minin is the highest title which can be used for the sultan's provincial governors; Wall Amlr al-Mu'minin can be used by high civil officials and by religious scholars, and ranks above Şafi/Şafwat Amir al-Mu'minin; and so forth (Subh al-a'sha, vi, 108-9).

The type of honorifies classified by al-Basha, op. cit., 83 ff., as "those indicating place and status" alkāb makāniyya, were used indications of reverence and humility in addressing or referring to the great. They had already been used in the heyday of the 'Abbasids, for in the vizierate of Ibn al-Furat there had arisen the practice of addressing the caliph indirectly as al-khidma, in effect, "the one to whom service is due", and Hilal al-Sabi? states that what had originally been just a formula of kurbs, ingratiation, soon became a sunna, compulsory practice (cf. Tyan, Institutions du droit public musulman. i. Le califat, 488). By the time of the later 'Abbasids, me find the caliphs regularly referred to in epistolary style (e.g. in such sources as Abū Shāma and the Kādī al-Fāḍil) by such circumlocutions as al-Dianib al-Sharif, al-Mawakif, al-Sharita, Maham al-Rahma, etc. The Büyid and Saldjük usage of al-Hadra (see above) is clearly a precursor of these expressions, although by the Mamlük period, al-Hadra had declined from being a form of address suitable for caliphs, in la al-Hadra al-Samiya, into being used in addressing civil officials, infidel foreign rulers and the Coptic Patriarch in Egypt, according to al-Kalkashandl, Subk al-a'sha, v, 498. These "honorifics indicating place or status" enjoyed a great expansion in Ayyubid and Mamlik times. That of al-Madilis spread under the former dynasty downwards from the sovereign to mill great mill of state, so that by al-Halkashandl's time it was regarded as essentially a title for the "men of the sword and the pen", but somewhat below al-Dianab. Honce towards the end of the Ayyūbid period, the ruler tended to adopt instead the forms al-Makam al-'Alī or al-Makam al-Ashraf. This usage was followed by the Mamiohs, that Ibn Shith, for instance, says in

629

his Ma'ālim al-hitāba that al-Makām and al-Makām the highest alkāb and are exclusively royal (tbid., vi, 495-6, where it is also stated that the reference in such titles is to the seat of the ruler's power or his capitall.

Van Bercheni's opinion was that the study of mediaeval Islamic honorifies was only of value for the study of administrative institutions, and that these titles only had historical significance in so far as they inked with specific offices--"lose Ehrentitel haben so gut wie keinen Werth" (op. cit., 105). As already noted above, Kramers combatted this negative view, suggesting that the nature of these honorifies reflected the religious and cultural atmosphere of their time, e.g. that the later predominance of din titles over dawla ones coincided with the Sunni reaction against political ShIsism and against external Christian pressure. Whether certain din honorilies did owe their popularity in the Iranian world to the fact that they resembled traditional names, e.g. Farid al-Din and Faridun/Afridun, Bahā' al-Din and Behdin, and Kiyam al-Din and Kamdan (Les noms musulmans composés avec Din, 63-5), seems impossible to prove or disprove.

of honorities continued in the great empires of later mediaeval Islam, so, those of the Indo-Muslim sultans, the Safawids and the Ottomans, almost down to modern times.

The titulature of the first Muslim dynastics to be permanently established in the northern Indian plain, the Slave Kings of Dihlt and their successors, inevitably followed grosso modo the pattern set by their original master, the Afghin Ghūrids [q.v.], who had in their turn continued in the ways established by the power which they had overthrown in the later 6th/12th century, the Ghaznawids (for Ghaznawid titulature, see above, 5, and for that of the Ghūrids, the information given in the Tahahāt-i Nāṣirī of Minhādi-i Sirādj Djūzdjānī (q.c.), who is always careful to detail the titles of his Ghūrid forebears, as also those of the Dihlt sultans contemporary with him).

The Slave Kings, essentially the Turkish military commanders of the Gharid sultan Shihab al-Dia or Mufizz al-Din Muhammad (d. 604/1206 [see GHORIDS]), followed their old masters in favouring on the whole alkab in dis, whence Kuth al-Din Aybak, Shams al-Din [ltutmush [q.vv.], etc. However, as both Djuzdjanes information and the contemporary inscriptions show, there were many variants and elaborations. Thus Avbak appears in an inscription of the Kuwwat al-Islâm mosque in Dihli as Kuth al-Dawla wa 'l-Din, Amir al-Umara', whilst Diuzdjani gives Iltutmush's lakob in full as Shams al-Dunya wa 'l-Din, Basking in the glory of their extensive military conquests, various sovereigns of this period conceived of themselves as following in the footsteps of Alexander the Great. Already the Gharid Musizz al-Din Muhammad is described on the Kuth Minar (q.v.) as Iskandar al-Thani, a title imitated e.g. by 'Ala' al-Din Muhammad Shah Khalgji of Dibli (695-715/1296-1316) on his coins, with such variants as Iskandar al-Zaman "the Alexander of the age". The geographical and ethnic extent of the empire ruled by these Turkish commanders is indicated by litutmush's adopting later in his reign (in an inscription of the Hansi mosque) the title Mawla Muluk al-Turk wa 'l-'Adjam, whereas previously he had styled himself (on the Kuth Minar) by the conventional, but by then obsolete title for an eastern Islamic potentate of Mawia Muiuk al-'Arab wa 'l-'Adjam. Like other Turkish ruling dynasties of the East, being newcomers into the Islamic society and polity and yet uncertain of their place within these last, the Indo-Muslim rulers sought to validate their rule by expressing their loyalty to the 'Abbasid caliphs (who were of course after 659/1261 puppers under the control of the Egyptian Mamlüks). Iltutmush, in the last decades of the independent 'Abbasids of Baghdad, usualiy styled himself Nașir 🖿 Nășir Amir al-Mu'minin, but in one instance at least, Kasim Amir al-Mu^aminin, the title favoured by the Ghurids to demonstrate their fidelity to Baghdad. Later in the century, Ghiyath al-Din Balban (664-86/1266-87 [g.n. in Suppl.]) followed the same tradition when he styled himself Yamin Khalifat Allāb as well as Nāṣir Amīr al-Mu²minīn. See J. Horovitz, The inscriptions of Muhammad ibn Sam, Quibuddin Aibeg and Illutmish, in Epigraphia Indo-Moslemica, 1911-12, 12-34; G. Yazdani, The inscriptions of the Turk Sulfans of Delhi-Mulium-ddin Bahram, Alau-d-din Mas-ad, Nasteu-d-din Mohmud, Ghiyathu d-din Balban and Mu'irm-d-din Kaiqubad, in ibid., 1913-14, 13-46; Z. A. Desal, The inscriptions of the Mamlik Sultans of Delki, in Epigraphica Indica, Arabic and Persian Supplement, 1966, 1-18.

The Turco-Mongol successors of these first Turkish and Aighan Indo-Muslim rulers, the Mughals, brought to India Timurid traditions in using the grant of titles and other marks of honour to strengthon the loyalty of their own Turkish commanders and to win over other groups, such as the great Afghan chiefs. Bâbur mentions that, in India, permanent designations (muharrari hhildblar) were given to highly-favoured amirs, such as A'zam Humāyūn, Khan-i Djahan and Khan-i Khanas (Babur-nama, tr. Beveridge, 537). Bábur's son Humáyün followed a careful policy in the award of titles appropriate to services rendered or expected; thus the supreme distinction of Amfr at-Umara' was bestowed on Amír Hiudû Beg, an old commander of Bābur's who had fought at Panipat [g.r.] in 932/1526 and who was, moreover, allowed the signal honour of sitting with the emperor in formal court sessions. Under Babur's immediate predecessors in India, the Lodls, the titles of nobility had been (in ascending order) Malik, Amir and Khān, In the course of the zoth/t6th century, the title of Malik fell out of fashion and that of Beg, one of prestige under the first two Mughal rulers, subsequently declined in favour of Khan, so that under Akbar, Beglar Begi was a lower title than that of Khān-i Khānān. This fast was the highest title of all, held e.g. by the young Akbar's atalih or guardian Bayram Khan (d. 968/256: [q.v.]), together with that of Amir al-Umara'. Other titles tended to be associated with specific affairs or functions; thus that of Aşaf Khān was mostly conferred on civil officials acting as tensir or as makil of the royal household, hence mainly on Persians; whilst Akbar conferred the Hindu title of radia not only on the hereditary successors to princely power but also on faithful Indian servants like the master-gunner Sabbahan. See Radhey Shyam, Honours, marks and titles under the Great Mughals (Babur and Humayun), in IC, xivi (1972), 101-17, and idem, Honours, ranks and titles under the Great Mughais (Akbar), in ibid. xivit (1973), 335-53.

As the political and military power of the Mughab shrank in the post-Awrangzlb period, the conferring of titles became more and widespread by the emperors and by provincial Muslim dynasties, so that their social value declined; hence today, old titles like Mirzh, <u>Kh</u>ån and Beg have in the modern subcontinent become nothing more than the equivalents of western surnames.

In Safawid Persia, one notes first of all, in connection with the strongly Shiff basis of the state and the theocratic nature of the early Shah's authority, a fondness for names and titles expressing devotion to or dependence upon either some venerated figure of Shl'ism, such as 'All or his sons al-Hasan and al-Husayn, or upon the sovereign himself, considered as the victor on earth of God or the Imams. In pre-Safawid times, there had occasionally been used by rulers in Persia names compounded with the Persian word banda "slave, devotee", e.g. the Mongol II-Khānid Muhammad Khudābanda Öldjeytü (the lakab being assumed when Öldleytű became a Muslim: his pro-Shl'i sympathies should perhaps be noted here). Under the Turkmen Safawids, the equivalent Turkish word kul was commonly used, in 'All-Kull, Imam-Kull, Tahmasp-Kull, Saft-Kull, etc., especially in regard military commanders and governors, although the Shahs themsolves retained simple regnal names. The usage of these titles in kul was imitated in Muslim India by certain of the South Indian sultans who were Shift in faith and strongly under Safawid cultural influence, e.g. the ruler of the Kuth-Shabis [q.r.] in Golkonda, Muhammad-Kuli b. Ibrahim (988-1020/1580-1612).

Whilst the Shahs themselves remained modest over the use of personal alhão, their subordinates enjoyed a rich titulature. It is under the early Şafawids, apparently towards the end of Shah Tahmasp I'a reign co. 976/1568-9, that the characteristic Safawid title for the sensie, that of I'timad al-Dawla [q.v.] "trusty support of the state" appeara; this title is much distorted in the travel accounts of contemporary western visitors to Persia, e.g. the "Athemadeulat" of Du Mans and the "Etmadowlett prime minister" of John Bell. The tate Safawid administrative manual Tadhkirat al-mulith (ca. 1137/1725) gives detailed information on this latter official and on the other important figure of the Kurdl-Bashl [see genet] (who was, in early Safawid times, before the establishment of a regular, standing army, virtually the commander-in-chief, with the title of Amir al-Utnara"), here called the Rukn al-Saltana al-Kählra, and on a host of lesser officials. The top fourteen officials of the administration had the title of 'dil-didh "exalted in rank", and there were groups of officials with the title of mukarrab al-hhdhan "confident of the supreme ruler" because of their special closeness to the throne, and with that of mukarrab at-hadra "confident of the royal presence". The first group included the head of the palace eunuchs, the royal physician (hakim-baski), the court astrologer (munadidjim-bash), the controller of assay (mu'ayyir al-mandlik), the state secretary, who drew the royal jughra [q.v.] (munshi 'l-mamalik), the keeper of the seal (muhr-dar) and the keeper of the ink-holder (dawat-dar). The second group, somewhat lower in status, included senior harem attendants, aides-de-camp (yasáwulán), the heads of various departments of the royal household and workshops (buyütät), including the master of the mint (darrābi-baskl), etc. (Tadkkirat al-mulūk, If. 8b, 12b, 302-552, tr. Minorsky, 44, 46, 55-69]. Under the Kädjärs, the title of I timad al-Dawls

Under the Kädjärs, the title of I'timad al-Dawls for the wasir declined in currency, being replaced by that familiar in Ottoman usage also (see below), Sadr-i A'sam. There was also a great expansion of

honorifies in dawle, memleke, salfane, etc. for the numerous princes of the Kadiar family and for other great officials, a process which the Amir Kabir [q.v. in Suppl.] endeavoured in the mid-roth century years to check, but one which continued with little abatement me the end of the Kadiars in 1925. This rich array of titulature, with by now elaborate forms of address extending down the social scale as low as mere village beadmen, inevitably came under fire from the reforming Rida Shah Pahlawi, Muhammad Rida had indeed already in the Fifth Madilis, as Sardar Sipah and before he had overthrown the Kādjārs, abolished the honorific titles which had been sold for the personal enrichment of the Shah and court officials, even though this act had been an infringement of the monarch's prerogative. On · August 1935 there was issued a decree on the abolition of titles and on the terminology of social Intercourse. The royal family was receive new titles, with the Shah himself to be Asla-vi Hadrat-i Humayun Shahanshahi; high officials were to be addressed just as djandb, and the old titles of amir, beg, khán, mírzá, etc. were to be abolished. In fact, although these reforms were honoured in the press and in public announcements, the | titles continued very much in common and spoken usage (see P. Avery, Modern Iran, Loudon 1965, 267, 273; D. N. Wilber, Risa Shah Pahlavi: the resurrection and reconstruction of Iran, Hicksville 1975, 167, 171). When western-type surnames were introduced, some people turned the old alkab which went back to Kādiār days into family names, e.g. in the cases of Dr. Muhammad Musaddik, Prime Minister 2957-3. formerly Musaddik ai-Saltana, and his contemporary the statesman and former Prime Minister in 1921 Abmed Kawam, formorly Kawam al-Saltana.

A centralised and bureaucratic institution like the Ottoman empire, with from the late 8th/14th century onwards extensive diplomatic contacts, firstly with the Muslim beyliks of Anatolia and the Turkmen powers of the East, and then with the Christian states of the West, increasingly affected by Ottoman expansionism, evolved a complex and elaborate chancery procedure in which the careful recounting of honorific titles played a vital role. The immense bulk of surviving Ottoman diplomatic and administrative documents would make feasible a highly detailed study of this titulature, a task which remains however to be done. For the moment, it may moted that Feridua Beg devotes the opening pages of his great collection. of correspondence to an exposition of the alkab of the various classes of addressee, from 📰 sultan at the top down to civil all military officials and members of the religious institution within the empire, and also of the alkab to be used in communicating with dependent rulers such as those of the Trans-Danubian principalities and with foreign potentates like the Doges of Venice (Munthe at abschiffn, Istanbul 1274/1857, i, 2-13). Also, L. Fekete devoted a section of his Einführung in die Osmanisch-Türkische Diplomatik der Türkischen Botmässigkeit in Ungarn, Budapest 1926, pp. XXXII-XXXVI, an exposition of honorifies a found in administrative and diplomatic documents of the toth/16th and 11th/17th centuries concerning relations between the Porte and local officials in Hungary or between the sullans and the Christian monarchs in adjoining lands. The luxuriance of the titulature of, for instance, Suleyman the Magnificent is in a letter of this sultan from 972/ 1565, where in the intifulatio of the document Stiteyman describes himself as Sultan-i Salāţin-i Shark wa Gharb, Sābib-Kirān-i Mamālik-i Rūm wa ⁶Adiam wa ⁶Arab, Kahraman-i Kawa wa Makau, Nartman-i Maydan-i Zamin wa Zaman, Ak Deñizia wa Kara Denizio wa Kasba-yi Musagama wa Madina-yl Munawwacanth wa Kuds-i Sharlift wa Takht-I Misr Nadira-yi Asrih wa Wilayet-i Yaman wa 'Adan wa San'a'nin wa Dar al-Sadad Baghdad wa Başı wa Labsanlı wa Mada'ın Anushin-Rawanlı wa Diyar-i Diaza'ir wa Adhathaydiania wa Dasht-i Kindak wa Diyar-i Tatarin wa Kurdistan wa Luristănlă wa Kulliyy Rûm lii wa Anațăli wa Karaman wa Aflăk wa Bughdân 🚥 Augarûs memleketleriniñ wa bunlardan ghayri nice mamalik 🗪 diyar sazim al-iftibarin Padishabi wa Sultani Sultan Suleyman Khān b. Sultān Selim Khān (roid., p. XXXII).

The honorifies of the sultan's subordinates were naturally less florid, but considerable care was taken to differentiate nicoties of rank, so that a badi with a stipend of less than 130 akirs was addressed as Kudwat al-Kudāt al-Islām [sie], Umdat Wulāt al-Anam, whereas a kadi of 150 ables or more could add to the above titles that of Mumayyiz al-Halal fan al-Hardm (ibid., p. XXXIV). The grand vizier was from the time of Sülcyman onwards awarded the designation of Sadr-I Ataam "most illustrious of the high dignitaries", and this title remained in use all through the Ottoman sultanate's existence, surviving the reforms in the bureaucracy of the Tangimāt [q.v.], the last Şadr-i A'zams being Dāmād Ferid Pasha [q.e.] (till October 1920) and his successor Ahmed Tewfik Pasha (till November 1922) who served Mebemmed VI Wahld al-Din. The vizier had several other epithets of distinction, such as samt, asaft and fall, and he was entitled to the same form of address as the Khedives of Egypt in the roth century, devoletli fekkâmetli (see further SAUR-I AZAMI.

It was during the Tantimat period of the mid-19th century that some attempt was first made at rationalising and restricting the unchecked growth of titulature, as part of the institutionalisation on western lines of the old Ottoman bureacracy. It seems that the traditional titles were now bureaucratised. Thus Redhouse in his Turkish and English lexicion, s.v. boy (375a), has "5. The title given [to] the sons of Pashas, and of a few of the highest civil functionaries, to military and naval officers of the rank of colonel or lieutenant colonel, and popularly, to any persons of wealth, or supposed distinction"; s.v. pasko (434x) he has an explanation of the modern military and naval positions, of general officer and flag rank, entitled to use this designation; and s.v. vesis (2136a) he has the definition "a civil state functionary of the highest rank, with the title of pasha", Hence in the biography of Fu'ad Pasha [q.v.] given in Ibnülemin Mahmud Kemal Inan's Osmanla devrinde son sadriazamkar . Istanbul 1969, i, 159, he is referred to merely as Efendi a all official documents until he achieved the rank of vizier in Shaban 1271/May 1955 and thereby acquired the title of Pasha. See for this period, S. Kekule, Über Titel, Amter, Rangstufen und Anreden in der offiziellen osmanischen Sprache, Halle 1892, and the entries in M. Z. Pakalın's Tarih devimleri ve terimleri sözlüğü, İstanbul 1946, s.v. sihâb-ı resmiye, ruthe, mulhiye, terir, etc.

It seems that these bureaucratic gradations in titulature introduced under the Tanzimal continued under the Young Turk regime in the early 20th century, but, in the parallel case of Persia under Rida Shāh Pahlawi, Kemal Atatürk's secularising

and reforming policies did not allow these titles to continue in official and public usage. According to the Law no. 2590 of 26 November 1934 "Concerning the abolition of appellations (ldkap) and titles (times) such as Efendi, Bey and Pasha", these modes of address were swept away, and religious titles such as Hacı, Hafız and Molla were also banned (Kazim Öztürk, Son degiçiklikleriyle gerekçeli anayasa *, Ankara 1975, 306; Bülent Daver, Türkiye cumhuriyetinde Myiklik, Ankara 1955, 175). Instead of Bey and Hamm, Bay and Bayan were introduced for "Mr" and "Mrs". But in In Persia, old conventions and speech habits die hard, and in popular speech, the old title survive: Paga for generals, whether active or retired; Elendi for artisans and non-Muslims; Ustad for craftsmen, artists, etc.; Hoca for teachers, secular and religious; and in forth (cf. G. Lawis, Turkey 2, London 1965, 110-11).

(C. E. Bosworth)

LAKANT, the name of two places in al-Audalus. The first, which has now disappeared, was situated some 60 km, to the south of Márida [q.r.] in the district where in Fuente de Cantos is at present to be found, on or near # the road connecting Mérida with Seville and followed by Musa b. Nusave, and on the left bank of the Guadiana (see F. Hernandez Jiménez, Ragiedt y el itinerario de Missã, de Algeeiras a Mérida, in al-And., xxvl [1961], 106-13, and La kara de Mérida en el siglo X. in ibid., xxv (1960), 320, 361, 368). Yāķāt (iv. 363) speaks of two fortresses dependent on Mérida, Lakant al-Kubra and Lakant al-Sughra, but this seems highly improbable, for might more feasibly conclude that al-kubrá refers to the place mentioned above or the alternative, and that al-sughrd corresponds to Alicante (or the alternative) on the Mediterranean coast to the south of Daniya [q.v.] oc Denia

Alicante, classical Lucentum, formed part of the kura of Tudmir [q.v.]. It was one of the six towns included in the pact with Theodomir, on the journey from Orihuela to Elche, six miles from the fatter according to al-'Udhrl. Al-Idrisi (Maghrib, text 193, tr. 235), copied by al-Himyarl (al-Rawd al-mi far, text 170, tr. 205), says that there was here a little town (madina saghira) which was fairly prosperous, with a market, a great mosque and a minbar. The earth produced in abundance fruits and vegetables. figs and grapes, and the town was a port for shipping esparto to the Mediterranean lands, and a centre for the construction of shipping for commercial purposes and for fishing. It had a kasaba wellgarrisoned with troops, on the summit of a mountain. Benacantil, which was difficult of access. At the time of Muhammad I, it seems m have become m anchorage used by the seafarers of Pechina. In 315/928, the ford of Callosa de Ensarriá (Kalyusha) and of Alicante and its strongholds. Muhammad b. 'Abd al-Rahman al-Shaykh al-Aslami, was subdued. In the 5th/11th century, Alicante became part of the la2ifa of Donia, whose fortunes it followed. After the Almoravids had passed by there, it within the possessions of Ahmad b. Hild Sayl al-Dawla and was governed by Iba Tyad. Subsequently, it fell under the domination of Ibn Mardanish [q.v.] and of the Almohads, After having recognised for some period of time Iba Hud's authority, and having known several confused years, whose history deserves to be studied more thoroughly, it passed under the control of James I of Aragon, on condition that the local Muslims might retain their lands.

LAKHM, an Arab tribe, especially influential in the pre-Islamic period. With the exception of the Lakhmid family [see LARMINDS] in Trāk, so frequently celebrated in the old Arab poetry, the pre-Islamic history of this family is not well-known and is full of legend. According to the traditional genealogy, Lakhm was of Yemenl origin and was the brother of Djudhām and 'Amila [q.ev.]. Yemenlis and Ma'addls claimed descent from the powerful

Lakhmid dynasty of Trak.

Of the three sister-tribes, Lakhm was undoubtedly the most illustrious and the oldest also. Legend connects it with the descendants of Abraham. A Lakhmid is said to have taken Joseph out of the well into which his brothers had thrown him. But by the eve of the hidira, the vigour of the Lakhm had been sapped, while the 'Amila and notably the Dindham, who under the Umayyads played = leading part, had increased in importance. Two centuries before the hidira, the surplus Lakhmid population had spread over the lands in the north of the peninsula in Syria and Palestine and in 'Irak where they established the Lakhmid phylarchate of al-Hira [q.v., and also plannina], continually at war with the Chassanids of Syria. In Syria we **1** the Lakhm settled in mi districts as the Djudham. Like the latter, they adopted Christianity, which also become latterly the official religion of the Lakhmids of al-Hira.

However, the al-Namara inscription, dated A.D. 328, has thrown much light on the history of Lakhm. It fully explains the presence of Lakhm or part of it in Syria after it emigrated from Trak with its king, Imru' al-Kays, who went over to the Romans. It was after its emigration to Roman Syria that Lakhm became associated with the "sister-tribes", Diudham and 'Amila, and so the geneaology that related the three tribes to one another as descended from one ancestor is fictitious, and is morely the reflection of geographical and political conditions that obtained after the emigration of Lakhm to Roman territory and its settlement in the southern part of Syria, not far from where these two tribes had settled. The separation of Lakhm from the two "aister-tribes" genealogically tips the scales against Lakhm's being a non-Yemeni or South Arabian tribe and suggests Mesopotamian origin. The re-appearance of the tribe in 'Irak, and what is more, in al-Hira, after a long interregnum may be explained by the possible return of part of it to 'Irak after its disappointments with the Romans, or by the fact that part of Lakhm had not accompanied its king Imrû' al-Kays when he went over to the Romans but had stayed in al-Hira.

When Islam appeared, the Diudham had practically absorbed their relatives, the Lakhm of Syria, a peaceful absorption by mutal agreement. In the 1st century A.H. the two tribes were usually named together in forming one group, and even when reference is made to a "chief of Lakhm", we hardly be wrong in thinking that he also ruled the Djudhām. The sishe "Lakhmf" becomes rare in comparison with "Dludhaml." In the wars of Islam, during the conquest of Syria, at the Yarmok, at Siffla, and later in the course of the campaigns under Yazīd I against the sacred cities of the Hidiaz, the two tribes fought under the same chiefs and under the same banner. "Lakhmi" became practically reduced to little more than a title of honour. Its archaic flavour, the glorious memories which it recalled of the phylarchs of 'irak, was socially impressive, but the tribe of Lakhni no longer had separate existence from the Djudham. When in the lands to the west of the Euphrates, we find them mentioned alone, the maine must be taken to mean the Djudham, and it is the latter that the chroniclers asually have in mind.

Only a last echo of the aristocratic connectation of the name "Lakhmi" is seen in the claim of the "Abbādids [q.v.], mulāh ai-ļamā'if in al-Andalus during the 5th/11th century, to be of Lakhmid

stock.

LAKHMIDS, \blacksquare pre-Islamic Arab dynasty of Trak that made al-Hira [q,v,] its capital and ruled it for some three centuries from ca, 300 A.D. to ca, 500 A.D. Strictly speaking, the dynasty should be called the Nasrids after their eponym, Nasr, Lakhni [q,v,] being the tribe to which they belonged. As semi-independent kings and as chents of the Sāsānids, the Lakhmids were the dominant force \blacksquare the political, military, and cultural history of the Arabs during these three centuries before the rise of Islam.

z. History. The founder of the dynasty, whose florus may be assigned to the last quarter of the

3rd century, was 'Amr b. 'Adl, the nephow of the Tanükhid king Dadhlma [q.v.]. It was be who made at-Hira the Lakhmid capital, whence he conquered far and wide in the Arabian Poninsula and, according to the Arabic tradition, warred successfully against Queen Zenobia of Palmyra. He appears as the protector of Manichacism after it was outlawed in Persia. He was succeeded by his son, Impu' al-Nays, described in the famous al-Namara inscription as "king of all the Arabs". He, too, was a warrior king who after conquests in Arabia went over to the Romans, died in A.D. 328, and was buried at al-Namara in the province of Arabia. The defection of Imru' al-Kays to the Romans resulted in the first interregnum in the history of the Lakhmids. The sources speak of a certain Aws b. Kallam in the sixties of the 4th century, and he is given various tribal affiliations, but it almost certain that the interregnum began long before the sixties and that the Ghassanids played an important role in the affairs of al-Hira, now that more light has been shed on their early history. Certainty cannot be predicated of the and reigns of the Lakhmid kings assigned by the Arabic tradition to this obscure period in their history, we the 4th century.

The 5th century is much better documented in the Greek and Syriac sources as well as the Arabic ones, which yield imporant data on three Lakhmid kings. The first is al-Nulman, nicknamed al-Alwar ("the one-eyed"), and also al-Sa'ib ("the wanderer"); according to the Arabic tradition he carned the latter for his having renounced the world. This is not Improbable, since he is known to have visited the Syrian saint, Simeon, between 413 and 420. His name is associated with the building of the famous palace, al-Khawarnak [q.e.], and with the two divisions in the Lakhmid army known as al-Shahba' and al-Dawsar. He was succeeded by his al-Mundhir, who is said to have reigned forty-four years, possibly 418-52. He took part in the Byzantine-Persian war of 422-2 and played an even more important rule in the internal affairs of Persia by his support of Bahram Gar for the throne. Little is known about the Lakhmid kings that followed him, al-Aswad and al-Munghir II, but much is known about the warrior-king al-Nu^smän II. He took part in the Byzantine-Persian war of the period. In 498 he was besten by the Byzantine commander Eugenius at Bithrapsos; in 502 he advanced against Harran, where he was first beaten by the Romans and then triumphed over them, but shortly after died of a battle-wound in the vicinity of Circesium. A second short interregnum takes place in this period, or 500, associated with a certain Abû Vs fur.

Of the three centuries of Lakhmid rule in al-Hira, the last is the best documented and the most important. It is dominated by al-Munghir III, who reigned for a half-century, 503-54. Firstly, during his reign the Arabian Peninsula witnessed a reassertion of Persian power and al-Mundhir made his presence felt in it, both as an Arab king and as the vassal of Khusraw Anûshirvan, who entrusted him with the entire Persian sphere of influence in Arabia. He warred continually with the South Arabian kings; ca. 520 he received an embassy from the South Arabian king, Yusuf Dhu Nuwas [q.p.] and ca. 540 he sent one to the new ruler of South Arabia, the Ethiopian Abraha [q.r.]. During his reign, probably in the twenties, took place a third interregnum, that of al-Harith of Kinda [q.v.]. Secondly, throughout the Byzantine-Persian conflict he was the spearhead of raids and expeditions against the

border provinces, especially in the twenties; — 520 he attained international fame when he received an ombassy from the Byzantine emperor Justin; in 531 he conceived and in part executed the Persian campaign which ended in — great victory against Byzantium at Callinioum on the Euphrates; in 539 he engaged in a dispute with the Ghassanid al-Harith, which — one of the — for the cutbreak of the Byzantine-Parsian war of 539-44; in the forties he continued to war with the Ghassanids, but in 554 he was killed in an engagement with al-Härith near Kinnasrin, probably the Yawm al-Hiyar of the Arabic tradition.

He was succeeded by his son (Amr (554-69) whose mother was Hind, the Kindl princess and daughter of the same al-Harith who ruled al-Hira during the Kinda interregnum in the twenties, and it is by his matronymic, son of Hind, that 'Amr, the son of the most famous of all the Lakhmid kings, is known to the Arabic sources. The Lakhmids and their adversaries, the Ghassanids, are mentioned in the treaty of 561 between Persia and Byzantium; according to an of its clauses, both were expressly forbidden from waging wars against each other which would involve the two world powers, and yet 'Amr continued to make raids against the Byzantine frontier in the sixties as did his brother Kābūs, who appears associated with him as his general. In 569 'Amr died a violent death, killed by the poet 'Anir b, Kulthum [q.v.] and was succeeded by his brother Kābūs, who reigned for some four years (560-73). It was during his reign that the Ghassanid al-Mundhir scored, ca. 570, wistory in Lakhmid territory not far from al-Hira itself, probably the battle of Ayn Ubagh, but it was also in the same reign that the Persian occupation of South Arabia took place in 172; this turned the tide against Byzantium, and resolved in favour of Persia what might be termed the struggle for Acabia.

The short period that intervened between the death of Kābūs in 573 and the accession of the last Lukhmid klug in 580 was punctuated by two interregna; that of the Porsian Subrāb may be assigned to 573-4, while the other, during which most probably ruled Kabīṣa, an Arab from the tribe of Tayyi², lasted for a few months in 580, before the accession of al-Numān. Between the two interregna there ruled the unpopular al-Mundhir IV, during whose roign his namesake, the Ghassānid al-Mundhir, scored a decisive victory over the Lakhmid, this time capturing al-Hīra itself, rs. 578, and setting it afire.

The last Lakhmid king was al-Nu^emān, the son of al-Munghir IV, who ruled for some twenty years (580-602). He is the Lakhmid best known to the Islamic Arubs and the post-Islamic Arabic sources through the panegyries of al-Nabigha al-Dhubyani (q.v.) and through his relations with 'Adi b. Zayd (q.u.). Unlike the reign of al-Mundhir III, his is not memorable for its international relations but for those with the Arabs of the Peninsula and with his Sāsānid overlords. In his Peninsular wars he was unfortunate in a battle (the Yawm Tikhia or Takhfa) with Diarbas, a subdivision of Tamim. His relations with the Sasanids varied. Hormuzd gave him a splendid crown, while Khusraw Parvis fell out with him, possibly because he me intolerant of Lakhmid pretensions to independence. After wandering among the Arab tribes seeking refuge, he surrendered himself to Parviz, who had him killed in 602, and with his death the Lakhmid rule over

al-Hira came to an end. In so doing, Parviz destroyed the shield that protected Persia's flank against the Azabs of the peninsula. Some two years after the death of al-Nu'man, the battle of Dhu Kar [q.v.] was fought, in which the Arab tribe of Bakr scored a victory over the Persians, a foretaste of more dramatic victories in the thirties by the Muslim Arabs. Dhù Kūr foreshadowed al-Kādisīyya [q.v.], both of which were splendid justification of Lakhmid al-Hira as a bulwark for Persia against the Arabs of the Peninsula.

After the death of Nu^cman, al-Hira was ruled by - Arab from Tayyi', Iyas b. Kabisa, assisted by ■ Persian, al-Nahlragan, for some nine years, 602-21, After this it became a Persian possession directly ruled by the Persians until it fell to Khālid b. al-Walld in 633. The last Lakhmid prince known to the sources in this period is al-Nu'man, ulcknamed al-Gharur ("the deluder"), who took part in the riddo war in Bahrayn and was defeated by al-'Ala' b.

al-HadramJ in 633.

2. Culture. The geographical location of their capital al-Hira and their special relationship to Sasanki Persia determined for the Lakhmids the direction that their history took. In spite of a certain independence which they enjoyed, they were vassals of the Sasanits, for whom they performed the following important functions: (a) they were their skield against the inroads of the nomads from the Arabian Peninsula; (b) they watched over their sphere of influence in Arabia, especially the Arabian littoral of the Persian Gulf, including Bahrayn and Uman, which they ruled for them; (c) they were their spear against Byzantium and the latter's clientkings, the Ghassanids; and (d) they protected their trade interests in the Peninsula, especially the caravanroute that connected al-Hira with South Arabia.

Their fruitful association with Persia is reflected in the various forms of their military, political, and social life, and in their material culture: (a) the sources speak of five units in their army-al-Shabba?, al-Dawsar, al-Wada'is, al-Şana'is, and al-Raha'in, the first of which are said to have consisted of Persian troops; besides, there was the Khandak Sabur, "Shapur's Ditch", rebuilt by Khusraw Anushirvan, a limes of some sort protecting al-Hira and extending down to where al-Basra was to be in Islamic times; (b) the _____ of the Lakhmids were apparently bestowed on them by the Persian kings and with the crown came the word itself for crown, tadi, as a loanword into Arabic from Persian; and (c) the various aspects of their material culture must also have been dominated by the Persians in such areas as architecture, dress, food, driak, and music.

Zoroastrian Persia was also the determining factor in the attitude of the Lakhmids towards Christianity. The Sasanids understandably frowned on their adoption of a missionary religion with untversalist claims, especially after the conversion of their secular enemy, Rome, to that religion. The second Lakhmid ruler, Imru' al-Kays, adopted Christianity, which fact must at least partly explain his defection to the Romans. Only the last Lakhmid king, al-Nu'man, adopted it openly; but since it was the Nestorian form of it, in opposition to the Chalcedonian one adopted by Byzantium, it was acceptable to the Sasanids. And yet their capital, al-Hira, became the great centre of Arab Christianity and of its transmission in the Arabs of the Peninsula. The city was adorned with churches and monasteries, was the seat of a bishopric, and the refuge for many a persecuted ecclesiastic.

Important as their role was in the political and military history of the Arabs and of the Near East, it was their development of al-Hira itself as the great Arab urban centre in pre-Islamic times that must be considered the major and enduring contribution of the Lakhmids. In the 3rd century A.D., the Arab cities of Hatra, Edessa, and Palmyra fell in rapid succession, and the rise of al-Hira so the capital of the Lakhmids, almost immediately after the full of Palmyra, ensured a certain continuity in Arab urban life in the Fertile Crescent.

For almost three centuries, al-Hira stood almost alone a metropolis radiating higher forms of culture to the Arabs of the Peninsula; and of all the elements of culture that mattered, the most important was undoubtedly the development of the Arabic seriot and of written Arabic, called for by the demands of an organised and stable urban life in al-Hira isee 'Anamyya. A. The Arabic language

60 (1)3.

Bibliography i the main source for the history of the Lakhmids is Tabart's Tabrick, magisterially translated and commented upon by Th. Nöldeke, Gerchichte der Perser und Araber zur Zeit der Sasaniden, Leiden 1879, repr. 1973; (see - this now, I. Shahid, in IJMES, viii [1977], 127-22]; the standard work on the Lakhmids is still G. Rothstein, Die Dynastie der Lahmiden in al-Hira, Berlin 1899. In both these two works the scattered references to the Lakhuids in the Syrlac and classical sources are discussed. Other important Arabic sources are: Mastudi, Muradi, III, 181-214 = §§ 1036-75; Hamza al-Isfahāni, Ta3rtāk, ed. Beirat 83-97; ibn al-Athir, i, 340-51, 400-3, 410-11, 434-5, 437-9, 482-91, 540-7. For the monasteries of the Lakhmids and of al-Hira, Yakût, Mu'diam, ed. Beleut ii. 495-543; Bakel, Mu'diam, ed. Cairo II, 570-607. On the al-Namara inscription, an Bibl, to LAKHM. For further studies on the Lakhrnids, see F. Aitheim and R. Stiehl, Die Araber in der alten Welt, Berlin 1964-8, ii, 313-28, v/1, 358-73; l. Shahid (Kawar), The Arabs on the Peace Treaty of A.D. 561, in Arabica (1956), 181-213; ident, Procobius and Arabas, in BZ (1957), 39-67, 362-82; idem, Ghassan and Byzantium: new terminus quo, in Isl., (1959), 232-55; idem, Byzantino-arabica: the Conference of Rainia, A.D. 524, in JNES (1964), 113-31; idem, The Martyrs of Najran, Brussels 1971, 269-72; M. J. Kister, Al-Hira. Some notes on its relations with Arabia, III Arabics, xv (1968), 143-69; C. E. Bosworth, Iran and the Arabs before Islam, in Cambridge history of Iran, vi. Cambridge 1982. (ERFAN SHAHID)

LAKHNAW, conventional English spelling Luck-Now, the capital city of the Indian state of Uttar Pradesh (the United Provinces of British India). It is situated on the south bank of the winding Gunsti river at lat. 26° 52' N. and long. 80° 52' E. It is the eleventh largest city in the country (population, 1971 census: 750, 312) and the second largest town of the State. Besides being the seat of the State government, the city also serves as the administrative headquarters of Lakhnaw district and division.

r. History. Though legend connects the origin of Lakhnaw B a mythical local mound called Lakshman Tila, a pre-historic stronghold built by Lukshinana, brother of Rame, king of Ayodhya, the known history of the city can be traced m the beginning of the 13th century A.D. when it was colonised by the Shaykha, one of whose descendants Shaykh Muhammad, better known as Shah Mina, attained

great saintly renown, and his shrine, located with the confines of the historic Machhi Bhavan, is a place of pilgrimage for devotees all the year round, apart from being the oldest epigraphic monument of the city. During the Dihli Sultanate [q.v.] period, Lakhnaw figured prominently in connexion with the revolt of A'in al-Mulk, son of Māhrū, governor of Awadh, against Sultān Muhammad b. Tughluk. Between 1394 and 1478, Lakhnaw became part of the Sharki kingdom of Djawnpur [4,r.]. After changing hands several times between different occupants of the Dihli throne, Lakhnaw finally passed into the Mughal dominion under Humayun, after suffering from frequent Afghān incursions. The Emperor Alchar, under whom the district of Lakhnaw formed part of the sarkar of that name in the sabs of Awadh, had a special fascination for Lakhnaw, whose delightful surroundings, pleasant climate, flowers and fruits and different varieties of rice are highly spoken of by his court chronicler, Abu 'l-Fadl, During Djahängir's reign, Lakimaw biossomed into a magnum emporium. Awrangzib's visit in the place is commemorated by a mosque which he built on the top of the said Lakshman Tila, the oldest site of the city.

As the fortunes of the Great Mughais dwindled, those of Lakhnaw rose, until a new and independent kingdom sprang up as an offshoot from the decayed tree of the Empire. The governors henceforth paid only nominal allegiance to the titular Dihli king. Sa'adat Khan, who was appointed subadar by the Emperor Muhammad Shah in 1134/1722, became the founder of the dynasty of the Nawwahs of Awadh, with whose régime most of Lakhuaw's glorious past is intimately connected. The period of the fourth ruler, Nawwab Aşaf al-Dawia, marks the greatest height of Lakhnaw's prosperity. The extravagance and munificence of his court passed into a byword, and could be rivalled only by the lmperial court of Dihli. Along with the Rumi Darwaza and the adjacent mosque, the great Imambara, whose central hall is one of the largest vaulted in the world, forms the apotheosis of his building achievements. Lakhnaw was raised to the rank of a royal city in 1819 when Lord Hastings transformed the seventh and the last Nawwab Wazir, Ghazi al-Din Haydar, into the first king of Awadh. The puppet monarchy came to an end in 1855 when the territory was annexed to the East India Company territories and Wadiid 'All Shah, the last king, was exiled to Calcutta, where he lived a pensioner's life under British supervision till his death in 1887.

To the Englishmen, however, Lakhnaw is best known in the city where a regiment of British troops under Sir Heary Lawrence, joined by the local English inhabitants, put up a gallant defence of the Lakhnaw Residency for twelve weeks against heavy odds during the Sepoy Mutiny of 1857, when the city witnessed some of the fiercest lighting. The history of the Lakhnaw district after its annexation by the British is a history of a long chain of administrative changes caused by the exigencies of situations obtaining at different times. Later on, Lakhnaw had a conspicuous role to play in the political movements of British India, for the famous Lakhnaw Pact resulting from meetings held there in December 1916 between the Indian National Congress and the Alf-India Muslim League led to the Hindu-Muslim cooperation in the hildfal movement and the Nonco-operation movement launched by Mahatma Gandhi in 1920.

With gilded domes and graceful minurets rising above its many mosques, imambalias, palares and

tombs, Lakhnaw gives the impression of fantastic splendour, characteristic of the capital of an eastern potentate. The fine Djamis Maschid, the handsome Chattar Manzil and the glittering Shah Nadiaf mausoleum are, apart from Aşaf al-Dawla's buildings, some of the finest speciments of the architectural glory of the prodigal Nawwabs. La Martinière, an impressive Christian landmark of Lakhnaw, symbolises the zeal and influence of General Claude Martin (1735-1800), a French soldier of fortune who amassed great wealth and position during the days of Nawwab Asaf al-Dawla. The building is an exquisite memento of the synthesis of European and Indo-Saraconic architecture. "As regards learning" says Abdul Halim Sharar, the noted contemporary Urdu writer, "Lakhnaw was the Baghdad and Cordova of India and Nishapur and Bokhara of the East". The world famous dikan embroidery, the hallmark of Lakhnaw's craftsmanship since the days of the fastidious Nawwabs, has developed as the most flourishing industry. Another legacy of the Nawwabl era is the manufacture of good-quality khamira tobacco used for smoking and the zarda for chewing, which have acquired a reputation of their own.

With Lakinaw's name is indissolubly associated a particular school of Urdū poetry which developed there under the benign patronage of the Nawwābs. Cultivation of delicacy and refinement, which characterised the city's social life, left an indelible mark on the Urdū poetry produced there. The Urdū language was purified almost to the point of perfection. The intensive interest of the Lakinawi Muslims in Shī'sim brought about the sophistication of the poetical genre known as marthiys [q.v.] (martyrological epic monraing the tragedy of Karbalā), of which Anīs and Dabir were the two great exponents.

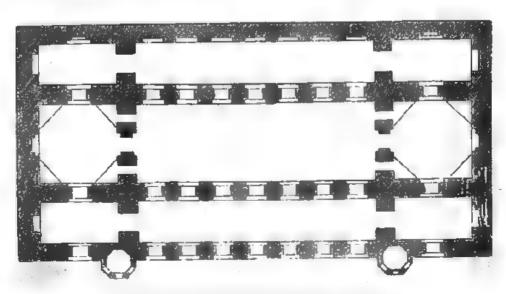

Modern developments have made Lakhnaw a leading city of northern India. It occupies a central place in a rich farming region, producing and marketing wheat, barley, grain, mustard, mangoes and sugar cane. Paper and carpet, chemicals and pharmaceuticals, cigarettes and shoes, gold and silver wares, wood carving and leather goods, embroidery and perfumery are among the chief commercial and industrial products of Lakhnaw. It is a very intportant centre of the country's railway system. For its numerous parks and avenues, Lakhnaw is called a "garden city". There is a residential University founded in 1921, with a large number of boys' and girls' colleges, several private and technical schools and the provincial museum. A University of Indian music and two national research institutes, sc. the Central Drug Institute and the National Botanie Garden, are housed there, Nadwat ai-'Ulama', popularly known as Nadwa College, is universally regarded as the leading centre of Islamic studies in India.

2. Monuments. The most noteworthy of the older sites is the tomb of Shaykh Muhammad, known as Shah Mina, dated 884/1479 (though biographies of saints give 870/1465-6). The tomb of Shaykh Ibrahim Cishti, near the 'Aysh-bagh, dated 961/ 1553-4 is a square limestone cell surmounted by blind merlons and a hemispherical dome set on octagonal drum; the plain doorway arch, flanked by two small superimposed niches on each side, resembles Sultanate work at Dibli. Two Mughai mausolea in the same area are close to work at Fathpur Sikri [q.v.] in character, but undated. One, the Nadan Mahall, apparently the tomb of Shaykh Abd al-Rahim Khau, was built as a twelve-pillared open pavilion, but this was converted to a square cell with diali lattices, and surrounded with a verandah of twenty pillars whose elaborate brackets, including elephant and birds, support a chadidia pent. The parapets of this verandah, the cell, and the base of the dome carry brilliant tile mosaic ornament in dark blue, turquoise and yellow set III red plaster: a confirmation of detail to be ---some contemporary book paintings (e.g. Akbarnāma, V & A, IS 2-1896 113). The mahābadma finial base is extended by a petal-like network of tilework lides. The red sandstone Sola Khamba preserves the open form, here rectangular, with sixteen columns surrounding a line of five cenotaphs, and supporting a florally carved ceiling above a finely panelled plinth. The details indicate the transition from the Akbarl to the Djahangiri style. The Mosque of Awrangelb with three frontal arches to its prayer hall, and three domes, is flanked by massive octagonal minarets engaged to the front corners like the larger Djamit Masdiid at Dihli, and lauterns at the rear; its pishfak however incorporates new Baroque curvatures in the upper storey, with an arching thadidia and flanking thatris. Following his transfer of the administration of Awadh from Faydabad [q.c.] in 1189/1775, Asaf al-Dawla built a complex including the Asaft Masdid within the Machi Bhawan or Old Fort (Kil'a) to relieve the famine in 1198/1784. This mosque follows the lines of the earlier one, but with a prayer hall of eleven bays, still with three domes, here bulbous, gadrooned,

and reeded. The facade of plain arches set within engrailed arches on tapering engaged pillars is crowned with a deep foliated frieze, and a continuous register of delicate arches surmounted by tiny bulbous domes, a device already used in the mausoleum of the Nawwab Saidar Diang (d. 1168/1754) at Dihll. The prayer court, flanked by arcaded ranges with octagonal pavilions, is approached by a long surge of steps. The same tradition is resumed in the Diami' Masdid tounded by Muhammad 'All Shah (1837-42); there the pishiak is no longer rectangular, but rises into a pointed arch, and within its iwan, where squinch nets are reduced to waving lines, there was three arched entrances. Secondary pishfais are introduced at the centre of each wing, rising in taller arcades. Luxuriant leaves spring round the dome bases, and the me foliation pervades the interior, where the mibrib, matching the entry, is triple. Guldastas of differing length are clustered on the skyline.

The totrive ceremonies [q.v.] required large halls, of which the greatest, the Bara Imambara is in Asaf al-Dawla's complex of 1784 (see Fig. 1). The long range of IIII facade is handled like that of his mosque, but with niched piers, and triads of arches at each end marked off by domed octagonal pavilious two storeys. The arches and domes of the parapet are reiterated in a second range above, set back with two more pavilions in the flat roof. The hall within, ca. 49 m by 16 m by 15 m high has a solid concrete vault carried on successive covings of converging groins, and the founder's tomb lies in the middle. The architect was Kilavat Allah. The third building of the complex, the Rumi Darwaga, possibly sonamed after its triple gateway, shares the rapid change of rhythm and the recession in levels, but the river elevation unexpectedly reveals a giant iwan framed within an arch with radiating guldastas, and capped by a thatri. The Husaynabad Imambāfā of Muhammad Ali Shāh again contrasts arches of different sizes with parapet arcades and guidastas, though in a light, lany manner culminating în a gilderî dome. Tac Hadratgandi îmâmbăfâ of Aindiad 'Ali Shah (1842-47) is comparatively plain, but its interior, will the other two, - once

[Plan of the Bäfä Imämbäfä, Lakhnaw (after J. Forgusson).

splendid with crystal chandeliers and procious shrines. Besides the imambata burials, the tradition of mausolea continued with those of Sasadat sAli Khan (1708-1814) and his wife Kljurshid-zāda, bullt by his successor Ghazi al-Din Haydar (1814-27). Both follow the organisation of Safdar Diang's monument with corner turrets capped by chatris around the main dome, but the pishak and ludn - absent, replaced in the former by a tetrastyle portico on each face (R. Smith, fournal 1832, V & A. IM 15/58-1915, pp. 581-2). Both have donies of a strungly European profile, with prominent finials and salient angles around a tall drum suggesting a derivation from Les Invalides (1693-1706); the accumulation of lesser domes and bangle vaults around the Queen's tomb also recalls Hindu massing. Charl al-Dln built his own tomb, the Shah Nadjat (Nadjat Ashral) dominated by white, stupa-like dome and finial within an areaded precinct. The garden at Husaynabad contains two supposed replicas M the Tadj Mahall for a daughter of Muhammad 'All Shah and her husband, which however demonstrate complete lack of its classical balance.

The origin of European influences is apparent in domestic buildings. Initially Safadat Khan had taken over the Panc Mahall built by the Shaykhzadas in the Fort; the buildings were improved on a grand scale by Shudiac al-Dawla (1754-75), but by 1775 they still lacked unity (Modave, op. cit. 183). Both palace and fortifications were destroyed in 1857 and after. Asaf al-Dawla transferred the court to a new Dawlat Khana including the Asaft Kothi, probably commissioned from Claude Martin, in 1782-9. Martin, who had arrived in Lakhnaw in 1776, rose to become advisor to the Nawwabs, whose taste he influenced, creating fine buildings for them and obtaining furniture from Europe, These included Mūsā Bāgh (Barowen) (1780-1804), a classical house with a bow front to the river, and a landward court sunk for coolness, and Biblyapur Kothi, a much plainer building. His own town house, Farhat-bakhsh (1781) shows the same combination of climatic ingenuity, strong defences, and wit; it was bought in 1800 by Sa'adat 'All Khan, who used it as his residence at the centre of a new palace complex. Constantia (La Martinière (1795-1800) though influential was, as Martin's tomb, unsuitable for adoption, and continues in his endowment as a school. Dil-kush a (ca. 1805), built by Sir Gore Ouseley as a reinterpretation of Seaton Delaval back home in Northumberland (1729) became a favourite hunting lodge of Safadat 'Alf, and provided the portice model for his tomb. By 1803 the Nawwab had bought III the English houses but three, and himself constructed a fine new street of such houses, radically different from the Indian model, in Hadratgandi. The building of palaces continued with his domed Moti Mahail and Lal Baradari (Kasr al-Sultan), a throne room with didlis as fine as the Nadān Mahail, Ghāz! al-Diu built the Chattar Manzil, incorporating the Farhat-bakhsh, for his barem, blending Martin's classicism with the local tendency to culminative recession, and domes with thadidia caves, carrying gilded parasols. That these allusions were deliberate is confirmed in the Darshan Bilás, of whose four taçades two me taken from Barowen, one from Farbat-bakhsh, and one from Dil-kushā, much as the images in Urdū poetry (Jones, op. cit., 224). The borrowing of Western motifs remained superficial, and even the use of such houses was not fully grasped. Such stylistic variety could be realised with in the local

medium of succo on brickwork. This was fully exploited in the vast palace of Kaysar Bāgh built for Wādhid 'All Shāh by Chôfa Miyān in 1848-50; the final, Recure phase of Mughal architecture is combined with the gamut of Western elements with a splendid and theatrical disregard for rule, but little now remains.

LAKHNAWTI (shortened form of Lakhanawati, "home of Lakhan", which is a derivation from Lakhmand, son of Dasarata and half-brother of Rāma Candrā, and wafi, meaning "home" or "habitation", the name of an ancient city which served as the principal seat of government in Bengal under Muslim rule for nearly four centuries. Its ruins are still found spread over a narrow and deserted channel of the River Ganges in lat. 24° 52' N. and long. 88° 10' E., 10 miles/16 km. south-west the modern Malda town (administrative headquarters of Mālda district in the State of West Bengal, India), from which it is reached by a macadamised road.

Though the date of the foundation of the city is shrouded in obscurity, tradition has it that it was built by one Sangaldib of the Cooch Behar of north Bengal, who had become unchallenged master of Bengal and Bihār after defeating Rādja Kedar Brahmin of the same region. But the recorded

history of Lakhnawti does not begin until the Muslim conquest of western and northern Bengal 504/1108 by Muhammad Bakhtiyar Khaldif, the military general of Kuth al-Din Aybak of Dihit, who surprised and defeated Lakhan Sen, the ruling Hindu king, at Nadia (represented by the present Nabadwip town). After the fugltive king escaped iato eastern Bengal, Bakhtiyar Khaldil established his capital at Lakhnawil, which thenceforth became the centre of Muslim power till the end of the roth/ 16th century. The most ancient name of the city was Gawr, afterwards changed to Lakhnawil, und subsequently called Gawr again. The city was also known by various names at different times, such Fathābād, Husaynābād, Nusratābād and Djanuatābad, the last name, meaning "paradise", being given it by the Emperor Humayan when he stayed there for three months in 1538. The earliest numismatic mention of Lakhnawti as a mint town occurs in a coin of Sultana Radlyya dated 634/1236. The nearest contemporary account of this early period is the Tabakát-i Nāşiri, whose author Minbādi-i Sirādi visited Lakhnawti in 641/1265 within fifty years of its conquest by the Muslims. Under the Emperor Akbar, Lakhnawil was one of the nineteen sarkers in which Bengal was divided for administrative purposes. Abu 'l-Fadi states in his Alix-i Akbari that the city was known in his time both as Lakhnawif and Gawr.

After the lapse of three decades of the Khaldil oligarchical rule, the Lakhnawti kingdom passed under slave governors, during which it acquired so much influence and status that its governors used to be called Malik al-Shark. But me the palace intrigues and political squabbles of the Dihli Sultanate emboldened the viceroys of Lakhnawti to revolt against the central imperial authority, the distance from Dihli being a greatly-contributing factor here. The greatest of these revolts took place during the reign of the strong-willed Sultan Ghiyath al-Din Balban [q.r. in Suppl.], who personally led a large army to Bengal to crush the rebel governor Sultan Mughith al-Din Tughril, who was mercilessly put to death. Bughra Khān, Balban's youngest son, became governor of Lakhnawti in 681/1282, Barani, the author of the Ta'rikh-i Firm-Shaki, gave Lakhnawti the name of "Bulghakpur", meaning "place of sedition", in view of the insurrections which frequently occurred there ever since the inception of the Muslim rule.

With the passage of a century, the small principality of Lakhnawtl expanded into a redoutable Muslim kingdom, embracing in its fold Sunargaun (the present Dacca area), Sotgaus (present Hooghly area), the Brahmaputra valley and the marshy lauds of southern Bengal. The founder of the Hyas-Shahi dynasty, Shams al-Din Ilyas Shah, used to be called "Shah-i-Bangala". The process of the cultural identification with the Bengali people which had begun during 140 years of Hyds Shahl rule culminated during the next half-century's reign of the Husayn Shāhi Sultans, who were particularly noted for their active patronage of arts and literature. The fame of the Lakhnawti kingdom spread far and wide, and its sultans exchanged ambassadors with the potenof China and Khurasan, Sultan Shiyath al-Din A'zam Shah (795-813/1392-1419) estabilshed madrasas in the holy cities of Mecca and Medina and invited the famed Persian poet, Haliz Shirazi, to visit his court and elicited from him a celebrated panegyrical ode. The writ of the Sulfan of Lakhmawil was respected even beyond the frontiers of Bengal, within Orisse, Kamrup, Tippera and Arakan. The prosperous condition of Lakhnawii in the mediaeval times attracted the attention of foreign travellers. The Portuguese traveller, de Barros, writing before 1540, speaks of broad and crowded streets with trees planted in rows along the walls to give shade to the passers-by. Faria y Souza, visiting the city around 1640, describes the capital city lying the banks the Ganges as being three leagues in length, and well-fortified, and containing 1,200,000 families. Rennell, the cartographer, who visited Lakhnawii in the third quarter of the 18th century, portrays the city "not less than fifteen miles in length and from two to three in breadth".

On account of changes in the course of the Ganges, the capital was removed from Lakhnawti to other nearby places several times in its long history. Twenty-six rulers from Bakhtiyar Khaldil (1198) to Kadic Khān (1325) ruled from Lakhnawti, while six kings of the Ilyas Shahi dynasty had their capital at Pandua, 20 miles/32 km. away in the north-easterly direction, till 1414, when it was transferred back to Lakhnawti in the reign of Sultan Dialal al-Dia Muhammad (818-36/1415-32). In 1564, Sulayman Karrani subsequently removed the capital from Lakhnawti to Tanda, lying still further to the southwest near the present village of Mahdipur. The capital was again shifted back to Lakhnawti in 1575 by Murfim Khan Khan-i-Khana, the first viceroy of Akbar, but excessive rains in that year caused a pestilence in which thousands of inhabitants perished. the viceroy himself falling a victim to the contagion. The few people that survived the epidemic left the deserted city, which never regained its old glory. The capital was hurriedly shifted to Tanda, from where it was later changed to Radimahal in 1589 by Rādjā Mān Singh, and then to Dacca in 1608 by Islam Khan, and finally to Murshidabad in 1704 by Murshid Kull Khan.

Though Lakhnawti was finally deserted towards the end of the 10th/16th century, its magnificent buildings withstood the ravages of time for another century, for as late as 1683 when William Hodges, governor of the East India Company, visited the place, the architectural remains of the historic city were fairly intact. But systematic human spoliation caused irreparable damage to the monuments, whose bricks and stones were carried away to adorn the palaces and houses of distant Rādimahal and Murshidabad. According to Grant (Fifth report), the ulgámat daftar of Murshidábád received Rs. 8000/annually from the local adminddrs of Lakhnawti as fees for the privilege of demolishing the ruins and stripping from them their highly-prized enamelled bricks and basalt stones. Early in the 19th century, many carved stones, found in the ruined city, are said to have become prey of the Calcutta undertakers and others for ornamenting graves in Calcutta. Some of the important relies which are still extant are m follows:

The Sona Masdid or Great Golden mosque, a massive rectangular mosque, built by Sulfan Nusrat Shåh in 932/1526, is the largest as well as the finest of all the monuments of Lakhnawti. It is called golden because its domes were actually gilded, and Barādarī (meaning "audience hak") because it has a spacious court-yard resembling an audience hall. The Chota Sona Masdid, built during the reign of "Ala" al-Din Husayn Shåh (899-925/1494-1519) is situated in that portion of Lakhnawti which now forms part of the Rādishāhi district of Bangladesh. Of the historic Fort of Lakhnawti, which lay on the

banks of the Ganges and extended for about a mile from north to south, only the Main Gate, called the Dikkil Darwiza, and the Royal Entrance, commonly called Luka Cari, are in existence today. The First or First Shah Minar is a sort of a victory tower, 84 ft. high and 62 ft. in circumference, popularly supposed to have been built by Sayl al-Din Firuz Shah (1488-90). The Kadam Rasúl is a single-domed square building, constructed by Sultan Nusrat Shah in 937/1531 and situated within the enclosure of the Fort. The actual relic, which comprises a small carved pedestal of blank marble containing a stone representation of the footprint of the Prophet, is said to preserved in private residence nearby for reasons of security. Of the remaining important mosques, there are the Tantipara Masdild, erected around 1480, the Lattan Masdild, built in 1475, and the Camkatti Masdild constructed by Sultan Yüsuf Shāh in 880/1475. In = spot known as Banglākot there existed the tomb of Sultan Husayn Shah (d. 925/1519), but it was destroyed in about 1846. The tomb of Shayah Akhi Siradi al-Din Uthman, the famous saint who visited Lakhnawti in the early 8th/14th century, is located in the north-west corner of the Sagardighi, the enormous cistern, nearly 7 miles/10 km. south-west of Målda town.

Taraldar, Husayn Shāhi Bengal, Dacca 1955; West Bengal District Gazetteers: Mālda, Calcutta 1969. (Andus Surhan) LAKĪT (A.) "foundling", according to the

LAKIT (A.) "foundling", according to the definition of Müliki law, a human child whose parentage and whose status (free or stave) is un-

known.

It is a collective duty (undiff) to pick up an abandoned or exposed child. A person finding such a child may not, having taken it up, replace it in the place where found. If two persons wish to take up the child, preference given to the one finding it first; if they have both found the child together, it should go to the one best fitted to rear it, but if both are equally qualified, then lots may be drawn for it. The child's finder must swear in the presence of witnesses that he has found it, in that he may not subsequently claim that it is his own son or slave. The child's paternity must be established by regular means. A slave, even if liberated through mukātaba, and married women, may not pick up a child unless with the master's me husband's consent. A person who has picked up a child must be free, a Muslim, sur inris (rāshid) and of good character.

The foundling is presumed to be of free status until proved otherwise, and is presumed to be a Muslim if found by a Muslim in a place populated by Muslims, If the local people are, however, all infidely,

the child is presumed to be non-Muslim.

Looking after the foundling is the responsibility of the finder; the collective obligation (fard kifáya) is converted for him into a personal obligation (fard fayn). Nevertheless, certain authorities set the child's upbringing as a charge to the public treasury (the revenue derived from the fay?) or to special endowed foundations (al-Ya-qubi, Historiae, ii, 171). The finder administers the child's possessions, represents him in civil law and is responsible for the expenses of his upbringing, but he may have a remedy against

the child's father for the cost of these expenses if it can be proved that the father voluntarily exposed the child and not through necessity. The child's upkeep is due until the end of puberty if it is it boy and until marriage if a girl. If the child dies, its inheritance belongs to the public treasury as representative of the Muslim community, but the imalium may nevertheless make over the inheritance to the child's finder.

(A.M. DELCANBER)

LAKIT AL-IYADI, pre-Islamic Arab poet. The name Lakit does not necessarily mean that the person buaring it was a foundling; but in the present instance, whilst the genealogists know all the poet's ancestors (see Ibn al-Kalbī-Caskel, Dinmhara, Tab. 174 and Register, il, 377), the ductus of his father's name has given rise to divergent readings; MACBAD (Ibn al-Kalbī, loc. cit.; al-Dithie, Bayan, I, 42, 43, 52; Ibn Durayd, Ishtikab, 104; al-Amidl, Multalif, 175); MACMAR (lbn. Kutayba, Shite, 152-4; Ld, s.v. I-8-1); and vacuar/vacuur (al-Shammakh, apud al-Mubarrad, Kamil, 829; Ibn al-Shadjari, Muhhtarat shu'ara' al-'Arab, 1-7; al-Baktl, Mu'diam mā statajam, 71-5; Aghāni, xx, 23-5, ed. Beirut, xxii, 394-8; Ibn Khayr, Fahrasa, 398; Yakut, Buldan, iii, 125). This last reading seems to be the most correct; it even appears in the siss, of the Diudu whose rescension is attributed to Ibn al-Kalbi, for whom, in his Diamhara, the poet was Machad's son (see above). Such variation is easily explicable, but one nevertheless wonders whether two distinct persons have not been confused (see Ibn al-Kalbi-Caskel, Register, ii. 377; amongst Kināna, there was ascreover a Lakit b. Ya'mar, cited by Ibn al-Kalbi, Tab. 36).

Ibn Kutayba, ioc. cit., says that the lyad [q.v.] established in 'Irak had to flee for refuge in al-Diazira under pressure from the troops of Anûshirwan [531-79 A.D.], who wanted to pul a stop to their depredations. These last continued, and Lakit, who happened to be in al-Hira (or, according to Ibn at-Shadjari and al-Bakri, loc. cit., was allegedly secretary for Arab affairs in the Sasanid king's chancery), placed his fellow tribesmen on guard against an expedition which the Persians were preparing, in a poem in -adī. But the lyad remained deaf to this warning, persisted in their ways, and were scattered; it was then that Lakit wrote a long poem in -'d exhorting them to take seriously the new threats against them and to choose a valiant chief to oppose their enemies.

The Aghans (los. cit.) places these events in the same sovereign's reign, after the battle of Dayr at-Djamādjim, during which the Lyādis repelled the Porsian cavalry sent against them (see Vāķūt, Buldān, s.v. Dayr al-Djamādjim; naturally, this was not the famous battle of B3[702 [q.v.]], and makes the poem = -âdī the prelude of the poem in -sā. Al-Bakrī (los. cit.) also speaks of Dayr al-Djamādjim, whilst for lbn 'Abd Rabbihi, the incidents in question were contemporaneous with Dhū Kār [q.v.], heare later, which seems very unlikely.

Al-Mas'adi (Muradi, ii, 176-7 = §§ 601-2) tells palpably the same story, but places it much further back in time, since, for him, the poet was serving in the army (var. in Tambib, ed. Şāwi, 175; was languishing in jail) of Sābūr II (310-79 A.D.); this last exterminated the Iyād, and it must the fate wrought on the prisoners which, according to this tradition, gave Sābūr the sobriquet of Dhu 'I-Aktāf.

From all these pieces of information, the personality of Lakit remains highly confused, and it is hardly possibly exactly to fix the period when he was living, though it was probably during the second half of the 6th century A.D. Thanks to his two poems, the poet passed into posterity; in the 6th/rath century indeed, Iba al-Shadjarl (d. 542/1148) thought highly enough of the poem in 's to place it at the beginning of his Mukhtarat, where it has 55 verses. It was set to music, and the passage in which the ideal war commander is sketched **en** especially famous (see al-Mubarrad, Kāmil, 497, 1166; Ibn Nubāta, Sark al-suyan, 203). Lakit is placed on the same level | Kuss b. Sa'ida [q.e.] In some verses of Zayd b. Djundab al-lyadi in praise of his tribe (al-Diabiz, Bayda, i, 42), and as a result, considered as the glory of lyad. One editor of the Diwan, Mufid Khān (see below), makes him "the first nationalist poet of pre-Islamic Arabia". This Diwân, which contains un more than these two poems, is preserved in several mss. of a few leaves: Aya Soiya 3033, Fatih 1665, Chester Beatty 5474 and Berlin 1123, 1176, 1130. It was made the subject of an edition and German tr. by Th. Nöldeke (in Orient and Occident, i [1862], 689-718), an edition by Khalil Ibrahim al-'Atiyya (Baghdad 1300/1070) and an edition and English tr. by M. A. Mufid Khan (Beirut 2391/2971).

LAKIT B. ZURARA B. "UDUS B. ZAYD B. "AND ALLAH B. DARIM, ABU NAMEHAL, poet and sayyid of the second half of the 6th century A.D.

His name apparently appears for the first time in a tradition concerning the assassination by his brother-in-law Suwayd b, RabFa b, Zayd (see Ibn al-Kalbi-Caskel, Diamkara, Tab. 60, and Register, ii, 521) of a son (or of a young brother) Mālik, of al-Mundhir b. Ma' al-Sama', who had entrusted him to Zurăra, and the vengeance of 'Amr b. Hind (q.v.), in the first place on the seven sons of the murdered man and then on the Banû Hanzala b. Mâlik (Ibn al-Kalbl-Caskel, Tab. 59), from whom he is said to have had about a hundred tribesmen burned; in a piece of verse, Lakit reproaches these last for having remained in the service of the king of al-Hira (Nață)id Diarir wa 'l-Farazdak, ed. Bevan, 1084-7 Azhani, ed. Beirut axii, 190). In his article devoted to a mountain in the Hidjaz infested with llong and called Tardi, Yākūt (Buldān, i, 835-6) alludes to a "famous" yanın Tardi (cf. al-Maydani, il, 409; E. Meyer, Der historische Gehalt der Aiyam al-'Arab, Wiesbaden 1970, does not mention this), in the course of which Lakit is said to have been captured by a certain Kumayt b. Hanzala, Nevertheless, it is in the traditions about the "days" of Rahrahan (see Meyer, op. cit., 47-50) and of Shi'b Diabala (see DIABALA and Meyer, 63-71) that he is most often mentioned. In the course of the first battle, which took place after the death of Zurara, the latter's son, Ma'bad chief of Darim, was captured by a section of the 'Amir b. Şa'şa'a commanded by al-Ahwaş b. DiaYar

(Ibn al-Kathi-Caskel, Tab. 93). Lakit, now chief of Darin, then offered his enemies 200 camels — the purchase price for his brother, alleging that Zurära had forbidden his sous to go beyond that number so as not in incite their enemies to obtain large ransoms. Despite the prisoner's supplications, in which he offered 1,000 camels from his own herds, Lakit remained immovable and loft Mashad in die of hunger and thirst in captivity (Nahilid, 227; al-Mubarrad, Kāmil. 424; Ibn Sabd Rabbihi, Ilid, ed. 1346/1928, iii, 306; etc.).

As sayyid of Därim, Lakil decided to avenge the death of his brother, and assembled a force of warriors from Tamim (with the exception of the Banû Sa^ed b. Zayd Manat, according to Ibn Habib, Muhabbar, 247, who accounts him and of the war leaders worthy of the title diarrar), from Dhubyan and Asad, as well as a contingent said to have been sent by al-Nufnian b. Mundhir, against the coalition of the 'Antir b. Sa'sa'a and the 'Abs. Exactly a year after the "day" of Rabraban, ca. 580 according to Meyer, loc. cit., the "day" of Shifb Diabala took place; during the clash, accompanied by the usual exchange of verses, Laklt, who was mounted, for the first time among the Arabs, on a borse caparisoned with brocade provided for him by the king of Persia, was felled by the blows of an opponent variously named in the sources (see e.g. al-Mubarrad, Kdmil, 194; Yāķūt, Buldān, 11, 24) but who must have been Shurayh b. al-Abwas (Naka'id, 663-5; Aghani, xi, 135-7). He died the next day, not without having uttered once more some verses, and the leadership passed to his brother Hādilb [q.r.]. Since his enemies had yet again struck him after his death, this gratuitous action inspired some verses of his daughter (or his sister, according to 4kd, iti, 209) Dukhtanus, wife of his cousin 'Amr b. 'Amr b. 'Udud (Naka'id, 665; Aghānē, xi, 137-9; Yākūt, Buldan, ii, 24).

Although al-Diāhiz, in a rather obscure passage (Hayawān, ii, 93), seems to consider Lakit as a tyrant, the sources cite an anecdote in which one has his widow (a daughter of Hāni' b. Kabīsa according to al-Mubarrad, Kāmil, 493, and al-Maydānī, Amihdi, ii, 231-2, or else a certain Mukarhdhafa blint Kays b. Khalīl according to Yākūt, Buldān, iii, 372-3), who had remarted, eulogisling Lakit and telling bur new husband that he was certainly as [sweet as] water, though not however as sweet as that of the famous spring of \$acdā^-mā' va-lā ka-\$adda', an expression which became proverbial.

Al-Diabit (op. cit., iv., 382) considers that all the sons of Zurāra (1bn al-Kalbi-Caskel, Tab. 60, cites ten of them) were poets, but their output hardly appears profuse, and only a small number of verses attributed to Lakit survive; these brought together by Abkāryūs in Kaudat al-adab, 258-9.

LÄLÄ [Owing to circumstances beyond their control the editors are unable to supply the article planned under this entry. They intend to publish it in the Supplement.]

LALA MEHMED PASHA, grand vizier under Ahmad 1. He was a Bosnian by origin and a relation of Mehmed Sokollu Pasha. The year of this birth is not given. After having had higher education

in the palace, he was ustrakher, and became in 1003/ 1505 agha of the Janissaries. In the next year he took part in the Austrian wars - beglerbegi of Rümill and was commander of Esztergom (Gran, Turkish: Usturghon) when this town capitulated to the Austrian army in Muharram 1004/September 1595. During the following years, Lala Mehmed was several times ser-tasker in Hungary and when, in Safar 1013/July 1604, the grand vizier Yawuz 'Ali had died in Belgrade on his way to the Hungarian theatre of war, the sultan sent the imperial seal of office to Lala Mehmed. Although peace negotiations were continually being resumed, the new grand vizier took in that year Waitzen (Turk, Wač) but besieged in vain Esztergom. During next year's campaign, Esztergom was taken by Lala Mehmed (29 September 1605), and in November he crowned the Hungarian Bocskay as king of Hungary (excepting the regions occupied directly by the Turks) and Transylvania. in that same year, the Turkish eastern army under Cighale Pasha was beaten by the Perslans, while the troops sent to subdue the revolt in Anatolla were routed at Bolwadin. After his return, it was decided that the grand vizier should remain next year in the capital and lead the war on the two fronts and, if possible, bring to a successful end the longdrawn peace negotiations with Austria. The young sultan, however, changed his mind in keeping with the wishes of the Kapudan Pasha Derwish, who was intriguing against Lala Mehmed. Accordingly, the latter was ordered to take command of the army against Persia. He had already put up his tent in Uskudar, when overcome by sorrow because of the trustration of his plans, he was seized with an apoplexy and died three days afterwards (23 May 1606). He was buried near the turbe of Şokollu Pasha.

Bibliography: The ta'rikks of Pečewi who, scribe, had served Lala Mehmed on several occasions (cf. Babinger, GOW, 192], Na'ima and Hasan Beyzade; 'Othman-zade Tā'ib, Hadikat al-wuzarā', 52 ff.; Sidjill-i 'othmani, iv, 140; von Hammer, GOR, iv. (J. H. Kramers)

LALE DEVRI, "The Tulip Period", the name given to one of the most colourful periods of the Ottoman Empire, corresponding to the second half of the reign of Ahmed III [1703-30 [q.v.]) and more precisely to the thirteen years of the vizierate of Nevshehirli Ibrahim Pasha [q.v.]. The tulip which gave its name to this era had been exported from Turkey to Austria by Ogier Chislain de Busbecq, the ambassador of Ferdinaud I of Habsburg (1503-64) at the court of the Sultan, but it was in Holland that its cultivation was developed, through the efforts of the botanist Charles de l'Écluse (C. Clusius) (Arras 1526-Leiden 1609), who occupied the Chair of Botany at the University of Leiden. The predilection for tulips spread rapidly throughout Europe, but the mania for this plant adopted its most extravagant forms in Turkey. In fact, imported back to Turkey from Holland in the 17th century by the Austrian ambassador Schmid zum Schwarzenhorn during the reign of Ahmed III, this flower became the object of extraordinary enthusiasm. The tulip fashion gave birth to an architecture, of which the elegant Läle Djänvis mosque, in Istanbul, is an example; to an art form, Ottoman baroque, inspired by French "rococo"; and to a literary genre, the poet Nedlm [q.v.] being the prototype here,

The promoter of this fashion was the Grand Vizier Ibrahim Pasha of Nevshehir, son-in-law of the Sultan. Coming to power at the beginning of 1718, he showed great diplomatic skill in the negotiations

over the Treaty of Passarovitz (21 July 1718), putting an end to a state of continual war which had disrupted the economic structure of the Empire and devasted its rural areas. After Passarovitz, the Grand Vizier applied himself to pursuing the objective of peace, and his vizierate was to be marked by initial period of absolute peace, followed by a period of suphoria induced by victorious campaigns in Iran, which was then in a state of anarchy as result of the Afghan invasion. Agreeable and peace-loving by temperament, Ahmed III had a strong bedonistic streak. He was a cultured man, poet and calligrapher, but also a man of exceptional greed. Ibrahlm Pasha was himself refined and cultured, mextrovert personality and a lover of peace and pleasure. Having similar tastes, the two men were well-suited to each other. Ibrāhīm Pasha was at pains to satisfy both the hedonistic nature and the avidity of the Sultan. By anticipating the latter's desires, he simultaneously reinforced his own status and ensured the relaxation and well-being of his master. The Sultan took no interest in any aspect of government and left all the responsibility of state to his vizier, who surrounded himself with close relatives and rid the court of mbostile elements. Until 1730, the entire administration of the state was under his control and all important posts were held by his appointees; this nepotism caused much resentment and earned him numerous enemies.

Overtures to the West. The Grand Vizier was a man of enlightened sympathies, and the years of his vizierate were marked by a main of approaches to the West. For the first time in the history of the Ottoman Empire, attempts were made to benefit from the political, economic and cultural structures of Europe. Diplomatic relations were fostered, especially with France: an ambassador, Yirmisekiz Celebizade Mehmed Efendi, was accredited to the court of Louis XV, and was instructed to study those French institutions which might be adapted to the requirements of Ottoman lands (1719). Commercial relations with France were developed: each year, five hundred trading ships operated between France and Turkey.

Policies of progress, construction and innovation. In 1724, the first printing-press was installed in Istanbul, through the good offices of Ibrāhīm Müteferrika [q.v.],
Hungarian converted to Islam, sided by the son of the Sultan's ambassador to the court of Louis XV, who had accompanied his father to Paris. A French officer of engineers, de Rochefort, was invited to prepare plans for reforming the army on the Western model, while another French convert to Islam, Khumbaradji Ahmed Pasha [see ARMED PASHA BONNEVAL], organised . corps of artillery. Yet another French convert to Islam, Gerček Dāwūd Agha, was responsible for the foundation of the first team of fire-fighters. A lover of arts and literature, the Grand Vizier surrounded himself with poets, musicians and artists. He prohibited the export of rare manuscripts and founded a society for the translation of Arabic and Persian texts. He established five libraries, in addition to that of the Sultan, of which the poet Nedlin was curator. He gave a fresh impetus to the manufacture of porcelain and earthenware, restoring the workshops of Izmid and Kütayha and founding a new in Istanbul, that of Telkor Sarayl. He founded a textile-mill. In the context of municipal engineering, the projects that he instituted include the construction of a dam to bring water from the Forest of Belgrad to the capital and the building of roads and

of harbour installations; he supervised the markets personally, regulating the sale of bread and the importation of coffee. He encouraged progress in medicine. Lady Mary Wortley-Montagu, the wife of British ambassador to the court of the Sultan. states in her Letters that certain meladies were, better treated in Turksy than showhere and, in particular, she mentions the existence of a vaccine against small-pox. The Sultan was an enthusiastic promoter of construction projects: fountains, ques and mausoleums sprang up in every corner of Istanbul; palaces, pavilions (hogh [q.v.]) gardens and places of recreation adorned the Golden Horn and the Bosphorus, Architects were brought in from Europe, and on his return from France in 1721, Yirmişekiz Celebizâde Mehmed Efendi brought with him the plans of palaces and gardens. The most famous III these palaces, that of Sa'dabad, built at the base of the Golden Horn, at Käghitane. Given this name on of ancient paper-mili dating from the Byzantine era, it was m become a favourite place of promenade; the palace me erected in two months, according to the plans brought from France; the French ambassador, the Marquis de Bonnac, presented the Sultan with the forty orangetrees which adorned the façade; and the first feast was held there on 3r July 1722, of which Nedlm has left us an account. The Tulip Period was an era of progress and increased interest in art and culture, poetry and music being pre-dominant; in poetry, Nedim was an innovator, introducing music into

verse and popularising ballads (sharki). Entertainment. When wearied with affairs of state, Ahmed III sought rest and recreation. Over a period of almost thirteen years, Ibrahim Pasha procured for him mambience of continuous festivity, symbolised by the tulip. Gardens and window-frames were decorated with tulips; different varieties proliferated; 830 were enumerated in 1726. Competitions were organised. Bulbs became so expensive that the government was obliged m control prices order to prevent speculation (firmin of Muharram 1740) September 1722). A bulb in the possession of an ambassador went missing; town-criers appealed in vain, for its return and bouses were searched. At times when the flowers were in bloom, Ahmed [1] used III change his place of residence, proceeding majestically to his yalls (palaces built in the edge of the water). The people resorted on masse to the tulip promenades, and barges sailed to Sa'dabad and other places of recreation. Festivities were also hald at night, and these men renowned for the spectacle, in the gardens of the Palace of Ciraghan, "Palace of Candles", at the mouth of the Bosphorus, of burning night-lights or candles under every tulip, hence the name given to this palace; in the illuminated gardens, tortoises were to be seen meandering over the beds of tulips, bearing night-lights on their shells. Nedlin has laft a a reminiscence of these festivities in the lines: "Let us laugh, be glad, make merry/ . . . Come, tlender cypress, let us set our course for Sa dabad." When the tulip season was at an end and the rigours of the winter arrived, the round of entertainments continued unabated. The cold and the inclement weather were forgotten at the "feasts of \$elue"; poets, men of letters, musicians and singers invited to these occasions, and the most intemperate nights of the winter were passed in convivial company, enlivened by a profusion of choice viands and confections; the banquet came to its climax with the arrival of the heled, brought in on copper plates and prepared in the presence of the guests, to the accompaniment of music and song. Besides the tulip feasts and the hetra banquets, the ceremonies associated with the circumcision and marriage of the thirty-one princes and princesses, the children of Ahmed III, were the occasion for interminable festivities. Such feasts sometimes lasted for as long a week or we days (for example, in April 1719, April 1720, May 1721). In 1727, there were heliaf banquets which lasted for a whole month; that same year, the month of Ramadán fell in May, giving rise month of Ramadán fell in the spring, and was celebrated accordingly each year.

With the passage of time, the festivities became ever more extravagant; the Sultan's palace was crammed with tulips and panks at the height of winter and also with odoriferous shrubs; thousands of birds sang in gilded cages; pleasure was the sole purpose of living; the Sultan and the Vizier, both of them poets and calligraphers, wrote love-poems addressed to each other. Under the influence of the court, a change in public morals was discernible, and ■ love of luxury and the pursuit of pleasure became more marked. In her Letters, Lady Mary Wortley-Montagu declares that Turkish women are more liberated than their English counterparts. Lines by Nedlm are an indication of the moral freedom of the time: "Ask permission of your mother, say that you are going to the Friday Prayer/ ... Come, stender cypress, let us set our course for Sa'dabad." Wishing to rival the people of the court, the middle class also embarked on schemes of reckless expenditure, thus causing the rain of numerous households. As a of restraining such expenditure, the Grand Visier was obliged to pass a law regulating clothing according to social class, especially in regard to decorative dress worn by women. But this moral laxity dalised the public; the Sultan had swings built for the people's amusement, and the sight of swinging women pushed by young men was an affront to public opinion; in addition, members of the nobility, including the Grand Vizier himself, were accused of amusing themselves, during barge-trips on the water, by torsing gold coins into the corsages of the ladies: there were even an accusation levelled against the Grand Vizier that he had made continual advances to the attractive wife of the Kadi of Istanbul, Zuläli Hasan Efendi.

The end of the festivities. The unbridled expenditure by the court, the relaxation of morals, the taxes levied by the Grand Vizier to pay for evermore costly entertainments, caused discontent among the people, in particular the fanatical and reactionary class of the 'ulend'. The people felt that they had been let down, Although the Grand Vizier had made great efforts in the interests of cultural growth, had had done nothing to combat the fanaticism of the 'alema' and the ignorance of the masses. The Janissaries, ignorant and fanatical, whose income depended on pillage in time of war, felt themselves threatened by the military reforms advocated by the Grand Vizier. The latter had imposed new taxes on commerce, taxes which caused discontent both among the artisans and among the Janissaries, who engaged in smallscale trading during their leisure time. The Sulemā's took it upon themselves to fan Imm grievances. However, the revolt was caused by political factors.

The foreign policy of Ibrahlm Pagina consisted in the avoidance of war; however, the Tulip Period saw a temporary extension of Ottoman sovereignty, on account of the Afghan invasion of Iran. In the anarchic conditions which provailed, a new rivalry brought the Turks and the Russians into confrontation in the Caucasian provinces. Thanks to the mediation of the French ambassador, the Marquis de Bonnac, this tension was resolved in an amicable fashion and a Russo-Turkish treaty, signed 23 June 1724, divided the Iranian spoils between the two powers: the Turks occupied Tiflis, Ereván, Tabriz and the territories to the west of a line from Ardabit to Hamadan, while the Russians took possession of Derbend, Bakû and Dagkistan, This treaty was the occasion for fresh festivities, with exchanges of gifts between Turks, Russians and French, then control of affairs was delegated into the hands of the walks of the frontier regions, and the festivities continued. However, in Iran, the situation was soon reversed: Nadir Shah succeeded in seizing power having overturned the Aighan dynasty and, in 1730, he compelled the Turks to restore the Iranian territory that they had occupied. There was news of the capture of Hamadan and the massacre of its Turkish garrison. The Grand Vizier tried to keep the defeat a secret and to settle matters peaceably through diplomacy, but Nadir Shah refused to negociate. In order to stifle public unrest, it was necessary to prepare a campaign, On 17 July, the Ottoman army paraded at Uskudar, where until 3 August it awaited the arrival of the uncommunicative Sultan. The latter finally joined his troops to conduct a grandiose procession which was nothing more than a show-off, all the soldiers returning to their homes at the end of the parade. But on 12 August, it was heard that the franians had taken Tabriz and brutaity massacred the Turks who had been stationed there. Again, Ibrāhīm Pasha tried to suppress the news, but Janussaries returning from the frontier regions spread the news of Iranian atrocities through the hammains. Discontent mounted, and the Grand Vizier was held responsible for the setbacks. Jamissaries and "wiemis" fanned the fanaticism of the artisans. In his report dated 17 September 1730, the Marquis Willeneuve, the French ambassador, speaks of hesitation to act on the part of the Sultan's court. This indecision was to prove crucial to the success of the revolt, which broke out me the morning of 28 September. The leading officials of the State were on boliday at the time: the Sultan and the Grand Vizier at Uskudar, the governor of Istanbul, Kaymak Mustala Pasha, son-in-law of Ibrahlm Pasha, was busy tending his garden beside the Bosphorus, as was the Kapudan Pasha, another son-in-law of the Grand Vizier. The insurgents were able m act with total freedom. Their leader was Patrona Khalli, an Albanian, formerly a levend [q.v.] on the Suitan's flag-ship Pateona, of whom we have a portrait painted by the artist of the Tulip Period, the Dutchman Vanuaour (1656-1738); be was a man between thirty-five and forty years old, already an active veteran of memory rebellions, a skilled demagogue and inciter of crowds, who made a precarious living, sometimes = an interest trader, sometimes as a town-crief or hamman masseur. The crowd which assembled I the Hippodrome Square (At meydanl) consisted of some thirty artisans, mostly Albanians, who were joined by the tradespeople from the bazaar and about three hundred Janissaries whose Agha had made his escape with great difficulty and had reached Oskudar in disguise. Towards evening, the number of rebels had risen to 2,000 persons. The revolt man the work of a handful of ignorant artisans: Patrona Khafil, Muslu the vegetable merchant and *All the coffee stall owner, but In fact it was skilfully directed by two individuals belonging to the 'ulemā' class: the preacher of Aya Sofya, Ispirizāde Ahmed Efendi, and the Kādi of Istanbul, the Albanian Zulall Hasan Efendi, who had personal reasons for hating the Grand Vizier. According to the report of the Marquis de Villeneuve, dated 7 October, the tragic outcome - caused by the indecision of the Sultan. The court did not return to Istanbul until the night of 29 September, two days after the outbreak of the revolt. On the morning of the 30th, Ahmed III sought to negotiate with the rebels: feeling themselves in a position of strength, the latter demanded that the Grand Vizier and his two sons-in-law, the Ketkhüda Kaymak Mustafa Pasha and the Kapudan Pasha, be handed over to them. The Sultan tried in vain to rescue his favourite; in the night of 30 September, fearing for his own life, he ordered the strangling of Ibrahim Pasha and his two sons-in-law, and at dawn their bodies were surrendered to the rebels, on three ox-drawn hearses. But the insurgents, who had pillaged and sacked the palaces of the viziers, now insisted on the abdication of the Sultan. Züläll Hasan Efendi and Ispirizade, acting in the seem of the rebals, communicated the decision to Ahmed III. In the night of a October, having received the guerantee that his own life and those of his sons would be spared, he abdicated in favour of his nephew Mahmud who was immediately enthroned. Soon afterwards, Mahmud I had the ringleaders of the revolt assassinated.

The age of festivity had come to an end; the tulip gardena, the palaces and the places of recreation had been destroyed. The tulips had gone: they left behind a sumptuous but tragic memory.

LALEZARI, SHAVKH MERMED, Ottoman author of a work on tulips, the Misan al-ashir "Balance of flowers". This treatise on the cultivation of tulips was composed in the reign of Sultan Ahmad III (xxx5-43/1703-30), who had given the author the title of Shikhife-perweran "cultivator of blossoms" on the suggestion of the grand vizier ibrahim Pasha

between 1718 and 1730.

LALEZARI, SRAYEN MERIMED TARIE, Ottoman ¿āḍī and author of several theological works,

often known as Kādi Mehmed.

The date of his birth is unknown, but he was born in Istanbul and was presumably connected with the Lalezar quarter near the Fatib Mosque. He became molla and a muderris. In 1201/1786-7 he was hidi at Eyyüb, and then on 30 Muharram 1204/20 October 1789 he died at his house in Rumeli Hisar. None of his extant works has been printed, but these all exist la manuscript in Istanbul libraries. They include a series of theological commentaries, such as the Misan al-musim fi ma'rifas al-kisfas al-musichim, the Daf' i'tirad Raghib Pasha fi hakk al-fusiis, and on the Kaside-yi naniyye, and various others on works of leading Sunni scholars like al-Maturidi, al-Ghazáll, 'Abd al-Kādir al-Dillāni and al-Birgewi.

(Ep.) LALISH, a valley 30 miles/50 km northnorth-east of Maweil in 'Iraic, in the lada' of Shaykhān and in a largely Kurdish mountain area, famed as the principal pilgrimage centre of the Yazidi sect [see variots]. The siama'iyya of the Yazidis is held from the 23th to the 30th September O.S. (6th to the 13th October N.S.) each year, and revolves round the shrine of the founder, Shaykh 'Adl Musafir [q.v.] and the tombs of other early saints of the sect. The first European to attend and describe the festival mans to have been Sir Henry Layard in 1846 and 1849; a valuable description of the ceremonies as they were held in the 1940s is given by C. J. Edmonds, A pilgrimage to Lalish, London 1967.

Bibliography: given in the article. (Ep.) LALITPUR, the name of a town in the Bundelkhand region of Central India, administratively in the southwards-protruding tongue of the former United Provinces, Uttar Pradesh of the Indian Union. It is situated in lat. 24° 42' N. and long. 78° 28' E. on the Great Indian Peninsula Railway and on the Känpür (Cawnpore) - Saugor road. Tradition ascribes its foundation to Lalita, wife of a Deccani Radia, and till the early 16th century it was held by the Gonds. In the 17th century it fell within the Bundels state of Canderi. In the first half of the 19th century, it passed from Maratha control to that of the British, and in 1844 the District of Canderl was formed, with m name changed in 1861 m that of Lalitpür; in 1891 it was absorbed into Jhansi District. The Canderl and Lalitpar Districts were centres of fighting, under the leadership of Radia Mardan Singh of Banpur during the Indian Mutiny of 1857-8, and Lalitpur town was temporarily abandoned by British troops. The antiquities of Lalitpur include several Hindu and Jala temples, and there is an inscription of Sultan Firms Shih Tughluk dated 759/ 1358.

LALLUDI LAL, the most important translator of Sanskrit works into Bradi-bhasha prose the Fort William College, Calcutta. Born at Agra in 1763 of a family of Brahmin priests, in 1786 sought employment with Nawwab Mubarak al-Dawle of Murshidabad and then settled in Calcutta,

where he died in 1835.

In 1802 John Gilchrist, the Professor of Hindustani (later known = Hindi and Urdû) at the Fort William College, appointed Laliudil as massistant in Bradibhāshā. His primary duties were to help the Professor In his publications of a Hindustani grammar and dictionary. Lalludi also collaborated with the senior Muslim translators of Hindustani in their works. Based on Lalfüdil's interpretation, Kāzim 'Afi Djawān translated <u>Shakunlale</u>, the celebrated Sanskrit drama of Kälidasa (cs. 375-455 A.D.). Laliūdji also translated a book on Hindu polity and wrote an elementary manual of Bradi-bhāshā, but became infinitely more famous for his Premsagar. This is a translation of the tenth book of the Bhagatesta Purdus in Srimad Bhajavatam, containing the life story of Krishna, especially of his boyhood. The original Sanskrit - first translated into Bradjbhāshā poetry by Caturbhudidās in 1510, and Laliudil translated it into lucid Bradi prose, which the Muslims of that century preised highly, both for its content ill its language.

LAM, the 23rd letter of the Arabic alphabet, transcribed == 4; numerical value 30 [see ABDIAD].

Definition: fricative, lateral, voiced. It is called ■ liquid (H. Fleisch, Traité, i. § 3 b) because of the fluidity of its emission. This act of emission comes normally from the two corners of the mouth, I bilateral; it can be made from one side only, with unchanged acoustic results, I unilateral [M. Grammont, 71 penult. This last was probably the case with the did (a lateralised consonant [see Dio]), called al-da7[a, which me made from the right or left side of the mouth (Sibawayh, ed. Paris, ii, 452, ii. 17-18). J. Cantineau has placed I amongst those "consonants outside the classification scheme" (Esquisse, 183, and Consonantisms, 188), see A. Martinet's observations in BSL, xlix[1 (1953), 77. According to Arabic tradition, it is baymiyya, dhamlakiyya, madjinira, and also called mankarifa "incurvated" (see Fleisch, op. cit., § 47 a, d. § 48, c. f. § 49, i, and Cantineau, Cours; 50).

The articulation described above is for the phoneme; for the phonological oppositions which define the phoneme I, see Cantineau, Esquisse, 272, and for

the incompatibilities, ibid., 200.

Law is emphatic | in the word A | fah when it is preceded by the vowels = or a, so that one says 'inda | fah, but li-liah (see references in Cantineau, Cours, 51 n. 1; for a study of its articulation, references in Fleisch, op. cit., 224 n. 1). The treatises = tadjuid set forth the rules according to which I may be found in other words (Cantineau, Cours, 51).

Lam seems to continue an articulation which was similar to it in common Semitic (Cantineau, Esquisse, 172 n. 1); indeed, one may go further and add that "La liquide latérale les trouve me correspondance régulière en sémitique, berbère et couchitique" [M. Cohen, Essai comparatif sur le vocabulaire et la phonétique du chamilo-sémitique, Paris 1947, 182).

Alterations: (a) Exchange of phonemes: l > n in a fairly numerous groups of doublets. In several of these, the phenomenon does not seem to be conditioned, e.g. builds and hunses "mountain peak", and l > r in 'ad mulakatis' and mulakatis' "a piece of

split wood" (Fleisch, op. cit., § 9 f, g).

(b) Assimilation. The f- of the definite article is assimilated when In contact with the "sun" consonants, sc. the dentals to the prepalatals (except for df). For -I when it is final in a word, assimilation of the initial following consonant is especially notable in the case of the interrogative particle hal and of bal "nay, the contrary" (ibid., { 12 k); for the variations of the Kur'an readers, see loc. oil. For the position in the dialects, see Cantineau, Cours, 53-4, to be completed for Egypt by the material in N. Tomiche, Le parler arabe du Caire, Paris-The Hague 1964, 27; and for Mauretania by that of D. Cohen, Le dialecte arabs Harsaniya, Paris 1963, 23-4. In regard to Lebanon one might add milh > muih "well", sår-ina > sår-rna "has been for us", and -lea > -aena "for us" (Fleisch, Études, 398), and for Aleppo (A. Barthélemy, Dict. ar. fr., Paris 1935-54 and 1969), assimilation at a distance, in lath'r (750) and rath'r, rathri and also eskhedes and eskheess (273) "other" or" another".

(c) Dissimilation. For this Cantineau, Cours, 51, and for the dialects, ibid., 53. To the nouns cited there one might add for Lebanon karakol > karakon and karakon "police station" (Fleisch, Etudes, 361 and 188 l. 3, and the examples of J. Grand'Henry in his Le parler arabe de Cherchell, Algérie, Louvain 1973, 42; and also W. Fischer, Die Sprache der arabischen Sprachinsel in Uzbekistan, in

Isl., xxxvi (1961), 238.

Bibliography: Fleisch, Traiti philologie arabe, I, Beirut 1961, and Études d'arabe dialectal, Beirut 1974; Cantineau, Cours de phonétique arabe, Esquisso d'una phonologie de l'arabe classique and Le consonantisme du sémilique, in Études de linguistique arabe, Mémorial Jean Cantineau, Paris 1960;

M. Grammont, Trailé de phonétique, Paris 1933; Zadidiādit, in his K. al-Lâmāt, ed. Māzin Mubārak, Damascus 1389/1969, has gathered together all the uses of lām as a particle -l, la- and li-.

(H. Fleisch)

LÂM, Band, a numerous and formerly powerful Arab tribe living on the borders of Iran and 'Irâk, principally on the plain between the foothills of the Pusht-i Küh mountains and the river Tigris. The easterly limit of the main tribal territory follows the course of the Rüd-i Karkha southwards from Pā-yi Pui to the area north of Hawiza where the river peters out into salt flats. The course of the Tigris between Shaykh Sa'd and 'Amāra forms the westerly limit of that territory. Small and isolated groups of Band Lām have been observed outside the main area—as far afield — Mandall to the northwest and in the Rām Hurmuz district to the southeast.

The tribe is divided into numerous sub-groups which have varied over time in their size and relative importance (A. M. Layard, A description of the province of Khuzistan, in Journal of the Royal Geographical Society, xvi [1846], 45; J. G. Lorimer, Gazetteer of the Persian Gulf, 'Oman and Central Arabia, Calcutta 1908-15, ii, 1081-4; Max Freiherr von Oppenheim, with Werner Caskel, Die Beduinen, Wieshaden 1952, iii, 471-3, and H. Field, Contributions to the anthropology of Iran, Chicago 1939, Anthropological Series of the Field Museum of Natural History, xxix/1, 195-8). According to Lorimer (li, 1085), all members of the tribe spoke Arabic, but minority also knew and used Persian. The great majority of the tribe was, and remains, Shift. In the past, different groups have followed sedentary, semi-nomadic and nomadic ways of life, but in the soth century, particularly since the Second World War, the former has come to predominate. The Band Lam have long had a reputation for being very good pastoralists. In former times they raised a wide range of animals-sheeps, goats, cattle, borses, donkeys and camels. Demand for some of the latter animals has declined sharply in recent decades, and most attention is now devoted to sheep. The Banu Lam also grow crops, chiefly for their own consumption; these include wheat, barley, oats and maize, but little attention is apparently given to rice.

It is impossible to give accurate figures for the population of the tribe either now, or in the past. One estimate made in 1840-1 put the total number of families at about 30,000 (Layard, op. cil., 46). Some seventy years later Lorimer (ii, 1084) estimated the total population to be about 45,000. After fieldwork in 1934, the number of Banti Lam living in Persia was estimated to be about 5,700 familles (H. Field, op. cit., 196). Another source put the number of familles in Persia at 10,650 in 1945 (Admiralty [Great Britain] Naval Intelligence Division, Persis, Geographical Handbook Series, London 1945, 379). A similar source for Trak noted that the Bank Lam were the most powerful tribe on the Tigris, but no figures quoted (Admiralty [Great Britain] Naval Intelligence Division, Iraq and the Persian Gulf, Geographical Handbook Series, London 1944,

371).

The origins of the tribe remain obscure (see von Oppenheim, iii, 459-69, for a summary history of the tribe). Tradition relates that the name of the tribe derives from a certain Lam b. Härifha, a leader of the Kabtan tribe in the Hidiaz; and that one of his grandsons, Barak, led migration to the Hawiza miss of Träk. Later, Häfir al-Läm, a son of Barak, is reported to have quarrelied either with his father,

or with the wall of Hawiza, who was also a leader in the Banu Rabi'a. Hafix is then said to have taken control of the land between Shaykh Sa'd and 'Amara which had previously belonged to the Banu Rabi'a and to have become the founder of the Banu Lām (S. H. Longrigg, Four centuries of modern Iraq, Oxford 1925, 8, and H. Field, The anthropology of Iraq. The Lower Euphraies-Tigris region, Chicago 1949, Anthropological Series of the Field Museum of Natural History, XXI'X no. 2, 349-30). A putative date for these events would be about the end of the 10th/15th century (von Oppenheim, iii, 450 states that the Banu Lām were already living on the east bank of the Tigris in 1573).

groups of Lurs to attack Baghdad,

punishment on the tribe.

The rise to power of Tahmasp Kull Khan (later Nädir Shah [q.v.]) provided further opportunities for insurgency on the part of the Banu Läm. In 1145/17733 Tahmasp Kull Khan laid siege to Baghdöd and the leader of the Banu Läm, 'Abd al-'All, joined forces with the Persians. He apparently agreed to cooperate with the Arab will of Hawks in launching an attack on Bayra, but the decision was not implemented (L. Lockhart, Nadir Shak, London 1938, 68). After the defeat of the Persian army by Ottoman forces under Topal 'Othman Pasha [q.w.] in Safar 1146/July 1733, the Banu Läm helped many of the survivors to return to their native country; for this, a Turkish force led by Ahmad Pasha later Infilicted

The destruction and chaos brought about by the Persian invasion and retreat provided conditions in which tribal rebellion could flourish, and the Banu Lam were not slow to take advantage of them; "Les Muntefilis et les Beni Lames avoient donné plus de peine que les autres aux Paschas" (M. Otter, Voyage on Turquis et en Perse, Paris 2748, quoted in Longrigg, Four conturies, 156). In 2156/1743 Nadir Shah's forces again invaded Turkish territory and they were joined by the Band Lam, who this time did take part in the siege of Basra (A chronicle of the Carmeliles in Persia, London 1939, i, 646-7). During the next century and a half, the pattern of rebellion followed by punitive Ottoman military expeditions was often repeated. Important Turkish campaigns were mounted against the Banti Lam 1763, 1800, 1806, 1849, 1879 and 1911. In 1841 the Persian ruler Muhammad Shah sent an expedition to collect arrears of taxation from Muhammad Taki Khan, the Ukhāni of the Bakhtiyari. During this campaign, which was led by the governor of Isfahān, Mu'tamid al-Dawla, the Bant Lam were plundered by the Persian troops (Layard, loc. cit.). But in later years the tribe had relatively little in fear from Tehran; it seldom paid taxes to the Shab (Lorimer, il, 1085), and it retained a position of autonomy between the Ottoman empire and Persia.

The Banu Lam were often in conflict with their neighbours, particularly with the Lurs, the Al Muhammad and the Muntafile [4.0.]. De Bode, who

visited the area in 1841, reported that it was only the existence of strife between the Banu Lâm and the Muntafik which prevented Diaful from being attacked (C. A. de Bode, Travek in Luristan and Arabistan, London 1845, ii. 198-9). At other times, the tribe was riven by internal leuds, iii these too led to bloodshed and iii intervention of Turkish forces.

Raids by the tribe not infrequently interrupted traffic on the Tigris, and this was seen as a serious menace to British lines of military communication. during the First World War. The Lam attacked both boats on the river and military outposts at this time, and British forces were involved in minor actions against them (A. T. Wilson, Loyalties: Mesopotamia 1914-1917, London 1930, 46, 79, 145; idem, Mesopotamia 1917-1920: a clash of layalties, London 1931, 96). In the years immediately following the First World War, disputes between the Banu Lam and the wall of Pusht-i Küh were again frequent particularly during the summer months when members of the tribe moved into Persia for better grazing (S. H. Longrigg, Iraq 1900 to 1950, London 1953, 107, 158). The rise to power of Rida Shah Pablavi and the establishment of effective central government in Iran reduced both the degree of migration and the incidence of such skirmishes.

Bibliography: substantially given in the article. Von Oppenheim provides many useful references Marabic, Persian and Turkish works, as mill as to the accounts of European travellers. Longrigg, Four centuries of modern Iraq, also has a useful survey of both types of sources. There are references to the tribe in Ahmad Kasrawi, Ta'rihi-i pāmad sālet-yi Khūristān, Tchran 1312/1934-5.

(V. MINORSKY-[R. M. BURRELL]) LAMAK, the Biblical personage Lamech. In Gen. iv, 2r, the invention of music is attributed to Jubal, we of Lamech, but various Arabic sources give primacy here to Lamech/Lamak, of Cain's posterity. Bringing together the origin of the IIII with the invention of music, the story goes that Lamech had an only son in his old age, who ill the part of five, leaving his father full of grief. wishing to be separated from him, Lamech hung the corpse up until it decomposed. There then came to him the idea of making from his foot an sad, on which he could accompany himself in his lamentations. The most detailed, and perhaps the oldest, version of this story occurs in the K, al-Lahu us V-maldhi of al-Muladdal a Dabbl, who in fact cites a lost source going back to the historian Higham b, al-Kalbi. With variants, the story comes up again in several authors, notably in Ibn Khurradadhbih (K. al-Lahw), al-Bayhaki (Maddsin), al-Diabie (Tarbi'), al-Mas'udi (Murudi), Ibn 'Abd Rabbihi ("tod) and al-Adfuwi (al-Imiae bi-ahkām ai-samā'). Elements of Hebrew legends and of the universal myths concerning the origins of music can be found in these stories.

On the other hand, al-Tha labt retails in his Kisas al-anbise? [q.v.] the Hebrew legend about Lamech, how the latter, when blind, inadvertently killed his father Cain and then his own dear son who was accompanying him out of hunting; after these events, he recited the first Bihlical lament (Gen. Iv. 23). This source, together with others, emphasises the connection of music, invented in the bosoms of the posterity of Cain, with the excesses and trickery of Satan.

Bibliography: See A. Shikah, The theory of music in Arabic writings (RISM, BX), Munich 1979, index, s.v. Lamek. (A. Shiloah)

LAMAS-SO. . small river of Southern Anatolia, descending from the Eastern Taurus and flowing into the Mediterranean, about 60 km. in length, whose canyon, carved deep in Miccene fimestone, constituted in antiquity the border-line between lowland Cilicia and Trachosan Cilicia. Muslims and Byzantines often assembled on its banks for exchanges of prisoners, in the 3rd-4th/9throth centuries (see below). The flanks of the upper river, above Kunl Gerit, are totally uninhabited; along the lower reaches a series of ancient ruins marks the edge of the plateau. At the mouth, the small township of Lamas retains the name of the ancient settlement of Lamos (a simple village according M Strabe, ziv, 6, not to M confused with the town of the same name situated much further to the west, between Gasi Paşa and Anamur; cf. W. H. Ramsay, The historical geography of Asia Minor, London 1890, 382, 455-6). Nearby are the important ruins of an aqueduct which carried the waters of the rivers as far as Ayas (Elaeússa-Sebaste) at a distance of 14 km., and of a mediaeval fortress, held for a long period by the Armenians (Lamas Kalesi).

Bibliography: Among the numerous descriptions by travellers, in particular F. X. Schaffer, Cilicia, Gotha 1903 (Petermanus Mittellungen, Erginzungsheft 141), 64-5; J. Th. Bent, Explorations in Cilicia Tracheia, in Proceedings of the Royal Geographical Society (1890); L. M. Alishan, Sissonan on Utermino-Cilicia, Venice 1899, 423-14. (X. PLANHEL)

On the banks of the Lamas-Sü there took place, on ______ occasions, payment of ransons and exchange of prisoners of war with the Byzantines.

The first of these arrangements, in the reign of the caliph Haran al-Rashid and that of the emperor Nicephorus 1, was effected in 189-90/805, in the name of al-Kasim b. al-Rashid, by a conuch of the caliph named Abû Sulayman; the exchange lasted 12 days, and 3,700 Muslims were freed. The second (fida Thabit b. Nasr) took place under the same sovereigns in 192/808; it lasted 7 days, and 2,500 Muslims of both sexes were exchanged. The third (fida Khākān), in the reigns of al-Wāthik and of Michael III, in Muharram 231, September 845, lasted to days and involved some 4,000 prisoners; the chief hags Ahmad b. Abs Du'ad [q.v.] sent an emissary to interrogate them on the question of the creation of Kur'an, with instructions to leave in the hands of the Byzantines those who refused to comply with official doctrine. The fourth (fida' Shunayf) was effected in the reigns of al-Mutawakkil and of the same emperor, in Shawwal 241/February-March 856; it lasted 7 days and allowed the liberation of 2,000 men and 200 women. The lifth (fida) Nass b, al-Ashar wa-"All b. Yahya" took place in the reigns of the sovereigns, at the beginning of Şafar 246/April-May 860; it lested 7 days and involved 2,367 Muslims of both sexes. The sixth (fida? Ibn Tughan) was effected in Sha'ban 283/September-October 896, in the reigns of al-Mu tedid and of Leo VI; it lasted to days and allowed the liberation of 2,500 or 3,000 Muslims of both sexes. The seventh took place in Dhu 'l-Ka'da 292/September 905, in the reigns of al-Muktaff and of the meet emperor; it lasted 4 days and 1,155 Muslims of both sexes were freed; Rustam conducted the negotiations, but this exchange is usually known by the name fidd' al-ghadr "the ransom of treachery"), because the Byzantines reneged on their guarantees and took several thousand prisoners. The eighth, also effected by Rustam, took place in Shawwal 295/July 908, and 2,842 prisoners of both were released; it bears the name fida? al-tamam ("the ransom of completion") because it supplemented the preceding. The ninth (fidd) Mu?. mis) magotiated in Rabi II 305/September-October 917 in the reigns of al-Muktadir and of Constantine II; it lasted 8 days, and 3,336 Muslims of both were the beneficiaries of it. The tenth (fidā? Mufli)) was effected under the same sovereigns, in Radjab 313/September-October 925; it lasted 19 days, and nearly 4,000 Muslims of both sexes were freed. The eleventh, in Dhu 'l-Hididia 326/October 938, in the reigns of al-Radl and the same emperor, was negotiated by Ibn Warka"; it lasted 16 days and 6,300 Muslims of both sexes regained their freedom, but foo prisoners remained in the hands of the Byzantines and subsequently freed in small groups. The twelfth and effected in Rabi' I/October 946, under al-Mutis and the same emperor, by Nasr al-Thamali, but in the name of Sayf al-Dawla (it also bears the name of fide Ibn Hamdan); 2,482 Muslims of both sexes were exchanged, and 230 remained in the hands of the Byzantines. Subsequent exchanges do not figure in the lists, since they cannot have taken place on the Lamas-Su, benceforward situated in Byzantine territory; we may note in particular that of which Abû Firas [q.o.] was the beneficiary, in 355/966, at Samosata.

LAMBADIS, a name of unknown origin designating in general a group of tribal peoples, ancient nomads, who were active in western and southern India as salt carriers, cattle herders and porters of general merchandise. They were known by different names in different parts of southern India: Lambani, Brinjari, Boipari, Sugali and Sukali, as well as Lambadi.

The origins of the Lambadis an obscure, but appear to be similar to those of groups like the Koravar and Yerukala. All are ancient nomadic tribal groups, who maintained their freedom of movement by securing a place in the economic structure of premodern ladia - carriers, herdsmen and porters in an age when modern modes of transport and adequate roads were non-existent. Apart from their occupation as carriers, members of such groups were often found on the fringes of villages in hunters and distillers of toddy,

Edgar Thurston (see Bibl.) indicates that the Lambadis were mainly Hindus, and clung to their tribal rituals and mixed Hindu-animistic religious practices. However, some Lambadis, in the Telugu coastlands and the Mysore highlands, claimed to be Muslims and aspired to the title of Shayhh. Their numbers were very smail, but nevertheless they represented a very basic level of Hindu-Muslim interaction within the Indian subcontinent. At one end of the spectrum were the orthodox Urdu-speaking Muslims of northern India, at the other end odd tribal groups caught in the transition from tribal identity to something more distinctly Muslim. Some groups of Lambadia fell into this category, as did the Ahir cowherds of the Andhra highlands and the Dudekula and Panjuvetti cotton cleaners of coastal Andhra and Tamil Nadu.

Such groups were generally despised by the body of Muslims, and possessed few overt signs of being followers of Islam. The Muslim Lambadis spoke a dislect of Telugu strongly interlaced with Tamil and Kanarese words, followed no Muslim marriage rites and practiced circumcision. In dress, daily life-style, names and casual worship, however, they retained many tribal and Hindu rituals. Like the more numerous Dudekula, who were also of Telugu origin, the Lambadis were endogamous and rarely mixed with other Muslim groups, who regarded them with scorn.

The only settled groups of Muslim Lambadis found in southern India | located in the Anantapur district of the old Madras Presidency and in the region of Mysore. There are three recorded groups, all Telugu-speaking, with bards or priests known as Tamburian (or Thamburi), who appear to be the equivalent of the Hindu Lambadi priests or blad. Most of these Lambadi Muslims claimed to have been forcibly converted by the Mysore Muslim prince Tipu Sultan (q.e.) in the late 18th century, who found the nomadic Lambadis ideal espionage agents in his wars against the British in Madras. However, in Anantapur also claimed descent from carriers who had accompanied Mughal generals in their invasions of southern India.

Until the 19th century, nomadic tribal groups

like the Lambadis had a distinct function in the economic life of India; but with the evolution of modern modes of transport their status and fortunes declined. The Hindu Lambadis (and Karavars and Yerukala) probably suffered more than their Muslim counterparts, is the jair system made the changeover to alternative occupations very difficult. Many in fact took to brigandage and petty crime, and were officially classified as problem groups and habitual criminals. The Muslim Lambadis were far fewer in number, and appear to have made the transition to sedentary occupations, though generally they were ones of low social and economic status.

The Dudekulas, a similar Muslim marginal group, were more fortunate in that their traditional occupation-cotton cleaning-facilitated their absorption into the economy of modern India. By the early soth century, they were merging into the mainstream of Islam in the subcontinent, with overtly Muslim practices and names replacing those of their pre-Islamic past.

By the middle of the 20th century, the Muslim Lambadis appeared to have all but vanished. They were no doubt absorbed into the surrounding body of Muslims, and probably can still be traced amongst the more impoverished and illiterate Muslims in remote areas of Andhra Pradesh in India.

Bibliography: The most detailed description of the Lambadi group can be found in E. Thurston's Ethnographic notes on Southern India, Madras. 1906, and vol. iv of his Castes and tribes of Southern India, Madras 1909. Thurston, however, concentrated on Hindu Lambadis, with only an occasional reference to the Muslim mes. The same is true of the District Gazetteers, especially G. A. Grierson, North Arcot, Madras n.d., and W. Francis, Bellary, Madras 1904: W. Francis, Anantapue, Madras 2905, does mention the Tamburian priests. J. Dupuis, Madras et le Nord du Coromandel, Paris 1960, puts the Lambadis in their tribal and occupational perspective, whilst L. Dumont, Une souscasto de l'Inde du Sud, Paris 1957, further explains the painful transition from porterage to crime for the nomedic tribal peoples in an excellent case study. G. A. Herkiots, Islam in India, London 1832, makes a brief reference, perhaps the earliest, to Muslim Lambadis. In addition, there are a few isolated references scattered through the records of the British administration of the Medras Presidency.

In official publications and in Thurston's Castes and tribes of Southern India, the Dudekulas and Panjuvettis and far more prominent than the Muslim Lambadis, and references to them can be found in the following District Gazeteers: W. Francis, Anantabur, Madras 1905; idem, South Arcol, Madras 1906; F. R. Hemingway, Godavari, Madras 1907; C. F. Brackenbury, Cuddapah, Madras 1914; Gunder (statistical appendix), Madras 1915; A. F. Cox and H. A. Stuart, North Arcot, Madras 1895; W. Francis, Bellary, Madras 1904; F. R. Hemingway, Trickinopoly, Madras 1907; W. Prancis, Vizagapatam, Madris 1907. See also references in Census of India, 1901, XV, 1911, xil, 1921, xiii. Brief references occur III T. W. Arnold, The preaching of Islam, rept. Lahore 2961; 1. H. Qureshi, The Muslim community in the Indo-Pakislan subcontinent, The Hague 1962, and Murray's handbook of the Madras Presidency, (K. McPHERSON) London 1879. LAMENTATION (see MIVÁHA).

LAMCHANAT, a district of eastern Af-

shinistan, thus designated in the Islamic sources of the later mediaeval period, deriving its name from its urban centre Lamghin (later form, Laghman). It comprises the fertile plain of the middle course of the Kabul River, much of it lying to the north and east of Kâbul city [q.e.] itself. It is bounded on the north by the mountains of Kafiristan (q.v.), modern Nüristan, and includes the lower reaches of the Alingar and Alighang Rivers; on the south and east, it adjoins, and was sometimes considered (e.g. by Babur) to include the region of Nangrahar and the comparatively recent town of Djalalabad [g.v. in Suppl.]. Ethnically, the region includes Pushtuns and Tadīlks, and also a considerable proportion of Dardicspeaking Pathalls [see DARDIC AND KAFIR LANguages), who are probably descended from the ancient Hindu and Buddhist population of pre-Islamic Kapitá and Nangrahar; the ancient Iranian Paraci language also lingers in a few villages of the region (see Arghanistan, ii. Ethnography, and

iii, Languages].

The town of Langhan was already a flourishing one in the 4th/roth century. The Hudad al-falam (372/982) describes it as being situated on the middle stretch of the Kābul River (which the anonymous author in fact calls "the river of Lamkan" [sic], regarding this, pius "the river of Dunpur", Babur's Adinapur, ... constituting the modern Kabul River), and as a residence of merchants and an emporium for the products of India (tr. Minorsky, 72, 92 - §§ 6, 10, 209, 252). Until the edvent of the Turkish adventurer Sebüktigin and the Ghaznawids [q.v.] towards the end of that century, Lamghan was still part of the Indian cultural and religious world, and the Hudiid al-falam specifically mentions the presence of idol temples there. It lay me the western marches of the extensive kingdom of the Hindushahis [q.e.] of Wayhind, which spanned the middle Indus and lower Kābul River basins: 'Utbī's Yamīni describes how Sebüktigin twice defeated the Rādjā Jaypāl in the Lamghan region, annexed it to his dominious and implanted Islam there (M. Nazim, The life and times of Sulfan Mahmud of Ghazna, Cambridge 1931, 30, 36, 86, 194). Islam was still however precarious there for some time to come, and the Muslim settlements were vulnerable to attacks by the pagan Pasha'ls and Käifrs in the north of the Käbul River. An anecdote in Nigāmi 'Arūdī Samarkandi's Cahār makala describes how the intidels raided and despoiled Lamghan during the reign of Sebüktigin's son Mahmod of Ghazna (388-421/998-1030), = that the vizier Ahmad b. Hasan Maymandi bad to remit that year's taxes (ed. Kazwhil, 18-19, revised tr. Browne, 20-1). Yet a century or so later Lamghan was producing Muslim scholars, for Yakot mentions a family of Lamghani Hanafi kadis and faliths who had settled in Baghdad during the 6th/12th century (Buldan, ed. Beirut 1374/1955-7, v. 8, s.v. Låmghan; Barbier de Meynard, Diel. géographique, historique et littéraire de la Perse, Paris 1861, 503).

During the early years of the 10th/16th century, the Mughal prince Bābur [q.v.] spent much time in this region, and in the Bābur-nāma he expatiates on the beauty of the forested hillsides (cypress, hoim oak, etc.) and on the fertility of the valley bottoms (corn, rice, oranges, citrons, mulberries, and in one favoured spot, even date palms). It is in this that we find the name given as Lamghānāt, and the area described as containing administratively five tūmāns and two buiūhs of cultivated land; a "greater Lamghanāt" included the Muslim-settled parts of the lower Kāfiristān valleys, including the easterly one

of the Kunar River (Bābar-nāma, tr. A. S. Beveridge, London 1922, 206 ft., 222, 424, 494, 510-11; cf. also G. Searcia, Sifal-nāma-yi Darviš Muhammad Hān-i Gāsi, cronaca di una crociata musulmana contro i Kafiri di Latmān nell' anno 1582, Rome 1965, Introd. pp. cxxxviii-cxt). Lamghān was doubtless the base for many expeditions of diihād against the Kāfira, and as such in frequently mentioned in the Kābull Persian account of the crusade ied by the Muhaml Emperor Akbar's younger brother Muhammad Hakim, governor of Kābul, in 990/1582, cf. Scarcia, op. cit., index to text, av.

The district of Lamghan is today an important food-producing area, supplying Kābul, Djalālābād and other centres with rice, cereals, fruit, etc., and it further produces textiles (J. Humlum et alsi, La géographie de l'Afghanistan, étude d'un pays aride, Copenhagen 1959, 172-3, 327-8). Since the administrative reorganisation of 1964, province specifically called Laghman has come into being, and this comprises essentially the central part of Na-

ristan, with its centre at Meh Tarlam.

Bibliography: Given in the article.

(C. E. Boswonen)

LAMIC. ABU 'L. HASAN B. MUHAMMAR B. ISMICL, Persian court poet, born about 402/2011, died some time after 460/1067, who left a dimin of fasidas, only some 1,100 bayes of which have survived.

Although Lâmi'l was a contemporary of, and panegyrist to, such major historical figures as Tughrli Beg, Alp Arsian and Niçām at-Mulk, very little reliable information about his life and work has come to light. From his Dirain we learn only that he ama a native of Gurgân and that he went to Baghdād in the train of Tughrli Beg in 447/1055. The tadhkiras of Dawlat-Shāh, Adharbīkdūli and Ridā Kull Hidāyat state that he was a student of Muhammad al-Ghazāli and a disciple of the poet Sūzanl, but Nafist has shown that these statements — fabrications (cf. Laghat-nāma-yi Dihkhudā, s.v.).

Stylistically, Lämi'i was an enthusiastic but unexceptional imitator of the great Ghaznawid court poets, 'Unsuri, Farrukhi and Manūćihri, particularly the latter. His poems reflect none of the stylistic innovations that may be seen in the works of his contemporaries Arrahi and Abu 'I-Faradi Rûni

[g.v. in Suppl.].

Bibliography: Lami's Dinds has been published twice, by Sa'id Nafisi in 1319/1941 and by Muhammad Dabir-Siyaki in 1353/1974, both times in Tehran. The only studies of his life and work are to be found in the introductions to these editions, the substance of which is repeated in the article on Lami's in the Lughat-nana-yi Dihkhada already cited. There is a brief chapter on Lamis's use of metaphor and simile in Muhammad Ridh Shafi's-Kadhani's Sawar-i khiyal dar shi'r-i Pdrst, Tehran 1350/1971. (J. W. CLINTON)

LAMIT. Shaves Named B. Othman B. All al-nakkash B. Ilyas, a celebrated Ottoman Soft writer and poet of the first half of the roth/roth century. He was born in 877/1472-3 at Bursa, where he spent all his life. His grandiather, Nakkash All Pasha, teacher of Fawri [q.n.] and one of the great painter-carvers (nakkash) of his time, had in his youth been taken by Timur to Samarkand, where he perfected his art; after his roturn, he contributed masterly decorations to the Yeshil Diamic and the Yeshil Türbe in Bursa.

As the son of Othman Celebi, the deflerder of Sultan Bayazid II's tressury, Lami'i learnt Arabic and Persian, and received an excellent madrasa

656 LÄNLIT

education from the molids Akhawayn and Muhammad b. Hådidil Hasan-tade. He aspired to the career of purist and theologian, but his father's death created difficulties (preface to Farhda-ndma, see A. S. Levend, Lomif'nin Farhad it Sirin'i, in TDAY Belleten 1964, Ankara 1965, 67). He seems to have written worldly poetry and prose, until he became aware of his preference for the mystic path, farha, and took as his spiritual guide the Nakghandi Shaykh Amir Ahmad ah-Bukhari, who exerted a decisive influence on his life.

Lâmiss success as a writer began when two of his works attracted the attention of Sultan Sellm I, who awarded him a pension of 35 skies a day, and bestowed on him the revenues from a village. Sultan Süleymän, whose accession he celebrated in a chronogram, kept up this patronage; to his Grand Vizier Ibrāhīm Pasha (q.s.), who showed him the greatest favour, Lāmis dedicated several of his mathnawis as a mark of gratitude. Already in 918/1512 Lāmis was

able to found a wakf of 4,000 akkes.

Occasional complaints over lack of money did not unanswered: Ibrahlm Pasha awarded him a stipend of 20 ages daily which Lami'l needed for the education of his children. He had married early and had three sons and daughter; among his descendants, his son Derwish Mehmed Celebi, known as Lem'l, a mudarris and author of a work on prosody, and a grandson known — Lami'l-zade, are mentioned. In his private life, Lami'l was described as outspoken, persistent in his opinions, witty and fond of literary jests. He died in 938/1531-2, and was buried in the graveyard of the (no longer extant) mosque built by his grandfather on the Citadel of Buria.

The fact that Lâmi'l, who never went to court, owed his livelihood to Ottoman sultans and Crand Vizier, allows is surmise that be conformed to the expectations of his patrons. Their declared aim was to blend the refinement of Persian poetry with the vigour of the Turkish style cultivated in Anatolia, while welcoming the best of Eastern

Turkish poetry.

Significantly, Lämi'i took as his models two great near-contemporary poets of Timbrid Herat, the Persian Diami [q.v.] and his Turkish friend, the minister Mir 'All Shir Nawa'i [q.v.], both Nakshbandis like himself.

In a literary age which restricted any poet, Turkish Persian, to conventional forms (allegory being the prevailing fashion), Lâmi'l me encouraged by his Ottoman patrons to turn his efforts originality in the direction of the thomes. Passing by such well-worn stortes me Laylà and Madjinfin (q.v.) or Yûsul and Zulaylhā, Lāmi'l concentrated his talent in introducing into Turkish literature fresh themes such as Sham' me parmona, Salaman us Abadi and Hafi paykar, incidentally preserving two themes that had virtually sunk into oblivion in Porsian literature: Wis us Rāmin, for which one of the me Gurgani [q.v.] manuscripts could only be found after mong search, and Wāmi's u 'dāhā', of which the Persian original by Unsuri (q.v.) is now lost.

Lamiq developed the mundiana genre and experimented, as had become customary for poets, with Caghatey Turkish. It was Lamiq's diversity and originality, and not only his renderings of works by Diami, which carned him the honorific epithet "the

Diami of Rum".

Lami've "reasons for writing", sabab-i ta'lif, and additions to his translations, are worth a special study (cf. Babinger, 264); this would reveal the independent and lively intellect of this writer, whose

originality was achieved not by breaking out along new lines but by fusing new themes with the traditional conventions. About thirty of his works are known. He wrote eight mathrawis and a great deal of other poetry, but is better known for his prose works. Viewed chronologically, his major works are as follows: (1) The Lata if-nama, a collection of facetious and partly scandalous stories in prose, probably written from the time of his youth and continued over the years; the unfinished book, which contains valuable information such as that on the old poet Shayyad Hamza (see S. Buluc in IA. s.v.), was completed in 988/1380-1 by his son Lam? (P. N. Boratav in Ph T Fundamenta, il, 55); - (2) Shark-i dibādja-vi Gulistān (according to the Farhādnama, Lami'l commented on the whole Gulistan, A. S. Levend, op. cit.), a commentary on the preface to Sa'dl's [q.v.] "Rose garden", completed in 910/ 1504; - (3) Hum u dil, ("Beauty and the heart"), a translation in prose of Fattabl's (q.v.) allegorical work, dedicated to Sultan Sellm I, studied by R. Dvoták, Husn u dil, persische Allegorie von Fatidhi aus Nisapile, Vienna 1889; - (4) Shawdhid al-nubuwa ("Distinctive signs of prophecy"), an expanded and commented prose translation of treatise of Diami, completed in 915/1509-10, printed 1293/1876 Istanbul, ed. 1958 Muzaffer Özak; — (5) Guy = langhan, ("Balt and bat"), Lamid's first mathravi, for which, inspired by a religious dream, he made use of 'Ariff's (d. 853/1449) allegorical poem, studied by N. Tescan, Lami Pnin Gay w Çevgan mesnevisi, itt Omer Asım Aksoy armağanı, Ankara 1978, 201-25; - (6) Farkād-nāma or Farkād u Shirin: interestingly enough, Lämi'l used for his second matheaut, written in honour of Selim I, the Eastern Turkish version by Mir 'Ali Shir Nawa's, who had introduced radical changes in the old theme, especially by replacing Khusraw as hero by Furhad (see FARHAD WA-SHIRIN). Lamin, who undertook the work on the request of Fenari [q,v,] Diamil al-Din Mehmed Shah, who had just acquired a Khamsa by Nawa'l, claimed only to have altered the style (uslab), but he made also alterations in the story (A. S. Levend, op. cit., 88, 110 f.), ir. . Hammer, Stuttgart 1812; -- (7) Absál u Salamán, his thírd mathrawi, dedicated to Selim 1, is the first Turkish treatment of Djami's allegorical work with considerable additions; -- (8) Futth at-mudjahidin li-taruth milità al-mushahidin ("Conquests of the champions of Islam giving rest to the hearts III the spectators"), better known as Tardiama-yi Nafahdi al-uns ("Translation of the Breath of divine intimacy"), a translation of Djami's Suff biographies with important additions on more than thirty Anatolian Şūfis, in prose, begun in 917/1512 and finished in Radiab 927/April 1521, on the see of Süleymän's Beigrade campaign; the book was printed in Istanbul 1270/ 1853:4 and 1289/1872; -- (9) Shame a parentes ("The taper and the moth"), his fourth matheaut, written in honour of Süleymän after the conquest of Rhodes 929/1522, but sent to him later; it that Lami'l used for this allegorical poem not the accepted Persian version of Ahli-yi Shīrāzī, composed in 894/ 1488-9, but that of a certain Niyazi ('Abd Allah Shabustari; G. K. Alpay, Lami's Chelebi and his works, [see Bibl.], 88 ff.), a second-rate author whom he need not mention in his preface; — (10) Wāmiā = "Adhea", his fifth mathauri, translated at the request of Sultan Süleyman from the no-longer-extent Persian version of 'Unsuri; parts were very freely tr. by J. von Hammer, Wamih und Asra, das ist der Glübende und die Blübende, Vienna 1833; - (11)

Makiel-i Imam Husayn ("Martyrdom of the Imam Husayn"), his sixth mathnawl, for which no specific source is named: Lami'l reacted here against the warnings of some 'dama' concerning the recital of these martyrdom narratives in public; illustrated copies have survived; - (12) Shahrangiz, a poem in praise of Bursa in expectation of a visit of Sultan Süleymän, published at Bursa 1288/1871-2, tr. A. Pfizmaier, Die Verherrlichung der Stadt Bursa, Vienna 1839; — (13) Munāşara-yi bahār u shitā? ("Controversy between spring and winter"), an extensive poem using Bursa and the Keshish Daghi as a stage-setting, letanbul 1290/1873; - (14) Munsha'āt i makātib or Nisāb al-balāgka, Lāmiti's letters; — (15) Manahib-i Hadrat-i Uways al-Karani, a prose legend; on the few mas,, see G. K. Alpay, op. cit., 82 no. 9; - (16) Ibrat-numa or Ibrat-nama ("The exemplar") written after the battle of Mohácz (932/1526), a prose work in two parts, legendary accounts of holy persons, and stories with moval significance; their agreeable literary style procured wide popularity for this work, printed twice in 1273/1856-7 and 1327/1909; — (17) Sharaf al-insan, ("The nobility of man"), perhaps Lami'l's bestknown prose work, written in 933/1526-7. The theme, the contest of man with the animals, is taken from the Rasa'il Ikhwan al-safa'; -- (18) Wis u Ramin, his seventh matheaut, in honour of Süleyman, appeared in the same year; Lāmi'i uses Gurgānī critically and changes the tone drastically; "instead of expressing the intensity of human passions, Lami Tries to amuse and edify. The end of this poem is tinged with mystic reflections . . . " (V. Minorsky, who had not seen Lami'l's work, in Vis a Ramin, ■ Parthian romance, in BSOAS, xii [1947], 31-2); --(19) his Diwax of about 10,000 verses, compiled in 936/1529; -- (20) A work on the mathnawi Haft paykar ("The seven effigies") based on Hatiff's [q.v.] Haft mangar, was interrupted by Lami'T's death and completed by his son-in-law, Rüshent-zäde.

A comprehensive description of Lamin's works, with reference to the manuscripts, is contained in G. K. Alpay, Lami's Chelebi and his works, in JNES, xxxv (1976), 73-93, to which should be added N. Tezcan's article Lāmi Tuin Gūy u Çergün mesnevisi (sec above). (B. FLEMMING)

LAMLAM, a generic name given by mediaeval Arabic authors to the animistic African peoples, considered to be cannibals, living to the south of the Muslim sultanates of the Sudanese zone; other versions are Dahdam, Damdam, Iamiam, Limiyyia, Namnam and Temiam.

Al-Mas'údl (before 356/957) places the Dahdam

upstream from Gao and says of them "They fight amongst themselves. They cat people. They have a paramount king who has other kings under his authority. In his land there is an important fortress in which there is an image in the shape of wwoman which they venerate and to whom they make pilgrimages" (tr. in Cuoq, Recueil, 61). This passage is repeated by al-Bakri (460/1068), who speaks of the Damdam, and by al-Idrisi (548/1154), who speaks of the Lamiam who are raided by the slave merchants of Takrür and Ghāna. Ibn Sasid (before 685/1286) speaks of, as well as the Lamlam of the west, the Damdam to the south of Ethiopia and Nubia, and his information is repeated by Abu'l-Fida' (721/1321). Al-Dimashķī (before 727/2327) mentions the lakes of the Tamim and the Damdam, a name also borne by m river emptying into the Indian Ocean, and equally speaks of the Lamlam to the south of Chana. According to al-'Umari (before 749/1349), the Damdam are a people employing horses and hostile to Mansa Mūsā (Mossi?). Ibn Khaldūn (784/1382) and al-Makrizi (846/1442) repeat the information of Ibn Safat about the Damdam invading Ethiopia and Nubia. Leo Africanus takes over from al-Makrizi the name of Tamim in order to make up a kingdom of Temiam, and it is under this form that knowledge of it came to European writers of the 16th century, such as Marmol 1573, Belleforest 1575 and Anania 1582 (lamiam).

The 19th century explorers speak of them mainly in the form Yernyem or Niamniam (see Cooley, loc. cit., below).

Bibliography: W. D. Cooley, The Negroland of the Arabs..., London 1841, rept. 1966, 211-16; J. Cuoq, Resuell des sources arabes concernant l'Afrique occidentale du VIIIº au XVIº s., Paris 1975 (R. MAUNY)

LAMT, m word of obscure origin which denotes the oryx of the Sahara [see MANAT]. Now the word is obsolete and occurs only in a proverbial expression inspired by the speed with which it runs: "he runs like a lamt" (see M. Hadj-Sadok, Description du Maghreb et de l'Europe au III:-IX: siècle Algiers 1949, 103, n. 159). It is also used in northern Algeria, where Beaussier (Dict., s.v.) found it applied to a mythical animal which, even though it had only one foot, was very swift.

Arab geographers of the Middle Ages referred to the lam/i in association with the tribe of the Lamia [q,v.], who were particularly famous for the shields they made from the skin of this animal $\{daraba\ lamilyya\}$. In this expression, the adjective conjusts as well have been derived from lam/a as from lam/i, so the two terms may only be apparently related and the connection may be \blacksquare arbitrary one.

The earliest mention of these shields (darak) may be found in al-Ya'kübi (K. al-Buldan, 345, tr. Wiet, Cairo 1937, 206, n. 1), who says simply that they were white in colour, or in 1bn al-Faith al-Hama-dhāni (Mukhiasar K. al-Buldān, 81, tr. H. Massé, Damascus 1973, 99; ed-tr. Hadj-Sadok, op. laud., 33, 35), who is more explicit. He describes how the inhabitants of Anbiya and the Lamta soak them in milk for a whole year with the result that "a sabre rebounds off them, and if it does manage to penetrate, it sticks - hard that no-one can pull it out". Curing leather in milk makes shields (not only those made by the Lamta) better than those from India, where elephant hide is used. That was the opinion of al-Masfodi, (Murūdi, iil, 18 = § 859). Al-Zuhri (K. al-Diatrafiyya, ed. Hadj-Sadok in BEO, Damasons (1968), §§ 314-15, in his description of the lamf,

records that lamtivya shields were offered to the kings of the Maghrib and al-Andalus. It is in this last country that E. Lévi-Provençal (Hist. Esp. mus., ill, 93) says that "the most desirable shields were those made from lamf leather". The name of the animal was certainly well-known, especially in Portuguese: it was called lant, dant, etc. Another point is made by al-Bakri (Description de l'Afrique septentrionale, ed.-tr. de Slane, 19653, 171-231), who says that the best (and most expensive) shields made from the hides of old females. The place where they were made is said by al-Idrial (Opus geographieum, Naples-Romo iii, 224, ed. H. Pérès, Algiera 1957, 37) to have been at NOI (see Yākūt, s.v.), a centre for the Lampa near Joulimini; he says that "the Maghribls am them in battle because they light yet solid". More information is provided by the Egyptian Ibn Zunbui al-Mahalli (roth/r6th century), who also describes the lamf (Inhfat al-muluk, tr. E. Fagnan, Extraits intdits relatifs an Maghreb, Algiers 2924, 179-80) and says that these shields "are special, because holes made by arrows or spears close up again by themselves and so they never lose their value - defensive weapons". Leo Africanus (Desc. de l'Afrique, tr. Épaulard, Paris 1956, 559, see also 452-3) has a paragraph devoted to the lamf, and says that in the summer it is easier to catch the animal because the heat of the sand affects its hooves. As far as the targes (lambiyya) are concerned, he provides more up-to-date information additional to the earlier accounts and says: "Nothing except bullets from fire-arms can pierce them, but they very costly."

These defensive arms are probably no longer made except for tourists, but until recently the Touareg (at least, the Touareg nobility who had the sole right to carry them) still used them and they were "escutcheon-like in shape and significance; the decorative motifs have magical qualities associated with them." (H. Lhote, Les Touaregs de Hoggar, Paris 1944, 325-6, with illustrations; also H. Bissnel, Les Touaregs de l'Ouest, Algiers 1888, 95). When P. Broundid was writing, the targes of Ahaggar had the man name as the animal, the hide of which was used to make them, them, pt. themsen.

(Dict., ii, 602-3).

Ferrand, Tuhfat al-albāb, in JA (1923), 43-4, 248-9; H. Lhote, La chasse ches les Touaregs, Paris 1951, 75-82; R. Mauny, Tableau géographique, etc., Dakar 1959, 256. (P. Virá)

LAMTA, a large Berber tribe of the Baranis family. Its exact origin does not seem to have been known to the Arab and Berber genealogists, who simply make them brethren of the Sanhädja, Hasküra and Gazüla; others give them a Himyarite origin like the Hawwara and the Lawata (g.m.).

The Lamta were one of the nomadic tribes who wore a veil (mulsihthaman). One section lived on the south of the Mzāb, between the Mussifa — the west and the Tārga (Tuareg) on the east; they even seem to have extended as far as the Niger. In the south of Morocco, in al-Sus, where there were Lamta who led a ——dic life, in company with the Gazúla, the Lamta occupied the territory nearest to the Atias. On the coming of the nomadic Araba of the Maskil family, the two sections of — Lamta were absorbed by the Dhawil Hassân; the remaining

sections then joined the Shabanat, another Mackil

tribe, to oppose the Gazula who joined the Dhawl Hassan.

In the territory of the Lamta of al-Sas at the mouth of the Wadi Nai (now Wad Nan) lay the commercial town of Nai or Nai of the Lamta, the first inhabited place one reaches on coming from the Sahara. Several Moroccan dynastics have struck coins there.

The jurist Ugg ag b. Zallū of Sichilmāsa, a pupil of Abū 'Imrān al-Fāsī [q.v. in Supph], and a member of the tribe of Lamta; one of his pupils 'Abā Allāh b. Yāsīn al-Gazūll, founder of the Almoravid empire [see Al-MURĀBIŢŪN].

The country of | Lampa was noted for | shields made at Nûl with the skin of the fami antelopo [c.v.].

Lamta and Nül; Idrisl, Opus geographicum, Naples-Rome, tasc. iii, 221-5; Leo Africanus, Description do l'Afrique, tr. A. Épaulard, Paris 1936, index (esp. 452-3, where H. Llote's long note should be regarded with care)

(G. S. Collin⁸)

LAMTONA (in Leo Africanus: Luntuna or Lumtuna), a great Berber tribe belonging to the branch of the Şanhādja who led a nomadic life, and like other tribes of this branch forming part of the Mulaththamilm or "wearers of the vell" [see

lithām).

The Lamtina nomadised over the western Sahara. where between the and/8th and 5th/auth conturies they played a considerable political role. According to al-Bakri (439/1067), the region covered by them stretched from the lands of Islam (i.e. the Maghrib) to those of the blacks. This is what this geographer says of the Lamtuna's way of life: "They are strangers to any manual work, to agriculture and meet to bread. Their riches consist whally of their herds. They live entirely off meat and milk". According to Iba Khaldûn (d. 808/1406), the Lamtuna aiready formed considerable kingdom at the time of the reign of 'Abd al-Rabman al-Dakhil, founder of the amirate of Cordova (138-72/756-88). This author plus Ibn Abi Zare (d. between 720-20/1310-20) give the names of several kings of the Lamtuna from that time onwards. The first of these was a certain Talakakin; the period of his power is unknown, but it is very probable that he lived towards the middle of the ard/8th century, His successor was Tilutan or Taywalūtin b. Tiklan b. Telākākin, who died aged 80 in 222/836-7. He was a great ruler, and H ibn Abi Zare is to be believed, he reigned over all the desert (i.e. all the western Sahara), and the territory under his control stretched for three month's journey in both length and breadth, as far as the borders of the land of the blacks, of whom more than twenty of their kings were subject to him. Tilutan's successor was his nephew al-Athir b. Bāṇin (also called Yalattān) who died aged 65 in 257/852-2, or according to another source, in 287/900. The fourth king of the Lamtuna was Tamim (or Ramim) b. al-Athir who reigned over the tribe until 300/912-13; he was killed by the Sanhadja notables in a rebellion. His death heralded a time of troubles which lasted 120 years, i.e. until ca. 420/1029.

It seems that the state (or rather, the confederation of Berber tribes) created by the Lamtuna and which endured down to 306/918-19, was actually the state or rather confederation called Anbiya by the mediaeval Arabic writers. This existed already in the time of the astronomer al-Fazāri (az. 172/388), who locates it as between the kingdom of Sildilmāssa (in the western

Maghrib) and that of Ghana in the western Sudan. We also owe a few details about the Anbiya to Ibn al-Fakih al-Hamathani (co. 200/903), whose information on Africa goes back to the middle of the zad/8th century. He relates that "the land of Anbiya is part of the Sus al-Aksā (in the extreme south of present-day Morocco) and extends over seventy nights' march across the plains and deserts". One may further add that the historian and geographer al-Ya'kûbî (d. 276/891) says = follows about the people of Anbiya: "It is by setting off from Sidillmassa southwards that one arrives in the land of the blacks ... It is reached via empty regions and deserts stretching for about fifty days' march. En route one meets a people called Anbiya, a part of the Sanhādia [who live] in the desert; they have no fixed abodes. They well their faces, according to one of their castoms. They do not wear a funic, but cover themselves with pieces of cloth. Their food comes from canels, and they have no cereals - corn". On al-Ya'kübi's evidence, the Anhiya confederation was not, in the 3rd/9th century, the only great Berber power in the western Sahara. Indeed, he mentions also mexisting in this desert and on the fringes of the land of the blacks a land (or a town) called Ghast, identical with the Awdaghast of the geographers of the 4th-5th/10-11th centuries and situated in south-eastern Mauritania. According to al-Ya@ubl again, there was in this country a king who had no religion, who raided into the land of the blacks and who possessed numerous kingdoms.

It seems that the king of Awdaghast contributed to the fall of the confederation of the Lamtuna for of Anbiya), and it may be in reference to him that Ibn Abi Zar' speaks when he mentions the revolt of the Sanhadia notables against the fourth king of the Lamtuna in 305/918-19. Hence the king Tinazwa b. Wênshik b. Bîzâr or Barûyan b. Wânshik b. Îzâr, who ruled, according to Iba Khaldun, over the Lamtona and ail the Sahara in the 4th/10th century, in the times of 'Abd al-Rahman (II al-Nāşir (300-50) 912-61) and his son al-Hakam II (350-66/961-76), belonged to the dynasty of Awdaghast and not to that of the Lamtona. This Barnyan b. Wanshik b. Izar appears merely to be a deformation of that of The Yarutan b. Washou b. Nizar aitributed in the king of Awdaghast (who reigned between 340/95) and 350/962) by the geographer al-Bakri, it is the same person who is mentioned by Ibn Hawkal (d. ca. 378/988) under the name of Tanbarutan b. Isfishar and who was his contemporary; he says of him "Tanbarutan b. Isfishar ... was at that time king of all the Sanhadia . . . He governed these last for twenty years ... Power belonged to this man's family in that tribe from time immemorial".

It appears that towards the end of the 4th/10th century = at the beginning of the next one, the kingdom of Awdaghast was destroyed by the king of Ghāna, who incorporated its capital (now the ruins of Tegdaoust) in his own kingdom, whilst leaving the tribe of Lamtuna their freedom. It was at this time, at the end of a period of 120 years during which "power was divided up amongst the Lamtuna", as Ibn Abl Zar' says, that there appeared amongst the Lamtuna a new king called 'Abd Allah (or Abu 'Ubayd Alikh) b. Tifawt, who brought about a union of all the Lamtuns, According to Ion Abi Zar', he was a mes of religion and piety who made the Pilgrimage. He was killed, 🔣 the end of three years' reign, during a raid; al-Bakri calls him Muhammad Tareshna and says that he carried on **ma** holy war, in the mount of which he was killed at a place called

Kantara (Gangara, the Mandingos) in the land of the blacks. Târeshna (or Nâresht) al-Lamtūnī scena to have reigned between 426 and 429/1034-8, at the head of a confederation of Şanhādja tribes whose members included, well as the Lamtūna, the Dludšia and perhaps the Massūfa too.

At the outset, the Lamtuna were pagans, and according to Ibn Khaldun, only became Muslim during the prd/9th century. But most of the tribe's members were only nominally Muslim, apart from the amirs and probably a section of the notables. Because of this fact, Yahya b. Ibrahim al-Djudall, the successor of Naresht (Tareshna) as bead of the Lamtana confederation, decided in the course of his Pilgrimage to Mecca, to bring from the Maghrib into the Sahara pious and learned Muslim shayek called 'Abd Allah b. Yasin, who were to work at the conversion. of the Diudala and Lamtuna = a genuine form of Islam. 'Abd Allah b. Yasin and discovered that most of the people he was working amongst lived in ignorance; hence he quickly surrounded himself with true believers and declared holy war against the infidels of the two tribes, which he managed to convert to Islam after several raids, in this way came about the origin of the kingdom of the Murabiţun of Almoravids [see Al-Murkbitun].

After the death of Vahya b. Ibrahlm al-Diudall (cs. 434/ro42-3), 'Abd Allah II. Yaşın, by now the spiritual head of the new community, appointed his successor the antir Yahya b. Umar b. Talakakin, who reigned until 449/1056-7. Then the latter's brother, Abu Bake b. Umar, also appointed by 'Abd Alläh b. Yäsln, reigned over the western Sahara. Abū Bakr b. Umar was content to rule over the desert and to leave Morocco, whose conquest he undertook, to his nephew 1bn Tashfin. However, he kept the title of amir of the Almoravids till his death. Apparently, after Abū Bakr's death (be 🚥 killed in 480/1087 during en of his raids against the blacks in the western Sudan) the Lamituna still retained for some time their supremacy over the people of the western Sahara. Towards the middle of the 6th/12th century al-Zuhrl speaks of # Yahya b. Abi Bakr, amir of the Massüfa (*Lamtūna) who lived towards the year 496/1102-3 and who seems to have been the son of the amir Abn Bakr b. Umar al-Lamtont. During this time there took place the conquest of Ghana by the Lamtuna and the conversion of that city to Islam. Later, the power of the Lamittina graw feebler, but nevertheless, we know, thanks to the anonymous author of the Kitāb al-Istibjär (ca. 588/1192), that the Lamtūna always possessed, at this period, in independent king as well as their own shaykle. Subsequently, like the Massufa and other Berber tribes of the southwestern Sahara, the Lamtûna men compelled to recognise the supremacy of the Sudanese kings of Mail. If al-"Umart (743-50/1342-9) is to be believed, the Lamtûna came under their control in the first half of the 8th/14th century; however, they still had their own shaykh. The later Arabic seems silent about this people, whose importance became at that time almost nil.

A word should finally be said about the boundaries of the Lamtúna territories in the period from the 2nd/8th so the 5th/14th centuries. Originally, they extended, according to al-Bakri, to the south of the mountain of Ayzal (Kedyet Fj Jell or Fort Gouraud on our maps), occupying all the eastern part of what is now Mauritania, as far as the fringes of the Sudan. They were separated from the Atlantic by the lands nomadised over by the Djudåla, who occupied western Mauritania and the south-western part of

that country (al-Bakrl, Ibn Sa'ld) to the north of the lower Senegal and as far as the fringes of the Diabal al-Lamma' (modern Cap Blanc). Towards the middle of the 5th/12th century, the Lamtona occupied the Mauritanian Adrar previously inhabited by a non-Muslim Berber tribe. They built there a fortress called Azukki or Azukki (Azougui near Atar on modern maps), which then became their capital and a very important stage along the commercial route connecting Sidjilmassa with Ghana. From the Mauritanian Adrar, the lands traversed by the Lamtuna stretched as far as the Sudan, more exactly to Tagant. In the second half of the 5th/rith century, the Lamtuna occupied the district of Nul al-Aksa in the south-west of modern Morocco and that of Tazuggäght (Saguiet El Hamra on modern maps - al-Sākiya al-hamrā'), both of which belonged to the tribe in al-Idrisl's time.

(T. LEWICKI) AL-LAMTONI, ABO BAKE B. "UMAR III TAGLAGIN AL-SANKADI, war leader of the Almoravids [see AL-MURABITUN] and above all, the real founder of one of the historic capitals of Morocco, Marrakesh (Murrakish [q.v.]). He was the brother of Yahyā b. 'Umar who became, at the death of the pious kādidi Yahyā b. Ibrāhim al-Gazūli, amir of the Berber confederation of Sanhadia nomada of the parts of the Sahara bordering on the Atlantic (Lamtūna, Gudāla and Massūfa). The two brothers were the first to rejoin, after his hidira, the reformer 'Abd Allah b. Yasin in his ribit (q.v.) of Nā (?), situated on an island m a peninsula of the Atlantic coast of modern Mauritania. It was from this ridal that the powerful movement which culminated in the establishment of the Berber Almoravid dynasty was launched.

In 448/1056 Yahva b. Umar was killed fighting the infidels in the western Sudan, and the imam 'Abd Allah immediately replaced him, - bead of the armed forces, by his brother Abû Bakr, who was colebrated for his courage, religious enthusiasm and experience. The new assir had his position legitimised by the people of Sidjilmassa and struck coins of his own, and was then charged with the task of conquering, by word and by sword, the region of the Moroccan Atlas. In 449/1057-8 his successful campaign ended in the capture of the town of Aghmat [q.v.], the Masmoda capital. With the support behind him of this urban centre, at the time one enjoying considerable prestige, the imans 'Abd Allah directed his troops against the Barghawata (y.v.), the heretics of the central Moroccan Atlantic coast region; but having injudiciously rushed into the battle, he was killed in 451/1059. Abu Bakr now became the sole head of the Almoravids; he buried 'Abd Allah b. Yasin on the spot, went on to crush the Barghawata and returned, laden with booty, to Aghmat. There he established his centre of power and married the rich widow of the former governor of the town, the Tunisian lady Zaynab bint lahāk ai-Nafzāwiyya, whose beauty was only equalled by her political astuteness.

Being probably now largely occupied with the administering of his native land and of his conquests, Abū Bakr at this point gave command of the army to his nephew and cousin, Yūsuf b. Tahfin [q.w.], who had come to prominence through his outstanding qualities, confirming him in this office and directing him to the conquest of northern Morocco.

However, life in Aghinat became more and more difficult for everyone. Both the persons and the possessions of the local people suffered from the presence of their unpolished conquerors, and these latter, as Saharan nomads, felt little at within the walls which they had conquered but which were suffocating them. In the end, Abu Bakr was persuaded to found m new town, one better situated in all regards than the double city of Aghmat. Following the advice of his expert counsellors, he decided to establish the new centre - the actual site | Marrakesh. The process of transfer took place, according to the Moroccan historian Ibn al-1 dharl in his Bayan, on 23 Radjab 462/7 May 1070 and not in 1062 as indicated by Ibn 🔤 Zar' [q.v.] in his rather undependable Rand al-hirlas. The initial works, directed by the amir personally, were concentrated on the construction of a kasaba [q.v.], the renowned Kasr al-hadiar "stone fortress", where the ruler's harem, treasury and armoury were deposited in safety over the following three months.

Soon afterwards, on a date which the Bayan fixes within Rabi II 462/January 1071, Abū Bakr received some alarming news from the desert. In order to fly to the aid of his tribe, he left to Yūsuf b. Tashfin the administration of the Almoravid conquests, the town in course construction, a large part of the army and even his wife, who had herself urged him to divorce her so that she might, at the end of the waiting period required by Muslim law, legally marry Yūsuf and give him the benefit of her great experience of the Morooccan situation. The great role played by in Almoravid society is of course well-known.

After having restored order within the desert, Abû Bakr did not return III Morocco till 464/2072-3. Well aware of what was happening at Marrakesh, he prudently installed himself at Aghmät. He had

quickly learnt and realised that Yūsuf, strongly backed by Zaynab, would not give back to him the command antrusted to him earlier nor the town of Marrakesh, now expanding rapidly. After a pathetic interview between the two men, seated together on burnoose in the open countryside, Abū Bakr had the season of a accept the very impressive presents offered to him, will with his face thus saved, returned to the land of his people in order to resume the holy war against the infidel blacks. This doughty here of the faith, and founder of one of the great capitals of the Islamic world, was killed in 468/1075-6 in the massif of Tagant to the north of the Senegal River, where his gravestone and epitaph have been found.

His son Ibrahlm then went to Morocco to reclaim his father's heritage of leadership, but wise counsels of prudence and substantial presents discouraged these ambitions and led to his definitive disappear-

ance from Almoravid history.

(G. Deverdum)

LAMU, a town, island and archipelago, in lat, 2° S. off the Kenya coast, together with Pate and Manda islands [q.vv.] and some smaller islands, probably to be identified with the Pyralage Islands mentioned in the Periplus of the Erythraean Sea of ca. A.D. 106 = an established resort of Arab and Egyptian traders. Nevertheless, the first archaeological evidence found on Manda does not antedate the 8th or 9th century A.D., nor on Lamu before the 13th century. The first reliable literary evidence is that of Ibn Taghribirdi (later 9th/25th century), but the Swahili traditional history Khabar Lame, and likewise the Swahili traditional histories of Pate, assert that it was founded in 77/695 by Syrians sent thither by the caliph 'Abd al-Malik b. Marwan, and reinforced by a further contingent sent by Harun al-Rashid in 170/786. Although not in themselves impossible, there is no contemporary literary or archaeological evidence to sustain these 19th century traditions. Syrian traders are not known to have penetrated farther south than the Ethiopian ports, and such late traditions are to be regarded with the greatest caution, if not scepticism. At the end of the 9th/15th century the island and the adjoining landfall are mentioned briefly by the celebrated pilot, Abmad b. Mādiid.

Ibn Taghribirdi, quoting al-Makrizi, makes only the curtest mention. The king is entitled to ambergris found on the beach. There are large banana trees, from which a kind of honey is made, and various preserves. The town is almost buried under the sands. This suggests that in the later oth/15th century the town was in decline. Its fortunes seem be aptly illustrated by a sequence of dedicatory inscriptions, all but one in the mosques. The earliest is dated 1370-1 A.D.; the next, with a remarkable wooden minter unique in eastern Africa, where stone alone is used for this purpose, mot built until

1511-12. The 18th century saw the construction of four mosques, in 1733, 1753, 1760 and 1797. In this interval, from 68. 1506 to 1698, the town was under nominal Portuguese control, and the first tribute of 600 mithed is of gold was paid in Venetian meconigos. In 1585 the town acknowledged Turkish suzerainty in the person of the Amir 'All Bey, for which the Portuguese deposed the sultan in 1587, hanging him in Goa on Christmas Day, 1589. Lamu supported the Mombasa rising of 1631 [see mones.a.], for which the town was punished in 1634. Following another rising in 1678, the sultan of Lamu and four other neighbouring sultans lost their heads.

Lamu came under the nominal control of 'Uman after the 'Uman' capture of Mombasa in 1698, but this was not effectively exercised until 1812-13, in which year an inscription dates the building of the fort = a residence for the Bū Sa'idi governor, always a member of the royal family until about 1901 [see At mu sa To]. Under them the town grew considerably because of the expansionist trading policy of Sayyid Salid of 'Uman and Zanalbar and his -Lamu was an important centre for trade in ivory, mangrove wood (used universally at this epoch throughout southern Arabia for roofing) and, for a 1824 (two), 1845, 1849, 1865, 1876, 1877 and 1880-1. To the same period we may ascribe the pleasant twoand occasionally three-storayed houses with their verandahs (Swa. barasa), which form the greatest part of the older town, so reminiscent of southern Arabia, but with a distinctive architecture which may be called "Zanzibari". Particularly attractive are their doors of carved teak. These and the so-called Lamu chests (Swa. sanduku), camphorwood clothes chests, used because that wood is resistant to the omnipresent white ant, were important local manufactures. Elaborate beds and chairs, of ebony intaid with ivory, give some indication of the luxury of the merchant notables. This is echoed in poetry, and especially during the 19th century Lamu was colebrated for its numerous Swahili poets and literary men [see swantli, Literature]. These included poetesses, of whom Mwana Kupona was the most famous. The poetry is written in the local dialect of Swahili, Ki-Amn. During the 1960s J. W. T. Allen identified no less than 30,000 pages of Swahili poetry in private hands in Lamu town, all in manuscript. Of these 10,000 pages have been photographed and the record deposited in the University Library, Dar es Salaam. It is estimated that as many pages were found of Arabic manuscripts, but at the present these have neither been photographed nor catalogued: they remain a challenge m the present generation of scholars.

With the growth of Mombasa as a deep-water port, the diminution in importance of the mangrove and ivory trades, and the disappearance of the slave trade, Lamu receded in importance, although recently it has achieved a certain popularity as a tourist centre. But more than anything it has been saved by emerging as the most important Islamic religious centre in eastern Africa. The Ribat al-Riyada, or Madrasat al-Riyada, also commonly called the Mosque College of Lamu, projection founded in 1319/1901-2 by Habib Salib b. Habib 'Alawi b. Habib 'Abd Aliah Djamal al-Layl, the word Habib being used an alternative to Sayyid. Of a wellknown Hadrami family of suppids, an ancestor had settled at Siu town on the neighbouring Pate island: from there another ancestor migrated to the Comoro Islands [see Kuma and Park]. There Habib Şâlib was

born and brought up as a Swahili speaker: although his was a learned family, Arabic was not spoken in the home. There and from family connections he became learned in the religious sciences and in traditional Arab medicine, although he never left eastern Africa. Migrating from the Comoros to Lamu. he began to teach, and man acquired a band of followers. Following quarrels with the more conservative Muslims in the town, and especially because of the use of the tambouring to accompany the reading of the Barzanji maulidi to celebrate the birth the Prophet, Habib Salib first built a but for use as a musalla, and subsequently the present mosque. This became a centre for the dissemination of the 'Alawlyya farika, which soon attracted students from neighbouring African peoples, mainly the Pokomo, the Galia and the Bajun. By the 1950s the influence of the mosque had made itself felt throughout the eastern littoral of Kenya and the present Tanzania, and its pupils could be found teaching in numerous small Kur'anic schools. In eastern Africa, all Sunni mosques hold maulidi in honour of the Prophet during the month of his birth, the authorities in each neighbourhood arranging not to clash with each other's celebrations. The most important masslidi is that of the Ribāt al-Riyāda, attracting visitors from throughout Kenya and Tanzania, even as far m the border with Mozambique. Apart from the strictly religious ceremonies and the solemn procession to Habib Salib's tomb, Africans of different tribes also celebrate it with dances that are generally frowned upon m impious, mot heretical, by those of Arab descent. The tomb itself is in a flimsy wooden hut. If this is surprising, such simplicity in a holy tomb has its parallels not only in Tanzania but also in al-Shihr, the port through which the potent influence of the Hadramawt has chiefly percolated into eastern Africa.

LANBASAR (thus in RashId al-Din and Mustawfi), popular pronunciation with assimilation Lam(m)amar < Lambasar, the name of one of the Ismā'ili fortresses in northwestern Iran taken over from a local chief by Hasan-i Sabbah's lieutenant and eventual successor Kiya Buzurg-Ummid, according to Diuwayid in 495/2102 (800 ALAMOT, isma'iliyya]. Its still-extensive iii lie iii site sloping at 30', whose surface resembles in shape a truncated cone and which measures _____ 1,500 ft./ 480 m. by 600 ft./rgo m., with easily defensible slopes, in the Rüdbär district of the upper Shah-Rad, tributary of the Safid-Rad [q.v.] in what the mediaeval region of Daylam (q.v.), now in the central ustan of modern fran. Its precise location is 30 miles/43 km, north-east of Kazwin and 2 miles/ 3 km. north of the village Shahristan-i Bala, on the Nāyln-Rūd streum, in lat. 36° 33' N. and long. 50° 13' 30" E. The fortress's position guarded the approaches to Alamut from the Shah-Rud valley, and it was accordingly an important unit in the network of Isnia 'Ill castles in Daylam. In recent times, the site and ruins have been visited and described by Freya Stack (1931), W. Ivanow (1958) and P. J. E. Willey (1960).

Lanbasar was besieged in vain in \$11/1117 by the forces of Saldjük aultan Muhammad b. Malik-Shāh [q.v.]. At the time when the II-Khān Hūlegü overran northern Persia, the last Ismā'fi Grand Master Rukn al-Din Khūr-Shāh submitted to the Mongols, and some forty Ismā'fil strongholds passed into the invaders' hands. Lanbasar, however, beld out against Hūlegū's general Dayir-Buka for a year after the beginning of 655/1257, and another fortress, Girdkūh, for considerably later; it was presumably after its capture that Lanbasar was abandoned

a military centre.

LANGA (see LAS BELA, 2 Ethnography).

LANKORAN (LENKORAN), the chief town of the district of the same name in the region of Båkû. Lenkoran is the Russian pronunciation of the name, which was at one time written Langar-kunān ("anchorage"), or perhaps Langar-kanān ("place which pulls out the anchors"), which is pronounced Länkārān in Persian and Lankon in Tālishī. The ships of the Bākû-Enzeil [q.v.] line used formerly to call at Lankoran, which has an open roadstead, but at I miles north-east of the town is the island of Sarā, which has an excellent roadstead which shelters the ships in bad weather.

In the district of Lankoran, de Morgan found monuments of very great antiquity (doimens, tombs, cases of exposure of bodies in the Mazdaean (?) fashion), but it is not known at what period the town of Lankoran and founded. Certain statements (cf. Ta'rikh: 'Alam-ārā under the year 940/233 in Dorn, Auszigs, iv, 23; and Shaykh 'All Hazin [about 1725] A.D.], Ta'rīkh: Akudi, ed. Balfour, 157) suggest that the capital of Tālish was originally at Astārā; towards the end of the 18th cantury, Lankoran be-

the capital of this hanate. The whole district was annexed by the Russlans under Peter the Great (treaties of 1723 with Tahmasp II, and 1720 with the Afghan Ashraf), but returned to Persia by the treaty of 1732. Retaken by Count Zubov in 1796, Lankoran was retaken in 1812 by the Persians who fortified it. On o Muharram ('dehard) 1228/1 January 1813, Lankoran taken by storm by General Kotliarevski after a brave resistance of the Persians. This event bastened the conclusion of the Treaty of Gulistan (1813), by which Persia ceded E Russia part of Talish to the north of the river Astara, From 1846 Lankoran was the capital of the district. The fortress was dismantled in 1865. Since 1921 Lankoran has formed part of the Adharbaydian S.S.R. in Soviet Transcaucasia.

The population of the town, which was 3,970 in 1862, had reached 11,100 in 1897. The district of Lankoren has me area of 5,000 sq. miles and in 1840 had 30,200 inhabitants and in 1861 99,082. Later, the district was reduced to 2,000 sq. miles; in spite of this, its population in 1897 was 125,895, of whom 45.5% were Azeri Turks, Iranian Taligh 46.2%, Russians 6.9% (in the north) and Armenians (0.2%). The district is composed of three zones: to the north, an eastern continuation of the steppes of Mughan; to the east, a marshy littoral intersected by lagoons and covered with a rich subtropical vegetation; whilst to the west are wooded mountains running from 5,500 to 7,500 feet above sea-level which rise from the Russian frontier, forming the boundary with the Persian province of Ardabil. The district is rich in forests and had good fishing.

The figures for the 1926 and 1932 censuses showed little change from the above figures, but by 1973 the town alone had a population of 42,300. The town has a number of schools and colleges, libraries and clubs, as well as decided in a colleges, libraries and clubs, as well as decided in a fixed in Adhar-baydjant and Talisht. The majority of the population of the province are ShI4, though there are substantial Sunni communities in the south. The tomb of Shaykh Ibrahim Zahid, teacher of Shaykh Safi al-Din, eponymous ancestor of the Safawi dynasty, is situated defew miles to the south of the town of Lankoren.

The chief local industries are associated with the processing of agricultural products (tea, fish, vegetables, who),

LAR and LARIDJAN. Broadly attested outside southern Iran, the toponym Lar is applied to a characteristic region of northern Iran known by Laridjan, Laritself is the name of a watercourse, of its valley and of the pasture-lands

which surround it. In different forms and local variants, it also refers to other sites or urban actulements of the Iranian lands.

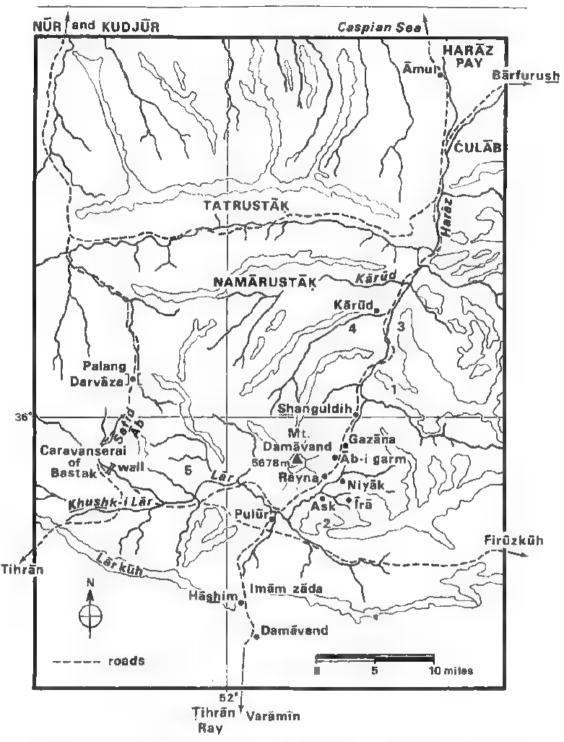

1. The high valley of the Lar.

On the barren slope of the Elburz, not far from the conurbation of Tehran, the valley of the Lar constitutes one of the high points of nomadism. Situated at the foot of Mt. Damävand-at 5,678 m (de Planhol), the highest peak of the Elburz and Iranian range-between the valleys of Nur, Karadi, Diadi-i Rūd and Harāz, populated by Gilaki peasants, today it supports no permanent settlement. Highly appreciated over a long period, not only by the nomads but also by the neighbouring village communities and by members of the royal household, its pastures have been the object of complex apportionments between these three contenders. Since the decade of the 1930s, the balance has been largely upset in favour of the nomads or semi-nomads, threatened in their turn by the process of modernisstion.

Between its source in the vicinity of Kulûm/Kulûn-i Bastak and the elbow of Pulür where it changes its name to that of Haraz, the Lar takes in the waters of numerous tributaries (names supplied by Rabino, 41-2; Karlman, Kapran, 120-1). It flows between mountains which, in the north as in the south, rise beyond the 3,000 m. mark; to the south, the peak of the Lar-koh is at an altitude of 3,901 m. (12,797 feet according to ... American map printed in 1957; ibid., 116). On either side of the banks of the Lar, the pasture-lands extend over some 60 km. and over a breadth of 6 to 7 km. (sbid., 122). The winters are long and extremely cold. The altitude does not fall below a level of 2,500 m.; even in summer, the temperature seldom rises above 24°C. At the eastern extremity of the valley, at Pulur (see Laridjan, below), situated = 2,130 m., average temperature over the year is 5.8° C., rainfall is 547,7 mm. (Adle, chart; 569 mm. according to de Planhol, 23, n. 52, after Péguy).

Near the confluence of the Seffd Ab and the Lar, wall of dry rock blocks the entire valley. Situated, close by the so-called caravanserai of Shah 'Abbas, at a crossroads of caravan routes between Tebran and the north, in a locality dominated by the ruins of Kal'a-yi Dukhtar, according to oral tradition this wall separates two villages (Hourcade, 42 and map). Indications of the existence of permanent settlement in the valley of the Lar me quite numerous; besides the remains observed by certain traveliers (Wells, 2; Von Call-Rosenburg, 121; Stahl, 10), there is the oral tradition current among the Hedavand nomads (Brugsch, i. 284, quoted by de Planhol, 21-2) among the Gilaki viliagers of the valley of Ira (Hourcade, 42, n. 6) and most notably the tradition attested at Läristän as in the villages close to the valley of the Lar, according to which, under a king of ancient Iran, the villagers of the Lar, unable to endure the rigours of the winter, are supposed to have emigrated to Lar of the Fars (Fasa 1, ii, 281 ff.; Kotschy, 5t). This popular tradition should not be regarded ""quite fantastic" (de Planhol, 21) since numerous toponyms (Lär, Lårak, Elburz, Bastak etc.), are current in the north as in the south

Although it is impossible to follow the evolution of relations between nomads and settlers until after the beginning of the 19th century, it seems that the settled territory covered a greater then than it does today. According to de Planhol, the "wail" across the valley separated nomeds from

settlers. Since the decade of the 1830s, the encampments of the nomads and semi-nomads of the Lar have been amply described by travellers, diplomats, soldiers etc. These accounts describe to the stability of these tribes (itineraries of migration, places of summer pasturing, etc.) of which the majority were transferred to the region of Tebran from the 18th century onward, for political (Hourcade, 39). For at least a century, and until quite recently (1976), approximately 200,000 head of small livestock (sheep and goats) belonging to the nomads of the south slope of the Elburz have summered at the Lar. But the terms "tribes" and "nomads" are quite inappropriate to designate populations whose origins

remain obscure. Briefly, and socounters Hedaward who speak the Lori language (having arrived in the 18th century); Koti Arabic speakers (originally from Khuzistan?); the 'Araba, poor and Persian speaking; the Kalmur or Kalhur, Gilaki speakers, whose chiefs lived in Tebran (descended from the Kalmuk Mongols?); the Persian speaking Pazuki ("Turks of Khurásān", Kurds?); other small tribes or diverse groups: Turks (Sayl Sepur, 'All Mansur, Kal'a'l, shepherds of the Turkish villages of Rudaban); Kurds; "great nomeds" ('All Ka'i, Glaki apeakers: Hasanlu, Turkish speakers; Sangsari, who speak an Iranian dialect from the North-West); numerous details on these tribes (number of tents, migrations, summer pasturing etc.) in Hourcade, 40 ff.; de Planhol, 33 ff.; Hourcade and Tual, 23.

The use of Turco-Mongol terminology in nomadism reflects the acceleration of the process of bedouinisation in the region following the Mongol invasion. The term year refers to the tent as well as to encampments (Stack, i, 98) or pastures and summer settlements (Rabino, 115). The summer pasturing (yaylâk) of the Lar min frequented by the II-Khanids, the Timurids, the Şafawids and the Kadjars. Under Nāsir al-Din Shāh (1848-96), the pastures were grazed in summer by horses from the Shah's stables (de Pianhol, 21), He often set up his summer camp there, to be followed by all the dignitaries and their families, military men, ambassadors (numerous references to the camp of Lar in the diplomatic archives in Loudon, Paris etc., in the stories told by travellers, soldiers, sportsmen, etc.). Under the Pahlavis (1925-79), the pastures to the west and south of Damawand remained for the most part the property of the crown or of public services (national education, army, agriculture, etc.), who leased them to the nomads.

While profiting from the decline of sedentary mountain life, nomadism has recently suffered the impact of the expansion of the Tehran conurbation. Sami-nomadic groups adapted with varying degrees of success to the re-organisation of the milk and meat markets, becoming the salaried shopherds of large societies, "city-dwelling" nomads willagers. But the trend towards sedentary living, utilisation of the motor-car, etc. have modified migratory practices. In some cases, nomadism has been replaced by pastoral migrations of the Alpine type (Hourcade, 44-3). Other factors have contributed to the decline of nomadism. The development of tourism and of sporting activities (mountaineering, trout fishing, also practised by the nomads, facilities and ski-ing activities in neighbouring areas) has led to the creation of cottage industries and of construction projects; inevitable measures for the protection of the environment have brought about the extension of natural reserves to the detriment of the pasture-lands. But it is the construction of the dam of the Lar, designed to improve the waterof Tehran, which has had the profoundest impact on nomadism. With its foundations im in 1975, this huge dam (105 m. in height; 1,000 m. long; reservoir of 30 square km. containing 960 million cubic m. of water) was due ## become operational in 1980. Ecological constraints-particularly the erosion of the banks and terraces as a result of over-grazing-brought about the expulsion of the nomads from 1976 onward (ibid., 45 l.). The abandonment of major industrielisation projects should in principle favour the renewal of the traditional economy and of nomadism which had been tending towards modernisation and self-destruction (shid., 47f.) Rivairies between the nomads, the villagers and the state over the appropriation of pasture-lands are reflected the administrative lovel. Originally belonging to the Ustan-i Markazl {bahhh} of A(die, shahrisfen of Fibran: DG, i, 196), the Lär has seen its southern area attached to the villages of the southern slope (Ustan-i Markazī) and the rest shared between the dihistan of Nūr and Lārīdjān (Ustan-i Māzandarān), the properties of the crown and the state lying between these two spheres of ownership (Hourearie, 38). Until the 19th century, its history is intermingled with that of Lārīdjān (see below), of which it often forms an integral part.

2. Laridjan

Geographical setting. Lătidiân takes its name from the Lâr (see above), a perennial river which flows down the southern flank of the Damāwand and constitutes the principal branch of the headwaters of the Harāz. The change of name takes place towards the elbow of Pufür where the Harāz is swellen by the addition of the Deličây; in places where it crosses inhabited territory, the river is called Ghāzān-cāy (from the Turkish "river which bores", according to de Planhol, 17, n. 13; perhaps also in memory of the H-Khān Ghāzān; see below).

Constituted of volcanic rocks thrown up in the Pllocene and Quaternary periods (clear trachytes and coloured andesites), the cone of Mt. Damawand (400 km³.) offers on its eastern slope-dissected by the Haraz and its tributaries and a multiplicity of deep valleys-conditions more favourable to human settlement than exist on its western slope, which is made up of a compact and inhospitable mass of andesites. The high valley of the Lar does not fall below a level of 2,500 m., although the moun deeply excavated valleys descend towards a level of 1,300 m., the furthest limit of permanent settlement currently being in the region of 2,300-2,400 m. On the eastern periphery, the soil produced by the decomposition of volcanic deposits engenders a stretch of fertile and well-watered ground. These natural conditions explain the human dissymmetry of this volcanic massif, which gives to Liridjan its physical shape and its individuality (de Planhol, 17 ff.; on the morphology and physical geography of the Damāvand, see P. Bout, M. Derruau, J. Dresch and Ch. P. Péguy, la Mémoires et Documents, viii, CNRS, Pacis 1961, 39-83; see also CHI, i, 44 ff., 189, 415).

Socio-economic outline. A remnant of of the most ancient provincial nuclei of northern Iran, Laridian is characterised by an exceptional density of villages, in contrast to the remarkable void existing upstream of the Lar towards Pultir as well as in the down-stream valley, on the Caspian. side. Life in the settled areas, in the main valley, is closely linked m that of the high pasturages of the Lar and of Laridjan. The traditional equilibrium is based in a minute system of balance between intensive agricultural exploitation of tiny plots, the pastoral life and complementary supplied by the winter emigration (on land use and errigated and pluvial cultivation-corn, barley, lucerno, vegetables etc.—the ograrian structure and rustic landscape, the pastoral life and exploitation of the mountain-raising of small and large live-stock-see de Planhol, 22-8; also Hourcade and Tual, 34 ff.). The rigours of the climate and the lack of winter resources are the cause of the significant migrations. In winter, only the peasantry and the stock-breeders remain on the mountain. Some farmers possess arable land on the Caspian plains. Traders and artisans (manufacturers of felt) traditionally emigrated towards the Caspian. Conversely, the people of the plain of Amul used to spend the winter on the Lir. Some important resources were drawn from the transit of merchandise and from mule-traffic along the traditional highway axes; the Harāz valley route (Tehran-Amul by way of the col of Imām-zāda Hāshim): the route of Nūr and Kudjūr through Afdje, via the valley of the Lār (Hourcade and Tual, 23 f.).

Having witnessed an expansion at the beginning of the century, sedentary rustic life has experienced a constant decline as a result of this migration towards the Caspian and towards Tehran, a focus of attraction. In the decade of the 1930s, new migratory patterns - to emerge; in over increasing numbers, the nomads establish themselves in the high altitude cultivated lands abandoned by the villagers (de Planhol, 32 f.). The improvement of roads, the reorganisation of the production and marketing of dairy and meat products, have transformed the pastoral life and nomadism (see above). The tourist excursions undertaken by a great many city-dwellers are capable of "rendering marginal" the migrations of villagers. Centres of seasonal commerce have been established along the major routes (Hourcade and Tuel, 29 f.).

The uneven settlement of the land and the social contrasts are reflected in the appearance of dwellings (large houses belonging to farmers/stock-breeders; the small houses of the emigrants; more recently, summer resort chalets). Cave-dwelling is an ancient practice; caverns excavated in the calcareous rock currently used for sheltering live-stock and fodder (de Planhol, 26, nn. 55, 56). Study of the system of ownership reveals a predominance of small properties. Quite complex contrasts exist between small-holders and exploitative farmers/stockbreeders. Although the standard of living is fairly low, it is possible to regard Laridjan — "a rural democracy, with a hierarchy, but without glaring inequalities" (de Pianhol, 29 f.).

Laridian is the point of departure for the ascent of Damiwand [q.v.] (Dumawand/Dunbawand/Dubawand, etc.), a mountain which plays a significant role in the myths and legends of Iran (Ibn Isfandiyar, tr. Browne, index; Schwarz, 785 ff.), and in local folklore (Minorsky, Lar, in E11). Nāşīr-i Khusraw (5th/rith century) relates that sulphur extracted from the crater wrapped in the skins of cattle which were then rolled down the slopes (Safar-nama, ed. Dabit-Siyaki, Tehran 1344/1965, 7). Ibn Istandiyār (writing in 613/1226) describes-following the Firdaws al-hikmat-how the ascent could be made in two days, starting from the village of Ask (i, 82-3; tr. 35-6). In the 19th century, two scientific ascents were made within a few days of each other in September 1837 (W. Taylour Thomson and E. d'Arcy Todd); subsequently, it became fashlonable for Europeans (travellers, diplomats, explorers, mountaineers, etc.) to make expeditions to Mt. Damawand (de Planhol, 19 (f.). Ascent by the north face being something of an exercise for experienced climbers, it is more easily accomplished by the south face starting from the village of Rayna/Reine (to the south-east, 2,200 m.in altitude) with the aid of muledrivers well acquainted with the mountain (see de Planhol, in Iran, Nagel's Guide, Geneva 1973, 128-9).

As warriors of repute, the Lardiants have had occasion to defend their territory or to support the claims of local chieftains. After having fought against the Kädjärs, they supplied them with appreciable help in the maintenance of order in the north as well in the south of Iran (see below).

Administrative framework and demography. Although Läridjan has been able to extend its influence over the neighbouring regions, its borders have changed little in the course of time. They have probably not gone beyond those that it had in the Kädjär period. This is how Rabino delines them (114-15, with the names of villages and pasturages; names given here in parentheses are those of the main places of permanent settlement);

(a) Amiri or Pā³in Lāridjān (Shāhāndasht, Shan-guidih)

(b) Bāiā Lārldiān (Ask, Åb·i garm, Gaynā, Gaznā, Gazānak, Īrā, Malār, Lāssim, Navā, Niyāk, Pulūr, Rayna)

(c) Bihrusták (Báydján, Nawsar/Nássar)

(d) Dilărustâk (Fira, Hădidi Dilă, Kahr-rūd/ Kuhrūd/Kārū, Kuri, Năndal/Nunnal, Tihna/Tina

(e) The valley of the Lar; besides the caravanserais of Surkhak, Bastak and Sefid Ab on the road from Tehran to the Nür via Lashkarak, there we no pasturages (see Hourcade, chart of the summeringsites of the Lar).

Although Dilarustak, on the northern slope of the Damawand, has been capable of definition as "a separate regional subdivision" (de Planhol, 17), it is historically most of Larigian. With the exception of the valley of the Lar-which now depends to a large extent on the Ustan-I Markazi (see above)—Larigian has preserved its other administrative divisions (see below).

The demographic evolution of the region is hard to trace. Having apparently benefited from the development of Mazandarān in the Safawid era, the population of the region seems to have declined in the 18th century. The improvement and then the decline of the 19th century is reflected in the population of the regional centre, Ask: 1,000 to 1,500 houses in 1837 (d'Arcy Todd): 2,000 in 1860 (Brugsch); 500 in 1874 (Napier). Recent information indicates a decline at Ask (approximately 700 inhabitants in 1950, 424 in 1956) and a relative expansion at Rayna (200 houses in 1874 (Napier), 400 in 1958 (de Planhol)).

Attached to the Ustan-l Mazandaran, Laridian constitutes a bakkel of the Makristan of Amul. It is divided into four dihistans, = follows (DG, iii, 266; data from about the year 1950):

dikistän	inhabited places	inkabitanti
Bálá Láridján	18	7500
Bihrustāk	7	900
Amiri	10	2000
Dilārustāk	10	1500

The censuses of 1956, 1956 and 1976 indicate a demographic decline, the inhabitants being progressively less numerous than the migrants (see Hourcade and Tual, 16 ff.).

Historical evolution. The toponym Lăridian is quite widely attested in Islamic sources. It derives from Lârig: Lâr + 1 (a suffix which, in Pahlavi, serves to form adjectives of relation; however, its use in proper names in Pahlavi remains problematical: see Ph. Gignoux, in Pad nâm-i yazdân, 63 l.). It should therefore be written with a long i although, as in the case of Lāhīdiān, both aucient and modern authous most irequently write it with a short i.

The precise localisation of the urban settlement or the district known in ancient times by this name

remains uncertain. Its origin is lost in the myths and legends of ancient frap which cannot easily be exploited from a historical point of view. Briefly, "Lärldjän is the most ancient region of Tabaristan. Firiden (i.e. Thractona/Freton) was born in the 'village' (dike, which can have a broader sense) of War which is the principal town (hasaba) of this region (ndhiyat) and where the cathedral mosque (djami') and the oratory (musalla) == situated" (Ibn Isfandlyår, i, 57). Waraka for War in an incorrect reading by Browne (tr. of 1bn Islandiyar, 15), followed by Rabino, 40; Minorsky, art. Lar in EP (who identifies Waraka/Warak/Varena with the village of Wāna in Lāridjāu); de Planhol, 20, etc. According to Amult (31), the birth-place of Firidan is Laridian, kasaba of the region of the same name. According to Mar'ashl (TT, 4), Gurgin Milad, the "founder" of Gurgan, possessed the region of Ray: "in winter, his hishidh [q.v.] was at Karadi Rad, in summer his paylak was at Lar (TT, 4; on Lar-i Kasran, see below). More easily identifiable is Shalab/ Calab/Calaw, at Dilárusták, at the northern foot of the Dunbavand/Damawand, an area of rich pasturages where Firidun - brought up, went hunting mounted on a cow and devoted himself to training oxen a saddle-animals, and whence he set out to conquer Trak (Ibn Islandiyar, 1, 57 ff.; according to de Planbol (20, n. 34), there is in this myth an echo of the ancient mountain practice of riding ozen.

The fact that Laridjan designates sometimes an urban settlement, sometimes a district, does nothing to faciliatate the toponymic study of the region. Laridjan is the mountainous frontier zone where the Harhaz flows (Hudad, 72). Probably because of the fairly late Islamisation of the region (by the 'Alids), Laridjan is rarely mentioned by geographers who wrote in Arabic. In addition, their works contain ambiguities. Thus Lariz (supposedly the ancient form of Laridji), named as a village or a district of Tabaristan (Marquart, 127, 133) is not the present day Laridjan (on Lariz and Marquart's interpretation, cf. below, 3).

According to Yakūt (iv. 340-t) "Lārīdjān in m small town (bulayda) between Ray and Amul in Tabaristau; it lies at a distance of 18 farsakhs from each of these two towns; it is protected by a fortress often mentioned in the chronicles of the Buwayhids and M Daylam". Villages, fortified points, places allegedly situated in Lartitjan are mentioned by various sources. The village of Ira is mentioned under the man of Bara/Yara [al-Işţakhri, 210; Ibn Hawkal, 271, quoted by Schwarz, 789; does this refer to Ira near Ask, or to mancient permanent village to the south of the valley of the Lar (see above): Ask (lbn islandiyār, i, 83); Fulūl, Fulūl-i Laridian, Kal'a-yi Fulul (Mar'ashi, TT, 116; TG, 284); Kal'a-i Lawandar (near Rayna) (Mar'ashi, TT, 213-14); the kalea or the urban settlement of Kuhrūd/Kahrūd/Karū/Karūd (Āmūli, 135) Isfandiyar, ii, 78, 99; Mar'ashi, TT, 54, 213). This or the salias of Lar, without further definition, are aiso mentioned (Ibn Isfandiyar, i, 297-9; Amuli, 109; Mar'ashl, TT, 212). In the Sasanid period, Laridian must have formed part of the Padashkh "argar, of which the sovereign was Mah gushnasp for Djushnasishab) at the end of the Arsacid period. Subsequently, this region belonged to the Sasanid Kawad, then to his son Kawas. Leter it came under the control of the Sasanid family of the Karinide [q.v.] (Marquart, 130 ff.; Kariman, Kasedo, il, 632). In a broad sense, Küh-i Karin or Dibal-i Karin designated the eastern Elburz, According to Rabino (2), it included present-day Lärldjan, the Sawad

Küh and the Hazār-diarīb. But according to the Diahān numā, the Dibāl-i Kārin is also called Djibāl-i Rūnandi/Rūna (Rūyān) and the Dunbāwand/ Damawand does not form a part of this mountain (Muḥammad b. Nadjīb Bakrān, Diahān-sumā, ed. Tehran 1342/1963, 58), At the time of the Arab invasion, the altuation in the region is unclear, especially as regards the Lit (valley of the Lir), the southern limit of Laridian, where ancient occupation is attested most notably by the presence of remains of sanctuaries dedicated, it is said, to Nahld/Anahita (Kariman, op. cit., 189, 632). The mountainous region to ill north of the Ray was called Kasran (Kühsarān), and was divided into Kaşrān-i dākhil (or Kaşrân-ı darûnî) and Kaşrân-i bîrûnî (Karîmân, op. cit., 3 ft., with reference to al-latakhri, Ibn Hawkal, al-Mukaddasi, Zakariyā al-Ķazwini, Yāķūt, etc.). The Lar presumably belonged to the Kasran-i dākhil. Lār-i Kasrān is found in various sources (Ibn Islandiyar, i, 56; Mar'ashl, TT, 112, 124; Amult, 182 f., etc.). But reference to Lär | Kasrān (e.g. Ibn Islandiyar, i, 223) is also found, which gives grounds for supposing that one part of the Lar belonged to Kaşrân and the other part to Lâridian. Furthermore, the mountains to the north-west of the Lar whose waterways flow towards the north, form part of the Rud-bar-i Kasran (Kariman, op. cit., 20 f.). It also appears that the Lar, endowed with at least one fortress, at times exercised a certain independence between Lâridiân, Lawasan and Kaşran. It may also be noted that—at least on 🔤 geographical level-the mountains of Ruyan formed frontier with the mountains of Ray (Ibn al-Fakih, 304, and Ibn Hawkal, Surat al-ard, 320, quoted by Kariman, op. cit., 18).

At the time of the conquest of Ray (which al-Tabari locates in 22/643), the Maşmughān (Mas-I Mughān, Grand Master of the Magil) who exercised jurisdiction over Dunbāwand, Khuwār, Lāriz and Shirciz, agreed conditionally to the payment of the divine and kharadi (Karimān, RB, il, 487, after al-Tabari and Ibn al-Athīr). According III H. Karimān (Kasrān, i, 71 II.), the north of Kaṣrān and I part of Lārīdjān were in the hands of the Masmughān, but this II not stated clearly in the sources. The possessions of the Masmughān were conquered by Abū Muslim in 131/748 (Marquart, 127, after Ibn al-Athīr).

In the absence of indications in the sources which would permit mappraisal of the economic worth of the region, it may be said that, in mediaeval Iran, Laridian exercised—as a result of its geographical position-control over a military, commercial and pastoral route, i.e. the Ray-Amul axis towards the Caspian Ses and the transversal routes towards Kūmis and Khurāsān via Fīrūs-kūh to the east, towards Kazwin and Adharbaydjan to the west. A highway also connects Arim, in the Hazār-djarib, to Laridian (Rabino, 115). Other transversal routes were added later (see below). This function would pre-suppose the existence of a stable local power, The latter was exercised by governors usually bearing the title of marrhan (the term Laridian seems also to have had a patronymic connotation). Ibn Islandiyār supplies us with a list of these maraháns beginning with Fadi b. al-Marzubán in 252/866 (the list has been partially reconstructed by Rabino, 147, up to the 7th/13th century). In the final third of the 3rd/9th century, Sahi b. al-Marzuban constructed across Laridian the route which, in earlier times, had been impracticable both in winter and in summer, and he took steps to ensure its security (Ibn Islandiyar, i, x22).

Like other chieftains of Tabaristan, the governors of Lāridiān accorded a warm welcome to the 'Alids. The chieftains of Laridian and of Kaşran rallied to the support of the brother of Hasan b. Zayd known as al-Da'l al-Şaghir (Ibn Isfandiyar, i, 233; Marfashi, TT, 232). In 272/885-6, the 424 Muhammad b. Zayd, brother of Hasan b. Zayd, attempted take possession of Ray; on being defeated, he sought refuge in Lärldika (Ibn Islandiyar, I, 252; Ibn al-Athle, vi, 59). In the Saldius period, the phase of disorder which followed the deaths of Nizam al-Mulk and of Malik Shah (485/1092) had an effect on Laridian. Having ordered his governors of Laridian, of Ruyan and of Amul | help him in the fight against the Isma'llis, Muhammad b. Maiik Shah nominated as governor of Ruy and of a vast area, including Laridian, his young son Malik Ahmad, whom he entrusted to the see of an amir named Sunghür-i Kučík. This Saldiūk policy, aimed at maintaining control of pro-Shi'l regions, spread consternation among the Bawandid Ispahbads (Ibn Isfandiyār, ili, 38). Nevertheless, Lārīdjān benefited -as did other regions of Iran before the Mongol ravages-from the decline of Saldjuk power. After a period of conflict with the Ispahbad Shah Ghazi Rustam I Bawandi (534-58/1140-63) (see Ibn Isfandlyar, ili, 77; Amult, 126), Manücihr, maraban of Laridian, turned Kal'a Kuhrud (in the down-stream area, later known by various names, including Kārū/Kārūd) into a place m prosperous that people of all professions, natives of India, of Egypt and of Syria, came and settled there (1bm Islandiyar, iii, 77 ff., 99); this kalfa was destroyed in 783/1381-2 and later rebuilt (Mar'ashl, TT, a13 if.). Other fortified points mentioned. The hal's of Laridian (without further definition) is named in connection with various events (Ibn Isfandiyar, i, 297, 299; Amull, roo); Mar'ashi mentions the kal'a of Fulul (TT, 19). Manucihr allied himself, with other chieftains of Tabaristan, to Shah Ghazi Rustam Bawandi; his troops formed a part of the army which conquered Bistam/Bestam and Damghan (Ibn Islandiyar, iii, 94; Mar'ashī, TT, 19; Amull, 131).

Abu Harb, the eldest son of Manucihr, - a violent and irreligious man. He killed his father and his brothers (through trickery), renewed the alliance with Shah Ghazi Rustam, and fought alongside him against the ustundar Kay Kāwās; after having been defeated, the latter went to war against the rebel Garshasf. At the last military parade conducted by Shah Ghazl Rustam, Abu Harb was among his army commanders (Ibn. Isfandiyar, kii, 99 ff.; Mar'ashI, TT, 22-3). Eventually, the people of Laridian lost patience with Abb Harb and his misdeeds, and killed him. His care-year-old son, Klukh *ar or Kina-kh "år (i.e. "Avenger") was put into power by 'All Laridiani, the commander of Abû Harb's army and of that of his father Manucihr. 'All Lärldiani appointed himself atabeg and towards the end of his career he collaborated at Ray with the Saldjük stabes Ildegiz [see n.neRiz] in carrying off "the treasures" of Laridian (Ibn Islandiyar, iii, rro-rr; Marfashī, TT, 107). The Laridianis rallied to the cause of the ispahbad 'Ala' al-Dawla Hasan (surnamed "al-Malik al-Shahid", 558-67/1163-71), maternal uncle of Kinkh var. Shah Ghazi Rustam I and 'Ala' al-Dawla controlled Kaşran, and, especially after the misconduct of Abe Harb, Laridian had practically jost its independence. Furthermore, "Amir Laridjant" incited the Saldjilk atabeg to recapture from 'Alla' al-Dawis the enlayat-i Larididn "which had always been a part of 'Irak' (Ibn Islandiyar, iii, 212). Under the ispabled Husam al-Dawla Shah Ardashir, e sizable portion of Laridian formed part of the "darun Tamiaha" (ibid., 124). Husam al-Dawla entrusted the government (sardari) of Laridjan to the ispanded Abu Diaffar Asarb (Marfashl, TT, 110).

At the turn of the 6th-7th/12th-13th centuries, the history of the region is poorly attested; the chronicles mention numerous journeys that passed through Laridian, of which the sal'a also constituted a refuge (for example for the mother, the wives and the children of Dialal al-Din Muhammad Kh *arazm-Shah when he fled before the armies of Cingiz Khan: see Djuwayni, Td'rihh-i Djahan-gusha, ed. Kazwini, GMS, xvi, il, London 1976, 199). The relations between the Laridianis and the Isma'llis tenergetically fought by Shah Chazl Rustam I) and, in general, the politico-religious situation in the region on the eve of the Mongol invasion, remain obscure. It may also III noted that, according to Mustawii, the kelfa of Lar was included among the Isma'lli fortresses conquered by Hulagu Khan in 654/1256 (Tarrikh-i gurida, ed. Nawā'i, Tehran 1339/1960, 527).

Following the Mongol invasion, the weakening of local powers resulted in the loss to Laridian of part of its strategic importance (later Saldjuk, Mongol and Timurid refer to the region by the name wildyat-i Lar). It is, however, unknown to what extent the presence of the Mongols, experienced in operating in high-altitude areas, and the extension of nomadism which ruined the neighbouring districts, affected Läridjän (on these problems, - J. Aubin, Réseau pastoral et réseau caravanier, in Le Monde iranien et l'Islam, i, Paris-Geneva 1971, 103-30, at 216 ff.). It that the pasturages of the Lar appreciated by the II-Khāns. Arghūn Khān "had caused a fine palace (kūshk-i 'dli) to be built at the summer resort of Lar, at the foot of Mount Damawand; this place is now known by the name of Küshk-i Arghun" (Rashid al-Din, iii, 229). This was no doubt the place where Ghāzān Khāo solemniy adopted the Muslim faith in Shasban 694/June 1293 (at least, this is the version given by authors: d'Ohsson, Histoire des Mongols, Amsterdam 1852, iv, 131-2; 'Abbas Ikbal, Tabelkh-i Mughul, Tehran 2536/1977, 256; J. A. Boyle, in CHI, v. 378). But details as to the site, the date, the number of Mongols converted in this occasion, etc., remain poorly defined in the sources. According to the leading chroniclers, it was at Firuz Küh that, following the advice of his amir Nawrūz, Chāzān Khān was converted to Islam at the beginning of Sha'ban 694/mid-June 1295 in the presence of the shayed Sadr al-Din Ibrahim (Rashid al-Din, Dinmic al-tawarish, ed. Alizade, Baku 1957, iii, 294 ff.; Wassal, Tarikh, Teliran 1338/1959, 316-17, Kh "and-Amb, Habib alsiyar, Tehran 1333/1954, iii, 144; Mir-Kh "And, Rawdat al-safa", Tehran 1339/1960, v. 380). According to local tradition, it was in the valley of the Lar, at Küshk-l Arghun, that this conversion took place (Feuvrier, 239). It may also be noted that on numerous occasions Ghāzān Khān frequented the "Yāylāķ-i Damawand" [see Rashid al-Dia, Ta'rikh-i Ragital, ed. K. Jahn, GMS, London 1940, index).

The Timurids also thought highly of the pesturelands of the Lar. It min the valley of the Lar that the Spanish ambassador Clavijo came, in June-July 1404, to visit the son-in-law of Timur, Sulayman Mirzā, whom he found in the middle of his encampment of some three thousand tents (tr. Le Strange, London 1928, 169). Some days previously, on his way from Ardabil, Timbr had broken his journey the wildyat-i Lar, in Kushk-l Arghtn, which he left for Ffrüz-küh on 29 June (Yazdī, Zafar-nāma, ed. Calcutta, ii, 591, ed. Tehran 1336/1957, ii, 417).

As elsewhere in Iran, and especially in Mazandaran, Laridian was affected in the 8th-9th/14th-15th century by the increasing power of socio-religious movements and of the sayyids. In 734/1333-4, Amir Mas'ed Sarbadar forced the II-Khan Tugha Timer, governor of the Kaşrân-i dakhlt, to take refuge in the summer resort of Lar-i Kaşran (Amuli, 282-3). In this period, the Mariashi sayyids [q.v.] were allpowerful in Mazandaran. In the years 783-4/1381-3. Sayyid Fakhr al-Din, brother of Sayyid Kamai al-Din, took possession of Kal'a-yi Nur; in two years, he took I the kulfas from Tälijean to Lawasan, including the kal's of the Lar and of Laridjan (Lawandar, near Rayna; Kārūd). Lārīdjān was then in the hands of Kiya Hasan Kiya T Damandar; Namārustāk, Daylárustāk, Tarita Rustāk and Kārūd were under the control of Mazandaran (Marinshi, TT, 213-14). In 795, 'Ilmur exiled Sayyid Kamal al-Din to Transoxania with his brothers and his sons, After his death, Shithrukh allowed them to return to Māzandarān (Kh "ānd-Amlr, Habib al-siyar, iii, 22). In 821/1418, Sayyid Murtadā b. 'Alt seized power in Mazandaran. He entrusted Namarustak, Daylarustāķ and Tarīta Rustāķ to his son Malik Kāwūs and gave him authority to wrest Laridjan from the hands of Kiyā-i Damāndar (Martashi, TT. 268). But other local potentates disputed control of the region with the sayyids, notably the Padusbanids or Rustamdarlyya (who bore successively the titles of Ispahbad, Ustundar and Malik) and the Kiya of Culaw/Carab (see Rabino, 141 ff.). After the death of the Padusbanid Malik Gayumarth (857/1453), Rustamdar was shared between his sons K5was and lakandar, founders of the Bani Kāwūs (Nūr branch) and of the Bani Iskandar (Kudjur branch). Under Malik Gaytimarth, Iskandar had been in control of Laridian, Namarustak and Karud. Conflicts between Kāwūs and lakandar were numerous and prolonged; Djahan Shah Kara Koyunlu intervened on mumber of occasions, calling upon Amīr Kiyā Sayyid Muhammad Gliant to settle the dispute between the adversaries (Mahdjürl, ii, 75 ff.; Karlman, Kasran, 197-8).

In the 10th-16th century, the region remained under the control of the Padusbanids. Under the Şafawid Shāh Tahmāsp I, it was shared between three cousins: Malik Bahman held Läridjan (formerly a dependency of Kudjur), Malik 'Aziz beld Nor and Malik Sultan Muhammad held Kudjür, At the beginning of the reign of Shah 'Abbas, Rustamdar was divided into three salityes: Malik Bahman holding Lärfdjan, Malik Djahangir b. Malik A212 holding Nür, and Malik Diahängir b. Malik Sultan Muhammad holding Kudjer (AAA, ii, 399, tr. 696; 534, tr. 213). Malik Bahman - constantly at war with his neighbours, whom he endeavoured to dominate by force or by trickery. These internecine struggles inevitably gave encouragement to Shah 'Abbas I in his scheme to assert his power over the whole of Müzandaran. In 1000/1592, Malik Bahman welcomed to the summer resort of Lar a Safawid expedition on its way to Eljurasan (Yazdi, icl. 58a). In 1001/ 1593, he laid siege to the halfs of Lawasan, captured and then put to death the brother of Malik Sultan Husayn Lawasani who was a favourite of Shah 'Abbas, and led away his wives and children to captivity in Larigian (AAA, ii, 520-t, tr. 697, 714-15; Yazdi, fol. 65a). In the course of the second campaign in Mazandaran which Farbad Khan undertook on the orders of Shah Abbas I, he succeeded in capturing

Malik Bahman (in 2005/2596-7), who we put to death (by Malik Sultan Husayn Lawasani to avenge the blood of his brother, according to AAA, ii 522, tr. 698; by 'Abd al-Kahhar Beg, son of Malik Sultan Husayn, according to Yazdi fol. 73b; on Malik Bahman, see also Mir Timur Mar'ashi, 273 ft.). Realising the futility of resistance, Malik Kay Khusraw, ekiest son of Malik Bahman, surrendered, Shah 'Abbas had commanded Muhammad Beg Begdilo Shamio to take possession of the sale the prothers and the children of Malik Bahman, who were subsequently delivered to Malik Husayn, Lawssani; then he entrusted Läridjan as a hyul to a Kiribāsh bākim (AAA, li, 534-5 tr. 713-14). But the two Diahangirs of Rustamdar who had capitulated to Shah Abbas at the summer report of Lar retained important functions: the Malik of Nur was appointed governor of Sawa; the Malik of Kudiur at first rotained his possessions as suzerain and became one of the trusted officers of Shah 'Abbas, Later, he rebelled as did other maliks of Rustamdar; their conspiracies were seems and all were put to death. Thus was extinguished the power of the Padusbanids (ibid., 535-4, tr. 725 ff.).

The Kaşran-i dakhil and the summer resort (ydy-lāḥ) of the Lar were favourite haunts of the Safawida. At the time when the Klallbāsh amies enthroned Shah Tahmasp I (931/1544-5), the wakil Div Sultan Runda established his summer quarters I Lar, before marching on Khurasan which had been invaded by the Uzbeks (AAA, i, 45, tr. 78). On many occasions, Shah 'Abbās visited the yāyldā-i Lār (ibid., ii, 399, 452, 854).

Although the history of Mazandaran and of Kasran is relatively well-documented from the time of the Safawids to the present day, points of reference concerning the Lar and Laridian do not become plentiful until 🔤 Kādjār period. Tahmāsp II lived for two years in Mazandaran (1137-9/1724-6), in particular in Larigian where he was joined by Fath 'All Khān Kādjār, who became his sipah-salār (Mahdiūri, 110 ff.; I'timād al-Saltana, Mir'di albuldan-i naşiri, i 521). The chieftains of Larldjan and the potentates of Mazandaran took the side of the Zands against Muhammad Hasan Khan Kadjar Koyania. Saba 'Ali Khan, leader of the dignitaries of Laridjan, prevented him from going to Amul; the misconduct of Wall Khan, the envoy of the Kadlar chief, led to the revolt of "the people of the mountain and of the plain", under the command of Mukim Khān Sārawi, Aishārid governor of Māzandarān (Mahdjürl, 123-4). After the death of Karim Khan Zand (tr93-1779), numerous Lāridjānis and Māzandaranis allied themselves to Mustafa Kuli Khan Kādjār, estranged brother of Agha Muhammad Khān (ibid., 131). After defeating 'All Murad Khan Zand and his coalition of Lariditals, Alghans and men from the Lur, Agha Muhammad Khan controlled the whole of Mazandaran and of Astarabad (end of \$294/2780). But in the conflicts in which he was continually at odds with his brothers, the Laridianis fought on the side of his enemies (Rida Kull Khān, Mihdl Kull Khan: ibid., 132-3). Captured and then set free by Agha Muhammad Khan, Rida Kult Khan again rebelled. With his Laridiani tufangeis (musiceteers), he captured Agha Muhammad Khan, who was set free me the intervention of Murtada Kuli Khan (ibid., 133, Fasa'i, i, 222; according to Sipihr, Nauhh al-tawarihh, i, 20-1, it was Dia'far Kull Khan who liberated Agha Muhammad Khan). Beaten more by the army of Astarabad, Rida Kuli Khān railied to the most of Şādik Khān Zand. But in 1x96/1781-z, the Lärldjänls remained in the camp of the Zands. They joined forces with Amir Güna Khān, sent by 'Ali Murād Khān to Māzandarān, on whom Āghā Muḥammad Khān inflicted a crushing defeat at Sabze Maydān: the crushy of the Kādjār khān towards the Lārldjānis has remained proverbial in the region (Fasā'l, i. 223; Mahdjūrl, 134). But in 1x98/1x783-4, Shaykh Ways Khān Zand, son of 'All Murād, asserted his control over the whole of Māzandarān, Fīrūz-kūh, Lārldjān and Rustemdar (i.e. Nūr u Kudjūr), Fasā'l, i. 224-5. The following year, Āghā Muhammad Khān was obliged to recapture Māzandarān before proceeding to take possession of Tehran.

Under Muhammad Shah (1834-48), the Ahan of Laridian enjoyed a quasi-independence. This semiautonomy was founded upon control of the principal economic thoroughfare between Māzandarān and Tehran "in a fairly subtle equilibrium of forces and of services rendered with the sovereign who ruled not far from there" (de Planhol, 19, with refetence to Aucher-Eloy, Thompson, d'Arcy Todd). Ask was at that time the local capital of the province. 'Abbas Kuli Khān Lāridjāni Sartīp (later Sardār) possessed a fine palace there (Bulse 229-30). This prince of Lārīdiān set about maintaining order in the region. He made himself a valuable ally of the Kadjar authority and of the 'ulama' by quelling the Babi insurrection [see sable] of Mulla Husayn Dinab-i Báb al-Báb at Shaykh Tabarsí/Tabrisi in 1265/1849 (see Mirzā Husayn Hamadāni, Ta'rīkķ-i Diadid. tr. E.G. Browne, London 1893, 52-3, 67 fl., and index; Mahdjurl, 165 fl.). 'Abbas Kull Khan at that time occupied the highest rank among the officers of Mazandarán (Mahdjüri, 176). The following year, he helped to re-establish order in Fars with his Laridjani horsemen; he entrusted the government of Kuhgfluya and of Bihbahan m his Laridjani officers and acted himself in the role of administrator ('dmil): Fasa'l, i, 306-7. The prosperity of Laridian is again indicated in 1860 (Brugsch, i, 205) and in 1862 (de Philippi, 256-9). At the start of the journey of Nāsir al-Dīn Shāh to Māzandarān, in 1283/1866, 'Abbas Kull Khān presented bimself to the istiebāl with all the officers of Mazandaran (Mandjuri, 177). Although the decline of the town of Ask became a constant process, at the time of Nasir at-Din Shah's second visit to Mazandaran (1292/1875-6), Laridian retained a degree of prosperity and still had its dignituries (including 'ulama' and sayyids); Mahdiuri, 18: if. But in 1875 an Italian general had under his command in Tebran a regiment recruited in Lāridjān (von Call-Rosenburg, 142, quoted by Planhol, 19, n. 23).

The last important figure of Läridjan in the Kädjär period was Mīrzā Muhammad Khān, son of 'Abbās Kull Khān. Surnamed Amīr-i Mukarram, he was a senior functionary at the court of the Kadjars. Outside Láridján, he exercised jurisdiction over numerous villages of Amul. During the upheavals of the Constitutional Revolution (1905-11), he was appointed governor of Astarabad and encountered hostility from members of the local and uman (Mahdjürî, 249). At the time of the dismissal of Muhammad 'All Shah (1327/1909), he was obliged to confront his kinsman Amir i A'zem Sangsari and his coalition of religious activists and of Bakhtiyaris. Amir-i A'zam plundered the treasures of Amir Mukarram at Ask and carried them off to Tehran. In the course of a second expedition of Amir-i Ateam to Laridian, a large number of Bakl tiyarls were killed (including their leader Imam Kull Khan), ibid., 258 ff. Although succeeding in retaining some of his influence, Amir Mukas Läridiani was exiled Mirmanshah by Wu al-Dawla in 1337/1918-9 (ibid., 295). Under 1 Shah Pahlavi, his possessions as well as willages of Kasran and Mazandaran became property of the crown (amish-i hidssa), plunder the jurisdiction of officers who, in their toppressed the villagers (ibid., 326-7).

The predilection of the Kadjars for the sum resort of the Lar led to the development of ro especially transversal routes linking the wi and summer palaces of the Tehran region. modernisation of arterial routes towards Lar Laridian was pursued by the Pahlavis (Karit

Kaşran, 165 îl.). 3. Other Lars.

Besides Lär in Färs (Läristän) and Läridjän, toponym Lär and its variants are widely attests the Iranian lands. Within the present-day front the following are to be noted (after DG):

<u>-</u>	, -	
village	<u>s</u> hahristån	DG
Lär	Sāwa	i, 196
Larī <u>d</u> jān	Mahallat	i, 197
Lär	Zandjān	il, 268
Lär-i Muhammad		
Ḥusayn Khān	Zandlan	ii, 26g
Lår-sar	Föniln	ii, 268
(Lärmä)	Särī	iii, 266
(Lārim)	Shahi	iii, 267
Lär	Bihbahan	vi. 325
Lår	Çah Bahar	viii, 383
(Lär-hang)	Sabzawār	is, 374

Larak is alteged to be the some of a localit Hazardjarib (Rabino, 124).

The gorge (tanga) of Laridi on the northern sof the Elburz in Māzandarān is known for its depot iron ore (Lughat-nāma-i Dihāhudā, after Kay Diughtāfiyā-yi iātisādā, 259-60). A Larān ei in Badahhān (Minorsky, Hudad al-dlam, n. 1). A gorge called Lar is mentioned in Kast (q.v.) (Mūzā Muhammad Haydar Dughlāt, Ta'vi Raghidā, tr. Ellas and Ross, London 1895, repr. 1423, n. 3).

According to Minorsky, Lai(i)djān/Lābidjān, hidjān are variants of Lār (Lābidjān, in EI*; Bu too ff.) Lābidjān and its variants are widely presented Gillan and elsewhere, (in Ādharbāyd in Fārs, in Dāghistān, etc.: Minorsky, ibid.; also W. Eilers in Ar O, xiii [1954], n. 174}-

Variants II Lar have led to some confusions. T although Yākūt (iv. 340-1) has established II tinction between "Lārdjān" and "Lāriz", attenhave been made to discern III the latter topos the arabised form of Lārdjān (Marquart, 127, 3 Lāriz is presented sometimes as II district of Tristan (Ihn Khurradādhbih, 119; Ibn al-Fakih, 3 sometimes as II village provided with II fortres two days' distance from Amul, on which it is pendent (Yākūt, iv. 341); its prominent citi are known by the wisba of al-Lārizi (Yākūt, Sam's According to Rabino (130), Lāriz is probably La a village in the district of Āmul, better known the name of Kaf'a Lāriz.

CALMARD) LAR, LARISTAN, a Perslan toponym which, in various forms (Lär, Läd, Lädh, Läz, Alär, etc.) denotes an important town of Färs and its surrounding region (Lär and Läristän), an island and an islet in the Persian Gulf, and various villages and a region of pastures in southern Persia (Lär and Laridjän).

z. The town of Lar (lat. 27° 42' N., long. 54° 20' E.) in the chef-lieu of a shahristan (which has become a farmāndāri; see Lāristān, below) of the province of Fars (ustabri Fars). It is situated on one of the roads connecting Shiraz [q.v.] with the Persian Gulf ports and the Sea of 'Uman (Darya-yl 'Uman), 366 km. from Shirāz, 306 km. from Bandar Linga [q.v.] and 250 km. from Bandar 'Abbās [q.v.]. Lār is an old station on the caravan route (9th-12th/15th-18th centuries), and lies at a height of 909 in a moderately mountainous region (ca. 1,000 to 2,000 m. high). Because of the region's aridity, the town's drinking water comes from wells and from cistems for collecting rain-water (birkns). For irrigation, a network of *kamits* [q.v.] in used. Unlike other towns in Firs, and despite earthquakes, Lär has retained relatively well its former appearance, e.g. in its wind-towers (bad-girs [q.v. in Suppl.]), its labyrinths of streets, alleys, etc. Only a single new avenue, the Khiyaban-i Himmat, crosses the town from north to south. The most interesting monuments comprise:

(1) The stone-built fortress Azhdabā Paykar ("having a dragen's body") which dominates the town from a rocky spur. According to legend, its well contains a army and treasures belonging to the Kā'ām-i Āl-i Muḥammad (see the extracts from the Tuhfat al-gharā'ib, ms. of the B.L., Or. 10999, ed. J. Aubin in Farhang-i Irān-tamin, vil2-3 [1337/1958], 177). The ancient castle of the kingdom of Lār is said to have been destroyed by an earthquake in 1393 [the ruins are mentioned by 17th century European travellers; — Calmard, 150). The region is rull of fortified places, in particular, at Girāṣḥ, most of them in ruins (on the kal-as a Lār, — the Muḥhavar-i Mufid, ed. Aubin, in ibid., 174).

(2) The Bāzār-i Kayşariyya ("imperial market") which forms, with the caravanserais surrounding it, a remarkable architectural ensemble. This is a covered bazaar of the fahâr şûk type (i.e. cruciform, with four streets for merchants and artisans, or four sides), with an abnost-square plan (rr7 m. E.-W., 124 m. N.-S.). It is built out of dressed masonry covered with stucco. Its dome (tak, gunbad) is 18 m. high, and has a bad-gir providing fresh air and ventilation. Inscriptions indicate various dates of building or reconstruction; under Shah 'Abbas in tot4/2605-6, by Hādidii Kanbar 'All Beg Dhu 'l-Kadr (see Fasar, if, 283), and under Nasir al-Din Shah in 1300/1882-3, by Fath 'Ali Khan, governor of Fars. This bazar was altegedly the model of the Bazar-I Kayşariyya of İşfahân (built 1029/1620) and of the Bāzār-i Wakit of Shirāz (see Allāh Kull Islāmi, Bazar-i Kaysariyya-yi Lar, in Hunar wa Mardum, no. 139 [1353/1974], 70-3; this article makes == mention of the evidence from European travellers of the Safawid period, for which see Calmard, 154, and below).

(3) The Masdjid-i Dium'a, for which we have no exact, historical description. Ibn Battūta mentious a dervish convent (idwiya, i.e. khānakāh) of the famous Shaykh Abū Dulai Muhammad. At the opening of the 17th century, there was situated near the Kaysariyya bazaar "a very great mosque, the only one of the town"; it contained the marble tomb of a saint constructed "in a fine court outside the mosque" (Rabelo, 109). A marble mihrāb of Gudjirātī style, allegedly dating from the 8th/x4th century

and coming from Lar, in preserved in the Fars Museum at Shiraz. This mibrab poses an historical problem; was it brought to Persia in its present state? And were the inscriptions on it added in Persia? (see R. Howard, The Las mibrab, in Art and Archaeology Research Papers, ix [April 1976], 24-5, with a photograph which does not permit the decipherment of the inscriptions).

1. Shiras-Lär-Bandar *Abbäsi

De Bourges

Lår is divided into 14 quarters (kuy). Like most modern Persian towns, it now takes in several suburban areas. It has all the organs of civil administration, a military garrison, schools (a dableistan and four dabistans) and an airport (to the south-east of the town). Although the climate of Lar is relatively tolerable than that of the Gulf coasts, various illnesses are rife there, in particular trachoma and filiarotis, both for long endemic in the region. The demography of the town has followed the evolving of the natural conditions and the historical and economic vicissitudes of the region (see below). 2. Läristän, Geographical sketch. As a province of southern Persia on the Shiraz-Bandar 'Abbas axis, Laristan is generally reckoned m part of the garmsirát or warm regions of Färs, with which it was integrated the opening of the Lith/L7th century. Since its influence spread over the neighbouring regions (see Map 2), its natural borders have fluctuated. In general, they may be fixed as follows. In the north-east and north, the old regions of Sabra (centred on Furg) and of the Shabankara (centred on Id), now lşţahbānāt; Lāristān takes in Diuyum, to the south of the Darab). In the east, along a line passing half-way between Diabrum and Djuyum and connecting with the Gulf littoral in the region of Gawbandi (embracing the lands of Bid Shahe, Khundi, 'Alamarwdasht and Calladar). In the south, the Gulf littoral (ports and islands of the Gulf of 'Uman, embracing Lashtan, from Cape

Bikha, meaning a steep-sided valley, derived from bikh, "river-bed", in Läristäni (iktidäri, Fashang).

** Fümistän, from füm, meaning "corn" in vernacular Persian.

Nåband to Bandar 'Abbås. In the east, Kawristän. In former times, certain adjoining regions (such as Furg, Tärum and Hurmuz) have been on occasion attached to Fårs, mothers to Kirmån; Kawristän/Kawusistän was taken over by the Shabānkāra in the 7th/r3th century (see below, mothers).

As noted by travellers, this region has distinct geographical features. Nevertheless, it has never formed the object of detailed geological studies; in regard to archaeology (see below), only the peripheral zones have been studied. The region is situated to south of the main spine of the Zagros (the "Main Zagros thrust line", according to A. Rutiner and J. Stöcklin, in Bull. Amer. Assoc. of Petroleum Geologists [2968]), i.e. on the edge of the Arabian formation-level which juts forth a salient

into the region of Bendar 'Abbas. In certain marginal zones belonging to the Creteceous period there are included some Eocene period formations, such the "Ginau series" (at Küb-i Ginaw; 🚃 Pilgrim [1924], 59 ff.). The autochthonous, marginal folds which make up the mountainous terrain which is characteristic of Läristän are clearly marked out. With their east-west orientation, they are made up from a basis of an epicontinental sedimentation; their composition (calcareous rocks, maris and gypsums) suggests the existence of fairly shallow seas. In their immediate vicinity are often found domes of salt, generally considered m being of Cambrian origin. The main concentration of these domes of salt is located in me part and another of a line connecting Lår and Bandar 'Abbås (see J. V. Harrison, in Camb. kist. of Iran, i, 179 with map). These marginal folds are closed on the south by the Küh-i Khamir (apposite island of Kishm [q.n.]), which is made up of calcareous rocks described as "foetid putrid" (hippuritic limestone) belonging to the structure bearing the special name of the "Khamir series" (see Pilgrim [1924], 15, 60). The "Hurmus series", conglomerates of rock found on the peripheries of most of these salt domes, stretch as far east as Tärum and Kirmän and possibly further in to Läristän (Pilgrim classes them I Jurassic, ibid., 16, and Harrison as Cambrian, ibid., 115).

The orography of the region is characterised by a relief which is lower than elsewhere in Fars (especially along the axes Shiraz-Bushire and Shiraz-Bandar Tahiri) or further the the in Makean, Along the Djahrum-Lar road, the highest point is 2,100 m., and only along the edges of Laristan is the 3,000 m. mark passed (Kth-l Furgun, 3,280 m.). Elsewhere, heights are usually between, 1,000 and 2,000 m. Läristän suffers from frequent earthquakes, some of which have been described or noted by chroniclers and travellers; IIII have been counted between 1953 and 1960. In 1960, one of them caused much destruction and casualties at Lar and Girdsh (see photographs in the National Geographic Magazine [Jan. 1961], 68-9). The hydrography of Laristan is very clearly marked by aridity. Except along the margins, snow does not remain long in winter, and the rainfall is feeble (at the most, 200soo mm. per annum). The water intended for consumption or for irrigation is frequently brackish (see below). The rivers with a regular flow wery erratic; rainstorms gouge out ravines across crossingcoutes, and floods are often the cause of catastrophes. The most important river—known, with local variants, as the Rūd-Khāna-yi Shūr Mihrān runs from west to east, from the dihiston of Faramarzan to Bandar Khamir. It is totally useless for agriculture: its flow is very feeble, and it can be forded at all seasons (Razmara, Farhang-i diughrāfiyā-yi Irān, vil. 208).

The region has a sub-tropical climate, hot and humid along the coasts, arrid and torrid in the interior (see A. H. Adle, Regions climatiques et végétation im Iran, Tehran 1950, Persian text 40-1, I'r. text 8-o). Although certain traces of a continental climate may be felt at Lar (untouched by the monsoons). the variations of daytime and nocturnal temperature are small, and towards the Gulf, the temperatures become torrid (Calmard, 94 ff.). Winter cold is only met with along the Lar-Djahrum route. In Lar, the houses - cooled by bad-girs (ibid., 95), and beyond Kawristan, a drying wind called bad-i samilim ("poisonous") blows (ibid., 97). There is a great contrast between the plains of the littoral affected by the monsoons (with a hot and humid climate) and the upland regions (mountains, elevated plains and desolate plateaux) of the interior which have a dry climate, with mild winters and very hot summers. The palm-groves of the laterior offer, however, shelter for the coastal peoples at the period of greatest heat.

Socio-reiteious aspects. The story of the population of Lăristân is an extremely complex one. Heterogeneous groups have been subsequently added to ancient Iranian stratum of agriculturists and pastoralists. Elements described m Mongol were still in course of sedentarisation in the Kurbâl district at the end of the 7th/13th century (Aubin, Lar médiévale, n. 24). The presence of Turkmens, who intervened in the affairs of Lâr at the beginning

of the 14th century, presents an historical problem (ibid., 496, and below). From the zoth/zōth contury onwards, travellers mention the presence of numerous nomads. Kashkan groups spent the winter in the Khundi district (Le Fare, 17, 21). Some Baharia had become sedentarised and lived in tents on the plain of Yazd-i Khwast (ibid., 27). Some Basiri spent the winter in the districts of Sarwistan and Kurbal. and some Nafar occasionally passed the winter in Laristan (ibid., 31-2). Some nomadic or semi-nomadic families (tiva) of Turkish origin have been recorded at Durz, Sayiban, Karmusta(di), Şabra-yi Bach, Ashkanan, Bid Shahr and Didyum; and some Arabs and Bāşir! at Djūyum, Harm, Kāriyān and Bid Shahr (see the in Razmara, Forhang, vii, 209; Iktidari, LK, 15). There are sedentary Arab elements along the coasts, at Bandar 'Abbās, at Bandar Linga (Kawāsim [q.v.] known locally as Diawasim) and in the interior (notably the Diahangiriyya/Djuhungira, cf. the shayans of Bastak). The Banyans, Hindu merchants also called Multania (numerous at Bandar 'Abbas and at Bandar Kung in the Safawid period), used to play moutstanding commercial role, and there are still residual groups of Hindus in Läristän. There used to exist an important Jewish community at Lar, Gilar, Diahrum and Hurmuz, and Lar was a centre of Hebraic learning. At the beginning of the 11th/17th century, a Jew from Lår became a convert 🖿 islam, assumed the name of Abu 'l-Hasan Lari and secured from the Shiff Sulama, the putting-into-force of discriminstory against the Jews. These measures were incorporated in a code to be applied to all the Jews of Persia, who had to wear special, distinctive clothing (a hat m piece of coloured cloth), and they underwent various persecutions under Abbas I and his successors. In the 19th century, there were massacres, forcible conversions, expulsions, etc., and the Jews of Lar, Diahrum, Fasa, etc. emigrated to Shiraz (the main items of bibliography about the Jews of Lar to be found in L. Loeb, The Jews of Southwest Iran, a study of cultural persistence, diss. Columbia University 1970, 31 ff., with translations of the "restrictionary codes", Appx. I, and obronological lists of intimidatory measures, Appx. II; on Abu I-Hasan Larl, see also Habib Liwi (Levy), Ta'rikk-i Yakûd-i Îrân, Tehran 1339/1960, lil, 224 ff.).

Islam in Läristän was notable for the preponderant influence in the Sunni farilias in dervish orders: the lahāķiyya/Murshidiyya, the Dānyāliyya (at Khundi and Lar), the Bant 'Abbasi (at Bastak), etc. The Twelver Shillshi imposed by the Safawids only succeeded in implanting itself in Laristan to . partial extent, and numerous troubles broke out in the post-Safawid period, in the 18th and 19th centuries (see Aubin, Les sunnites du Larestan, and below). The dichotomy thus created remains very apparent today, since the greater part of the urban and village communities are in majority Shaff? Sunnis. The sedentary Arabs of southern Laristan are Sunnis. Amongst the tribal groups, it appears that today, only the Turkish tribes - both nomadic and Shi'le (Aubin, op. cit., 157 n. 8). Non-Islamic practices have been noted among the peoples of African origin along the coasts and in the islands (see below, on Larak).

The population structure has been heavily affected by natural factors: earthquakes, floods, droughts, polluted water sources, locust-plagues, etc. These last have been the cause of dearths and illnesses: ophthalmia (from the sand atorms), malaria, dysentery, and above all the filiarosis peculiar to Laristan, caused by a parasite present in particular in the stagmant water of cisterns, the guinea-worm or Filaria medimensis, payawipiyak in Persian and powe in Laristan (see lightdari, Fashang, 67). Accidents of history have also been the cause of depopulation (destructions, sackings, massacres, exoduses, deportations, etc.). Despite the relative economic florescence of the region during the 14th-18th centuries, the Laris have continued to emigrate, above all towards Muslim India, where they have served in the army and in the administration.

Taking into account the lack of preciseness in the evidence, the demography of the region as a whole is difficult to delineate. The only data which are a little sure concern the town of Lar itself, and these are given below (unless there is an indication to the contrary, these items of information pertain to the town or the urban agglomeration of Lar; one should reckon I persons per family or household): 4,000 heads of families in 1523 (Tenreiro); 4,000 households in 1638 (Mandelslo); 50,000 inhabitants at the beginning of the 18th century (English estimate); 15,000 inhabitants in 1808 (a figure given to Dupré, who found it exaggerated); 1,200 households in 1881 (information given to Stack, who estimated the population at 6,000 inhabitants); 2,500 families (1913); 11,656 inhabitants (ca. 1950); 14,188 inhabitants (1956); 17,000 inhabitants (1960 estimate). In 1966, the shahristan comprised 137,303 inhabitants and the town of Lar 37,198. The preliminary results of the 1976 census (the only information so far published) deal only with the shakristan of Lar, and give a population of 183,369, 52,465 being urban and 130,904 rural dwellers.

Language and literatures. In addition to Persian. Arabic (spoken on the coasts) and Turkish, Läristän has its own particular dialect, which has been used by popular poets of the region; their verses have been partly gathered together in written login and studied (see the references in Minorsky's El' article). Some proverbs in laristant have been published (Iktidari, in, FIZ, xi/2-3 [1533/1954], 233-53), as well as vocabularies; K. Kamioka and M. Yamada, Lorestone studies, i. Lari busic vocabulary, Tokyo 1979 Inot seen). Some works in Judaeo-Persian have been written at Lar, which must have been the centre for a school of scribes, translators, copyists, etc. (see Loeb, op. sw., [1.]. The fate of the Jews of Lar has been put into Persian verses (mixed with dialectal terms) by the Jewish poets (on whom see Habib Livi, op. cit., 270-t), notably by Baba'l Luți Kashani and Baban Farhad Kashani (cited = length by Liwl, 224 ff.).

Numerous littérateurs originally from Laristan have written in Persian in all the literary genres: poetry, grammar, philosophy, mysticism, fish, historiography, etc. (see the lists cited by Ragl, Hafi iklim, ms. India Off. Libr., cat. Ethé, i, 297, fol. 1112-b; Fasan, ii, 284 ff.; Iktidarl, LK, 135-203. To these one should add Nimdihl, a writer of the 9th/15th century, on whom see Aubin, in REI [1967], 61-81; Karamati [idem, Les sunnites du Lârestán, 155]; Shaykh Ahmad Faldhi [ibid., 170 n. 1]; etc.).

rysj; Shaykh Ahmad Faldhi (ibid., 170 n. 1]; etc.). Economic aspects. Though generally considered as one of the poorest regions of Persia, Läristän is not without natural resources. Sulphur is found in many places, and is fairly easily exploitable: in the coastal regions, at Bustina (to the west of Bandar Linga) and at Khamir (to the see of Bandar Linga); in the interior, at Karmüsta(di), to the south-east

of Lar, etc. In the 19th century, the sulphur mines of Laristan were quite productive (see Pilgrim [1908], 155 ff., [1921], 343 ff.). Gypsum (gad) is frequent everywhere, and is easily exploitable along the littoral (Pilgrim [1908], 157-8). The iron ore and the salt of the "Hurmuz series" - more difficult to exploit. There is also some copper, unexploited, at "Karmoussah" = Karmüsta(di), see Dupré, i, 431. Saltpetre, taken from nitrous lands and abundant in the region of Lar, yields material for gunpowder (at Girāsh, to the east of Lar; Dupré, loc. vit.). On the minerals of Laristan, see also Fasa'l, ii, 338-9. After having been famous for its bows (see below), Lar was also famed for its firearms (Calmard, 157). Various manufactories existed at Evaz (ce. jo km. north-east of Lar; see Dupré, loc. cit.; Karamat1, 48-9).

The natural vegetation covering is fairly meagre. However, Läristän is relatively well-wooded. There are to be found varieties of tamarisk, acacias, conifers (Adie, op. cit., ro), and the jujube tree (kunār) is also to be found. The gas wood, which is very hard and solid, is used for cabinet-making and for timber framing. Various spiny shrubs, such as the kakar, are enjoyed by camels. The region falls completely within the date-palm zone, which is cultivated in the cases of the interior. The date barvest occupies a seasonal work-force, and as well m dates, cotton, tobacco (of good quality) and mustard are grown and exported (Le Fars, 163). In some places, opium popples, sesame, etc. are cultivated. On the stony plains between Lar and Bandar 'Abbas, asafoetida, the exudation from the roots of certain varieties of Fernia foctida, used in the pharmacopeia as far as in Europe, is gathered (Calmard, 115-16). Amongst products III an animal origin, the "bezoar" has been noted (see below). One should also note the raising of and trafficking in carnels (Dupré, i, 442; Le Fars, 163); a similar trade in borses, exported to Iudia (see below); and one im sheep, whose skins were the subject of an extensive trade throughout all of Läristän (Dupré, i, 453).

The basic problem remains that of water-supply. The water from wells and watercourses is most often brackish. Cisterns for rain water (birkas), in various patterns (hexagonal, circular, etc.), are to [found in all the inhabited spots and at road stages. Except in certain regions of the north, in particular those of Dinyum and Khundi, where irrigation by hands, wells (gdvddks) and springs is found, dry farming is generally done (daynti, ma Razmārā, Farkang, vii, 209). In the date-palm oases of the interior, these are often consumed in the spot. In addition to dates, the food supply comes, according to local possibilities, from cereals, products of market-gardening, citrous fruits, specimens of the gourd family, milk products (cows, goats, sheep), poultry, etc. Travellers have noticed the abundance of game (ibexes, mouflons, partridges, quails) and the excellent truffles of Lar. On occasion, grasshoppers also appreciated (Calmard, 120-1). Along the coasts and elsewhere in Laristan, fish is fed to animals, including to camels, asses and even to bovines and sheep (ibid., 124). There is moundiment, peculiar to the region, made from a fish base and spices (mahidba or mayaba, called makes in Laristani; see Iktidari, Farkang, 203-4, and Fasa't, ii, 283, where its making a described).

As well as the making of arms, local products include cotton cloths and carpets (gilles, källs). Except in period of disturbance, the agro-pastoral sedentary and the nomadic economies complement

each other (i.e. exchange of agricultural products and manufactured goods for the products of stock-

rearing, carpets, etc.).

The economy of Läristän was relatively prosperous in the 9th/15th to the 1sth/18th centuries, but suffered in the post-Safawid disturbances and the interruption and ending of international trade (see below). The profession of caravaneer (coupled with the rearing of camels, mules, asses, etc.) used to occupy important proportion of both the town and rural population. From this economic activity in the past, the people of Läristän have retained interest in the commercial life; one meets, above all along the Gulf shores, numerous peddlers (plianars). Also, the profession of arms (cf. the famous tufanglis) has continued to attract a good number of Läris.

Historical evolution. Laristan m the land of Lar does not emerge clearly in Persion history till the 7th-8th/13th-14th centuries. Until then-apart from a few sparse items of information about the neighbouring regions = about certain small places (Yākūt speaks of "Diuwaym Abl Ahmad", i.e. Diuyum)its past belongs almost exclusively to the littleknown history of the kingdom of Lar. There are doubts concerning the localisation of this last according to mythical or legendary history. Minorsky (EI1 art. Lar) proposed to equate it with the land of the dragon Haitan Bokht (or the Haftwid of Firdaval's Shah-name) which Ardeshir Popakan killed. This dragon is said to have lived in the village of Alår in the rustak of Kodjäran, - of the rustales berdering on the Gulf of the province of Ardashir Khurra (al-Tabari, i, 820). The variants Gular (Karnamah, tr. Nöldeke, 50), Kočárán (ibid.) or Kudjärän (Shāh-nāma, ed. Mohl, v. 308) do not help in identifying it. Aiar is the name of an island (see below); Kudjar, in the bulsh of Galladar (Fasa?, Fibrish, borders on Litristan (of which it forms part, in the large sense). At the present day, one finds several villages in Läristän whose names might well be variants of Gular (liktidari, LK, 46 p. 2; Gilar belongs to the bakksh of Djuyum, Razmārā, Farkang, vii, 202). But there is also a Kular in the shebristan of Bû-shahr (ibid., 187), a Kular in the bulik of Cahar nāhiya (Fasā'ī, Fihrist), etc.

Thus the localisation of the land of the dragon Haftvåd within the imprecise borders of Ardashir Khurra (also called Irahistān) remains problematical. Moreover, m legend which could have some basis of genuineness places the home of Haftvåd in the region of Bam (Aubin, Lar miditvale, m 3). The place-name Marak-i Lārān appears in the Bundahima (D. Monchizadeh, Topographische-historische Studien sum iranischen Nationalepos, Wiesbaden 1975, 141). A village called Lar exists in the jahristän of Cah Bahār (in the old ustān of Klimān wa Makrān), populated by Sunni Balūčis (pop. 220 in cs. 1950, see Razmārā, Farhang, vili, 383).

According to a bays attributed to Firdaws! (lacking in the known editions of the Shih-name, but cited in the Burkan-i hahi", whence Vullers, Lexicon, a.v. Lid; Fasa"i, il., 283, etc.), the town or region of "Lad" was allegedly "given" to Gurgin Milad by the Kayanid Kay-Khusraw when he renounced the world and distributed the Persian lands to his dignitaries. The passage from d to r is found in Armenian, in Tati (Minorsky, Ell art. Ldv; J. Darmesteter, Etudes iranianuss, i., 73) and in various Iranian dialects (see G. Larard, La langue des plus anciens monuments de prose person, Paris 1963, 156). Previously, Lad to bave had another name (AAA, tr. Savory, ii, 807).

According to a legend as generally current in southern Persia as in Lâristân, the people of Lâr in Fârs are said to have come from Lâr at Damāwand (see Lâr and Lâridjân), whose cold climate in winter they were unable to endure (Fasâ7, ii, 281 ff.). Although one can hardly use this legend as historical material, there are toponymical resemblances between the two places: Kûh-i Alburz in both places (to the south-east of Djahrum in Lâristân); a defile (gardana) Kulūn-i Bastak of Lâr at Damāwand (Lâridjân) and the settlement of Bastak in Lâristân (Iktidârl, LK, 47, 11, 4; Muwahhid, Bastak, 6).

According to another tradition, the foundation of Lar came from one Balash (Valakhsh), son of Firdz (Pérôz), see Razmára, Farkang, vii, 209,

and Dihkhudå, LN, s.v. Lår.

Archaeological information gives us only very imprecise material on the past of Läristän. Investigations have revealed numerous "Säsänid" traces, above all in the western border district. On Galladär (icemerly Khundjūfā!), — Sir Aurel Stein, Archaeological reconnaissances in North-Western India and South-Eastern Iran, London 1937, 213-25; on the čahār-jāds of Kāriyān and of Mahallča, near Fishvar, — L. Vanden Berghe, in Iranica Antiqua, i (1961), drawing, 196, and maps; Aubin, Lar midičusle, — 3; idom, Survic de Shilās; and for — archaeological survey in southern Läristän, — Stein, in Gf. lxxxiii/s (1934), 130 ff.

The list of princes of Lar, from Gurgin Milled up to the 16th century, has been partially reconstructed by J. Aubin from the Şafawid (above all, from Ghalfari, Djahan-ara, ms. B.L. Or. 141, Add. 7649/z; Rārl, Haft iklim, ms. I.O.L. (cat. Ethé. i. 397) and ms. B.N. Paris, Suppl. persan, 357; Hasan Beg, Aksan al-tandrikh, ms. B.L. Or. 1640; Münedidjim-Bashi's Saba'if al-akhbar (cl. Iktidkri, LK, 69-71) add nothing to this list, which replaces that of Minorsky in EI1 art., based on ■ single ms. of the Diahan-dra). Information on this princely family only becomes reliable after 594/1198. Between the 7th/13th and 10th/16th centuries fifteen amirs followed each other, we succeeding father. But the fist has some vague points; Ibn Battūta's evidence (according to him, the sultan of Lar was a Tuckmen and not a descendant of Milad) and that of other sources does not tally. Also, the chronology becomes uncertain for the last five reigns, in the 20/16th century, Lar médiévale, 496 ft.).

As Aubin has pointed out, the problem of the "rise" of Lar in the 13th and 14th centuries can only be approached indirectly, as a reflex of the establishment of a new route Hurmuz-Lar-Shiraz (op. cit., 491). This particular problem is connected with the general of the evolution of the maritime outlets of Fars and Kirman. The ruin of Siraf (5th/11th century) and its problematical survival linked to the development of the island of Kays/Kish [see KAYs] (6th-8th/12th-14th centuries) caused == eastwards displacement of the ports and routes of the Persian Gulf. New towns grew up in the garacted! of Färs: first of all Fäi/Bäi, a place to which 🔤 Straffs, menaced by the Gulf pirates and the tribes the interior, could fall back, and then Khundi, situated at the crossroads of the garm-sirát routes, the Kays-Shiraz axis and the transversal axis towards Lar and Hurmuz. In the 7th-8th/13th-14th centuries, a complicated play of interests brought the various socio-economic small groups and local powers into conflict. Around 700/1300, the dervishes of Khundi secured from the Tibi merchants the cession of the isle of Djarun to the princes of Hurmuz, and these last acknowledged them till the time of the Portuguese domination (Aubin, Princes d'Ormus, 94-5; Survie de Skilán, 26). Around yee/1300 also Kays was occupied by the Ormuzis, and henceforth, the international transit trade via Hurmuz in the

Kays-Shiraz route was abandonned.

Although Lar is described in the 8th/14th century as a prosperous town (by 1bn Battuta, see below), it does to have played any important political role nor to have excited the eavy of its neighbours in mediaeval Persia. The sole exception to this state of affairs seems to have been the annexation in the 7th/13th century of Lar by the Shabankāra, its northern neighbours who controlled eastern Fårs and who had spread into Kirman, According to Aubin (Lar médiévale, 499-500), this involved an episode in the fight between the Shabankara and Salghurid Fars. From the beginning of his reign, the Salghurid Abu Bakr b. Sa'd (628-58/1231-60) began a policy of dominating the Gulf. In this kind of race to the sea, he clashed with other local powers: Muzaffar al-Din Shabankara'i and, over control of the island of Kays, the prince of Hurmuz. It was probably in 628/1230-1 that Muraffar al-Din seized Lar; the territories annexed extended to the Gulf shores (not precisely delimited in the west, but to Kawristan, the frontier with the kingdom of Hurmuz, in the east, see Aubin, op. cit., 500). Lir's orientation towards the Gulf and its prosperity in the 8th/r4th century confirmed by various sources. Mustawfi -who does not use the term Laristan but that of wildyat-i kindr-i daryd "region along the sea-coast"says that most of its inhabitants merchants who travel by sea and land, and corn, dates and cotton grown there (Nuzha, 139, tr. 138). Ibn Baţţūţa's words, who visited Laristan (probably in 748/1347), pose certain problems, especially in regard to dating (see J. Hrbek, in AsO, xxx [1962], 446 ff., and Aubin's remarks, Survie de Skilän, 23, n. 20, 29, n. 68, 31, n. 92). He describes Lar to mas "a large town with springs, considerable streams and gardens". It had large, well-built bazaars. He lodged in a zawiya of Shāfi'l dervishes, who welcomed travellers. Not only the dervishes but also the brigands of Laristan were organised for trading (Aubin, Las médiévale, 500; lbn Battüta, ii, 240-1, tr. Gibb, ii, 405-6).

We know from other sources, complementing Ibn Battūta's information, that the hereditary shaykhs of the sawiya of Lar came originally from Khundi (Aubin, Survie M Shildu, 32, n. 98). The religious situation at Khundi in the 8th-9th/: 4th-15th centuries is unclear. In the 7th/23th century, this little town became the seat of a hhanahih [q.v.] whose murshid Shaykh Dāniyāl, affiliated to the Ishāķiyya or Murshidiyya order. In addition 🖿 the rich sawiya of Shaykh Abb Dulai Muhammad (Sh. Diniyal's successor), Ibn Batjūta saw at Khundi another Shafiq zawiya of an imprecise nature. It seems that in the 9th/15th century the khanahak of Sh. Daniyal into decline, whilst that of Abu Nadimi (that visited by Iba Ba(tūta? In 1347?) was more flourishing (Aubin, op. cit., 30 ff.). According to Muwahhid, Bastak, 29-30, the one visited by Iba Battata was that of the shay!h of the Bani 'Abbasi, Hadidil Shaykh 'Abd al-Salam Khundji, known under the latab of Kuth al-Awliya' (d. aged 85 in 746/1345-6).

According to various sources, two Indian princes are said have invited the poet Halis Shirazi [g.v.] to their court. At the invitation of the Deccani sultan Mahmud Shah of the Bahmanids, Halis proceeded to Hurmuz via Lar with the intention of setting sail for India by ship; but since a storm

blaw up at the time of his departure, he is said to have abandoned the plan (see Browns, LHP, iii, 285-7). Some coins struck in Lar (a gold piece of the Muzaffarid Shah Shudia*, and some Timurid (and Čaghatayid?) coins) testify to the interest of certain princes in the town during the 8th/9th/14th-15th centuries (references given by Minoraky in his EP art.).

In the 8th/14th century, the garmsieds of Fars were divided into two antagonistic politice-administrative groupings, the bildd Ldr and the Khungj-u-Ball (cf. Ibn Battûta) "de structure interne différente et de visées extérieures opposées" (Aubin, Survia de Skilāu, 23). <u>Khundi</u>-ū-Fāl had amicable relations with the principality of Humnuz, whilst the principality of Lar employed an aggressive policy towards this last and even tried to annex it (see below). Although Khundj-u-Fal possessed-in the same manner as Shirāz or Hurmuz—a class of ous, experienced notables, one only finds there, at late date, a powerful family (that of the raits Falts) who, well after the decline of Khundi-a-Fal, became viziers at Hurmuz i the end of the 9th/15th century and remained there till the end of the period of Portuguese domination (Aubin, op. cit., 36). As for the principality of Lar, despite its feeble resources, its lack of intellectual elite and the emigration of its traders and its soldiers to India, it had a family of maliks who assured to the town a continuity of princely power during the 8th-9th/14th-15th turies. Gradually, in the more of the second half of this latter century, a class of educated notables took shape there (ibid., 32).

The causes of the decline and then of the deflection of the Khundj-u-Fal route remain little known (political upheavals, the loss of influence by a certain or group or family and natural catastrophes have been suggested, ibid., 35). The ruin of Karzin (on the Khundj-Shiraz axis, earthquakes and floods ca. 1440), the development of Djahrum as an intellectual and religious centre in the second half of the 9th/15th century and the founding nearby of a community of dervishes (by Kuth al-Din Muhammad b. Muhyi al-Din Kushknärf, called Kuth-i Muhyf, at ikhwanabad or Kutbabad, at the crossroads of the routes from <u>Sh</u>irāz, Fasā and Lār, (avoured the use of the Hurmuz-Lär-Diahrum-Shirāz axis (see Map 1). At the end of the 8th/14th century, $\underline{\mathbf{D}}$ jahrum was a stage on the $\underline{\mathbf{Sh}}$ irāz-Lār road (Aubin, Las médiévale, 501). Whilst the Hurmuz-Shiraz route via Tarum, Furg and Fasa continued to be used, that via Diahrum was regularly employed from the second half of the 9th/15th century onwards (Aubin, ibid., and Survis de Shilau, 33-4).

in the garmairat, only the family of the rails Falls-who hald Shillaw and retained some influence in the Gulf-succeeded in maintaining Fal as a petty urban centre, despite the growing pressure of the princes of Lar. The latter in fact drew benefit from the new position of their town-staging post the Hurmuz-Shiraz axis by extending their power towards the coast and the intervening high valleys (soid., 35-6). The inevitable conflict between Lar and Hurmus-which had become economically complementary through their dependence on the Indian trade-broke out in 904/1598-9, when the prince of Lar tried to exploit an outbreak of discontent amongst the Bedouins of Djulfar. The naval expedition against the island of Diaron led by Abo Bakr Lari was checked by Kh "adia 'Ata', m chuldon of Salghur Shah (Aubin, in Mare, I, 102-3). The intrusion of the Laris in the affairs of Hurmuz revived

after the death of Salghur Shah (1505) with a further attack on Diarun. But the new ford of Hurmuz, Kh vādja 'Atā', put an end to this, at the same time removing young ruler issued from union between Saighur Shah and a princess of Lar (ibid., 104-5). Nevertheless, the princes of Lar continued expand towards the shores. Their vassals, the amirs of Hud, brought pressure to bear on the Lashtan region (the land behind the island of Kishm at Năband); one of them seized the district of Lashtan in 1546 [Aubin, in More, li, 142-3; on Ilud, see ibid., in 367 and Lar miditrale, n. 22). Yet despite the decline of Fal, Larls and Falis followed parallel paths in their relations with Hurmuz even after the advent of the Safawids.

At the end of the 9th/15th century, commercial traffic was enough to stimulate Lar's prosperity. The prince levied no taxes on goods in transit. At the beginning III the next century, at the time when the Portuguese appeared, Larl merchants and mercenary soldiers took an active part in affairs of the Deccan. The famous silver coin of Lar, the idei or larin [q.v.], circulated through all the markets of the Indian Ocean shores (Aubin, in Mare, ii, 242; Steensgaard, 420-1). Like Lari warriors, the bows of Lar were celebrated, and were exported = "trak and India (Aubin, op. cit., 177-8). After Fål (Dör al-Said? "abode of purity") and its twin Khundi (Dar al-Auliya) "abode of saints", Lar could boast the lakab of Dir al-Ma'dala "abode of equity"

In 914/1508 envoys from Hurmus and Lär to give allegiance to Shah Isma'll = Shiraz (AAA, tr. Savory, i, 57-8). The prince-governors of Lar became tributary to the Safawids with the title of Amir-i Diwin (ibid., ii, 800). Around the turn of the 15th-16th century, pieces of information on Lar become more numerous. The travellers who passed through it in the 15th century did not give any details on their itinerary (Alanasiy Nikitin, Khoshenye ta tri morya, Moscow 1958, 89; Girolamo S. Stefano, see Aubin, Survie de Shilau, 33, m 106-7). Gil Simdes, secretary of the Portuguese embassy to Shah Isma'll who, in 1515, returned from Shiraz to Hurmuz via Lar, tells us nothing further. Other Portuguese, however, were more informative. The embassy of 1523-4 passed through Lar. Though sometimes difficult to trace, the itinerary of this embassy is described in detail by Autónio Tenreiro (Itinerário, Lisbon 1971, 16 ff.; for a critical study of this text and of the parallel account of Fernão Lopes de Castanheda, see Aubin, in Arquivos, iii (1971), 238-52, with 245-6 on Lär itself. Tenreiro gives us some important information about Laristan, especially on Kawristan/ Kawuristan, the frontier region between Lar and Hurmuz (cf. Aubin, in Mase, il, 104), on the caravanserais and cisterns constructed along the road by pious donors, on the town of Lar (its protective wall built from stone and with plaster decorated with tiled squares; the Laris' clothing; the Lari bows; the agricultural products (dates and barley); the local Jews; the money there (the larin); the muleteers-caravaneers; etc.), on the date-palm groves, the rearing of and the export of horses to India via Hurmuz, and on the mountain goats which produced the basar (bezoar, i.e. bdzakr [g.v.]; this famous antidote to poisons of which there existed spurious imitations, was produced in Persia in Khurasan and in the land of the Shabankara, see C. Elgood, A medical history of Persia, Cambridge 1951 369 ff.). Tenreiro also describes the road from Khundi to Kärzin at a time when it had become a secondary track (Aubin, Survis de Shilau, 33-4).

In 1540, under Shah Tahmasp I, the Venetian Michels Membré travelled from Shirae to Hurmus via Lar, giving a description of the latter (Relacione di Persia (1542), IUON Naples 1969, 53-4). According to him, the town was surrounded in two halves by stone walls. It had a higher part, that with the citadel, and a lower part, and "outside the town there are other houses which are not walled". Membré and his retinue lodged in a caravanseral outside the town walls. He noted the numerous cisterns for collecting rain water built by pious Larls both in the town and at two-league intervals along the Lar-Hurmuz route. At Lar, there were even some fountains for the prostitutes. The gold and silver smiths were "gentiles from India", "all gathered together in one street". At Lar, both Turkish and Persian were spoken. The king, a vassal of the "Sofi", was called "Soprassi" (?), and wore the "cap" of the Sofi (the external sign of adhesion to Twelver Shifism, according to the Kizlibash. The shops, piled high with merchandise, hardly needed protection at nights against thieves "because the said king of

Lår exercises great justice".

Soon after Membré's passage through Lar, the prince [Anushirwan] b. Abi Sa'd b. 'Ala' al-Mulk, called Shah 'Adil, was assassinated (29 Salar 948/24 june 1541; . Aubin, Lar médiévale, 495). Under his successor Ibrohlm Khan, the relations of Lar with the Safawid authority deteriorated. He omitted to go and give allegiance to Shah 'Abbas I when he went to Shiraz, ill-treated the Shah's tributecollectors and levied extraordinary taxes on merchants and travellers. The Shah's anger aroused, and he sent two punitive expeditions against Lar in 1010-11/1601-2 under the command of Allah-Verdi Khan, the beglar-begi of Fars. In the course of the second one, the latter seized Lar, carried off lbråhim Khan and his entourage back to Shiraz and confiscated their possessions. Ibrahlm Khan and the "treasures of Lar", including the famous crown of Kay Khusraw, were then taken off by Alläh-Verdi ichan to Shah 'Abbas's court, then engaged on a campaign in Badghis - Harat. In the course of the expedition against Balish, Ibrāhīm Khān died of an epidemic which affected a large number of the troops. The administration of Lär was entrusted 🔳 Kädī Abū 'l-Kāsim Lārī, a devoted Shift (AAA, tr. Savory, 807-8; cf. Yazdi, fol. (f.).

During the whole of the 11th/17th century, until the decline of the Şafawids, the Persian Gulf routes via Lar were followed by numerous traders, diplomats, travellers, men of religion, etc., who have left us lively first-hand accounts. A few months after Allah-Verdi Khan's seizure of Lar, the Augustiaian friar António de Gouvea passed through the town, where he mentions the recent destructions (on Gouvea's mission as mediator in the conflict between the Portuguese and Shih 'Abbas, we Steengaard, 230-1; on Lár, 231). In a parallel version to the Itinerdrio of Gaspar de S. Bernardino, Nicolau da Orta Rebelo gives us a long description of Lar and Lärlstån dated August-September 1606 (on S. Bernardino's narrative, see Aubin, in Arquives, i [1969], 208-15; on Lär, ed. Lisbon 1842, 136-42). Rebelo noted the numerous charitable works (cisterns and caravenserals), the security of the roads (the Hurmuz-Lâr road and above all the entry into Lâr was very well policed "because of the war between the Sofi and the king of Ormus") and the freedoms and the liberalities which the Persians and the travellers enjoyed (see below). He further noted the

abundance and low price of the bāzār products (fruits, textiles, poultry such as partridges, and sheep) and the rebuilding works undertaken after the Şafawid conquest, in particular, the fortress dominating the town and the bazar (i.e. the Bāzār-i Kaysanyya, see above) rebuilt as that time by Kanbar 'All Beg, who also erected a sumptious caravanserai on the Lār-Shīrāz road (Rebelo, ed. Serrao, 201-12).

After the Safawids achieved direct control of Lar, its affairs were continuously affected by the question of Hurmus, which brought into play the colonist rivalries (essentially those of Spain and Portugal, now united under one crown, against the English), the Persians' own interests, those of the Arab merchants and the Gulf pirates, etc. (Steensgaard, 253 ff.). After the conquest of Lar, the Persians had -at least temporarily-taken off the protection payments ("mocarrerias", i.e. multareart) made by the ruler of Hurmuz to that of Lar (ibid., 249). Kanbar 'All Beg tried to reimpose these levies on Hurmuz and occupied the island of Kishin (ibid., 250 ff.). The khân of Shirāz, the beglar-begi of Fars Imam Kull Khan, selzed the port of Gombron/ Gombroon (Portuguese Contordo) in December 1614 (thid., 291 fl.), and in spring 1622 Persian troops commanded by Imam Khan were helped by an English naval force (AAA, tr. 1200-4; Steensgaard, 305 ff.). The negotiations begun by the second "Spanish" embassy of Sheriey (1617-22) and the presence of a Spanish ambassador at the Persian court and a Persian one at the Spanish court in 1617 unable to prevent the Portuguese from losing "the key m the Land of India". Much held back in his mission [cf. Steensgaard, 312 fl.), the Castilian ambassador Figueroa has left behind for us an itinerary (lacking details) of his journey through Lăristân în 1618.

After the fall of Hurmuz, the English, and then the Dutch, and then later the French, were authorised by the Safawid government to set up their factories at Gembrun, now renamed Bandar 'Abbāsi. In 1630, the Portuguese gained the same permission to me Bandar Kung (8 km. to the cast of the modern Bandar Linga), which began to fill up with Arabs and Persians (and then with Banyans and Portuguese) and became an important town in the years 1630-40 (Steensgaard, 357-8). Despite the difficulties of the routes into the interior, Djāsk/Djāsak and Bandar Kung became significant rivals of Bandar 'Abbāsi (on the rivalry of Bandar Kung and Bandar 'Abbāsi, see Calmard, 86-7).

From this time onwards, the routes through Laristan described in detail by the travellers. We have important items of information from Sir Thomas Herbert about the embassy of Sir Dodmore Cotton to Persia in 1528-9 (tr. Paris 1663, 205 If.; Calmard, illustration 1), and | parallel account of Robert Stodart (ed. Denison Ross, London 1935; on Shiraz-Lar-Gombroon, see 78-85). Mandelslo, a member of the Duke of Holstein's embassy, passed through Lar in February 1638, and he gives us a fairly detailed description of his route from Shirks to "Ganuron" (tr. Wiequefort, Paris 1659, Book i, 91 ff.). With the development of the commerce of the trading Companies, journeys and accounts of them abound. Putting together a synthesis of all the items of information from 1638 = 1706, a map is here given showing the chronological divisions of the routes from the Gulf to Shiraz via Lar (Map 1; the travellers who only describe Bandar 'Abbasi, Bandar Kung, etc., have not been included herel. As this chronology shows, the dates of movements

across Laristan were a function of the movements of ships, hence of the monsoons, and the climatic conditions in the interior of the country; there were few journeys in mid-summer, because of the extreme heat and the "poisonous winds" (bad-i samam), in winter, because of the snow along the route Lär-Shiräz (Culmard, 23 ff.). The travellers give us first-hand information on the routes followed (which varied little from the 17th to the 19th centuries, except on the Lar-Shiraz section), on travelling conditions (state of the roads, bridges and fords; the security provided by the rdh-ddrs, "road-guards"; tolls, customs-dues; etc.), on the natural habitat and the populations (climate, plants, animals, local inhabitants, habitats, illnesses and urban communities), on the political rivairies in the Gulf and in Persia between the central and local powers (including the topic of pirate activity) and between the different European Companies, etc. (see the Bibl. for travellers of the 17th-18th centuries).

Although the Dutch remained the most firmlyimplanted group along the Hurmuz-Lar-Shiraz-Isfahan axis (they had factories or "houses" in each of these towns) and derived great profits (above all, from the illegal trade in gold which weakened the Persian economy), the Portuguese continued to strengthen their presence at Bandar Kung (used by the Portuguese, Italians and other travellers). At the turn of the 16th and 17th centuries, an attempted Portuguese-Persian alliance against the "Arabs" (i.e. Muscat or "Limin) was cut short because of the internal situation in Persia (see Aubin, L'ambatsade de Gregório Pereira Fidalgo, Introd.). This did not prevent the taking shape of threats from the "Umanis (aided by the Kawasin [q.v.] and Arabs from Katar) against the islands and the ports along the Laristan coast (see L. Lockhart, The fall of the Safavid dynasty, Cambridge 1958, 115-16, and below, on Larak). During this period of troubles, the Laristan government was a kind M lamily enterprise; the shahbandar of Bandar Kung was the brother of the Bandar 'Abbāsi and the Khān of Lār's one (Calmard, 187). According to Pereira Fidalgo, the Khan of Lar had under his jurisdiction Bandar Combron, Bandar Kung and Bandar Rig (Aubin, op. cit.,

Despite the repeated attacks of Arab pirates and of the Balacis (who seem to have allied with the *Umanis in their threats to the ports and E Ler; see Aubin, op. cit., 79), Läristän resisted longer than the Isfahau-Shiraz axis against the Afghan invasion. In practice, when Shrism became implanted along the Shiraz-Lar-Bandar 'Abhasi commercial route, the south and part of the north of Laristan (except for the town of Lar) had remained Shafi'll. Certain lines of shaykis, in particular at Evaz and Bastak. occupied the dominant places of Sunni Laristan. Despite the support of the lufanglis or musketeers of the Sunni garmsirát, the Afgháns were unable to establish = effective control over Lar, which was held in turn by a Balüči chief, a local notable, a Safawid general and the sardar of Fars Muhammad Khān Balūć (see Aubin, Les sunnites du Larestan, 150 ff.). In the latter's rebellion against Nadir (the later Nadir Shah), Muhammad Khan Balüč was supported by the Sunnis of Laristan. Nadir's revenge there was merciless; the executions of Muhammad Khān and Shaykh Ahmad Madani, tines, extensive deportations, etc. (ibid., 168 ff.).

Taking advantage of this period of troubles and its aftermath, the brigand chief Nasir Khan Lari was able to establish—in the first place with the

help of his brother Hadkiji Khan-control over the Buluk-i Sab'a (i.e. the region between Laristan and Kirman), and then over Lar. After an abortive expedition against Shiras in 1163/1750, to which Hādidil Khān died en route, Nasir Khān extended his jurisdiction over the Gulf littoral (i.e. over the Arab shoyeds) and his expensive protection over the East India Company at Bandar 'Abbasi, Nevertheless, he had difficulties in controlling this latter port, and moreover, fell inevitably into conflict with Karim Khan Zand. During the years 1754-66, be fought on two fronts, against the governor of Kirman on the north-east and against the penetration of the Zands in the west. He even planned joint attacks against Kurlm Khān in Shīrāz in concert with the Kadiar chief, Muhammad Hasan Khan (in 1756 and 1758). It was \$adik Khan Zand who in the end captured the town of Lar and reduced Nasir Khān's fortress there in 1279/1766 (on these events, Perry, 117-22, based on the English and Dutch archives and on the main Persian sources; add to these Rustam al-Hukama', Rustam al-lawdrigh, Tehran 1348/1969, 373-4; Muwabbid, Bastak, 38-9).

It seems that, contrary to what Fasa's asserts (followed by Minorsky, El' art, and Perry, 122), the administration of Laristan did not remain in more or less autonomous fashion in the hands of Nasir Khan's family (till 1845, according to Minorsky, till 1858 according to Perry). This me family adopted towards the Zands and then towards Agha Muhammad Khan Kadiar an at least rebellious attitude (Fasa'l, i, 229; Dupré, i, 369). Furthermore, Karim Khān Zand and Lutf 'All Zand handed over the government of Laristan and the ports of the Gulf to the shayahs of Bastak (now promoted to ahans). Under Fath 'All Shab, the government of Laristan and the Bulük-i Sab's reverted to this same family; it was given to three tons of 'Abd Allah Khan (at Furg, Tarum and Lar respectively), with 'Abd Allah himself residing I Shiraz at the side of the Kadiar prince-governor (Dupré, i, 361 ff.). Having become begins-begin of Laristan, one of his sons, Naşîr Khan Lari, was in 1247/1831-2 deposed from office and the governorship of Laristan entrusted to Ahmad Khan Bastaki (Fasa'i, i, 280). In the next year, Naşir Khân was re-appointed beglar-begi of Läristän and the Sab'a (ibid., i, 281). in 1262/1845. after dissensions had arisen amongst the khans of Lar, the well of Fars put as end to this appointed at Lar a mere Adlanter (q.v.), Karbaia'i 'Ali Rida Girashi, and then his son (Fasari, ti, 284). Nașr Alfah Khan Lari, jailed in Shīrāz for his misappropriations, managed to escape and to stir up a revolt in the region of Sab'a. He could not be suppressed by force, but hid in the mountains; in the end, he went to Shiraz and was in 1275/1858 granted a pension (Fasa 7, i, 318-19). In 1276/1859-60 the governorship of Läristän me given to the Kädjär prince Mahdi Kull Mirza, who put down the revolt of Mustaia Khan-i Bactaki (ibid., i, 321).

In view of the extreme difficulties of the Kādjārs in keeping control of Fārs and the Gulf ports (in particular, Bandar 'Abbāsī, the governorship of which had to be handed over to the Imām of Maskat (Muscat) until 1284/1868), the governorship of Lāristān kept its considerable importance. In 1284/1868 and in 1293/1877, it included the regions of Sab'a and Bandar 'Abbāsī, to which were joined (in 1297/1880 and 1299/1881-2) jurisdiction over the Five Tribes (Khamsa [see Willayat-1 Khamsa]) and over Dārāb (ibid., i, 326, 335, 340, 345). Towards the end of the Kādjār period, Lāristān found itseli

more and more under the control of the Kawami, powerful vizieral family of Fars stemming from the descendants of Hadidil Ibrahim Khan Istimad al-Dawia Shirazi. In 1294/1877-8, Ihtisham al-Dawia and Mirza 'All Muhammad Khān Kawām al-Mulk restored order in the coastal districts 🔳 Laristan (ibid., i. 337-8). In 1299/1882, the governorship of Laristan, Sab'a, Darab, Khamsa and Fasa 🗪 entrusted . Kawam al-Mulk, who in fact died the next year. The plan for the administrative reorganisation of Fars in 1913 proposed m longer to attach "Laristan and 'Abbasi" to I Kawami sphere of influence nor to the wildyes of the Khamsa tribes (Le Fars, 161). Under the Pahlavis, Lar became a shahrisian comprising tive bathshs: Markazi, Bastak, Linga, Gawbandl, and Djuyum and Bunāruya (the result of the administrative reform of 1317/1938-9. Razmārā, Farhang, vil, 209). With the reform of 1334/1955-6, the Farmandari-yi Laristan comprised the following bakitshe: Evez, Lamard, Diffyum and Huma. The coastal districts and their hinterlands now form part of the Ports and Islands of the Persian Gulf. Bastak, shorn of two dihistans, is one of the five bathshs of Bandar Linga (Muwabhid, 8-9).

The fighting between Karim Khán Zand and Nasir Khán Lári for control of the ports and the routes through Láristán acoderated the economic ruin of the region (Perry, 152 fl.). Already rather little-used in the Safawid period (over and above the Gulf routes via Lár), the Shīrāz-Bandar Rīg route (facing the island of Khāng) was envisaged by the East India Company as an alternative to Shīrāz-Bandar Abhāsi (bid., 259). The troubles in Láristán amongst the local powers led to the Companies moving further north up the Gulf: the English to Bushire (Bû-Shahr) and the Dutch to Khāng (bid., 154 fl.; Stiffe, in GJ, xvi [1900], 211-15]. Hence Lâr retained henceforth only w regional importance.

Läristän once again suffered from brigandage (the pillaging expedition of the Baluci Mihrab Khan, sardar of Bampur, at the opening of the 19th century, Pottinger, Travels in Belootchistan, London 1816, 163, Fr. tr. Paris 1818, I, 325 ff. (on the Balüci raids of 1810, see Sykes, Ten thousand miles in Persia, London 1902, 105). Around 1256/1840, Lär seems to have been occupied by Akā Khān Mahallāti, head of the Nizāri Ismā'ilis in revolt against the Shah (Houtum-Schindler, Eastern Persian Irak, London 1897, 94; on Āķā Khān's revolt, see H. Algar, in SI, xxix [1969], 55-18). Despite its comparative isolation, Lar continued to trade with the Gulf ports (in particular, with Bandar 'Abhasi, Bandar Linga and Bandar Tähirl (the former Sarif), see Stiffe, in GJ, vi (1895), 166-73.

In 1881, Stack found Lar in a fairly wretched condition (i, 133-45). But the action of its governor Fath 'All Khan (a person whom he describes at length) and his son allowed the town's buildings to be restored (see above, on the Kaysariyya bazar), noted as being in excellent condition in 1907. Bandar Linga was at that time the main port of Lar (via Bastak; see A. T. Wilson, in EJ [February 1908], 152-70). The comparative development of Bandar Linga under the Kawasim/Diawasim Arabs favoured the hinterland, and notably Bastak. At the end of the Kadjar period (cs. 1900-15), the Gulf ports, including Bandar 'Abbas and Bandar Linga, were increasingly controlled by Belgian officials (Lorimer, iiA, 14). In 1335/1916-17, Bandar 'Abbās was considered to be wholly under British influence (Kababi, 541).

 The island of Lâr (see Map 2). This Gulf island is generally considered as being that called Abh Shu'ayb (Bu Shu'ayb, Shaykh Shu'ayb = Diazirat al-Shaykh, situated to the south-east of Bandar Nakhilu and belonging to the Shib-l Kuh-i Laristan (at a farsakle' distance from the coast, according to Fasa 7, ii, 315). Since the identification of this island is not made easy by utilising the classical and early Islamic sources, one finds errors in both old and modern writers, and some of them have mixed up the island and the kingdom of Lår (Iktidåri, ŁK, 128-9). Nearchus must have touched on it in the course of his periplus. It could possibly be the island of pearls (Nesos Margaritis) of Orthagoras (see Tomaschek, in SB Ak. Wien, exxi [1890], 55, and Minorsky, EII art. s.v.). The geographers writing in Arabic give it various names: Lawan (Ibn Khurrariadhbib, al-Istakhri); Lar (Yākūt, Abu 'l-Fidā); whilst the variants Alār, Lan, Allan (Laran) mgiven by Schwarz, 87, Le Strange, 261, and Minorsky, loc. cit. Ibn al-Balkhi (Fars-nappa, ed. Le Strange, 241) connects the island with Ardashle Khurra (Irabistan), Muhammad b. Nadilb Bakean calls this island Ladh (Diahan-nama, ed. Muhammad Amin Riyāhi, Tehran 1342/1963, 43). The toponym Ladh (cf. Lad, the ancient name of the town or the kingdom of Lar) could be applicable to the place called Laz/Laza or to Laz/Laza/Laza, the most important settlement in the eastern part of the island. The Portuguese called it libs de Lazão or Laracoar (Lar-Shatwar, from the name of the islet Shatwar/Shitwar/Citwar at its eastern extremity; see Aubin, in Mare, ii, 97, n. 215).

According to Yakut (iv, 341), Lar is a large island situated between Straf and Kays, lacking any settlement or village; there were pearl fishers, i.e. divers; its circumference was said to be 12 farsakhs round. Because of the insecurity from Gulf piracy, the island was thinly peopled. According to Duarte Barbosa, I formed part of the dependencies of Hurmuz (Aubin, in ibid.). It is situated, in relationship = the coast, which makes - outward salient at Ra's Nakhūlū, 14 = 15 miles from the coast; from east to west it is about 15 miles long, and about 3 miles wide. It is 120 feet high at the centre, and low plains of we two miles extend towards each extremity. It has virtually no vegetation, but the water from Its well is of good quality (Lorimer, iiB, 1813). Its geological formation is identical with that of the island of Kays and Hindarabi (Pilgrim (1908), 142).

Shaykh Shu'ayb is attached to the dihistan of Badawl in the shahristan of Bundar Linga (Razmārā, Farkeng, vii, 61, which places it 23 km, to the southeast of Bandar Makam and gives its dimensions as 24 % 5 km., with its highest point co. 37 m.). Drinking water comes from wells and from cisterns = catch rain-water. There is cultivation of dates, cereals and some market-garden produce. Fishing, for fish and for pearls, is carried on. At the beginning of the 20th century, it had willages or hamlets, the most important being Laz (70 houses). It had a total of co. me houses for 1,500 inhabitants, Shafi's and Sunni Arabs of various tribes (Lorimer, HB, 1814-15), ln ca. 1950, it had 7 small settlements and 730 inhabitants, both Sunni and Shi'l, speaking Arabic and Persian (Razmārā, Farhang, loc. cil., which mentions its liability to malaria). The population to have varied little (800 in cs. 1976, according to the Farkang-i Musin, v, 948).

4. The island of Larak (see Map 2). This is an island of the Guif 20 miles south of Bandar 'Abba's and partially closing the approach to this port between Kishm and Hurmuz. The channel between Larak and Kishm, to the north-east, is I miles wide:

between Lärak and Hurmuz, to the north-north-east, it is 11 miles. Slightly smaller than Hurmuz, Lârak is eval in shape, measuring 6 miles (from east-north to west-south-west) by 4 miles. It is surrounded by deep water except at the western side. The interior is a mass of sharp, sendstone hills mixed with salt domes and domes of red fron chide (a typical formation of the "Hurmus series", see Pilgrim [1908], 141, [1924], 16). Except for a few date-paims, it is almost bare of vegetation. The highest point reaches 510 feet. Except for the well of Salmi (in the west). water comes from cisterns (Lorimer, iiB, 1086; see also Fasali, ii, 317). There are many gazelles and rabbits, the former living off a spiny plant called the kittaw which stays green in winter as well as summer (Kababi, 98, who states that the island is 13 miles in circumference, 18 miles from Bandar 'Abbas, 28 miles from Kûh-l Musandam, ■ miles from Shahr-l Kishm, and 16 to 17 miles from Hurmus).

The sparsity and the vagueness of the older sources has given rise to many hypotheses. Larak, literally "little Lar", has been take-by Kababi, 201-for the ancient island of Lir (wrongly, because the depths do not allow pearl-fishing). The island seems to have occupied, made useful and cultivated by a fairly important (to judge by the remains of buildings and irrigation works) non-Muslim population (according to the orientation of numerous tombs, see Lorimer, iiB, 1087, and Kababi, 698). Amongst the ruins, the latter author mentions those of a rectangular fortress like the one of the island of Kishm. Lorimer records two ancient forts: a ruinous me at the place called Kharabistan, in the interior of the island (i.e. Larak-i kuhi), and the other, in a better condition. at Labtiyab on the northern coast. According to this same authority, the fort is said to Portuguese, but according to Curzon, ii, 413, Dutch, According to iktidari, the kal'as of Larak and Kishm - Portuguese, whilst that of Khamir is possibly Dutch. The Larak halfa is made from dressed stone covered with mortar, with three floors, four towers and a look-out walkway (Athar, 740 ff., with photographs). Only the foundations remain of the East India Company's telegraph house. Among the remains of the cemetery have been found lamps for the dead from baked earth (ibid., with photograph at 742).

The anchorage of Larak much appreciated by sailors, especially the Portuguese, who called it Lareka/Lareca. They sheltered there in February 1623 when making an attempt to recover Hurmuz (see Steensgaard, 352). The ambassador Pereira Fridalgo stopped there in 1696 (ed. Aubin, 29). In 1717, Lärak was captured by the Imam of Maskat akied by the Kawasim and Arabs from Katar (Perry, 158).

According the Mukhtasar-i Mufid (17th cantury), Lärak was inhabited by Arab fishermen. The boat from Bandar Rig called there sometimes (ed. Auhin, in FIZ, vi/2-3 [1337/1958], 175). At the begirming of the 20th century, the population of ca. 200 was made up of Dhahūriyyin linked by marriage with the Banu Shatayr Shihuh of Kumzar (the region of the Ru'us al-Dibal in 'Uman' who spoke kumzāri (Lorimer, iiB, 1086). In addition to the Kumzārīs. Kababi notes 30 heads of families, five of them from Bustanti-yi 'Abbasi, and he states that the soil of the island is good for agriculture. The people live by extracting salt (exported to the 'Umanat and Kishm), fishing and a fittle bit of stock-rearing (sheep and goats). In summer, most of them migrate to the oasis-palm-groves III Minab (Kababi, o6), Formerly, the island depended administratively on

the haldner of Kishm. Persian authority was only established after 1905-6 with the building of a customs-post (Lorimer, iiB, 1087; Kabābi, 97). One of the interesting peculiarities of Lârak is that it possesses—in company with other piaces of the coasts and islands of Lâristân—afr [q.v.] adepts and practitioners. Called locally the ahl-i haud "people of the wind", they have as the officiating persons men (the biblis), women (the biblis) and and always and the still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still a still

LARACHE [see AL-SARA'ISH].

LARANDA, Larende or Karaman in modern Turkish usage, earlier Turkish Karaman or Darende, a provincial town in Anatolia, is the seat of one of the thirteen districts of Konya [q.v.]. The district of Karaman is the largest (4,647 km 1) iles in Turkey. The town lies outside the earthquake zone at fat. 37° N, long. 33° 20' E, at m elevation 11,038 m., on the plateau at the northern end III the pass leading through the Taurus Mts. to the Göksü (ancient Kalykadnos, - Saleph) river valley. The main road from Konya (at tto km.) to Silifke (at 148 km.) passes through the district. The town has a station on the railway line from Konya to Eregli, a stretch of the former Istanbul-Baghdad railway. The population grew from 8,182 in 1927 to 28,113 in 1965 and to 51,108 in 1980, when the fice counted 113,408 inhabitants.

t. HISTORY

Excavations at prehistoric sites in the Konya-Laranda area, especially at Catal Huytik and Can Hasan, have revealed an advanced Neolithic culture and substantial towns dating from ca. 7000 B.C. (See J. Melizart et alis, in Cambridge ancient history; idem and D. French, in Anatolian Studies, x (1960); U. B. Alkim, in Anatolia i (1968); D. Magie, Roman rule; W. Ramsay, Hist. geogr., 45; F. Taeschner,

Wegenets).

The Byzantine Larenda (τά Λάρανδα, of. Pauly-Wissowa, xii, col. 793) feli to the Saldiuks after the battle of Manzikert (463/2071), and islamisation must have taken place early. After having been under Dānishmendid [q.v.] rule, it was retaken around 560/1165 by the Saldiuk sultan Killdi Arslan If [q.v.], Taken briefly in 586/1190 by emperor Frederick Barbarossa, and in 1210 by Leo II of the Armenian kingdom in Cilicia, it me regained by the Saldjüks in 1216 and used as a frontier fortress against the Armenian kingdom. In 623/1226 the area was organised in the wildyal-i Arman (Histoire des Croisades, Doc. Arm, 1, 360; Cambridge history of Islam, i, Cambridge 1970, 234 ff.). Around 625/ 1228, the family of Mawlana Dialal al-Din Rumi [q.v.] settled in the town. Djalâl al-Din was married there and extols its delights in his postry (A. Göl-

panarit, Meviana Celaisddin, Istanbul 1959, 4, 41 (f.). It is claimed locally that the great folk poet Yunus Emre [q.v.] is also buried there (idem, Yusaus Emre, Anyati..., Istanbul 1963; M. C. S. Tokindag, in Belisten www (1966), 117, 59-90; Procs. of the 1971 Istanbul Symposium on Yunus Emre). Laranda also claims in its native sons the chronicler Neshri [q.v.], Grand Vizier Karamani Mehmed Pasha [q.u.], the medical writer Larendeli Siyabizade Dervish, and others (Gibb, Onoman postry, index; Babinger, Geschichtsschreiber, index; V. L. Menage, Neshel's History of the Ottomans, London 1964; A. A. Adrvar, Osmanis Türklerinde ilim, İstanbul 1943). In 526/1228 the Türkmen dynasty of the Karaman-oghullari (q.r.) emerged in the Ermenek-Laranda region, and in 628/1231 the town was given m a temporary itta' to Kushlu Sankum, a Kh "ārazmian chief. In 614/1256 Laranda became the capital of the Karamanics under Karaman-oghlu Glineri Beg and was able to maintain itself against the combined forces of the Saldiuks and their supporters. the Il-Khānid Mongols. In 687/1288 Lāranda was burned by the II-Khānids, and lost temporarily again to them in 691/1292, but heavy destruction and loss of population did not stop the Karamanids from rising to great political power. The town grew in importance and was enriched with many buildings. (See section 2, below). After 1300, the name Laranda was replaced by the new name Karaman. Even when the Karamanid princes expanded their dominions and were able to make the prestigious royal city of Konya their capital in 712/1312, the old residence remained important as a seat of lesser members of the dynasty. The town remained somewhat distant from the battle front during the Karamanids' struggle with the competing powers in Anatolia, including the Mongols and later the Ottomans, the heirs of the Saldjük sultans. According to F. Sümer (art. KARAMAN-OGHULLARI, Vol. 1V. 522a), Ibn Battūta's account of his visit to Konya and Laranda, and of his meeting the Karamanid begs, is based on hearsay. In 799/1397 the Ottoman sultan Bāyazid I Ylldīrim [q.v.] occupied Lāranda and conquered nearly all the dominions of the Karaman-oghlu amir 'Ala' al-Din, who was himself killed. The amir's widow, the Ottoman princers Nefise (Melek Khātān), and her two sons Mehmed Beg and 'All Beg, were deported to Bursa in 800/ 1398. This was seemingly the end of the principality. Timur, however, restored the Karamanids to power after the battle of Ankara (804/1402), and they maintained themselves in the face of the Ottoman restoration in 81?/#414 and 818/1415. Next to Konya, Laranda remained the main centre of the Karamanid state and flourished greatly. At this time, however, the Mamhiks invaded the country and occupied Liganda in 822/1418-19 for a short time, the region becoming tributary to them. The town's lords then changed several times because of civil warfare. In 826/1423, Mehmed Beg was killed at the siege of Antalya and buried in Laranda. The town saw its last decades of glory as a capital under Karamanoghlu Ibrāhim Beg (827-69/1424-64). When de la Brocquière traversed the lands of "the Grand Karman" in 836/1432, he attended an audience with sultan Ibrāhim in his court at Konya after having visited Laranda. He remarked on the great extent of the Karamanid domains, the dignity and wealth of the court and flourishing trade of both towns, Another conflict brought the Mamilok army to Låranda again, and it was set on fire (861/1456-7). After Konya was lost to the Ottomans, the Grand Vizier Mahmud Pasha took Laranda in 873/1468, the last Karamanid chiefs continuing their resistance against the forces of Sultan Mehemmed the Conqueror. Part of the inhabitants, especially the craftsmen, were deported in 1471 in he settled in Istanbul in the so-called Büyük Karaman quarter (the present Carşaruba). In Laranda a number of monumental buildings, sacred and profane, were destroyed by the new Ottoman rulers (including by Gedik Abmed Pasha (q.v.)). The castle was repaired with the architectural debris. In 881/1426 the first Ottoman registration of land, property and pious foundations took place, and the town's tithe tax ('dshr) was made into a wolf for the benefit of al-Madha. By this time, the rule of the Karamanoghullari in Laranda had virtually were to an end (Tekingdağ, 1963, 61; Konyah, 100-2, 405). The town became the first Ottoman shekrade (prince's) sandjak, governed from Konya under princes Mustafā and Diem [q.wv.]. In 888/1483 Bāyazīd II had the Karamanid territory organised as a regular Ottoman province in the evillet of Karaman, with Konya as capital and seat of the baglerbegi-

From now onwards, Laranda was of only secondary importance. With its castle, it must have played a role in the Ottoman campaigns to suppress revolts fomented by Karamanid chiefs and Şafawid agents till ca. 1501. The rebel Kull Shah seized the town briefly in 916/1510, while in 917/1511 the area was taken by prince Ahmad in his fruitless effort to succeed Bayazid II. Turmoil was caused in 933-5/ 1526-8 by the Kalandar [q.v.]. Until 923/1517, the town was part of the fortified frontier with the Mamiluk dominions, and it became a hadil in the saudiah of Konya. During a short period in the rainth century, it probably held the rank of sandjak itself. The name of Karaman came now more and more in use. The importance of the trade route passing through Laranda probably reduced by the extension of the Ottoman empire to the east. The tax registers dated on 929/1523 show that the population of Laranda counted 664 khānes - 464 nejers = tax payers (Konyali), = 493 khānes - 693 nefees (Jennings), or 576 khānes 693 mefers (Faroqui). The registers of 992/1584 and 995/1587 show 2,027 nufus (Konyah), 2,048 nefers (Jennings), and 1,423 Mines = 2,048 nefers plus 625 middjerreds (Farophi). The number of mahailes had increased in 1587 from 34 (Konyali: 33) to 39. Thirteen of these quarters still exist at the present. The growth of population to point to secure living conditions. From other sources it is known, however, that Liranda was me of the centres of the well-known softs or student revolts against the central government's financial policy in the years 985-1002/:577-94. In 1396 the Dieiali [see DIALALI in Suppl.] revolts ravaged the province of Karaman. Laranda's population seems to have remained loyal to the government during the following years, at least till rorr/roos. The presence of the Janissary garrison must have had an influence here (cf. M. Akdağ, Coldi isyanları (1559-1603), Ankara 1963, Index s.v. Karaman (Lärende)). Kara Yazidii [q.v.], one of the Dielalis, was bought off by the office of mukā/iz of Karamān.

From the taxation data of the roth/soth century, Laranda appears as a flourishing interregional market town in important agricultural region. The building activity during the same century seems bear this out. The town contained, around 920/1523, 1 'simiret, 4 didmi's, 25 mesdids, 7 medeeses, 1 ddr al-hadith, 10 tekkes, 7 hammelms, 264 dilkhāns

and 65 sandlès ("trading booths"). The castle was manned by a garrison of 30 men under a commander (diadar) and a kdkyd. Its armament must have included pieces of artiflery (Konyali, 176, 178). Tenth/seventeenth century Laranda is described by Ewliya Celebi (Seyāhdd-ndma, ix, 311-15) and Kātih Celebi (Dihān-nūmā, 1145/1732, 614 l.). In 1867, Laranda/Karamān incorporated in the new wildyd of Konya as a kadd in the central sandjak.

Traditional economy, based mainly on dry farming, live-stock, textiles and the production of the well-known Karamin-bilgaru (wheat), has been diversified and enlarged. Lead, sine and chrome are in limited production and there are minor iron ore deposits in the area. In the early 1960s, 400 workers from Karaman went to Germany in the first group of Turkish labourers. For further details, and Ibrahim Rifks Boynukahu, Karaman'm intisadi in sosysi galişimi, Istanbul Üniversitesi Edebiyat Fakültesi, Istanbul 1968.

2. MONUMENTS

The archival sources for the monuments of Litanda/Karanan—the was/ review of Khwadia Muslib al-Din dated Muharram 881/January 1477 (— Ankara, Kuyud-i kadime 665; faesimile and commentary, Feridun Naftz Uzluk, Fatih devisida Karanan sydleti vasufiar fikristi, Ankara 1958); and was/ reviews of Bayazid II, dated 906/1500-1

Sherd finds from the Citadel or Içkale are evidence for 13th century habitation, though the existence of a Saldijūk palace remains to be demonstrated, Saldjuk blue and white tiles were also roused in the Hatuniyo Medrese (see below), and two fragments in the Victoria and Albert Museum (355-6, 1906) have been shown (M. Meinecke, Fayencedekorationen Seldschukischer Sakraibauten in Kleinasien, 1-ii f = Deutsches Archäologisches Institut. Istanbuler Mitteilungen, Beiheft 13], Tübingen 1976, ii, 483-4) to have Karaman as their likely provenance, But there is no architectural evidence for major buildings in the 13th century, and the only surviving 13th century monument is a small masdiid . [Monuments marked with an asterisk bear dated inscriptions), much restored in 645/2247-8 by Said al-Din All b. Abû (sie) Bakr (Meinecke, op. oit., ii, 483-4; I. H. Konyah, Abideleri ve kitabeleri ile Karaman tariki, Istanbul 1967, 347-50), a domed square with an adjacent flat-roofed iwin. It contains multiple burials, but the only dated tombstone is that of Sa'd al-Din Muhammad b. Madjd al-Din 'All, dated Diumādā II 700/March 1301. The area was evidently a cometery at the time it was built.

Fortifications. Of the original triple enceinte, little remains. The outermost walls have disappeared entirely. The middle enceinte, to which Ewliya Celebi attributed nine gates and from which Christian and pre-Christian spoliae have been retrieved, is now reduced to ■ single gate and ■ few fragments of rubble walls. The Citadel or Ickale (Fig. 1) which, doubtless by mistake, he describes m surrounded by a deep most, is rectangular, with eight round, faceted as rectangular towers. The walls contain many beterogeneous re-used Islamic blocks (Fig. 2), perhaps from the monuments which, Shikari states (M. Koman, Şihdre'nın Karaman oğulları tarihi [- Konva Halkevi Tarih ve Müze Komitesi Yaymlars, 1,2], 1946, 112), were destroyed by Gedik Ahmad Pasha [sec ARMAD PASHA GEDIK] = the Ottoman occupation of Karaman (inter siis the Diami'-i Sultan, the Diami'-i Kashi and the Diami'-i Nizāmshāhī); and from the Great Mosque, the mosque of the Karamānid 'Alā' al-Dīn Beg and the mosque of Karaman Shah. None of the reused fragments bears a foundation inscription, so that Shikarl's assertion is difficult to evaluate. However, since all are fairly near ground level, the Citadel was evidently rebuilt shortly after the Ottoman conquest. It adically restored in 1965.

The pre-Ottoman fortifications cannot be identified, though the Citadel mound is evidently manmade and the fortress played important role as late as the end of the 15th century. Nor can the water supply be traced; in the absence of wells or aqueducts, the Citadel must have been supplied by established.

Mosques. The Great Mosque, now restored out of all recognition, was a flat-roofed aisled construc-

tion with wooden columns and stalactite capitals (Konyali, op. oit., 359-63). No Great Mosque is mentioned in the makf register of Muharram 88:/ January 1477, which thus indirectly corroborates Shikarl's assertion that it was destroyed in or after the Ottoman capture of Karaman. The only evidence, moreover, for the existence of a Great Mosque III the 16th century is the foundation inscription of makes * associated with it dated 940/1533-4. The façade of the Hacibeyler Camii (Konyalı, 294-8), rectangular building now with pyramidal gabled roof, has also evidently been substantially rebuilt, for the entrance in a projecting rectangular moulded frame bearing a foundation inscription dated 902/1496-7 (cf. the anonymous foundation inscription of the heavily restored Arapzade or Araboğlu Mosque dated 899/1493-4). However, a block built into the wall to the left of the porch bears the foundation inscription of a mosque dated 757/1356. This is evidently a re-use, and it is unclear whether the present building occupies the site of earlier mosque.

The Dikbasan Mosque in the bazar (Meinecke, ii, 275-7), identified by Konyalı, (282-8) with the Fasih Camii of the wahf registers of the reigns of Bayasid II (906/2500-1) and Süleyman I (929/2522-3), is a flat-roofed, four-aisled construction with a carved stone mibrab in the central bay. The brick minaret is rebuilt. The interior contains a two-line chronogram, read variously = 899/2493-4 (Konyali, loe. eit.) and 920/1514-15 (E. Diez, O. Aslanapa and Mahmut Mesut Koman, Karaman derri sanais, Istanbul 1950, 40), and m re-used fragment of relief tile on a cobalt ground with traces of gilt dated Djumādā II 840/January 1437, perhaps from an earlier building on the site which was then rebuilt about 1500. The most imposing Ottoman mosque, however, is that of Nüh Pasha, a native of Karaman, built while he was governor of Konya and dated 1005/1506-7. Against the inside wall of the threedomed naribex is a wooden gallery, the soffits of which have an applied revetment of gift and painted wooden strapwork, probably contemporary.

Madrasas. The madrasa of the Amir Müsä (Konyalt, 455-60; Aslanapa-Diez-Koman, Meinecke, if, 158-64) was destroyed in 1927 (Fig. 3). The building was, however, photographed by both Sarre and Van Berchem, and Sarre was able to draw a plan of the building (F. Sarre, Konya. Seldschuhische Denhmäler [- Denhmäler Perzischer Bankunst, IV], Berlin 1910, Plate 30, misidentified as that of the Hatuniye Medrese). This shows a central dome on pendentives, lateral ranges of four calls fronted by arcades or re-used marble columns, and an axial imis flanked by domed chambers with a mierab housed in its side wall. To either side of the shallow recessed entrance and inner porch were rectangular corner rooms and annexes, that to the right housing the stair-well of the minaret. This was cylindrical on a square base, with a shaft, divided, like that of the "Imaret of Ibrahlm Beg (see below). by projecting mouldings into registers, and a single stone balcony on a corbelled stalactite base. The porch was a barely-decorated moulded frame with a shallow stalactite canopy on corner pilasters with doubled polyhedral capitals. The foundation inscription, which has now disappeared, occupied the course above the doorway and was flanked by further pilasters and capitals. The world review of Muharram 881/January 1477 gives the madress of the Amir Müsl in seventh place. Its precise designation is problematic. Musă Beg (d. 758/2356-7) is buried in the Tol Medrese * (740/1339-40) which he built at Ermenak [q.v.]. The present foundation === also functary, however, and Konyalı (loc. cil.) has identified the tombstones of Fakkr al-Din Ahmad Beg b. Ibrâhlm b. Mahmûd b. Karâmân (sic) (d. 7 Dhu 'l-Ka'da 750/17 January 1350) and his brother Shams al-Din Beg (d. 753/1352-3) from it. These give a terminus for its construction; and m third burial, of Durkh and Khâtûn bint Badr al-Din Beg (d. 12 Djumādā [813/13 September 1410), testifies to its later frequentation by the Karamānids.

The Hatuniye Modrese * (783/1381-2) (Fig. 4). the finest decorated building of Karaman, was founded by Sultan Khatun, daughter of Murad I Khudawandigar and wife of the Karamanid 'Ala' al-Din Beg (Astanapa-Diez-Koman, 55-66); Konyalı, 461-82; Meinecke, ii, 165-70). The building is symmetrically planned, with small domed to either side of the entrance block, will ranges of three domed cells and a rectangular vaulted dars-hidne, and an axial foods flanked by domed chambers, one mausoleum. The entrances to these have high relief-curved limestone frames (Fig. 5). The projecting entrance block has been heavily restored several times; the entrance is recessed in melaboratelycarved and profiled bi-coloured marble frame, continuing a tradition of Saldiak porch decorationthe Çifte minare Medrese, Erzurum (ca. 1242), the Gök Medrese, Sivas • (670/1271-2) and the Esrefogullari Camil, Beysehir * (699/1300) - and although on a smaller scale than these, is particularly close in conception and execution to the Gök Medrese at Sivas (cf. S. Ögel, Bir Selcuk portelleri (sic) grubu ve Karaman'daki Hatuniye Medresesi portals, in Ilahiydi Fakültesi Dergisi. Yıllık Araştırmaları Dergisi 1957 [Ankara 1958], 115-9 and Figs. 6-7). It bears = craftman's signature, Kh vādia Ahmad b. Nu mān b. Ahmad (Meinecke, op. cit., ii, 166, correcting "Muhammad" in Mayer, Architects, 112), which also continues the Saldjük tradition of signed façades. The remarkably exact copying me amalier scale of both profiles and decoration suggests strongly that forms of projection known to the builders of 14th century Anatolia, though there are no literary attestations for the popularity of the prototype, and the other cases of parallelism have not been established beyond the Saldjük period (cf. K. Erdmann, Das Anatolische Karavansaray des 13. Jahrhunderts, il-ili, Berlin 1976, 148). The marble revetment of the façade, like the columns inside, is entirely re-used.

There is no trace of any tile mosaic milesto, but Meinecke, loc. vil., has established that the freds and the mausoleum both had dadoes of dark turquoise-green hexagonal tiles. The canotapha have disappeared but these also may well have been tiled. The Hatuniye has also yielded a re-use Saldjuk tile inscription, evidently from a plous foundation, in white relief maskh on a cobalt ground, in the name of Abu'l-Fath Kaykhusraw ... b. al-Sand Kilidi Arslân (= RCEA, 4817), now in the Islamic Museum in East Berlin (No. I. 563). The inscription is defective and the ruler, therefore, indeterminate, but Melnecke, loc. cit., has argued for Kaykhusraw I (second reign, 601-7/1205-11) or for Kaykhusraw II (634-44/1237-46) [q.ov.]. Kaykhusraw III (663-81/1266-84) [q.v.] may be eliminated, since from 1261 the amfrate of Karaman was independent, and the titulature of a Saldiük Sultan would not have appeared unmodified in foundations at Karaman of the later 13th century.

The foundress has been identified with Malak Khātān, whose mahfiyya, appointing herself as

materials with her descendants after her, dated Rabi' I 787/May 1385, is resumed by Konyak, 475-82, and appears in precis above the entrance to the mausoleum. This designates the foundation in a Hanafi madrass, in which the family mausoleum to be attacked, with the provision that a Shātif mudaris might be appointed if no-one better was available. On the foundation were two makids, five fakiles, a majir, a makadhdhin, a sweeper and in porter. The endowments are almost exclusively agricultural property and the national income therefore fairly small. No students in the foundation in mentioned; and the madrasa is so small that some of the staff, anyway, must have lived out.

Khankahs. The teaks of Siyahser or Karabas Veli, otherwise known as the hhankah of Shaykh or Sultān 'Als' al-Din (Konyalı, 316-22; Aslanapa-Diez-Koman, 85-7) consists of a flat-roofed, threeaisled covered mosque with transverse areades and a minaret of Ottoman type, possibly a later construction, at its north-east corner (Fig. 8). On its northwest side is a symmetrically-planned building, following Anatolian custom in not being hiblaoriented, with a central sunken with a large fountain and roofed by a dome on pendentives. Of the three fmans, each has lateral annexes, while on the south-east side 📰 arcade or loggia serves as a narther to the mosque. The masonry and plan suggest a foundation date of about 1460. Both table and mosque have entrances on the east. Outside is a cemetery with late burials and a ruined undated octagonal canopy tomb (Fig. 9).

The complex no longer bears a foundation inscription, but been associated with a Khalwati shayah, known variously as Mawlina or Shayah or Sultan Ala'al-Din Ruml or Aswad, whose tombstone (Konyah, 316), dated Shawwall 670/June 1466, was recorded in the canopy mausoleum in 1943. The confusion of names suggests that the monument was colonised by later shayabs. The mosque was evidently ruined by the end of the reign of Mehenmed II, since it does not appear in the walf-register of Muharram 681/January 1477; and in the register of the reign of Bayazid II dated 906/1500-1, the walfs at stated to at the disposal (dar tasarruf) of another, unidentified admiya, that of Shayah Piti Khalifa.

A building, known variously as the Aktekke. Meylevi takke, takke and tomb of "Mader-i Meyland" and the Valide Sultan Camii, seems to be an adaptation of a 14th century Ottoman mosque plan, consisting of a large, partially-domed rectangular area containing twenty-one undated constaphs, with me exterior portico preceded by a narrow courtyard with ranges of cells to either side (Konyah, 229-53; Aslanapa-Diez-Koman, 44-9). The foundation inscription records the foundation by the Karamanid 'Ala' al-Din Beg of a sawiya for a shaykh, whose lohabs are given 🖿 Djalāl al-Milla wa 'l-Hakk wa 'l-Din, in Rabic I 772/October 1370. The foundation evidently associated with another admiya, the makfiyya of which in the name of 'Alas al-Din Beg and dated 769/1367-8 (Konya, Yusuf Aga Kütübhanesi No. 10389) has been resumed by Konyali, 252-3. This was in favour of the descendants of a shaykh, Djalal al-Hakk wa'l-Shari'a wa 'l-Milla wa '-Din, whose wishe is not given. The conclusion that the shaykh in question was Distal al-Din Rami is unwarranted; there is no evidence in either foundation inscription or walfiyys that a Mevlevi foundation was envisaged; and the popular association of the wike with the Mevlevi order must, therefore, be based on a late colonisation of the tekks by Mevievi dervishes.

Though the details of its organisation are obscure, the so-called "Imaret of Ibrahim Beg (Konyali, 405-52: Aslanapa-Dioz-Koman, 67-84: Meinecke, il, 170-5) belongs architecturally among the tekkes of Karaman. It was a multiple foundation, enclosed by a wall of which there is now no trace, consisting of the Smaret, a mausoleum attached and a fountain opposite (Fig. 10). The Smaret has a domed, central courtyard surrounded on three sides by two storeys of rooms, with a kibla-oriented axial hear flanked by domed chambers. The minaret salient and traces of the springing of arches on the façade show that originally the building was intended to have an arcaded exo-narthex. The 'imdeet plan has several remarkable features, including the fan-pendentives below the dome which derive from the brick architecture of 13th century Konya, though with the exception of re-used marble blocks for the lintel and consoles of the main entrances and the tympana of the outside windows the building is entirely of local stone. The upper storey consists of long galleries, evidently store-rooms or places of assembly. The central area is poorly lit and barely decorated in a style deriving from the internal stone carving of the Cifte Minare Medrese at Erzurum (cd. 1242) and the Hospital | Divrigi (626/1228 onwards). and the decoration is concentrated on the exteriorgrilled windows and their tympana, soffits, door frames and a cylindrical minaret shaft divided by projecting mouldings into registers sparingly decorated with bi-coloured stone (ablak). The main entrance is framed by mouldings of Anatolian Saldjuk origin, but without concern for their canonical disposition. and their carved decoration, particularly the markedly chinciserie foliate elements in the spandrels of the porch, is more indebted to the decorative renaissance of the 1420s at Bursa than the Saldjük tradition. The Bursa style is also apparent in the carved marble hood of an exterior window, a single carred block with m arabesque-palmette design, deriving from the marble hoods of the Green Mosque at Bursa.

The tomb, at the southern corner, is also bibleoriented, a domed square surmounted by an eightsided pyramidal canopy - octagonal drum (Fig. 11). Inside there are two floors: a crypt or burial chamber just below ground level and mupper chamber with a curved porch reached by a double staircase. The porch has a shallow stalactite canopy and carved frame with marble jambs, and a lintel with voussoirs set as a flattened broken arch of Bursa type. The upper chamber contains three damaged moulded plaster conotaphs (Fig. 12), of Ibrahim b. Muhammad b. Karaman (d. 868/1463-4), 'Ala' al-Dio b. Ibrahim (d. 870/1465-6) and Shah Kāsim b. Ibrāhīm (d. 888/1483-4). Meinecke, loc. cit, remarks that the first two are evidently from the same mould and that the third may well be contemporary. The plaster shows traces of gilding and may also have been painted.

The interior of the 'imaret still contains traces of hexagonal turquoise tiles alternating with cobait triangles set directly on the rubble walls. The most important decorative feature, however, was a monumental tile militab, now in the Cinili Köpk in Istanbul, old number 136 (E. Kühnel, Die Sammium Türkischer und Islamischer Kunst im Tachtuili Köschk [— Meisterwerke der Archäologischen Museen in Istanbul 111], Berlin-Leipzig 1938, Fig. 24). It is of polychrome tiles, partially gilt after

firing, with black or red contours of earth colours to prevent the glazes from running. Though not identical to the tile-work of the Green Mosque and Tomb at Bursa (822/1410-20) or the Muradive at Edirne (co. 1433), it is markedly similar. Meinecke, loc, cit., considers the migrat to have been a special order, while assigning comparable fragments in Konya, Berlin and the Victoria and Albert Museum to a reflection of the tomb of Diatal al-Din Rumi at Konya in 783/1381-2. Also from the 'imarei, doubtless from the main entrance, is a wooden door, now in the Türk ve Islam Eserleri Müzesi, lstanbul (Çinili Köşk, old number 15; not No. 238 as in Aslanapa-Diez-Koman, loc. cit.), carved by a craftsman, Umar b. Hyas al-Karamani (Mayer, Woodcarvers, 66), combining high-rellet foliate motifs and silhouette carved lions and gryphons. in a style much closer to stone carving than was Anatolian woodwork of the Saldjük period.

The Godert and mausoleum are rich in inscriptions. That over the main entrance is dated Muharram 836/August-September 1432. Over the entrances to the domed chambers flanking the axial swan are two undated extracts from the wah/iyya. The basic masfiyya text, dated Shawwal 835/July 1432, bears two addends of the wear and further addenda of 843/1439-40, 849/1445-6, 851/1447-8 and 870/1465-6 (facsimile and commentary by İsmail Hakkı Uzunçarsılı, Karamunojulları devri vesikalarından İbrahim Beyin Karaman imarcii rabfiyesi, in Belleten, i [1937], 65-164). The richest foundation of Karaman, was it endowed as unkfahil according to the Hanafi madhhab, with a staff of twelve Kur'an readers, from among whom the officials of the foundation were to be appointed with appropriate supplements to their basic stipends of 225 silver dirhams, and servants to work in kitchens to provide three days' free food and lodging for reputable visitors. Its designation is slightly ambiguous. Uzunçarşılı describes the foundation as dir kurra', majbakh and masdjid. However, the toundation inscription and the first of the two extracts from the wakfiyya inscribed inside describe it merely <u>hādhihi 'l-'imāra al-mubāraka</u> (non-descript "foundation"); while the wakfiyya also mentions a dar al-huffas. None of this is sufficient to characterise the foundation as a novelty in institutional organisation. The mutawallt was to be Ibrahim Beg during his lifetime, and thereafter his descendants. Nothing is said of the disbursement of surplus revenus; but the express conditions that one-quarter of the income should go to the upkeep of the foundation and that wall property be kept in good repair look forward to the terms of Ottoman wakfiyyas.

Mausolea. The distinction between attached and unattached mausolea is probably artificial, since the cemeteries have suffered considerably from recent urban expansion. Photographs, for example, taken prior to the restoration of the 'Ala' al-Din Türbe (Fig. 13), close to the no longer extent madrass of Musa Beg (see above) show the springing of the arches of m adjoining building on its south-east side; while a tomb, probably early 15th century, popularly associated with the Zayni film and fakih, Shams al-Din Mehmed Fenāri, who was actually buried at Bursa [see FRNARI-ZADE] (d. 834/1430-1), was also attached to a sawiya or masdiid. Of the tombs in the cemeteries, only three are now of architectural importance. The 'Aia' al-Din Turbe (designated as such in the welf survey of Muharram 881/January 1477) is undated octagonal construction of the 14th century with a fluted pyramidal roof following a brick prototype (cf. the mausoleum * of Sayyid Mahmud Khayrani at Aksehir [621]
1224-5], RCEA, 3920) with a recessed entrance and diminutive stalactite canopy (Fig. 14). A ruined octagonal tomb with a set-back octagonal transitional some and a recessed entrance in a shallow, brokenarched niche, known (Konyalı, 499-501) as the Demirgömlek Türbe and identified on the basis of the 881/1477 was/ survey as the mausoleum of a late Karamanid official. Amln al-Dln, appears to be a development of a tomb type characterised by the Hüdavend Türbe at Nigde (712/1312-13). Comparable is the Kiziar Türbe, an undated construction of cut stone with bi-chrome (ablah) designs on alternate facets and a recessed entrance set in an arched canony. The evidence (despite Konyali, 364-77) that the tomb of Yunus Emre-fervently believed by the local population to have died at Karamān-is in the Kiritci Baba Mosque is inconclusive.

Baths and fountains. Most of the baths of Karaman were seriously damaged in an earthquake in 1299/1881-2. None is dated, but the plan of a bath given by Aslanapa-Diez-Koman, 49, which, they suggest, might have been founded by the Karamānid Süleymān Beg, is of recognisably traditional type. There are no recorded double baths, the buildings must have been used alternately by men and women. Many must occupy the sites of baths mentioned in 16th century Ottoman wak/syyas and may well be older, since Sauvaget has remarked that waterworks, for obvious reasons, tend to persist though the superstructure is rebuilt. However, there is a clear relation between the construction of new baths in the outlying quarters of the town and the building of fountains in the 18th-10th centuries.

The numerous fountains of the quarters of Karaman (Konyali, 525-35) III III uniform type, with the outflow inset in an arched, normally undecorated, recess, with small marjabas or seats at the sides. Those in the same of Karaman have, like the baths, been the object of frequent, mostly unrecorded, repairs and restorations, often re-using stone from other constructions. Thus the foundation inscription of a dar al-huffür * dated Rabl' II 855/May 1451 built into the Hoca Mahmud fountain (Konyali, 037-8) is no evidence that the fountain associated with any dar al-huffa; founded by Khwadja Mahmud. Likewise with the marble foundation plaque of an Simára of the Karamanid 'Ala' al-Din Beg's Supervisor of Waterworks (mir-1 db/dv), dated Rable II 777/October 1375, built into the so-called Sahruh Cesmesi (Konyali, 351). The earliest standing fountain is thus that opposite the main entrance of the 'Imdeet of Ibrahim Beg (836/1432), set in 8 well-decorated, carved frame. The fountains of the Ottoman period, except for the Kadibudak and Kilpl Cesmes (both 958/2551), mostly associated with mosque foundations. To judge from the surviving inscriptions, few were built in the 17th century. However, the large number of construction restoration inscriptions covering the period 1790x850 on the fountains of the peripheral quarters is evidence for considerable urban expansion in the late Ottoman period.

Conclusion. Despite the disappearance of important monuments over the past hundred years, the surviving monuments (of which only the most important have been considered) seem a typical sample of the original constructions of the Karamanid

and Ottoman period. To judge from the earliest Ottoman mak/ registers, many buildings were already kharab and their wakis appropriated by other foundations. Calculation of the revenues of the major Karamanid constructions is difficult, since the scale of the endowments is not recorded. However only the largest foundations, the madrata of Misa Beg (ca. 1340, no longer extant) the Hatuniye Medrese 4 (783/1381-2) and the "Imdeet of Ibrahlm Beg a (836/1432), have whole villages specified among their awks/. Even allowing, therefore, for the decay I Saldjuk foundations and their endowments through the 14th century and their tacit absorption by the later Karamanid foundations, the made registers tend to show that even at the height in the Karamanids' power, building was no more extensive at Karaman than at other centres of the amirate-Nigde, Ermenak, Ereğli and Aksarayand considerably less than at Konya, Aksehir, Beyjehir and Aksaray under the Saldiuks.

LARI (SOO LARIN).

AL-LARI, MUHAMMAD II. ŞALAH B. DIALAL B. KAMAL AL-AMŞARI (or al-Nāṣiri), known as Muṣtiḥ al-Din al-Lāri, Persian scholar and historian, was born an 1510 in Lār, to the south of Shirāz. Following his family's tradition, he entered upon a scholarly mand studied under Muliā Şadrā's son Mir Ghiyāth b. Şadr al-Din Shirāzi and Mir Kamāl al-Din Husayn, a pupil of Dialāl al-Din (see Al-Dawāni). It is transmitted that Lāri's lather proceeded openly against the Shifl heretics (ramāfid).

(J. M. ROGERS)

During his later journeys, al-Larl was at first received honourably by the Mughal emperor Humayan (1530-56), who granted him the title ustad and became his pupil. Because of the unrest after Humayan's death, he left the country to go first on a pilgrimage to Mecca. According to the Persian source quoted below, four hundred of his books were lost at a shipwreck. After the pilgrimage, from 964! 1336-7 (rather 1537) onwards, he stayed for a while in Aleppo, where he apparently tried to establish himself as a merchant. His erudition stood out in discussions with learned men, among whom was Ahmad Kazwini, who did not dare to answer Lari's objections against his recently-composed Ithbat al-madjib. It is not known how long Larl stayed in Aleppo; he probably lacked there means of subsistence. His next station was Istanbul, where obtained admittance to the Muft! Abu 'I-Su'6d [see ARU 'L-SU'Up]. But he declined the offer of a professorship, endowed with 50 sides daily; he

might have thought that such a position was rather unimportant in comparison with his previous situation at the Mughal court. In this connection, the Ottoman historian 'All speaks III breach of faith of the Muttl' vix-4-vix Lart (H. Schrweide in Isl., xivi [1970], 186). Disappointed, he left Istanbul and found his final bome in Amid (now Diyarbakar), where Iskender Pagha, the Ottoman governor, appointed him professor at the Khosrew Pagha madrasa and teacher of his children. After being accepted among the memali-yi Rūm, he then also met with rocognition by the Porte. He died over fo years old in Dhu 'l-Hididia 979/April-May 1572.

He was originally a follower of the Shaff's madhhab. becoming later a Hanaff; also, he had a certain inclination towards mysticism. He wrote numerous annotations and commentaries of well-known works on philosophy, astronomy, tafsir and hadila. His few experiments as a post met with m approval, but his Mir'at al-adude wa-mirhat al-ahhbde, m universal history in Persian, dedicated to the Ottoman sultan Sellm II (974-82/1566-74) on the occasion of his accession to the throne, became widely known. The work consists of ten chapters, and is a compilation from fifty Arabic, Persian and a few Turkish works, which are mentioned in the preface. Possibly between 974/1566-7 and 978/1570, Khôdja Sa'd al-Din (d. 1008/1599 [see KHODIA EFENDI]) undertook, at the order of the Grand Vizier, adaptation, in Turkish of the first nine chapters. He left out the tenth chapter, on the Ottomans; as is well-known. they were the subject of his own work, the Tadi Al-tenedrikh. In the 19th century, the official historiographer Estad Efendi [see estad erendt, Sakharlar-SHEYKHI-ZADE SEYYID MEHMED] also made a partial translation.

LARIDA, name denoting, in Arabic texts, the former Herda, an episcopal see, currently Lérida, provincial capital in Spain, to the west of Barcelona, on the Segre.

It and a district ('amal) centre of the Upper March (al-Thaghe al-al'a) to which other towns and a large number of fortified strongholds were subordlnate. Situated on a fertile plain, it is surrounded by numerous gardens and orchards. One of its main sources of wealth was constituted by the plantations of fine quality flax which were farmed commercially throughout the March. There used to I gold in large quantities in the river of Larida. The district included rich farmlands on the banks of the Cinca (nahr zaytūn) with olive-groves and vineyards. There were numerous agricultural estates (diyde) comprising cereal and pasture land. Al-Himyari notes 🖿 a special feature the fact that each rural grouping (day'a) had at its disposal a fortified look-out tower (burgi), or underground galleries (sirddb) where the farmers could take refuge in the event LÄRANDA PLATE XXXII

of attack. Situated me the main strategic route of the Upper March, Larida was an obligatory transit point of armies and a site of the utmost importance in the defensive system of the Marches. Conquered by the Muslims at some time after the capture of Saragossa and Tarragona (whose inhabitants capitulated without resistance, if al-Razi is to be believed), the territory of Larida underwent pillage and destruction, in the and/8th century, at the hands of Franks-the armies of Louis-and of Cis-Pyrenean Christians and renegades. Governed by walls granted military prerogatives on account of its distance from Cordova, it succeeded on many occasions in eluding the authority of the amirs. The Banu Kasi, the Banu Musa = Banu Lubb on the hand, the Banu 'Amrus, and the Banu Shabeit or Band Tawil, on the other, as well as the Banu 'l-Muhādiir or Tudjībis [q.v.], dominate the entire history of Larida and its region in the 3rd-4th/ 9-roth centuries.

The man of Ismā'il b. Mūsā b. Mūsā b. Kāsī who, in 270/883-4, reconstructed and fortified Larida and its surrounding territory, deserves a special mention. His sons were obliged, in ca. 277/890, to fight against Muhammad al-Tawil of Huesca, who vied with them for possession of the Barbitania (Barbastro and Litera, in the Ribegorza). The walks of Larida, with their own troops or with reinforcements from Cordova, fought on more than one occasion with the Christians of Pallars and of the Barcolona region. The superb Grand Mosque built by Lubb b. Muhammad b. Kasī in the upper part of the fortress dates from the beginning of the 4th/10th century. In the final third of the 4th/10th century, the role of kapid appears to have been occupied by Rashid al-Barghawati, who was instructed to restore to Hāshim b. Muhammad b. Hashim al-Tudifbi the district of Larida, which continued to be controlled by his family for a number of years. In the 5th/11th century, the fate of Larida and its region was linked to that of the Arab family of the Band Hud [see Huntes], who in 431/1030 replaced the Tudifbl family in controlling the valley of the Ebro and in the farifas of Saragossa and Lārida. Yūsuf b. Sulaymān b. Hūd al-Mugaffarlike the hadish Mundhir at a later stage-governed the town, from a time prior to the death of his father (438/ro46) and was in disagreement with his brother Ahmad al-Muktadir of Saragossa, who held him responsible for the loss of Barbastro in 456/1064 [see BARBASHTURU]. Under the control of members of the family of the Band Had, sometimes dependent on Saragossa and in a precarious state In the 6th/12th century in the face of the Christian advance, the town survived under the authority of milis, It was compelled, when the fortresses of the defensive perimeter were taken, and Armengol VI of Urgel and Ramon Berenguer IV of Barcelona entered into alliance with other Catalan chieftains, to capitulate on 19 Djumada II 544/24 October 2249, when it was at that time being governed by the adii al-Muzaffar b. Sulayman.

LARIN (e., Ideh, a silver coin current in the Persian Guif and Indian Ocean in the roth and 17th centuries. It takes its ____ from the town of Lär [q.v.], the capital of Laristan at which it was first struck; cf. Pedro Texeira (Travels, Hakiuyt Soc., London 1902, 341): "There is also the city of Lar. .. whence are called taris, money of the finest silver, very well drawn and current throughout the East", and Sir Thomas Herbert speaking of Lar in 1627 (Some years' travels, London 1665, 130): "near this byzar the larges are coyned, a famous sort of money." The larin weighed about 74 grains (4.9 grammes) and had a high reputation for the parity of its silver. It was worth ten pence in English money (Herbert) or one-lifth of a French crown (Tavernier) or 60 Portuguese reis.

The larin is in shape quite unlike any other coin. It is a thin silver rod about 4 inches long, doubled back and then stamped on either side with inscriptions from dies like any other coin. It is admirably described by William Barret in his account of the moneys of Başra im 1594 (Hakluyt, Principal toyages, Glasgow 1904, vi, 12): "The sayd larine is a strange piece of money, not being round like all other current money of Christianltie, but is a small rod of silver of the greatnesse of the pen of a goose feather where with we use to write and in length about one eighth part thereof, which is so wrested that the two ends meet at the juste halfe part and in the head thereof there is a stamp Turkesco and these be the best current money in all the Indices and six of the larines make m ducate".

The kingdom of Lär ceased to issue these after its conquest by Shāh 'Abbās the Great of Persia (Chardin, Foyages, Amsterdam 1735, iil, 128), but its popularity led to this type of coin being adopted by other states of the Indian Ocean. The kings of Hormuz of the latter half of the xôth century issued latins, as did the Shāhs of Persia at Shīrāz and the Ottoman Sultans at Başra. In India, they

were struck in the 17th century by the 'Adil Shahl dynasty of Bidiapur and other rulers, and the frequent finds of larins Western India show how extensive was their circulation there. In the Maldive Islands in the early 17th century, the king struck his own larins, as me know from the Voyage of F. Pyrand de Laval (Halduyt Soc., 1887, i, 232-3). In Ceylon they were also struck, not only by the natives but also by the Portuguese merchants at Colombo; in this island they were twisted roughly into the shape of a fish-hook, whence the term "fish-hook" money. These pieces are either uninscribed or bear rude imitations of the Arabic script. In Ceylon the "fish-hook" money survived into the 18th century. A degenerate descendant of the larin existed till recently (H. St. J. Philby, The heart of Arabia, London 1922, il, 319) on the Arabian side of the Persian Gulf, in Hasa, where it is known as a tawile, i.e. the "long" [coin]. It is only an inch long and of very base silver, if not copper, without any trace of inscription. It is described by Palgrave (Nareutive of a year's fourney through Central and Eastern Arabia, London 1865, ii, 179) who adds that there is a proverb "like a Hasa fauti", applied to any one who, like the local currency, is of no away from home, H. R. P. Dickson, The Arab of the desert, London 1949, still registers in his Glossary, 643, the latest as a copper bar coin current in Masa.

LARISSA [see VENISHERIE]

LAS BELA, a former native state of the British Indian empire. It lies in the south-east of Balüčistän, along the coast to the west of Karachi, between lats. 24° 34' and 26° 39' N. and longs, 64° 7' and 67° 29' E. It is bounded on the west by Makran [q.e.] (of which western Las Bēla forms indeed a part), in the north by the Jhalāwān district of the former Kalāt native state [see kū.Ār] and on the east by the former province of Sind; its area, both as a former native state and as a modern District of Pakistan (see below) is 6,444 sq. miles.

1. Geography. The central part of the state is a flat, arid plain (las = "plain"), but in the western part of the state there is the Makran coastal range running parallel to the sea, and ranges like the Mor and Pab ones run north-southwards in the eastern part of the state and separate Las Béla from the lower Indus plains. The central lowland area is drained by the Porali, Titiyan and other streams, and it is here that the main settlements lie. Much of the terrain of Las Béla is desolate and scrubcovered, and because of the exiguous rainfall (7"/ 17.5 cm. per annum), agriculture depends essentially on irrigation from floods coming down from the hills after the summer rains; this water is collected by dams across watercourses, and hariss [see KANAT] are used for conveying water to fields. The coastal population depends on a small amount of coastal navigation, and especially on fishing, the whole Makran coastland being known in classical times as one inhabited by ichthyophagoi; with the suppression of phacy in the Persian Gulf and the Arabian Sea during the 19th century, these fisheries expanded considerably, and saited fish was exported from the Makran coasts as far as Zenzibar, Bombay and the Malabar coast.

2. Ethnography. The main Last tribes claim descent from the Sumra and Samma former rulers of Sind, and meet from their names (cf. the frequent element potra) to be of Indian Rādiput origin, Las Bela being the only part of Makran where morieinally indian ethnic element has apparently maintained itself against the Balüe incomers. There me tive principal tribal confederations, of which the Ründiha held the chieftainship of Bèla before 1742, and the Djamots after them. A group called the Cadras, of negroid features, clearly descend from an imported slave population, and another low-caste group is stituted by the Langes, mainly employed andomestic servants. The overwhelming majority of the population is Sunni Muslim in faith, with some Khodia Isma'lli traders in the towns. The worship of local pirs or saints is widespread, with especially important shrines, formerly visited by Hindus from quite distant parts of the subcontinent as well by Muslims, at Hingfadj, Shah Bilawat and Labut-i Lamakan. Threequarters of the population speak the Djadgall or Diagdall (lit, "Diat language") form of Sindhl, but Makrānī Baiūči is spoken generally in the west and Brahül in the exareme north.

3. History. Las Béla has virtually separate history before the 18th century; for the history of the region before then, see in general MAKRAN. Alexander the Great must, however, have passed through what became Las Béla when in 326 B.C. he left Pattala on the fower Indus and marched westwards via the land of the Oreitae to Gedrosla or Makran and then Persia.

Various local tribes exercised power in Las Réla until in 1742-3 Djam 'All of the Diamot tribe (see above) established his authority there with the help of a Brahui force from the ruler of Kalat Mahabbat Khan; the chieftainship benceforth remained with this family, who were known by the Radjout title, formerly used in Sind, of Dillen but who came elaim a spurious descent from the Arab tribe of Kuraysh. Las Bela thus became a dependency of Kalāt, whose Khān at first drew half the revenues of Bèla as his share and later required on occasion a troop contingent in lieu; also, Las Béla's northern frontier adjoining [halawan remained for long undefined. Henry Pottinger passed through Běla in 1810 and found that town enjoying considerable prosperity under the benevolent rule of Djam Mir Khan 1 (1776-1818); a colony of 250-300 Hindu merchant families carried on trade there (Travels in Beloochistan and Sinde; accompanied by a geographical and historical account of those countries, London 1826, 14-29). It was during this Diam's reign that conflict arose over the Makran port of Gwadar [q.e. in Suppl.], which had been transferred to the sultans of 'Uman in 1784 by Mr Nastr Khan of Kaiat, but captured at point by Mir Khan I. In the middle decades of the 19th century, Djam Mir Khan II (1830-69), who was beginning his reign as a child when Charles Masson was in Bela in the 1830s (Narrative of various journeys in Baluchistan, Afghanistan and the Panjab, London 1842, il, 17-18, 25-30), came to covet the territories of his father-in-law Khudadad Khan of Kalât, and allied on various occasions from £865 onwards with the Khan of Kharan [q.e.] in northwestern Balüfistän and the Brahül sanddrs or chiefs of Jhalawan. After 1869 he lost the chieftainship of Las Bêla, however, and was an exile in British India; his son ill ultimate successor as Diam 'All Khān III in 1876 recognised the suzerainty of Kalāt

in the general settlement at Mastung arranged by Sir Robert Sandeman (T. H. Thornton, Col. Sir Robert Sandeman, his life and work on our Indian frontier, London 1895, 46). Irreconcilable disputes within Las Bela broke out between father and son, with Djäm Mir Khän exiled to Queeta in 1886. When Djäm Mir Khän II died in 1888, Sir Robert Saudeman, then Agent to the Governor-General in Balüčistän, in 1889 installed Djäm 'All Khän III in Bela (ibid., 199-203). After this latter ruler's death in 1896, there were disputes among his sons, but Djäm Mir Kamal Khän assumed the chieftainship, and in the onsuing decades, events in Las Béla were less eventful.

After British India was partitioned, Las Bēla, like Kaiāt and Khārān, acceeded to Pakistan [1948], and after 1952 became part of the Balūčistān States Union, with the Diām no longer an independent ruler but receiving a privy purse from the central government. In 1955 all the provinces of West Pakistan were merged into one unit, with Las Bēla as a District of Kalāt Division under a Deputy Commissioner; but after 1960 Las Bēla District was transferred to Karachi Division. According to the 1961 census, Las Bēla District had a population of 90,826, excluding non-Pakistanis, and the town of Bēla one of 3,139 (Population census of Pakistan 1961, District census report, Las Bela, Karachi n.d.)

LASHKAR, the Persian equivalent of the Arabic Cashor, disend [q.c.], or disysh [q.c.], and the term normally used by the Indian Muslim rulers for army. Though armies were generally organised according to the Perso-Turkiah military traditions of the Ghaznawids and the Saldjükids, Mongol traditions were is assimilated later into the subsequent plans for the reorganisation of the lagitar.

Composition and organisation. The laghkar of the Dibli Sultans, that of the 9th/13th century provincial dynasties, and that of the Mughals was divided into the cavalry, infantry and the elephant corps, the cavalry forming its backbone. Following the Chaznawid, Churid and Saidjukid traditions, both the Sultans and the Mughal emperors maintained a multi-racial professional cavalry, not neglecting to include even the leaders of the Hindu racial and ethnic groups.

In the 7th/13th century, the Dihit cavalry, or the standing army at the capital, was variously known — the hasher's halb, afwidin's halb, halb's sulfans, or simply hasher. Some Sulfans also recruited a slave corps personally loyal to themselves, but they invariably proved disastrous to their successors. The dianders (king's body-guards) performed both military and police duties and were counted as members of the military force. Apart from the hasher, the thia' [q.v.]-holders also recruited cavalry from the regions in which they were posted, or from the garriunder their command. The army of the ihid's holders — known as the hasher-i aird, or later, as the hasher-i bilad-i manualth.

A separate army was kept at strategic points, both in old and newly-buist forts along the River Indus in order to stop the Mongol incursions. Sultan Balban [g.v. in Suppl.] built strong forts even at Djaläll. Patiyall, and in other predominantly Hindu areas cast and north of Dibli, in order to open up roads

and communication with Outh — Awadh [q.e.]. He manned these forts with Alghans, who were given fertile land to farm. The commanders of the forts remained — it/id⁴-holders, but the soldlers —— encouraged to develop a personal interest in the land as landowners.

Bughrā Khān, a son of Balban, is said to have informed his own son Kaykubâd, who succeeded his grandfather Balban as the Sultan of Dihli, that a sar-khayi should III in control III ten horsemen; a sibak-sālār should command ten sar-khayls; an amīr should be a commander of ten sipul-sálárs; a malik should have authority over ten amirs, and a khan's forces should control contingents of mi maliks (cf. Diva al-Din Barani, Talrikh-i Firas Shahi, Bibl. Ind., Calcutta 1860-2, 145). This is not to say, however, that the armies were organised according to a decimal system, but it was an ideal which the Sultans wished to implement, because of their growing awareness of the decimal chain into which the Mongol army was divided. Sultān 'Alā' al-Dln Khaldji, however, did re-organise his army on that basis, and the Tughluks are known to have continued the decimal system, for we are told by al-"Umarl's Masdik alabşār fi mamālik al-amşā) that, in Muhammad b. Tughluk's reign, the high commanded 10,000 horsemen, the malik 1,000, the amir 100, and the sepahsălăr less than 100.

The head of the military administration was known as the 'āriḍ-i mamālih, or the sāhib-i dimān-i 'arḍ [see isti'rāp, 'arp]. As a minister, he was second only to the water or the Prime Minister. In the reign of Balban, the 'āriḍ-i mamālik was known by the title rāmat-i 'arḍ, the first word being of Hindl origin. Amir Khusraw's maternal grandfather, 'Imād al-Mulk (pillar of the state), was Balban's rāmat-i 'arḍ, and had a very keen sense of his responsibility. Later, in Fīrūz Shāh's reign, the 'āriḍ-i mamālik was given the title 'Imād al-Mulk.

The 'drid-1 mamalik was the principal recruiting officer for the Sultan's standing army (hashmikalb); he inspected the armaments and horses of the ravarry of least once a year, kept their descriptive tolls (hilpat), and recommended promotions or pinishments accordingly. The 'drid-1 mamalik was also responsible for the internal organisation and the discipline of the hashm-1 halb and the commissariat. The leading ikid*-holders appointed their own personal 'drids.

Faithten Mudabbit | q.n. in Suppl.] tells us how the 'drids' assistants were required to note down the name and hilyat of both the troopers and the footsoldiers. As an inspection of the army invariably held before its march to campaign, the 'drid on such occasions was not expected to be too harsh, for disheartened troopers, according to Fakhr-i Mudabbir, were not very dependable (Fakhr-i Mudabbir, Addb al-karb = 'l-skatja'a, ed. A.S. Kh-'ansart, Tehran 1346/1966, 276-8].

It would seem that the system of dagh (branding of horses) which was known in the reign of the Ghaznawide had been abandoned by Illutmish. It was reintroduced by Sultan 'Alā' at-Din Khaldil, but Sultān Flrūz Tughluk abolished the practice, as well as that of recording hilyats. The latter was reintroduced once again by Sikandar Lödl, while Shir Shāh also made dāgh compulsory (see nāgm u rassulsa in Suppl.).

A remarkable change took place in the military organisation when Akbar introduced his monolithic military and civil service organisation, known as man-sabdist. Although the system became more complex in

the reign of Shahdjahan, the basic framework of the mansabderi system as instituted by Akbar endured. According to the Alin-i Akhari of Abu 'l-Fadl, the Emperor divided the mansab (rank) of the mansabdars from the dah-bashs (commander of ten) to dah-hasars (10,000), reserving commands of 5,000 and above for his owns sons. He intended to limit the mansabs to sixty-six, representing the value of letters in the name of Allah, but in fact there were only ever thirtythree grades. Akbar himself relaxed the rule about higher ranks, promoting Prince Salim to a mansab of 12,000 and two nobles to the ranks of 7,000. All massabdars were required to maintain horsemen, horses, elephants, camels and carts, as fixed by their respective mansaba. By 1010/1602 the mansabs were divided into dhat and sundr and the institutions of yestaspah, du-aspah and sih-aspah were also introduced. Mansabdars of the rank of 500 were called amirs and those holding higher ranks were given other appropriate titles. Later in Shahdjahan's reign, only those who held the rank of 1,000 were known as amirs (rendered as Omrahs by Bernler and other foreign authors).

The personal rank of mansabdars called dhat was meant for calculating one's salary according to the sanctioned pay scale, and the swear rank indicated the number of troopers and horses the mansabdars were ordered to maintain; for example, a mansabdar with a swedr rank of 5,000 was ordinarily required to produce 1,000 horsemen at muster. Troopers who were required to provide one horse were called yakaspah, while those who undertook III provide two horses were called du-aspan. Those obliged to provide three were known as sih-aspah. The mansabdars' and amirs' contingents contained all three types of troopers proportionate to the salaries they drew. Salaries were not allowed for the full twelve months; some drew them for much shorter periods. For example, a mansabdar with a sugar rank of 5,000 drawing his salary for twelve months was required to muster a contingent of 1,000 troopers, of whom 300 were silvaspak, 600 dii-aspah and 100 yak-aspak, i.e. a contingent containing 2,200 borses. If, on the other hand, he were to draw his salary for only five months in a year, he would need to muster only yak-aspalis.

The contingents of the mansabdars were multiracial, the number of recruits of different martial being predetermined. Only the Radiputs and Mughais were allowed to recruit troopers exclusively from their own racial groups and tribes.

Troopers wishing to enter the army had first to find a patron who generally belonged to the same race as himself, but as the empire expanded, the racial exclusiveness in the mansabdár's contingents broke down. The candidates had to furnish their own horses of standard breed, as well mearmaments, but the patron mansabdárs also gave them horses for which deductions were made from the troopers' salary. The mansabdárs' troopers were known as their jábinán ("followers").

The appointments of the mansabdass from the lowest to the highest rank were approved by the emperor, and all of them were technically speaking directly subordinate to him. The head of the military administration was called the mir bakksh, the Moghal name given to the 'ārid-i mandlik. The mir bakksh also held the status of minister, and in that capacity mext to the prime minister. However, even the ministers' contingents were examined by the mirbaksh's department and, the fact that their salary depended on the maintenance of those contingents meant that means the prime minister's salary was de-

pendent on the mir-bakkshi's approval. The bakkshi's department also recorded the descriptive roll (cihra) of the mansabders, their troopers and horses. The breeds and the quality of their horses were examined and those that were approved were branded with different marks (digh). A muster of troopers and horses was held periodically for physical checking and verification (tashiha). Those who failed to muster their troops forfeited their pay were heavily fined. The mir-bakhski was assisted by two other bakhshis who helped to check the evasion of rules, and to prevent traud. The Mughal government, which depended mainly in the troopers of the mansabdars for their conquests and for the suppression of reballions, remained efficient only so long as the monarchs were strong. Unfortunately, under the incompetent Mughal emperors who succeeded Awrangalb, the government began to disintegrate.

There was a second group of troopers, superior to the fdbinān, who were known as ahadis (from ahad, "one"). An amir was commissioned especially to introduce suitable candidates for the ahadi-ship, and a separate bahish was assigned to examine their horses, brand them, and compile their descriptive rolls. The ahadis' salaries were some 75% higher than those of the fdbinān, and their horses and were thus of a superior kind. During Akbar's reign, the ahadis acted in his immediate servants. They were also assigned to non-military duties. The wala shahi ("belonging to the exalted king"), referred to as the "emperor's slaves" by Manucci, worked as bodyguards in defenders of the imperial person, and were also picked from amongst the ahadis.

Another category of horsemen were known as bāṣgir-sɨwörs. They neither owned horses were enrolled as fābinān. However, as they were fit for cavalry service, in times of emergency they were provided with horses and went into action. They were not, however, part of the regular cavalry.

Abu 'l-Fadl also makes mention of m large army consisting of 384,558 cavalrymen maintained by the ramindars [q.v.]. Some ramindars made their contingents available to the emperors for suppressing rebellions; they also kept their localities free from robbers, and performed police duties in the villages, but im no way did this big army form a part of the Mughal regular fighting forces.

The foot-soldiers who were maintained within their infantry contingents by the Dihli Sultans were known as pāyaks, and were mostly Hindus. They were good archers and were generally arrayed in front of the lines of horses, or around the elephants in order to prevent them from fleeing. As body-guards and palace-guards of the emperors and princes, the payers were deeply loyal to their masters and are known to have rendered singular services to Sultan 'Ala' al-Din Khaldji and Kuth al-Din Mubarak Shah. Shir Shah presented them with matchlocks, and Akbar's infantry contained 12,000 matchlockbearers [see BAROD, vi. India). They were divided into four grades with different salaries. Akbar also recruited into the infantry a caste of Hindu highway robbers called mainly, and named them khidmatiyyas (serving men). Their officer was called the Khidmat Ray. The khidmatiyyas were required to guard the palace and to control highway robbery. Members of many other hill tribes and Hindu martial clans were also induced to join the Mughal infantry. The matchlockmen and the archers formed a formidable corps of the Mughal army. For administrative purposes, Akbar used to assign contingents of foot-soldiers, paid by the imperial treasury, to many high many abdars. They were

687

known as piyāda-i dākhilī and were classified as alma-suwārān (half-troopers) in the descriptive rolls. One-fourth of the dākhilā foot-soldiers, used match-locks, and the rest were archers.

Auxiliary tradesmen such marapenters, black-smiths, cotton-carders, stonemasons, leather workers, lirework-makers, turners, diggers, miners, axemen, larriers, and kakars (bearers of different kinds of litters) were also classed as infantry. Indispensable as they were for constructing defensive works, pontoon bridges and helping in siege operations, they were also included in the infantry and trained in awordsmanship im order to defend themselves in times of need.

Elephants imported from India formed a formidable corps of the Ghaznawid army (see vit. As beasts of war, and warb. v. Persia). The Dihit Sultans were also highly impressed with the utility of elephants in war. Balban considered each elephant as equal m 500 horsemen, and the Dihit Sultans fost no opportunity in obtaining the choicest elephants for their pilibalus (elephant stables). They also strove to keep those areas that supplied the best elephants, such m Bengal and Deccan, in their possession. One hundred and twenty war-elephants arrayed against Timür's army by the feeble Fughluk Sultan are known to have struck panic even into that world-conqueror's army [see also wars. vi. India].

Elephants were an asset to the army in battering the gates of strongholds. The warriers shot arrows or matchlocks from their positions on the elephants' back; the commanders who seem seated on the elephants could be seen from a distance by the rest of the army and were able to instil confidence into their soldiers. However, when paniestricken, or werely wounded, the elephants became uncontrollable and would often trample their own army underfoot.

The Muslim rulers in India did not neglect the artillery [see BARCD, vi. India]. The Deccan Sultans of India, who had close contact with the Ottoman Turks, were pioneers in establishing firearm factories. The Gudjarat Sultans followed their example, and Sultān Maḥmūd and Bahādur Shāh made good use of the Turkish gunners in their service. Babur, the founder of the Mughal empire in India, secured a decisive victory over Ibrahlm Lodl, mainly due to the efficiency of his artillery. In India, he took a keen interest in having heavy guns cast by those gunners trained under the Ottoman Sultans who were now in his service. Akbar also took a personal interest in casting guns, and recruited oven Portuguese to develop his artillery. Many new types of guns min invented by the Persian Fath-Allah Shirazi in Akbar's reign. From the middle of the 11th/17th century, European adventurers drawing exceptionally high salaries began to hold superior positions in the artillery of the Mughals and other rulers. In the 12th/18th century, the British and French gunners made radical improvements in the casting of cannons and beavy guns. but the blacksmiths invariably remained Indians.

All the heavy guns were given pompous names, and some of them were so heavy that it took as many metwenty oxen to haul and several elephants to push them. Naturally, they could not cross boat-bridges and were only with great difficulty transported along the ranged routes. The light artillery consisted of several types of guns, variously known as gadjadl or hathadl (guns transported on elephants), thuteradl, samburat and shifts (swivel-gun or wall-piece). A special type of light artillery known as the "artillery of the stirrup", which François Bernier mentions, consisted of "fifty or sixty small field-pieces, all

of brass; each piece mounted on a well-made and hand somely painted carriage, containing two ammunition chests, one behind and one in front, and ornamented with a variety of small red streamers." (Travels in the Mogul empire, ed. A. Constable, Oxford 1841, 217-18).

The Darügha-i tüp-khina, im wir diash ("head of the artillery department"), performed duties similar to those of the bakkhi, insofar in the recruitment of artillerymen and the supervision of guns were concerned. With the growing importance of artillery, the mir iliash in the rath/lath century became one of the most influential officers of the empire.

The Indo-Muslim rulers did not, however, take any interest in developing their navy. Mahmud of Ghazna in known to have fought against the Diats in 418/1027 by launching a flotilla of 1,400 boats on the River Indus. The Dibil Sultans used boats provided by Hinda chieftains only for transporting goods and men. The Gudjarat Sultans fought naval battles against the Portuguese. Babur had enormous boats constructed and Akbar also constructed an impressive flotilla of huge boats some being shaped in the forms of different animals. Bengal, Kashmir, Thatta, Lahore and Allahabad were the main boatbuilding centres. Akbar also employed scamen, had pilgrim ships built, but was unable to establish a genuine navy. Early in Awrangelb's reign, Mlr Djumia [q.o.] fought successful river butiles against the races of Kūč Bihār and Assāni, who had complete mastery over their rivers. The only navy that the Muslims possessed belonged to the Habshis who ruled the rocky island of Djandilra (q.v. in Suppl.), 45 miles south of Bombay. They were most daring seamen, and until 1730 were victorious both against the English and the Marathos (see further RABSET).

Numbers. The strength of the army of the Dihli Sultans ear only be roughly estimated and many of the figures in the sources seem to be exaggerated. We are told by Minhādj-i Sirādj-i Djūzdjāni [q.v.], that in 658/1260, Sulțăn Nășir al-Din Mahmud had collected 50,000 troopers and 200,000 foot-soldiers from Dibli and its vicinity to demonstrate his strength before Hülägü's ambassadors. Balban recruited a considerable number of trained soldiers into the corps of the succircular halb and made his standing army very strong. Troopers in 'Ala' al-Din Khaldji's army numbered 475,000. Muhammad b. Tughluk's cavalry is said to have consisted of 900,000 troopers, some being stationed in the capital and the others in the provinces. In 730/1329-30 he is known to have recruited 370,000 troopers for his Khurasan expedition. The army he sent against Karādill consisted of 100,000 troops and a large infantry. On his first Bengal expedition in 754/1353-4. Firuz Tughluk commanded 90,000 troopers. Again, Firnz Shah marched against Bengal with 80,000 troopers, 470 elephants and an exceedingly large number of foot-soldiers.

According to Bábur, Ibrahim Lódi had resources enough to have brought into the field 500,000 men, but actually took only 200,000 mem and 2000 elephants with him. Bábur's army, on the other hand, consisted of only 12,000 men. Humäyün fought the battle of Kanawdi against Shir Shāh with 200,000 troopers, while Shir Shāh commanded only half that number.

The total strength of the army of Shir Shah consisted of nearly 300,000 horsemen and 100,000 infantry, comprising matchlockmen and archers. Of this army, 150,000 troopers, 25,000 horsemen and 5,000 elephants were commanded by the king himself, the

rest serving at cantonments and in strategic places. The contingents of ikidé-holders were also requisitioned whenever needed.

The Persian sources do not help us in calculating the number of Akbar's manşabdars, but their number at the Emperor's death, given by De Laet as 2,961, seems approximately correct. According to Pather Monserrate, there were "forty-five thousand cavairy, five thousand elephants and many thousand infantry, paid directly from the royal treasury" [J.S. Hoyland and S. N. Banerji (trs.), The commentary of Father Monserrate, S.J., Oxford 1922, 89).

Bernier says that the total number of cavalry in India was incredible, but he considered that the effective cavalry commonly about Awrangab's person, including that of the radias and Alghans, amounted to 35 = 40,000 which, added to those in the provinces, formed a total of more than 200,000 troopers.

In 1057/1647. Shādjahān's army consisted of 8,000 mansabdārs, 7,000 ahadi and bark-andāz troopers, and 185,000 troopers (tābinān) belonging to the princes, important amirs and mansabdārs. This army did not include the troopers under the pargand officers. Of the infantry of Shāhdjahān, which included matchlockmen and others who discharged heavy and light artiflery, 10,000 were always with the Emperor.

Training and physical exercises, and uniforms. Before their admission into service, both the troopers and foot-soldiers had to pass a severe test of their competence. Fakhr-i Mudabbir gives the rules for training horses and for horsemanship in considerable detail, and works on archery as well swordsmanship have also survived. This same author further discusses the advantage of different kinds of sports, such as wrestling, boxing, weight-lifting, disc-throwing and fencing for military training, and gives a detailed account of the advantages which the manoeuvering of stick, ball and horse in polo offered to the troopers. After entering into service, the soldiers had to maintain rather than improve their military skills through regular physical exercises, horse-cacing [see FURÜSIYYA] and polo [see CAWGÂN]. Balban took with him 1,000 horsemen and 1,000 foot-soldiers, expert in archery, during his regular hunting expeditions; Firaz Tughluk used to array his army in battle formation, even on his hunting expeditions. These expeditions and polo were an indispensable part of the life of the Mughal soldiers, officers, princes and emperors. The military parades and proper battle array were not possible without some training in combined movements, but regular drills of the soldiers do not were to have been common.

The troopers are not known to have worn any uniforms. In the miniatures depicting the reign of the Mughais, they are seen wearing clothes of different colours, but in the rath/18th century, some nobles seem to have introduced uniforms. The contingents were generally identified by the special snarks with which their horses branded.

Pay, Mahmad of Chazma and his immediate successors paid their army in cash, but in the 2th/13th century the Dihll Sultans assigned id/4's (assignments of revenue of different regions) to their commanders for their personal maintenance and for that of the troops (hashes: atal) under them. Sultan Shams al-Din Illutmish assigned the revenue of the villages around the capital and in the Do'ab to the hashes: balb, and the latter were also called ithis holders. By the time of Balban, the surviving

troopers of the hashm-i halb and their descendants had become the bereditary owners of the villages. Balban ordered the resumption of the hild's of old men, widows and orphans into the hild's of old men, widows and orphans into the hild's [g.v.] (= territory whose revenue was reserved for the Sultans' treasury), but later abandoned the scheme for emotional reasons. However, Balban's own hild's had expanded, and he was able to pay his own body-guards and troopers a handsome salary in cash.

The Khaldils and the Tughluks reorganised their revenue system and determined the salary of the commanders and their troopers in cash. They then assigned its equivalent in the form of the revenue of territories in lieu of the salary. Al-Draad states that the Syrian and Egyptian istat system differed from that of India in the mode of making payment to the troopers. In Egypt and Syria, commanders assigned land directly to their troops instead of salaries, while in India the troopers were paid in cash. 'Ala' al-Din Khaldil resumed all the smaller itia's into the khālija and paid cash to his large army, recruited to meet the Mongol threat to his kingdom and to ensure further conquests. Two hundred and thirty-four tankas [q.v.] were paid annually by the Sulfan to a well-trained and equipped trooper with one horse, 78 tankas extra being granted to troopers with two borses. To that the troopers lived satisfactorily on their low salaries, he fixed the prices of all commodities, from horses to articles of daily use, making sure that supplies and not withheld.

Sultan Ghiyath al-Din Tughiuk also paid his large standing army in cash, and issued strict orders to the idda-holders to refrain from reducing the salaries of troopers fixed by him. Sultan Muhammad b. Tughluk made his commanders further dependent upon the local treasuries for their salaries, sometimes by appointing his own officers, and sometimes revenue farmers to reliect the revenue from the idda's. Firat Tughluk made all civil and military posts hereditary and paid them by assigning idda's, the revenue from which was known madia.

The Aighâns found Firûz's policy highly compatible with their own tribal system, and assigned hereditary 1446's to their commanders, who in turn sub-assigned smaller to their subordinates, who then paid the troopers by making similar subassignments. However, the monthly salary of ordinary troopers was fixed and the ilitis were granted to the commanders on the basis of the total number of troopers and their monthly salary. Shir Shah, who in his youth had managed we own father's sub-easignment, was fully conversant with the abuses of the system. He reverted to the system of "Ala" al-Din and paid his standing army in cash, personally supervising the recruitment and the fixation of the soldiers' salaries, which were paid in cash. Fraudulent practices were eradicated by making payment only to those whose horses were branded. The big ibia's corresponding to provinces were managed by the Aighan tribal chiefs, but they were also ordered strictly to enforce the control government regulations in their respective administrative charges, including monthly cash payments to the troopers and the branding of horses.

Akbar and his successors paid their mansabdars mostly by assigning them revenue from territories, called by the Mughals gifeir [q.v.], although the term ithis was also used. Some mansabases were paid in cash, others partly in cash and partly in diagre. The salary schedules of mansabdars were carefully prepared on the basis of their das and sames ranks

(including disaspak and sik-aspak) [see further MANSABDAR]. The available pay certificates of the mansabdars of Shahdjahan's reign explicitly mention the amount of salary which they were allowed to draw to maintain themselves, their families and their personal establishments (khdss), and the amount meant to be paid to the siblada. For example, in 1060/1650, Rajo Karan was allowed to draw 4,700,000 dams for his dhat rank of 2,500 and 16,000 dams for tablean in his squar rank of 2,000. His fixed salary totalling 20,700,000 daws was to be drawn from the revenue of pargands [q.v.] mentioned in the certificate (Selected documents of Shadjahan's reign, Daftar Diwani Haydarabad 1950, 176-7). In Shahdiahan's reign, the mansabdars from 5,000 to the lowest rank were subdivided into three grades in their dhat rank, the manyabdars of the first grade drawing the highest salary.

The salary of the troopers was fixed according to the breed of horses they maintained. According to the Alin-i Akbari a yak-aspah troopers was paid according to the following rates. If his horse was an 'Iraki, he received 30 rupees per mensem: if mudjannas (nearly equal to 'Irald, half-breed), 25 rupees: If Turki, 20 rupees; if a yaba (the Indian-bred offspring of Turki horses), 18 rupees; if a Tazi (Indian cross-Arab breed inferior to pabe), 15 rupees; and if a diangle (Indian-bred, inferior to tital), 12 rupees. According to Bernier, early in the reign of Awrangzib the troopers with me horse did not draw a salary of tess than 25 rupees per month. However, the mansabdars could pay an even higher salary, and in order to attract efficient troopers into their service, many mansabdárs did so Manucci strongly criticises discrepancies in payments to troopers, some of whom received to to rupees, others forty, fifty, or a hundred. This inconsistency can be ascribed partly to the fact that Manucci's comments relate to the last years of Awrangzib's reign, and partly to the fact that he does not appreciate the fact that troopers maintaining more than one horse naturally received a higher salary.

The mansabdars were authorised to deduct 5% from the salary of the fabinan for miscelfaneous administrative charges. A further deduction of one month's salary was made annually for the cost of horse and equipment supplied by the government to the troopers until the amount of the loan was paid off. The price of a trooper's horse charged by the government used to be 50% higher than their cost price, but since the government bought horses competitive prices, the troopers did not suffer any loss, according to Abu 'l-Fadl.

The mansabdars, sabinda and other government servants received rewards for their good work in the form of increments in salaries, cash prizes and additions to the diagirs. Akbar introduced the system of granting loans to officers for their urgent needs. A rate of interest which doubled the original loan in ten years was charged. This usury was known as musa'adat ("assistance"). The mansabdars who violated the rules and neglected their duties, for example by failing to muster horses of the breed for which they drew salaries, or by omitting to produce the number of horses stipulated for their saludy rank, were fined according to a fixed schedule. Checks and counterchecks were introduced to prevent defalcation of government money through a machinery of rules and regulations requiring close co-ordination between the state departments and the department of the mir bakkshi.

Since the armies of both the Dihil Sultans and the

Muchals were paid by the state, they were not entitled to receive the four-fifths of the chanima (booty) sanctioned by the Shari's. Firuz Tughluk is known to have distributed this portion of the glanima taken at Diadinagar and Akbar took only one-fifth into the imperial treasury, requesting the officers (faudidars [q.v.]) to distribute the rest equitably amongst the army, However, as the booty gained by the faudidits in local wars was never very great, the amount received by the troops was mi-

Horses and elephants. The Indian Muslim rulers maintained the superiority of their cavalry, not only by acquiring superior breeds of horses through sea and land routes, but also by devoting their full attention to improving Indian horse breeds. From the Persian Gulf, Bahrayn and the ports of the coast of southern Arabia were imported Traki. Persian, Syrian and Arab horses. Overland trade brought in Tatari or Central Asian horses from the territories lying between the steppelands of southern Russia and the Oxus. The horses from Ghazna to Peshawar compared favourably with these animals. The territories between the eastern Pandlab to north-western India, and from north-eastern India. to upper Burma, contained the best horse-breeding grounds, although horses from these areas were considered infesior to those imported from foreign lands, and were sold at a lower price. Ibn Battūta says "The people of India do not buy them [horses] for [their qualities in] running or racing, because they themselves wear coats of mail in battle and they cover their horses with armour, and what they prize in these horses is strength and length of pace. The horses that they want for racing are brought to them from al-Yaman, Uman and Fars, and each of these horses is sold at from one to four thousand [silver] dinare (Rihla, ii, 374, tr. Gibb, ii, 479). This same author states here that the price of the cheapest Tatari horse in Muhammad b. Tughluk's reign was roo silver dinars, while the exceptional ones were sold for 500. Racehorses were therefore very dear.

Akbar reorganised the purchase of horses of foreign breeds by providing improved living conditions for the merchants and the horses they were to sell. Horses from 'Irak, Arabia, Persia, Turkey, Turkistan, Badakhshan, Shirwan, the lands of the Kirghiz, Tibet and Kashmir were acquired for the imperial stables. Soon, Indian breeding techniques were so greatly improved that the Indian horses could hardly be distinguished from 'Irakl or Persian breeds. Among the new horse-breeding regions, Kaééh began to produce horses which exceed the Arab imports. Horses from the region between the Indus and the Jhelani were similar to those from 'Irak. The horses in Akbar's stables numbered 12,000; the imperial stables were classified into several categories and the quantity of the beasts' fodder, the quality of their outlits, and the salaries of officers and fervants appointed to look after them

were fixed.

Under the Dihll Sultans, the superintendent of the royal horses was known as the akkarbes, there being one for each wing of the army. Under the Mughals, this officer was known as the atbegt or ākhtabēgt. Akbar appointed a noble of 'Abd al-Rahlm Khān-i Khānān's (q.v.) status = the ātbēgi. Mansabdars from the rank of 5,000 down to the senior ahadis were appointed as the daraghes (superintendents) of different stables. A big staff, which included min officers on the list of adadis, was appointed to carry out miscellaneous duties related to the maintenance and improvement of the stables

[see further, 157ABL, v. India].

The Ghurid conquest of India === achieved by the exploits of the cavalry. The elephants in the Mikhāna (elephant stables) were acquired mainly booty. However, it was after the Deccan conquests that the pilkkana of Sultan 'Ala' al-Dio Khaldii came to consist of ca. 1,000 war-elephants. The numbers increased during the reign of Muhammad b. Tughluk, and the elephants seem to have been bought even from Ceylon. Firuz also added to the number of elephants in stable, but under his successors they were rapidly lost, to the extent that the last Tughluk Sultan faced Timur with only 120 warelephants. In Akbar's reign, elephants were hunted in the forests of Agra and Allahabad provinces, besides being acquired from Bengal and Orlssa. The best elephants were to be found in the lorests of Panne, Bundl in Radiusthön. Djahangir seized to elephants from Gudjarit, but they could bought from all over Indla; in Shāhdlahān's reign, the first white elaphant was bought from Pegu. Akbar introduced the breeding of elophants, abandoning the ancient superstitious beilef that to do so was unlacky, and his successors configued to follow his lead. He also classified elephants into seven categories, and framed rules for their feeding and general improvement.

Under the Dihli Sultans, the shahns-ri fil the supreme head of the pilkhana. Again, there was one for each army wing, and the shahnas were each assisted by a large staff. From the reign of Akbar, the elephants were classified into halfas "circles" or "rings") of tens, twenties and shirties, and placed under the control of superintendents known as faudidars, who also ordered to train them to stand firm at the sight of fire and in the noise of artitlery. Several halfas of elephants were placed in the care of some important nobles, and chosen elephants known as this says elephants were placed in the says of one such person, with the expenses

being met from the imperial treasury.

[S. A. A. Rizvi]

LASHRAR-I BĀZĀR, the name given to a complex of military encamoments, settlements and royal palaces in southern Afghānistān which apparently flourished in the 3th/17th and 6th/17th centuries. The site (lat. 31° 28' N. and long 64° 20' E.) is an extensive one, stretching along the left bank of the Helmand River [see hilmand] near its confluence with the Arghandāb with the mediaeval Islamic town of Bust [q.n.], modern ruins of Kal'a-yi Bist, at its southern end, and the modern, new town (named after the mediaeval complex of buildings) of Lashkar-gāh at its northern one. The western edge of the complex is thus bounded by the river and also protected by a cliff running down to the water.

2. History. The existence of ruins on this site was vaguely known to H.W. Bellew in the mid-19th century, probably from hearsay when he mid travelling in the region; but its existence was only made known to the academic world through the discovery in 1949 and the subsequent five seasons of excavations in 1949-51 by the Délégation Archéologique Française en Afghanistan.

The complex is not unmentioned in mediaeval geographical and historical sources. Al-Mukaddasl, 304-5, says that "half-a-farsakk [from Bust], in the direction of Ghazna, there is something like a town, called al-'Askar, where the ruler (al-sulfan) resides". Since al-Mukaddasl completed his Absan al-takksim in 375/985, although later additions may have been made to it, it seems that Laghkar-i Barar an early creation of Sebüktigin, built to secure his newly-

acquired province of Zamin-Dawar and Bust-the founder of the Ghaznawid line had seized this from the Turkish ghulam ruler there, Beytuz, in 367/977-8 (see Bosworth, The Charnavids, their empire in Afghanistan and eastern Iran 994-1040, Edinburgh 1963, 37)-but it is not excluded that Baytuz himself had buildings on this site, and a coin of his dated 359/969-70 has been found there, see Gardin, Lashkari Bazar, ii, 170-1. Whether Mukaddasl's al-tAskar is responsible for the form al.y.n. of the Hudud al. falam, 110, § 24.11, "a small district between Bust and Zamin-Dawar", as suggested by Minorsky, comm. 345, is uncertain. However, our site must be that mentioned by the Ghaznawid historian Baybaki, Ta'rikk-i Mas'udi, ed. Ghani and Fayyad', Tehran 1324/1945, 149, Russian tr. Arends4, Moscow 1969. 221, when he speaks of the building operations of sultan Massud b. Mahmud (421-32/1031-41): "At Bust, by the polo-ground of the military encampment (lashhar-gah) of his father the amir, he had several additional constructions made; some of these are still visible today" (sc. in 6a. 451/1059).

The main, or southern palace, shows signs of two successive burnings; after the first one of these, there was a general restoration, but after the second, the whole palace was definitely abandoned. It seems reasonable to assume, with Schlumberger, that the first conflagration was the work of the vandalistic Ghūrid sultan 'Ala' al-Din Husayn b. 'Izz al-Din Husayn, called Diahan-süz, in co. 545/1150, when he sacked Ghazna, temporarily expelled the Ghaznawid sultan Bahrām Shāh to India, and then marched back to Chur via Zamin-Dāwar and Bust: Djuzdjāni states that he devastated the palaces and public buildings of the Ghaznawids at Bust (see Bosworth, The later Ghaznavids, splendour and decay: the dynasty in Afghanistan and northern India 1040-1186, Edinburgh 1977, 118-19). When, soon after these events, the last Charnawid sultans abandoned their Afghan possessions and retreated to the Pandiab, the Churids or their governors doubtless restored the buildings at Lashkar-i Bazar and installed themselves there in the Ghaznawids' stead. Schlumberger dates certain alterations even to the post-Churid period, that of the Khwarazm-Shahs. The second and fatal burning thus probably dates from the ravages of the Mongols in southern Afghanistan in spring 617-18/ 1221; Nasawi, Sirai al-Sultan Dialai al-Din, ed. Houdas, 64-5, tr. 109-10, speaks of a siege by the Mongols of Kandahär at this time (doubted, however, by Barthold, Turkestan down to the Mongol imasion3, 438). Yet underiably, life no longer continued on any discernible scale at Lashkar-i Bāzār.

2. The buildings. Laghkar-i Bazar includes three palace buildings along the cliffs of the Helmand. the most impressive of which is the southernmost one, constructed of unbaked brick on foundations of fired brick and with wooden bonding; fired brick was also used in the reception hall and for doorways. The palace is built round a vast central rectangular courtyard with four imans. After the first burning of the palace, modifications and repairs were made to the palace and the fire-blackened remains of the original main entrance were masked by a entrance with decoration of geometric panels and epigraphic bands, on one of which are the remains of m date, 55x/t:55-64, probably indicating a reconstruction by the penultimate Ghaznawich sultan, Khusraw Shah, the last of his family to reign in Afghanistan, or by his Ghurid suc-CESSOIS.

At the north of the palace, backing at to the

Helmand, is the very interesting reception hall of the palace, the most monumental of the rooms in style and the most richly decorated, including with panels of brick ribbon work with stucco insets. But esspecially important from the viewpoints of cultural and artistic history is the fact that the friezes running round the inner faces of the brick piers in the hall contain mutal paintings (these have now been removed, for safety, to the Kabul Museum). The remains of 44 figures are visible, and with those probably to be found on the missing porth side, must have numbered some 60 all told. They depict frontal views of the bodies of what must have been the royal guards, the corps d'élite of Turkish military slaves of sultans Mahmud and Mastud [see GHULLE. ii. Porsial. These warriors wear rich tunics and boots, and bear the shafts on their left shoulders of what may well have been maces, the mace (garz) being a favourite weapon of Massud himself, according to Bayhaki, and a weapon of heroes in the Shak-nama. The faces are unfortunately badly damaged, but a painted fragment found elsewhere in the palace shows a beardless, smooth-faced youth with what are generally regarded as "Mongolian" there, of course, "Turkish") features. The appearance of these figures accords remarkably well with the literary descriptions in e.g. Bayhakl of the rich uniforms, bejewelled weapons, etc. of the royal ghulams when paraded on ceremonial occasions such as the reception of envoys and ambassadors.

Leading to the southern palace was the street of the army bazaar, 500 yds./half-a-kilometer long and lined with shops; judging from the absence of post-Maḥmūd coins found there, this bazaar may well have been abandoned after that sultan's death. Also to the south of the palace was the great mosque (the southern palace itself contains a small, richly-decorated mosque, obviously for the private use of the sultans and their entourages), constructed originally from good-quality fired brick, but rebuilt, like the southern palace, after the first burning in wless careful monner. Schlumberger places the original mosque within the early Ghaznawid period, and it is of obvious interest as one of the very few pre-Mongol period mosques in Afghānistān.

The placing of all these buildings of the Lashkar-i Bazar complex in their proper architectural and art historical contexts many problems, and a full evaluation can only begin to be made now that we have the long-awaited volume in the DAFA Mémoires series on the architecture of Lashkar-i Bāzār (see Bibl. below). Schlumberger was reminded of the plans of Samarra palaces ("l'architecture de Lashkari Bazar apparaît, à plus d'un égard, comme un représentant provincial et tardif de celle de Abbasides"), but noted eastern Iranian features, such as courtyards with four hears and the ornamental use of brick (Syria, xxix [1952], 268-9). J. M. Rogers has noted the early appearance in the southern palace (the early Chaznawid construction) of the angular, interlacing strapwork in stucco characteristic somewhat of Saldjük decoration (The 11th contury—a turning point in the architecture of the Mashriq?, in D. S. Richards, ed., Islamic civilisation 950-1150, Oxford 1973, 221-3). The mural paintings reminded Schlumberger again of Achaemenid representations, but he observed also that the heritage of the Buddhist art of Gandhara and northern India, much nearer in place and time to 5th/11th century Zamin-Dăwar, should clearly be taken into account. Finally, it should be noted that the pottery finds i at Lashkar-i Bāzār give a valuable conspectus of local artistic trands in this field for the period 68. 1000-1220.

(C. E. BOSWORTH)

AL-LAT, name of one of the three most venerated deities of the pre-Islamic pantheon, the two others being Manat and ai-"Uzzā (q.vv.).

The deep attachment felt by the Thakif towards al-Lât, the Aws and the Kharradj towards Manât and the Kuraysh towards al-'Uzzz, constituted the greatest obstacle in the path of the peaceful implantation of Islam in the regions of the Hidiaz. This obstacle was so difficult to overcome that the Prophet seems, for a brief period, to have consented to the continuation of the cult of these three deities, called al-ghardsik al-'ulā (see T. Fahd, Panthéon,

88-90, but of AL-KUR'AN, B, in fine).

The cult of al-Lat, the deity of the Thaklf, descendents of the Thamud (Aghani', iv, 74, 76; a)-Tabari, it, 937), is attested over a vast area of the pre-Islamic Near East. She was at the same time the goddess of shepherds, from the Hidjaz to Safa, and that of caravan-travellers, from Mecca to Petra and to Palmyra. Her name is recorded in the most remote antiquity, and it is to be found, in various forms, in the works of Herodotus (cf. EP s.v. Alilat), also in Akkadian texts (Al-la-Inm: Tallqvist, Götterepitheta, 259; J. Bottéro, in Le antiche divinità semiticke, 56). Safaitic texts (R. Dussaud, Penetration, 56 ft.), Palmyran texts (D. Schlumberger, La Palmytène du Nord-Ouest, 63, 71, 73), Nabatassan texts (M. de Vogué, Palm., 119; W. R. Smith, Kinchip, 292 ff.; J. Wellhausen, Restes, 32), Aramaic texts (Pognon, in MFOB, v [1911], 77-8). The Arabic form of her name dates back, | least, to the time of the Khuran Amr b. Lubayy, the reformer of the idolatrous cult in Mecca at the beginning of the 3rd century A.D., a period for which there is evidence of the cult of al-Lat in Nabataca, in Safa and In Palmyra, Now it is known that this reformer spent some time in the land of Moab, whence he would have brought back statues of various divinities, including that of Hubal [q.v.].

The precise meaning of the name of al-Lat remains unclear. Two Interpretations deserve consid-

cration.

The first derives it from the root 1-1-1. Arab lexicographers are unanimous in considering that al-Lat is derived from the verb latta, "to mix, or knead, barley-meal (sawik)." It has been shown, in Panihéon (112 ff.), that this interpretation emerges from a revealing association with the "idol of jeal-ousy" erected in the temple of Jerusalem (Ezekiel, v, 15), which can be none other than Astarte (cf. II Kings, xxi, 7; xxiii, 6-7, 13-14; see Dussaud, in Syria, xxi [1940], 359-60; Ch. Virolleaud, in IA. cexxxiv [1943-5], 418-19). The "oblation of jealousy", offered by the husband who suspected his wife of in-lidelity, was made with barley-meal. Now Ibn al-Kalbi, K. al-Aşnām, 10, speaks of a lätt al-zawik.

"kneader of barley-meal", who meet I Jew and after whom was named the square rock of TaNi, symbol of al-Lât. From this it may be deduced that a ritual similar to the Hebraic ritual of the "oblation of jealousy" was practised in the vicinity of the sacred stone, symbolising al-Lât, and that the latter was regarded as one of the multiple incarnations of the Semitic BaNa of which Astarte was the most emiment. This is further evidence of the Semitic tradition of the anonymity of gods, to whom epithets were given reflecting the sites or the forms of worship dedicated to them.

The second, treating al-Lat = consort of Aliah or of his prototype 11 = E1, simplifies the problem, taking al-Lat to be a teminine form of Aliah or al-Ilah, unnamed god of the pre-Islamic Arab pantheon (Panthéon, 41-4).

Either of these etymologies is possible: the first responds best to Arab traditions, the second is more in line with Semitic tradition in general (cf. details in Panthton, 111-20).

Al-Lat is seen at Ta'll displaying the most primitive attributes of the Semitic Basia. Originally, she was represented by a white stone, in contrast to the black stone of Mecca; subsequently, she was 🚃 sociated with a sacred tree; then a sanctuary was erected for her, and this became a place of pilgrimage. But the rivalry between Tabit and Mecca and the commercial and economic predominance of the latter prevented the goddess of the Thakif from making Ta'if a centre of assembly for all the Arabs. The Mecca of Kusayy, the reformer of the pilgrimage and architect of the Kuraysh confederation, rapidly eclipsed the other metropolises of the Arabian Peninsula. Thus al-Lat was unable m preserve anything of her former prestige other than the epithets rabba "mother of the gods", in her role ... goddess of fertility, after the manner of Ba'la, of whom she is incarnation, and tagkiya, "preeminent goddess", an epithot still reflecting the important cultic role that she had played among the Arabs of the Nahataean, Salaitic and Palmyran regions, as goddess of war (see refs. in Panthéon, 111. n. 2).

In order to consolidate the economic power of Mecca and to reinforce its role as holy city of the Arabs, Kuşayy brought together in the Kasha all the divinities of Arabia. The triad which emerged, namely Manāt, goddess of the northern Arabs, al-Lat, goddess of the Arabs of the Nadid, and al-Uzza, goddess of the Kuraysh confederation, represent the three political forces which co-existed meentral and northern Arabia, from the period of Kuşayy (5th century A.D.) to the advent of Islam. These three deities correspond to the theophanies of Venus, morning star and evening star, very often confused with the Semitic Basia and worshipped by the Arabs since time immemorial.

Although al-'Uzză was the last-born of the triad, she soon became the most important, in her role as lutelary goddess of the sanctuary of Mecca (see details in Panthéon, 118 ff.). In a parallel development, the three sacred trees (samurāt) which stood before the sanctuary of al-'Uzzā at Nakhla, — the road leading towards 'Irāk and Syria, — assimilated to the three divinities (Panthéon, 164).

The predominance of al-'Uzzā over Manāt and al-Lāt is expressed by the dual al-'Uzzātān', "the two 'Uzzātān', which designated them (Hamdso, 190, l. 15; Pauthéon, 118, m 3]. This predominance is also apparent in the Nabataean region, where al-Lāt had been a favourite goddess, as a result of the

expansion of Meccan commerce inside Nabataca,

the birthplace of Rusayy.

581-98, xlii (1933), 572-89. LATIPI, 'ABD AL-LATIF CELEBI, a Turkish biographer, littérateur and poet who lived in the 10th/15th century. Born in Kastamonu in 895/1491, according to his own statement (Tadhkira, Istanbul 1314/1896-7, 135, 297), he belonged to an old and a noble family called the Khatib-zadeler and his forefather, Hamdi Celebi, was a poet who lived in the time of Mehemmed II, the Conqueror. He states in his Taghkira [298] that he started writing poetry when he was seven years old. He began to receive his education in Kastamonu, but soon gave it up ('Ashific Celebi, Mashafir al-skufara', ms. Istanbul Universitesi, TY. 2406, f. 132b), and worked as an accountant and a secretary. But at the same time, he spent much effort to educate and train himself. and acquired a considerable reputation in poetry, and especially in the high culture of his time. He came to Istanbul in his youth, and was at once appointed secretary to the 'Imares (sc. the public kitchen for the poor) in Belgrade. After a long stay in Rumelia, he returned to Istanbul (950/1543), and served again as a secretary for some 'imdeds. At that time Schi had written his Tadhhira, which had aroused great interest among the literary circles, and with the encouragement of his friends (Tadhhira, 229) and tollowing Ashlk Celebi's ideas, Latifi completed his Tadhkira, clearly his most important work. In 953/1546 Latifi presented this work to Süleyman the Magnificient, and as a result was appointed secretary to the peak of Abu Ayyub al-Anşâri, the trustee of which was Tashildiall Yabya, the lamous Turkish poet, and in 960/1553 he was occupying this post ('Alt, Künk al-akhbar, 1st. Universitesi, TY. 9959, f. 416a). Later he worked in similar jobs in Rhodes and Cairo. 'Ashlk Čelebi, who completed his own work in 974/1566-7, relates that Latiff spent his time composing poetry and belles-lettres, and above all in religious duties. Having changed the introduction of his Risala-yi awad/-i Islanbul-which in fact had been composed in his youth-he presented it to Murad III in 982/ 1574, expecting me gifts, but it is not certain whether he was recompensed. Latili spent his declining years in Istanbul (Hasan Celebi, Tadhkira, ms. Ist. Universitesi, TV. 1737, ff. 165 b, 1666). He must have died on 25 Ramadân 990/23 October 1582, probably m his way to Mecca for pligrimage. He had been in Egypt, and his ship was wrecked on its way to Yamen (Kafawi, Rdi-adma, ms. Ist. Universitesi, TV. 4098, f. 105a, and a letter written to Masih-zāde, who survived the disaster). Latti says in his Risdla-yi awsdf-i Istanbul (f. 60b) that he was 35 years old when he finished this book, i.e. this was in 931/1524-5; hence his birth date must have been 896/1490-1, making him 94 lunar years old when he died.

All through his life Letifi complained that he had never been appreciated properly. He did not have a comfortable life, for he had never been pushing and sycophantic; but he expected that others would have realised his literary ability.

Although Latiff mentions in his Taghkira that he composed twelve books, treatises and literary compositions, only the following seem to be extent: (1) the Tadhkiral al-shu'ard'; his most important work, generally considered as the second finest biographical work (after 'Ashik Colebi's) in Ottoman literature. He states that ten biographical works were composed in his time, but none of them received attention and iame or were widely read (Tadhkira, 301). Probably tacy were all incomplete, pioneering attempts in this field. The Tudhkira consists of an introduction, three chapters and a conclusion. In the first chapter, he mentions poet-shaykhs of Anatolia who were brought up in or emigrated to Anatolia. In the second, he speaks about Ottoman sultans who engaged in poetry. In the third, the main part of the work, Latiff mentions, in alphabetical order, the names of 300 poets (Tadhhira, 372) who lived from the reign of Murăd II (824-55/1421-51) until 950/1543. The book is arranged alphabetically (muddiam), a method which Latdi initiated in Turkish biographical works, whereas Schl's and Nawa"s had been arranged by tabahat or generations, so that Latiff's Tadhhira became the bridge between the two types. Latlit took this idea from Ashik Celebi, but applied it in his book before him. Some criticisms were, however, made about his work. One was that Latiff did not include poets of his own time in the Tadakira. From the early copies of the work (e.g. Kayseri, Rāşid Efendi Libr. 1160, copied before 957/1550, and another one which stems from the above, Ist. Universitesi, TY. 2564, copied in 968/1561), it can be deduced that two reductions of the work were in existence and that the early copies did not have Latiff's autobiography. The author later included it, as well as notices of some other poets not previously included. By doing so, he improved the text and also replied to the criticisms of those whom he calls ikhman-i hikd a hasad, "the hateful and the jealous ones". 'Ashik Celebi relates that Latiff's work also became nicknamed the Kasfamonu-nama (f. 133a), for the author found ways to connect some poets to Kastamonu, whether or not they had been born in the city; but he adds that Latiff's Tadhkira most valuable and quite different from Sehl's one. Hasan Celebi regarded the style as rather duli (Hasan Čelebi, Tadhkira, f. 265b); Hence 'All took it upon himself to answer all unfair criticisms (op. cit., 413b). The work is undoubtedly important, not only because of its form, but also because of the fact that, with this work, for the first time literary criticism. and assumptions were dealt with in this Ottoman poetic biographical genre. It accordingly soon became a very popular reference book, considered to be reliable. It was edited by Ahmed Djewdet under

the title of Tadhkira-yi Latifi (Athar-i aslai series, no. 9, Istanbul 1314/1896); H. Theodor Chabert summarised it in German (Latifi oder biographische Nachrichten von vorzügliche Türkischen Dichtere nabst einer Blumanlese aus (hran Werke, Zürich 1800); another translation into German was done by O. Rescher (Latific Tadhkira, Tübingen 1950; this last translator referred to 9 old mss. of the work, together with the edited text. (2) Risāla-vi awsāl-s Istanbul. As the title indicates, the work is a brief description of the natural beauties, the historical buildings and monuments, etc. of Istanbul, in short, a physical description of the city and its spiritual life in the 10th/16th century, written in an artistic style. The work is quite valuable in that Latifi's observations reflect the thoughts will the feelings of his youth. As he says in the skidlings or conclusion, he was then spiritually in confusion; at times acting like a vagabond and m others behaving piously. The text is adorned with poetry, and Latifi claimed that he had invented a new style in prose writing; latanbul was the most proper topic for such a purpose, in order to display a successful sample of his creative style (Tadhkira, 300-1). He later revised the work, and with a new introduction, presented it to Murad III. (3) Fuşül-i arbata (Mundşara; Muhāwara?), an artistic description of the specialities of the four seasons, written in a mixture of prose and poetry. It was first published in the "Astr newspaper in instalments and then = a book under the title Munășara-yi Lafifi (Istanbul 1287/1870). (4) Subsat al ushship, a Turkish translation of 100 hadiths, composed in verse. (5) A Turkish translation of 40 kadiths, also in verse, having much subject-matter in common with the previous - (ms. in Sehid All Pasa Libr. 272, f. oob-105a). (6) Nasm al-djawihir (La all-i manthisea wa-djawahir-i mansuma), a versified Turkish translation of 207 speeches of 'All b. Abi Talib (Istanbul Arkeoloji Müzesi Libr., 342, if. 40b-66b). (7) Asmā' suwar al-Kur'ān, a poem giving the names of the sures of the Kur'an in 29 couplets [ms. Ist. Universitesi, TY. 902, f. 115b-116a). The following works are now known only by name: (8) Diwan (Tadhkira, 300). (9) Rab'iyya-yi ashar ('Ashlk Celebi, op. cit., f. 1338, 'All, op. cit., f. 415b). very likely the first chapter of the Fusil-i orbafo. (10) Abwdi-i Ibrahim Pasha ('Ashik Celebi, loc. cst.), possibly the same work about the grand vizier Thrahim Pasha, Wasf-i Asaf-nama, which 'All enumerates. (11) Anis al-fusabl' (Tadhkira, 301). From the contents of his works, Latiff was appar-

From the contents of his works, Latiff was apparently not a first-riass poet, but II very good critic who had the power of discertaneau, wide knowledge in his field and, above all, a fine literary taste. As III will in the Tadhhira (200-1), he brought into being II new style in prose by adorning the text with proverbs, parables and phrases, etc., just as Nadjāti had done in verse a century before. His works III had done in verse a century before. His works III had done in verse a century before. His works III had done in verse a century before. His works III had done in verse a century before. FTYA, KUBBAT AL-ARD

LAWATA, an important Berber ethnic group belonging to the family of Butr and whose eponymous ancestor was Lawa the Young, son of Lawa the Old. They are distant descendants of the Lebu (Lebou) of the Egyptian documents of the 13th century B.C., of the Lublin or Lehabim of the Bible, the Libues (Libyans) of the ancient Greeks, of the Laguantan of Corippus and the Leuathae of Procopius (6th century A.D.). It is probable that the Lebu (Lebou) of the Egyptians fived on the Mediterranean coast of Africa, between Egypt and the Gulf of Syrtes. As for the Libnes, they were for Pindar (518-438 B.C.) natives of Cyrenaica, but later their name became among the ancients a name for all the indigenous peoples who lived in the littoral zone of North Africa, from Egypt as far in the Atlantic coast inclusive. However, it appears that the real Lebu (Lebou) survived in the tribe of the Liburakhae who lived, according to Ptolemy (and century A.D.), in the north of Marmarica, immediately to the east of Cyrennica. Another section of the Libues properly so-called, apparently Egyptianised, were the Libusegyptil whom Ptelemy places in Marcotis, i.e. in the region of Lake Mareia in Egypt, Mariut (Maryout) on our maps. It should further be added that some Greek and Latin authors, such = Polybius, Diodocus, Strabo, Pliny and Ptolemy mention still another branch of the Libues, namely the people of the Libyphoenicians who were probably Libyans mixed with the Punic people, and who lived most probably, if one is to believe Pliny, in the province of Byzacena in present day Tunisia. Later 🖿 in the 6th century A.D. the Libues properly so-called appear under the seem of Laguantan (*Lawatan), llaguas ("llawa-s), Hillaguas ("llawa-s) or Leuathae ("Lewatae) in Tripolitania and 📺 Tunisia. Procopius speaks of the massacre of the chiefs of the Leuathae at Leptis Magna (Lebda) in 543 by Serglus, Byzantine governor of Tripolitania, and he speaks of the penetration of this people from Tripolitania into Byzacena and of its alliance with the Berber king of this land, Antalas. This time, the Lenathae advanced as far as the fown of Lares (Larbous on our maps), which they besieged. Procopius also speaks of a second invasion of this tribe into Byzacena in 548. On this occasion, the Lenathae occupied southern and central Tunisia, as far as the confines of the Proconsulate.

According to the ancient Arabo-Berber traditions, the Lawäta first established themselves after their arrival from Palestine in the Maghrib, in the period of Biblical David (sic), in the territory of Barka (Cyrenaica). It was this land which they occupied at the time of the invasion of the Arabo (in 21/641-2), at the time when the Islamisation of the Maghrib began. The Arabic sources tell us of the peace treaty that 'Amr b. al-Âş concluded in this year with the Lawāta of Barka. However, it is certain that some sections of this people, distant descendants of the ancient Libuarkhae and Libuaegyptii, also lived in

LAWĀTA 695

this period in Egypt, and it is very probable that other Lawatan sections, who were descended from these Laguantan or Corippus and the Leuathae of Procopius and were established in the 6th century A.D.; in Byzacena, continued to live, in the 7th century, in the southern part of Tunisla. Later on. from the 8th century A.D., branches of the Lawata expanded into some regions of Algeria and Morocco.

If we set aside powerful peoples of Mazāta and Sadrata, to whom Berber genealogists attribute a Lawätl origin, but who already constituted, in the 9th century A.D., separate ethnic groups, the Lawata properly so-called were subdivided in the Middle Ages into several branches of which we know the names, thanks especially to the works of al-Yackübl and Ibn Khaldun. They are as follows: 1. Māṣila or Māṣala 🚛 [al-Bakrī writes this name by error List Fadila); z. Katufa; z. Maghagha; 4. Wāhila; 5. Marawa (this name might be identifiable with that of the Libyan tribe of the Mareotae living in the south of Lake Mariut in Egypt); 6. معبدرية Maștûba (to be corrected as Mașghūna; Ibn Hawkal, Masghūna); 7. Zanāre; 11. وَكُودِهُ Zakūda (lbn Hawkal: کود (Akūda); 9. Makarta (al-Yackebi, Mafrata); Atruza, and II. Diadana (this tribe a branch of the Lawittan group of Katūf or Katūfal. It is also highly likely that the following Berber tribes of Barka belonged to the Lawata: Farțița); قرطيعالة Fațița (Ibn Hawkal, غوليعاة 13. Siwa (al-Mukrtzi, Siwa) and 14. Masusa. This constitutes the evidence concerning this collection of Lawati groups and their geographical situation, going from east to west, evidence which the mediaeval Arab authors, of the and to the 9th/8th-15th centuries, have bequeathed to us.

Egypt. The numerous Lawati groups dwelt in a nomadic fashion near to Alexandria and Catro, to the west of these cities. Among these groups who paid the Maradi to the Egyptian government, Ibn Hawkal mentions, in the ath/10th century, a branch of the Lawatt group of Māṣila (Māṣala). It was apparently these Lawata whom al-Idrisi mentions as a tribe who ravaged the western banks of the Nile to the north of al-Bahnasa. Later on, in the 8th/14th century, the plains extending from Alexandría to Cairo which constituted the province of al-Buhayra were inhabited by another branch of the Lawata, the Zanāra, a people who were nomadic, but who stopped in al-Buhayra to sow their seeds at the approach of winter, as they passed through the environs of Barka. The Zanāra themselved paid a tax to the Egyptian government: Ibn Khaldun says that, in a slightly later period (probably towards the end of the 8th/14th century), the chief of the Zanāra of al-Yedder) يدر Badr (or more likely بلر Badr) b. Salām revolted against the Egyptian government, but after having been beaten by the Mamiuks, he took refuge in Barka. According to Ibn Khaldun, some remnants of the tribe of Lawata were also to be found, in his own time, i.e. towards the second half of the 8th/rath century, in Upper Egypt, where they pastured their flocks and cultivated the land. One should also note that the present locality of Maghagha situated on the road leading from Cairo to Asyut, 180 km, south of Cairo, probably owes its name to the Lawati tribe of Maghagha. A numerous Lawatt population occupied, in the 4th/roth century, the man of Egypt, where the Lawata created a state. According to al-Mascadi, the Lawaten master of the in 332/943-4 was called 'Abd al-Malik b. Marwan; he had under his command several thousand

riders on horses and cameis. According to Ibn Hawkal, who wrote at a slightly later period than that of al-Mas@di, the kings of the oases who belonged to the tribe of Lawata, mistress of this region, traced their origin to the dynasty of Al 'Abdun (= 'Abd al-Malik). Al-Bakrī also speaks of the Lawati tribes established in the Egyptian oases. It appears that these Lawatt tribes of al-Buhayra and the oases were distant descendants of the Libuaegyptil of the aucients. It is perhaps due to this Lawati branch that Ibn Hazm attributes to the Lawata . Coptle origin. Moreover, to the west of Alexandria, in Marmarica, al-Bakri mentions the existence of about ■ thousand tents belonging to the Māşila ■ Māşala (al-Bakri writes this name by error Fadila) and to the Banû 'Akîdân, a Berber tribe who probably belonged m the group of Lawata. A section of the tribe of Siwa I Siwa who probably beloaged to the group of Lawata lived, in the 9th/15th century, in the oasis of Siwa, the casis of Ammon of the ancients and Santariyya of al-Idrist. The oasis of Siwa owes Its game to this people.

Barka. This land was inhabited, in the 1st-4th/7throth centuries, almost exclusively by Lawati groups. One of these groups, namely the tribe of Māṣila (Māṣala), placed by al-Ya'kūbi in im eastern part of Barka; they lived, in the 4th/9th contury, alongside other peoples, probably Berbers. They were also to be found in the coastal region, mixed with other Lawati groups, such as Zanara, "Masghuna, Marawa and Fatita (Fartita), in the great mannil of Wadi Makhil, which resembled a town and which may be identified with El-Mechill on our maps. The dwellings of the "Masghuns and some other groups of the Lawata, such as Marawa, *Makarta and Zakūda, were also to be found near the road which linked Wadt Makhill to the town of Barks, el-Merdj on our maps. The tribe of Marawa left its name to presentday Maraua, a locality situated about 50 km, to the east of al-Merdj. Further to the south-west, in the Diabal al-Gharbi (probably Dahar al-Ahmar and Dahar al-Abyad on maps), al-Ye'kübi also places Berber groups of the tribe of Lawata. In the second of these chains of mountains lived, according to this geographer, the Lawatt tribes of Zakūda, *Makarţa and Zanāra. It is also in this region that there lived a section of the tribe of Katūfa which gave its name to Kasr Ketof, a locality mentioned by H. Barth (Wanderunger, 356). Further to the west, in the envirous of Bernik (ancient Berenike, Benghazi on maps) lived three Lavätl tribes, namely Maghagha, Wähila and Djadana, as well as the tribes of Siwa and Masüsa, who themselves traced their origin from Lawata. The territory of the tribe of Masusa extended from Benghazi towards the south and south-east. Indeed, the name of this tribe in to be connected with the Wad! Masus montioned by Kudama b. Diaffar (d. 337/948-8) and by al-Bakrī who wrote ≡ century later. According to the latter, there are in this valley "several ruined vaults and cisterns, to the number, It is said, of three hundred and sixty." In our opinion, it is to be identified with Msous (Msus) on our maps, a centre of encampments situated near an homonymous wadi, about 80 km. east of Solouk. A section of the Masusa also lived in the town of Adjdabiya (Adjedabie on our maps), alongside Lawäti groups of Zanāra, Wāhila, Siwa and Diadāna. The latter constituted the majority of the inhabitants of this town.

Tripolitania. The inhabitants of Adjdabiya constituted in the second half of the 3rd/9th century, if an ean believe al-Ya kubi, the westernmost group 696 LAWĀTA

of the Lawata of Barka. However, it appears that the ethnic situation of this part of Libya was a little different a century earlier, under the domination of the Ibadī Imām Abu 'l-Khattāb 'Abd al-A'la b. al-Samh al-Macafirt who, in 140-4/757-62, was master of the whole of eastern Barbary. Indeed, it is known that an Ibadi chief belonging to the tribe of Lawata, one named 'Umar b. Imkaton al-Lawäti, lived at first near the great road which led, following the coasts of this country, to the town of Maghmadas (ancient Macomadas Syrtis or Macomades Selorum), Le. In eastern Tripolitania properly so-called. Then he went to settle in the Djabal Nafūsa, in western Tripolitania. It is also known that he became governor of the province of Surt (Syrtis) in eastern Tripolitania on behalf of the Imam Abu 'l-Khattab and that he commanded a Lawatt brigade, the only one in the army of this imam. It may be supposed that these Lawata of eastern Tripolitania constituted, in the 1st-2nd/7th-8th centuries, the remnants of the Leuathae, whose chiefs had been massacred at Leptis Magna in 543 A.D., by Sergius, Byzantine governor of Tripolitania, and whole main body then retired towards the south of Tunisia.

Tunisia. Al-Ya'kūbī mentions the Lawāta (who are descendants of the Leuathae of Byzacena) in the town of Kabis (Gabès). According to al-Rakri, the Lawata were also found, in the 5th/11th century, in the environs of this town. Ibn Khaldun places, in the 8th/14th century, some Lawati groups in the mountain called Djabal Lawata situated to the south of Kabis. It is to this branch of Lawata that the family of Bann Makkl, who were rulers of Gabès in the 8th/rath century, traces its origin. Another group of the Lawata lived in the district of Nafzawa, whose Ibadi population remained, towards the middle of the 3rd/9th century, under the government of Miyal b. Yusuf al-Lawati. We know I thanks to al-Shammakhi (10th/16th century), who also mentions the existence of a section of the tribe of Lawata in the town of Turra (probably the ancient Turris Tanialleni) in the district of Nafzāwa. Another section of the Ibadi Lawata lived, according to the same author, at hantrar in Bilad al-Diarld. The Lawata were also found among the Berber tribes who were exterminated, in 224/838-9, by the Aghlabid general 'Isa b. Ray'an al-Azdl. This took place between the towns of Kastiliya (Tozeur) and Kafsa (Gafsa). Another branch of the Lawata of Tunisia, probably the descendants of this branch of the Leuathae who appear alongside the Lares (Lorbous) from the 5th century A.D., were found among the Berber-Ibadi tribes who followed, in 144/761-2, Abd al-Rahman b. Rustam, the old Ibadl governor of Ifrikiya, in his flight from al-Kayrawan (Kairouan) to the central Maghrib, before the army of the 'Abbasid general Muhanunad b. al-Ash'ath.

Algeria. An important section of the Lawata lived, if Ibn Khaldûn is to be believed, in the vast massif of the Awras (Aurès on our maps), alongside other semi-nomadic, semi-sedentary populations of shepherds and cultivators. They were already mentioned in the period of the Ibadi-Nukkarl chief Abū Yazid Makhlad b. Kaydād (d. 335/947), who rebelled against the Fāṭimid dynasty. Hence the Lawāta of the Aurès rallied to this chief. They continued to live in the Aurès until the 8th/14th century at least and, at this period, they kept in subjection the Berber groups of the Hawwāra and Ketāma who lived alongside them. At this time, they were able to put into the field a thousand cavalry and a large number of infantry. The Lawāta of the Aurès

preserved their independence, apart from two sections of this branch, namely the Banû Ribān and Banû Badûs, who for several years paid tribute to the dynasty of the Banû Moznt of the Zāb. Later on, the Banû Badîs seized plains in the environs of the town of Nikāwus (Ngaous m NGaous in the plain of the Hodna, north-west of the Aurès). It is very probable that the Lawâta of the Aurès were simply the remnants of the Lawâta of southern Tunisia who succeeded in retiring to this massif after the extermination of the Berber tribes of this latter region by the Aghlabid general 'Isā b. Rayân al-Azdl which took place, as mentioned above, between Tozeur and Galsa in 224/838-9.

Another section of the Algerian Lawäta occupied, according to al-Bakri, the surroundings of the town of Madidiana (Medianae of the ancients) which was situated near Wädi Mallak (Mellegue, south of the ancient town of Madauras (Mdaourouch on our maps), on the road which led from Kayrawan to Baghaya. The history of this group is unknown to us; however, it is not impossible that we are concerned here with descendants of these Leuathae who besieged the town of Lares (Lorbous) in 543 A.D.

Ibn Khaldûn mentions a branch of the Lawata settled in the plain of Tagrert, in the environs of Bougie. This branch cultivated the land and pastured its flocks. In the 8th/14th century, it was subject to the government of Bougie.

There lack in the 4th-6th/coth-cath conturies, if one can believe al-Shammākhī, of small groups of Lawāta in the casis of Sūl (Souf) and in that of Rīgh. According to this author, a Lawāti settled in this latter casis had come from Barka. However, it appears that the majority of these Lawāta traced their origin to Nalcāwa and the Bilād al-Djarld in southern Tunisia.

An important group of Lawata who accompanied, according to Ibn Khaldun, the Ibadi governor of Kayrawan 'Abd al-Rahman b. Rustam in his flight from Ifrikiya i the west in 144/761-2, settled to the south of Täheri, capital of the Ibadi state founded by this emigrant. If Ibn Saghir is to be believed, the Lawata already lived there towards the end of the 2nd/8th century and at the beginning of the 3rd/ 9th, in the reign of his successor, the Imam al-Affah b. 'Abd al-Wahhab. They owned a fortress there and often involved themselves in the affairs of the Rustamid Imams. According to al-Bakel, the Lawata inhabited, in the 5th/11th century, the region situated to the south of Thhert and also the fortress of izmāma situated on the road which linked this latter town with the town of al-Masila. Ibn Khaldun supplies us with several details me this section of the Lawata. According to this historian, they frequented the valley of Minas. At the beginning of the 4th/10th century, the chief of this Lawati section was in the service of the Fatimid 'Ubayd Allah, but later these Lawata revolted against al-Mansur, the third Fățimid caliph, who defeated them and drove them out into the desert. There were also wars between the Lawata of Minas and # Zanata tribe who lived on the other side of this valley. Following these wars, the Lawata of Minas went to settle on the mountain called Darradi, where they extended their settlements towards the interior of the tell and as far as the mountain which dominates the Mitīdja. According to Ibn Khaldun, this branch of the Lawata was, in the 5th/14th century, liable for tax.

Morocco. According to the early Arabic sources, there were also _____ Lawata in Morocco. It is possible that they may have come from eastern

Barbary towards the middle of the 2nd/8th century, probably with the Ibadl and Suirl chiefs who took refuge in the west of the Maghrib before the 'Abbasid armies. In any case, when Idris I b. 'Abd Allah founded the state of the Idrisids in the Maghrib al-Aksa, among the Berbers of the north of Morocco who rallied to his cause (in 172/788-9) there was also a section of the Lawata. This people probably lived to the south and west of Fas. Ibn Sa'id at-Gharnati notes there, in fact, the territories occupied by this people. These are probably the Lawata settled on the Sebou River who owned the fortress called Lawata Madvan. This fortress was situated on the road which linked the town of Sidjilmasa to Fas, Another group of Lawata lived in the north-west of Morocco, south of the town of Asila (Arzila), the territory of which also belonged formerly to this people. In the province of Tadla, south of the Oued Umm al-Rabit, there lived, among the Arabs of the tribe of the Bana Diabir, the Lawsti tribe of Zanara.

Mauritania. A certain number of people belonging to the tribe of Lawata, probably merchants, lived in the south of Mauritania, in the town of Awdaghast which was an ancient centre of commerce. It is possible that they may have come from Tahert, or more likely from southern Tunsia.

Sletty. According to Amari, the Berbers of the tribe of Lawata appear in the Middle Ages in the diplomas of Palermo as amongst the inhabitants of this town. There was also in Sicily a colony of the Lawatt sub-tribe of Maghagha. It is, indeed, from the name of this tribe that the name of the town of Magagi is derived (in Arabic al-Maghaghi), mentioned in a Sicilian diploma of \$182.

AL-LAWATI, ABU MUHAHKAD 'ABD ALLAH B. MUHAMMAD W. NASIR B. MIYAL B. YOSUF, noted Ibadi-Wahbi historian, traditionist and biographer. He was descended from Yusuf al-Lawatt, the vizier of al-Aflah b. 'Abd al-Wahhab, the third Ibadi imam of the Rustamid dynasty (208-50) 823-71). According to the biographical notices about him given in the works of al-Dardilal and al-Shammalthi, he was born in the first half of the 5th/rith century in the province of Barka (Cyrenaica). His misbs indicates that he was from the Berber tribe of the Lawata [q.v.], of which several sections were adherents of the Ibāḍiyya. In 450/1058-9, when he was 18 years old, he left his natal Barka and went 📖 settle at Adjio, a town situated in the oasis of Arigh (modern Oued Righ), and he apparently died there in 528/1133-4 at an advanced age. Nothing is known of his life, except that he travelled to the Kal'a of the Banu Hammad and that he had visited two places not very far from the Oued Righ, sc. Waghlana (modern Ourlana) in the north, on the road from the Oued Righ to Biskra, and Wardilan. (Onargla) to the south of the Oued Righ. One may also note that his family had connections with the town of Sadrata (the modern ruins of Sedrata) in the Ouargla oasis. Indeed, his maternal uncle, the learned thay Mahammad 'Abd Alfah b. Muhammad al-Sadrati, was probably a native of that town.

Ibadi tradition rightly accords al-Lawati a place of honour. He was not only an eminent historian and traditionist, but also a remarkable poet. He wrote a work on the history of the North African Ibadiyya which was used by the anonymous author of the Siyar al-mushāyikh, who used al-Lawati's autograph. He also taught Ibadi history and siyes to numerous pupils. One should mention three of these, who are accounted amongst the most celebrated bistorians and biographers of the 6th/12th century: Abd 'Amr 'Uthman b. Khalifa al-Şüfi, Abu 'l-Rabi' Sulayman b. 'Abd al-Salam al-Wisyani and Abu Nub, all of whom took from al-Lawatt many narratives, to be used in their own works or else to be transmitted to the traditionalists of the following generation. Amongst other works, whose authors used al-Lawati's traditions and stories, may be mentioned, in addition to the Siyar al-mashāyikh, the K. Tabahāl al-mashāyikh of al-Dardjini and the K. al-Siyar of al-Shammākhi.

It is interesting to remark that Abb Mubammad also devoted time to the explanation of collections of Ibadi traditions written in Arabic for adherents who were only Berber speaking. Thus for instance, in the course of me academic and at Adjili in the Oued Righ, he gave exposition of the Arabic text of the Afhar of al-Rabi's b. Habib, an Ibadi traditionist of the East who flourished in the second half of the 2nd/8th century.

Al-Lawati **—** also a poet, and al-Sismmakhi speaks of his poetic dimin.

LAWR (A.), board, plank; tablet, table. Both ranges of meaning are found in other Semitic languages such as Aramaic, Hebrew, Syriac and Ethiopic, and Jeffery thought that, whilst the sense "board, plank" might be an original Arabism, the second sense was almost certainly from the Judaco-Christian cultural and religious milieu (see The foreign possibility of the Our'an, Baroda 1938, 253.4).

vocabulary of the Qur'an, Baroda 1938, 253.4).

The word occurs five times in the Kur'an. The first meaning B found in sura LIV, 13, where Noah's ark is called diat alwah. The second meaning is that of lawh as writing material, e.g. the tablets of the lawh (sura VII, 142, 149, 153, where the plural alwah is used; see LA, iii, 421). Al-dawl but "l-lawh (Bukhari, Tafsir al-Kur'an, sura IV, bah 18) correspond our "paper and ink". The expression mā bayn al-lawhayn "what lies between the two boards" is found in Hadich, to be the two boards" is found in Hadich, to be the whole Kur'an (Bukhari, Tafsir, sura IX, bah 4; Libas, bah 84); cf. mā bayn al-daffatayn (Bukhāri, Fadā'il al-Kur'ān, bāb 16). In modern Arabic, al-lawh also means school-child's slate and a blackboard.

Al-lawk thus means the tablet kept in heaven, which in sura LXXXV, 22 is called lawk mobiles, usually translated as the "safely preserved" tablet. But it is not certain whether the words in this passage are really syntactically connected. If we read makfusm, the word does not with lawk but with the preceding turism and the translation is: "Verily it is a Kurian, famous, preserved on a tablet" (see the commentaries); "safely preserved", i.e. against alteration.

In the commentaries on sara XCVII, I, the tablet is again mentioned: "We sent it down (so, the Kur'an) in the night of the decree"; this refers either to the first revelation made to Muhammad in to the descent of the Kur'an from that tablet which is above the seventh heaven, to the lowest. The tablet as the original copy of the Kur'an is thus identical with sum al-kitab.

The decisions of the divine will are also written on the lawk with the pen, kalam [g.v.], and the particulars contained as a whole in God's consciousness in transmitted by this last, so that on the lawk are inscribed the archetypes of all things, past, present and tuture. The popular mind represented the lawk, following an hadith of the Prophet given by si-Bayhaki, as created from a white pearl, with its upper and lower surfaces of jacynth. We have therefore to distinguish two quite different conceptions:

a. The tablet as the original copy of the Eur'an. This idea is found in the pseudepigraphical literature. In the Book of Jubiless, iii, 10, it is said that the laws relating to the purification of women after childbed (Leviticus xii) are written on tablets in heaven. Jub. xii, 28-9, says the same of the law regarding the "feast of booths" (Lev., xxiii, 40-3) and Jub., xxii, x5, of the law of tithes (Lev., xxvii).

b. The tablet as the record of the decisions of the divine will in also found in the Book of Jubilees. In Jub., v, x3 it is said that the divine judgement on all that exists in earth is written on the tablets in heaven. Enoch prophesies the future from the contents of these tablets (Book of Enoch, xciil, 2; lxxxi; ciil, 2; cvi, 19). The "scripture of truth" is mentioned in early as Daniel, x, z1, the contents of which Daniel announces in prophetic form. These ideas are connected with the Babylonian conception of "tablets of fate".

From these passages, it is evident that in the pseudo-opigraphic literature also, the tables in heaven also regarded as the originals of revelation, sometimes at tablets in fate. This is sufficient to explain the double meaning of lamb in Musim literature.

For other passages, cf. the index to Charles, The apocrypha and pseudepigrapha of the Old Testament, s.v. "Tablets"; it cannot always be said definitely to which of these two conceptions a statement belongs.

In 50ff mysticism and in esoteric philosophy and cosmology, the land has an important place. The pantheistic mystical writer 'Abd al-Karim al-Difft [q.v.] (d. in the first half of the 9th/15th century) explains in his al-Insan al-kāmil how God's creation is first given shape occultly in the divine knowledge, and only later given objective individualisation by the pan or divine intelligence, which distinguishes the created from the Creator and imprints its form of existence on the tablet as the mind imprints ideas on the soul (R. A. Nicholson, Studies in Islamic mysticism, Cambridge 1921, 111-12 n.). Esoteric works identified various forms of the tablet with the primal intelligence (as above), the 'akl al-awwal; with the expressive, universal soul (al-naft al-națika alhulltyya) - the preserved tablet; with the particularising soul; and with the lawh al-hayela = material tablet, which receives the forms of the supersensory world (cf. al-Djurdjant, Tarrifat, ed. Flügel, Leipzig 1845, 204). Mystically-inspired persons, it was held, might have glimpses of the entirety of God's decrees inscribed - the tablet and normally hidden from human comprehension, either by dreams or by a sudden flesh of divine revelation (ilhām), removing the veil (see D. B. Macdonald, The religious attitude to life in Islam, Chicago 1909, 253-4, 264-5). Finally, it may be noted that the 19th century Persian religious leader Bahá' Allah [q.r.] promulgated, at different points in his career, various "tablets" containing homilectic counsels and prophetic buttuctions for his followers, such as the laws al-amr "tablet of command" issued in 1280/1863 and ostensibly from the divine pen, giving me exposition of his mission (a document which contributed to the schism with his rival Mirza Yahya Şubb-i Azal); the lawk-i basharai "tablet of good tidings"; etc. (see E. G. Browne, Materials for the study of the Babl religion, Cambridge 1918, 27, 21-2, 29-31,

(A. J. WENSINGK-[C. E. BOSWORTH])
AL-LAWH AL-MAHFÜZ [SOR AL-LAWH]

LAWN (A.), "colour". One of the distinctive features of the Arabic language is the great richness of its chromatic vocabulary. It is as if the smallest detail, the most minute mance, was deemed to require a nomenclature sui generia.

It the first part of this article, we shall undertake a morphological and semantic analysis of the names of colours. Subsequently we shall see how Muslim thinkers, theologians and philosophers, have analysed perception of colours. The final part will be devoted the symbolic dimension of colours.

For a proper understanding of the subject, clarifications and definitions are required, however: the colour of an object is observed, on the purely perceptive level, with its three sensory variants of tonality ("colour" in the strict sense), luminosity (the "quality", the extent to which the object reflects or transmits light) and anturation ("vivacity", "intensity" of the colour). White is an achromatic colour, as is black. Just as, in physics, a white body diffuses equally all the visible radiations that it receives, so a perfectly black body, for its part, absorbs all radiations totally and transmits none. The achromatic colours have a zero saturation, The complementary colours are those which neutralise each other and which when combined produce white: indigo/yellow, blue/orange, violet/yellow-groon, red/blue green. Finally, of the seven colours of the spectrum, only three, blue, yellow and red, are fund amental: they serve to claborate the other colours.

Morphological study. The morphology of adjectives of colour is characterised by the fact that they are, in the majority of cases, formed on the diptote paradigm of of in the masculine, falld' in the feminine. The afful theme is a theme of intensity, which also supplies the clative; this common formulation of the intensive and of the adjective of colour is apparently not coincidental, and it asserted that, semantically, the latter may have been regarded, at a certain stage in the evolution of the language, as an intensive: that which we translate "red" may, originally, have signified "more red than ...". The evolution of the language would have led to the ellipse of the second term of the comparison. (In this context see 4.4, ed. Beirut, il, 122-3, root b-y-d. As M. Guillaumont has commented (Problèmes de la couleur, 345), "it is a fact that in Semitic, there is a particularly narrow line separating names of colours and intensive themes. In Aramaic, names of colours are specifically formed on the pattern feel. In Hebrew there also exists a series of names of colours formed on an intensive pattern characterised by the doubling of the last two radicals (/*/*/)"

Alongside this of alifa 'la' construction, which is not only that of the majority of adjectives of colour, but also that of all | fundamental colours, other forms are encountered, admittedly rare, to which we nevertheless, draw attention, while not forgetting that some of them - doublets of the form afful, or combine to form doublets of their own. We may mention the following themes: facil (hdmif), mufactal (mudjasza"), fa"l (djawn), fa"il (faki"), fa"al or fa"il (shahab, lahih) and muffit (muhrif). Less common = adjectives of the patterns fatial, fulfil, fulfill, fulfayi, filfal, fa'all, fa'ill, fa'all and fu'ill. There exists an undoubted link between certain of these themes and a certain chromatic nuauco: fa'll and saturation, mufattal and mixture, fatt and blending. Others of these themes are in fact relative adjectives terminating in i, an indirect manner of denoting colour to which Arabic frequently has recourse. Some adjectives III colour (often borrowed words) are defined by relation to an object which represents this colour and which serves as a support. Thus wardi derives from ward "rose", bana/sadri Irom bana/sadi "violet", kuhli from kuhl [q.c.] "collyrium". It is most probable that there exists a connection between the form of the adjective and its meaning. Thus, from the one mot f-h-1, the following are derived: fah' "of a simple yellow", fukat "very red" (of human complexion). fakit "red = white', and after "very white"-so many bright nuances.

Nouns of colour majdars which generally have the form f_k a. This is the only abstract element in chromatic terminology. By fumna or suffa, Arabia expresses "the state of being red", "the state of being yellow". As with the adjectives of colour, but within a less varied spectrum, the nouns of colour, although being majdars, are capable of borrowing the following themes: f_a a, f_a a, f_a a (the last applying, apparently exclusively, to white and black, of which the roots are "hollow"), f_i and for these alone, it seems that these majdars cannot be called "verbal substantives", since, as we shall see, the verbal substantives, in origin.

Of the derived forms of the Arabic verb there are two-those of the paradigm if alla and if alla-which have a particular quality: they express states (colour or deformity); they do not derive from the "bare form" fatala, but are denominative in origin, formed from adjectives of the paradigm of al expressing the states cited above; and they denote an intensive aspect which is illustrated by the doubling of the final radical. The XIth form (if alla), less common than the 1Xth (if'alla) seems to be a doublet of it, still intensive. Thus we have, besides ibyadda and isandda, meaning respectively "to become white", "to become black", ibyadda and iswadda, for "to become pure white", "to become black ebony". All verbs of the IXth and XIth forms are verbs of colour or of deformity. It does not, however, follow that all verbs expressing a notion of colour belong to one of these two forms. Besides the latter, which rould be described as "essential verbs of colour", we encounter others which borrow all the verbal forms, "bare" or derived, and which in general express colour through derivation of

Finally, attention should be drawn to non-triliteral forms and loan-words. The following paradigms are encountered: fa'lal, fic'lal, fu'lal, fa'lall and fi'lal among the former. As for loan-words, the most used are: argiaxán "purple", siryáh "yellow", xardiña "red and gill", firfir "violet", samánghání "skyblue", and allagi "indigo"; these are terms derived from Persian — Greek.

Semantic study. To express the concept of "colour". Arabic the general term lawn which, besides this precise sense, also denotes "shade", "aspect", "type", "dish (of food)", etc. In addition to this general term, we also have the following words: big (stressing a notion of brightness, of clear colour), sabib (liquid colour or tincture, also applied to the object which it colours) subna (applied to the colour of the complexion), layl, nadir, thusba (applied to a dirty colour, a mixture of two blended colours); thareth, thusba and nast (all three referring to a mixture, a combination of two colours sometimes regarded as opposites).

It would seem useful, im preliminary to a semantic survey, to discover how the Arabs perceived the colours of the rainbow [see gaws guzag], and how they subsequently transcribed their perceptions. Since this atmospheric phenomenon displays a very wide spectrum of colours, in is of the utmost interest to determine, for each people, the names that they have given to what they have seen. We know that the Greeks and Romans attributed three colours to the rainbow. In his Meteora (iil, 4, 373) Aristotle lists red-brown (alourgon), green (pression) and purple (phoinikon) in which he sees a progressive weakening of the light. Plato shows, in the Timeses, that it is possible to reconstitute all shades with

four fundamental colours: black, blue, red, and the colour of light. Comparative study of languages belonging to very diverse cultural areas show that the divisions of the spectrum in far from always coinciding. They are arbitrary, and differ according to attuations and the existing resources of the language. The great dictionaries and encyclopaedias of classical Arabic present, under the heading knew kneah, almost unanimously, the following formula: "the rainbow consists of strips in a circular arc, coloured yellow, red and green". Here too—green replacing blue with which it is often confused—we again find the three fundamental colours.

The primary term used to denote the colour white is the adjective abyad. The same root supplies the word for "egg", bayda. Al-abyad also denotes saliva, m sword, money, and, paradoxically, in Africa, coal. In the Kur'an, the terms abyad and aswad appear consecutively, expressing the contrast between light and dark, rather than that between white and black. Many examples could be quoted where abyad refers to a tonality rather than a colour. There exists a host of other terms to denote white: #dam, thaghim, diawn (which denotes white as well as a dark tonality), ashyab, sikiab, palm, agharr, fakse (a bright white well as a bright red), akmor, kuhábí, kaddí, akamm (which displays the same peculiarities as diaura), hawārī, khālis, ashar, lahak, amrak, nāsi! (brightness of white, yellow, red), yakak, etc.

The principal term used to denote black assend, of which the root implies the notion of power, of might. The antonym of abyad, sc. assend, has the same characteristics: very often it applies a dim or dark tonality, rather than to the colour black itself (cf. Kur'an, II, 189, III, 106, XVI, 58, XXXIX, 60, XLIII, 17). The substantive al-assend can refer to such diverse objects and creatures as the snake, the scorpion, dates, etc. The masser "samid", referred, quite uniquely, to a region of Trak especially rich in

palm-trees and orchards.

The range of terms used in reference to black is also extremely wide. Worthy of mention are baghs, mulaiham, finum, sham, kunbūb, bindas, huiba, bdiik, ahamm (white, black, m dark red), ahwas, ahad a perfect example of the concept of darkness: black, ted, green; cf. Kur'an, LXXXVII, 5] adbas (dark), addjan, ad'adj, adkan, adkam, adham (dark: cf. Kur'an LV, 64), asham, asfas, muslim, ghuddf, ghirôib (the association between the crow and the colour black is very wide-spread; we may recall that the root serves to denote black in Hebrew and in Aramaic), afham, bdiim, bdiim, bdiim, akhai, akhai, etc.

Grey, a fusion of black and white, does not have a precise colour. It does not have a primary term in Arabic. We may mention the designations stable and athab, agatham, athab, adsam, arbad, armad, armak, aghath, awrah, afhal, kahd, aklas, annas, amiah,

amhak, etc.

The Arabs carely mention violet. The principal term, borrowed from Persian, is benefedgi. Also encountered are htmbbas, samanghan, firfiri, evidently non-Arabic words, and all of them adjectives of relation. The same applies to indigo, of which the colouring material, a plant, is called thir, sadds, mushayir, lithin, nu'ar, nil, nile or nilegi and vesma. On the rare occasions when the colour indigo is mentioned, it is through paraphrases: as the colour of the indigo, or through adjectives of relation ending in i.

Bine, on the other hand, I one of the essential colours of nature. The usual word denoting it is assak, a term which also has the sense of livid, haggard [cf. Kur'an, XX, 102]. The plumi, sarakim, designates

snakes. The terminology of this colour is relatively limited, and this could be connected with the symbolic nature of blue, which we shall examine in due course. We may cite samdui, hahl, ashhal, 'awhak and amhah (three terms of a pelorative nature), and amhah.

Green is synonymous with nature. It is the basis of life. The usual term is akhdar, an adjective also associated with the notion of darkness, since it minimizes denotes black, dark, grey. We also find alkhadrd as a reference to the sky: a further illustration of the link between blue and green, often confused in antiquity. The Greeks, the Chinese, the Melanesians, the New Caledonians, the Romans, among others, used the same term to denote these two colours. Without having the extreme richness of those of black and of white, the terminology of green is fairly extensive. We shall confine ourselves to mentioning hans, akhdab, akhdab, akhdab, adlas, rakib, 'ashrab and aghyan.

Yellow is denoted, most often, by asfar, a word whose relationship with the name of the saffron plant (borrowed from Persian) is striking. Arab historians applied the designation Bann 'I-difar (q.v., lit. "the Yellow Ones") to the Greeks and the Byzantines, while they called themselves "the Blacks" (or "the Masters"?) and applied the designation "the Red ones" to all non-Arabs. The terminology of yellow is extensive. The principal terms are kibr, dhiryab, sabrak, sabradi, ziryah, sahr, asham, afka' (see fakt' for bright white and red), kaladi, amladi, nass'

(the same remark as for afkas) and waris.

Orange, like violet and indigo, is indicated by of the adjective of relation applying to the object which represents the colour: burtuhāl "orange",

supplies the adjective burtukāli.

Red evokes the notions of blood, flesh, fruits, life. The two "opposed" and complementary colours, green and red, are also the colours of all vegetable and animal life. Red has always occupied a position of particular significance, in almost every sector of humanity. It has always enjoyed a privileged status in vocabulary. All its shades are represented, in virtually all languages. Black, red and white form the trilogy of colours that are the best recognised and the richest in terminology and symbolism. The usual word, in Arabic, is almar, deriving from a root with the sense of ardour, violence, intensity. Red is the colour for which Arabic terminology is the richest. We shall confine ourselves to citing #dam (already encountered as a word for white, and perhaps the term for red in ancient Semitic), bathagh, abkam, thakth, diamn taiready encountered as a word for white), ahlas, hānii, adbas, madmūm, adhas, adhan, arbad, tādini, zabrak, tākir, azkā, aziakh, asiagh, ashrak, subdhi, ashar, say'ari, sikidb, (already mentioned for white), samfari, askab, adradi, fanik, 'anami, ghasik, ghadb, maghluk, fadm, fadn, firas, Jirsad, ajdah, fakit (already mentioned for yellow), burras, akraf, hiemiei ("crimson"), kopiae, hani (especially denoting saturation), skiha', karih, kaif, hamit, mātšt, amtar, mamhitr, nahat, ward (ct. Kur'an, LV, 37) and yani'.

Brown and pink have a limited vocabulary. It is logical, on the other hand that russet-lawn should be precisely observed and distinguished by a people whose origins lie in the desert. We may mention between, alsab, hider, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, askeh, aske

that the Arabic arghands is a loan-word from Persian. First and birfiri obviously derive from the same etymology in the Greek porphyre and the Latin purpura. For lessened colours other than brown, the terminology often relies on variants of terms designating dust, ashes and earth.

The vocabulary of mixtures and blendings of colours is very extensive. One is struck by the frequency of the consonant sh in the formation of terms designating flecked, mottled, striped, spotted colorations. In addition-which is scarcely surprising the hides of horses and camels are differentiated, down to the slightest nuance, by dozens and dozens of see the articles by Hess and Shihābi, cited in the Bibl.). The striking fact, in this context, in the large number of terms (adbas, addian, adkham, adras, ad'as, adehaik, adeham, adlam, adhas, adham, etc.) with d = the first radical.

We close this brief survey of the semantics of colour with the remark that doublets and loan-words are particularly frequent here.

Tonality, luminosity and saturation. The three psycho-sociological components which were cited at the beginning of this study are three unevenly-perceived sensory variants. It does not appear that tonality, in its sense of specific colour, was of fundamental importance to the Arabs when they evoked, in their literature, the colour of a landscape, a garment = any object belonging to their regular lives. It was rather a case of indistinct touches conferring general impression. On the other hand-and this feature is determined by that mentioned aboveluminosity, and saturation even more so, impressed them particularly. This is to be expected of a people living in a sun-drenched environment. These two notions of luminosity and of intensity meet in addition to be confused in the semantic quality of the innumerable adjectives which the Arabic language possesses, and which could be called "intensives of colour". The latter are used to qualify a "classical" adjective of colour, such as abyad, aswad, akhdar and almar, and to indicate that this colour has attained its highest degree of luminosity or of intensity. While the substantives, al-shabi, al-lashrib, al-lashrib and al-yaki', specifically denote saturation; and while, on the other hand, brightness has the names al-barik, al-lastf and al-ra'flf; it is nonetheless true that the intensives fahrt, nașit, khális, nadir and fatik, previously encountered in this survey, and all of them active participles: (a) imply, when they govern m adjective of colour, the notions of saturation | luminosity, indicating that the colour is intense and striking; and (b) == capable of being applied-originally at least-to any colour whatsoever. Apparently it was at a later stage that Arab grammarians assigned to each of these intensives a specific adjective of colour to qualify.

Colour in the works of Aristotle and his Arab translators. The Arab philosophers, in their analysis of the problem of colour and of its perception, were, to differing degrees, influenced by Aristotelian theory on the subject. It is important therefore to identify the major themes of the theses expounded by Aristotle, especially in his De anima (il, 428a-419a) and his De sensu et sensib.

The Greek philosophers were struck by the indissoluble link between light and colour on the me hand, and transparency on the other. The eyes, the most transparent part of the human body, are the meeting point of light or of external colour, and of their interior equivalent, a fact which favoured the theory of emanations. What is visible, says Aristotle, is colour; and colour is that which is on the surface of what is visible by itself. The basis of all the phenomena of colour is the transparent. The latter, represented especially by air and water, carries and determines colour, and colour is not visible without the aid of light, since it is only in the light that the colour of any object may be perceived. Where transparency is only potential, there is darkness. Light is like the colour of what is transparent, when the latter is realised in entelechy. The receptacle of colour must be what in colourless. The quiddity of colour is the ability to move the transparent in fact; and the transparent has the property of transmitting, instantaneously, the colour of the visual object to the eye, independently of any notion of time or space. One sees it; it is a qualitative and not a quantitative transmission. Aristotle rejects categorically the theory of emanations, developed by Empedocles, revised by Plato in his Timasus (458 ff.) according to which we me by means of "rays of the nature of fire", which issue from the eye and meet the luminous emanation from the object perceived. Aristotle and all those who followed him, including the foldst/a [q.t.], insisted on the aqueous and nonigneous was of the eye. All the same, the Master rejected the idea, propounded by Democritus, Leucippus and Epicurus, that vision is only the reflection of an object, as in a mirror. Every object, even opaque, contains, in varying proportions, air and water; and to the extent to which bodies contain transparency, they are susceptible to being coloured. The colour III solid body is the limit, the surface, not of the body itself, but of the transparency that is within it. The nature of transparency extends, in addition, throughout the whole of the body. Colours are the defined transparencies which reside in bodies and which approximate, more or less, white or to black, according to whether they contain more in less fire (luminosity and active transparency), = earth (the opaque in the absolute), the shining element or the obscure element. The essence of colour is the act of determining a qualitative change in the light, which is, itself, active transparency. The intermediate colours-that is, those other than black and whiteexist neither through juxtaposition of a white and black particle, nor by superimposition of one colour perceived over another. They result from a total, effective blending, of bodies entailing the blending of their colours. Such is the determinant cause for the existence of a multiplicity of colours. But their number is limited, since it is confined within the two extremes of white and black. Finally, Aristotle distinguishes between darkness and blackness. Darkness is the absence of actualisation of the transparent. It has no existence per se.

Some eminent Arab authors and translators, like 'All b. Rabban al-Tabari (d. 240/855) and Hunayn b. Ishāk (d. 260/873) were influenced by Greek theories of colour, m they became known to them through the medium of the commentators of the early Middle Ages. According to al-Tabari, white is evidence of the predominance of the dry element over the humid within bodies; the exact converse applies to black. For him, red results from the synthesis of heat with dryness and humidity. Such are the three fundamental colours from which the others derive. Yellow is the intermediary between red and black, green the intermediary between red and white. In the former, humidity is greater than in the latter. Other chromatic nuances are determined by varying quantities of dryness, humidity and heat. Hunayn,

for his part, is complimentary towards Aristotelian theories regarding the perception of colours. He insists in the fact that light is neither a form of fire nor a rarified body, in some of Aristotle's prederessors had claimed, but in contingency borne by a body. Colour is the perfection (antetechy) of limped and disphanous bodies—namely, water, air and all other similar substances—which receive the real colour of the objects surrounding them. The transparent body has no colour per se; but it absorbs the colour of the object which it envelops: it thus has potential colour. Colours transform the transparent: from being potentially coloured, it becomes actually coloured. Light, by its presence in the air, renders

it capable of receiving colour. Colour according to the Muctazilis. In its defence of the articles of faith by means of rational argumentation, the theologico-political school of the Mu'tazilla was led to take an interest in the problem of physical bodies and of their perception; but they took divergent views on the problem of colour. While al-Nazzám (d. sa. 230/845), starting with the postulate that accidents cannot be visible, classed colours among the substances, the corruptible bodies. Bishr b. al-Mu'tamir (d. cs. 220/835), his contemporary Mu'ammar and the majority of the disciples of the school, considered colours = accidents due the action of men alone, or produced by the very nature of the things that they affect. Thus they are not subject to divine creation, but God remains the determinant cause of the accidental determination of substances. God created substances (bodies, atoms), capable of producing, by their own nature. well-determined accidents, and colour is one of these. Directly following this reasoning, Highlan al-Fuwati (beginning of the 3rd/9th century) declared that colour does not constitute proof of the existence of God, but is a simple form of physical bodies. Mu'ammar, the theoretician of ma'na ("entity", "nature"), according to which "God creates a thing by virtue of a cause which, itself, derives from another cause, which is the fruit of another cause . . . ", postulated that it is through the effect of a mains that blackness differs from whiteness, and through another mains that a certain body is black and another white. In fact, according to him, every "accident" (movement, colour, taste), requires the existence of an infinite chain of determining ma'més, of which the initial cause is the Creator. "If God colours a body, it is because this body is by nature susceptible to colour. The same applies for other accidents" (Nader, Système, 161). Abu Hàshim al-Djubball (d. 321/933) classed colouration (allauteriyya), äke substantiality, corporality, and accidentality, among the real things which do not actually exist. He considered that substance is not coloured necessarily, but that any substance endowed with colour is incapable of losing it. Abu I-Kāsim al-Balkhī (d. ca. 319/931) declared, for his part, that substance has always been endowed with colour. But the two masters agreed in stressing the fact that substance and colour are two distinct things: the first depends on divine action, while 4 the second is engendered by the substance which bears it.

In fact, the Makdist of al-Agh'arl (392-3) echo the controversy which developed within the school concerning these questions. From the perception of a coloured object, can one abstract the colour, knowing that the latter cannot be perceived, but only known? Or indeed, can one at the same time perceive whiteness and white, blackness and black? Or again,

does one see only the colour and not the object, al-Nazzām suggested? Opinions differed on the above points. As regards sensible awareness of the exterior world, al-Nazzam borrowed from the pre-Aristotelian philosophers their sensualist thesis, and their theory of "pores" and "emanations". According to him, colour, form, flavour, taste etc., are each perceived only through the medium of an opening of a certain kind, by which the senses are affected. Each of these sensations is a rarifled body; it emanates from a sensible object, penetrates through the specific apertures of the sensory organs, and thus reaches the consciousness of the being that senses it. Al-'Allaf (d. after 226/840) spoke of a divine intervention in the operation of man's awareness of sensible objects: but other Mu'tazili theoreticians, like Mu'ammar, regarded the perception of sansible objects = a natural act of the sensory organs, as an engendered act (munaliad), free from any divine initiative.

Colour according to the faldsife. At the meeting-point of Mu'tazilism and of falsafa, of which he was one of the major initiators, al-Kindi (d. == 259/873) was greatly interested in the "physical sciences" and, consequently, in the theory of light, of colour, and of their articulation. In his work, as in that of his most eminent successors, the influence of Aristotelian theories, as they had been transmitted to the Arabs through the contemporary Neo-Piatonism. is manifest. For "the philosopher of the Arabs", colour is a "general accident, since it affects numerous things". An accident perceived by the first of "the two noble sensory perceptions" (al-hassayn alsharifaye), sight and hearing. Just m the active intellect has the function of actualising potential intelligibles, the light which strikes opaque objects transforms potential colours into actual colours. The truly diaphanous body has no colour of its own, since it is the vehicle of the colour of the objects situated behind it. Of the four elements of the universe, only earth is not transparent: it is thus the only bearer of colour in this sublunar world. For an object to be affected by light and thus, a bearer of colour, it must be circumscribed, not fluid, compact, and it must form an obstacle (yesterid) to visual rays. The colours which we believe that - perceive in fire are in fact the colours of terrestrial particles which are mixed with the lire. The latter-like air and water-is totally colourless. At the same time, our give the illusion that the sky is azure (lazameral) in colour, although it is not so at all. In fact, the colour that we believe we see in the sky is martificiality; it is the colour of the vaporous and terrestrial particles of which the air is full. The stars, the other hand, are circumscribed and compact bodies, as is proved by the fact that they eclipse another. That is why they may be coloured.

Al-Fârábi (d. 339/950) was also interested in colours. The latter, he tells us, the surface of bodies, under the effect of a luminous source, since they do not exist in themseives. They are thus accidents provoked by this source of light. The chromatic differences are provided by the different dispositions of the lighted bodies. Colours only affect the sublumer world, the world of generation and of corruption. The heavenly bodies, the primary elements (usfutussat), the simple bodies, have no colour. The colour of terrestrial bodies derives from the fusion of the elements composing each one of them. The presence of the fire element brings a tendency towards white, that of the earth element a tendency towards black. The intermediary colours result from the proportions in which these two primary elements are blended.

Repeating an Aristotelian formula, al-Fārābi defines colour as "the surface of the diaphanous body, in the measure of its transparency". White is not the negation of black, nor black that of white: these opposite do not annihilate each other.

The lkhwan al-Safa' [q.v.] (and half of the 4th/roth century) authors of a collective encyclopaedia clearly influenced by Neo-Platonian emanationism, considered colour one of the complementary attributes of the body. It in a "spiritual accident", a "form which the soul puts into the body". Light is bound np with the souls and spirits that circulate within it. While traversing duphanous bodies ("the purest bodies are diaphanous") in the same way in which the soul circulates in the human body, light carries colours up to the pupil, preserving their purity intact. At the level of the pupil, the visual faculty perceives the colours, then transmits them to the imaginative faculty. Light and darkness are "spiritual colours". On contacts with bodies, they transform themselves, respectively, into white and black, which we "corporeal colours". Colours, defined as "the brightness of the rays of bodies" appear only on the surface of the latter. There exist simple colours: white, black, red, yellow, green, blue and "the dull colour" (al-hudra, violet?). Black derives from carthy humidity which prevents light from reaching vision. Black is the absence of light. It causes convergence of the visual cluster. At the opposite extreme, white is the manifestation of light in its full purity. For its part, it entails a divergence of the visual cluster. The other colours intermediaries between these two extremes; each one being characterised by the respective part played by the quantity of white and of black which it contains. An object appears yellow when an obstacle prevents light from appearing pure. Red can derive from "putrefactive causes" (through excess of humidity) or from "liquefactive causes" (through excess of heat). Green draws near to black, in the sense that, here too, an earthy humidity is dominant, constricting the passage of light and of the visual rays. Blue belongs to the chromatic family of green. God made the air blue and the plant green to accommodate the interest of His creatures. In fact, these two colours possess the virtue of being salutary for the vision. The colours of the rainbow are four in number: red. yellow, green and blue; each of these colours corresponds to one of the four primary qualities, namely, heat, dryness, humidity and cold; and to one of the four elements, namely, fire, air, earth and water. Finally, these authors reject the theory of emanations. Such a thesis, they declare, could only be supported by people having no "experience of the things of the spirit and of nature".

Ibn Sina (d. 428/1037), like Aristotle, classed the psychology of the sensory apparatus among the physical sciences. He devoted me entire chapter of his 5hga' to the problems of vision and of colour. Light is a quality affecting diaphanous bodies: and colour, opaque bodies. The latter - coloured potentially. Colour was exist without being visible; but actual colour occurs only by virtue of its clarity. Colours do not exist, in fact, in bodies. A black, dark body, is potentially coloured. An object that is coloured when it is lit up, will be colouriess in the dark: it is deprived of actualised colour. The actively transparent (air, water, the celestial sphere) is a diaphanous medium, and at the same time a vehicle. The illuminating body approaches the coloured body, without any change, my alteration, affecting the disphanous medium. The existence of light makes

the potential transparent an actualised transparent. As light increases, so the manifestation of colour increases also. Ibn Sīnā followed the views of Aristotlo in regarding as absurd the theory of emanations, in rejecting the theory that assimilated vision to a reflection similar to that transmitted by a mirror, and in distinguishing between darkness and blackness. He rejected the theory according to which only whiteness is a colour, and blackness is darkness, since, he tells us, black is illuminated, and it gives light to things other than itself. Consequently, colour is not whiteness alone. Absolute, generic colour, is not light; but the latter is the cause for the apparition of the former, and the cause of its transmission. Light is thus a constituent part of the visible entity which we call "colour". Effective colour results from the encounter of light with potential colour. The intermediary colours result from the blending of black and white. White can turn into black in three different ways: (a) through grey of increasing darkness; (b) through red tending increasingly towards brown; and (c) through green and indigo. These diverse processes are the reflection of the diversity of composition of the intermediary colours.

Ibn al-Haytham (d. 430/1039), in his Optics, took issue with those scholars who denied the real existence of colour, and declared that it was only an apparition situated between the eye and the source of light. According to him, if it is true that the appearance of colour is affected by the quality of the light which carries it, and that the same colour can be transformed according to the degree of light which it is given, it nonetheless remains a fact that colour has an existence of its own. His commentator Kamāl al-Din al-Fārisi (d. 720/1320) explored the fundamental connection between light and colour. In darkness, colours are presented, potentially, in coloured bodies. They are transformed into actual colours when light affects these bodies.

Ibn Hazm (d. 456/1064) devoted a paragraph of his Fisal to colour. Here we read that the air is invisible, because it has no colour; whereas water is visible, because it is white. Similarly, fire also is colourless in its sphere; the colour that me see in burning wood, in the wick of a lamp or in any other body that is consumed by fire, derives from the measure of humidity contained in these bodies. In burning, the latter is transformed into igneous air; and the colour which each of these burning bodies adopts is determined by the materials of which it is composed. It is also particles of humidity which give rise to the rainbow. The scholar of Cordova subsequently sets out to refute the theses of the "Ancients" according to whom white results from a divergence of the visual cluster, and black from a convergence of this cluster. According to him, black is invisible, because perception exists only through an extension of vision. Since the eye sees only that which is coloured, black is not a colour. It is, in fact, only darkness, the non-being, privation of colour and eye sight. When we believe that we "see" black, we are subject to m optical illusion. It is purely a matter of convention and metaphor when - describe a person, a crow = garment, as black. In fact, each of these bodies has its own colour, which is not black. As for the difference between a matt black and # shiny, bright black body, this derives not from the black itself, but from the lustre, the brightness and the scintillation, which are distinct and constitute a colour in its own right, which affects all the chromatic nuances. We may recall that Plato counted

"the colour of light" among the four fundamental colours. One could, says Ibn Haym, just as well say that the dull is a specific colour, since the vision perceives it. Such is also the with brightness, with luminosity. It wildent that the Zahiri master was particularly of the sensory variants of colour. He goes on to establish a hierarchy the vividness of perception of colours, whose order is follows: white, yellow, red and green. It is be noted that he shows a great deal of circumspection in the declaration of his statements, since he is careful follow them, invariably, with the formula "God alone knows!", or even "May God assist us!"

lbn Bādidja (d. 533/1139), elaborated a whole doctrine of colour in his Treatise on the soul. The influence of Aristotle, in particular of his De sensu et sensib, is evident; a fact which the author makes no attempt to conceal, as he quotes from the latter work on more than one occasion. The postulate is that the primary sensory element of vision is colour. The seeing soul (al-nafs al-basira) is the faculty which exists in the eye and which enables it to perceive colour. It is localised in the vitreous humour, which the Arab philosophers called the glacial humous lat-rutabo al-dialidiyya). Colour is, in substance, a form. It is perceptible only through the intermediary of the air: and when a coloured object is placed directly before the eye, the latter is incapable of perceiving it. The air only discharges its function as a vehicle for colour when it is lit by a luminous source. Two hypotheses could thus be formulated: (a) colours, in darkness, are potential only, and have no effective existence; (b) the air absorbs colours only through the influence of the optical image in which these colours reside. For Ibn Badjdja, the potential existence of colour in darkness is in no doubt. Proof of this existence lies in the different tonalities of the colour, depending on the quality of the surrounding light, which includes penumbra. He adds that this was demonstrated well by Asistotle (see De sensu et sensib., lil, 440a, 7-13). As for the phosphorescence and the sheen of certain objects and animals, these are determined not by colour but by impressions affecting the eye. The property of colour, endowed by the fact that it derives from the blending of the lighted with the coloured body, is that of being, itself, a dispenser of light, and of moving the air. Colour therefore contains light. It promotes a movement in the lighted body, in that it is lighted; for this body is, itself, a vehicle for colour. In addition, colour puts the diaphanous into effect, by reason of the fact that the latter only accepts colour because it is lighted. Democritus was mistaken in declaring that vision in a vacuum would be purer than through the disphanous. Just as colour cannot be perceived in the absence of light, in the latter is only perceptible when associated with colour.

The eminent commentator on Aristotle, Ibn Rushd (d. 595/1198), also undertook to expound a theory of light and of colour, as far as possible consistent with the spirit of the Peripatetic science, as transmitted through the intermediary of Alexander of Aphrodisium, Thensistius and Jean Philiponus. He sets out his theory in his Great Commentary — De anima and his Epitome on Parea naturalia. Colour exists on the surface of a certain body. It is the entelecthy (actualisation) of a limited transparency, in that it is a limited transparency, while light is the metelecthy of — unlimited transparency. Resulting from a blending of fire with diaphanous body, colours find in the light, not the cause of their transmission of the visual organ, but a genuine

essence and existence. We have that Ibn Bādidia supported the theory according to which colours exist, in potentia, in bodies, whether the latter lighted or not. Unlike his compatriot from Saragossa, the master of Cordova claims that they can exist effectively, even when they not perceived. They only become visible under the effect of light. "It is evident that light is necessary for colours to be visible; whether because it gives to colours the form and the of being (malskalhabitus) by which they impinge upon the transparent; or because it gives the transparent the form by which it receives the action of the colours; or else both can be achieved" (apad L. Gauthier, Ibn Rochd, 133).

For his part, Averroes maintains the following connection; light gives to the transparent the manner of being which enables it to be influenced by colour. Light and colour coexist in the diaphanous milieu. They derive, the former from a body which is luminous in itself; the latter from a body which is coloured in itself. Light brings about the actualisation of potential colour, in such a way that it is capable of moving the diaphanous; which is transformed from the potentially diaphanous to the effectively diaphanous; and can, m a result, absorb colour and transmit it in the eye. Thus the objective existence of colours, and their effect on the eye, depends on light. wisibility is not a condition for the existence of colour. It follows that, contrary \equiv the view of Ibn Bādidia, colour = such does not contain light. When light acts upon the diaphanous, then, according to the intensity of this light, and its degree of transparency, different colours are produced. White derives from a blending of pure fire, that is, solar light (in its capacity as a luminous element) with air (in its capacity as the most diaphanous element). Black derives from a blending of turbid fire (that which is located above the elements and below the spheres) and earth (in its capacity in the most opaque element). The two absolute colours are thus "the primary elements" (unjuguestant) of the colours. All the other colours are situated between these two extremes. They result from an infinity of proportioning of the chromatic pair white/black. To the extent to which an intermediate colour (green, red, yellow, etc.) tends towards white, it loses, in proportion, the ingredient of black which it contains, and vice versa. In common with Aristotle, his Arab == tator believes that the blending of colours consists, not in a juxtaposition or a superimposition, but in a total union of constituent elements, in the event, of fire and diaphanous bodies.

It is evident that, while the Arab theologians and philosophers did not neglect the subject of colour, they were concerned essentially with the manipulation of theories inherited from the Greeks and translated, since the 3rd/9th century, by men like Yahyà b. al-Biṭrle, Hunayn b. Ishāk, Ishāk b. Hunayn m. Biṣhr b. Mattà. There was, strictly speaking, marab-Muslim doctrine of colour, and, as far as we know, no monograph devoted to this question.

A mystical vision of colour. It is hardly necessary to stress the universal nature of the spiritual experience of colours. In this context, the works of H. Corbin enable us to appreciate the interest which certain Muslim mystics, like Nadjim al-Din Kubrá (d. 618/1226) and al-Simnāni (d. 737/1336) took in the phenomenon of colours, and in the synchronism between them and the interior mion. Taking up the theory of "physiological colours" dear to Goethe, which the German master espoused in his Farbenlehre (1808), to refute the hitherto mn-

challenged theses of Newton, the Iranian theosophist al-Kirmani (d. 1870) laid stress on the difference to be established between the existence (undjud) and the manifestation (mildr) of colour; a difference which has nothing to do with the classic distinction drawn by the falasifa between potential and actual existence. His hermeneutic of colours "sets in motion ... a symbolism based on an integral spiritual realism" (Corbin). Colour is the language of souls. The eye-the meeting point between exterior light and interior light-does not reflect passively the world which is presented to it; it participates in the perception of things, and produces its own colour. Deriving support from certain verses of the Kur'an which, like XIII, 16 and XXXV, 20, make forceful statements such as "Are the blind man and he who sees equal; are darkness and light equal . . . ? ", al-Kirmani considers that the colours perceived by our eye are those of bodies, not those of rays of light, and that they exist in the supra-sensible worlds. "Light is the abstract of colour, or colour in the abstract state . . . Light is the spirituality of colour; and colour is the corporality of light ... It is through the medium one of the other that they enter our field of vision" (Corbin). Without light, colour is still present, but is similar to a body deprived of its spirit. Every compound, whether it belongs to the sensible or to the supra-sensible world, therefore has a colour. The colour of the world of Intelligence I white; that of the world of Spirit is yellow; that of the world of the Soul is green; that of the world of Nature is red; that of the world of Matter is an ashen colour; that of the Imaginary world is deep green; that of the material body is black. In the same spiritual context, we may recall the famous formula of Novalis: "Colour is an attempt by matter to become light"; and this comment by Rudolph Steiner: "Colour is not only a quality applied to the surface of objects, but a light flashing from the soul of things to reveal itself to our soul",

These reflections lead us on to the symbolism of colour.

The symbolism of colour. Colours are capable of acting, on the human being, independently of the optical system; and the sensation of colour, essentially, is individual thing before it is a collective thing. The link between human perception, power of evocation and psychism, does not need to be proved. Also, since time immemorial, peoples have used colours = a system for the communication of thought, and as "signs" and symbols of abstract ideas. Although each colour does not denote, incontrovertibly, a universal quality, a number of invariants have been isolated by comparative study. Colours have played a role of considerable importance in ritual, in magic and in superstition. Nor are the psychological, physiological and physical effects of colour to be ignored: this "language of colour" in which is expressed, in art, the ineffable role of the chromatic nuances, whose faculty of interaction is essential for painting.

One quotation from the Kur'an will suffice to prove that this was also the with the Arabs. In XVI, 13 we read: "... in that He has disseminated various colours upon the Earth, here, truly, is a certain sign for a people that is edified ..." (see also XVI, 6; XXX, 22; XXXV, 27, 28; XXXIX, 21).

One of the most striking manifestations of the symbolic connotations of colours among the Arabs, is the phenomenon of opposites (al-addēd [q.v.]). We have seen, in studying the semantic value of certain adjectives of colour, that they were sometimes capable

of embracing two diametrically opposite meanings. This phenomenon is particularly to be noted in the case of white and black, which have common adjectives. To signify wine, the Arabs used mumber of euphemisms, of the type "the fair drink", "the golden one", etc. It seems to have been the same reasoning that led them, superstitiously, to avoid the use of certain terms, and to evoke them either by sufficiently eloquent imagery, or by antiphrasis, in cases where the context rendered the sense unequivocal. Even today, in certain parts of the Orient and the Maghrib, in order to avoid pronouncing the word "black" (the accursed colour, the colour of Hell), opposites are used. In Morocco, al-abyad sometimes denotes tar or coal. It has been observed, in addition, that some adjectives occasionally qualify two colours which, while being different, nonetheless present certain affinities. In the collective unconscious where humanity's roots are laid, it does not seem that our ancestors left the need to establish a tight partition between colours which may be regarded as being close, as they offer similar attributes of luminosity or of intensity, such as blue and green in the former instance, yellow and red in the latter. The same conclusion holds good for the Arabs. For them, the symbolic value of white, does not seem to have been much different from that which it was for the majority of peoples, for certain latent associations are universal. The colour of brightness, of loyalty, of royalty, sc. white, most often symbolises purity, joy, chastity and virginity in popular psychology. White, the confusion of all the colours, is unity, the very image of divinity. The body of the archangel Gabriel is snow-white. The white bird is the emissary sent from Heaven to tell good news. The white cock is held to be the incarnation of an angel. It was a white cock that Allah sent to indicate to Adam the times of prayer (Kisas, 13, 66-7, 126, 200). By reference to the white band of Moses, when he accomplished the miracles recounted in the Kur'an, the expression yad bayda' symbolises potency, power, authority. In the colloquial speech of Syria, 'a white heart" designates a person of good companionship, of noble nature; "a white standard", a good reputation; "white tidings", a joyful message. In Egypt, a fine day is compared to milk or to a white flower. But, as in the For East, and as in Europe for a long time, white can also be the colour of grief and of mourning. Death is livid and white in contrast to the redness of life. The shroud is white. White hair is the forerunner of death. In Spain, in Morocco, in eastern Persia, white was also the colour of mourning (cf. Pérès, Poésie andalouse, 298-9). The popular subconscious has, furthermore, also been aware of this affinity between white and death, and the end of life is characterised by rhetorical figures such as "white death", sudden and natural death, death in which human knowledge is powerless towards the unknowable.

Asked and sayyid present an etymological relationship that is toaded with meaning. The Arabs sensed that black was medominant colour, exercising over them a fascination that was mingled with fear. Black, darkness, the night, mystery—all of these demand respect. The Black Stone of the Ka'ba is a pillar of spiritual influence. Black is the coat of "the unknown journey", of mourning and of all sadness. It is also the joint symbol of vengeance and revolt (cf. the black flag of the 'Abbasids). In the history of superstition in the lands of Islam, black occupies a privileged position. By me kind of homeopathic magic, it is used as mechanical charm against "the evileye". The black

cat is endowed with enormous magic power: It is a creation of Satan, and anyone who cats its flesh is immunised against illness; its spleen, when applied a woman, stops menstruction. For the Muslims, for so many other peoples, the black crow exera baleful influence; meeting the bird is an unfavourable omen, since the bird is the herald of separation; is it not assumed that the Prophet said that the crow must be killed, since it is wicked and perverse? The chains of Hell are black. A black cloud is a sign of divine wrath. Cain killed Abel with a black rock (Kisas, 8, 108, 121, 186-7, 193-4, 298). Al-sawda" is the black bile, of sorrow and fear. "Black liver" is a term applied to a aworn enemy; "Dlack heart" is a degenerate and vulgar personality; "black news" denotes a calamity; "black life" is unfortunate; a "black face" belongs to a discredited person; "black death" is reserved for that caused by strangulation.

Blue, at the opposite satreme from red, is a cold, fleeting, profound, immaterial colour. The sky and the sea 🚃 blue; anyone who plunges into them is lost to infinity, since their depth is immeasurable. Metaphysical fear is a "blue fear". The Arabs considered this colour magical, inauspicious and disturbing. Blue eyes are a source of bad luck; and miscreants are depicted with them in the Kisas al-ambiya? (117, 121, 123). In Egypt, as a defence against the "evil eye", blue-coloured grains of alum (shabba) are hung at the neck of children and adults. Blue stone possesses a share of the sacred force, by virtue of its colestial colour. The magical power of blue is at the same time the dispenser of ill fortune and a defence against it. The "blue enemy" is an invotorate and mortal enemy. In Syrian parlance, when it is said of a person that "his bones are blue", this that he is of cunning, vindictive nature. Blue is the colour of haggard, ilvid, frightened people. In the only Kur'anic passage where the root *-r-& occurs (XX, 202), it is used to describe the guilty ones on the Day of Last Judgment. This is why, as with black, the Arabs took pains to avoid mentioning this colour. In certain regions of Egypt, one says "green" rather than "blue". A disagreeable or fretful day is also described as "a black day" or "a blue day". We may note that in Sanskrit, the term will serves to denote both blue and black, two colours regarded maleficent. In Egypt, nils (indign) is a sign of misfortune, of failure.

Equidistant between infornal red and celestial blue, green has medium role, a form of equilibrium dear to Islam. For the Arabs, as for many other peoples, it is the symbol of good luck, of natural fertility, of vegetation, of youth. For Islam, the green standard of the Messenger of Allah and the green cloak of 'Alī have become the very emblems of the Religion. As a beneficent colour, green belongs maturally to the popular spirit of the Arabs that their colloquial language is full of expressions where this colour symbolises joy, gaiety or success. In Syria, a "green hand" is used in describing a lucky person. To wish somebody a good year, one uses the expression "green year", and when one takes up residence in a new dwelling, pleaves of beet are hung there as a token of good luck. In Murocco, the expression "my stirrups are green," means "I bring the rain when I travel into an area where it is awaited". Muhammad himself declared: "The sight of green is as agreeable to the eyes - the sight of a beautiful woman (cf. al-Diabia, Tarbis, 137). The archangel Gabriel has two green wings. The Heavenly Throne is carved from a jewel green in colour. Abraham is clothed, in

Paradisc, in green garments. The Preserved Tablet [see LAWR] is inade of emerald (Kipas, 7, 13, 139, 220). The title "Green Bird" is the name given to a number of saints. One should not ignore the special place reserved by the doctrine of dished to the shakid, "the markyr in the Way of Allah"; while the corpses of these martyrs remain in their tombs, their souls, the other hand, are ontitled to privileged treatment: "Allah puts their souls into the bodies of green birds, which quench their thirst in the rivers of Eden, and eat of its fruits", says a famous hadith. In symbolism and the occult sciences, the emerald, a beautiful green stone, is seen as endowed with an esoteric significance and a regenerative power. The Emerald table is the title of a work, which appeared in the Middle Ages, containing all the laws of occultism and the Kabbala, and attributed to Hermes Trismegiatus. "The colour green", said al-Simnant, "is the most appropriate in the secret of the Mystery of Mysteries". In Islamic cosmology, Kdf [q.m.] the mountain encircling the terrestrial world, is made of m emerald, whose colour is reflected by the celestial vault. The image "green death" refers to the action of clothing oneself in rags or patched garments, m do the dervishes and the Suffs. It is thus the man gentle of deaths, accepted willingly and endowed with spiritual worth.

The colour of gold and of the sun, of butter and honey, but also that of sulphur and the flame that consumes, yellow presents a wide ambivalence on the symbolic level, and not only for the Arabs. It can, according to me applied to it, refer just as easily to cowardice or treason as to toyal power and glory. The sight of Managel of Death gives to Adam sweat "the colour of saffron". At the time of the "descent of Jesus" and the Last Judgment, the guests of Paradise will have white faces, those of Hell black; m for the people condemned to undergo "the ordeals of the tomb" their faces will be "the colour of saffron" (Kisas, 75, 308). The link between bright yellow and youth, love, waiting, separation, is widespread in human psychology. For the Andalusian poets, the yellow of the narcissus is the symbol of the lover who pines away for unrequited love. The colour yellow symbolises the pain of separation. Al-safra? denotes bile. In the parlance of the Levant, "a yellow smile" denotes a smile full of envy. On the other band, may note that in the 'Abbasid period, the Muslim East displayed a definite predilection for yellow. Even food was coloured yellow through the use of saffron.

Red is the colour of fire and of blood, of passion, of impulse and of danger. It is fundamentally linked to the vital force, and to the warlike qualities. It is a gushing colour, but and male, unlike blue and green The name of the first man, Adam, signifies "red" in Hebrew. As with yellow, its symbolism is ambivalent, both divine and infernal. The Burning Buth has its equivalent in the Furnace. The red sulphur (kibrit almar) of Islamic esotericism denotes Universal Man, the product of the action of hermetic red. It is said that m the battles of Badr and Hunayn, the angels who assisted the faithful against the infidels were red turbans or belts. But, on the other hand, when the Eternal decreed the destruction of Saba' and of Ita dam, He sent red cats to undermine the edifice (Kisas, 380, 286). The Arabs qualified with "red" the form of death caused by the emission of blood. In popular speech, an unlucky year is called "a red year". In Syria, expression "his eye is red" applies to a cruei person; and "his wool is red" means that he is accurated.

We see that the problem of colours, of their transmission and their perception, is quite complex. There has been a definite evolution in chromatic perception. since the origins of humanity. In early antiquity, man was, apparently, above all to the light, and very little to colour as strictly defined. Gradually, psychism-and, consequently, semantics -learned to distinguish the number and to designate them. The infinite richness of the colours emerged slowly in the course of the centuries. The apprenticeship of colour took place in the milieu surrounding each people. Language and perception have interfered, without ever totally covering all aspects of the question. Symbolism has entered into the element of subjectivity and ambivalence inherent in every perception of colour, while the human brain has extended its field of reflection, the range of its thought, and rendered its transsion more flexible, by learning how to nuance it.

LAWSHA, Spanish Loja, a small town of al-Andalus, 35 miles to the south-west of Granada, on the left bank of the Gemil at the foot of an imposing limestone mountain, the Periquestes. It has mather less than 30,300 inhabitants, but was probably more important during the Arab period. It was the birthplace of the famous Lisan al-Din Ibn al-Khatib [g.v.], who wrote an enthusiastic description of it. The walls of the hism which commanded the town during the Arab period can still be seen. It was repopulated in 280/893 during the reign of the dmir 'Abd Allah b. Muhammari. This 'key of Granada' was besieged in 1486 by the Catholic kings, who captured it on 25 Djumādā I 891/29 May 1486.

(É. LÉVI-PROVENÇAL)

LAYL and NAHAR (Ar.), two antithetical terms which designate respectively night and day, but do not have exactly the same status and are not parallel.

Lay! is treated as a collective noun without dual (except in poetry where the use of this incorrect form is justified by the requirements of metre), or plural; it possesses, as would be expected, a noun of unity, laylates "one night", of which the phral layate the seldom used diminutive luyayliyaten, are something of membarrassment to philologists, who are inclined to consider them as formed either on "laylivetes or on "laylates. Nahar, for its part, applies to the "day" which extends from sunrise to sunset; like lay!, it has neither duel, nor plural (since the forms anhur, nuhur and, in dialoct, nahārāt, secondary and judged inadmissible by the grammarians, who can only account for them as an aberrant transfer from the generic to the particular, from djins to naw'); but it is not a collective and, for this reason, it has no noun of unity and cannot itself supply this function. Thus the correlative of opposition to layl, nahár, cannot be opposed to laylatm, of which the antonym is yourm (pl. ayyam), signifying "day" (of twenty-four hours). So one says layles wa-nahār "night and day, by night and day" (e.g. Kur'an, LXXI, 5], but yawn wa-layla, "a day and a night" is twenty-four hours and not thirty-six; the famous battles of the pre-Islamic Araba, which did not take place at night, are known by the expression ayyam al-'Arab [q.v.], generally translated as "the days of the Arabs". On the other hand, sakar is sometimes a substitute for yawm, as in Moroccan dialect where, in stories, "one day" is always wild en-whar and one even encounters with en-whar ... f-01-III (e.g. G. S. Colin, Chrestomathic marconine, 87). On the other hand, ayydm and laydli are, in certain cases, interchangeable. While the "borrowed days", each one of which effectively lasts twenty-four hours. known in Arabic as ayyam al-sadjūz [q.v.], the very cold period which begins in December and ends

forty days later is always called sl-layālī al-sūd "the black nights", while the forty "mottled" days which, in two series of twenty, immediately precede and follow it and during which the cold is severe, are sometimes called al-ayyām al-bulk (e.g. in the Calendrier de Cordoue, al-layālī al-bulk (especially by nl-Kalkashandi, Subb, ti, 384).

Similarly, the distances which me express in "a days' journey" are measured by the Arabs in stages (marhala, pl. marāhil), translated either as "days" (ayyām) or "nights" (layāli, even in reference to a country where day-time travel is practicable). While the day of the month can be expressed by of your followed by an ordinal number up 19, ordinal and a cardinal from 20 upwards (alyawma 'l-hālitha wa 'l-Lithrina min Şafar = 23 Şalar), a calculation based on nights is used in preference, most often with elision of the word layla = laydli, but with the femining form of the numerical noun (whereas yours or ayyam would demand the masculine), for example: h-arba'a 'askrata khalat/khalawna min Muharram - "fourteen (nights) having elapsed of Muharram = the rath of the month (not the 15th, since the official day begins at sunset). or; li-'askr bakiyat/bakina min Muharram = "ten (nights) remaining of Mubarram" the 20th of the month. (In this context, in calculating correspondence with the Julian or Gregorian calendars, it is important to know if an event dated on a certain day happened before midnight, in which case the corresponding date indicated by the tables should be put back one unit.)

Being accustomed to look to the sky for guidance while travelling at night, and to use the stars [see ANWAP] and the phases of the moon [see KAMAR] for the measurement of time, the ancient Arabs divided the lunar month into ten periods of three nights bearing names chosen for the most part as references to the different shapes of the moon or to the degree of its brightness: 1-3: ghwrar (or ghurr, hurh); 4-6; nufal (or djuhar, shuhb); 7-9: tusat (or zuhr, buhr); 10-12: 'ughar; 13-15: bid; 16-18: durat (or durt); 19-21: pulam; 22-24: hanādis (cr nuhs, duhm); 25-27: da'ddi' (or huham); 28-30; ma/i/uhdh. These three last nights were qualified with, respectively, da'dja', dakma' and layla', but the 30th also bore the names safirar, sarar, nahira, da'da', falia. The first and the last days of the month, in historical works and correspondence, are also designated by terms connected with the man gharra for the first and mensalakh or sarår for the last. There also exists a different nomenclature in which nights from the 13th to the 21st bear the same names as those detailed in the scheme above, but the others are: (-): hilāl; 4-6; ķamar; 7-12; nufal; 22-27; hanādis; 28-29; da'ddi'alan'; 30: majijuhdh (for 📰 these names, 🚃 Ibn Kutayba, Anui, § 159; al-Mas'ūdī, Murūdi, ili, 429-31 = §§ 1316-18; Calendrier de Cordouc, 18; al-Biruni, Chronologic, 63-4; Iba Siduh, Mukhassas, ix, 30-1; Ibn al-Adidabl, al-Asmina wa 'l-anwa', 85-7; M. Rodinson, La lune chez les Arabes et dans l'Islam in Sources orientales. La lune, mythes et rites, Paris 1962 163-4).

The ancient Arabs possessed a host of epithets to describe a dark night but it is scarcely possible to establish a gradation between them. The majority of these terms, some of which are quite expressive (e.g. mushankik, muflakhimm), have fallen into disuse; we shall mention only the following: layla saimd' mushima, mudlahimma, daydiur, "very dark"; mu'lankisa, hakim, "where one can see nothing"; lakhyd', dadiiya, "overcast and moonless"; sadaf, ghatan

"penumbral"; layl muséjahier muséjahédé, "long night" (see Iba Sidub, op. laud., ix, 37-42).

From the whole of this rich vocabulary, attested in ancient poetry or compiled by rundt and reproduced scrupulously, though without much enthusiasm, by lexicographers, only the most current elaments (in particular those derived from the root g-l-m) figure in the Kur'an, where day and night items of considerable importance; we may in fact count a total of 57 occurrences of maker, 79 of layl, 7 of layla and 4 of layall (compared with 36 of yours, 27 of ayyam and 69 of yamma'idhin). The day and the night, naturally created by God and put at the disposal of mankind (XIV, 37/33) are signs (XVII, 13/12, XLI, 37) of divine power; they are mutually concurrent (XXXI, 28/29, XXXIX, 7/5, LVII, 6), and God brings forth the day from the night (XXXVI 37; see also VII, 52/54); complementery (VI, 13, 60, XXV, 49/47, XXVII, 88/86, XXX, 22/23, XXXIV, 32/33, XXXVI, 40, XL, 63/61), they succeed one another regularly, with emphasis placed on this succession (ibitilal al-lay) un V-nahar, II, 159/164, IV, 187/190, X, 6, XXIII, 92/80, XLV, 4/5), which is sometimes treated by translators as a contrast between two creations which renew themselves constantly (honce the term al-diadidan', "the two new ones"). The two words appear together in a total of 24 verses.

The word sata, which occurs 47 times in the Kur'an (in 33 cases to designate the [Last] Hour) meant nothing more than "a moment, a brief lapse of time", for the aucient Arabs apparently did not divide the day in 24 hours; this usage, me perfectly understandable one, is retained in the classical language, where expressions are encountered such as summe safatin "instantly fatal poison". The concept of the hour was, however, introduced into Arab culture at an early stage, for it was indispensable to astronomers, who distinguished between equal or average hours (sa'd) mu'tadilat) and unequal or true hours (samaniyyāt muswadidiāt, and Islamic civilisation was at quite an early stage familiar with various types of clock [see HIYAL, in Suppl.] which were evidently not at the disposal of the majority of peoples. However, references in historical texts to events which took place, for example, at the third hour of the day or of the night, lead one to suspect that this notion was widespread than is generally thought; it is thus possible that in a period which cannot be precisely identified, the day and the night were divided into tweive hours, the relative proximity of the equator making fluctuations in their duration according to the seasons a matter of small account. This method of reckening is still in use in Arabia, where, now that the possession of watches is widespread, it causes a certain amount of confusion.

The night begins immediately after sunset, which marks the start of the official day; this is why, when one talks of the previous night, the Arabic expression is al-laylata "this night", if the time is before midday [but ai-bdribate "[the night] that has peased" if the time is after midday). The divisions of the night were not precisely defined, in spite of the rich vocabulary which is to be found, for example, in the Mukhassas (ix, 44-8) of Ibn Siduh who mentions, following Kutrub (ix, 37) five parts (adjaa?) named respectively: thudra, mudka, sudfa, kadima and yaffir; these expressions do not seem to have been in widespread use and, in any case, they are not defined in a satisfactory manner. However, the need to fix the hours of the three canonical prayers which take place during the night obliged the Muslims interpret precisely

the meanings of certain encient terms and to establish with accuracy the times to which they apply. Among the many words denoting the beginning of the night, shafah has been sanctioned by usage; in the Kur'an (LXXXIV, r6), Allah swears By the and ab, interpreted meaning either "twilight" or "day", as opposed to the night which figures in the oath contained in the following verse, but it is agreed that this term designated "the evening twilight", the time at which the maghetb prayer should be performed [see situar]. Some authors distinguish two twillights, of which the first is characterised by the redness of the sky and the second by its pallor (e.g. Ibn al-Adjabl, op. laud., 118), but this distinction is secondary. The astronomic twilight lasts for as long as it takes the sun to descend 18° below the horizon (or 1 hour, 12 minutes, since 15° = s hour), and Muslim scholars adopt the average figure of 17°; it is however quite certain that the real duration in the shafak varies according to lattitude, season and meteorological conditions; this is why the calendars indicate it regularly to enable the faithful to perform the prayer within the required time; one might naturally ask on what observations are based the figures supplied for example by the Calendries de Cordons, where this duration (and that of the morning twilight, the fadir, which is reckoned to be identical) varies from 1 hour 1/7 on the 1st of January to a hours 1/8 on the asst of June. As regards the maghrib prayer, it is said in the Kur'an [XVII, 80/77): ahimi 'l-şalâta li-dulûki 'l-shamsi ild ghasaki 'I-layl, and the end of the shafak effectively marks the start of the ghazak (which was also known by other names: salām, even I the moon was shining, iktiham al-layl, etc.); the beginning of the latter period is the time for the prayer of 'ight', which some call incorrectly al-'iska' al-akklra, - opposed to a 'isha' üla - salat al-magheib, and which the Bedouins were reproached for calling salát ai-'atama, after the first third of the night during which they customarily performed the milking (istiliam) of their camels. Although we know of a considerable number of terms designating any part of the night (see Mukkassas, ix, 45), only m few words seem to be at all precise, in spite ill differences in interpretation; thus, 'aghea, si'm, had' and variants = 1/4 of the night; bif's and variants = t/3; dhuhl and variants -1/3 or 1/2; htta', kasi', thabadi, mawhin and variants = 1/2 approximately. The middle of the night was called dians, uslumm, diarch, but astronomers rendered "midnight" simply by misf al-layl (in the same way they called "midday" misf al-nahār) and the modern language uses the expression musicasaf al-layl. The as as a precedes the third third, the sahar or sahr, which matches the ghass! and is immediately followed by the morning twilight, the fadir; for the Muslim astronomers, this twilight begins at the moment that the sum is 19° below the horizon, but the real duration of it is indicated, as has been seen above, in the calendars. It is during this final part of the night that the morning prayer (fadjr or subb) is performed. Since their territory did not extand as far as latitude 48°, the Arabs did not know that at the summer solstice there is me complete night (the lay! alyal of the astronomers) at this latitude.

Night travellers experienced a certain relief when they observed the first lights of dawn, and they tended to include the fadir in the wahar; a reflection of this conception is also found in the works of lexicographers who normally place the subh (or sabiha method) at the end of the night and are furthermore inclined to make it the beginning of the day, calling

zhudwa or buhra the time which elapses between the fadir prayer and the survise (see Mukhaspas, ix, 48-52). Although the prayers which punctuate the Muslim's life obliged the fulahd? to fix with a degree of exactitude the time of the subr and of the 'asr (let alone the duhd), the divisions of the day lack precision. The maker begins at the moment that the upper adge of the sun appears on the horizon, just m the night and the official day begin when the opposite edge, now uppermost, disappears. The first part of the day, up to the moment when the sun has traversed a quarter of the diurnal arc, is called dubā; the period corresponding to the sun's progress over the second quarter of the arc in known as dahā'; it comes to an end at midday (soud!), which is marked, for the astronomers, by the sun crossing the meridian and, for the simple faithful, by the displacement of the shade which moves from the west (where it is called the pill) to the east (where it takes the name fay"). It is at this moment that there begins the period, varying according to the judicial schools [see migar], during which the midday prayer (suls) must be performed. A number of terms referring to the heat which then reigns are employed (sairea, hādjira, hā'ila, ghā'ira), without designating a precise lapse of time. Some calendars indicate, at the beginning and the end of each month of the solar year, the altitude (irlifac) in degrees of the sun at midday (e.g. the Calendrier de Cordone, or, to enable the faithful to calculate for themselves the hour of the pulse, the length of the shadow either in feet, as in the Risala of Ibn al-Banna, or in height (hama), once again as in the Calendrier de Cordone, where the shade varies from a quarter of the height of object on the 16th of June and the 1st of July, to one and live-sixths on the 16th of December. The period which follows that of the putr and also extends between limits determined by the length of the shadow, but variable according to the fulade, is that of the tase (see I. Goldziher, in Archiv für Religionswissenschaft, ix 293 ff.; transl. in Arabica vii/t [1960], 26 (f.); this term is thus precisely defined in Islam, although diverse and much less definite interpretations are retained. Atll was used in reference to the time which elapses between the 'asr and sunsel, but this word tends to be employed, in the contemporary language, for the evening twilight; masa', which had the same meaning, is today applied to the evening, m opposed to sabah, "morning", and also come to designate the period which begins at moon and encroaches upon the night; the word 'askiyya (and variants) is also taken in the sense of "evening", although it used to be as precise as masa' and asil, designated the end of the nahar and was the opposite of duld (e.g. Kur'an, LXXIX, 46: illá 'ashsyyatan wa-duháhá).

The calendars to which reference has been made often attach importance to the length of the day and of the night, which some of them indicate twice a month, either in degrees of the sun's arc, or in hours. Since the authors who supply these figures are not usually astronomers, they give the impression of borrowing these numerical data from their predecessors, without perhaps taking account of differences in latitude, especially in view of the fact that, when aiddressing themselves to their fellow-citizens, they do not take the trouble to establish the name, and the position relative to the Equator, of the place concerned. It would nevertheless be possible to calculate the latitude of this place if one could rely me the accuracy of the data relating to the length of the longest and shortest days and nights of the year, but in this respect great uncertainty remains. It is furthermore to be noted that the geographers, heirs to the Ptolemaic tradition, divide the zone reckoned to be inhabited in the northern hemisphere, as far as approximately latitude 50°, into seven climates [see IKLIM], of which the lower and upper limits are constituted by parallels separated one from the other by a distance corresponding to a difference in half-an-hour in the length of the longest day of the year.

Bibliography: Given in the article.

(CH. PELLAT)

LAYLA AL-AKHYALIYYA, Arab poetess of the 1st/7th century of the tribe of the 'Ukayl ('Amir b. Sa'sa's group) whose mises came to her from an ancestor, Akhyal, or from several of the Akhā'il. Literary tradition attributes to her an elegy on the murder of 'Uthman and speaks of her as having been familiar, late in life, with the caliphs Mu'awiya and 'Abd al-Malik, and the redoutable governor al-Hādjdjādj: it follows that the pinnacle of her should be placed a around 650-60 A.D. She is wellknown for her romantic saga, of 'Udhrite type, concerning har relationship with the bandit-warrior Tawba b. Humayvir, also | the 'Ukayl tribe. He loved her, and although he was prevented from marrying ber, he always maintained a chivalrous devotion to her. When he was killed in the course of one of his raids, Layla mourned him in a number of touching elegies, fragments of which are available to us from literary sources (as far as is known, they were never collected in a direin) which show Layla resembling a Musiim al-Khaosa' [q.v.]. In fact, these funereal elegies, like those of the most famous poetess of the Diability, are still imbued with a purely pagan spirit, lauding the warlike and beneficent virtues of their heroes (for ai-Khansa), her two brothers; for Layla, her sweetheart Tawba), without any hint of faith or Muslim piety. The genre of the ritha' [see MARINIYA], was beaceforth perpetuated in an established form in the new miliou of Islam. As with the poetess of Sulaym, the sincerity of Layla's sorrow and her fidelity to a long and unrequited love through the conventional topol of the elegy, in the accounts of her conversations with the callohs.

Besides these mardini, there is attributed to Layla - poetic exchange in hidid' form, fairly coarse on is typical of this genre, with the poet al-Nabigha al-Dia'dl. This is all that is known of we (she was married to a certain Sawwar b. Awfa al-Kushayri). On the date and place of her death, there is conflicting evidence. According to a highly communic tradition, she died very close to the tomb of Tawba, in circumstances which would corroborate certain well-known verses of her friend in this respect; more plausible perhaps are other traditions which put her death in Iran (at Sawa or Rayy), in the course of a fourney which she had undertaken in her old age through the basid of al-Hadidjādi, to visit her cousin Kutayba b. Muslim [q.v.], who was then campaigning In Khurasan. In any case, the date would be in the early years of the 8th century A.D. (end of the 1st century of the Muslim era). Her historical authenticity is not in any doubt, unlike that of her more famous namesake, Layla of Madjnůu.

[F. Gabriell]
LAYLA KHANIM (? - 1847), Turkish poetess

of the first half of the 19th century. Very little is

known about her life. Born in Istanbul the daughter of the kādi-'asker Morall-zāde Hāmid Efendi, she was educated by private tutors, particularly by her maternal uncle 'Izzet Mollā [q.v.], whom she eulogised in an elegy. Her short-lived marriage and her gay and unscrupulous way of life gave rise to gossip about her being a lesbian. Her poems, not particularly original, are written in a comparatively simple and unadorned style avoiding the articulatives and affectation of many of her contemporaries. She excelled in manadjil and merihipes. Her diwân was printed at Bulük in 1844, with second and third editions made in Istanbul in 1851 and 1883 respectively. Laylā Khānim was a Mewlewi adherent, and is buried in the garden of the Galata Mewlewi convent.

LAYLA KHANIM (Modern Turkish Layla Saz 1830-1936), Turkish poetess and composer. She was born in Istanbul, the daughter of Dr. Isma'll Pasha (1812-71), originally a Greek from Chios, who served as imperial surgeon under Mahmid II and as governor, minister and Palace physician under 'Abd al-Meglid and 'Abd al-Yazz. From early childhood, Layla Khanim frequently lived in the imperial harem in close association with it. She was privately aducated and was married to a civil servant from Crete, Sirri Etendi (later Pasha, 1844-95), who served as a governor in various parts of the empire. Layla Khanim, who necompanied him, included interesting travel notes in her famous memoirs (see below). She died in Istanbul on 6 December 1936.

As a composer, she followed the classical Turkish tradition, although the influence of Western music which had entored the Ottoman Palace in the mid-thread in the mid-thread in the mid-thread in the composer of over 200 works to which she wrote the words, including some famous and very popular shark and marches.

Her early poems published in the Khasins-yi carab in the 1880s in the diwan tradition. Later, she wrote in the second of the Tansimal modernists, particularly of Abd al-Hakk Hamid. She occasionally used syllabic metre and a simple language for her türküs. Only a small portion of her compositions and poems survived the fire which destroyed her villa in Boständji near istanbul (see Mustafa Rona, Yirminci yüsyil Türk musikisi³, Istanbul 1970, 25-31, where 45 iii her compositions iii given). Her scattered poems were collected and edited by her son Yüsuf Rüd in 1928 as Solmush türkler ("Faded flowers"). They seldom the above the average.

Laylà Khānim's most important contribution is her invaluable memoirs, which mainly cover her experiences in the harem. This is in unique first-hand report of Palace life from the inside. The memoirs describe in great detail everyday life in the Palace, its décor and furnishings, and particularly the harem, its customs, tashions, ceremonies, special occasions, training and life of princes, princesses and slave girls, etc., together with character studies and sketches of interesting types. She began to write her memoirs in 1897 and completed them in 1920 at the age of 70; and she published ill first part, on the harem, in the daily Waht (beginning in January 1921) and the second part, on women's life, in the 19th century, in the daily Ilsri (from 25 April 1922). As [stanbul]

was under Allied occupation at the time and the press under strict control, some passages were omitted by the censor. The memoirs were translated by her son and published under a pseudonym, that of Mine. Adriana Piazzi (Delcambre), Le Harem impirial at les suitanes an XIX* siècles somemirs, adaptés an français par son fils Youssouf Razi. Préface de Claude Farrère, Paris 1925. Both parts ill the memoirs have now been edited in one volume by Sadi Borak ill Leyla Saz, Harem'in içpiini, Istanbul 1974.

Bibliography: given text, but see Inbulemin M. K. Inal, Son and Thirk sauderi, v. Istanbul 1938, 880-3. (Fahir 12)
LAYLÂ Û MADJNÛN (see Madjnûn Wa-LAYLÂ)

LAYLAT AL-BARÂ'A [see RAMADÂN]
LAYLAT AL-BADR [see RAMADÂN]

AL-LAYTH B. AL-MUZAFFAR, Arab philologist and Jurisprudent, grandson of the Umayyad governor of Khurasan Nasz b. Sayyar al-Kinani al-Laythi (d. 131/748, 85 years old [q.v.]). Sometimes he is identified as the son of the latter or even as the son of an alleged third son of his grandfather, Räfi's, who might be confused with the well-known Räfi's b. Layth b. Nasz b. Sayyar [see hardman-rasseld].

The biographical information about al-Layth (or Layth) is meagre. He studied grammar and lexicography under the versatile scholar and kadi of Kuia, Kāsim b. Masn (d. 175/791?), and was held in high repute as a secretary with the Barmakids. It seems that his relationship with the master of the 'arabiyya, al-Khalil b. Abmad (d. 175/791? (q.v.)), who was not much older than himself, - trustful and close. We learn that from traditions, some of which are embellished by anecdotes, and we furthermore learn that he revised and completed the Kitab al-'Ava of al-Khaffl, according to some sources after the latter's death. Al-Layth may have finished this work at the beginning of the eighties of the and century A.H. (about 800 A.D.) and died soon afterwards, in other words, just before the fall of the Barmakids in 187/803. Later philologists consider him as the actual author-and recent investigations confirm this view, especially in regard to the bulk of the material-or else they leave this question undecided, speaking of the sahib Kitab al-Ayn; whereas others attribute the misunderstandings and the mistakes which they thought to have discovered in the first Arabic dictionary mainly to that revision. (Concerning the works which have been written before the background of such criticism, cf. J. Kraemer, in Oriens, vi [1953], 208 f.)

Bibliography: in addition to the works mentioned in the article KRALIL B. ARWAD, G. Flügel, Die grammatischen Schulen der Araber, Leipzig 1862 (repr. Nandeln 1966), 39-42; E. (R. Sellmein)

AL-LAYTH B. SA'D B. 'ABD AL-RABBAN AL-Fanni, And 't Harith, traditionist and jurisconsult, belonging to the class of the great tabifies. He was born and died in Egypt (Karkashanda, Sha'ban 94/May 713-Misr, 14 Sha'ban 175/16 December 701. At the cemetery in Cairo, may be the tomb of "El Imam El Leis"). This "scholar of Egypt" (of Persian origin) is ranked unanimously among the leading authorities (fukakā' al-amṣār) on questions of religious knowledge in the early years of III Islamic empire, these being: Abu Hanifa, Suivan al-Thawri and Ibn Abi Layla (Küta), Ibn Djurayh (Mecca) Mālik and Ibn al-Mādjishûn (Medina), al-Awzā'i (Syria), and finally, al-Layth b. Sard (Egypt). With his vividly critical attitude towards the law schools (the Maliki one in particular), the Zahirl Ibn Hazm regards all these individuals as the worthy successors of Mālik in respect of erudition, intelligence and moral severity (al-Ihkam fi 115ūl al-ahkām, ii, 138). Al-Layth in also beld in high esteem by the imam al-Shafi'l, in whose opinion the study of tradition rests, essentially, the authority of these three masters Málik, Sulyan al-Thawri and al-Layth b. Safd.

Only fragmentary information is available concerning the career of al-Layth (cf. the article devoted to him in Ta'rikh Baghddd, xiil, 3-14). His training in the discipline of hadith was both Meccan (with Ibn Shihāb, Nāfis and 'Aţā' b. Rabāh among others) and Medinan (Mālik). He travelled III Baghdād in Shawwal 151/July 778, where his teaching of badith was an outstanding and earned him the patronage of Hārūn ai-Rashīd. His humility is said to have prevented him from soliciting honours and appointments of state. On returning Egypt, he devoted himself to teaching and also to the management of what seems to have been a considerable fortune. He was credited with an annual income of the order of 23,000 dinars, which he utilised with such generosity that he me left with practically nothing which could justify the payment of saket. Al-Layth was, throughout his life, a much-courted and honoured man (no doubt because of his fortune). According to a man familiar with him over a period of twenty years, he was never seen lunching - dining unaccompanied by numerous associates. He lived in a grand scale and knew how to enjoy his wealth. If such a life-style allowed him a certain amount of leisure for participation in public life, or for daily sessions of hadlik, it was hardly compatible with long and exacting periods of work. In addition, the written work of al-Layth seems to be less than prolific (see Bibl.) in comparison with that of Malik (93-179/711-95) who was able, in the rustic setting of Medina, to lead a much more productive scholastic life.

The biographers of al-Layth often compare him with Mālik, with the object of attributing superiority in numerous areas to the former. Without doubt, subjectivity plays a major part in these judgments, when dealing with an individual whose special success and munificence inspired much respect. In the doctrinal sphere as such, the personal contribution of al-Layth is far from comparable with that of the indem Mālik. It is significant in this context that classical authors duscussed the legitimacy of whether al-Layth should accorded the title of indem, taking into account not only his plety and his virtues, but also the importance and impact of his doctrine as measured on the scale of the semms (Ta)ribh Baghdad,

ziii, 13). The verdict of posterity is negative on this point; all that need be quoted here by way of a tribute is the opinion recorded by al-Khatib al-Baghdadi (d. 463/1071); "If Malik had not existed. the superiority of al-Layth would have been universally recognised" (Ta'rikh Baghdad, xiii, 7). Having been a pupil of Målik, al-Layth was in a position to assert his independence with regard to his eminent contemporary, while maintaining a relationship with him marked by courtesy and a willingness for intellectual co-operation (cf. his Risála ilá Málik b. Anas, in Ibn Kayyim al-Djawziyya, I'lam al-muwakki'in, iii, 94-100). If in the sphere of religious law (figh), the influence of al-Layth is decidedly slight, his pame nevertheless remains connected with the discipline of hadith, where the classical authorities unanimously attribute to him a well-proven competence and integrity.

Bibliography: Seigin, GAS, i, 520, no. 7, where the work of al-Layth (1. Hadith; 2. Madilis min fauxi'id al-Layth; 3. the above-mentioned Riskla) in to be supplemented by Kitāb masā'il i'l-fibh, cited in the Fibrist of Ibn al-Nadim (199); al-Khatth al-Baghdādi, Ta'rīth Baghdād, Cairo-Baghdād 1349/1931, xiii, 3-14 (article no. 6960); Mubammad b. Merad)

LAZ, a people of South Caucasian stock (Iberic, "Georgian") now dwelling in the southeastern corner of the shores of the Black Sea, in the region called in Ottoman times Lazistan.

r. History and geography. The ancient history of the Laz is complicated by the uncertainty which reigns in the ethnical nomenclature of the Caucasus generally; the same names in the course of centuries are applied to different units (or groups). The fact that the name Phasis was applied to the Rion, to the Corokh (the ancient Akampsis), and even to the sources of the Araxes, also creates difficulties.

The earliest Greek writers do not mention the Laz The name Autol. Autor is only found after the Christian era (Pliny, Nat. hist., iv, 4; Persplus of Arrian, xl, 2; Ptolemy, v, 9, 5). The oldest known settlement of the Lazoi is the town of Lazos or "cld Lazik" which Arrian puts 680 stadia (about 80 miles) south of the Sacred Port (Novorosslisk) and 1,020 stadia (100 miles) north of Pityus, i.e. somewhere in the neighbourhood of Tuapse. Kiessling sees in the Lazoi a section of the Kerketai, who in the first centuries of the Christian era had to migrate southwards under pressure from the Zygoi (i.e. the Cerkes [q.v.]) who call themselves Adighe (Adzighe); the same author regards the Kerketai m a "Georgian" tribe. The fact is that at the time of Amian (and century A.D.), the Lazol were already living to the south of Sukhum. The order of the peoples living along the coast to the east of Trebizond - as follows: Colchi (and Sanni); Machelones; Henjochi; Zydritae; Lazai (Aŭζαι), subjects of King Malassus, who owned the suzerainty of Rome; Apsilae; Abacsi [cf. ABKRAZ]; Sanigae near Sebastopolis (- Sukhum).

During the centuries following, the Laz gained much in importance that the whole of the ancient Colchis had been renamed Lazica (Anonymous Periplus, Fragm. hist. grass., v, 180). According to Constantine Perphyrogenitus, De administrando

imperio, ch. 53, in the time of Diocletian (284-303), the king of the Bosporus, Sauromatus, invaded the land of the Lazoi and reached Helys (N. Marr explained this last name by the Laz word meaning "river"). Among the peoples subject in the Laz, Procopius (Bell. Got., iv. 2, 3) mentions the Abasgol and the people of Suania and Skymnia (= Leckhum). It is probable that the name Lazica referred to the most powerful element and covered a confederation of several tribes. The Laz were converted to Christianity about the beginning of the 6th century. "In the desert of Jerusalem" Justinian (527-65) restored Laz temple (Procopius, De aedificiis, v. o), which must have been in existence for some time before this. The Laz also sent bishops to their neighbours (Procopins, Bell. Got., iv. 2). In Colchis the Laz were under the suserainty of the Roman emperors, who gave investiture to their kings, and the latter had to guard the western passes of the Caucasus against invasions by the nomads from the north. On the other hand, the monopolistic tendencies of the commerce of Rome provoked discontent among the people of Colchis. In 458 King Gobazes sought the help of the Sasanid Yazdagird II against the Romans. Between 539 and 56s Lazica was the scene of the celebrated struggle between Byzantium under Justinian and Persia under Khusraw I Anüshlewan.

According to Procopius, who accompanied Belisarius on his expeditions, the Laz occupied both banks of the Phasis, but their towns (Archaeopolis, Sebastopolis, Pitius, Skanda, Sarapanis, Rhodopolis, Mochoresis) all lay to the north of the river, while on the left bank, which was desert land, the lands of the Laz only stretched for a day's march to the south. Nearer to Trebizond were the "Roman Pontics", which only means that the inhabitants direct subjects the Roman emperor and not of the Laz kings; from the ethnic point of view, the "Roman Pontics" could not have been different from the Laz. This strip of shore continued longest to shelter the remnants of the Laz.

In 1204 with the aid of troops lent by queen Thamar of Georgia, Alexis Comnenus founded the empire of Trebizond, the history of which is very closely connected with that of the southern Caucasus. Nicephoros (v. 7) says that the founder of the dynasty had seized "the lands of Colchis and of the Lazes". In 1282 John Comnenus received the title of "Emperor of the East, of Ivoria and of the lands beyond the sea". In 1341 the princess Anna Anakhutlu ascended the throne with the help of the Laz. The lands directly under the authority of the emperors of Trebizond seem to have extended as far as Makriali, while Gonia was under m local dynasty (cf. the Chronicle of Panaretes, under the year 1376).

In 865/r46r the Ottoman Sultan Mehemmed II conquered Trebizond, and as a result the Laz into contact with Islam, which became their religion in the form of the Shāfi'l madhkab. The stages of their conversion are still unknown. The fact is that, even in the central regions of Georgia (Akhaltsikhe), Islam to have gained ground gradually from the 13th century onwards (N. Marr, in Bull. of the Acad. of St. Petersburg [1917], 415-46, 478-306). In azhitata Trebizond, with Batum, was made a

In 926/1519 Trebizond, with Batum, was made a separate eyālat. According to Ewliyā Čelebi, who went through this region in 1050/1640, the five sanājaks of the eyālat were: Dianikha (Dianikk = Samsun?), Trebizond, Giiniya (Gonla) and Lower and Upper Batum. The modern Lazistān was governed from Gonia, for among the kadi's of this fortress we find Atina, Sumla, Witče/Biče (= Witse) and Arkhawi

(Ewliya and the version of the Dithan-numa in Fallmerayer, Original-Fragments, in Abh. d. Bayer. Akad. [1846]). Hādidit Khalifa and Ewliya Celebi, deceived by the similarity in sound of Caucasian names (as also was Vivien de St. Martin), proposed theory of the identity of the name Lezgi and Laz. Ewliya calls Trebizond the "former Lezgi wilayat". Hadidil Khalifa, after enumerating the peoples of the district of Lezgi as Mingrelians (Megril), Georgiaus, Abkhaz (Abaza), Čerkes and Laz, adds that the latter are those who live nearest to Trebizond. To the south-east of Trebizond in the Cepni mountains he mentions the Turks who "worship as their God (ma'bad) the Shah of Persia (i.e. are extreme Shiffs) and are associated (mushtarik) with the Laz". Hādidjī Khalifa and Ewliyā do not agree on the number of the fiels of Trebizond; Ewliya only says that the value of the evalue has depreciated through the unruliness of many of its 4x mahiyes (Dithan-##ma, 429; Ewliya, ii, 81, 83-5).

The first serious blow to the feudal independence of the derebey of Lazistan was only struck at the beginning of the 19th century by the Ottoman Pasha of Trebizond; but Koch, who visited the country after his expedition, still found most of the hereditary derebeys in power, although shorn of some of their liberties. He counted fifteen of them; Atina (two). Bulep, Artashin, Witse, Kapiste, Arkhawe, Kisse, Khopa, Makria (Makriali), Gonia, Batum, Maradit (Maradidi i), Perlewan and Cat. The lands of the three latter lay, however, on the Corokh behind the mountains separating this valley from the river of Lazistan in the strict sense. On the other hand, among the derebeys of Lazistan was the lord of Hamshin, i.e. of the upper valleys of Kalopotamos and of Fortuna, inhabited by Muslim Armenians. According to the Armenian historian Levond, tr. Chahnazarian, Paris 1826, 162, the latter with their chief Hamam of the Amatuni family had settled in the district in the time of Constantine VI (780-97) (the old Tambur was given the name Hamshin < Hamamshen, "built by Hamam"]. It is evidently this region that Clavijo (1403-6), ed. Sreznewski, St. Petersburg 1881, 383, calls "tierra de Arraquiel". He adds that the people, dissatisfied with their king Avraquiel (Arakel?), submitted to the Muslim ruler of Ispir. The Hamshin are now Muslims, and only those of Khopa have not forgotten Armenian, A Hamshin lexicon was published by Kipshidze.

With the institution of the wildyels, the sandiak of Lazistan became part of the wilayet of Trebizond. Its capital was at first Batum but, after the Russian occupation of Batum in 1878, the administration of the sandiak was transferred to Rize (Rhizaion), detached for this purpose from the old contral sandjak of Trebizond. That part of Lazistan lying to the west of the Ottoman-Russian frontier occupied a strip of coast 100 miles long and 15 to 20 miles broad. The hada's of the sandiak were: Khopa, Atina and Rize, subdivided again into a nahiyes (Sâml-Bey, Kamās al-a'lam, v, 3966). Cuinet, La Turquie d'Asie, i, 118-21, mentions Of as a fourth hadd' and gives ■ (7) ndhiyes (Hamshin, Karadere, Mapawri, Waki, Kura-yi sab'a, Witse, Arkhawi). In 1880 there were in the sandjak 364 inhabited places with 138,467 juhabitants, of whom 689 were Orthodox Greeks and the rest Muslims (Laz, Turkicised Laz, Turks and "Hamshin"). The number of true Laz cannot be more than half the total population.

The term Laz is used in the west of Turkey to designate generally the people of the country round the south-east of the Black Sea, but in reality the people calling themselves by this name and speaking the Laz language now live in the two kadā's, modern iles: Khopa (between Kopmush and Gurup) and Atina (between Gurup and Komer). Laz is spoken in 64 of the 69 villages of the kadā' or iles of Atina. To these should be added the very few Laz who used to live in Russian territory to the south of Batum. These Laz were incorporated in Turkey by virtue of the Turco-Soviet treaty of 16 March 1921, which moved the Turkish frontier to Sarp (to the south of the month of the Corolch). Rize and Batum are now outside the Laz country proper.

Due to its remoteness and to its proximity to the Russian frontier, Lazistan has only been marginally affected by the modernisation of Turkey in recent years. Communications are poor, and roads largely unmade. The ancient port of Hope, which is the end of the line for passenger and mail steamers from Istanbul, has been equipped with a modern harbour which includes two massive artificial moles. At Sarp, which is only about to miles from the important Soviet port of Batum, there is a flourishing tea factory surrounded by the highly-productive plantations of this bush.

The Laz have traditionally been regarded as very conservative in their Islamic religion, and the old Turkish shadow theatre (Karagöz [q.v.]) and popular theatre {Orta oyunu [q.v.]} often portrayed the Laz as slow-witted rustics; a Turkish proverb stated that "a Muslim does not eat Laz jelly", Lazlarin termonu müsülman yemes onu (termoni < Greek θέρηος). In fact, despite a long-established reputation for brigandage and for smuggling goods across the Turco-Russian frontier, the modern Laz are highly intelligent. They are skilled tillers of the soil, and were in the past often to be found in the towns of eastern Turkey as gardiners. Today they are to be found in towns all over Turkey in their traditional calling of bakers and pastrycooks; before the First World War many Laz went to Russia to work - bakers, and often returned with Russian wives who became converts to Islam. They are shrewd and enterprising businessmen, and have secured a large portion of the real estate market in Istanbul. When modern educational opportunities are available to them, they readily respond to this stimulus. They are also excellent sailors, and form a large proportion of the crews of many Turkish vessels.

2. Language. The Laz language is closely connected with Mingrelian (which is a sister language of Georgian), but N. Y. Marr found in it sufficient peculiarities to consider it a Mingrelian language rather than a dialect. In the Lazo-Mingrelian group he believed that he could find resemblances to the more Indo-European elements in old Armenian (Grabar). There are two Laz languages, castern, and western with smaller subdivisions (the language of the Ckhaia). Laz is very full of Turkish words. It has no written literature, but there are local poets (Rashld Hilmi, Pehliwan oghlu, etc.). The Laz are forgetting their own language, which is being replaced by the Turkish patois of Trebizond (cf. Pisarev in Zapiski VOIRAO [1901], xili, 173-201), in which the harmony of the vowels is much neglected (cf. a specimen in Marr, Teksti i easiskaniya, St. Potersburg, vii, 55).

The Georgians call the Laz C^can, but the Laz do not know this name. "C̄^can" is evidently the original of the Greek name Sannoi/Tzannoi, and it survives in the official name of the sangiak of Samsun (Djanlk). From the historical point of view, the separation of the Laz and C̄^can seems to have taken place, in spire

of the close relationship between the two of them. In the time of Arrian, the Sannoi were the immediate neighbours of Trebizond. In an obscure passage in this author (cf. the perplexed commentary of C. Müller, in Geogr. gracci minores, ad Arriani Peripl., 8), he places on the river of the frontier between the Colchians (Laz?) and the fluctvetory (?). Koch mentions the interesting fact that the people of Of speak "language of their own", and according to Marr. the people of Khoshnishin (near Atina) speak an incomprehensible language. Procopius places the "Sannoi who are now called the Trannoi" on the area adjoining the mountains separating Corokli from the me (the Parayadres range, the name of which survives in the modern Parkhar/Balkhar). Marr's researches showed that the C'an (Tzannoi) had at first occupied a larger area, including the basin of the Corokh and its tributaries on the right bank, from which they temporarily displaced by the Armenians and finally by the Georgians (K'art'ii). The chronicles of Trebizond continue to distinguish the Laz from the Tzianids (ζιανίδες). The latter in alliance with the Muslims attacked the possessions of Trebisond in 1348, and in 1377 were punished by the Emperor. At this period the Trianids must have been in the southwest of Trebizond (besides, the sandjak of Dianlk is to the west of this port). Thus the Georgian application of the name Can to the Laz may be explained by the confusion of the two tribes one of whom (the true C'an living to the south and west of the Laz) was ultimately thrust to the west of Trebizond.

(V. MINORSKY-[D. M. LANG]) LAZARUS, the name in the Gospels of (t) the poor man who finds compensation in Abraham's bosom for the misery of this world (Luke, xvi, 19-31); and (2) the dead man whom Jesus raises to life John, xi). The Kur'an mentions neither the one nor the other, but among the miracles with which it credits Jesus is included the raising from the dead (III, 43/49). Muslim legend with its fondness for the miracle of resurrection is fond of telling of the dead whom Jesus revives, but rarely mentions Lazarus. Al-Tabarl in his Ta'rikh talks of these miracles in general. According to him, Ham b. Nuh is revived by Jesus (i. 187). Al-Kisa'l only mentions Sam son of Nub amongst those restored m life by Jesus. Al-Tha laht relates, closely following St. John's Gospel: "al-'Azir died, his sister sent to inform Jesus, Jesus three (in the Gospel, four) days after his death, went with his sister to the tomb in the rock and caused al-'Azir to arise; children were born to him'. In Ibn al-Athly the resurrected man is called "'Azir", the of Elacar was taken for the article, ■ in al-Yasac (Elisha) and Alexander (al-Iskandar) or in Azar, the father of Abraham in the Kurlan, whose name Fraenkel derives from Eliezer. In Ibn al-Athly we find Muslim legend endeavouring to increase the miracle; Jesus raises not only Azir (Lazarus) but also his wife (children are born to them), and Sam (son of Nab), the prophet Uzayr and Yahya b. Zakariyya (John the Baptist).

Fraenkel, in ZDMC, lvi (1902) 72-3; J. Horovitz, in Hebrew Union College Annual, ii (1925), 157, 161; idem, Koranische L'intersuchungen, Berlin 1926, 12, 85, 86. (B. Hatten)

LEBANON [see LUBNAN]

LEBARAN, the name generally used in Indonesta for the 'ld al-Fitr [q.v.], originally means "end" or "close", in this case specifically the and of the fast (Indonesian prass). Combining it with the Javanese word gardbig ("procession"), people in Java also use the term gardbig phassa, the court festival at the end II the fast. Ignoring the original meaning of the word Hibaran, the expression libraran kaji is sometimes used for the 'ld al-Adbi [q.v.], the "major festival" according to Islamic law.

Just in other Islamic countries, the festival after the month of fasting is also celebrated in Indo-

nesia as the greatest festival of the year. The way of celebrating it does not differ greatly from other countries [see 'In and 'In al-MITA]. An exception must be made for the principalities of Central Java, where this festival has a special character because of its connection with the court and the influence of elements from pre-Islamic Hindu culture. For a description of the background and meaning of the ceremonials and practices surrounding the gardble phase in Yogyakarta, the reader is referred to the literature mentioned below.

As mesult of Islamic reformism, as well as the independence of Indonesia (with the Ministry of Religious Affairs trying to influence religious developments), Muslims have been encouraged to participate in Islamic observances in conformity with Islamic law, whereas commonials and practices such as those connected with the gardidge in Yogyakarta are relegated to the sphere of custom and folklore.

Bibliography: Besides the passages on Liberan in the books by Juyaboll and Saouck Hurgonje mentioned in the bibliography to 'To, mention must be made of two monographs on the festivals in Yogyakarta, namely J. Grodeman, De garthég's to Ngajogyakarta, The Hague 1895, and R. Soedjono Tirtekoesoemo, the Garchegs in het Sullaneat Jogiakarta, Jogiakarta 1931.

(B. J. BOLAND)

EEFF, an Arabic term used in the Berber-speaking regions of central and southern Morocco (a different term is used in a similar way in Berberophone regions of northern Morocco, and the term soff appears to be im equivalent in Knbylia) to denote a kind of political alliance or party.

The term or the notion acquires its importance, however, from its prominence in the literature on the social and political organisation of the Berbers, notably in the work of R. Montagne, who extended it to the totality of North African, and eventually also to Middle Eastern societies, including even urban and minority ones; thus he later claimed to find similar institutions amongst urban Jewish communities in Morocco, and also in Arabia.

In Montagne's hands, the word in effect became a technical term of political analysis, though with the definite suggestion that the theory formulated by means of the leff (lieff in Berber) or by an equivalent was already present in the minds of, and above all put in practice by, the indigenous users of that word. According to this theory, and to the associated explication of the indigenous significance of the term, leffs were alliances with the following properties. They were very stable over generations. The units which entered into them were themselves communities, whether genealogically or territorially defined. They were binary; in a given region there would be two and only two such leffs. They were invoked, like military alliances, when violent conflict occurred: members of the same leff were expected to give support to each other, when any one of them became involved in conflict with opponents from the other leff. These alliances were hereditary, and transitive, in the ____ that membership of the same leff by A and B, and by B and C, implied that A and C were likewise of the same alliance. Finally, these Ifuf were supposed to be arranged in a kind of chessboard pattern on the map; a community (say a village or valley) would belong to an alliance other than that of its immediate neighbours but the same as that of its neighboars-but-one.

The significance of the notion of leff arises above all from the great importance of the theory based on it. The problem which this theory attempts to solve is that of the nature of the maintenance of order in areas in which central government is absent or ineffective, notably in the bldd es-siba, the dissident regions of pre-rolonial Morocco (see MARKEEN). though also in other similar areas. The leff theory maintains that the crucial institution for furthering the maintenance of order in such conditions was, precisely, the balanced opposition of two moieties, deployed chequerwise over the countryside. This theory has a certain affinity to that of "segmentary opposition" - developed by E. Evans-Pritchard (and foreshadowed by E. Durkheim, partly on the basis of Algerian material), but differs from it in various important respects. Segmentation, m understood by Evans-Pritchard, was not necessarily binary, but it was of its essence that it operated at a number of levels of size: the "opposition" of "balanced" sogments operated simultaneously between, say, intravillage lineages, entire villages, and clusters of villages grouped as "clans", etc. Conflict at one level did not preclude co-operation at another. By contrast, the leffs of Montagne were, in any one region, articulated at one level of size only. In Montagne's hands, the theory was combined with another important thesis; that this balance-of-moieties mechanism occasionally broke down, and was replaced by ephemeral tyrannies such as those of the "great caids" of the Moroccan South, but that these temporary crystallisations of personal power in turn gave way to a re-establishment of the original system, in a kind of cyclical pattern.

The theory of the leffs has been subjected to various criticisms, both empirical and theoretical. Subsequent researchers have not always found them even in areas where Montagne claimed they were most at home (e.g. J. Berque), m have doubted whether they in fact contribute to the maintenance of peace (e.g. A. Adam); or they have pointed out that the problem posed, that of order-in-anarchy, is only solved by the theory for those units which are of the size at which these leagues are articulated, whereas in fact the problem also arises at all other levels of size at which conflict is liable to occur (and at those other levels, the theory offers no solution). There is also to suppose that in regions where groups were less stable, and territorial units less well-defined than in the Western High Atlas and Anti-Atlas which inspired Montague, 10ffs more fluid and opportunistic than his work would suggest. Nevertheless, his work, which is heavily centred on the notion of leff, remains one of the high points of the political sociology of North Africa.

LEFKOSHA, Grk. Leukosia, the town of Nicosia in Cyprus [see guerus].

The town was under joint Arab-Byzantine rule from 688 A.D. to 965 when Nicephorus Phocas seized it {R. J. H. Jenkins, Cyprus between Bysantium and Islam, A.D. 688-965, in Studies presented to D. M. Robinson..., St. Louis 1953, ii, 1006-14}. The Venetians occupied it in 1489, 100 Ottomans in 1571, the British in 1878, annexing it in 1914. The town was sacked by Mamlůk forces of Sultan Barsbay in 1426. The Ottomans captured the town after a liftyday siege in 1570, after much suffering on both sides and thousands of casualites. There is a good account of this conquest in Türk silahlı kurrelleri tarihi. iii. Kibris seferi (1570-1572), T. C. Genelkurmay Harp Tarihi Başkanlığı Resmi Yayınları. Seri no. 2, Ankara 1971.

Western visitors to Lefkosha during the Ottoman period report the town in being severely underpopulated and devoid of evidence of its former wealth and luxury. They attributed that plight to the tyranny and extertions of Ottoman officials whom the Porte would not or could not control, to plague, virulent fevers, and hordes of locusts, and to the fatalism and lethargy of Muslim and eastern Christians. Few knew that the town had reached the peak of its wealth and population late in the Lusignan period. Never under the Venetians or the Ottomans did it regain that fame and spleadour, though both made sporadic efforts to revitalise and repopulate it.

By 1211 the Lusignan capital had become a firstclass town. W. von Oldenburg said "It has inhabitants without number, all very rich, whose houses in their interior adormnent and paintings closely resemble the houses of Antioch" (C. D. Cobham, Excerpta Cypria, 14). By the end of the 13th century the town had fallen behind Maghōsha [q.v.] - Famagusta in wealth and trade, although the simple Westphalian priest Ludolf (1350) saw Lefkosha = "another great city . . . in a fine open plain with an excellent climate", where lived the king, bishops and prelates, princes and nobles, barons and knights who in Cyprus "are the richest in the world" (Cobham, 20; Archives de l'Orient Latin, ii, 336. Cf. Jacobus de Verona [1335] in Cobham, 17; Revue de POrient Latin, iii [1895], 176 f.). The pilgrim Martoni (1304) judged the town larger than Aversa, with many gardens and orchards, some six acres in size (Cobham, 26; ROL, iii [1895], 634).

In 1435 the astute Pero Tafur attested that Lefkosha again surpassed Maghosha: "This is the greatest and most healthy city of the kingdom where the kings and all the lords of the realm always live" (Cobham, 31; Andanças é Viajes ..., Pt. 1, 67, in Coleccion de Libros Espanoles raros o curiosos, viii, Madrid 1874). Lefkösha had become the trading emporium of the eastern Mediterranean; the Dominican monk Felix Faber (1483) admired the "... great city . . . surrounded by fertile and pleasant hills . . . Here are merchants from every part of the world, Christians and infidels. There are stores, great and precious, for the aromatic herbs of the East are brought here raw, and are prepared by the perfurmer's art" (Cobham, 42f.; Evagatorium in Terrae Sanctae, ed. C. D. Hassler, in Bibliothek des Literarischen Vereins in Stuttgart, iv [1849], 230).

The Venetian patrician Fra Francesco Suriano (1484) — the town, "twice as large as Perugia", with palaces, houses, and churches, destroyed by a disastrous earthquake of 1480 (Cobham, 48; 11 Trattato di Terra Santa, ed. P. G. Golubovich, Milan 1900, 219 n.), but by then it had passed its economic

and demographic peak; to Peter Mésenge (1507) only a quarter of the town appeared occupied (C. Enfart, L'ast gothique, ii, 523).

Savorgman (1562) found empty tracts and dusty disordered streets with no good houses (Sir George Hill, A history of Cyprus, iii, 811, 844 ff., 851 f.). However, the nobles had not given up their prerogatives, as the pilgrim Fureri (1566) perceived in that town, "of size and beauty", lived the French nobles who "... keep their vassals, who are called Parici, in the state of slaves... The nobles may greatly given to amusements, especially hunting and hawking... [with] solemn games and banquets with great cost and splendour" (Cobham, 78-9; Reis-Beschreibung, Nuremburg 1646, 302).

The Lusignaps had fortified their capital expertly. Early in the 13th century, walls 4, 7 or 9 miles in circuit were built high to resist attacks in the style of Crusader warfare. In 1567, to resist the heavy pounding of Ottoman cannon, the Venetians had large sections of the walls dismantled and rebuilt them thicker and lower, with a circumference of only three miles, yet apparently still large enough to accommodate the existing population. A deep most was excavated around the circular walls; all structures outside the new walls were methodically levelled, the rubble being used as fill for the new walls. Writing in 1572 just after the Turkish conquest, the priest Étienne de Lusignan celebrated a town he remembered with 250 to 300 churches, 80 of which had been destroyed completely when two-thirds of the town was levelled. "In this city lived all the nobility of Cyprus, Barons, Knights and Feudatories, nearly of whom died in this affair (i.e. its fall), with townsielk to the number of twenty thousand: all men devoted to the service of God most High, and of

Local agriculture and commerce, as well as local and international trade, boosted the economy of the town. In good times it produced a marketable surplus of cotton, wool, and silk, which were sold raw or processed or manufactured into a variety of cloths. As long as Cyprus remained close to the terminals of the silk and spice trades as the easternmost outpost of the western Christian world in the Mediterranean, Lefkösha would remain a centre of trade. Nevertheless, the town could not escape the changes in the international socio-economic order which saw the Mediterranean world gradually lose its commercial and cultural pre-eminence to northwestern Europe.

their sovereign. The remnant of the souls ... were all ruade slaves." (Cobham, 120-1; Description, 32,

262).

Foreacchi [1576] reported that great quantities of camlet and cotton cloth were made in that "very pleasantly and beautifully situated" town "healthfully and pleasantly" supplied with running water. The candets were good and the "cotton woiles" "the best of the Orient", according to Sandys (z610) (Cobham, 164-5; L'isole..., Venice 1572, 22 %; Padua 1620. Cobham, 208; A relation of E journey, London 1615, 220).

Pococke [1738], a careful observer of Cyprus, found the trade of Leikosha still substantial: "There is a great manufacture of cotton stuffs, particularly of very fine dimities, and also half sattins of a very coarse sort: they have here the best water in Cyprus...", Cottons were sold to Holland, England, Venice and Livomo and "a great quantity of yellow, red, and black Turkey leather" to Istanbul (Cobham, 260, 268-9; Plukerton, ed., A general collection of ... voyages, Lundon 1811, x, 582-3). According to

Mariti, the covered market (bedeston), the former church of St. George next to Aya Sofya, was the gathering place of the chief Turkish, Greek and Armenian merchants, of whom the last were the tichest. At large bazaars and khāns local villagers well as townspeople sold the cotton that they had soun; dyeling skins and stamping cloth were other major industries [Travels in the Island of Cyprus, tr. C. D. Cobham, 42-5). W. M. Leake (1800) was completely negative: "The flat roofs, trellised windows, and light balconies III the better order of houses, situated in they are in the midst of gardens of oranges and lemons, give together with the fortifications, a respectable and picturesque appearance . . . at a little distance, but, upon entering it, the narrow dirty streets, and miserable habitations of the lower classes, make a very different impression upon the traveller; and the sickly countenances of the inhabitants sufficiently show the unhealthiness of the climato"; but W. Turner (1815) reported that every house had a well-cultivated garden with fig, olive, mulberry, orange, Ismon and pomegranate trees; all the houses were of mud and the streets, though clean, were unpayed (Cobham, 339, 436-7).

Since the Lusignan period, Aya Sofya, as cathedral and mosque, had been the centre of the city, with the main basaars adjacent. In the 19th century the entire road from Tahta Kale and Baf gate to Baghosha gate was lined with merchants' booths; the Friday basaar of women has existed at least since then in the 1870s there were 25 quarters inside the walls, 14 Muslim, I Greek Orthodox, 1 Armenian, 1 Latin and I mixed (Bazar and Phaneromene) (Jeffery,

Cyprus monuments, 32-3, with map).

Lefkosha, located near the centre of the island, lies on the Pediyas, the longest and largest seasonal "river" in Cyprus, only 12 miles from the perennial springs of Deghirmenlik, the largest on the island, from where water is easily brought by aqueduct. The immediate binterland is fertile grainland; its villages produced puris adequate for the town's needs except when drought or, more frequently, hordes of locusts appeared. The Lusignan rulers built summer palaces in the northern mountains for relief from the intense summer heat; many Latin nobles took refuge in the Trodos mountains, just as the British colonial government did later. Spring and fall are long and pleasant, while winter is short and mild. Lefkösha was by no means free of the malaria and plague which long decimated the island's population, but those diseases were less severe there than along the marshy littoral. Stochove (1631) said the town had the best air in Cyprus, although Turner (1815) observed that even there "fevers" occurred constantly in the summer (Cobham, 216, 430, 436). According to J. Bramsen (1814), the fever was June to October (Letters of a Prussian traveller ..., London 1818, 304).

In 1571 Lefkösha, with a kāşī of the third class, made the capital of a large beglerbegilik which included all of Cyprus and the Anatolian sangiass of 'Alā'iyye, Ičel, Silifke, Tarsūs, and SIs on the south side of the Taurus Originally, Tarābulus al-Shām was included too. Despite several changes in administrative organisation which greatly reduced the importance of the province, Lefkösha always remained the administrative centre. Foreign consuls lived at Laraaka or its port Tuzia, where they served foreign merchants at a comfortable distance from the paska.

A study of the Lefkösha judicial records (sidjill) surviving from the period 1580-1640 reveals some urban activities. Lists of official prices (north) indicate a busy market in comestibles. The rich and varied agricultural produce of Cyprus found its way the bazaars of Lefhôsha, including yoghurt, cheese, meats, grapes and other fruits, and olives. Cotton cloth and raw cotton were the leading goods in commercial transactions, but wool and woollen cloth were important too. Lending and credit and an integral part of the town's economic life, both for Muslims and for the thimmis (i.e. Greek Orthodox). In intercommunal credit, the Muslims were disproportionately the lenders. Interest was openly charged (kard-i hasan, or kard-i shert), although bankruptey (iffas) seems to have been uncommon. Muslims and dhimmis interacted frequently. They worked in the same quarters, bought and sold land and even houses from one another, and made business partnerships. About one-third of the judicial cases involved dhimmis, and 20% of the cases were intercommunal. Conversion to Islam was very common, probably increasing in frequency between 1580 and 1600 but then falling off considerably; there is no evidence of wholesale conversion. Converts had to declare their conversion publicly in court. Besides the Greek Orthodox majority, a haudful of Armenian Gregorians and of Maronites had churches, and there was a very small community of Jews. Women used the court very frequently (almost a quarter of all cases), where their property, inheritance, and domestic claims were apparently handled like those of men. More than 20% of the property mentioned belonged to women.

Although Lefkösha has been the residence of the autocephalous archbishops of Cyprus since the Lusignan period, the office has never been associated with a particular town. Ottoman rule relieved the Orthodox clergy from their long subordination to the Latin hierarchy (cf. R. Janin, art. Chypre, in Dictionnaire d'histoire et de géographie scollenssiques, xii, 791-819; J. Hackett, A history of the Orthodox Church

of Cyprus, London 1901.

Most estimates of the town's population between 1510 and 1550 range between 15,000 and 20,000 people (Hill, iii, 873). Visitors to Lefkösha during the Ottoman period often remarked about the population of the town. According to A. M. Graziani, 20,000 people were put to death in eight days of plundering when the town fell to the Ottomans; Porcacchi reported that all the people were "cut to pieces" and Sandys wrote of "an incredible slaughter" (Cobham, 170, 207). Dandini, who visited there in summer 1596 and spring 1597, estimated that the large, wellbuilt town had at least 30,000 inhabitants, of whom only 4,000 or 5,000 were Turks (Cohham, 182), J. Cotovicus (1597-8) reported the town full of ruins, Sandys (1610) "defected by the Turks"; for the latter, the town, once equal in beauty to the chief towns of Italy, is now balf-destroyed (Cobham, 195, 207), lo 1683 de Bruyn observed that the population was almost half-Greek (Cobham, 239; Reizen van Cornelis de Bruyn, Delit 1698, 371). Cyprianos gives a fairly official estimate of 755 Christian families for 1777 (Cobham, 366). In 1806 'All Bey estimated the town's population at less than 1,000 Turkish and 1,000 Greek families, although Lefkösha could easily hold 200,000 people within its walk (Cobham 393; Voyages, Paris 1814, ii, 82 ff.). J. M. Kinneir (1814) reported on the authority of the archbishop 2,000 Muslim families, 1,000 Greek Orthodox families, 40 Armenian, and 12 Maronite (Cobham, 417; Journey, London 1818, 190 ff.). An estimate of 12,000, including 8,000 Turks, 3,700 Greek Orthodox and 50 Armenians was attributed to the governor Tal'at Efendi in 1841 (L. Lacroix, L'Univers. Histoire et description des tous les peuples. Îles de la Grèce, Paris 1853, 88). A census just hefore the Island was handed over to the British in 1876 reportedly found 10,879 people, of whom 5,628 (52%) were Muslims (Correspondence respecting the Island of Cyprus. No. 3. Sir G. Wolseley to Marquess of Salisbury, 1879).

A census held in the third year of British rule (4 April 1881) showed the population of Lefkösha at 11,513, ■ whom 5,653 were Greek Orthodox (49%), 5,397 Muslims (47%), tot Roman Catholics, 28 Maronites, 88 Armenian Gregorians, Church of England and Protestants, and 22 Jews. Although the population of the town had increased 9% to 12,515 in 1891, the number of Muslims declined slightly to 5,352, 43% of the population (Cyprus Gazette, 16 October 1891). A census of 1901 shows a population of 14,752, a 28% increase over 1881. The Muslims numbered 6,013, up only 11% in two decades, while the Greek Orthodox had increased 41% to 8,739 (Cyprus Gazette, 26 April 1901; 30 August 1901). Almost 40% of the population of the six leading towns lived in Lefkosha. The town contained only 6% of the population of the island, although 12% of the Muslims lived there.

Initially, British policy in Cyprus was to presarve the existing Ottoman polltical, social and economic systems, except in a few specific areas of public health; extensive official English translations of recent Ottoman wakfiyyes and cadastral records were prepared. In 1893, £662 of the £1,510in municipal revenues from Lefkösha were from slaughter house fees, £35x from market tolls and rents, and £240 from weighing and measuring taxes. The municipality established in 1884 even had a "censor of markets". Awkaf still provided the water supply: 300 measures from the Arab Ahmet and 170 measures from the Siliktar aqueduct were sold annually, while another 100 measures were donated to mosques, churthes and schools (Cyprus Blue Book, 4 January 1895. See also Statiste laws of Cyprus, 1878-1923, 633-41, "Nicosia water supply"). Eleven Muslim schools, supported by mehaf, mosque funds and grants from the Porte, had 574 students in 1889-90 and 633 students in 1892-3, about 23% of them girls (Cyprus Blue Book, year 1889-90). Cotton and silk remained the major industries. Nearly every village in the district had cotton looms, and many houses in the larger villages had hand looms for manufacturing cotton and silk stuffs. In 1889 the town also had a tannery, 3 tobacco factories, a steam-powered flour and cotton mills, calico printers, copper, silver, and goldsmiths, and 5 distilleries (Cyprus Blue Book, 1889-90, 2892-3). The proposed railway between Lefkösha and Larnaka was never attempted, but in 1906 a railway connected Lefkosha and the new harbour of Maghōsha

In 1946, 10,330 of the 34,485 inhabitants were Mulaims, including 9,314 of 24,967 within the walls and 1,016 of 9,318 outside them. Besides 20,768 Greek Orthodox, there were 2,252 Armenians, 160 Maronites and 30 Jews; each of the 24 quarters was mixed.

Monuments. The Venetians levelled much of the Lusignan town in rebuilding the walls. Although the town walls are essentially the creation of the Venetians, the Ottomans repaired them extensively in the 1570s. Virtually all the monumental buildings date from the britiant Lusignan period; neither the Venetians nor the Ottomans added religious or other public buildings, for many already stood empty after the population began to decime (these are discussed with illustrations by C. Enlart, 67-187,

and pls. 1-12). Cf. G. Jeffery, Description, 18-100, and Cyprus monuments. No. 7, Historical and architectural buildings. The mosques of Nicosia, Nicosia 1935: F. Cuhadaroğlu and F. Oğuz, Turkish bistorical monuments in Cyprus, in Rólôve ve Restorasyan Dergisi, II (1975), 1-76; Oktay Aslanapa, Kibris'da türk eserleri; Cevdet Çağdaş, Kıbrısta türk denri esceleri, Lefkoşa 1965. The tinest Ottoman structions are the Mawlawl teats inside Girne gate (pre-tōoo), the Büyük Khān (pre-tōoo), and the small 'Arab Ahmed Pasha mosque. Many aspects of the Ottoman town are preserved within the walls of the Turkish quarter: narrow streets, overhanging balconies, stone-waited houses and gardens, and bazaars. A very few stone-cut houses, or their foundations, survive from the Venetian period, - do several fine houses from the Ottoman period. Sadly, there is little appreciation of this cultural heritage, and they are gradually being eliminated.

Until this century, the town has been confined within the walls. The main buildings of the Ottoman period, like the Buydk Khān and the no-called Kumārdilar Khān, date from early in the Ottoman occupation. Occupance of the town has been a conservative one, with few changes in the main centres and memory preservation of old quarter names and loca-

tions from earliest times.

LEGACY [see minigh]

LEGEND [see HIKAYA, KIŞAŞ AL-AMBIYA", KIŞŞA] LEGISLATION [see TASHRIT]

LEH (Jor 식), the ancient Ottoman Turkish term for the Poles and Poland (from Leck, Polish tribal name later extended to comprise all the nation, with the original nasal ϵ ousted by ϵ , as in Byz. Acyot "the Poles" and Acyta "Poland". In Turkish, Poland was also called Leh wildyets (memleketi), the Poles Lehlu and the Polish language lehdie. From the 12th/18th century, the Turks also called the country Lahistan (Pers. Lahistan, from) which is derived Pers. aki-i Lahistan "Poles" and zabān-i Lakistāni "the Polish language"). In the hitherto unpublished Crimean Tatar documents from the late roth/r6th century, the word for Poland is Lath (the Ukrainian-Russian form of the Polish Lock) or i-Lakh (خلاع and المحرة): Archiwum Glowno Akt Dawynch, Warsaw, Arch. Koronne, Dz. tatarski, kartony 60, 65). The term Körál, which is attested in the same sources (کورل or کررال; from the Ukr.-Rus. korol "king"), means "the kingdom"-Poland, including her southeastern provinces, i.e. Ruthenia and the Ukraine قرول Korol = it occurs in Ewliya Celebi, Seyāķat-nāme, vi, 366, 368 et passim, wherever the lands, the Ruthenians-Ukrainians and their language are mentioned). (On Koral, see also E. Schütz, Eine armenische Chronik von Kaffa aus der ersten Halfte des 17. Juhrhunderts, in AOrH, unix [1975], 164-5; this term is see so clear there as in the said documents.] The mediaeval Islamic authors called Poland by names derived from Lat. Polonia: Ar. Bulūniya (T. Lewicki, Polska i kraje zgziednie w świetle "K sięgi Rogera" geografa arabskiego z XII w. al-Idrisiego, i, Cracow 1945, 125 and 1); Pers. Poloniya (M. D'Ohsson, Les peuples du Caucase ou poyage d'Abou el-Cassim, Paris 1828, 269). The latter name - equally used by the Ottoman author Remmál Khödja (d. 975/1567-8) in his Ta'rikh-i Sákib Girey khán (A. Muchliński, Zdanie sprawy o Tatarack Litewskich . . ., Vilna 1858, 9). Since the 13th/19th century, the terms Polonya (Ital. Polonia). Polonyali and Polonya dili are in use in Turkey. In modern Arabic, Poland is called Billanda, Bullinda (Eng. Poland) and Bülüniya (Ital. Polonis), the Poles Bülüni and Polish al-lugha al-bülandiyya (albūlandiyya, al-būlūniyya).

Foland was known to Islamic peoples from the account written by Ibrahlm b. Ya'kūb (if not earlier) about the Stavonic lands (354/965-6), which, however, contained no reference to the name of the country, mentioning only the Polish ruler Manage (from Pol. Micsako). Poland has been long since connected with Islamic countries by animated trade relations, the numerous early Islamic coins found

now on her territory bearing an undeniable witness to the fact.

With regard to political relations between the Polish-Lithuauian monarchy and the world of Islam, they appear to have been established first with the break-up of the Golden Horde and the khanates which arose from their downfall (see BATU'1ps). After a period of peaceful and friendly contacts with the Crimean khan Hadidi Girey I and his successor Nür Dewlet, the long years under Mengli Girey I were period of unrest and strife. The khan vacillated between support for Poland-Lithuania and for Muscovy, which challenged the Jagellons in disputes over the regions of western Russia, Bélorussia and the Ukraine. Poland-Lithuania emerged successfully from this period, but it under an obligation to the khānate to pay specified sums in return for military aid against Muscovy (see K. Pulaski, Slosunki a Menelli Girejem chanem Tatarów perekobskich. 1469-1515, Warsaw 1881; L. Kolankowski, Problem Krymu w dziejach jagiellońskick, in Kwartalnik Historycany, alix [1953], 279-300). But the Tatar attacks into the Polish region were endless. Invasions by the Tatar Cossacks (Tatar kazaklari, bisim kazaklar of the Crimean sources; drew revenge from the Zaporozhians (Ozi/Ozii kazakiari). The Crimea, which since 1475 had been a vassal state of the Porte, was often used in the political battles of the Porte against the Poles; the Tatars took part in Turkish invasions of Poland in 1498, 1521-4, 1620, etc. In 1628 khān Mehmed Girey III and kalgha Shāhin Girey Sultan took an eath of allegiance to Peland for her help in their struggle against the Porte and hhān Djanibek Girey. The next year, however, Poland's striving to gain sway over the Crimea finally failed. The refusal of king Władysław IV to give the "presents" to the Crimea because of the Tatar violations of the peace led Islam Girey HI into an alliance with the Zaporozhians and to the Crimean-Tatar-Ukrainian united war against Poland, 1648-54 (Hairy Mehmed Senai z Krymu, Historia chana Islam Gereja III, ed. Z. Abrahamowicz, Warsaw 1971). The treaty between B. Chmielnicki and Moscow in 1654 made the Tatars change their standpoint radically. With renewed Tatar support for Poland in her war in the Ukraine, Mohmed Girey IV was to undertake diplomatic intervention in Denmark in her favour after the Swedish invasion into Poland in 1653 (J. Matuz, Krimtatarische Uskunden im Reschsaronio zu Kopenhagen . . ., Freiburg 1976), and in 1656 his troops fought successfully in Poland against the Swedes. Pursuing them, the Tatars advanced in far as Eastern Prussia. These events are the historical roots of the "journey" narrated by Ewliya Calebl, op. cit., vi. 364-78, to Denmark, Sweden, etc., with 40,000 Crimean Tatars after the Turkish conquest of Uj var-Neuhäusel (Nové Zámky, in Slovakia) in 1663; there, he must have met we of the Tatar expedition against the Swedes fighting in Poland (see Ksigga podroty Ewliji Czelebiego, Wybór, Warsaw 1973, 193-208, 423-7-a collective work by several authors, foreword by J. Reychman, translation of the relevant text and commentary by Z. Abrahamowics). The Tatars took a part in the Turkish war against Poland in 1672, sometimes acting as mediators between Poland and Turkey. The plans of King John III Sobieski for a Polish-Russian war against the Crimea and for a joint division of the khanate proved impracticable. The danger presented by the Tsarist empire to Poland and the Crimea in the 12th/18th century reconciled the two countries once again.

LEH

Witold (ca. 1357-1430), Archduke of Lithuania, who played a prominent part in the domestic struggle which was going on within the Horde, then undergoing a process of disintegration, on his return in 1307 from expedition to the banks of the Don brought a large number of Tatar families and settled them in his land. This gave rise = a strong Tatar colonisation in Lithuania, since 1385 united with Poland, and on Polish territory as well [see LIPEA].

700

The diplomatic ties between Poland and the Ottoman Empire extend back to 1410. When King Ladislas III of Poland (I III Hungary) disregarded the warnings of his Polish advisers, the tragedy of the Battle of Varna (1444) ensued; it was to be a terrible event for Poland to remember, and a pointer to her future association with the Turks. By this time, she was no longer disposed to engage in elaborate plans for a papal-knperial attack on Islam; she was at peace with the Turks and had a good defence against the territorial ambitions of the hostile Hapsburgs. After the Turkish attack on Kaffa [see KEPE) and the khinate of the Crimea (1475) and the Turko-Tatar conquest of the Black Sea ports of Kilia and Akkerman (1484), which were wital to Poland, a ceasefire arranged between King Casimir IV Jagello and Sultan Bayezid II (22 March 1489). The Moldavian campaign of King John Albert (1497) and the subsequent Turko-Tatar attacks on Poland (1498) had shown that there was a military equilibrium between the two powers, and peace was again restored between them in 1499. Following the armistice of 1525 and that of 1528, Süleymän the Magnificent made in January 1533 ■ life-long peace treaty and alliance with King Sigismund I and his son Sigismund Augustus who, in 1529, was crowned as his father's successor. This treaty, which Sigismund Augustus had renewed in 1553 with the old sultan, in 1564 with Sultan Selim - the heir to the throne, and in 1568 had renewed with the Pādishāh Selim II, was the basis of relations between Poland and Turkey in the roth/r6th century. During this period, these relations were on the whole favourable, but not without certain difficulties (C. Backvis, La difficile coexistence pacifique ertes Polonais et Tuecs au XVIe siècle, in Mélanges d'islamologie dédiés à la mémoire de A. Abel, ii, Brussels 1975, 13-51). Peland did not concur with the insinuations made by Süleymän and his Ruthenian wife Khurrem Sultan [q.v.] against the Hapsburgs, and in 1369 Sigismund Augustus also rejected the Turkish plan for a Polish-Turkish alliance against Moscow. During the first two elections of kings after the death of the last Jagellon king, the Porte intervented vigorously to prevent the choice of = Hapsburg. Moreover, Süleymän already appeared to be favourably disposed to Poland when he heard the false news of the death of both Polish kings in (Z. Abrahamowicz, Katalog dokumentów 1535 turechick, Warsaw 1959, no. 39; K. Beydilli, Die polnischen Königswahlen und Interregnen von 1572 und 1576 im Lichte osmanischer Archivalien, Munich 1975). The Polish-Turkish War of 1620 (Poland was defeated at Cecora) and 1621 (the victory for Poland at Chocim [see EBOTIN]) was not only caused by Poland's attempt m force the Ottomans out of Moldavia but also by the strife stirred up by the excesses of the Tatars and Zaporozhians (R. Majewski, Greera. Roh 1620, Warsaw 1970). It ended with the peace of 2623. The self-willed assault on Kamieniec undertaken in 1533 by Abaza Mahmed Pasha [see ABAZA] did not lead to a deterioration of mutual relations. However, the borderland skirmishes

steadily grew in number. This even led King Ladislas IV to construe, beginning from 1645, plans for joint Polish and Venetian attack against Turkey, with the support of the Zaporozhians (W. Czermak, Plany wojny tureckiej Władysława IV, Cracow 1895). These plans did not come to be fulfilled, as Ladislas IV died in 1648, and the war of the Cossacks and Tatars against Poland broke out the same year. The Porte very much valued Poland's role in maintaining the balance of power in their struggle against the Hapsburgs, and in 1648, when Poland was defeated in the war with Islam Girey III and the Zaporozhiana, it intervened on Poland's side, thus provoking the anger of the Tatars (Abrahamowicz, Katalog ..., nos. 339-41; Senai, op. cit., fol. 25-26). In view of her agreements with Poland, the Porte also rather reluctant to adopt the plan suggested. by B. Chmislnicki of placing the Ukraine under the sultan's patronage, even though this plan seemed to promise the liberation of Turkish lands from the threat of Cossack attacks. The theory of an alliance of the Porte with the Hetman in 1648 (O. Pritsak, Das erste türkisch-ukrainische Bündnis (1648), in Oriens, vi [1953]) cannot be supported, considering the carefully-guarded attitude of the Turks towards him in 1651 (J. Rypka, Weitere Beitrage zur Korrespondenz der Hohen Pforte mit Bohdan Chmel'nyckyf, in ArO, ii, and Ahrahamowicz, Katalog . . ., no. 344). Even when in 1065/1655 Sultan Mehmed IV had taken the Cossacks formally under his patronage, he hastened to declare to King John Casimir that he nevertheless wished to maintain his good relations with Poland (A. N. Kurat and K. V. Zettersteen, Türkische Urkunden, Leipzig 1938, no. 1). In the years that followed, the period of the "Flood", Turkey lent Poland also considerable support against the threat 🖿 her by Carl X Gustavus 🚻 Sweden (1656) and George II Rákoczi (1657).

The balance power was first destroyed by the Grand Vizier Köprülüzäde Fädil Ahmed Pasha [see köprülü n] when, in 1669, he granted the Cossack Hetman P. Doroszenko, who since in revolt against Poland, the supreme authority the Pädishäh; as a result, the Grand Vizier directly attacked Poland in 1672. The splendour of his included the capture of Podolia, compelling Poland pay tribute, etc. But this faded quickly with the defeat of the Turks at Chocim in 1673 (J. Sobieski was still only Royal Chief Hetman) and then again at Zorawno in 1676 (Sobieski was then King; the attack was repelled, the tribute imposed in 1672 was repealed and it was never paid by Poland).

The Porte was now involved in a difficult was with Russia over the Ukraine. The manual of the Grand Vizier, Merzifonlu Kara Muştafā Pusha [q.v.], adopted an inflexible attitude to his next treaty with Poland (1678), and an additional threat to Poland came from the south in consequence of his 1682 alliance with E. Thököly. He had occasion to deplore his rash step when, at the battle for the relief of Vienna on 12 September 1683 and in the subsequent war in Hungary, the Polish king "was the first one to drive his horse against the Muslims and then to draw his sword" and "caused so much harm that it was he who gave the greatest help and support [for the Emperor Leopold I] and had many Muslims taken prisoner" i Diebedji Hasan Esiri, and eyewitness of the events of 1683, in TOEM, iii, 1016; in general, see Z. Wojcik, King John III of Poland and the Turkish aspect of his foreign policy, in Belleten, 2liv, no. 276 [1980]). The fruits of the victory of John III, the commander-in-chief of the allied Christian armies in this battle, fell to Austria alone, and the territory taken from Poland in 1672 was only restored by Porte in 1600.

The turning point in the relations between the two neighbours was the Treaty of Carlowitz [see garloveal. Poland, who had once been so proud of her epithet antemorale christianitatis-against Islam -- was now, in the face of the common threat of Russia, drawing nearer to Turkey, particularly after the partitioning of the country by Catherine II with the help of Austria and Prussia (W. Konopezyński, Polska a Turcja, 1683-1792, Warsaw 1936). A manifestation of the Turkish sympathies towards the Poles in this time can be found in the Sefaret-name-y: Fransa by Mehmed Emin Webid Pasha, the Porte's envoy to Napoleon I in 1807. Turkey never recognised the division of Poland, but offered Polish patriots continuing protection after the failure of their national uprising in 1831, and they supported Polish efforts to attack the empire of the Tsar from the south. The greatest Polish poet, A. Mickiewicz, had gone to Constantinople to organise the Polish Legion, and be died there in 1855. Countless Polish refugees performed all kinds of work there to further the modernisation and europeanisation of the country and of Ottoman society and the army, K. Borzeeki-Muştafă Djelâl al-Din Pasha was the first to rouse a spirit of national identity within the Ottomans [B. Lewis, The emergence of modern Turkey, Oxford 1901, 28, 339). S. Chlebowski, court painter to Sultan 'Abd al-'Aziz, painted a series of scenes from Ottoman history for the new Dolmabaghce Palace (A. Lewak, Deieje emigracji polskiej w Turcji (1832-1878), Warsaw 1935). Polish specialists and advisors even penetrated the intimate society of Kamal Pasha Atatürk. This resulted in friendly relations between the new Poland and the Turkish republic from its inception. In spite of its complicated political situation, Turkey gave Poland vital help during the Second World War. After the war, both countries developed their co-operation in economic and cultural fields. An active link between the two Is Polonezköyß, founded in 1835 by Prince Adam J. Czartoryski, and thereafter called Adampol in Polish. It is a colony of Folish immigrants on the Asiatic side of the Bosphorous near Istarbul, who still maintain their national character.

Venetian-Persian attempts to win over Poland to the idea of an anti-Turkish coalition in 1474 and 1475 faded under the careful direction of King Casimii IV (). Długosz, Historiae Polonicae libri XII., v, Cracow 1878, 601, 602, 626). Sigismund III Vasa. (2536-2632) also remained deaf to similar suggestions from Shah 'Abbas I; the dispute with Sweden and later with Muscovy was more important to him. The first delegation from the Shab led by Sir Anthony Sherley had not been, incidentally, allowed by the Tear Boris Godunov to enter Poland because of his hostile attitude to the king. Afterwards, in r6or, Sefer Muratowicz, an Armenian merchant from Warsaw, travelled to Käshan to buy carpets for the king (T. Mańkowski, Wyprawa po kobierce do Persji se cokte 1601, in RO, xviii [1951]). In doing so, he came into personal contact with 'Abbas I (see his travel narrative in A. Walaszek (ed.,), Tray relacje z polskich podróży na Wschód muzułmański w pierwesej poowie XVII wieku, Cracow 1980, 35-47), and then other Polish envoys travelled to Persia, though sometimes for the purpose of trade. Serious plans for an anti-Turkish alliance with Persia were cherished by the Polish Kings Ladislas IV and John III, but

proved impossible St. Chowaniec, Z dziejow polityki Jana III na Bliskim Wschodnic, in Kwartalnik Hisfor years, xi [1926]), In the 11th/17th century the kings of Poland supported the Catholic Mission to Iran, vainly hoping to convert her to Christianity. In the 13th/19th century, Poles also came to Persia, some as refugees from the army of the Tsar in Cantral Asia and some as political agents from Paris t owork among them, and some came as merchants and industrialists from the Russian-occupied regions of Poland. Friendly alli ances between Poland and Persin after 1918 won the help of the Shah, Muhammad Rida, who favourably received numerous Polish military and civilian personnel in Persia during the Second World War. This also led active agreements between the two states after the war.

In May 1552 a legation from Bukhārā was staying in Cracow. The business discussed there probably included the provision of experts in the production of gunpowder and also artillery advisers for these Sunnt allies of the Ottoman Empire which was peacefully co-existing with Poland. This was a difficult time for Poland, because the king was mourning the death of his beloved wife. The fact that there is no mention of any later similar delegation suggests that there was no favourable outcome for this mission (AGAD, AK, Rachunki poselskie, and information obtained from Professor B. Baranowski; the documents referring to this episode were partly destroyed in Warsaw during the last war).

At the beginning of the 11th/17th century, there was Pollah Intervention in Moscow concerning the impostor Dmitri, and on this occasion a temporary rapprochement between the Poles and the Kasknov [q.c.] Tatars took place. During the 13th/19th century, there was contact between those Poles who had been deprived of their state and the Islamic peoples of the Russian Empire; the hand, there were scientists and technologists, etc., employed by the Russians, and on the other hand the political outcasts, victims of Tsarist administration. Pollah patriots from Paris had contacts, through Constantinople, with the anti-Tsarist insurgents in Daghistan under the leadership of Shamil (L. Widerszal, Sprawy kaukaskie w polityce suropejskiej w latack 1832-1864, Warsaw 1934).

Polish relations with Arabic countries had begun with pilgrimages to the Holy Land, In 1645 King Władysław IV made an endeavour m reach an agreement with Morocco. The reply by Sultan Muhammad II, extant in an Italian translation only, the unique piece of evidence for these contacts, is too scenty a record to establish their purport. In any case, Poland's attempts, if there had been any, to gain Moroccan support in the struggle against Turkey, proved fruitless (B. Baranowski, Proby namigrania stosunków polsko-marokańskich m polowie XVII wisku, in RO, gvii [1953], 212-19). It was not until the 13th/10th century that the contacts with the Arab nations grew closer. After 1918, those contacts had attained the status of diplomatic ties which again, after the Second World War, developed into a lively co-operation in economic, technical and cultural spheres with different states of that region,

Under the strong influence of Islamic culture, Poland was shown to be a borderland between the Christian West was the Islamic Bast. This was particularly evident in material culture, for the products of these Islamic craftsmen (Turkish, Persian and to extent Crimean Tatar) reached Poland either by trade or as the spoils of war. They shed an oriental 722 LEH

influence on Polish national costume, domestic furniture, the conduct of war, and arms and equipment. These artifacts spread beyond Poland to other countries (e.g. Persian carpets were known in the West es "tapis polonais"), and they were later imitated in Poland (T. Mańkowski, Safuka islamu w Polsce w XVII i XVIII wisku, Cracow 1935; idem, Le tapis persan dit cracovien-paritien de la cathédrale de Cracovie, in RO, zvi [1953]). This attracted a number of Oriental words and terms into Polish (A Zajączkowski, Studia orientalistyczne s dzścjów slownistwa polskiego, Wrocław 1953). Polish museums contain authentic art treasures from Islamic countries, especially weapons, Ottoman standards and tents. There are Persian carpets bearing the Polish eagle which S. Muratowicz brought from Kāshān for the Royal Castle in Warsaw in 1602 and which are now in the Residenzmuseum, Munich. The activities of the art-loving Stanislav Augustus, the last Polish king (1765-95), of many Polish magnates in the 18th century as well as various Polish emigrants to the East in the 19th century, led to the formation of rich collections of Islamic art in Poland.

Moreover, Poland not to the intellectual culture of the Islamic East. The most important work in this connection is the translation by Samuel Otwinowski of the Gulistān by Safdi in the mid-17th century (following an Ottoman version; it appeared in print only in 1879). The 18th and 19th centuries, the Romantic Period, brought new oriental influences to bear on Polish literature. These traditions are maintained by modern Polish orientalists of the post-war period, who translate into Polish the literature and historiography of the Islamic world.

The travel descriptions by many a Pole journeying to the Islamic East of the roth/16th century have contributed much to the knowledge of that world in Europe (A. Broniovic, J. Laski, Michalo I.itvanus, A. Taranowski, M. Radziwik). Similarly, the career of Fr. Mesguien-Meninski as an Ottoman scholar in part stemmed from his stay in Poland where, for the part stemmed from his stay in Poland where, for the part stemmed from his stay in Poland where, for the part stemmed from his stay in Poland where, for the part stemmed from his stay in Poland where, for the part stemmed from his stay in Poland where, for the part stemmed from his stay in Poland where, for the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed from his stay in Poland where the part stemmed fro

LEMNOS [see LINK!]

LEO AFRICANUS, the name by which the author of the Descrittions dell' Africa is generally known, who was in fact originally called al-Hasan b. Muhammad al-Wazzan al-Zayyati (or al-l'āsi). He was born in Granada between 894 and go1/1489 and 1495 into a family which had to emigrate to Morocco after that city's fall [see CHARNATA], and was brought up in Fas, where he received a good education and very soon entered the service of the administration there. Whilst still a student, he was employed for two years in the mental hospital, which he describes in detail (Description, tr. Epaulard, i, 188 [see Bindristan. ii]). He then accompanied to Timbuctu one of his uncles, who had been sout there as an ambassador (Descr., i, 136), travelled across Morocco on various diplomatic and commercial missions on behalf of the sultan of Fas, Muhammad al-Burtukall [see watta-SIDS), and already displayed a precocious intellectual curiosity by collecting, in the course of his travels, funerary inscriptions, of which he made a collection (Descr., i, 231). He later returned to Timbuctu, and from there, crossed by the land route to Egypt, whence he returned home by sea. In 921/1515 he undertook a last mission, which took him to the East, via Debdū, Tierneen, Algiers, Bougie, Masila, Tunis (where he gathered information on economic and social life there, see R. Brunschvig, Hafsides, p. xxxv) and Tripolitania. From Cairo, where he found himself in 1517, he travelled up to Aswan, made the Pilgrimage to Mecca, and even claimed to have gone to Constantinople. During his voyage homewards by sea, he was captured at Diarba by Sicilian corsairs, who took him to Naples and then Rome, where they presented him to Pope Leo X, Giovanni de' Medici. By the end of the year, the Pope had persuaded him to become a Christian; he baptised him on 6 January 1520 and gave him his own name, Johannis Leo de Medicis (the latter rendered his name in Arabic ... Yuhanna al-Asad al-Gharnati; the editor of the

in Konstantinopel, in Jahrbücher für Geschiehte | Descrittione calls him Giovanni Leone Africano, and current usage generally refers to him by the second of these Christian names).

> Apart from the autobiographical details which can be gleaned from the Description, we know little of his life; all that is known is that, before 2550, he went to Tunis, and probably spent the last years. of his life in his ancestral faith.

During his stay in Italy, he learnt Italian, taught. Arabic at Bologna and, in addition to his Descriptions of Africa, conceived the further plan of describing similarly the part of Asia which he claimed I have visited, and also Europe (see Descr., fi, 537-8). He certainly put together in 930/1524, for the physician Jacob ben Simon, an Arabic-Hebrew-Latin vocabulary, of which the Arabic part is preserved in the Escorial (no. 598; see H. Darenbourg, Cat. des manuscrits arabes de l'Escurial, Paris 1884, i, 410). He also left behind a treatise on prosody (see A. Codazzi, Il tratiato dell' arte metrica di Giovanni Leone Africano, in Studi orientalistici in onore de Giorgo Levi Della Vida, Rome 1956, i, 180-98), and there is attributed to him a biographical work completed in 1527 and translated into Latin under the title Libellus de virus quibusdam illustribus apud Arabes (ed. J. H. Hottinger, 1664, and then by J. A. Fabricius, 1817). Nevertheless, his main fame rests on his Descriptions dell'Africa, completed on ro March 1526; written in poor Italian on the basis of notes in Arabic, it was edited and published by G. B. Ramusio, in Navigationi e viaggi, Venice 1550, I, r-130a (and several later aditions). It was translated, as early as 1556, into French by Temporal (ed. Schefer, Paris 1896-8) and into Latin by Florian(us), us J. Leonis Africani de totius Africae descriptions (Antwerp 1556). On this latter translation. were based an English version by John Pory (Historia of Africa, 1000; ed. Browne, London 1896), a Dutch one by Leers and a German one by Lorsbach. The original ms. of the Descrittions we radiscovered in 1931 and placed in the National Library at Rome (uo. 953); it was to have been edited by Sra. A. Codazzi, put publication of this hardly seems worthwhile now that A. Epaulard has been able to compare it with the Ramusio edition and bas brought to the textus receptus some improvements and corrections, utilised in his French translation, Description de l'Afrique, l'aris 1956, which has been edited by H. Lhote, with a copious commentary by A. Epaulard, Th. Monod, H. Lhote and R. Mauny. It has been possible to identify the majority of the place-names, deformed in the Italian text, and the notes, which are generally accurate, throw useful light on the work's information.

The Description contains nine sections: (1) generallties about Africa; (2) south-western Morocco (in particular, Marrakesh, with errors-see G. Deverdun, Maerakeck, Rabat 1959, p. xiv and index); (3) the kingdom of Fas (a very extended treatment, more accurate and confident); (4) the kingdom of Tlemcen; (5) Bongie and Tunis; (6) southern Morocco, and the southern parts of Algeria and Tunisia, followed by Libya; (?) the land of the blacks; (8) Egypt; and (9) the rivers, animals, plants and minerals of Africa. This work remained for centuries a major source on the Islamic world, and is still cited by historians and geographers of Africa. Although it is not free from errors—certainly exusable if takes into account the conditions in which it was put together-it provides first-hand items of information m the situation m the beginning of the 10th/16th century in the lands visited, on the ethnography and the institutions of their various inhabitants, and in particular, on political, economic and social life in North Africa.

LEON (see livon) LEPANTO (see ayraba<u>re</u>ti) LEPROSY (see <u>biuch</u>ăm, în Suppl.) LERIDA (see lârida)

لكن from the Albanian, Italian Alessio, a minor port, military stronghold and administrative centre in northern Albania, 30 km. to the south of Shkodër/Scutari, which was part of the Ottoman ampire between 1478 and 1912.

Lesh, the classical Lissus, is one of the oldest urban centres of the country. It is built on the banks of the river Drin not far from its estuary, and is overlooked by two isolated hills, each carrying the ruins of ancient fortifications. This setting largely determined the history and the function of Lesh; it was a military strongpoint in periods of danger and a harbour in more peaceful times. During antiquity, both hilltops and the lower town on the river were surrounded by an wall, parts of which still survive. This large city was destroyed during the invasions of the Barbarians (592 A.D.), and never recovered again. Anna Comuena mentions Lissus in her Alexiade = a strong Byzantine fortress and m fairly well-inhabited. In the 13th century, Lesh was included in the Serbian state, together with Shkoder. During the dismemberment of the Serbian empire, after the mid-4th century, Lesh became a part of the minor Albanian principality of Dukagin, but its lord ceded Lesh to the Republic of Venice in 1393. The citadel - the lower of the two hills (the old Acropolis on the higher hill had been left in ruins since classical times) - in ruins in the Venetian period. The Signoria decided only to rebuild the walls of the lower town on the river, which was done between 1404 and 1430. An enormous conflagration destroyed most of the settlement in 1440. In 1451 the new city wall was ready, partly paid for by Venice, partly by the local inhabitants.

In 1468 the famous rebel against the Ottomans and national hero of the Albanians, George Kastriotes Skanderbeg, died in Lesh and was buried in the Gothic cathedral of St. Nicolas in the lower town, an event described in detail by the chronicler Marin Barletius. Ten years later, during Sultan Mehemmed Fath's campaign against Shkoder (known to the Ottomans as Iskenderiyye), Lesh was captured and incorporated in the Ottoman realm. Before they fied with wives, children and property to the ships that were waiting in the river, the inhabitants of Lesh set fire to the city. The conquest is related by Tursun Beg in his Tarthir Abu "I-Fath and by Sa'd al-

Din in his Tadi al-tavārikh.

It was long before the ruined town recovered. At first, Lesh seems to have been included in the sandjack of Elbasan, but later (after 1485 and perhaps after the Venetian interlude) it was added to that of Iskenderiyye. In 1501, during Bâyezid II's short war with Venice, Lesh was taken by Venetian

forces, who kept it for mahort period. When they retreated, they had the town walls destroyed. The Ottomans receptured a totally wrecked town. They decided to rebuild the citadel on the bill, maite which offered better chances for defence than the place along the river. The work was finished in 928/1522, as is attested by a monumental Ottoman inscription—now preserved in the Legip Historical Museum—which mentions the name of Sultan Süleymän, the date in numbers and in the form of mehronogram, and the name of the architect as Derwich Mehmed, the son of Skura. The latter must have been a member of the well-known Albanian noble family of that

In the first half of the 16th century, Lesh remained a small place. The Idimal defter no. 367 of 1530-6, preserved in the Başbakanlık Argivi in İstanbul, mentions it as willage in the lived of Iskenderiyye, having 144 households. The Mufassal defter T.K. 63 of the livel of Dukagin, preserved in the Tapu ve Kadastro Gen. Müd. in Ankara (fols. 5a-6b), from 999/1590-1 (dated by internal evidence), mentions Lesh as an urban settlement (varosh) in the sandiah of Dukagin. The latter was set up in the thirties or forties of the r6th century and had Pec (lpek) as its chef-lieu, although the sandjak-begi resided sometimes in Lesh. Western sources mention in 1553 a figure of 80 houses of Turks in the castle on the hill (which is called "Castel Nova"). The lower town (il-Borgo) is described as a predominantly Christian place. The latter developed slowly into a centre of trade.

In the thirties of the 16th century, a strong impetus to this function of the town given by the Ottoman governor of Shkodër (later also in Thessaloniki and Prizren), Kukli Mehmed Beg of Prizren. At his expense, the caravan road through the mountains from Lesh to Prizren in the interior was safeguarded by a chain of caravanserals. Two of them were built in Lesh itself, together with 50 shops, which were part of the walf property of Kukli Beg's foundations in Prizren and its surroundings.

The Mulessal defter T.K. 63 mentions that a part of the inhabitants of Lesh were "outside the old register", which means that they had moved in from elsewhere. They gained their living workers in the harbour and itad the Filuri status concerned taxes and paid only a lump of 52 ables yearly. The register mentions 141 Christian households of them and six of Muslims, all living in the newly-founded suburb of "Ighule" (Ishull Leshe) which was formerly a meres's.

In m around 2580, the illi cathedral of St. Nicolas was confiscated by the Ottomans and turned into a mosque, this being reported in the visitation report of the bishop of Bar (Antivari) Marino Bizzi in 1610. In 1614 the open town is said to have bered 500 Turkish (read: Muslim) households. Hadidil Khalila mentions Legh = a part of the sandjak of Dukagin and situated near the district of Zadrima, whose inhabitants were rebellious Albanians. Ewliya Celebi visited Lesh in 1072/1661-2 on his way to Shkodër. At that time, Lesh was a veywodelik in the sandiak of Dukagin and the seat of the provincial administration of the area. In the castle, built on a steep rock, was a garrison under command of a disdar and only a few houses of civilians. An Ottoman budget of the year 1079/1669-70 bas 126 men magarison for the "Castle of Lesh in the hind" of Dukagin". The 17th century Lash cannot have been very prosperous. Ewliya mentions that Its houses were rather poor. The church-mosque was deserted in the

thirties - forties of the century, and left in ruins

for than a hundred years.

In the last decades of the 18th century, Sultan Sellm III concerned himself for the reconstruction of the building. At that time, it received the form it stil in our time (1978). The Armenian geographer Inciciyan describes Lesh in the last decades of the 18th century as a place with a thousand houses

During the administrative reforms of the 19th century (1862), the old sandjak of Dukagin was dissolved and added to the wildyet of Shkoder. The Kāniās al-a'lām, v, 3992, describes it towards the end of the last century as a hada" in the abovementioned wildyst, with 5,300 inhabitants, 80 shops and four mosques. The Ishkodra wilaydi salnamesi of 1310/1892-3, mentions Lesh as being the chef-lieu of # kada' with 32 villages with # total of 5,510 (male) inhabitants, of whom 1,500 were Muslims and 4,000 (Roman Catholic) Christians. The district contained at churches, and eight mosques but had only three schools, two for Muslims and one for Christians.

In the seventies of the 20th century, Lesh was still minor town. Its centre was modernised, the old cathedral of St. Nicolas-Mosque of Sultan Sellm III, was restored. In the spring of 1978, the tomb of the legendary Skanderbeg was discovered by Albanian archeologists, as being situated in the middle of the old church, just = Barletius wrote. Shortly afterwards, the town and the church suffered badly during an earthquake. What remained of the church was consolidated into a huge, constretebuilt memorial to Skanderbeg. The remains of the eastle of Sultan Süleyman still overlook the little

town.

LETTER (SEC BARID, HARF, RISALA) LEVANTE [See SHARK AL-ANDALUS]

LEVEAS, Greek Loukas, Santa Maura, Aya Mayra, Turkish Levkada, the name of a mountainous up to 1,158 m. above sea level) island on the coast of western Greece with a total surface of 304 km2. It is also the name of the only town = the island. The name means "White Island" in Greek, and goes back to antiquity. The fortified part of the town, an Ottoman naval base which was since about 1550 [see KARLI-LLI] a part of the province of the Kapudan Pasha and a much-feared pirates' nest, was situated on a small, flat island in a shallow lagoon between the mainland of Acarnania and the island. It is connected with both of these through causeways and bridges across the lagoon. Today the old walled town is an empty shell; the entire civil population of Levkas town (in 1961, 6,532) has been since the end of the Ottoman period (1684) concentrated on a sandy spit on the north-eastern tip of the island. The Ottoman geographers (Piri Re7s, Menementi Mehmed Rolls, Katib Colebi, Ewliya Colebi, etc.) called the island Levkada (القالية (or) الفكادة, and the town Aya Mayra (إيامورة). The hirtory of the town and the island are inseparably connected with each other. In Ottoman times, the town of Levkas (Aya Mavra) was the largest urban settlement in the sandjab of Karli-lii. In the second half of the 16th and most of the 17th century it was an Islamic centre of some importance, and possessed two of the largest works of Ottoman civil and military architecture in the Western Balkans, vis. the aqueduct of Sultan Süleymän and Prince Dihängir and the castle, rebuilt by Kille 'All Pasha under Sellm II.

The history of the town of Levkas goes back to the me century B.C., when it me founded as a colony of Corinth. The town III antiquity lay a few miles to the south of the present site. It disappeared during the migration of nations through the Balkans into Greece. The island was a possession of the Despotate of Epirus until the extinction of the native house, after which it became a possession in the Frankish house of the Orsini. Around 1300, John 1 Orsini built a small castle on a small sandy island in the mud bay between the island of Levkada and the mainland of Acarnania in order to protect the settlement there, until that time an open one. In 1362 island and town were included in the possessions of the Italian ducal house of Tocco. Duke Carlo Tocco (1381-1403) made the town the capital of his dominions (which since around 1400 also included a part of the mainland). Carlo greatly enlarged the walled town. Open settlements ported to have existed on both sides of the walled town. The open town of Levkas of today is of later origin. In 1430 the Ottomans placed most of Epirus under their direct rule. In 1449 they drove away the Toccos from the large city of Arta, only 50 km. from Levkas. The last Tocco, Leonardo, maintained as a vassal of the Sultan and was connected 726 LEVKAS

to him by family ties because of his marriage with Milica Branković, a niece of the much-respected stepmother of Mebemmed II, Carica Mara (widow of Murâd II). Milica died in 1464. In 1477 Leonardo remarried, this time with Francesca Marzano, a princess of the Aragonese house III Southern Italy, the bitter opponents of the Ottomans. Two years later an Ottoman fleet under Gedik Ahmed Pasha, then Bey of Avlonya (Valona), occupied the islands of Zakynthos (Zante), Cephalonia and Levkas (Cephalonia and Zante were RM | Venice in 1481; in 1485 the Ottomans re-acquired Cephalonia by treaty, but lost it definitively to Venice in 1500). Leonardo and Francesca, bitterly hated by their Greek subjects because of their ruthless exploitation. fled to Italy, where King Ferrante of Aragon gave them new possessions. Godik Ahmed is said to have deported the population of the islands, or at least part of them, to Istanbul as part of Sultan Mehemmed's policy of repopulating his capital Istanbul. Very likely there also strategic grounds.

During the Ottoman-Venetian war over the last bases of the Signoria on the Greek shores [see koron, modon, aynabakhti], the Venetians under Bernadetto Pesaro captured Levkas in August 1502. It was returned to the Ottomans as a result of the treaty with Venice, in which the Sultan recognised the Venetian occupation of Cephalonia. Levkas was to remain Ottoman for almost two centuries.

Ottoman Levkas (i.e. the town) became the seat of one of the two kada's into which the sandjak of Karil-lii was divided during the greater part of the roth century. The town was the largest of the sandiak. and possessed by far the most important castle, containing a strong garrison. The kada? of Aya Mavra was relatively thinly populated. An Ottoman census register (Tapu defter 367 in the BBA) from the years between 2523-36 shows that the town of Levkas/Aya Mayra numbered 194 households, 28 bachelors and 20 widows, perhaps giving a total civil population of a thousand souls. The kada' had at that time two towns (the second town was Venitsa, with 90 households, 27 bachelors and 15 widows), and comprised 43 villages, five monasteries and a total population of 2,234 bousehokis, 309 bachelors, 199 widows (or a total population of about 12,000 souis). These notes from the census register make clear that the kadd' of Ava Mayra not only comprised the Island of Lovkas but also a considerable part of the mainland of Acarnania. The bulk of the population of the saudiak of Karil-ili lived in the kada' of Engli-kasrl (= Angelokastro, Ottoman between 1460 and 1832), further inland. Engili-kasrl itself, which was officially the seat of the sandjak begi, numbered according to the same register 144 households, but the hadd' contained no less than 253 villages with 9,009 households, 290 bachelors and 954 widows (perhaps 46,000-47,000 souls). The register mentions that the garrison of Levkas town contained 111 soldiers and nine gunners. The castle of Angeli-kasel, safely inland, had only 25 soldiers (merdin-i halle), Vonitsa, exposed than Engli-kasri but less dangerously situated than Levkas town, had 25 soldiers and two gunners. Not a single Muslim bousehold m individual is mentioned in the entire sandiak of Karlf-lli. There were only three mosques in this province, those in the three castles, serving the needs of the garrisons. The register of 1523-36 mentions in the entire sandjak only three imams, two khafibs and two mil'edudhins. Thus Islam in Levkes was in the first half-century of Ottoman rule only represented by the military and administrative machinery. This was to change notably in the subsequent years.

Because of the constant lack of fresh water in the fortified town, due to its setting on saltings surrounded i sides by the waters of the lagoon, the Ottomans were forced to carry out important hydraulic works. Good drinking water was brought from the interior of the island to the feetified town by an aqueduct of 3 kms. long, which was carried over the lagoon for almost a mile on an aqueduct with several hundreds of arches (Ewliva Celebi, viii, 636, gives 366 arches, Coronelli, Mémoires, etc. de la Morde, Amsterdam 1696, 146, has 160 arches; Henry Holland [in 1812], Travels in the Ionian Islands, London 1815. 61, has 366 arches). Over the aqueduct ran a narrow path offering a much shorter way to the island than that over the saltings. A note in Milhimme defter no. 6 in the BBA in Istanbul contains the extract of an order of the kääts of Engili-kasri and Aya Mavra that the aqueduct currently under construction in Ava Mayra had to bring the water firstly to the walled town and then to the open town m island, and not to the walled town alone, as had previously been ordered. The inhabitants of the town had pointout to the Porte that the open town (enresh) did not contain 200 houses, as was thought in Istanbul. but 700 to 300 houses. Hence the need for more water. The order states that the aqueduct was built by "His Majesty". It is dated 17 Rebis al-Evvel 972/24 October 1564, thus in the reign of Soleyman the Magnificent. Mühimme delter no. 5, containing a part the orders of the year 973 (sic), has an imperial order from 6 Redieb to the Beg of Karlf-Ili and the kādi of Aya Mavra requesting the repair of the fortress works and ordering the subject people from the nearby villages to assist the garrison in the work. An order of some months later (12 Ramadan 973) urges the hidi to begin the work and to finish it as soon as possible.

During the crisis of Lepanto (1571), the fortress of Aya Mayra was besleged but held out. After the siege the Ottoman government ordered the total reconstruction of the old fortress works. This work was catrled out under supervision of Kapudan KMC 'All Pasha between the years 980-1/1572-4. The Muhimme defters 19, and 21 contain some dozen of orders demanding carpenters and masons from Tirhala, Aynabafhtl and Yanya to go to Aya Mavra. and Yuruks and Tatars from Schinlik and Tirhala and Umariots from Usküb (Skopje) to assist with the work. This new fortress has the form of an irregular hexagon which is at it's longest 220 m and 150 m wide. It is strengthened by nine round bastions of various sizes, all equipped with domed and vaulted casemates for guns and an open artiflery platform on top. The mediaeval castle of the Orsinis was maintained at the north-eastern corner, as a kind of le Kalfe.

The works of the Ottoman geographers contain little information about this outpost of Islam in the far west of the Balkans. Pirl Re's in his Baliyye describes in a few lines the setting of the fortified town, as being situated on a shallow lagoon and accessible only by two drawbridges that only opened to let ships pass through. Hadidi! Khallia (Rumeli und Bosna geographisch beschrieben, Vienna 1512, 128) merely copies this information. Mehmed 'Ashik in his Menairs al-'ardlim does not discuss this section of the Balkans. A wealth of information, the the other hand, is found in the Seyāḥal-nāme of Ewliyā Celebi (viii, 631-2). Ewliyā visited Levkas in 1081/1670-1, at a time when Islam

LEVKAS

had made considerable progress. After a detailed and fairly correct description of the works of fortification, be tells us that there were five Friday Mosques in the town, among which was the Khünkar Diam"i, a converted old church (this church-mosque was me 1863 by D. T. Ansted, The Ionian Islands, London 1863, 139-40, but has since disappeared). Besides these mosques there a fine newly-built mesdiid. Other Muslim buildings were a medrese, two mektebs, a hammam and six teshines, of which one was erected by a certain Ahmed Agha in 1028/1619, with an inscription in Turkish giving the date in numbers form of a chronogram. In the walled town were 200 stone-built houses remaining from the times of the unbelievers. These houses were exclusively inhabited by Muslims. Due east of the walled town as an open suburb called "Shehkilik Varoshi", with forty - fifty wooden houses inhabited by Muslims and Christians, fust outside the west gate of the walled town, on the sandy flats stretching towards the island, was a larger suburb, called "Tashra Varosh". It contained 300 houses built of wood (for stretegic reasons). In this suburb was a wooden mosque with a stone-built minaret, a mosdrid, a tekke, a mektob and two khans. The Christian inhabitants of this suburb possessed seven, tiny churches. This part of town was full of winehouses, frequented by the irregulars of the garrison and the

At a distance of two miles across a shallow sea was the island of Lefkada, whose fertility was praised by Ewliya. It had innumerable gardens and orchards and twenty prosperous villages, all inhabited by unbelievers. The island was reached by a path on top of the aqueduct which Ewliya attributes to "the brother of Sultan Selim II, prince Dilhangir" (1531-53). It is possible that there is a confusion with the son of Sellm II, also called Dishangir, who must have reached manhood at the time when the order in the Mühimme defter was written. This Dilhangir died in 983/1575 (cl. Sidjill-i Othmani, i, 29).

The fourth part of the "agglomeration" of Levkas was the "Varosh-I Lefkada" containing no less than 700 prosperous houses, all inhabited by Greeks, and having 20 churches. This information is in blatant contradiction to what we find in the Megale Ellinike Enkyklopeidein, xvi, 28, art. "Leukas", where a pitiful story of decay and stagnation is told and the great suburb on the island is said to have been "a few fisherman's hots." This part of town was long known as Amaxiki, a name that slowly fell into disuse in the 19th century.

The whole urban settlement of Leykas thus had 1,250 houses, or about 6,250 inhabitants. Six years after Ewliya, Jacob Spon and George Wheler (Italienische, Dalmatische, Griechische und Orientalische Reise-Beschreibungen, Nürnborg 1681, I, 19 [also tr. into English and French]) noted that in the citadel and the suburbs together lived 5,000 or 6,000 in-

habitants, mostly Greeks and Turks.

The strength of the garrison of Aya Mayra as given by Ewliya (633), is perhaps exaggerated. He mentions 1,085 kal's neferán, but an official Ottoman budget of the same year as his visit (published by Ö. L. Barkan in Iltisat Fakültesi Mecmuass, xvii [1955-6], 278) has only 285 topčiyan ne rubesa ne arabin = swariyan-f kal'e-yi Ayamawa ("gunners, captains, soldiers and cavalry of the castle of A.") on the pay list.

The halcyon days of Muslim Levkas ended during the war of 1683-99 against the Christian coalition.

In the summer of 1684 the Venetian fleet under Morosini captured the town after a bombardment of 16 days. The garrison and the Muslim civil population got a safe conduct to the Ottoman mainland, Moresiai turned the walled town, denuded of its inhabitants, into a citadel and removed its houses. He also evacuated and demolished the two suburbs just outside the castle and turned them into a glacis for the fortress. The deported inhabitants were helped building new houses on the island. Since that time the town was solely confined to the former Varosh (= Amaxiki) on the island itself. All the Muslim buildings except the fortress works and the aqueduct were removed by the Venetians.

727

The Treaty of Karlowitz (Karlofca [q.v.]) assigned the town and the island definitely to Venice, which in the first years of the 18th century modernised the Ottoman castle. On that occasion, the Ič Kal'e of 1300 disappeared and the east front of the castle, facing the mainland that had remained Ottoman, the ramparts and bulwarks, were replaced by modern works, including two bastions, a ravelin and couvre-face in the wet most and an enveloppe all around. Two separate works came to cover the flanks. Some Latin inscriptions mention the name of the commander under whom the work was carried out and the date of completion, viz. Augostino Sagredo,

During the Cerfu compaign of the Ottomans exainst Venice (1716), the modernised fortress was strongly defended. It was captured by the Ottoman army but was to return to the Venetians a year later. The Venetian rule lasted until 1797 (Treaty of Campo Formio) and was only interrupted by a revolt of the Greeks in 1769, after which date the fortress was again repaired (long Latin inscription.). In 1797 the island was occupied by the French, who kept it till 1800, when after a brief action of the combined Ottoman-Russian forces the Island became part of the so-called Republic of the Seven Islands. The French returned in 1807, but were driven away from these islands by the British in 1809-10. In the first decade of the 19th century, the mainland of Acarnania was controlled by Tepedilenti 'All Pasha, the able but treacherous Vizier of Yanina (Yanya). who in 1807 invested Lefkas unsuccessfully. On a rocky foreland commanding the only road from the mainland to the island he erected in the year a strong fortress. This was the site of the Khalwetiyye takko of Dizder Hasan, extensively described by Ewliva in 1670. Hence the good of that work, Kastro tis Tekker. Six km. further south, on a cape commanding the southern entrance to the lagoon of Lovkas, 'All Pasha constructed another, large, castle, now called "Castle of St. George". Both forts still exist today.

The mainland of Acarnania was included in the new Greek kingdom in 1832. In 1864 the British ceded Levkas and the other Ionian islands to Greece. The repeated changes of master did not stimulate the expansion of the town. When Henry Holland visited it in 1812, the town numbered but 5,000 inhabitants. Until the sixties of the present century, the populations of island and town have remained stationary (the island in 1863, 24,000; in 1961, 26,000). The great Ottoman aqueduct was wrecked during == earthquake in 1825, together with most of the town (Ansted, Ionian Islands, 144). It was not rebuilt, but served further as road until in this century it disappeared completely under the modern causeway. The town was rebuilt with wooden houses to minimize the damage of the very frequent earthquakes [list of dates in M. E. Enkyld., xvi, art. "Leukas"). The now decayed and deserted three Ottoman castles remain the only visible link with the Islamic past.

Bibliography: The Ottoman sources mentioned iii the article are unpublished. A comprehensive history of Ottoman Levkas, based on Ottoman and Western sources, is still a task for the future. Fragments of information can be pieced together from inter alia, E. Kirsten and W. Kraiker, Grischenlandhunds. Ein Führer zu Klaszischen Statten, Heldelberg 1962; W. Miller, The Latins in the Orient, London 1908 (repr. 1964); idem, Essays on the Latin Orient, London 1921; idem, The Ionian Islands under Venice, in EHR, xhiii (1928); F. Babinger, Mehmed der Eroberer, Munich 1953, 421-3; idem, Beiträge sur Geschichte von Qarly-eli vornehmlich aus osmanischen Quellen (most accessible in Aujsäize und Abhandlungen, Munich 1952, 370-7); D. N. Nicol, The Despotate of Epirus, Oxford 1957. For the confused accounts in the Ottoman chroniclers, see KARLI-ILI above. It should be added that the chronicler Oruc Beg (German tr. R. F. Kreutel, Der fromme Bayerid, Graz 1978, 152), has little-known details on the Ottonian capture of 1502. A Western travel account contemporary with Ewliya Celebi (1675-6) is J. Spon-G. Wheler, Italianische, Dalmatische, Griechische und Orientalische Reise-Beschreibung, Nureraburg 168r (also in English, A journey into Greece, Amsterdam, 1686); cf. also H. Holland, Travels in the Ionian Islands, Albania, Thessaly and Macedonia, London 1815 (repr. New York 1971), 58-64; W. M. Leake, Travels in Northern Greece, London 1835, i, 10 ff.; Leake has also accounts of the actions of 'All Pasha on the mainlend and his endeavour to capture Levkas fortress (with a good topographical sketch-map of the various parts of town, the forts and the aqueduct); D. T. Ansted, The Ionian Islands in the year 1863, London 1865 (Santa Maura on 125-228, with much on history, economy, topography, etc.). See also K. G. Machairas, I Levkas opi Enclokratias (1684-1797), Athens 1951, and idem, I Levkes, 1700-1864. Athens 1958; P. Rontogiannis, Istoria tis aisou Lefkados, i, Athens 1980.

The first detailed plan of the Ottoman castle of Selim II and Killé 'All is given in the work of Vincento Coronelli. For an old drawing of the aqueduct, was A. Grasset St. Sauveur, Voyeges dans les tles et possessions ci-davant vénétiennes du Levant, Paris 1800, 337 ff. For details on the fortress, see Machairas. To en Levhédi frourion lis Aghias Mauras, Athens 1936 (100 pages, but nothing serious on the Ottoman actions. Very good plans of the walled town before and after the Venetian reconstruction and large-size map of the area). For the Ottoman aspects of the castle, see for the time being, M. Kiel, Leukas/Sauta Maura, ten Turks-Venetiannes grensvesting, in Jaarboek Stickting Manno van Cochoorn, 1976, 58-64 (with photo-

For a modern survey of the history of the entire Ionian archipelago, see M. Pratt, Britain's Greek empire, London 1978. (M. Kiel)

graphs and plan of the castle).

LEWEND, the name given to two kinds of Ottoman daily-wage irregular militia, one tea-going (defis), the other land-based (fard), both existing from early times.

The word may derive in its maritime sense from the Italian lovantino (Sh. Sami, Kāmās-i Tācki), used originally by Venetians for soldiers recruited from their Levantine possessions, and then passing into Ottoman Turkish as a term for mercenaries recruited from the Mediterranean regions, especially the eastern lands and islands of Greece, Dalmatia and western Anatolia. Some claim its trione common use as "a rough-and-ready cavalryman" came from Persia [cf. Redhouse, Turkish and English laxicon, s.v., and Uzunçaralı, 46). By 966/1558 the Ottoman government clearly distinguished mounted lements from corsairs (Millimone defieri, ili, 163, and Silähder lavikhi, i, 152).

z. Denis lewend. In the hey-day of Ottoman maritime expansion, demands for unskilled labour could be met by hiring Muslim or Christian (Rum) lessends for a period of the campaign, paid in early times by booty, in later times a daily wage through the admiralty. These lewends acted m rowers, guardsmen, marines for shore invasion, but above all as seagoing musketbearers. Muslim denia leavads wore distinctive blue baggy trousers with a yellow sash; Riim levends cloak with cowl, a blue-and-white sash, and white baggy trousers. For those whose labour the Admiralty needed during the winter in the Bosphorus arsenal, special quarters (khān) were built on the Rūmeli side in the early 12th/18th century, known to this day as Lewend ciffligi. By the mid-12th/18th century, Muslim lewends took over many of the specialised naval duties previously pursued by Rum lawands (who we longer enjoyed absolute trust), to serve permanently as kalyondin or galleon sailors. Their apparently exciting life as semi-official pirates, corsairs, and adventurers on the sea lived on into the modern Turkish language, in which levend still means a bold, good-looking, dashing young man.

2. Kard lewend. Trained musketmen, discharged from Ottoman armies or the fleet, acting in concert with other jobless and homeless personnel (such as sekbān, gönsišii, and 'asnb [q.vv]), created mischief in Ottoman lands. Those who acted as cavalry were called hard lowend. Any man with a horse might join one of the many official or outlaw bands which swarmed in Anatolia, particularly after the 10th/16th century. Kard lewards tell into three categories: (a) hapili leward; irregular cavalry attached and paid by a beglerbegi or a provincial wall, for special services in peace or war, such as guarding fortresses, civil police duty, and honour guards. Kapili leaends generally followed Ottoman military rank-order, led by a bölükbashl, and included Anatolians, sc. Arabs, Kurds (Rafeq, 37) and Turks, together with Rumelians, sc. Albanians (Turan, 168), Hungarians (Orhoniu, 100) and probably many others. Kaptili lewends were colourful but not particularly uniform apparel, their respective employers supplying clothing suitable to their particular affectation (Cezar, 294-6); (b) hapisis levent (sometimes bashibosh, "Independent"): any lexical discharged from the service of his begierbegi or well, who in theory returned to civilian pursults. Anatolian social and economic conditions being in serious dislocation after the 10th/16th century, most eaplsiz lewends moved quickly into wandering groups of brutal marauders, many of whom took part in the Dialail revolts (q.v. in Suppl); and (c) miri lement: those hired by the government as musketmen = cavalry for a specific campaign and paid for by the central treasury.

To the end of the 12th/18th century, leasands found employment in Anatolia and Rimell, often terrorising rather than protecting those officially in their charge. In Dubrovnik in 1000/1392 they were "brigands" (ski-i fessid ve leasandsi) (Biegman, 82); iii Cairo in 1008/1399 ii visitor called them "unscrupulous scum"

(Tietze, 40); m observer in Ankara in 2029/2629 saw them as tyrants over the citizens (Andreasyan, 162); in 1069/1658 they supported Abaza Hasan Pasha's [q.v.] massive rebellion, crushed by Köprülü Mehmed Pāshā (Nafimā, vi. 347-9). By 1131/1719 a fetwā had abolished the lowereds from the empire, but a new war with Persia demanded an extension of their enrolment by eastern frontier governors until 1136/ 1726 (Uzunçarşılı, 47). Two decades later, 10,000 lemends deserted Yegen Mehmed Pasha in his ill-fated battle against Nädir Shäh (ibid.); the Ottomans reacted angrily and those caught were executed, but many continued the sale of their services to any provincial officer or man of wealth (a van [q.v.]) who could pay. By 1190/1776 the government again ordered the karā lewends to be abolished; most were absorbed into acceptable military units by the turn of the century. Others fled to Syria, where they found employment with Diazzar Ahmad Pasha of Sidon, Muhammad Pasha al-'Aam of Damaseus, acceptance among the local Kurdish lewends (lewend al-alraid, Rafeq, 37), and work in Palestine as mercenaries (Cohen, 282). By the beginning of the 13th/19th century, most hard learneds had been eliminated from the empire or had been absorbed into the modernised armies of Sellm III and Mahmud II.

Bibliography: References to lewends may be found in many official documents (Mishimone desterlers, the Ibnillemin tasnifi, the Condet tasnifi: askeri, dahiliye, maliye, and others) in the Bas Vekålet Arnivi, Istanbul. Many references occur in standard Ottoman historians like Mustala Natima, Ta'rihh, Istanbul 1280/1863, and Silähdär la'rihhi, Istanbul 1317/1899, as well as the other chroniclers of the period, both published and manuscript. The emphasis on towards - seagoing triegulars may be studied in Hammer-Purgstall, Staatsverfassung, ll, 234 ff.; Zinkeisen, fil, 307 f.; and M. d'Ohsson, Tableau général de l'Empire Othoman, iii, Paris 1825, which includes pictures, 416, 432. Several encyclopaedias and dictionaries give pertinent information, the best being I. H. Uzunçarşılı, art. "Levend", in IA; also M. Pakalin, art. "Levend", in ii, 358-9; and Midhat Sertoğlu, art. "Levend" in Resimli Osmanli tarihi ansiklopedisi, Istanbul 1958, 188-9. The only major work devoted to the subject is Mustafa Cezar, Osmanis tarihinde levendler, Istanbul 1965, which follows Uzunçareili's general outline and includes many useful photographed archival materials and their transliteration into modern Turkish. The major work explaining the social conditions of Anatolia (990-2020/2582-1611) in which lewends flourished is Mustafa Akdağ, Caláll isyanları, Ankara 1963. Translations of contemporary observations of lessends as well as documents include H. D. Andreasyau, Polonyale Simeon'un seyahatuhmesi, 1608-1619, Istanbul 1964; N. H. Biegman, The Turko-Ragusan relationship, according to the firmans of Murad III (1575-1595) extant in the State Archive of Dubrovnik, The Hague 1967; Cengis Orhonlu, Osmanis tarihine did belgeler telhisler, 2997-1607, Istanbul 1970; A. Tietze, Musiafa Ali's description of Cairo of 2599, text, translation, notes, Vienna 1975. Münir Aktepe, Pairona isyani, 1730, Istanbul 1958, related the history of a lewend who precipitated the downfall of - Ottoman sultan and his government. General works referring to the activities of levends include Serafettin Turan, Ranunt'nin oğin Şehinde Bayezid vak'ası, Ankara 1961; Abdul-Karim Rafeq, The province of Damascus, 1723-1783, Beirut 1966; A. Cohen, Palestine in the 18th century, patterns of government and administration, Jerusalem 1973; V. J. Parry and M. E. Yapp, eds., War, technology, and reciety in the Middle East, London 1975, esp. chs. by H. İnalcık, 195-7 and by A.-K. Rafeq, 285, 291; and S. J. Shaw, History of the Ottoman empire and modern Turkey. i. Empire of the Gasis: the rise and decline of the Ottoman Empire, 1280-1808, Cambridge and New York 1976, index.

(J. H. Kramers (W. J. Griswold)) LEXIGOGRAPHY [see KAMOS]

LEZGH (self-designation: Lezghi, pl. Lezghiar; Russian variants: Lezgintsy, Kyurintsy; others: Lezg. Lezgin, Kürin), a Muslim people of the Caucasus.

The Lezgh language belongs with Agul, Rutul, Tsakhur, Tsakaran, Budukh, Khinalug, Kriz, Dhzek, Khaput and Udi to the Samurian group of the Northeast-Caucasian (Cečeno-Lezgian) language farnity. The Lezgh language is comprised of three closely-related dialects, all of which have been strongly influenced by the Azeri Turkish language, sc. Kürin (Günci) and Akhtl, spoken in southeastern Däghistän, and Kuba, spoken in northeastern Adharbäydiän. The Kürin dialect forms the basis of the Lezgh literary language, since it is the most wirlespread of the three, and since it is the dialect spoken in Kurakh (the most important cultural and economic centre in the Lezgh territory, and former seat of the Khānate of Kurin.

Leigh became a written language in the late 19th century (using the Arabic script), although it did not replace Arabic in the minimal literary language among the Leighs until after Russian Revolution (In the late 1920s). Early attempts at using the Cyrillic script (1904-5) for writing the Leigh language met with utter failure. In 1928 the me of the Arabic script was abolished, and writing in Lezgh was changed to the Latin, and in 1938, to the Cyrillic script. Letah is at present an of the nine official languages of the Daghistan ASSR, although it is no longer used as a medium of instruction in the schools. Formerly (between the late 1920s and 1960s) Lezgh served as a language of instruction among the Lezghs of Dāghistān (and between the late 1920s and 1939 among the Lezghs of Adharbaydian) up to the 5th grade. Lergh was also the official language used among the Aguls between the late 1920s and 1950s. Since that time, all education among the Lerghs has been in Russian in Daghistan, and in Azeri in Adharbaydjan. The term "Lezgin" had been used by Russian authors to refer not only to the Lezghs proper, but also at times to all mountaineer Daghistanis, or only the southern Daghistanis (including all the peoples in the Samurian group).

The Lezghs inhabit for the most part the southcastern portion of Däghistän (Akhti, Dokuzpara, Kasumkent, Kurakh, Magaramkent and Rutul rayons) and contiguous northeastern Ädharbäydiän (Kuba, Nukha and Shemākha rayons). The 1970 Soviet census listed 323,829 Lezghs residing in the USSR. Of them, 50.2% lived in the Däghistän ASSR and 42.4% in the Ädharbäydiän SSR. Of the Lezghs, 93.9% considered Lezgh their native language, while 3.7% considered it to be Russian and 2.4% other languages (mainly Azeri).

According to legend, the Islamic religion and originally introduced among the Lezghs by Arab conquerors in the 7th and 8th centuries. The final conversion of the Lezghs to Islam came in the middle of the 15th century with the conquest of the Lezgh territory by the Shab of Shirvan-Khalil Ullot.

Although in bulk of Leaghs I Sunni Muslims of the Shafi'l school, there II azable minority of

Shi'ls in Adharbaydian.

As a result of the long influence of Turkish Khānates of Ādharbāydjān on the Lezghs, a Lezgh feudal principality—the Khānate of Kūrin—was formed in 1775 with its centre in Kuralah. This Khānate, however, included only a relatively small part of the Lezgh territory and exerted only a minor influence — the Lezghs. The majority of Lezghs continued to live in free societies, while others lived — different times under the Khanates of Kuba, Derbend and Kazikumukh. In 1812 the Kitrin Khānate became a Russian protectorate, and in 1864, with its abolition, the Lezgh territory became — integral part of the Russian Empire. In the midiph century, under the leadership of hhamil and his Murids, the Lezghs took part in the Caurasian wars against the Russians.

Although a weak feudal structure had developed in the region of Kurakh, the majority of the Leaghs lived in free societies made up of patriarchal clans and extended families. These free societies were ruled by the village 'ddal. Within the clan or extended family there was mutual help in work and family affairs, is well as group responsibility in vendettas, which were under the jurisdiction of the 'ddat. The Leaghs maintained a strict clan endogamic marriago

system.

The traditional economy of the Leaghs was based primarily on home industries (weaving, rug making, leather working, pottery, smithing, etc.) and transhumance sheep and goat raising. These activities still play a major role in the village economy. In the foothill and lowland areas, cereal crops, gardening and horticulture are important. Winter pastures of the Leighs were found primarily in Adharbaydian, and there a long tradition of seasonal (winter) migratory labour among the Lezgh men to the cities of Baku, Shemakha and Kuba (all in Adharbaydian). As a result of this migration, as well as the long cultural and political ties with Adharbaydian, the Leigh culture and language have been profoundly influenced by the Adharbaydianis; but this strong assimilatory force exerted on them has been sharply weakened during the Soviet period.

The Lezghs have a relatively long literary tradition though little pre-Revolutionary literature was written in the Lezgh language, since the dominant tongues here were Arabic or Azeri or Persian. Among the more renowned writers of Lezgh origin are the theologian Safid of Kockljur, the mystical poet Etim EmIn, the Azeri historian Hasan Alkadari and the poets Sayfulläh Cobänzāde, Emīr Arslān and Hādjdjī of Akhti. Soviet literature began with Sulaymān Stal'skil (the "national poet of Dāghistān"), and he has been followed by Tāhir Alimov of Khurug, 'Alībek Fatabov, Shāh Emīr Maradov, etc.

LI'AN (a.), in Islamic law, an oath which gives a husband the possibility of accusing his wife of adultery without legal proof and without his becoming liable to the punishment prescribed for this,

and the possibility also of denying the paternity of a child borne by the wife. "In the language of the Sharl's, evidence given by the husband, strengthened by onths, by which the husband invokes the curse (la na: from this the whole process is a policei named) and the wife the wrath of Allah upon themselves, if they should lie; it frees the husband from hadd [q.v.] (the legal punishment) for hadh [q.v.] (accusation without proof of infidelity by persons "of irreproachable character") and the wife of badd for incontinence" al-Tahanawl, Dictionary of the technical terms used in the sciences of the Musulmans, ed. Sprenger and Lees, Bibl. Indica, Old Series, ii, 1309). On the technical - of the related verbal forms, cf. the Arabic lexica and Dozy, Suppl. dict. orabes, s.v.; al-Kastallani, commentary = al-Bukhārt, Talāk, 25, = the beginning; al-Zurkāni, commentary on the Musselfs', Bab ma dja"s fi 'i-lifas, at the beginning.

t. The following Kur'anio passage is the basis for the regulations regarding the li'an (XXIV, 6-10): "As III those who accuse their wives for adultery] without having other witnesses than themselves, the man concerned shall swear four times by Alfah that he is speaking the truth and the fifth time that the curse of Alfah may fall upon him if he is lying, but the woman may avert the punishment from hersolf if she swears four times by Alfah that he is lying and the fifth time that the wrath of Alfah may fall upon her if he is speaking the truth. If Alfah were not gracious and merciful towards you and wise and

turning lovingly towards you . . . ".

These verses belong to meant of the Kur'an, apparently composed at one time, containing various regulations about adultery and consisting of XXIV, 1-10, 21-6; verses 11-20, which certainly belong to the year 5, were inserted later, me that our verses must therefore be older (cf. Nöldeke-Schwally, Geschichte des Qordes, i, 210-11; H. Grimms, Mohammed, ii, 27, puts the sura between the battles of Badr (2 A.H.) and Ubud (3 A.H.)).

They form a regulation in favour of the husband, an exception to the punishment strictly laid down in Kur-an XXIV, 4 (cf. also verses 23.5) for kadhf and are therefore, like this penalty, primarily Muslim and have no affinities in Arab paganism, in which an institution like the hids had no place at all (contrary to D. Santillana, Initiation di divito musulmano, 1, 221 below). The word hidso, which comes from the Kur-an,

is unknown to pre-Islamic poetry.

The hadiths concerning lican are almost entirely (the oldest probably exclusively) exegetical, and profess to give the occasion of the revelation of the Kur'anic verses in question; they are to some extent contradictory (attempts to harmouse them are found in a)-Zurkâni, commentary on the Munosta?, Báb mā did'a fi 'l-lifān), systematised and unreliable (cf. Nöldeke-Schwally, etc., where further references are given, to which may now be added those in A. J. Wensinck, Handbook of early Muhammadan tradition, 50-7 [to 56 ult. may be added, Tir. 44, sura 24]). Four types may be distinguished among them: (1) the husband (unnamed) laments his sad case to the Prophet in covert language, whereupon the verses are revealed (oldest form); (2) "Uwaymir b. Harith asks in the same way, first through the intermediary of a friend and then directly of the Prophet (a development of the first type); (3) Hillal b. Umayya accuses his wife of adultery and is to be punished with hadd for this, when Allah saves him at some point by the revelation of the verses (this type, probably a development of the first, in which Sa'd b. 'Ubada also LIMN

is often involved, who had previously with accornful criticism called attention to the possibility of the dilemma which has now actually happened, has of the three the most schematic and unoriginal appearance); and (4) someone marries a young woman and finds her not wingin, while she disputes his assertion; the Prophet therefore orders his assertion; the Prophet therefore orders his assertion; the Prophet therefore orders his assertion; the Prophet therefore orders his not exagetic). There are of course other transitional and mixed forms. In so far the haddh's yield nothing new about his his brief outline is sufficient; they are only of importance when they afford evidence for the oldest juristic adaptation of this Kur'anic institution.

2. The first subject of the earliest legal speculation was the question, not touched upon the Kur'an, whether liffs makes separation between the husband and wife necessary. In many hadiths this question is so expressly (sometimes polemically) affirmed that there must have been a school which approved the continuity of the marriage after the lifau. The statement that al-Mustab b. al-Zubayr is said to have held this view (Muslim, Nasah) is, however, based only an inadmissible interpretation of another hadith, in which he appears as a contemporary; on the other hand, that 'Uthman al-Buttl held it may be considered sufficiently proved (al-Zurkani on the Muraffa'). Among the oldest representatives of the other view, which later became predominant, that a continuance of the marriage was impossible after li'an, may be included with some probability Abd Allah b. 'Umar and with certainty al-Zuhrl, in whose time it was already sunna, and Ibrahlin al-Nakha'l (Kitab al-Ather); the tracing of this opinion back to 'Abd Allah b. 'Abbas, which we find in the hadiths, must however be regarded as unhistorical.

Next arises the question how this annulment of the marriage as a result of lisan is to be carried through, whether by a triple talak, which the husband has to pronounce against his wife, or by the decision of the judge before whom the lifax is taken, or by the lifax itself. The first view is undoubtedly based 📖 a large number of traditions, while no truce of its use in law has survived; these traditions are rather interpreted in favour of the second view (cf. the hadill of al-Zuhri in al-Tabarl, Tafsir and al-Bukhāri, Talak, bab 30 and Budad, bdb 43; the tradition in Ahmad b. Hanbal, v, 330-1, forms in its abbreviated form only an apparent exception; a polemic against the first view in al-Tayalisi, no. 2667). The second opinion survives in the later legal ibhtildf; apart from the ample testimony to it in hadlih, its oldest representatives known with probability or certainty are 'Abd Allah b. *Urnar; el-Zuhrl, in whose time it appears as sumna; and Ibrāhīm al-Najchaff (Kitāb al-Āthār); its ascription to 'Abd Allah b. 'Abbas is again not historical. For the third there is mevidence in tradition; it I only found after the rise of the madhahib. We seem therefore to have a tendency to development in a particular direction.

Other prescriptions about lifas in tradition going beyond what is laid down in the Kurlan, are of less importance. Thus when the question is raised at all, it is unanimously laid down that the husband can abeer marry the wite again at a later date, that a lifas may take place during pregnancy (legal ishilist is later attached to their interpretation of this hadle), that the child has only relationship with its mother as regards kinship or inheritance, i.e. is considered it legitimate. Other hadles say that the lifas must be taken in a mosque and attribute the formula to be spoken there by the kilds to the Prophet. We are also

brought into contact with questions of detail, which play a part in the latter iditial by a tradition according to which the Prophet did not allow it is unless the husband and wife were on equal terms as regards Islam and freedom; a series of older authorities who held the contrary view is quoted in the Mudaewana.

Details of the further teaching of Ibrāhīm al-Nakha'l on li'ān are given in the Kitāb si-Athār. Two more general pronouncements in Mālik and al-hhāfi' bring in to the period of the rise of the madhāhb. Malik states definitely that it was the summa of Medina, about which there is no doubt and no ikhtitāf, that the husband and wife after the li'ān has taken place could never marry one another again, and al-haāfi'l says that with li'ān, divorce of the pair and denial of the paternity of the child was summa of the Prophet.

3. The teachings of the separate madhāhih develop the views of their earliest representatives, not entirely on the same lines (e.g. from the Muscaffa?; it is to be assumed with probability that Malik followed the second view regarding the element in lifan which annulled the marriage (cf. above), while his school later held the third opinion entirely). The most important regulations of fish regarding lifan that go beyond what has been so far discussed are as follows; if the husband accuses the wife of adultery me denies the paternity of his child without being able to prove it in the legally-prescribed fashion and she denies his charge, recourse is had to the process of lifan. If the husband refuses to pronounce the formulae prescribed to him, he is punished with the hadd for hadkf; according to Abū Hanlfa, however, he is imprisoned until he pronounces the formulae, whereby he is set tree in is declared to have lied, whereupon he is liable to hadd. If the wife refuses to pronounce the corresponding formulae, she is punished with the hadd for adultery; but according to Abu Hanita and the better tradition of Ahmad b. Hanbal, however, she is imprisoned until she pronounces the formulae, whereupon she is set free or confesses her transgression and is then liable to hadd. On the question whether li'dn is possible If one partner is or both are not Muslims or not free or not 'adi, there is a wealth of ikhtildf, which cannot be detailed here; the same applies to the possibility of lifan during the pregnancy of the woman, with the object of denying the paternity of the child. On this point, the strength of the principle that the marriage decides the descent of the child, is remarkable, as is the distinction between two objets of lifes (accusation of the wife of adultery and denial of paternity), which is only a result of later developments. In the whole of the earlier period these two objects coincide from the juristic point of view. The divorcing element in titals is, according to the Mālikīs (on their presumed divergence from Mälik bloself on this question, cf. above), and a tradition of Ahmad b. Hanbal, the lifes of the wife, according to al-Shaff's that of the husband; but according to Abit Hauifa and the better tradition of Ahmad b. Hanbal, however, it is the verdict of the judges pronounced after the lifan of both. Opinions also differ regarding the legal consequences of a later withdrawal of the liten by the husband; according to Abu Hanife and one tradition of Ahmad b. Hanbal, a new marriage of the two people is possible in this case, but according to Mälik, al-Shāfi'l and the better tradition of Ahmad b. Hanbal, it is not; among older authorities, only Salid b. Diubayr is in favour of the first view, while 'Umar, 'All, 'Abd Allah h. Mas'ed, Abd Allah b. 'Umar, 'Ata' and al-Zuhri are quoted as in favour of the second (not all have historical

confirmation), which was also held by al-Awal's and Sufyán al-Thawri. Finally, it is a disputed question whether the Wan can only be performed orally or (in the case of a dumb person) by gestures; al-Bulghari devotes ch. 25 of his Kitáb al-Taláh to the discussion of this question and the manual for his attitude to it.

4. It is easy to understand that the resort was only had to the lifas in extreme Thus we find a scholar of Cordova in the 4th/10th century pronouncing the his against his wife simply in order to revive this summe of the Prophet, which had fallen into oblivion (I. Goldziher, Muhammedanische Studien, ii, 21, Eng. tr. ii, 33). But it has only begun to fall into disess with the introduction of modern legal codes into the Islamic countries and the creation of legal mechanisms for the adjudication of disputes over paternity. Thus the natural substitute for it, proof of non-access at the time of the child's conception, was introduced into Egypt in 1929 by the device of restricting the competence of the Shari's courts in questions of maintenance and paternity; hence the courts were forbidden to entertain disputed paternity suits where either non-consummation of the marriage, or the birth of the child more than one year after the last physical access between wife and husband, could be established. In men countries, e.g. Tunisia or Morocco, procedures have been introduced whereby a husband can repudiate a child with which his wife | pregnant, | has already given birth to it, without recourse to the li'dn procedure. In the Arabian peninsula, however, it remains in force, whilst in the Indo-Pakistan subcontinent it still provides a way by means of which wife who claims to have been laisely accused of infidelity by her husband we go to court and claim dissolution of the marriage.

(J. Schacht*)

LIBAS (A., pls. lubus, albisa) like its cognate counterpart in most Semitic languages (cf. Akk. lubūshs; Heb. and Aram. 1717; Syr. Land.), is the general Arabic term for clothing or apparel. The dictionaries define it as "that which conceals or covers the pudenda", for which the Kur'anic verse is cited, "O Children of Adam! We have revealed unto you clothing to conceal your shame, and finery, but the garment of piety, that is best" (VII, 26). In addition, "it is for self-beautification and adorument and for protection against heat and cold" (Kdmss TA, s.v.). In addition to the form libds, in fluds libs, malbas, milbas, malbūs, labūs and labūsa also signifying clothing.

A detailed history of Islamic costume has yet to be written. There have been of late ever-increasing studies of modern and late pre-modern attire for various Islamic countries (cf. Bibliography), but with the exception of R. Dozy, Dictionnaire détaillé des noms des vétements ches les Arabes (Amsterdam 1845) = comprehensive work covering all Arab -much less lalamic—lands in all periods has been produced. Dozy's pioneer work was based solely literary references which manuscript at that time. His literary references were somewhat supplemented by R. Levy, Notes on costumes from Arabic sources, in JRAS (1935), 318-38. R. B. Serjeant's monograph Islamic textiles, material for a history up to the Mongol conquest (Beirut 1972), although not dealing specifically with costume, has brought forth a great deal important ancillary material. Recent attempts to coordinate literary, sources with representations of costume in falamic art and with actual relies of garments preserved for specific periods me those of L. A. Mayer, Manduk costume, Geneva 1952, and Y. K. Stillman, Famale attire of medieval Egypt, according to the trousseau lists and cognate material from the Cairo Genian, unpubl. diss., University of Pennsylvania, Philadelphia 1972.

We shall limit ourselves here to a general survey of costume history in the Arab world during the classical period, with some brief notes on pre-Islamic and modern times.

i. - In the Central and Eastern Arab Lands

1. Clothing of the pre-Islamic Arabs Despite numerous references to the Arabs in classical geographical and historical literature, there is only scattered and scanty information concerning their attire. Herodotus mentions that the Arabs wore the teira, a sort of long flowing garment caught in with a belt (Hist, vii, 66). This most certainly is the iter (also found in the forms are, mi'zar, and in Middle Arabic texts and vernaculars issir), = large sheet-like wrap worn both as a mantle and a long loin cloth or waist cloth (comp. late bibl. Heb. 73%). This is corroborated by Strabe, who says of the Arab Nabatacans that "they go without tunics, with girdles about their lows, and with slippers = their feet" (Geog. avi, 4, 26). The mode of wearing the isa's by the Muslim pilgrim in a state of idrdm [q.v.] reflects this ancient fashion.

The earliest evidence for the clothing worn in ancient Arabia is the rupestrean art of prehistori:: Arabia (second and first millennia B.C.). These show men wearing relatively little clothing saide from a cache-sees and a variety of headdresses (see E. Anati, Rock-sees and a variety of headdresses (see E. Anati, Rock-sees in Central Arabia, i. Louvain 1968, 159, 163, and pussion). Already at this very early time some women are depicted in enveloping wraps (ibid., 195). Some sort of slippers = sandals were also worn by both sexes (ibid.).

Those Arabs who lived within the cultural sphere of one or another of the great empires could not help but be influenced by the fashions of the higher civilisations, clothing being a manifestation of culture, no less than art, architecture, literature, etc. Thus we find statues of the Arab rulers of Hatra in Mesopotamia which deplet them wearing Parthian-style dress. Some wear a sleeved mantle and chiton, and others Persian trousers and military festoons (see F. Altheim-R. Stinhl, Die Arabs in der alten Well ii, Berlin 1965, 227). Those Arabs who inhabited the oasis towns of the Syrian desert apparently dressed in the feahion of the eastern Hellenistic world (see

R. Dussaud, La pénéssation des Arabes en Syris avant l'Islam, Paris 1955, figs. 20-3, et passim).

Because of their conservative existence beyond the pale of sedentary civilisation, the Bedouln have maintained a fairly constant style of dress from pre-Islamic times down to the present. Throughout the Muslim world loose wraps have always been an extremely common feature of dress for both men and women. Ibn Khaldun noted that wraps, as opposed to taffored or fitted clothing, were the mark of nonurban dwellers (Mukaddima, repr. Belrut 1900, 411). Ibn Khaldun's observation, of course, needs some modification. City-dwellers were wraps also. To be sure, these were of finer quality, often ornate, and were worn over fitted clothing. The Bedouin have always shown a preference for dark garments. The Babylonian Talmud cites the dark garments of an Arab as an example of a blue-black colour it is trying to define with precision (Niddah, 202). Clothing is trequently mentioned in Dishill poetry, especially the many kinds of outer mantles such = burd, isar, ridd', and shamla (apparently similar to the bibl. Heb. 1729). Tertullian mentions that Arabian women appeared in public totally enveloped in their mantle in such a way so that only one eye is left free (Dr pirg. rel., 17). This fashion continues in places as far apart as Iran and southern Algeria and Morocco.

The use of footwear in Arabia goes back to prehistoric times and was certainly necessitated by the harsh landscape. Many of life figures in the ancient tupestrean engravings wear some sort of distinctive shoe or sandai (Anati, Rock-art, passim). The Taimud specifically mentions that the sandals worn by the Arabs are "close-fitting" (Yesamol, 102a) and that they "are knotted tightly by the shoemakers"

(Shabbat, 112a). a. The time of the Prophet and early Islam. The fashion of dress of the earliest Muslim community was on the whole mextension of the preceding period, with certain modifications for the new moral sensibilities. It is interesting to observe that many of the garments worn by the Prophet and his contemporaries continued through the centuries as the basic clothing of villagers and Bedouin, being simple, functional, and suitable to the ecology. The urban dweller, though perhaps far more conscious of _____ [q.v.] than his rural _ nomadic cousins, has since Umayyad times been constantly modifying his wardrobe. Nevertheless, the basic outlines of the Islamic vestimentary system have remained remarkably constant even in the city.

The basic articles of clothing at the time of the Prophet for both consisted of undergarment, a body shirt, a long dress, gown, or tunic, and an overgarment such a mantle coat, or wrap, footgear consisting of shoes or sandals, and a head covering. A person might wear many garments or only one depending upon a variety of factors including weather, occasion, economic means, etc. Many of the items of clothing worn by men and women were identical. Indeed, many of the articles were simply large pieces of fabric in which the wearer wrapped himself. What must have set off male from female fashion in many instances was the manner of draping, the accessories (jewelry, bead- and footgear, and weils), well as colours, fabrics and decoration.

The basic undergarment was the isis (sometimes referred to backs), the loincloth which goes back to prehistoric times. It may well be—although there is dispute over this point in the Muslim traditions as well as in Western scholarship—that siresis (from old P. zérawáro; modern P. zérawáro) or underdrawers

already in use by this time before the conquest of Iran. Persian cultural influenced had fittered down into Arabia through the Lakhmid kingdom of Hira and perhaps up through the Yemen. There are hadiths both claiming and denying that the Prophet wore them. From many kadiths, however, it would seem that there were women who were certainly mutasarwilds, i.e. wearing the sireds, at this early period. In one well-known story the Prophet averted his glance out of modesty from a woman who had fallen from her mount until he was assured that she was wearing a siredi. How these early siredi looked cannot be ascertained. In later Islamic times they differed greatly from country to country and included all sorts of pantaloons, kneebreeches, long trousers, and close-fitting drawers. It is reported that the men who bore 'A'isha's litter on the pilgritnage wore tubbin, small sizual or briefs (Bukhari, Sakih, kilāb xxv, bāb 18). Not everyone could afford a separate undergarment, and there are numerous hadiths in which men without underwear are forbidden to sit or squat publicly, truss up their garments while working, or to drape themselves in the fashion known as al-samma' whereby one end of the mantie is pulled up on mil shoulder leaving the other side of the body exposed-apparently in the style of the Greek chiton (cf. e.g. Bukhāri, Sahīh, vili, 8; vili, 10, 1; lxxvii, 20, 2; and most of the other canonical collections).

The basic body shirt was the kamis (from late Latin camisia; cf. Jerome, Ep. cest. mul., 64, no. 11). Like m many items of Islamic attire, it was worn by both sexes. Just as in the Arab world today, the kamis was frequently worn by children. The Prophet supposedly covered his uncle al-Abbas with a samis when the latter was taken prisoner naked at Badr. Any variety of robes or tunics might be worn over the hamis. These include the thank which in addition to being a gown was also a general word for garment (the pls. thiyāb and athurāb designate clothes) and fabric, since many garments were no more than a piece of cloth (shikka). Also worn over the kamis were the diubba, a woollen tunic with rather sleeves which was imported in the Prophet's time from Syria (Bukhārī, Sahīh, Ivi, and Ixxvii, 10), and perhaps elsewhere in the Byzantine empire [Ibn Mādia, Sunan, xxxii, 4]; the kuila, a long, flowing coat which the Prophet meet tucked up when he went out (Bukhāri, Sabīk, Ixxvii, 3) and of which he is reported to have worn on occasion a red one of great beauty (ibid., lxi, 23, 11); the habd?, a luxurious, sleeved robe, slit in front, with buttons (musarrar), made of fabrics such as brocade (dibādi), and apparently of Persian provenance; the forradi, a robe similar to the habe, but slit in the back. The Prophet is reported to have received a silk farradi (forradi harir) as a gift, to have worn it, prayed in it, and finally to have thrown it off as if it were suddenly loathsome, saying that it was not fitting for the Godfearing (Bukhārī, Muslim, Nasā'l, and elsewhere). The custom wearing several layers of tunics and robes continued through the Middle Ages and still persists in traditional areas today. In Morocco, for example, one frequently sees a man wearing two and even three diallabas (hooded outer robe) over two

The principal form of armour wan the coat of mail known as dir' or dir's which Nöldeke thought to be of Bthiopic origin (Neue Beiträge nor sem. Sprachwissenschaft, Strasbourg 1910, 53), but Bosworth has shown, was borrowed from Persia (ch. Irass and the Arabs, in Cambr. hist. of Iras, iii, B. Yarshater,

Cambridge 1983). Also mentioned in the early sources in a diubba min hadid or tunic of mail.

Arabian fashion required both men and women to wear a mantle of some sort over everything else when appearing in public. In the case of the less well-to-do, the mantle is outer wrap night be the only garment over the underwear, and there are numerous hadiths dealing with questions of public modesty which because of the common presence of me dressed in a single wrap at prayer. Once again, it is the obiguitous isde which was the fundamental garment in this category for both sexes. Another basic one was the shamlo, which like isar simply "wrap". These were usually white or some other light colour. The khamisa, - the other hand, - black with ornamental borders (a lam). In a frequently repeated kadith, the Prophet found himself distracted by the decoration on m thamise he was wearing at prayer and called for a simple woollen cloak known as m anbigianiyya (Bukharl, Şabib, viil, 14, 1, et passim; Ibn Madia, Sunan xxxii, 1). Like many wraps, the khamisa also served as a sleeping garment. Some wraps and mantles at this time seem III have been associated with one sex or other, although these were in the minority. The rida? was a man's mantle par excellence, and for the man of honour, in the words of the Diahill poet al-Samaw'al, "every rida" he wears is becoming". The dilibab, khimar, and mirj were primarily for women. Tirmidhi, Muslim and Abû Dâwûd all repeat a hadith about Muhammad wearing a black mirt, but all other references to this garment solely in a feminine context (e.g. lmru² al-Kays, Mu'allaho, 28; Bulcharl, Sahib, lii, 15). Then, as now, there were many names for wraps and mantles, and these were often synonymous, perhaps reflecting earlier of regional dialocts. That the terms were frequently interchangeable is clear from **a** hadiih where a woman brings the Prophet as a gift a woven burda with a border (burda mansūdia fikā kāshivya-(told) which she herself had made and asks the people assembled if they know what a burde is. They answer "a shamia". The story continues that Mubammad as his itely [sic] and gave it upon request to a man who wanted it for a shroud (Bukhāri, Sahih, xxiii, 29; Ibn Madia, Sunan, xxxii, t; and with variations elsewhere). Many wraps and mantles were known by their fabrics. Thus the namira man's wrap with stripes of varying colours which gave it the appearance of a tiger's skin, whence its name. The mulabbada was simply a feited hisa? (the generic word for wrap; cf. Assyr. kusitu, Heb. MOD, both general terms for garment or covering). The burds or burd [q.v.] was a wrap of striped woollen cloth produced in the Yamon. The Prophet wore a Nadjrani burd with a wide border. He gave one such mantle of his to the poet Ka'b b. Zuhayr [q.v.] which became legendary. The distinction between fabric and garment is often not clear. The bibars was a striped gampent similar to the burd, and according ... Anas, it was the favourite garment of the Prophet. Yet we also read of hibara garments, and thus, in a tradition to 'A'isha, the Prophet was wrapped in | burd of hibara fabric when he died (sudidiiya bi-burd hibara). The siyara? was both a mantle of Seres (Gk. Enper; Aram. NTW and and the fabric. Thus we find hulla siyara", burd siyara", and hamis harir siyara".

Precisely how these mantles and the many others mentioned in the traditions were draped we cannot know, but it is quite clear from the sources that there was a wide variety of styles. This is further corroborated by the fact that in these parts of the Islamic world where traditional wraps and mantles are still worn today there is considerable variation from one locale to the other in draping style. The canonical hadily collections are almost unanimous in citing condomnations of the practice of estentationally trailing one's garment along the ground (diarr min al-khayula). Ankle-length garments were considered proper in the early some. Shorter garments became the mark of an ascetic, longer ones the mark of a libertine.

Already in the Prophet's time the aggient Near Eastern practice of covering the head out of modesty and respect was the norm for both men and women. It is for this reason the Muslims and Jews customarily cover their heads when praying, rather than baring them as in the West. The Kur'an warns that the wicked will be dragged down to hell by his exposed "lying, sinful forefock" (XCVI, 15-16), Of course, a man or woman could draw his or her long mantle or ample wrap over the head, and in the case of women this was and still is the most common fashion even when some sort of bat or veil is worn under it. The Prophet is reported to have visited Abil Bakr while wearing the border of his burd over his head with a black headband ("isaba dasma") (Bukhari, Sabile, lxxvii, 16). In his last public appearance before his death, Muhammad supposedly wore his milhafa (a wrap similar to the indr) over his head, again held in place with a black headband libid., hi, 25, 51}.

The "imains or turban has been worn by the Arabs since pre-Islamic times. The word turban which is used in one form or another in all western languages derives from Persian dülband via vulgar Turkish tulbant or tolibant. The 'imama of Dishill and early Islamic times was probably not the composite headgear of the mediaeval and modern periods consisting of one or two caps (lukiyya or 'arakiyya and/or halansuwa, hulāh, = farbūsh) and a winding cloth, but merely any strip of fabric wound around the head. G. Jacob has suggested that the later turban is a synthesis of Arab and Persian styles (Altarabisches Bedwineuleben, Berlin 1897, 237). In the early umma, the 'imama certainly me not have any of the significance it was later to have as a "badge of Islam" (simă al-Islam) and a "divider between unbelief and belief" (hādiisa bayn al-kufr wa 'l-Imda). Nor was it yet—in the words of a proverb still heard in Morocco, at least-the "crowns of the Arabs" (tidian al-arab). The many hadiths which provide detailed descriptions of the Prophet's Simama clearly anachronistic. For later generations, Muhammad was "the wearer of the turban" (salid al-(imdma), and ill many of the accourrements associated with a hero of epic proportions, his turban had a name-al-siadb or "the cloud". According to Shiff tradition, he willed it I 'All. This hadith may have been circulated in order to counteract any prestige accruing to the Umayyad and 'Abbasid callphs by their possession of the Prophet's burda. One of the few reliable facts we know about the Smama in early Islamic times is that it is one of the garments specifically forbidden to a person in a state of thram [q.v.]. The 'imama | have consisted of a very long strip of fabric in later periods, since there are reports of its being used for bandaging (e.g. Bukhāri, Şakih, triv, 16, 2).

The hats worn in the Prophet's time included the faylasan, which though worn by Muslims was considered a typically Khayhari Jewish bat (cf. Bukhāri, Şabib, lxiv, 38, 23), the kalansuma which originally designated a close-fitting cap, and the burnus, a

sort of high cap or bonnet. Already at this early time the burnus must have also designated by extension a cloak with hood, despite Björkman's view to the contrary (art. "Turban", EI1, (v. 889) since "Umar's assassin was prevented from escaping by a Muslim who threw a burnus over him (Bukhari, Sahib, Izii, 8). The word balansawa apparently also could designate - hood or cowl, since it is mentioned along with the Simama as one of the garments which a man might spread under him for prayer when the ground was too hot (ibid., viii, 23). The high cap known in fasfüra or fusfür, though not mentioned in the early traditional literature, appears already in a 7th-century papyrus (J. von Karabaček, Ahendländische Künstler m Konstantinopel, in Denkschr. d. Kais, Akad. d. Wissen., Bd. Ixli, Abh. 1, Vienna 1918, 67). The 16th-century traveller Belon suggested a connection between this cap and the ancient Egyptian beadcovering called by the Latin writers lurritum capitis ornamentum or turritam coronam (cited in Dozy, Vitements, 263). S. Fraenkel's suggestion that the word is derived from Aramaic 1070 [Dis Atamäischen Frendwörter im Arabischen, repr. Hildesbeim 1962, 53) seems probable, since such bats were worn in the Aramaic-speaking regions in the period just prior to the advent of Islam. They are depicted in several murals from Dura-Europes and elsewhere (see e.g. . Ettingbausen, From Byzantium to Sasanian Iran and the Islamic world, Mayer Memorial Studies iti, Leiden 1972, Pl. xis, no. 65). On military expeditions, men wore a mith far or ghifara, a cap or headcloth of mail over which was worn a helmet known bayda (so-celled because of its resemblance to ostrich egg). The Prophet was wearing a migh/ar on the day Mecca surrendered.

Women in early Islamic times normally covered their head and face with any of a variety of veils when appearing in public. In addition, they were usually entirely enveloped in the large dilbab from head to foot leaving only one eve free. A common head veil was the mandil or mindil (ultimately derived from Lat. mantellum; cf. Sp. mantilla). The word may also have already been used at this time for "handkerchief" or "hand cloth" (see the detailed discussion on the mandil in F. Rosenthal, Four essays art and literature in Islam, Mayer Memorial Studies ii, Leiden 1971, 63-108, and MANDIL). The two most common face veils were the litham [q.v.], a rectangular cloth covering the nose and the lower half of the face, and the burkut, a harness-like affair consisting of fabric suspended from the centre front of the headband (fisaba) to cover the face. The lower corners of the burkut were attached to the sides of the headband by a string creating mask-like effect. The burker is still worn by married women amongst the Sinai Bedouin, Alisha wore neither of these veils when she was a muhrima (lä talat<u>hth</u>amis warla tabarka'u). Another veil worn by women at this time was the wikab. Oddly enough, there is no mention of any sort of hats or head-dresses for women at this early period, despite a veritable plethora of such items from the High Middle Ages to modern thnes.

Men did veil on occasion, normally by wearing the outer mantle (isar, rida', burd, milhafa, etc.) in such way as to cover both head and face). The Prophet is described on more than one occasion as being mulabannt. This does not necessarily imply that he was wearing the face veil known as kind or mikham (cf. for example, Bukhāri, Sahih, Ixxvii, 16). Very handsome young men sometimes veiled their faces,

particularly at feasts and fairs, in order to protect themselves from the evil eye (Aghāni, vi. 33; xi. 28; xiii, 137; xv, 157; also J. Wellhausen, Reste arabischen Heidendums!, repr. Berlin 1961, 196). The free end of the turban cloth frequently served as in face veil to protect the wearer against dust while riding. It was veiled in this fashion that al-Hadhdiadi [q.n.] entered into the mosque at Kūfa, mounted the pulpit, and dramatically bared his face as he began his famous sermon with the lines "I am the son of spleadour, the scaler of the high places/When I take off my turban you know who I am".

Footwear for both sexes tell into one of two catagories—the nat or sandal which could be of palm fibre, smooth leather, or leather with animal hair, and the khalf, most of shoe or boot made of leather. The various kinds of slippers which are popular throughout the modern Islamic world under variety of names (hābūdī, tāsūna, surmūdīs, bulgha, etc.) came into vogue after the conquests.

3. Early Islamic laws and customs regarding clothing. The austere nature of the early Medinese umma did not encourage having of any kind. The Kur'an promises the rightsons garments of silk [see HARIR] in Paradise, but the Prophet felt that such clothes were inappropriate in this life for men, although apparently not for women. According to a frequently-repeated hadith, Muhammad forbade seven things; silver vessels, gold rings, garments of harir, dibādi (brocade), hassi (a striped fabric from Egypt containing silk), istabrah (satin), and mayāthir humr (tanned hides). Actually, there are many more fabrics mentioned in the traditional literature which he supposedly proscribed. It would seem that he did make exceptions in the case of individuals suffering from some pruritic skin condition or lice. With the development of the empire and the rise of a leisured class, there came into being a wealth of countertraditions expressing the permissibility of wearing clothes of silk and other luxury fabrics.

Many of the earliest and most reliable traditions regarding clothing deal with iteam and questions of ritual impurity caused by menstrual flow = the ejaculation of semen. Each of the Prophet's wives had a special menstrual garment. Garments defiled by menstrual flow need only to be washed to be worn for prayer (e.g., Abû Dâwûd, Sunan, i, 130), and if not stained, a menstrual garment may be worn for prayer without washing. For these and related laws, see DIAHABA, GRUSL, HAYP and wupo'. It is not certain whether or not women in the early summs had special clothes for mourning. During the Djahillyya, a woman were her worst clothes when in mourning (un-labisat Marra thiyabiha-Bukhari, Şahik, laviii, 46, 47). The Prophet forbade women in mourning to wear dyed clothing except for garments of 5a3b, at Yemenite fabric with threads dyed prior to weaving (ibid., 48, 49). The technical term for "mourning garment" (thawb al-hidad) only appears in Ibn Hanbal (Musuad vi, 438) and seems to be a later development. The name implies a garment dyed to a dark from black.

As already noted, many of the garments worn in early Islamic times were the same for both men and women, especially tunics and wraps. There were, nonetheless, distinct stylistic differences. Islam, like Judaism and Christianity, strictly condemns transvestitism (Bukhāri, Ṣahīh, lxxvii, 61). However, in Islam this prohibition clearly refers to overall conduct as much as dress.

Clothes have always been considered objects of significant material value in the Middle East. They

are mentioned as valuable gifts, a medium of payment, and items of booty. A man who had worked in the Prophet's baggage train supposedly went to Hell for taking m single 'shi'a' (a sleeveless robe) from the house of the Prophet (Bukhari, Sahih, Ivi, 190). Garments could also be used for the payment of the zahid (ibid., xxiv, 33). As had been the custom of oriental rulers since ancient times, Muhammad bestowed valuable garments upon members of his entourage as a mark of favour (cf. e.g. Genesis, xxxvii, m and xii, 42).

Many customs were associated with clothes, Then as now, pieus wishes and felicitations were appropriate for someone with a new garment. Muhammad wished Umm Khālid abif wa-akhliff! ("wear it out and exchange it!"), when he presented her with a small black khamisa (Bukhāri, Sabih, Ixxvii, 22, 1). In more recent times, the wishes have become less eloquent, and one simply says mabrak ("congratulations") or natimmen ("how nice!"). In accordance with an ancient custom going back to pagan times, the Prophet reversed his ride, when he went out to make the prayer for rain. He did not reverse his cloak, however, when making the istiska' [q.v.] on Friday (ibid., Rv, II). The act of reversing the garment was apparently symbolic of the change in weather sought. It was still practiced in Tunis at the and of the 19th century (Wellhausen, Reste, 197). The custom of baring the head in extreme humility during the istishit' ritual also probably goes back to this period, though it is not mentioned in the literary sources until the later Middle Ages (see I. Goldziber, Enthlossung des Hauptes, in Isl. vi [1916], 301-16, esp. 304).

Many customs regarding clothes which most certainly have their roots in ancient Near Eastern supersition and me found also in the Talmud are ascribed to Muhammad in the Muslim traditions. Thus the believer should always put the right shoe on first. He should not go out with only one shoe on either both or barefoot (cf. the ill omen for Pelias of anyone shod in only a single sandal, in the Greek myth of Jason). Furthermore, shoes should never

be left with the soles facing heavenward.

4. The Umayyads and 'Abbasids and the liras system. Judging by the rather scattered and scauty literary evidence, most of the Arabian garments of early Islamic times continue into the Umayvad period, although some items become more and more restricted to Bedouin use (e.g. the mirt), The most significant change that came with the rise of Islamic empire is the use of clothing made of luxury fabrics by the Umayyad caliphs and their courtiers. 'Abd al-Malik is reported by al-Makrizi to have worn embroidered garments (tr. E. Blochet in Revue de l'Orient Latin, vili (1900-1), 175). Sulayman and his retinue were only garments of washy or variegated silk, including the diubba, rida, sirvel, Smama, and balansuwa (Mas Odi, Muridi, v., 400). There is one report specifically mentioning the socalled "caliphal garments" (thiydo al-kkildfa) being worn by al-Walld II (A ghāni vii, 83). Later under the 'Abbasids, the caliph were special robes of office with embroidered borders and which were called by this name. It is only stated of al-Walld's "caliphal garments" that they were white. The 'Abbasid robes of state were normally black. Their custom of wearing black garments on official occasions was established by al-Manster and was only abandoned for a brief period in favour of 'Alid green under al-Ma'mun (Tabari, iii, 1012 f.).

Two of the most significant phenomena of Islamic

costume history originate in the Umayyad period—the sumptuary laws requiring distinguishing clothing for the non-Muslim subject population, and the production of regal embroidered fabrics for clothing.

The laws of differentiation or ghiydr [4,v.] most probably do not go back to the time of 'Umar b. al-Khattab, since at that early period the all al-dhimma [q.v.] and the Arabs did not dress alike anyway. Although these laws were to be minutely detailed only in later centuries, they go back in general outline as well as in spirit, at least, to the caliphate of 'Umar b. 'Abd al-'Aziz. Dhimmis were forbidden to wear Arab-style headgear, including the 'imdma, 'asb, and Jaylasan, Arab military dress, and certain robes, as for example, the kaba'. They also had to and a distinguishing belt called mintak and more frequently tunner (cf. Gk. ζωνάρτον). This ordinance may have applied at first only to Christians. By the reign of Harun al-Rashid, these rules governing deimmits' dress were well-retined and were ascribed back to *Umar I [Abū Yūsuf, K. al-Kharādj, Cairo 1382, 127 f.). For a detailed discussion of the restrictions on thimmi dress and the more for Umayyad and Abbasid times, . A. S. Tritton, The caliphs and their non-Muslim subjects, repr. London 1970. 115-26.

The production of special embroidered fabrics in palace textile factories also began in Umayyad times and became a standard feature of mediacval Islamic material culture. The fabrics were known as firdz (4.0.), which in its narrowest sense meant "embroidery", especially embroidered bands with writing in them, and in a wider sense, indicated an elaborately embroidered robe, such as might be worn by a ruler of his entourage. Tirds garments were bestowed as tokens of royal favour and were among the standard gifts brought by diplomatic embassies to other rulers as part of foreign policy. In the view of many scholars, the Umayyads most likely took over Byzantine state factory establishments and adapted them to their special needs and tastes (e.g. E. Kühnel and L. Bellinger, Catalogue of dated tirox fabrics, Washington: The Textile Museum, 1952, 1). However, mediaeval Arab historians believed the production of first garments to be derived from . Persian institution, and there is some evidence that garments with royal insignia were worn in Sasanian times (see S. D. Goitein, Petitions to Fatimid caliphs from the Cairo Genisa, in JQR, NS, xiv [1954-5], 34 f., where Takmudic evidence is cited). The truth as to the origins of the first system would seem to combine both views.

The first Umayyad caliph who II specifically mentioned in the Arabic sources as having had first factories was Hisham b. 'Abd al-Malik (al-Djahshiyart, K. al-Warara', Cairo 1938, fo). In most event, it is clear that by late Umayyad times the first system extended across the caliphate, and continued to flourish under the 'Abbasids, Büyids and Saldjüks. The production of such luxurious fabrics was a highly profitable business, and there was considerable government control. The state was also responsible for the prices in Ashtor's view (E. Ashtor, Histoira des prix et des salaires dans l'Orient médiéval, Paris 1969, 75). This is perhaps an oversimplification.

To the mediaeval Middle Eastern bourgeoisie, firax garments were status symbols as well as valuable pieces of real property. Clothing formed part—sometimes a considerable part—of m family's investment, being transmitted from parents to children, to be converted into cash in case of emergency. Clothes also

formed an important element of the state's assets. Thousands of garments and listed among the annual treasury receipts under Härün al-Rashid (al-Djahshiyarl, K. al-Wuzara, 179-182). In addition to their socio-economic importance, garments of firar fabrics were of great socio-political significance. The 'Abbāsid caliphs and, at a later date, other Muslim rulers, were wont to bestow robes of honour (kkilac, sing. khil's [q.v.]) upon those of their subjects-Muslim and non-Muslim, male and female-whom they wished to reward or for some reason mark for distinction. The khills was often not a single robe, but an entire outfit. This suit consisting of two more garments was known as a kulla. (The word today means a "western suit of clothes".) The visier Hamid b. al-'Abbas (d. 311/923), for example, received two such outfits each consisting of a lined coat (mubattana), a sleeved robe (durrata), a body shirt (kamīs), drawers (sarāwil), and turban ('imāma) (Hilal al-Sabi), Ta'rita al-wusara, ed. Amedroz, Beirut 1904, 1761.

With the rise of the bourgeoisie during the 'Abbasid period and the dissemination of the polite educational ideal of adab [q.v.] by the Fersian secretarial class, many new garments and fabrics came into use, and people became ever more fashion-minded. The early aversion from silks and satins was forgotten or ignored by all but a pipus few, and only the most ascetic and the poor wore the rough woollen robe known as the khirka [q.v.] (the latter use of this word to designate "rag" or "dishcloth" is instructive). Another wool garment worn only by the very poor was the sleeved tunic known as midrata. Cultured gentlemen and ladies, on the other hand, were very much concerned with their appearance. The adib al-Washshā' [q.v.] (d. 325/936) devoted several chapters of his book On elegance and elegant people (K. al-Muwashsha aw al-garj = 'l-gurafa', ed. Brunnow, Leiden 1886; ed. cited here is that of Cairo 1362/1953) to describing the types of clothing worn by his contemporaries, as well as the acceptable canons of taste. The fashionable man, according to al-Washaha', outfitted himself in several layers of clothing, beginning with a fine undershirt (ghildle), over which was worn the heavier, lined (mubattan) hamis. Both of these ought to be of fine linen, such as Dabiki m [Nannābi (produced in Egypt and Fårs, respectively). Over these tunics was worn a lined robe (durid'a) or diabba of linen, silk, or mulhem (a labric with a silk warp and a woof of some other stuff). Finally, when going out, the fashion plate would drape over these his ridit' or another cloak known as mitraf (also migraf) which had decorative borders at each end (faraf) and cover his head, or turban rather, with a faylasde, which at this time was probably a cowl (K. al-Muwashsha, 160 f.). Making a good appearance also meant not wearing unpleasant or clashing colours, dirty clothes, or clothes perfumed like those of slave girls. Shoes and sandals could be of any of a number of leathers, colours, and designs; and it was permissible to wear shoes in such colour combinations as black and red and yellow and black (ibid., 161). The wearing of stockings (djawrab, from Pers. garab), a fashion adopted from the Persians, was by now well-established.

Al-Washsha' does not provide as much detail in his chapter in female at the which is devoted specifically to "those clothes which differ from those of fashionable mea". The elegant woman's lingeric consisted of a smoky-grey coloured ghilds and sirud!. White garments of any kind—except for the sirud!—were considered masculine and were in the avoided, Exactly

what kind of dress was worn over the undergarments at this time is not specified. Al-Washshā' does mention, however, that it should be wide-sleeved (ahmam mafihha) and that the collar should have a drawstring (ara 'I-djurrubānāt al-muhhānibiyya). For her wraps, the women was to wear a Rashidi or a Tabari ridā' (from Rosetta and Tabaristān, respectively). She might then totally envelop herself in a Khurasāni isār or muham. On her head she wore a black mi'djar, which seems to have been the iemale equivalent of the 'imāma both in form and use. Black was worn together with a face vell (mihna's or mihna'). The Nishāpār mihna'a was held in particular esteem (ibid., 163 1).

737

Persian cultural influences became more pronounced under the 'Abbasids. In addition to those garments of Persian provenance already mentioned (sirwal and diaurab), there was introduced at this time the distinctive, tall, conical Persian hat called the balansuwa famila or simply famila (e.g. Yakat, Udaba's vi, 59). This hat was also called danniyya because of its resemblance to a long amphora-like wine jar known as a dann (ibid., i, 373, and Aghani' x. 123). The top of the faulla was pointed (cf. al-Masfudi, Murudi, viii, 377 = § 3537, where it is described as mahdada). This hat consisted of a wicker or wooden frame covered with fabric such = silk. R. Levy has suggested that it may also have been shaped like "a truncated cone worn base upwards after the fashion of the combrous headgear of the modern, Lairs" (Notes on costume from Arabic sources, in JRAS [1935], 324); however, this suggestion is not borne out by the evidence of illuminated manuscripts. Abu Zayd of al-Hariri's Makamat is frequently depicted wearing a pointed jaulia je.g. Bibl. Nat., Paris, ms. arabe 3929, f. 69). Harûn al-Rashid is supposed to have worn such a hat inscribed on side with the word kiddig and on the other with ghdx44 for the duties which he undertook on alternating years of leading the pilgrimage and the war against Byzantium (Tabarl, iii, 709). Another Persian garment which was introduced at this and which became extremely popular throughout the Arab world is the haftan, a line robe with sleeves that buttons down the front (the original Persian word designates a cuirass). The caliph al-Muktadir wore a htaflan of Tustari silk brocaded with silver when he set out on his fatal march against the rebel Mu'nis in 320/932 (Dozy, Vetaments, 162 f.; Lavy, JRAS [1935], 331-2, and the sources cited by both). Since the later Middle Ages, the form koffine (variant &u//dn) has been used exclusively throughout the Arabic-speaking world, due to the influence of Turkish.

Pine garments were brought to Baghdad from all over the Muslim world, m well as being imported from abroad. From India came the fitta, a long place of sarf-like cloth which served a variety of functions: as a loincloth, apron, and a variety of headgear (Stillman, Female attire, 214 ff.). From China during this period there came offcioth raincloaks (mingars) (Tha'alabl, Lata'if al-ma'drif, Cairo 1960, 221; Eng. tr. Bosworth, Edinburgh 1968, 141; Mez, Renaissance, Eng. tr. 390). Fine garments for men in 3rd/9th century 'Irak ranged in price from 5-30 diners, and even more (Ashtor, Prix at salairas, 53). However, some of the prices cited by Arab writers for fabulous garments and fabrics are clearly anecdotal, as for exampie, the 50,000 dindes that al-Khayzuran [q.v.] is reported to have paid for a piece of washi (al-Mas adl, Muradi viti, 198). Still, it is quite apparent both from the literary and documentary sources that throughout

the Middle Agos clothing me very costly in comparison with the other necessities of life.

5. The Fāṭimids. Perhaps no period in the history of the Arab East was more clother-conscious then that of the Fāṭimids. Fāṭimid pomp and ocremony exceeded anything known in Bāghdād, and clothing played a major part in creating the splendid effect.

The first Fatiruid caliph in Egypt, al-Mufizz (d. 365/975), founded a special government costume supply house known = the dar al-kisma = khizenat ol-kiswa with an outlay of 500,000 dinars. An official bureau (diman) oversaw the production, storage, and distribution of costumes. Every official and functionary from the caliph down to government clerks was supplied with a ceremonial costume (badla mawkibiyya) for public occasions. According to al-Makrisl, who is the almost exclusive source of information for Fatimid ceremonial costume, each person was provided with an entire wardrobe "from the turban to the underdrawers" (Khifa) ii, 409). The khisana provided different weight clothes for many and winter. A complete costume (badla mukmala) could consist of many as a dozen articles, most of which have been mentioned in the preceding sections.

Naturally, these caremonial costumes were made of the most costly fabrics. The most popular were havin (fine silk), siss, dabibi, shards, dimydli (all linens), hhumanini (kingly brocade), and sikidium (siglaton). Most of the ceremonial costumes were white and embroidered with gold and silver threads in accordance with the official Fațimid imagery of luminous splendour and divine light. The selection the caliphal costume was itself a ritualised event before every holiday.

Each rank and office was distinguished by its costume. The most outstanding item of the caliph's attire was his enormous turban which consisted of a cap (shāshiyya) around which was wound a mandif in a fashion unique for the ruler in the shape of a myrobalan. This special manner of winding the caliphal turban was called "the winding of majesty" (shaddat at-waldr). The entire turban was ornamented with fewels. An enormous solitaire (yafina) mounted at a silk band centred the callph's forehead (Khitai i, 449). The entire headgear called "the noble crown" (at-tādi at-sharif).

The rest of the Imperial retinue were a variety of splendid headdresses. The chief curuchs of the court who were the amirs of the palace, all were turbans which were distinctively wound under the chin—the so-called lahnik al-findma or simply al-hanak. Thus, they were known = al-ustādhūn al-mukannakūn. The caliph al-falz became the first ruler to appear with the kanak (Khitat, il, 285) and eventually = did the vizier and the amirs (ibid., i, 440, 449). This fashion was introduced into the east by the Fātimids from the Maghrib, where it still may be seen, especially in southern Algeria and Morocco.

Another head covering which is first mentioned during this period in the kalawia or kalilia lcf. Lat, calautica, Fr. caloute, Pers. galilia) which was a kind of cap (Khitat, 1, 413). It was to become a standard item in Ayyübid and Mamlilk times (see e.g. al-Kalkashandi, Subk al-a-thi, iv, 39, 52-3; al-Makrizi, Khitat, ii, 98).

The viscous modern studies dealing with Fățimid ceremonies draw mainly upon al-Makrizi and to a lesser extent, on al-Kaikashandl and on Ibn Taghri-Birdi, all three of whom depended upon the lost work of Ibn al-Tuwayr. See K. A. Inestrantsev,

Torpesturnii vierd Fatimidiskihh hhatifou ("The solemn entry of the Fatimid caliphs"), in Zapiski Vost. Otdyel. Imp. Rust. Arkheol. Obihdestva, xvii (St. Petersburg 1904); M. H. Zaki, Kunar al-Fätimiyyis. Calro 1937; M. Canard, La cérémonal fatimite et le cérémonal bysantin: essai de compasison, in Bysantion, xxi[2 (1951), 355-420; idem, La procession du nouvel an chevites Fatimides, in AIEO, x (1952), 364-98; A. M. Madjid, Nuquan al-Fäțimiyyin voarusümukum fi Mişr, II, Cairo 1955.

One fact stands out clearly—that Jewish and Muslim women dressed slike during the Fatimid and Ayyūbid periods. The Geniza trousseau lists give every indication that the restrictive laws of ghiyār were not enforced. The same garments are mentioned in the Islamic sources. There is no limitation in the Geniza as to colour and textile, rather there is the greatest variety of hues and diversity of fabrics. Jewish women, like their Muslim counterparts (and most likely Coots as well) went veiled.

The Geniza documents show that the bourgeoisis consciously or unconsciously tried to imitate the modes and mores of the ruling class. Merchants, for example, bestowed khilat and firzix garments upon relatives and friends. People of means were all the precious fabrics known to us from the descriptions of the Fatimid ceremonies. Over sixty fabrics mentioned in the Geniza. Of these, forty-six mentioned in the Geniza. Of these, forty-six known from the literary sources collected by Serjeant. Under the Fatimids and Ayyūbids, the mercantile class indulged itself in many types of garments. The Geniza trousseaux mention almost seventy items for woman alone.

The Geniza has revealed the names and considerable data for ______ than two dozen garments which were hitherto unknown _____ only mentioned in isolated literary sources without any explanation or description. Among these _____ the filliation is a dress which first appears in late Ayyubid trousseaux and became popular in Marniuk times, after which it ______ to have disappeared; the 'akabiyya, 'ard, mukullaf, and radda, all head scarves or thawis; and the wasai and khasi, both beits or cumms bunds.

In addition to new names of garments and textiles, the Geniza has provided an entirely new vocabulary of patterns and adorments. Many of these designs can be correlated with those in manuscript illustrations (see Stillman, The importance of the Cairo Geniza manuscripts for the history of mediance female attire, in IJMES viila [1976], 579-89).

There is also considerable information in garments already known. For example, the safsdri and the barrakan, both mantles, which have been in attested use in the Maginib from mediaeval to modern times [al-Idris], Nutkat al-mantally, ed. Dory and de Goeje, Leiden 1866, 59: al-'Umarl, Masdikt al-abjar, tr. Gaudefroy-Demombynes, Paris 1927, 125) are shown to have been worn in Fâţimid and Ayyübid Egypt as well. No doubt they were brought

into the east after the Fāṭimid conquest in 358/969. The badan, a short, sieeveless tunic, worn by both sexes and usually associated with the Arabian Peninsula (Dozy, Vidaments 56-8), is shown to have been a fairly common article of feminine attire in

mediacval Egypt.

For the information provided by the Geniza costume, see Y. K. Stillman, Female attire of Mediae-tal Egypt; idem, The wardrobe of a Jewish bride in mediaeval Egypt, in Studies in Marriage Customs, ed. Ben-Ami and Noy, Folklore Research Center Studies, iv (Jerusalem 1974), 297-304; eadem, The importance of the Cairo Geniza manuscripts for the history of mediaeval female attire; eadem, Ketäbbot ha-Gentza ke-Makor kilvüsh ha-Ishka bimē ha-Bēnayim, in filikrē Genizai Kāhir, ed. M. Friedman, Tel Aviv 1980, 149-60.

7. The early Turkish dynasties: Saldiaks, Ayyūbids, Mamlūks. The Turkish military dynasties that controlled one part or another of the Middle East from the late 5th/11th to the early roth/16th centuries brought with them many Central Asian styles, particularly in military and ceremonial attire. These, however, were the distinguishing costumes of the military élite. The fashion of dress of the native Arab population was little affected at first. M. V. Gorelik (Blighnavostočna va miniatyura XII-XIII um kak etnografilesky istolnik, in Sovetskaya Etnografya, cixxii/2 [1972], 37-50) has attempted to distinguish between two broad complexes of dress throughout the Arab east at this time-the western, based on the fusion of Arabian styles with those derived from Hellenistic Mediterranean prototypes, and the eastern, derived from Iranian, Turkish, and Inner Asian styles. Syria and 'Irak during this period fell generally into the latter category, while Egypt, with the exception of the military, fell into the former.

Throughout much of this period, the typical outer garment for member of the ruling class and any of wariety of coats (abbiya). These were worn over the usual layers of undershirts, the most common of which was the hamdian. The undershirt was normally hidden by the outer garments, except in southern Trak where it was cut long to extend below the coat above it.

The Saldjüks and Ayyühids preferred the so-called Turkish coats (al-akbiya al-turkiyya), the hem of which crossed the chest in a diagonal from right to left. The Mamtik amirs were the Tartar coats [al-akbiya al-talariyya] with the hem crossing the opposite way. Over the coat was worn a belt of metal plaquettes (kiyāşa) or a sash (band). Al-Makrizt (Khija) ii, 99) identifies the kiyāşa with the ancient minjaka, and states that there was a special market in Cairo (sāk al-hamā'siyyin) devoted to the sale and manufacture of these belts. (For I finely preserved specimen of the kiyāşa, see Mayer, Mamiuk costums, Pl. 1X.)

For were frequently indicative of rank and social status. The longer and man ample the sleeves, the higher the standing of the wearer.

The illustrations from Makamai, K. al-Aghāni, and K. al-Diryāk manuscripts from this period attest a wide variety of caps and turban styles. The normal headgear of the military class was a stiff cap with a triangular front. It was sometimes trimmed with fur (Marbūsh), and sometimes had a small kerchief bound around it to form when the company of turban (lakh) [16]. The other most common cap was the kalawia which was usually yellow under the Ayyubids, yellow and

red under the early Mamiûks, and later red only (Mayer, Mamiak costume, 29).

The kaba and the sharbigh were so much the distinctive mark of a Muslim knight that even a Crusader was prepared to wear them as a gesture of friendship to Salah al-Din [Ibn al-Athir, xii, 51-2].

Under the Mamiliks, two popular short sleeved coats were the bughlufah (also bughlufah) and the solfariyya. These were made of a variety of fabrics and frequently were lined with fur. Such a coat sometimes were under an ample outer robe (faradjiyya).

Eventually, some of the garments which were at first the mark of the military aristocracy initiated by the middle classes. The bughluids, for example, appears in several Geniza documents.

The only comprehensive study of the attire of any of the dynasties of this period is L. A. Mayer, Mamink costume, where there is an extensive bibliography. Shorter, general studies include: Mayer, al-Asyá' fi 'l-ayyám al-wusfā, in al-Kulliyya (1932), 438-49; idem, Saracesuic arms and armor, in Al, x (1943), 1-12; M. V. Gorelik, op. cit. (men's dress only). 'A. M. Mādjid, Nasum dawlal ralājin al-Mamālik warusāmuhum fi Miçr, ii, Cairo 1967, 64-87, has chapter on Mamilik attire which, however, adds little to Mayer's work.

8. The Ottoman period (to early modern times). As far as the costume history of the region is concerned, the Ottoman conquest of the Arab East in the early roth/16th century marked a continuation of the preceding period, rather than an abrupt change. Ceremonial and military dress remained Turkish (see below, section iv). Some Ottoman fashions were adopted by members of the urban elite, as for example, the Turkish-style gaffan for men and the long, tightly-fitted coat known = the yelek for women. Turkish synonyms came into common use for certain items of clothing alongside, but not necessarily replacing, the native Arabic equivalents (e.g. čakshir for sirmil and yazhmak for burkus). But on the whole, Arab styles and Arabic terminology prevailed. The vestimentary system remained essentially the same.

1873, Constantinople 1873.

Regional distinctions were—and this remains true today in those places where traditional costumes are still worn—most striking in temale attire. Men's clothing was more or less uniform throughout much of the Middle East during the Ottoman period. This was due in part to the fact that men were physically and socially more mobile than and came to have a more pan-Middle Eastern style of dress. Thus when a plate from E. W. Lane's Manners and customs of the modern Egyptians (London 1836) appeared in a book Syria with the added caption "A Syrian gentleman with pipe and inkwell, cs. 1860", the inaccuracy was only minor.

The last one hundred years: the impact of the West on traditional Middle Eastern 740 LIBÁS

dress. The ever-increasing Western economic, political, and cultural penetration into the Middle East in the second half of the 19th and the first half of the 20th century had a marked impact on the costume history of the region. Over the past hundred years a gradual abandoning of traditional, loose-flowing garments has been taking place in favour of Western tailored clothes. The transition was slow at first and did not take place in every place and among all groups at the

The first group in the Arab East who began in large numbers to abandon traditional attire were the westernized Christian and Jewish protégés of the foreign powers. The civil emancipation of non-Muslims during the Tansimái [4.e.] period and the expansion of missionary schools and European businesses

accelerated the process.

Most Christian and Jewish women abandoned the veil m full generation or more before their Muslim counterparts. One factor which facilitated their abandoning the veil so much earlier was that the segregation of women in the non-Muslim communities was man m strict as it was among Muslims, m was the non-Muslims' style of veiling quite as total even in the preceding centuries (see e.g. Y. K. Stillman, The costume of the Jawish woman im Morocco, in Aspects of Jawish Jothlore, ed. D. Noy, Cambridge, Mass. 1979).

By and of the 19th century, the "I veil or not to veil" question had become one of the burning issues for modernist reformers such as Käsim Amin (see his Takele al-maria, Cairo 1901). It also became a burning issue for the small but growing Egyptian feminist movement. Huda Sha'rawi, the famous Egyptian feminist, is supposed to have solemnly cast her vell into the Mediterranean = she returned home in 1923 from a women's congress in Rome (A. H. Hourant, The vanishing veil: a challenge to the old order, in UNESCO Courier [January 1956], 37). Her symbolic action was soon followed by many upper and upper-middle class women, but not by women of the lower-middle class, which remained the last stronghold of tradition (see Y. K. Stillman, Attitudes soward women in traditional Near Eastern societies, In S. D. Goilein Festschrift, i, ed. S. Morag, I. Ben-Ami and N. A. Stillman, English-language volume, Jerusalem 1981, 345-60).

Muslim men abandoned traditional attire more rapidly than Muslim women. This is due to the male's greater physical and social mobility, moted above. The first Muslim men to adopt the European mode of dress members of the bureaucracy and the upper class who must in direct contact with westerners and who, in many cases, had visited Europe, Such individuals were referred to as "westernisers" (Ar. mutafarnadium) and "westernised gentry" (Turk, alafranga čelebiler). Throughout the 19th century they remained a small minority. However, after the First World War the change became rapid (see e.g. R. Tresse, L'évolution du costume des citadins syrolibanais depuis un siècle, in La Géographie, lxx [1938], 1-16, 76-62; idem. L'évolution du costume des citadines = Syrie depuis le XIXª siècie, in La Géographie, lxxì-lxxii [1939]. 257-71, 29-40).

One aspect of the male wardrobe that has resisted change even where the transition • Western attire has been more or less complete is the headgear. It is still common to see men dressed in a Western suit, wearing a likinya, a larblish, • a kāfinya. This is due to the traditional importance of covering the head and to the fact that the headcovering (origin-

ally the turban) was considered a badge of Islam. The kdfiyya, which was in the last century most commonly worn by Bedouin and peasants in many parts of the Middle East, has in recent years taken on a nationalist connotation comparable to that of the fez in Ottoman Turkey under the Young Turks. The chequered kāfiyya in today the badge of the Palestinian commandoes (see Y. K. Stillman, Palestinian costume and jewelry, Albuquerque 1979, 16). The traditional 'smāma is now worn almost exclusively by members of the 'ulamā' in the Middle East (although in the Maghrib, and in particular in Morocco, it is still commonly worn even by men who have adopted Western dress. See below, section if.

Any sort of country-by-country survey of the traditional garments still worn—or worn until recently in the Arab East would be outside the scope of this article. Western travellers to the Niddle East over the past two-and-a-ball centuries have provided lengthy and detailed descriptions of native costumes. In addition III these, there have appeared in recent years II number of scholarly monographs on various aspects of Middle Eastern costume (see Bibl.).

What follows is the alphabetical glossary of so of the more common articles of clothing still worn in the Arab East in the 20th century:

GLOSSARY

'abā's, 'abā's: coat, shoulder mantle, worn by both sexes (Arabian Peninsula, Egypt, 'Irāķ, Syria-Palestine)

'addi: ringed cord or rope to go over the head scarf, worm by men (Ar. Pen., Ir., Syr.-Pal.)

'antari: a lined yest ranging from short to knee length, worn by women (Eg., Syr.-Pal.)

'arakiyya: skull cap, often embroidered, worn by both sexes by itself or under the head-dress (Ar. Pen., Eg., Syr.-Pal.); called 'araki'm in 'Irâk

'asba: folded scarf worn by women (Eg., Syr.-Pal.)
bdbadi, bdbash: oriental slippers of soft leather (Ar.
Pen., Eg., Ir., Syr.-Pal.)

badan: cotton or silk man's gown (Ar. Pen.)

banegi, banigh: a wide-sleeved man's coat (Ar. Pen., Ir., Syr.-Pal.)

bigh; mantle, jacket, worn by both sexes (Syr.-Pal.) brim: ringed cord or rope to go over the head scarf, syn. with 'abdi (Syr.-I'al.); binding for loin cloth, syn. with hadw (Ar. Pen.)

burd, burds: heavy woollen wrap usually worn by men (Ar. Pen., Eg.)

burnus: woollen hooded cloak worn by men, imported from the Maghrib (Eg.)

burgue: woman's face veil (Ar. Pen., Eg., Syr.-Pal.)

bagh: variety of 'abb' made in N. Syria (Syr.-Pal.) baght, paght: black face veil mem by women (Ir.) 'abght, shakshir: Turkish-style pantaloons, underdrawers, worn by both sexes (Eg., Syr.-Pal.) dimir: a woman's jacket with short sleeves, syn. with

taksira (Syr.-Pal.)

diffivyo: a heavy winter cloak for men (Eg.) dile: the patched garment of Suffe, also worn by clowns (Eg., Ir., Syr.-Pal.) dialidatys: the loose body shirt still commonly by men in Egypt.

gillays: embroidered djubbs, a wedding costume may be a dress or a cost depending upon the region, worn by women (Syr.-Pal.); a man's marriage gaftan (Yemen)

distbs: a coat-like outer garment worn by both sexes (Ar. Pen., Eg., Syr.-Pal.)

diekh, diekho: a wide-sleeved coat worn by men (Syr.-Pal.)

durad'a: woman's outer coat, open in front, sometimes syn. with diubba (Syr.-Pal.)

faradiiyya: a long-sleeved man's robe (Eg.) farmaliyya: a woman's dross (Syr.-Pal.)

forudiyya: a square kerchief bound around the cap by women (Eg.)

fas: the Turkish fee, synonym for the red farbath (Ar. Pen., Eg., Syr.-Pal.)

fusiān: a woman's dress (Eg., Syr.-Pal.)

fals; embroidered kerchief hung from the walst sash by men [Ir.]

ghabānī, ghabānīyya: head scarf with an embroidered pattern of lozenges, worn by both sexes (Syr.-Pal.) ghudja: large head shawl for women, worn in the

Hebron area (Syr.-Pal.) below: dark, silky enveloping outer wrap for women

(Ar. Pen., Eg., Syr.-Pal.)
hakw: binding for waist wrapper worn by both

hakw: binding for walst wrapper worn by both sexes (Ar. Pen.)

hiyasa: cloth beit with silver plaque in the centre, worn by men (Syr.-Pai.)

bindm: ■ belt or sash worn about the waist by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)

huialityya: a large dark wrap wound around the body with the upper parts pulled down over the shoulders and secured with pins (Eg.)

shoulders and secured with pins (Eg.) ikdāda: a white kāfiyya worn in summer (Syr.-Pal.) ikāba: headband worn by ______ (Ar. Pen., Eg.,

Syr. Pal.)

ighdid: woven, woollen belt, worn by both sexes

(Syr.-Pal.)

ith: a loose gown worn by women (Ar. Pen.)

isår: a large, enveloping body wrap for women (Eg., Syr.-Pal.)

Mfiyya, hifiyya: head scarf worn by both sexes (Ar. Pen., Ir., Syr.-Pal.)

\$4/\$4n, \$4/\$4n: ample, full-length robe, buttoned down the front, with long sleeves, worn by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)

kamer: a broad belt often red in colour, worn by men (Eg., Syr.-Pal.)

hamis, hamisa: shirt-like dress worn by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)

khalaka: woman's dress (Ar. Pen., Syr.-Pal.)

thetadityya: wariety of 'abd' made in Hasbaya (Syr.-Pal.)

hairks: vell, head scarf, worn by women (Syr.-Pai.); also syn. with dilk of Suffs

his/f: short boots or leather outer socks (Ar. Pen., Eg., Ir., Syr.-Pal.)

kkumr: a man's | (Ir.)

hibe: a variety of thoub (Syr.-Pal.)

hubran: a jacket with long, wide sleeves, worn by both sexes (Syr.-Pal.)

#sambas: overgurment, gown, made of striped ailk, worn by both sexes (Syr.-Pal.)

kws, kis: a metallic cap or crown, often studded with jewels, worn on top of a woman's headdress (Eg., Syr.-Pal.)

laffa: man's turban cloth (Ic., Syr.-Pal.)

laf2'if: long bands of cloth attached to a hat and in which woman's hair is wrapped (Syr.-Pal.) liss: woman's head scarf of white silk or cotton net into which flat metal strips have been decoratively hammered (Syr.-Pal.)

libds: pants, underpants, worn by both (Ar. Pen., Eg., Ir., Syr.-Pal.)

libda, labbāda: a felt cap worn by men (Eg., Syr.-Pal.)

madraka: a variety of theat by Jordanian

women (Syr.-Pal.)

matrina; head scarf worn by Bedouin women (Ar. Pen.)

wandil: a woman's head scarf, veil (Syr.-Pal.); an embroidered kerchief hung from the waist sash by men (Ir.)

ma'raka; syn. with 'arakiyya (Ar. Pen.)

mark#b: pointed men's shoes of thick red morocco (Eg.)

machla: a variety of 'aba' made in Baghdad (Ir.)
mast: long stocking of soft, yellow leather, inner shoe
worn by both sexes (Eg., Syr.-Pal.)

maximi: a fine 'abâ' of white wool for mea, produced in Baghdad (lr.)

mass, mesd, miss: syn. with mest (Eg., Syr.-Pal.)
milhafa: a large, enveloping outer wrap worn by
women (Eg., Syr.-Pal.)

minshafa: a large, white head veil for women (Syr.-Pal.)

mintivés: a jacket worn by both soxes (Syr.-Pal.)
mudarrabiyya: a peasant woman's jacket (Syr.-Pal.)
mubla: wery wide nurban by 'ulasad' (Eg.)
muld'a: a large, enveloping outer wrap worn by
women (Ar. Pen., Eg., Ir., Syr.-Pal.)

musayyaha: a slik kafiyya (Syr.-Pal.)

mail: a general word for shoe used throughout the Middle East

sabla: a loose gown worn by woman, synonymous with thank (Eg.)

saffa: a small embroidered bonnet trimmed with colus, worn by women (Syr.-Pat.)

sāku: a woollen or velvet coat for women (Syr.-Pal.)
salja: a jacket worn by both sexes (Syr.-Pal.)

shabablikiyya; a variety of 'abd' made in Hashaya (Syr.-Pal.)

shaddo: a man's leather belt (Syr.-Pal.)

<u>shál</u>: a woman's shawl, usually of wool (Ar. Pen., Eg., Ir., Syr.-Pal.)

shalwar: synonymous with siredi (lr.)

shambar: | large veil common to the Hebron area and southern Palestine shabriyya: a black face veil of goat's wool or horse

hair, worn by women (Ir., Syr.-Pal.) 验程点: the winding cloth of a turban (Syr.-Pal.)

xdshiyya: ■ variety of farbüsh (Eg.); a skull cap worn beneath the farbüsh (Syr.-Pal.)

status: Bethlehem married woman's hat

<u>Mawdar</u>, <u>shawdhar</u>: m black, enveloping outer wrap for women (Ar. Pen., Ir.)

ghintipan: woman's pants or pantaloons (Eg., Syr,-Pal.)

ghut/a: m head scart of Bedouin women (Ar. Pen., Syr.-Pal.)

<u>shauayhi, shauayhiyya</u>: woman's balt, usually woven of goat's hair, quito ornate, wom mainly in Southern Palestine

sidviyya: sleeveless vest worn by both sexes (Ir., Syr.-Pal.)

simido: bonnet-like hat trimmed with coins most common to women of Ramallah (Syr.-Pal.); a man's headeloth (Ir.)

sudayra: m short, sleeveless vest, worn by men (Eg.) tabyra: the series skull cap wern by both series alone or under the head dress (Ar. Pen., Eg., Ir., Syr. Pal.)

LIBÁS 745

tagsing: short-sleeved jacket worn by both sexes (Syr.-Pal.)

tantur, tartur: a high conical cap resembling a mitre, worn by Suns (Eg., Syr.-Pal.); a high pointed woman's headdress of wood, horn, or metal, once very common among the Druze (Syr.-Pal.)

tarbifa: a woman's head scart or veil (Syr.-Pal.) jarha: a large, dark head veil that hangs all the way down the back, worn by women (Eg.)

thoseb: basic tunic worn by both sexes throughout the Middle East; a woman's dress (Eg., Syr.-Pal.) likks: draw-string for siredl, used throughout the Middle East

wuha, wuhaya, awha: terms designating a variety of women's bonnets, usually decorated with coins (Syr.-Pal.)

yasamak: Turkish-style veil, frequently syn. with burkut (E.g., Syr.-Pal.)

yelek: a woman's long coat, tightly fitting (Eg., Syr.-Pal.); a long vest worn by both sexes [Ir.) summar: a belt, usually made of a folded scarf, worn by both men and women (Syr.-Pal.)

STILLMAR) formen, Tübingen 1948.

ii. -- The Muslin West

The Mustim West, which in the Middle Ages included Spain and Sicily as well - North Africa, belongs generally to the Arabo-Mediterranean vestimentary system, whose common unifying factors are rectangular tunics and loose outer wraps. Within this system, however, there has always been m great deal of regional, ethnic, and socio-economic variation. The Maghrib has been noted since the time of the Arab conquest in the second half of the 1st/7th century for its own particular styles in dress, as in other aspects of material culture. The man for this can be conveniently summarised as follows: (1) the physical distance of the Maghrib from the Muslim-Arab heartlands; (2) the indigenous Berber element, which always remained strong; (3) in the case of Spain, the large native Iberian population and the propinquity of Christian territory; (4) the absence of the Persian katib class; and (5) the very late arrival of the Turks in Tunisia and Algeria (and their total absence from Morocco).

Since much of the information concerning mediacval Arab costume-nomenciature, style, customs and institutions-applies to the Maghribi centres of urban culture in the Middle Ages, this article will deal only briefly with this period, concentrating on the uniquely Maghribl aspects of its costume history. Most of the article will deal with the period extending from III later Middle Ages to modern times, or approximately the last 700 years, which, it should be pointed out, has been the subject of more study than that devoted to Middle Eastern ensume history for all periods combined. A glossary and an extensive bibliography by country follow at the end.

z. Pre-Islamic foundations of Maghribl costume. When the Arabs conquered North Africa. Punic and Byzantine influences were still alive in the cities and towns. The countryside may also have had some Punic elements, but was overwhelmingly-if not exclusively-Berber. Even in Classical times, North Africa was noted for its distinctive style of dress. Greek and Roman authors considered the natives to be barbarians because they were only an animal skin draped over the left shoulder covering the front and back. Garments of soft leather reminiscent of fildli, the soft leather from goatskin (which in European languages is called morocco, maroquin, etc.) were also mentioned as being worn, and indeed, some archaeological remnants have been found (see S. Gsell, Histoire ancienne de l'Afrique du Nord, Paris 1927, 22-38, where numerous sources are cited). Both this simple style of draping and the use of leather garments continued among the Berbers well into modern times.

The most striking feature III North African clothing in Roman eyes was the flowing, unbelted tunic-Roman and Byzantine sources mention the uncinched tunic frequently and in the same attributive way that they note the trousers of the European and Asiatic barbarians. Thus, for example, Virgil speaks of hie nomadum genus et discinctos Mulciber Afros (Aeneid, viii, 724), and Corippus, the 6th-century poet of the Byzantine reconquest, says even more explicitly: Nee tunicae manicis ornant sua brachia Mauri/Insita non ullis stringuntur cingula bullis! Distinctique ... (Johannidos, ii, 130-2). The basic Maghribl tunics such = the Tunisian smadidia, the Algerian 'abaya, and the Moroccan gandara all fit this type. Though ample and uncinched, the tunics of the pre-Islamic period seemed to have been short, not falling below the thigh. Similar short, simple garments were common in Berber areas such = the Moroccan Rif and the Algerian Mzab into the early 20th century.

Another distinctive feature of North African attire which continued to be a hallmark of Magnribl style in the Islamic period is the hooded cloak, called burnus (brends) in Libya, Tunisia, Algeria, and selham and akhnif and less commonly bornus in Morocco. Gsell (op. cit., p. vi, 24-6) sees the origin of the burnus in the sagues, the simple wool cloak worn by the

Roman legionnaire. E. F. Cauthier (Le passé de l'Afrique du Nord: les siècles obsours, repr. Paris 1952, 148 f.) point to an even similar garment, the parnula, a travelling cloak to which a hood (escullus) generally attached. Philologically, the word burnes is probably derived from Greek and Latin birrus (S. Fraenkel, Die aramdischen Freindwärler im Arabistkan, repr. Hildesheim 1962, 50 f., where 🖿 interesting connection is made with segum on p. 51, n. 2). The term burnes existed in early Islamic Arabia, where it usually designated a borntet [see Lisks. 1]. The North African burnet-clock was palpably different. When the Arabs invaded the Maghrib, they distinguished between two great Berber groups, whom they called the Barania and the Butr (Ibn Khaldûn, Ibar, vi, 89 f.). W. Marçais (Articles et conférences, Paris 1961, 74) has suggested very plausibly-albeit with caution-that these names might reflect not genealogical or ethnic groups, but rather physical appearance; i.e., those Berbers who were handed garments (baranis), and those who were short garments (but), most likely without hoods. The ubiquity of burnes in the Maghrib may originally have been due to the fact that the Berbers in Antiquity and for the first few centuries under Islam were no caps or headcloths (e.g. Ibn Khaldûn, Thar, vi, 89; wa-reusukum fi 'l-ghālið hasira'). Furthermore, some Berbers shaved all or part of the head (Gsell, op. cit., 16-18, for classical sources; cf. also Iba Khaldun, Ibar, vi, 89; we-rubbame yata ahadanake bi 'l-halb).

One last distinctive feature that may be traced back to pre-Islamic times is the large wrapping cloth used as mouter garment by both man and women (albeit in quite different ways) from Libya = Morocco. This wrap which is known by various names, the most common in Arabic being havid, hsav, and barrakān, and in Berber a'aban, aghusi, ajaggu, tahayht, and many others. Gsell suggests that this primitive garment has its origins in two wraps commonly worn in Roman North Africa, the lodix and the stragula (ob. cit., 29, n. 6). The poet Corippus speaks of the rough wrap which the natives of North Africa wore thrown over the shoulder and enveloping the arms (Johannidos, ii, 134 f.: Horrida substrictus dependens stragula membris/Ex umeris demissa iacel . . .], Ibn Kheldun also says that most Berbers wrap themselves with a kist' that is thrown over the shoulder ('Ibar, vl. 89: yashtamilina 'I-samma' bi "l-aksiya). Later European travellers also took note of this rather incommodious fashion (see G. Marçais, Costume d'Alger, 25-30, where numerous sources are cited). In Islamic times, the ancient Berber wrap came to be associated with its Arabian counterparts, the izar, mileafa, etc. Insolar as it was used as a veil for women, it overlapped with eastern fashions. However, it seems clear from the sources and from the modern witness that the Maghribl man's was, and remained, quite different in the way it was draped.

2. Magnifili costume during the early and high Middle Ages. The Arabs looked upon the Maghrib as a colonial territory even more than they did the conquered lands of the Middle East. There was almost nothing in the cultures of North Africa or Spain to command even their grudging respect or to stimulate m desire for emulation. They therefore adopted little m nothing from the native costume during the first century or so of their rule. The fashion of the urban clite was Arab. A child's tunic dating back to the earliest Islamic period which is now in the possession of the Bardo Museum in Tunis is very similar to garments from the same time in the Coptic Museum in Cafro (see M. Fendil, Un vitioment

islamique ancien au Musée du Bardo, in Africa, I [1967-8], 242-71). The 4th/soth-century geographer al-Mukaddasi (239) observed that Maghrible dressed in the Egyptian fashion (wa-bi 'l-Maghrib rusilmuhum misriyya—that rusûm here refers to custom la dress is clear from the continuation of the text). The many references to clothing in Ifrikiya collected by H. R. Idris for the 4th-6th/zoth-zeth centuries correlate fairly well with what is known of Middle Eastern attire during that period (Idris, La Berbirie Orientale sous les Zirides, Paris 1962, ii, 594-600). The only items that were distinctly Maghribl were the kisa', the kurziyya (from Berh. takerzit; 500 Dozy, Vétemenés, 380-2) which was a simple winding cloth for the head, and advait (sing, burk), native cork-soled sandals (Dozy, Vetements, 362 f.; idem, Suppl., ii, 334; Idris, op. cit., 597; cf. Sp. alcorque). According to al-Mukaddasi (op. cit., 239), even the traditional Arab ridd? was ____ draped like a kind? _ burnus.

The early Umayyad amirs in Spain tried as best they could to maintain the material culture of Syria, and it may be salely assumed that the dress of the small Arab élite and their epigones (mustafribûn) remained generally faithful to the styles of the Damascus caliphate. The newer Islamic styles with their oriental influences became the fashion of the upper classes when the 'Iraki singer Ziryab [q.v.] arrived at the court of Cordova in 207/822, where he established himself - the Andelusian Petronius. He was not only the arbiter elegantianum in regard to the cut, colour, and fabric of clothes, but established the proper season for each outfit (al-Makkarl, Analectes, ii, 88, citing Ibn Heyyan). It was he who established the djubbe in the standard robe for both sexes. One eastern fashion which only took limited root in Spain was the wearing of the turban ('imāma), which was reserved mainly for the /uḥahā'. Bare heads or heads crowned with a red or green wool cap (ghifara) were commonplace for much of the Spanish population of all classes. Most of the figures that appear in the genre scenes on carved ivory pyxes from Umayyad Spain appear to be bareheaded (see e.g. E. Kühnel, Islamic arl and architecture, Ithaca, N.V. 1966, Pl. 228; W. M. Watt and P. Cachia. A history of Islamic Spain, Edinburgh 1965, Pls. 5 and 7). The halansura and the jaylasan were also in vogue after the arrival of Ziryab (for details on both, mu times, section 1). The last Amirid hadjib 'Abd al-Rahman Sanchuclo increased his already great unpopularity in 399/1009 by ordering courtiers to wear turbans in the style worn by the Berber military (lbn 'ligharl, iid, 48). The style was soon, abandoned when two months later his rule came to its violent end.

There was with the passage of time considerable intermingling of styles between the Christian North and the Muslim South. The Spanish peasant's frock, sayo, in Ar. ghdya (from Lat. sagum) === commonly in the countryside (Lévi-Provençal, Hist. Esp. mus., iil, 425; Dozy, Vitements, 212 f.). Soldiers wore a scarlet cape (\$abā") similar to that worn in Christian territory (Lévi-Provençal, op. cit., iil, 429; Dozy, op. cit., 360; obviously derived from Sp. cope or caps and not from Pers. \$464, concerning which see Libks, sections a and 3). Oriental fashion progesssively gave way-perhaps as a partial corollary to the Reconquista-to a uniquely Andalusian style or cut (ta/sil). By the 7th/13th century, an Easterner in the turban and robes of the Levant regarded as a curiosity (Lévi-Provençal, op. cil., ili, 492).

It is interesting to note that although Muslim

women in Spain were the various veils used in the Middle East, such as the khimar, burkst, mikna's, and izde (see e.g. H. Pérès, La poésie andalouse, en Arabe classique = XI siècle, Paris 1953, 179, 180, 329), they were not always too strict about it. The poet al-Ramadi was the beautiful Khalwa at the Bab al-'Attaria, a popular gathering place for women in Cordova, and fell in love with her at first sight. Although she was unveiled, he did not know whether she was slave or free (Ibn Hazm, Towk al-hamāma, ed. H.K. al-Şayrafi, Cairo n.d., 22 f.). The reguish Ihn Kuzmān [q.v.] tells of a married Berber woman he met and with whom he had an affair. She is described as wearing only a garland on her head (J. T. Monroe, Hispano-Arabic postry. Berkeley and Los Angeles 1974, 265). Jurists complain of the heretical innovation among the common people whereby a man allows his wife or flancée to unvail in front of someone other than an immediate male relative (1bn 'Abd al-Ra'0f, Risāla fl ādāb alhisha wa 'l-muktasib, tr. R. Arié, la Hespéris-Tamuda, i [1960], 32). This laxity may have been due to the influence of the large non-Muslim population or of the considerable Berber element, or both. Even who mormally veiled would bare their faces when in mourning (see e.g. Pérès, op. cil., 103; also Ibn 'Abdun, Risāla fi 'l-badā' wa 'l-hisba, tr. Lévi-Provençal, Séville musulmane au début du XII: siècle, Paris 1947, 39, para. 53).

3. The Berber Empires and their successor states. Middle Eastern influences in Maghribi dress - as in other aspects of material culture-declined greatly from the late 5th/11th century onward, Indigenous Berber and Spanish influences became stronger than ever. The major factors in the increasing "Berberisation" and "Andalusianisation" were the rise of extensive Berber empires that united the Magarib with what remained of Muslim Spain. This occurred at a time of growing isolation, when the Arab East me coming under the rule of Turkish military regimes with their own language, customs, and style of dress [see LIBAS, section 2] and when the arteries of communication between Maghrib and Mashrik, though by no means cut, were not as smooth as in preceding centuries, because of the war, instability, and the overall decline of Muslim sea power, Lastly, the urban centres of high culture in Ifrikiya which had set the fashion for much of North Africa were in ruins after the invasion of the Banu Hila Bedouin. Further west, Morocco was a centre of power and Spain a centre of culture. Once united, they would become the local point of style for the rest of the Maghrib.

The rise of the Almoravids paralleled in a man a contemporary phenomenon in the East. They were non-Arab ruling élite who wore their own distinguishing uniform. They dressed in Saharan Berber fashion, and me described as being untouched by Mediterranean civilisation (al-Bakri, K. al-Mughrib A dhike bilad Ifrikiya wa 'l-Magheib, ed. 🖿 Slane, Algiers 1857, 164 (.; also Ibn Khaidûn, Thar, vi. 181). The main feature setting the Almoravids apart from their subjects was their face veil (lithim [q.v.], which masked the lower half of their face), hence their nickname of al-mulaththamun. Iba Khaldûn (Ther, vi. 197 f.) notes that many Saharan people were mulaththamile even in his own day. The style was essentially the same as that of the modern Tuaregs. Almoravid dress was not for the subject population. In fact, Ibn Abdun (op. cit., 6: ff., para. 56) warns against permitting even the other Berbers in the service of the Almoravids to wear the lithdom in the streets of Seville because of the fear it struck in the population. The Almoravids also were the 'imdoma and bernas. There were _____ Anda-lusians who donned these items in order to ingratiate themselves with their ____ masters, even though their own compatriots laughed at them (Ibn Abbār, al-Hulla al-siyarā', in Dozy, Recherches', i, p. li).

The Andalusians found little to copy from the Almoravids. However, the latter found a great deal worthy of emulation in Spanish civilisation. Under Almoravid rule, Andalusian culture spread into Morocoo together with, certainly, Andalusian fashions. This movement of styles across the Straits of Gibtaltar mainly from north to south would continue under the Almohads and in varying degrees under their successors.

The rise of the Almohads had a more direct and lasting influence on Maghribl costume history. The Mahdi Ibn Tümart's [q.v.] puritanism extended to matters of dress. His biographer al-Baydhak relates that on his return home from the East, the Mahdi upbraided the people of Bidjaya for wearing sandals with gilded laces (al-alrah al-merariyya) and turbans not in the Muslim fashion ('and'im al-dishiliyya), and for men wearing fut@hiyyat, which was apparently a tunic normally for women (Ta'rikk al-Messakhidin, ed. in Lévi-Provençal, Documents inédits d'histoire almohade, Paris 1928, 32, Ar. text). The prudish Mabdi had to cover his face when passing adorned and unveiled female labor vendors in the streets of Themsen (ibid., 61). His full wrath was heaped upon the Almohad rulers themselves. In the Friday mosque of Marrakesh, he called the veiled amir and his retinue "velled slavegirls" (ib:d., 68; djaudri munalsold(). When he encountered the princess al-Sura unveiled as was customary among Almoravid women, he reprimanded her so severely that she went crying to her brother the amir (lbn Khaldun, Thar, vi, 227).

Like all Berbers, the Almohads were the burnus (also burnus) and the kisā' (al-Baydhak, op. cit., 72 i.). They normally were the form of turban known as kurniya (ibid., 31). Under the Haisids, the descendants of the great Almohad faulities were the faylasān with the ends criss-crossed in front like the Arabic letters lām-alif (R. Brunschvig, La Berbörne Orientale sous les Haisides. Paris 1947, ii, 278. It was not long before the early Almohad simplicity in dress gave way iii the luxuries of al-Andalus. They bestowed magnificent robes of honour (khila' saniyya) upon their favourites (al-Marākushī, K. al-Mu'djib fī talkhis ahhbār al-Maghrib, ed. Dozy, Leiden 1881, 175, 184, 230).

From the Almohad period onwards, veiling for women was more strictly observed throughout North Africa and Muslim Spain. The Almohads also instituted one ill the mill unusual applications of the laws of ghirds [q.u.]. Suspecting the sincerity of the large number of Jews who had converted to Islam under duress, the caliph Abu Yusuf ordered that all these peophytes should wear distinguishing clothing consisting of blue-black garments (thiydb kulliyya) with exaggeratedly wide sleeves (akmām mufritat al-sa(a) which reached to the ground, and ludicrous caps (holantát falá sshnaf silra) that resembled pack saddles (ka-annakā 'l-barādi') which extended below the ears (al-Marrakushi, op. cit., 223). His son and successor Abů 'Abd Aliàh changed the uniform to yellow garments and yellow turbans (ibid.). It may be considered part of the Almohad heritage that in Morocco throughout the later Middle Ages and until modern times, the dress code for Jews was one of the most strictly applied in the Muslim world (see N. A. Stillman, The Jews of Arab lands, Philadelphia 1979, \$3, 304, 312, 357).

There were no great changes in Maghribl fashion with the passing of the Almohads. The Hassids in Tunisia, the Zayyānids in Algeria, and the Marfaids in Morocco were all in a sense successors rather than supplanters of the Almohads. The information on Tunisian dress culled by Brunschvig (Hafsides, ü, 276-82) correlates well with what is known from the preceding period. Local names for special varieties of garments appear more frequently now, as for example, barrakan, the heavy wrap for men and the safsari, the light wrap for women. Both are mentioned as being commonly worn in Tunisia (ibid., 276, 280), and both me known from earlier centuries as well (see Y. K. Stillman, Female attire of medieval Egypt, 42 L, 62 L). Leo Africanus's [q.v.] description of clothing worn in Marinid Fez also shows considerable continuity in the general outlines (Description de l'Afrique, tr. A. Epaulard, Paris 1956, i, 207 f.). He does note that the learned doctors and gentlemen were jackets with large sleeves like upperclass Venetians. He also mentions that women's trousers for outdoor covered the entire leg. He further notes that the latter are always veiled with a large wrap covering the head and the entire body (ká*ík) as well as with a face veil (litham) covering all but the eyes (ibid., 205).

Clothes are mentioned by the Marinid historian Ibn Ahmar (Rawdet al-nisrin fi dawlat Bani Marin, Rabat 1382/1962, 15) in connection with the popular Moroccan belief in baraka, the blessedness of a charlsmatic individual. The Amir 'Abd al-Hakk b. Mabyū was considered by the Zanāta to be a possessor of baraka and a mudido al-du'ā' (one whose prayers are answered). His kalansura and sardarit would be sent to women in difficult labour to ease the birth.

With the passing of the Almohads, the Muslims of Spain abandoned the turbans they had briefly worn (al-Umarl, Masalik al-abşar fi mamálik al-amsar, tr. Gaudefroy-Demombynes, Paris 1927, 234). Multicoloured garments were popular. The wealthy were garments of the fine gilded silk (al-washy al-mudhakhab) produced in Almeria, Murcia, and Malaga or special silken clothes (al-libds al-muharrar) called mulabbad mukhatfam ("felted, checked") made in Granada and Basta (al-Makhari, Analestes, i, 123). R. Arié has noted that fashions of the neighbouring Christian kingdoms already influenced the mode of Andalusian dress in the early days of the Nasrids (L'Espagne musulmane au temps des Nasrides, 382). The sayo (Ar. shaya) mentioned above was worn not only by peasants, but even by the Nasrid monarch when out riding (shid.). The marlots (Ar. mailitts), a sleeved outer garment whose precise details are vague, and the capellar (Ar. kabillar), a hooded cloak shorter than the burnus, were among the new fashions (ibid., 386).

4. From the end of the Middle Ages to modern times. The basic outlines of Maghribl costume remained quite constant from the end of the Middle Ages up to and well into the period of colonial domination. Certain new fashion elements were brought into the region by the Turks in Tunisia and Algeria and by the Moriscos and Jewish refugees from Spain in these countries and Morocco as well. Most of the clothing innovations which they introduced remained particular to their own ethnic group. Thus, for example, the dialitie (Sp. giraldetta), a whirling skirt, was worn in Morocco only by Jewish and Andalusian memory (see Y. K. Stillman, The costume of the Jewish woman in Morocco, in Studies

in Jewish Folklore, ed. Talmage, Cambridge, Mass. 1980, 350, 355, i., 30). The high, brimless hats known farfar and farfars in Algeria were part of the uniform of the Turkish military élite (Marçais, Costume d'Alger, 53-8), and as late as the 18th century, the Turkish-style dulband was not permitted to native North Africans (ibid., 53). Nevertheless, Ottoman modes of dress did make themselves felt in the urban centres of Algeria and Tunisia. The faleco (Turk. yelek) was very popular in Algeria, and the high, split cone, metal head piece, known as the sarma, became a general fashion for women in Algeria and Tunisla (ibid., 116-119, and Pis. xxix, xxxii, xxxiii, xxxiv). Likewise, the diabaduli, or diabador, a short coat brought by Jews and Andalusians became widespread in the cities of Morocco and Algeria, and in Morocco was manufactured exclusively by Jewish tailors (see Brunot, Noms de vétements culins I Rabat, in Milanger René Basset, i, 97 f.).

Most remarkable is the conservative nature of draping patterns in mon's clothing, which as we have seen goes back to the world of Antiquity. Also interesting to note is the widespread use of fibulae to fasten garments. The Maghribl fibula, called baims, hhellala, hitfiyya, and in Berber tabsims, thereay, and tazersis, has been shown to back to Antique prototypes (H. Camps-Fabrier, L'origine des fibules berbères d'Afrique du Nord, in Mélanges Le Tournesu = ROMM, nos. 13-14 [1973], 217-30). However, traditional attire is—as in the case of the Middle East—losing ground rapidly to Western dress, particularly in the major rities and towns where more than half the population now resides.

CLOSSARY

a'aban: large outer wrap for Herber men (Mor.)
'abaya: a sleeveless, long overblouse for men; a sleeveless, flowing dress for women (Alg.)

Sabrūk: bandana for women (S. Mor.)

akhuif, khusif: Berber cape, hooded for men, unhooded for women (S. Mor.)

farrāḥiyya: skull-cap for men (Mor., Alg., Tun.)
bābāṣḥār: flat slippers for both sexes (entire Maghr.)
bāḥṭasāḥ: embroidered bead shawl for women
(Tun.)

barrakan; large enveloping outer wrap for both sexes (Lib.)

bid'iyya; sleeveless yest for men (entire Maghr); a sleeveless kafida for women (Mor.)

balgha: flat slippers, usually pointed at the toe, but sometimes rounded, worn by both sexes (entire Maghr.)

bornus: large hooded cape for men (entire Maghr.) bhika: woman's het (entire Maghr., but different in each country)

dimir: body shirt for both (Mor.)

dânti: jacket for men (Alg.)

darbdia: a vest (Lib., Tun.); - old threadbare garment (Mor.)

<u>didbdddii, didbddbr:</u> a full-length, caftan-like garment with either no buttoas, or a single button in front (Mor., Alg.)

diard'id: a pair of men's leather loggings (Tun.)

distlaba, distlabiyye, distlab: Hooded outer robe with long sleeves, originally worn by men only, now by both (mainly Mor., also W. Alg.)

diabba: full-length, sack-like chemise without sleeves (Tun.)

diahha: a long, woollen outer robe without sleeves in collar which is closed by a single button at the neck; worn by men (Mor., Alg., Tun.)

duka: a pointed bonnet for women (Tun.)

durra's, der's, dirra: long robe with sleeves for both sexes (catire Maghr.)

foififa, djolfifa, djonfilo: a skirt of Spanish origin worn mainly by Jewish and Andalusian (Mor.)

farašiyya (Berb. tafarašit): a very light gown with a deep slit at the breast which may or may not have sleaves and is worn under the hafida or garment by both sexes (Mor.). It also comes in a half-length version called nuss farality ya

fordia, fradia: garment similar to the faradity of for men only (Alg., Tun.)

formia: vest for elderly men (Alg.)

fishial: shawl and headscarl for women (Mor.)

frimle, /urmayla; corselet for women (Alg.); embroidered bolero (Lib.)

füls: outer wrap; loin cloth for women fentire Maghr.)

fükiyya: a body shirt for men ween under the disliaba (Mor.)

ganding; full-length tunic with short sleeves for men (S. Mor.) and for both (Alg.)

rhidla: sleeveless outer robe for women (Mor.)

ghilla: vest for both sexes (Alg.)

guides: a light, lacy chemisette for women (Alg.) haddun, ahaddun: ■ variety of heavy burnus (Mor.)

hā'ik, hāyk, tahaykt: large outer wrap, usually white, by both sexes (entire Maghr.)

bates: general designation for belt, especially a sush (entire Maghr.)

iburegsen, iditshsha, iherkas: all names for a simple Berber sandal (Mor.)

ikerri: Berber turban consisting of a white cloth wound about the head leaving the crown uncovered

'imdma: standard turban (entire Maghr.)

"Isamiyya: a simple, wide tunic consisting of a hole in the centre for the head and one at each side for the arms, made of striped wool and worn by men; also a very ample blouse of strong cotton = over other clothing (Mor.)

isar: large outer wrap for both sexes (entire Maghr.); fringed shawl worn by Jewish women (Mor.) kabbut: a coat for both sexes (entire Maghr.)

kabkāb: wooden clogs for women (Alg. Tun.)

kaffan: caftan, originally worn by men and women, now only by women (Mor., Alg.)

halasssess: pointed bonnet for men (Alg., Tun.) tamis, kamididia, kamidia: long body shirt for both

sexes (entire Maghr.) kashshdha: long sleeveless outer gown for men; longsleeved flowing tunic with a deep slit down the

breast for women (Mor.) khāya; sleeveless vest for men (Alg.) kkidli: a red wrap for _____ (Mor.)

kenna hbira: elegant wedding and festivity dress of Jewish women consisting of several parts, derived from 15th century Spanish dress style (Mor.)

kmādidja: fine embroidered tunic for both (Tun., Lib.)

had: large outer wrap for both sexes (entire Maghr.) kib: headscarf for women (Mor.)

kurziyya: belt for both seem (Mor.)

lithim: veil for lower half of the face, worn by married (Mor., Alg.)

malāsa: large Turkish style turban worn by religious dignitaries (Tun.)

maryil: short, embroidered shift for women (Lib.) mdamma: leather belt was by men, women and children (Mor.)

milhafa, mlahfa, tamalhaft: large outer wrap worn by both sexes (entire Maghr.)

monida, monidi: man's waistcoat with long, straight sleeves (Mor., Alg., Tun.)

na'l, n'āla, n'āyi: sandals (entire Maghr.)

*#### : face veil for married women, often synonymous with litham (Mor., Alg.)

ribiyydi: flat leather slippers worn by both sexes (Mor., Alg., Tun.)

resse, ryest; small, rather flat turban (Mor.)

safsāri: large outer wrap for women (Tun., Lib.) taya: a skirt (N. Mor.); a dress (S. Mor.) sabbit: closed shoes for either sex (Mor., Alg., Tun.)

sabil, sherbil: flat slippers for both sexes (Mor.) shedd, shedda: turban (Mor., Alg., Tur.)

shall, shall: head scarf for both sexes (Mor., Aig., Turn.) shāshiyya, shāsh: brimless soft hat worn by both sexes (outire Maghr.)

ikhūfiyya, kūfiyya; woman's bonnet (Tun.) səbniyya: woman's headscarf (Mor., Alg.)

sadriyya (= şadriyya): a man's waisteeat (entire Maghr.)

selhām (Berb. āselhām); man's hooded cape (Mor.) sarwal: trousers for both sexes (entire Maghr.) to diffica: large embroidered shawl for women (Tun.)

takayda: pointed woman's bonnet (Tun.) (āķiyya: skull cap for men (entire Maghr.)

farbilsh: hats of various types for me (entire Maghr.) tarasa, tarasala, tarasal: wide-brimmed straw hat for both sexes (Mor., Alg.)

instmal: fringed head scarf for women (Lib.) thashor: stockings for both sexes (entire Maghr.)

track; riding boots (entire Maghr.)

trabak: leather leggings worn by women (Mor.) wikāya: woman's head scarf (Mor., Alg.)

žellāba: 🚃 djelidba

spretita: a simple, sleeveless, square-cut man's tunic (S. Alg.)

nibbiln: a man's jacket with long sleeves (Lib.) zris: a Berber scari for both sexes (Mor.)

Bibliography: For the Maghrib in general. Dozy, Vitements, is still extremely useful, since it is the heavily upon North African and Spanish sources. (1) For Algeria: G. Margais, Le costume musulman d'Alger, Paris 1930, remains unparalleled. See also: A. Flourgeot, Le costume masculin des Kel A kaggar, in Libyca, xvii (1969), 355-76; M. Chabrolles, Comment se voilent les Touaregs, in Buil. de Liaison Sakarienne, vi/20 (1955), 61-8; idem, Remarques = la bakhnouk soufi, in ibid., iv/13 (1953), 52-4; S. (Y. K. STILLMAN)

iii. — Iban

franian costume belongs to a completely different vestimentary system than does Arab costume. The most salient features have shown remarkable consistency from pre-Achaemenid to modern times. Whereas Arab costume (see i. above) is marked by rectangular tunics and loose wraps, franian clothing has traditionally featured tailored garments that include a sleeved coat of varying length and ampleness (kabā), long, straight trousers (shalwās) = leggings (pay-taba or ran), close-fitting boots (mass, kafsh, khifaf, or cakma), and a high or medium high soft cap (hulak or halansuwa, the latter perhaps a descendant of the ancient kyrbasia). This type of attire is typical of other emestrian peoples from the steppes of Inner Asia, such as the Scythians, and also of the Phrygians, and is consistent both with the harsh and highly variable climate and their pastoral way of life. It also shows strong affinities with the clothing of other Indo-Aryan peoples who moved further west, such as the Germans. This sort of clothing was also convenient to the calvary warfare practised by these peoples. Flowing robes were also worn, but mainly me royal or priestly dress for ceremonial occasions. Women, like men, wore coats or jackets (kabāča or nim tana) and trousers m a skirt (dáman), with however, a chemise (pirāhan) or tunio (djāma, a word which like Ar. thank also designates an unspecified garment and cloth in general).

For convenient surveys of pre-Islamic Iranian costume, see El. Goetz, History of Persian costume, in Survey of Persian art, ed. A. Pope, London-New York 1938, 2227-36; Georgina Thompson, Iranian dress in the Achaemenian period, in Iran, JBIPS, iii (1965), 121-6; Dl. Diya' Pür, Pühdk-i zandn-i Iran,

Tehran 1347/1968, 4-125.

 The Umayyad and 'Abbasid periods. During the Umayyad period 'Irak, which had for centuries been part of the Persian cultural sphere, became arabised. Traditional Iranian modes of dress remained in the Iranian heartlands and in Transoxania. Despite the fact that Umayyad rulers adopted elements of Iranian costume for themselves and their court (see e.g. R. Ettinghausen, From Byzantium to Sasanian Iran and the Islamic world, Leiden 1972, 21, 30-3), they did not permit the Arab fighting men on duty in the Persian territories to don Iranian clothing. Soldiers who put on the Persian-style culrass (khaflási) and leggings (sān) were punished (B. Spuler, Iran in frük-islamischer Zeit, Wiesbaden 1952, 515]. However, by late Umayyad times the Arabs settled in Khurāsān were becoming increasingly assimilated into the local culture, and, it may be assumed, had adopted many elements of native attire.

The rise of the 'Abbasids, the founding of Baghdad, and the increasing importance of Persian mowell in the rivil service, made 'Irak a of osmosis where Iranian and Arabo-Hellenistic styles fused, with Iranian elements passing westward and Arab styles and terminology eastward. There is a frequent overlap in the New Persian vestimentary vocabulary of Arabic and Iranian terms (e.g. Ar. libās becomes a common synonym for Pers. püşhāk). Nevertheless, native Iranian styles remained distinctive well into the 'Abbasid period, as noted by the Arab geographers (e.g. al-Mukaddas), 326-7. For other sources, P. Schwartz, Iran in Mittelatter, repr. Hildesheim 1969, 140-2, 404-5, 424-6, and 834-5). Among the more particular Iranian fashions in Arab eyes were the wearing of boots (kki/s/) in summer as well in winter (al-Mukaddast, 327), the unique cold weather clothing (ibid., 328), and the extensive use of the (aylasan, or headshawl worn over the turban, by religious scholars and notables in the northern and eastern parts of Iran and even by the common folk in Färs (ibid., 327, 440).

745 LIBÄS

Throughout the 'Abbasid period-as in earlier and later times as well-Iran was noted for its fine textiles. For a thorough survey of Persian textile production in this period, see R. B. Serjeant, Islamic textiles, Beirut 1972, passim. Iran was also noted for the special garments produced there. Amui and Kūtnis were famous for their wool fayalisa (ps.-Diahiz, K. al-Tabassur bi 'l-tidjara, ed. H. H. 'Abd al-Wahhāb, Cairo 1935, 30-1), Gurgān and Rayy for their excellent variety of soft wool cloaks known as narmab (from Pers. narm "soft", ibid., 29-30), and Barn for its fine kerchiefs and turban cloths (dastår-i bamt, anon., Hudad al-'alam, rev. ed. V. Minorsky and C. E. Bosworth, London 1970, 125). Ārībarbāydjān, Armenia, and Arrān produced the best quality trouser cords (shaluar band, findud al-'diam, 142-3). Kāth, the capital of Khwarazm, was noted for its quilted jackets (hazhāgand, Hudûd al-Salam. 221).

Artistic representations from the 5th-7th/11th-13th centuries invariably show both men and women in a full-length sleeved coat (kold) with we bands (bāžū band) either with or without firds inscriptions. In a 6th/reth century stucco relief from Rayy, each of the women in the courtly scene is depicted in a brocade coat (\$464-yi dibi) with a bordered edge (hāshiya-dar), Each woman wears a fillet (pigiani band) in the centre of which is an algrette (dies). Most of the women wear a necklace (garden band) and earrings (gushwaraha) (the relief is included in Pope, Survey, v. Pl. 517 and Diya' Par, Pashak-i sanān-i Irān, Pls. 106 and 107. For a survey of Persian jewelry during this period, see Dj. Diya' Puc, Ztwarhd-ye sanan-e Iran, Tehran 1347/1968, 331-62).

The Saldjuk period did not mark for Iran the introduction of totally new styles of see as it did in the Arab East (see section i, above, 8) since the Saldiüks were themselves under the influence of Persian culture. There were, however, some new fashions that were introduced at this time, particularly in head coverings. At least three distinctive caps introduced at this time, all of Inner Asian, Turkish origin (for examples of Saldink caps, == ill. no. 7; also Pope, Survey, v. Pis. 643B, 652, 655, 686 687, 688A, 692, 694, 706, 708, 714A, 813). Men of high rank wore a crown-like hat with a pointed rim either side (dushakh, Spuler, Iran, 365). The socalled Saldjüle crown (tādi, tādi huldh, = afsar), which shows affinities both to one of the Mongol caps and to the ancient Sasanid crown, remained for centuries the headdress of rulers and princes deploted In Persian paintings. It is perhaps to this sort of "crown" that the poet Sa'dl refers in the expression kulāh khudāwandi, or "cap of lordship" (Būsida, Introd., t. 212, in Kulliyyāt-i Sa'dt, ed. M. 'A. Farûzhl, Tehran 1964, 12). These various hats were apparently known by regional and ethnic names, such = kuidh-i kh "driemi (al-Rawandi, Rahut al-sudde, Tehran 1333. 385) or kulāh-i tatarī (Sa'dī, Gulistān, in Kulliyydt-i Satdl, 62). The Saldiüks also introduced new military garments.

2. The likhanid and Timurid Periods. The Mongol conquests brought with them many totally new fashions from the Far East. Court styles were those of China: mandarin robes with elbow-length sleeves are most commonly depicted. These were decorated with heraldic designs the breasts and back—usually Chinese clouds, scrolls, and vogetal motifs. The robe was worn a long-sleeved tunic. Men were a variety of hats with brins turned up or down, and even with double brins (for exam-

ples of these different hats, see Goetz, Persian costume, in Pope, Survey, III, 2239, Fig. 746a-b; and D. T. Rice, The illustrations of the "World history" of Raghid al-Din, Edinburgh 1976, 21, Fig. 20a-f).

Military attire was also of the Far Eastern variety, consisting of long coats of link mail arranged in borizontal bands (disamplant habit) or cultasses (rira) of mail (Diuwayni, Talvith: Dishingushā, ed. Kazwini, ii, 186, 176. For examples of the Mongol long mail coat, see Rice, Illustrations... of Ragidal-Din, Pts. 38, 44, 48, 49, 53. For the mail cultass, proper Survey, v. Pts. 834B, 839, and 842A). The latter could be worn under a robe (rira dar strigiona, Raghid al-Din, Histoira des Mongols de la Perse, ed. and tr. E. Quatremère, repr. Amsterdam, 1968, 122).

Also typical of Mongol amour were their closefitting helmets with ear-flaps and small spike at the top (for examples, Rice, Illustrations ... of Raskid al-Din, Pls. 22, 38, 39, 40, 43).

During the Ilkhanid period, women's clothing not to have undergone any major change, except with respect to the head gear. The head scarf (see band) was worn for the most part as a wimple (see e.g. Pope, Survey, v. Pl. 836E) by non-Mongol women. The Mongol princesses, however, special bonnet consisting of a light wood frame covered with silk and from the top of which protrudes a long feather (see Goetz, Persian costume, in Pope, Survey, iii, 2241, Fig. 747a-b). This bonnet is frequently montioned by Rashid al-Din (Histoire des Mongols, ed. Quatremère, 102, 106, 107), and is called bughtah. The bughtak could be ornamented with gold and precious stones and sometimes had a long train (dhayi-i bughtak) which hung down behind. According to Ibn Battūta, the girls who attended the Mongol ladies were "a kulāk that looked 📟 🚃 akrilf (fez) with a gold band encrusted with jewels around the upper part, topped with peacock feathers" (Ibn. Battita, ii, tr. H. A. R. Gibb, Cambridge 1958, 485).

Despite Timur Lang's partiality to Mongol ways, there is a noticeable decrease in Mongol influence as far as Persian costume is concerned under the Timurids. The bulky mandarin robes give way to close-fitting garments which follow the body's own lines. The outer kaba was often left entirely open or was left partially-open at the neck and below the waist revealing another coat below, beneath which a long body shirt (kamis m pirahan) was worn. The kamar hand which, except for a military belt over the armour, had all but gone out of style in the Ilkhanid period, became once again a regular part of male attire, worn on either the inner or the outer coat. The distinctive caps and hats of the Saldjuk and Mongol periods were gradually replaced during the Timurid period by turbans, which at first were small, but became progressively larger throughout the 9th/15th century (for examples of the caps and turbans of the period, see Pope, Survey, v, Pls. 851, 860, 865, 878, 880, 882). The reason for the gradual disappearance of the Mongol caps is that they came to be considered as symbols of paganism, in contradiction to the dastar which was symbolic of Islam (see e.g. Muhammad Haydar, A kistory of Moghads of Central Asia, tr. E. D. Ross, repr. New York 1970, 58). One new head-covering that appears at this period is the halpah, a fur-trimmed cap of Turkoman origin. As in earlier periods, both men and wore fur cloaks (pastin, Hafiz-i Abril, Dhayl-i Kitab-i Zafar-nama, Tehran n.d., 25) and fur-trimmed robes (kabā pūstini, Sa'dī, Gulistān, in Kulkiyyāt-i Saidl, 119; and idem, Hastan, in Kullivydt-i Saidl,

213). Por Illustrations of fur-trimmed coats, see Pope, Survey, v. Pls. 842B, 878; also Diya' Pür, Pühhhei tandn-i Îrân, Pls. 129, 132.

Female attire during the Timurid period also consisted of several layers of long, close-fitting robes. The pirahan covered the entire body down to the feet and was long-sleeved. A wide variety of outer coats were worn by women at this time. Although some bad long, narrow sleeves, most were short-sleeved (distin-i hittak), and some were sleeveless. The woman's habd depicted in Timurid paintings came in both long and three-quarter length versions (For the immine habd in all its variety, see Diya' Pür, op. cit., 143-65, Pls. 113-32.) The short coat is perhaps the habdla, mentioned in earlier literary sources (e.g. al-Kātib al-Arradjāni, Samak-i 'Ayydr, Tehran n.d., i, 30), but does not appear in artistic representation until this time.

Most of the women's head-dresses depicted in Itmund paintings are simple, consisting in the main of a white sar band worn in the simple fashion of the preceding periods or allowed to flow down behind. Some women are depicted wearing a close-fitting bonnet-like cap which is usually dark in colour. The bonnet has wide flaps that come down in front of the ears, and is held in place with mechin strap. On the top of the bonnet is a small flat plaque to which the face veil is attached (see Diya? Par, op. cit., Pls. 119-20; also J. M. Scarce, The development of women's veils in Persia and Afghanistan, in Costume, v [1975], 6, Pl. 4, where, however, this heardress is interpreted somewhat differently).

European travellers report that women appeared in public at this time in an all-enveloping white wrap (taddr-i safid), their faces hidden behind a black net of woven horsehair (pl6a) (e.g. Ruy Gonzales de Clavijo, Narrative of the Embassy... to the court of Timour, London 1859, 89). Another of face veil worn at this period was a small, white mask covering only the mouth and chin (dahim band, Diyā) Pūr. op. cit., 155, Pl. 212).

3. The Safawid period. The establishment of the Safawid dynasty marks not only me watershed in Iranian political and religious history, but a turning point in its costume history as well. During this period, Far Eastern influences in Persian costume cease to be important, and there is a reassertion of native Iranian styles.

The most immediate change came in the man's turban (dill band), which was wrapped around a cap with whigh, spiked protrusion that extended straight up through the middle of the headdress (see e.g. Pope, Surrey, v, Pls. 893A, 895, 896, 898, 900, 901B). The cap which forms the centre of the turban was known as the tadi Safawi. It was normally red, although occasionally blue. Because of the red caps which distinguished the Shiff Salawids and their followers, they were referred to by the Sunnis as kuidh-i surkh, or "red caps" (see Abu 'l-Chāzi Bahādur Khan, Histoire des Mongols et des Tatares, ed. and tr. P.I. Desmaisons, repr. Amsterdam 1970, 209, n. t), which was the Persian equivalent of Tk. kirll bdgh (q.v.). The symbolic importance of the Safawi iddi was such that in an allegorical painting showing the religions of the world, the Shiffs, as well as Muhammad, 'Ali, al-Hasen, and al-Husayn are all depicted wearing it (the illustration is in the Houghton Shah-name, Metropolitan Museum of Art, New York and is reproduced in B. Lewis (ed.), The World of Islam, London 1976, 257).

Safawid costume became extremely samptious with the reign of Shah Tahmasp (930-84/1524-76).

Ctothes were more closely-fitted than ever before. The kabá for both sexes became somewhat shorter. It was now fastened in front by a row of shiny buttons or golden frogs. The waist was cinched with a narrow belt decorated with large bejewelled gold discs spaced at equal intervals (for surviving examples of such belts, see Diya' Pur, Ziwarad-yi zandu-i Iran, 365, Pl. 274, and Pope, Survey, vi, Pls. 1394B-C; for detailed depictions in miniatures, see ibid., v. Pl. 901). The most outstanding feature of the Persian wardrobe for the next century-and-a-half is the great richness of the fabrics in both colour and pattern (see Pope, Sureey, v. Pls. 896, 898-900, for illustrations; and ibid., vi, Pls. 1006, 1011, 1012, 1015, 1028, 1034, 1041, 1042, 1046, for actual textiles and garments).

Safawid costume reached its most distinctive development in the rith/17th century. The kaba remained close-fitted about the trunk, but was now often flared below the waist. Over the kaba was worn an overcost (bālāpūsh) which could be short and sleeveless (kurdt) or long and with sleeves (kadabi). The turban (mandil or dil band) became mem larger than before, but | longer had the long stick protruding from the top. A large searf or sash replaced the belt with roundels. It was usually tied with a large knot in front (for surviving examples of such silk sashes, see Pope, Survey, vi, Pls. 1074A-E). Safawid clothing has been described in detail by the European travellers Herbert for the first half of the 17th century (T. Herbert, Travels in Persia, 1627-1629, London 1928, 79-80, 230-3) and Chardin for the second half [Sir]. Chardin, Travels in Persia, London 1927, 211-15, and the engravings between 212 and 213). Female attire during this period was very sensuous. The dress (\$amis) was buttoned or tied below the neck, but slit open down to the navel to expose the bare flesh (Pope, Survey of Persian Art, v. Pl. 918A). The items of underwear (fundam) were straighter than male drawers and were often decorated with flower motifs. Over these were worn embroidered leggings (saugār) that went from several inches above the ankle to slightly above the knee (see Pope, Survey, v, Pl. 918, where a reclining female is shown with her dress rolled up to expose her underwear). A loose shawl (tdrked) which was held on the head by a tiara, an embroidered hand, or a pointed huldh, fell down on to the back and shoulders (see e.g. J. M. Upton, Notes - Persian costumes of the sixteenth and seventeenth centuries, in Metropolitan Museum Studies, ii [1929-30], 206, Fig. 2; 214, Fig. 13; and 219, Fig. 21). As in the previous period, the favoured čádar for outdoor was white. One new innovation that came into use in this time was the rel hand, a rectangular white veil that was fastened were the cadur and fell down over the face. The ra band had a small slit covered with netting over the eyes to permit vision (Scarce, Women's reils, in Costume, v, 7, Pl. 7).

Two major trends can be detected in Persian costume during the 17th century. One is a bohemianism that appears in the increasingly casual and suggestive style of dressing, at least in the court circles depicted in paintings (see Pope Survey, v, Pls. 917B, 918A-B, 921B, 924B; and Upton, Notes on Persian costumes, 217, Pig. 18). The other is a noticiable, abbeit still minor, Western influence in clothing styles. At first this influence was more Georgian than truly European (Chardin, Travels, 212), but later the influence of the clothing of European traders and diplomats become stronger (Upton, Notes on Persian rostume, 217).

4. The Kāddar period. There was little discernible change or development in Iranian costume during the half-century of instability between the end of Safawid rule and the establishment of the Kāddar dynasty, except for a decrease in the elegance of upper-class attire and an increase in words of Turkic origin in the vestimentary vocabulary.

The second ruler of the Kādjār House, Fath 'Aii Shāb (1212-50/1797/1834), attempted to recreate the glories of the Iranian past with a revival of ancient artistic traditions and styles, including in court dress. He adopted for himself a modified version of one of the Sāsānid winged crowns (see Lewis, World of Islam, 270, Pl. 27, and 272, Pl. 32). Wide shoulder capes and diadems in imitation of Timurid prototypes also revived for a short while (Goetz, Persian costume, in Pope, Survey, iii, 2254). However, under his this artificial renaissance came to an end.

There was growing European influence in Persia already during the reign of Fath 'All Nhah, During the 19th century these influences became increasingly dominant in court and military dress. Popular costume came under foreign influence more slowly. The many European travellers, missionaries, and diplomats who visited Persia in the 19th and early 20th centuries have left detailed descriptions of clothing of the period. Male costume was composed of loose drawers (air djama or sholwar) of white, blue, or red cotton, a collarless shirt (alkalük or kamis), a tunic (kamaréin), a vest (kulidja or kurdi), one of variety of outer coats (bálāpāsk, bīrāna, kabā, diabba-the latter favoured by government secretaries), or jackets (nim taxa). The principal for all classes was the high kuldh of felt (named) or lambskin (past!) which was dented in on one side. Footwear consisted of boots (sarmara) of Russian leather (bulghar) for the upper classes, and leather sandals (darak) = cotton shoes (giva) for the common people. The belt for all classes was most commonly a large shawl tied round the waist (shal kamar). The mulias commonly wore the 'aba (see section i, above), and toyyids the green 'imama (among the numerous descriptions of male attire, see J. B. Fraser, A winter's journey: Constantinople to Teheran, ii, London 1838. 77-103, 151-7, and C. J. Wills, In the land of the Lion and the Sun, or modern Persia (1866 to 1881), London 1893, 317-22).

Female attim for the upper and middle classes consisted of a transparent piraham of gauze and pantaloons (calcar). Over these were worn a short frocked coat or jacket and a pleated skirt (phalith). The head was normally covered with an embroidered scarf of cotton, silk, or cashmere (cargal). Upper-class women are depicted in contemporary paintings wearing a jewelled tiara (nim tadi). Out of doors, women wore white black fadur and one of a variety of face valls (ri band, pila, burku', nihib) (see Fraser, 322-5; E. C. Sykes, Persia and its people,

London 1910, 196-203.)

5. Recent years. Urban dress in overwhelmingly that of the modern West. Recently however, there has been a return to the cider in among educated women for political in well as religious reasons. Outside the major cities, and especially in tribel regions, traditional costumes are still worn (for in comprehensive survey, see Di. Diyà? Pur, Pagadhiftha, Cidarraghinas warnoid? yan bartangari Shahangahiryi Muhammad Rida Shahi Pahlawi, Tehran 1346/1967).

iv. - Turkey

I. Old Turkish costume of the 6th/12th to the 13th/19th centuries. After having settled in Anatolia, the Turks remained faithful to their customs and cultural traditions and preserved their traditional costume. The latter, tracing its origin to Central Asia, was enriched from the 5th/12th century, in Iranian territory, by a certain number of new elements. To judge by the iconographic documents of the 12th to 13th centuries, Turkish costume was inspired to a great extent by Persian costume. But Persian costume evolves, new designs and types of clothing appear in it, whereas Turkish costume, whose style remains almost unchanged for several centuries, retains its specificity and its national character.

Synthesised studies of m historical and comparcharacter are not always to in found on this subject. The only materials which me have at our disposal, apart from illustrations, are the articles which have come to light and which relate to certain types of clothing in the different periods that Turkish costume has evolved in its history. The question which invariably arouses the largest number of problems and controversies is that of terminology, especially concerning the clothing and the small clothing items of which nothing more has remained. In order to reconstitute the cut of mold costume, its original parts, those which have been preserved. have in the first place to be positioned. Turkish costumes are to be found m present in vary large numbers in the collections of Turkish museums, especially in the Topkapı Sarayı Müzesi of Istanbul. They are also to be found, although in a smaller quantity, in European and American museums, notably in the Victoria and Albert Museum, London, the Islamisches Museum, Berlin, and some others. The oldest pieces of these collections date back to the 15th century, but it is impossible and risky in many cases to establish the exact date of their fabrication. The costume of the 16th century possesses, on the other hand, a documentation which seems credible. This comprises especially the Turkish miniatures and, notably, the special albums with the miniatures of costumes (klydjel-nāme) which constitute in this respect a very rich of information. Failing originals, we can also derive help in our comparative studies from various iconographic materials originating from Europe, such - prints, engravings, paintings or further representations of Turkish costume - objects in ceramic, metal and other

Another of information on old Turkish contume is constituted by the writings of travellers,

explorers; the descriptions left by European ambassadors; as well as the documents of Turkish archives speaking of the organisation of corporations of failurs, of sewing workshops and of registers of costumes.

The classification of costumes can be established according to the use for which they destined. We may distinguish: (1) the civilian costumes, (2) the military man, and (3) the religious ones (of "uland" and dervishes). The civilian costumes are divided into (i) costumes of the court (coatumes of reremony, state, household) and (ii) costumes of the bourgeoiste, each having its masculine and freminine variants.

A complete costume is composed of some basic elements (whose number varies in accordance with needs and whose importance is not always the same):

(a) head-gear, (b) outer garments, (c) inner garments, (d) belt, (e) shoes and (f) accessories.

In Ottoman Turkey, there were registers of laws which also contained the precepts of etiquette. These laws regulated notably dress, i.e. head-gear, clothing, the kind colour of the material, the shoes, all in accordance with the rank occupied in the social and administrative hierarchy, of the religion or race the person in question. The most important regulations of this kind date back to the period of Süleyman I (1520-66), Ahmed III (1703-30) and Uhman III (1754-7).

Head-gear. It was the head-gear, masculine as well in feminine, which, in Turkish costume, was characterised by the greatest diversity and mobility of forms.

a) Masculine turbans. The Turkish knowk was a head-dress of felt or woollen cloth of different thickness around which was wrapped a turban (a long hand of material) called in Turkish savik or diliberal (current pronunciation talbera). It is from the form of the gazus and the way in which the turban was tied that there derive different types and names of head-gear known in Europe as turbans. The kanuks, whose height varied, normally had the form of a contracted or enlarged cylinder, flat or bulging; but there also those which resembled a truncated cone or a cupola. The highest Ramiks (40 to 60 cm.) were kept rigid by means of a construction of metal bars or a kind of basket. They had a smooth or quilted (tark) surface and _____ trimmed with cotton to give the effect of relief in a dome shape with the quilting (ddim). To make the turban, lengths of material (saria) were used which were folded or made into rolls (burma). Fine materials such as cotton, gauze, muslin, fine wool, silk or brocade were chosen for this. Under the garue was placed a skull-cap (takks) which could also | worn alone. Sometimes small braids (sully) or pendants (puskul) were attached to the knowks, allowing the and of the sarie to fall on the back or the shoulders (saylasax). To give protection from the rain, a kind of small umbrella = covering (yaghmurluk) was carried.

Kanuks included: Moraidni—of cylindrical shape, growing broader at the top, worn with a white turban rolled slantwise on two sides; salimi—of cylindrical shape, introduced by Selim I (918-26/1512-20), some 65 cm. high, flat on top, worn with a white turban rolled around and bulging at the sides; kātibi—also called paṣhali kanuk, is the most widespread type of turban, worn from the 13th century by functionaries and civilians. It is a kanuk of cylindrical shape, quilted, worn with a white turban not too long, rolled at the base and tied in front; müdsunwas

-a head-dress reserved for the Sultan and the highest dignitaries, a some of cylindrical shape, growing slightly broader towards the top, about 45 cm, high, flat on top, worn with white turban rolled around; the end of the turban was fastened with a small roll of red felt; kallavi, a head-dress reserved for dignituries with the rank of pasha which, from the r8th century, became official headgear, a knowly with the body of a cone, worn with a white turban rolled around, draped and bulging in flour places, decorated with a gold band; forf ('orfi), worn from the 18th century by the religious classes, a large, dome-shaped kavek, worn with a white turban rolled around and which, draped, forms harmonious folds; kajeri (bubbeli kald/at), worn from the 17th century by the functionaries of the Defter, a dome-shaped karne, worn with a long turban forming folds fastened towards the base with a fine thread or pin; and tharlawi-worn from the 17th century, a high, pointed havel, worn with a turban rolled around whose end was often left

Another quite widespread head-dress was the turban worn on a small skull-cap (takks), often folded in large rolls (burnall) or particularly the haush worn with a small turban (mulahhad) rolled around; the haush without a turban was called dal haush or dal halfes.

b) Küläh (cap, hat). Külähs were a very widespread masculine and feminine head-gear, worn by soldiers, dervishes, functionaries and civilians. This head-gear, of which several dozen variants existed. could be made from felt or woollen cloth combined with other materials such m cotton cloth, fur, small turbans, scarves and trimmings. As to their shape, the most common were caps, head-dresses in the shape of a dome, cone, cylinder broadening towards the top, tube, helmet, brimmed bats with flaps and straps. Among the küldhs most frequently worn by servants of the court and soldiers there were: the servin tas, worn by the pages; a high, cylindrical killick trimmed with brocade and decorated with zuluf; the bork, which was the most widespread head-gear, in a cone or belimet shape, raised in front, decorated at the base with gold braid; officers were it decorated in addition with m plume; the uskuf (keteli kulah) of the Janissaries, a high küldh whose rear part fell in the form of a covering (yntirms) on the back, a ribbon ornamenting it at the base where metal case for the officer's spoon or plume was also fixed; and the barata of the palace domestics, a külüh of woollen cloth in the shape of a sleeve whose rear part on the back.

The killishs worn by the dervishes most frequently had the form of a cone, a bettnet or m cylinder widening towards the top and they were normally quilted (each order or lariba had the right to a defined number of terk). There were also killishs bordered with tur (mininganii). Only phayths had the right to put m turban on the killish. The killishs worm by dervishes also had other names: sikks, tādi and diffi tādi.

in the 19th century, the fer became a current head-dress, m did the shubars in the army.

 c) Kalpak (busby), a kind of bonnet of lamb's fleece or woolien cloth decorated with lamb's fleece,
 by men and women.

d) Feminine headgear: külüht of various shapes, scarves with a flap or a peak (siper); a veil (larshaf); we scarf called a yachmat, and the histor, the most popular head-gear, in the form of we conical

hillah or hood decorated with a fine scari or shawl

752 LIBĀS

and trimmed with feathers, precious stones and ribbons.

Outer garments. The most characteristic and widespread outer garment in Turkey (known since antiquity in Central Asia and the Near East) was the kaftan (caftan), a long, full with sleeves. Its cut varied according to the period and area. The Turkish caftan had several variants which were distinguished from another by the length and width of the skirts we sleaves, the buttoning, the use of slit or supplementary sleeves of a decorative character. It was these elements and the cut which decided the type of caftan. The hhillet, for example, was a ceremonial caftan, made with sumptnous materials, quite full, with skirts side by side or crossed over. Caftans had skirts descending as far as the ankle, covering the knee, descending as far ihe ground or even trailing on the ground. They alightly-fitting, flared or close-fitting, most often with a coller or bottom of a coller buttoned up to the neck and with a rounded or pointed scooped neckline, with crossed over, buckled or buttoniess skirts; fitted or more or less flared siceves, descending as far as the wrist or short, elongated slit or falling on the back, double sleeves. Caftans were made in brocade, velvet, hemind, satin, cotton, silk, cotton satin and wool. They were often embroidered, laced with frogs and loops, edged with fur and with the linine.

Outer garments. These included the dolama, a caftan worn by the least important palace servants, which has a long robe, fastened in front, with narrow sleeves; entári, a kind of caftan, the most widespread of all the garments, worn under the real caftan and har, descending as far as the ankle or covering the knee; jerādje (a man's garment), a long, full robe, with rather wide, short sleeves, sometimes edged with sable, sometimes with a collar; djibbe, a full caftan; keráke, a kind of djübbe in fine wool; khleka, a full, short caftan with sleeves; 'aba (really the name of a thick material), a garment of thick woollen cloth, stopping at the knee; seles, a military garment covering the knee and fastened at the front; lepken (or cebken), a short caltan with sheeves, buckled and bordered; salfa, a kind of deplen worm by the working classes; yelch, a waistcoat without sleeves formerly worn as an outer garment; didmedds, a short, trimmed waistcoat without sleeves; minide, a short caftan without sleeves, stopping at the waist; bisish, kind of very full caftan with wide sleeves, worn most frequently as a travelling or riding garment. Dervishes' garments: tennitre, a long robe without sleeves; hayderi, a kind of short garment, without sleeves, stopping at the waist; hhirks, a short caltan with flared sleeves; etch, a skirt; and minida.

To go out, particularly in the rain, a kind of cape was put on, called a harmaniyys, barant, hapel or yaghmurluk. Furs were an important element in the costume worn at court. Fox, squirrel, ermins, sable, lynx and marten furs were covered with the most varied materials (brocade, wool, velvet, silk, cotton satin and satin). They were characterised by a great diversity of styles, but the caftan was also dominant there. The most sumptuous fur was the espanidia of the sultan, with a large fur collar, narrow or short sleeves, decorated with fur below the shoulders, with straight supplementary alcoves, laced with frogs and loops in front; ferve-i beyda, a fur of white sable covered with green cotton satin; and kontogi, a fur (or caltan) with straight alceves, with a collar. Full furs edged with fur in front and in general with a collar were worn during ceremonies, gala receptions, etc. These were the üst kürk, the divint kürk, or the döri hollu kürk (when they had supplementary sieeves), or further the bol yoilli kürk (when it was a fur with wide sieeves).

The outer garments most often worn by women were: the feridie, the entari, the yelek and capes (harmaniye): feridie, with of full cloak with sleeves and a collar, sometimes with cuffs; entari, with long robe whose cut varied, normally with a low neckline, fitting at the waist and flaring from the hips, buttoned in front as far in the waist, trimmed, laced with frogs and loops, with narrow sleeves, sometimes long or turned up. Women also with short caffans or short entaris stopping in the hips with wide skirts. Their furs will long sleeves or short ones or were without sleeves. They put a long robe under the entari in over baggy trousers.

Inner garments. Among these are counted shirts (gamlek, piraken); a long robe worn under the entart we cattan, dolume or ittik; baggy trousers (ghalwar) of varying fullness, fuller and in finer materials for women; men's trousers ('akshr), reaching down to the ankle or below the knee; the potur, full trousers as far as the knee and straight from the knee to the ankle; the toxius, breeches worn by men as an outer garment; pants (don). All the parts of the trousers were held with a special belt called nother.

Belts were an indispensable element of old Turkish costume. They were of two kinds: material belts (\$\delta_{\text{tash}}(\varepsilon \text{tash}, \text{supple, knotted, with the ends bidden under the trousers; and leather belts (\$\varepsilon \text{tash} \text{cost}), fastened with a buckle, often decorated, gilded, in hammered leather, embellished and encrusted with precious stones.

Shoes were divided into indoor shoes with a supple sole and town shoes with a thicker sole: disme, the most widespread shoes for several centuries, with a high leg reaching up as far as the knee and a supple sole; women's boots here the name pastmak; čedik (an older form içedik), with a low leg, most often made in yellow Moroccan leather, with a supple sole; mest, a kind of fedik; shipship, a mule without heels with the end slightly raised and # supple sole; terlik, the most popular shoes, worn by and women, without heels or quarters slightly raised at the end, in leather or material, often decorated; shoes for women had m low heel, To go out in the town the pabud was slipped on over the supple shoes (cedit, mest). Sandals with a compensatory sole called nalls were also worn. The shoes of the sultan, dignitaries and women were often richly decorated, in accordance with various techniques, with plant motifs (appliques, embroidered, hammerod leather).

Accessories decorating the head-gear: plume (sorgul, supurge), crest (lelent), feathers, ornaments, scarves, shawls, ribbons, tassels, small braids and plumes. Accessories decorating outer garmants: shawls, trimmings, buckles, small buckles and metal badges, jewels and side arms completed the costume.

2. The modern period. In the 19th century, in the period of the army reforms, a new military uniform introduced, combining modified forms of old Turkish costume with interest elements of European uniform. This new uniform became common during the second half of the 19th century. Later on, modern European uniform was introduced.

Regional costume is not made the object of this study: there only exist a few studies in depth on this subject (see Hamdy Pey and Marie de Launay, Les costumes populaires de la Turquie en 1873,

Constantinople 1873).

(T. Majba)

LIBERIA, an African republic in which, according to the sources, Muslims account for no more than 15 to 20% of the population. They

concentrated mainly between Mourovia 200 Rubertsport on the frontier of Sierra Leone as well as on the frontier of Guinea. Their number is estimated at 360,000, but because the censuses take no account of religious allegiance, there exists no precise figure

for a Muslim population whose Islamic culture was until recently extremely primitive.

Islam was a late manifestation in Liberia. Certain groups related to the Mandingo peoples and arriving, in the 16th century, from the region of Kankan were probably the first Muslims to penetrate what was to become Liberia. After the Val, other Mandingo groups like the predominantly merchant tribe of Gbande were totally Islamised, while the Loma (or Bouzi) the Kpelle, the Mano and the Sumba were only partially converted. These peoples, impelled by mititary and commercial forces, included in their ranks Islamised elements. But the expansion of Islam could only begin to take shape from the 19th century onwards when the Afro-American emplorers had crossed the forest zone.

Since Liberia was governed until the coup d'état of 12 April 1980 by Liberians of Negre American origin, mostly of the Protestant falth, Muslims enjoyed no political representation. Moreover, the Liberian constitution of 1847 had a significant preamble: "Our People recognises with pious gratitude the goodness of God who has accorded us the blessings of the Christian religion and granted us political and religious liberties ..."; but the first clause declared that all religions would be tolerated and that no religious conditions would be attached to the holding of public office.

In 1953, President Tubman enacted a law pledging to the Muslims of Liberia full recognition of their rights. In 1963, the same president attended the mosque for the beginning of Ramadān and delivered the address. It was his government which, after consultation, gave to the leading *Imām* the title of

Muslim Bishop.

Since 1974, the National Muslim Council of Liberia has united the principal groups. It comprises the following organisations: The Council of the Muslim Community, founded in 1949 by Alhaji Varmunych Shariff who, in 1953, built the capital's first mosque (inaugurated by President Tubman); The Muslim Congress of Liberia, founded in 1965 for cultural and scholastic objectives; The Muslim League of Salefiya; and The Liberia Muslim Union, established in the north, in the province of Nimba, and providing bursaries for academic students to be educated abroad.

The majority of the Muslims are orthodox Sunnis of the Mäliki rite. Since 1957, the "Caliph" Mirsh Naşir Ahmad, who came in 1970 from Pakistan, has established himself and gathered around him a group of about a thousand disciples belonging to the Ahmadiyya sect. In addition, an autonomous and syncretist Bahā'i sect, which arrived in the country in 1957, has founded at Bomi Hilla a school capable of accommodating between 25 and 30 pupils.

In a land where the level of literacy is low (15 to 20%), the contribution made by the Muslim schools is feeble. The National Muslim Council sponsors one primary school in Monrovia and three high schools of which one, at Kakota, comprises 300 pupils. There is one elementary school at Robertsport (province of Cape Mount) and a secondary school in the province of Bong (40 pupils). Instruction is given partly in Arabic, partly in English.

Some rare Arabic books feature in the libraries of the capital, including some that have no religious content. There are certain Lebanese newspapers, of no interest other than to nationals of that country. The Ahmadiyya broadcast a five-minute television

programme every Friday.

Each year, between and 200 Liberian pilgrims make the journey to Mecca. Only al-'ld alhabir at the end of Ramadân is celebrated with any kind of vigour. Despite these modest activities, the role of the Muslims seems to be steadily growing.

Bibliography: Liberia, in J. M. Cuoq, Les Musulmans en Afrique, Paris 1975, 172-4 and bibl. cited there; J.-P. Monchan, Les Musulmans du Libéria, in Allas raisonné du monde musulman contemporain, to appear in the publications of the CHEAM.

754 LIBIYA

The Lebabim of Genesis, x, 13 may possibly represent the same name. The term passed into later and modern usage through the Greeks and subsequently the Romans. In Greek geographical writings, it was most commenly used-along with Africa, which later replaced it in this sense—as the name of one of the three continents or, occasionally, as the name of the region in North Africa wast of Egypt. Transmitted by the Greeks to the Romans in both senses, it was first made the name of a specific political entity by the Emperor Diocketian, who established the adjoining provinces of upper and lower Libya west of Egypt. The authenticity of a hadith quoted by al-Bakri (Description de l'Afrique septentrionale, ed.-French tr. M. G. de Slane, Paris 2965; Ar. 8, tr. 23) according to which the Prophet is supposed to have said "He whose sins are numerous must place Libya (Lübiyā) behind hun", i.e. go to fight the infidels in Itrikiya, is doubtful; moreover, the same author (Ar. 2r, tr. 49) states that Ifrikiya is really called Libiya, from the name of the founder

of Memphis, who reigned over the land. The term passed, along with much other Greek geographical knowledge and terminology to the Arabs, who normally wrote it in the form Lübiya (لربية or لربيا). The earliest Arabic geographical writers name Lübiya as one of the four quadrants into which the world is divided, the others being Europe, Ethiopia and Scythia (al-Battanl, Opus astronomicum, ed. C. A. Nallino, text iii, Rome 1899. 27, tr. 19; Ibn Khurradadhbib, 155, cf. Ibn al-Fakih, 6-7, 197; Agapius of Manbidi, K. al-Unwan, ed. A. Vasiliev in Patrologia Orientalis, v, Paris 1910-12, 612; al-Hamdant, Sifat Diariest al-Carab, ed. D. H. Müller, i. Leiden 1884, 32; Yaküt, s.v., citing al-Blruni who ascribes this classification explicitly to the Greeks). Lubiya consisted of "Egypt, Kulzum, Habash, the lands of the Berbers and adjoining countries, and the southern seas." In addition to this vague use as the name of a quarter, Lübiya also occurs, specifically, so place-manie in northern Africa. Ibn 'Abd al-Hakam (Futue Miss, ed, and partial French tr. A. Galeau, Conquete de l'Afrique du Nord et de l'Espagne, Algiers 1947. 35, 77), probably copied by Ibn Khurrada(Ihbih (ed. and partial French tr. M. Had)-Sadok, Description du Maghrib et de l'Europe = itrafixa siècle, Algiers 1949, 13 and n. 172) makes Lúbiya a province of western Egypt. Al-Mas'adi (Murudi, iii, 242 = § 1106], copying in his turn Ibn Khurradadhbih, speaks of a place (maudi') named Lübiya wa-Maraksiya (Marmarica) and cites in the Taubik (20) the region (ndhiya) of al-Iskandariyya, Lübiya and al-Marakiya, ibn al-Fakih (Buldan, 74, French tr. Massé, 90) makes Libya a locality of Egypt. Al-Ya'kabi (Buldan, 339, 342, tr. Wiet, 197, 201) speaks of Lübiya as one of the districts (hars or 'amai) dependent on Alexandria, while Yakut (iv, 368) places Lubiya between Alexandria and Barka. Most of the mediaeval Arab geographers see North African Libys as administratively part of Egypt (al-Makrizi, Khifos, ed. Wiet, i, 56, 309, 311; 1bn Dukmāk, v. 43; al-Kalkashandi, Subh, iii, 386-7, 390-1, citing the Rund al-miliar and al-Kudall; see further J. Maspero and G. Wiet, Malérianx pour servir è la géographie de l'Égpyle, Mém. IFAO, xxxvi, Cairo 1919, 163; A. Grohmann, Studies mer historischen Geographie und Verwaltung der frühmittelatterlichen Agypten, Vienna 1939, 8-9). The name also occurs as that of a mountain vaguely situated west of the Nile Valley. The passage in

al-Birant, (K. al-Djamabir fl ma'rifat al-djandbir, Hyderabad 1355, 100) naming Labiya = a source of precious stones south of Egypt, is cartainly a misreading for Nubia. The form Libiya is used, exceptionally, by al-Makrizi (Khitat, ed. Wiet, i, 52), citing the Ambir version of Orosius, and therefore following the Latin form of the name. By late mediaeval times, the name Lübiya seems to have passed out of use in Arabic. It reappears in the 19th century when it is clearly derived from European sources. A late Ottoman work of reference, the historical and geographical dictionary of Ahmed Riffat (Lughat-i tareighinge ve djughrafiyye, vi, Istanbul 1300, 151) lists Libya in the form Libi, obviously transcribed from the French, and defines it as "the Greek name of Africa". The entry goes on to explain the different senses in which the word was subsequently used ends by noting that, in the writer's own day, the term was confined to the regions "beyond Tripoli, Tunisla and Egypt and northeast of the Great Sahara Desert." "All Mubarak (Khilol, xv, 41), no doubt following European practice, also uses the form Libiya for the region west of Egypt.

The name Libya continued in occasional use in Enrope, mainly in the context of ancient history. It was given greater precision, and popularity by the Italian geographer F. Minutilli, whose Bibliografia della Libia was published in Turin in 1903, and who applies the term specifically to the two Turkish sandjaks of Cyrenaica (Barka (q.v.)) and Tripolitania (Tarabulus al-Charb [q.v.]), the only parts of the North Africa littoral that had not yet fallen under European control. Libya remained a geographical expression until the Italian invasion and the Italian decree of 5 November 1911, proclaiming Italian sovereignty over the two Turkish sandjaks. It was made the official name of a country-for the first time since Diocletian-by the Italian royal decree of 1 January 1934, which created a new colony, formed by the union of Cyrenaica and Tripolitania, and called Libya (Arabic Libiya). This form was retained by the independent state established after the ending of Italian rule.

Bibliography: For the earlier history, the reader is referred to the articles barka, fazzan and farabutus. Languages: On the Arabic spoken in Libya, see farabitya iii, 3. The Western dialects. On Berber, see Berbers, v, as well and A. Basset, Le langue bether, in Handbook of African Languages, i, London-New York-Toronto 1952, 69-70.

2. Libyco-Berber inscriptions. The Maghrib and the Sahara possess marge number of inscriptions using a script peculiar to the North-West of Africa, which was given the name Numidian and later Libyan. The first name, which has fallen out of use, was, however, to be preserved to designate one of this script, known as Eastern, which is widespread in Tunkin and Eastern Algeria.

The Libyan inscriptions published up to now and regarded as ancient, let us say pre-Islamic, can sestimated at some 1,200, but the Sahara possesses thousands of more recent graffiti and inscriptions carved on weathered rocks in the script, still used by the Touareg, who call it Tifinagh (See 1822agas 2.1).

These inscriptions, whether the monumental texts of Dougga from the and century B.C. or the simple Touareg graffiti, use only signs of a strictly geometrical form, based for preference on the straight line. Also, the alphabet of Dougga which contains 23 or 24 signs only uses the circle for two letters: (3):

LIBIYĂ

and O: R and the curve exceptionally) for M, more often written J, and (for S, more often

rendered by X.

The other Libyan alphabets make more use of the curve, which appears for example in five or six Tifinagh signs. The dots, only present in the composition of two Eastern Libyan signs, are more frequent in Tifinagh (seven signs) where they sometimes place the straight portions of the Eastern signs, also in Eastern is rendered by: W in Tifinagh, The Libyan scripts seem to have failed to appreciate any cursive form; the signs are clearly separated in the ancient scripts, which know nothing of connections and ligatures, which me not so rare in Tifinagh, where the initial is and final i are joined in about twenty cases according to K. Prasse.

Another characteristic is that the Libyan script, like the Telimagh, remains essentially consonantal. The vowels are not transcribed graphically except at times with a dot in Tifinagh, at the end of certain words. The sign E seems to have had a separate function in the Eastern script, and the dot to have

been the equivalent of alif-

The Libyan script, norcover, has no doubling of consonants and does not indicate stress; also, the alphabet is limited. In fact, 24 signs are known in the so-called Eastern form, of which one is doubtful, which agrees with the information given by an African writer of the 5th century, Fulgentius, according to whom the Libyan alphabet contained 23 signs.

The Libyan inscriptions, the ancient Libyco-Herber or Tifinagh and the modern Tifinagh inscriptions, occupy a vast area which seems to correspond to the ancient donosia of the Berber language. Roughly, the signs of this script are to be found in use from the Mediterranean as far south as the Niger and from the Canary Islands to Libya. It is towards the east that the limit of this veript's use is least known.

In Libya it was in common use in the Fezzan and Tripolitania. Recently, at the time of his excavation of Bu Ngem, R. Rebuffat noted that the Libyan inscriptions and graffiti there were influenced by Latin writing, Beyond there the evidence is less certain; nevertheless, a rock inscription found at Khor Kitobersa in Nubia was published recently. The signs of this inscription are sufficiently close to ancient Tifinogh for Alvarez Delgado to suggest a transcription and translation. Another author, Lawodowsky, even considered recognising in it a containmation of Mercitic script by Libyan, but this hypothesis was rejected by the majority of specialists. In this vast area, the density of nescriptions is highly variable and they are, furthermore, of different periods.

The zone with the highest concentration of Libyan inscriptions, their locus classicus, is undoubtedly North-West Tunisia and the part of Algeria adjacent to it; of the r₁724 published by J.-II. Chabot in his Recueil des inscriptions libyques, 1,073 come from this region. It is in fact the land of the Numides Massyles, cradle of the Normidian kingdom, where the Libyan language and script remained alive for a long time. In this district a large number of inscriptions are, moreover, from the Ruman period. The rest of Algeria, as well as Northern Morocco, contains a low density of inscriptions. Despite the discoveries made since the Recueil of J.-H. Chabot appeared in 1940-1, the number of these inscriptions has only risen to 27 in Northern Morocco (L. Galund), and those in Algeria to the west of Sétif can be estimated at around fifty, of which about ten and In Kabylia alone,

Things are less clear on approaching the Saharan regions. Exploration is incomplete and above all very unevenly conducted. Furthermore, geological and topographical conditions wery influential factors in distribution. It is quite understandable that the flat regions, such as the Hamada or the basins occupied by dunes like the Western Great Erg, the Edeyen of Marzouk, contain very few inscriptions, while the rocky regions are infinitely richer. In the present state of our knowledge, which does not necessarily reflect the reality, the richest Saharan regions are the Hoggar and Tassili n'Ajjer, as well as its Libvan extension formed by the Acacus, the Air, the Adrar of the Horas and the southern edge of the Atlas chain, particularly the south of the High Atlas, the Anti-Atlas and the Rio de Oro.

755

Inscriptions whose signs are close to the Saharan alphabet are not exceptional in the Canary Islands,

Periodically, "Libyan" inscriptions are mentioned outside the Berber domain, such as those of the Grotto Regina at Palermo, which, if their relationship to Libyan is confirmed, can be explained by the presence of Numidian mercenaries in the Punic contingents of Sicily. Others have been shown to be bad readings of Latm inscriptions (an inscription of La Garde Freinet, Var, attributed to the "Saracens") - the most fautastic interpretations, such as inscriptions found in Mexico m even Chile.

Traditionally, there are several distinguishable "alphabets" in the Libyan script, Some are contemporaneous with each other, such as the so-called Eastern and Western alphabets. The Libyco-Berber scripts of the Northern Sahara and the ancient Tiffuagh preceded the Tifinagh used at the present day by the Touaregs, who are unable to read the ancient Tifinagh. Modern Tifinagh can undergo regional

variations which are still little known.

The Eastern alphabet covers the north of Tripolitama, Tunisia and Eastern Algeria; the western limit of its use is to the east of Setif, although two western-type inscriptions may be seen at Guelma and some eastern-type inscriptions may exceptionally be found in Kabylia; such is the unn of the decorated stele featuring a person standing found at Lakhdaria (ex-Palestro), which bears its main face, on either side of the person, an inscription with eastern signs. This inscription mentions offices and titles similar to those in use in Dongga in the 2nd century B.C. This detail allows us to put forward the hypothesis that it may well be an official inscription of the Numidian Massylims kingdom and somewhat "foreign" in a land that was in ancient times Masaesylian and the later Manritania. This hypothesis may be strengthened by the existence on the reverse of the stele of graffiti using the Western script, which is that of the other inscriptions of the region. In the present state of our knowledge, the stele of Lakhdaria is the westermost evidence of the Numidian or Eastern alphabet which seems to us to be more precisely Massylian,

The Western Libyan alphabet covers the laads peopled by the Masaesylians and Moors. It contains a greater number of signs than the Eastern, but also presents more variations; some signs known in Algeria are unknown in Morocco, and vice-versa. This script thus occupies a vast region, for all the Libyco-Berber inscriptions of the Northern Sahara and the Atlas belong to it to a greater or lesser extent. A great many of the Canary Islands inscriptions have the same signs, whose value is unfortunately not known with any certainty; besides, it is hardly likely that the Western script and that of

Lībiyā

the Libyco-Berber inscriptions can be transcribed in the same way everywhere. This does not prevent three signs + IV (read from right to left) being found throughout the western area, from Guelma to the Atlantic, and is evidence of a certain unity.

756

Modern Tifinagh signs, current or mb-current, whose use goes back at least to the 5th century A.D. (tomb of Thi Hinan in Hoggar), are known throughout the Touareg world and go beyond it on the north-west, to Touat and Gourara, where they were even in use among the Judaised Berbers.

In some regions such as the Anti-Atlas, particularly in the Tintouline, the signs of the Western script are somethnes mixed with small animal figures (horse, dog, oryx) which appear to act as pictograms; they are so closely linked that it makes it hard to believe that they do not have the same semantic content. The presence of dromedary figures in the same scenes prevents these inscriptions from being regarded as very ancient. These pictograms, if they really play this role, cannot serve support the hypothesis of the Libyan alphabet coming into being through transformations of ancient marks of ownership and other traditional drawings, such as those which still figures in tattoos.

However, in should be noted that Tifinagh has two signs: A, a sign which has the value D1, and X, which has the value Z, the two of which seem to be derived from signs of a figurative, more or loss anthropomorphic, character. More frequently, Libyan Tifinagh is written in horizontal lines, but the meaning of the reading is highly variable; sometimes it is from right to left, sometimes from left to right, from top to bottom and in boustrophedon. K. Prasse noted that the use of a movable support, such as a sheet of paper, actually favoured this tendency. There are even some inscriptions known which describe almost closed curves.

Only the current form of Tifinagh and the Eastern Libyan alphabet can be transcribed, the former because the script and language are still in use among the Touareg, the latter because we have at our disposal several Libyco-Punic inscriptions, in particular that of Dougga, where we know that the Libyan text corresponds quite closely to the Penic text. This last has also transcribed, without translation, some Libyan titles or municipal offices, such as LOGMIL or GZB, which, it seems, had no equivalent in the Punic towns. Unfortunately, while the value of the signs is basically known and only requires some verification or points of detail, the language of the Libyan inscriptions is still unknown us. The little that is known of Libyan, some elements of vocabulary and some presumed grammatical functions, show clearly that this language belongs to Berber; an ancient Berber, certainly, and imperfeetly transcribed by a strictly consonantal alphabet, but which cannot be fundamentally different from the numerous current Berber dialects.

However, since the composition of the famous Record of Chabot, the very few specialists in this field have in general refused to suggest any translation of the texts, which imideed very short, of the majority of the Libyan inscriptions; some even go imfar in to pose the question of whether Libyan belongs to Berber. This carefulness contrasts with the adventurous attempts of G. Marcy, who, relying on Berber, particularly Monoccan Tamazight and Touareg Tamakah, suggested a translation for most of the Libyan inscriptions known in his time. This attempt was followed by M. Alvarez Delgado, who extends it to some Canary Islands inscriptions.

Between the possibly exaggerated carefulness of the former, and the certainly dangerous enthusiasm of the latter, there has to be a middle position which accepts at the same time both the most serious checking and control and the minimum of hypothesis indispensable for the progress of all-knowledge.

The Western alphabet contains some supplementary signs which are absent in the Eastern and whose originality has been demonstrated by L. Galand. in his Inscriptions antiques do Maroc. The use of these two ancient alphabets was certainly contemporaneous, and it would be a mistake to believe, following a historicising logic, that the Eastern alphabet is the older because the script came from the East. Personally, adopting a hypothesis of 3. Février, the author of the present article would carry it so far as to think that the Eastern form of the Libyan script (Numidian or Massylian alphabet) in a recast and simplified form of the original script due to contact with Punic, whereas outside the Massylum territory the old forms continued to be employed and to evolve until they became modern Tifinagh, which itself affords variations. His only disagreement with the hypothesis presented by J. l'évrier is over the age of this adaptation, which l'évrier placed in the 3rd century or the beginning of the and century B.C., whereas it to be much

Among others, the hypothesis has for long been prevalent that the Libyan alphabet derived directly from the Punic alphabet, as the name Tifinazh given to the present form of this script implies, But it is widely recognised that an origin derived from etymology can be fallacious. Nevertheless, the Libyan alphabet has several signs in common with the Punic script where they have the week value (G, T, SH). S. Gsell, however, raised considerable objections to this opinion. The writing of the Punic characters, as they are transmitted by numerous steles from Carthage, Utica, Hadrumota and Cirta, is radically different from those of all the Libyan alphabets. Not only do nearly all the Punic signs have a cursive form, while the Libyan signs are angular and geometrical, but even the meaning of the script differs. All the Punic inscriptions, like every Semitic text, are written in horizontal lines from right to left, while the Libyan lascriptions are generally written from bottom to top in vertical columns, particularly those which we have every reason to believe the most ancient. It is only at Dougga for several decades, during the reigns of Massinissa and Micipsa, that some inscriptions of an official character were written in horizontal lines. These inscriptions number eleven, which represent a hundredth of the texts gathered by J.-B. Chabot, This proportion would be even smaller if we were to take account of the inscriptions discovered since. The case of the texts inscribed at Dougga is thus highly original and denotes a very powerful Punic influence, but this appears to be only a factor of modernisation and not as an especially determining original element.

If we are look, as is most likely, among the Near Eastern scripts for the forms from which the Libyan alphabet derives, it is not to the Phoenician of Africa as it is known at Carthage, but to more archaic script that we should turn, which would explain the similarities remarked with the South Arabian scripts (Himyarite, Sabaean), but also with the Turdetan alphabet of Southern Spain.

The script did not necessarily penetrate Africa by sea, and it is actually more likely that it crossed the continent and that the Numidian Massylian form (the most recent of the uncient Lihyan alphabets) may have arisen out of a transformation of the archaic forms in contact with the Punfa world.

As far as this alphabet itself is concerned, two old hypotheses may definitely be rejected. The first is that of Meltzer, according to whom the Eastern alphabet was wholly invented by Massinisa, for we know today that some Libyan inscriptions are carifer than this king and, further, that the Munidian royal administration employed Punic exclusively in its official inscriptions, as it did in the legends on its coins. The other hypothesis, that of Lidzbarski, who wanted to link Libyan with New Punic, is even more improbable, for it is based on a totally outdated chronology of the Neo-Punic script.

If the origin of the Libyan alphabet poses some bisohable problems, it is even more difficult to date its invention or introduction.

Contrary to the views of several authors 1D. Blanchet, S. Gsell), the Libyan inscriptions or signs which are found im some rock carvings as at Kel Mektouba, Chaba Naima and Khanguel el Hadjar, cannot be contemporaneous with these latter. It is now known that these carvings are for the most part Neolithic and thus very much earlier than every ease that the inscriptions are superimposed on the earlyings.

However, this is not the case with the inscription from the Azib uTskis (High Atlas, Morocro), This inscription occupies a vertical cartouche delimited in an authropomorphic figure of which it forms an indisputable part. It is certain that this discription, which contains fifteen or sixteen signs not belonging to the Saharan alphabet, is contemporaneous with the carving. The technique of the lines, the patina, style and details such as the representation of the sex and the lateral fringes, which accompany the figure, are identical with other carvings which are usually attributed to the Old Brouze Age (El Argar civilisation in Spain). Even assigning it as late as possible within the archaeological context, this inscription seems to us clearly earlier than the 6th-5th century B.C.

In Morecco, we also have the inscription of Sidi Silmane of the <u>Charb</u> which refers to the tumnliss that it adjoins and with which it is consequently contemporaneous; the funerary furniture of this monument belongs to the 4th-4th century B.C.

In Eastern Algeria the bazina (Palaen-Berber dry-stone burial chamber) at Tiddis contained pottery, a piece of which has three Libyan letters painted on its belly. The bones contained in the pottery of this tomb have been dated from 2200 ± 100 years to 250 ± 100 B.C. So this inscription is quite likely to be older than the billingual dedication of the Temple of Massinissa at Dongga, dating from the tenth year of the reign of Micipso, i.e. 138 B.C. This inscription was for a long time the only Libyan text reliably dated, and there was also an unconscious tendency to regard it as the object. A Study by J. G. Février of the inscriptions of Dougga, mentioning municipal offices, allows us to reconstruct the genealogy of an important person, Solot, who was twice (during one year?) prince of the city. Taking account of this genealogy, it is possible to date back two other inscriptions (RIL, 10, 11) to a generation preceding the dedications of 130; these inscriptions would date from the decade apo-

In the Sahara, the datable documents are rater, but a preliminary investigation has shown that Tifinagh is very much older than the historians, who believed that the Betbers only conquered the Sahara in the 3rd century of our era following the pressure exerted by Rome on the land routes of the north, formerly thought. In Fazzan, some Tifinagh scripts are carved on amphora found at Germa which date from the 1st century of our era. Among these graffitt figures sign [45], which exists only in the Saharan alphabet. The Fazzan necropolis thus proves that in the 1st century of our era, Tifinagh was in use in the heart of the Sahara.

In the massif of the Floggar, the stele of Assekrem, whose inscriptions and carvings appear very againnt (H. Campa-Fabrer), is worth citing, and especially the carved blocks of the funerary monument of Tr n Hinan at Abalessa. These blocks which bear Tiffingsh script have been cut in in to form part of the construction of the monument, of which they constitute the lower courses. The cutting has mutilated or interrupted some carved texts. This Trangel, which belongs, however, to the modern alphabet, is thus at least contemporaneous with the monument and probably older; the funerary farattire and the isotopic date calculated from the wood of the bed or stretcher on which 'II a Binan reposed, date the construction of the monument back to the 5th century of our era.

Such are the chronological pointers which allow us to assert the great antiquity of the Libyan script in the Magneib, where it is clearly earlier than the reign of Massinissa, i.e. at the emergence of the Numidians and Moors into history. As for the Sahara, the use of Tifiniagh goes back to at least the beginning of our era and probably much earlier.

Bibliography: It is not possible to present complete bibliography of the Libyan inscriptions. The various histories of the alphabet and of writing should be consulted, particularly that of J. G. Fevrier, Paris 1948, and M. Cohen, La grande invention de l'écriture et son molution. Documentation of index, Paris 1938, 90-1. A very complete bibliography, for the period, is given by J.-B. Chabot in the Recneil des inscriptions libyques, Paris 1940-7. See also C. Meinhof, Die Libyschen Inschriften. Eine Untereuchung, Leipzig 1932-5; 1.. Galand, Inscriptions libyques, in Inscriptions antiques du Maior, Paris 1966; J. Alvarez Delgado, Inscripciones libicas de Canarias, ensayo de interpretacion libica, La Laguna, Tenerile 1964. The greatest caution should be exercised in using G. Marcy, Les inscriptions bilingues de l'Afrique du Nord, Paris 1936, and the numerous articles of this author which appeared in Hespéris (1934-7), AIEO Alger (1936) and R. Afr. (1937).

L. Galand provides annually a report entitled "Les l'Études de linguistique berbère" in the Annuaire de l'Afrique du Nord. In these chronicles the discoverles and analyses of Libyan inscriptions are mentioned regularly. These reports have been collected in a volume entitled Langue et l'étérature berbères. l'ingl-cinq ans d'études, Paris 1979. For the chronology of the inscriptions, see G. Camps, Recherches sur les plus anciennes inscriptions libyques de l'Afrique du Nord et du Sahara, in Bulletin archéologique du Comité des Travaux historiques, N.S., x-xi (1974-5), 146-66.

(G. Camps)

758 LÎBIYĂ

3. Modern history. - On 29 September 1911, Italy declared war on Turkey and started its lungplanned invasion of the Libyan littoral, Italian troops did not succeed in penetrating beyond the constal strip due to stiff resistance by combined Turkish-Libyan Forces. Negotiations between Italy and Turkey resulted in the Peace Treaty of Ouchy (17 October 1912). On the battlefield, however, Libyan resistance did not subside. During World War I the Italians were virtually besieged in their coastal strongholds. In Cyrenaica, Fazzān and the Sirtica, resistance was led by Ahmad al-Sharff (1873-1933), head of the Sanusi order, with support from Turkey and Germany. It was under their influence that he decided to attack British Forces in Western Egypt in November 1915. Defeated, he transferred all political and military control of Cyrenaica to his cousin Muhammad Idris al-Sandal (born 1882). In April 1917 agreements were reached between Idris and the British and Italians (the Accords of 'Akrama'). The Sanusi-Italian accord was superseded in October 1920 by the Accord of al-Radima, in which Idris was recognised as the independent ruler (Amir) of the interior cases.

In Tripolitania, leadership was divided. Though a number of tribal leaders (inter alies Ramadan al-Shtaywl (or Suwayhill) and the Ibadl Berber Sulayman al-Baruni) agreed on establishing a Tripolitanian Republic (Dimmariyya Tarabulsiyya) in 1919, fighting soon broke out between tribal factions. To overcome dissensions and to strengthen their position vis-a-vis the Italians, they decided to offer Idris al-Sandal the amirate of all Libya. This put him in a predicament, for he was bound to the accords with the Italians. On the other hand, refusal of the offer would undermine his position with his adherents. Finally, he decided to accept the offer, but subse-

quently fled the country to Cairo (1922).

Full-scale war in Libya me resumed after Musso-Mai's take-over in Rome in 1922. Due to its internal divisions, resistance in Tripolitania was soon crushed, but in Cyrenaica the charismatic leadership of the Sanusi representative "Umar al-Mukhtar inspired Bedouin resistance for almost ten years until = last be = injured in battle, imprisoned and publicly hanged on 16 September 1931. Pacification of Libya being completed, the Italians started extensive agricultural colonisation schemes in the fertile constal plains. In 1935 they completed the strategic coastal road connecting Tripolitania and Cyrenaica. The onset of World War II impeded further Italian development plans. After sovere fighting between Germany and the Allied Forces, in January 2943 all of Libya - occupied by British and Free French Forces, Idris al-Sanúsl had assisted the British effort from Cairo, and an army of Libyan exiles under the SanusI flag had participated in the liberation of Cyronaica.

After World War II the future fate of Libya was put before the General Assembly of the United Nations. On 21 November 1949 it was decided that Libya should become mi independent state before a January 1952. A UN Commissioner, the Dutchman Adriaan Pell, was appointed to supervise the power-transfer from British and French military governments. The UN decision stimulated political debate on the future form of an independent Libya. Two opposing groups emerged. The older tribal and religious leaders, mainly concentrated in Cyrenaica and Fazzan, supported a federation under the Sanūsl crown. The younger generation, influenced by Arabnationalism, advocated a unitary republic. This

no doubt would lead to the preponderance of Tripolitania, with its larger population and its better-developed economy and thus reduce the influence of ldris's supporters. They were wary of ldris's close bonds with Britain. The outcome of the debate, however, was anticipated by the proclamation of Idris al-Sanūsi as head of Independent amirate of Cyrenaica, while control of foreign affairs and defence remained with Britain (1949). After this, ldris would not support the independence of a united Libya unless under his own crown.

Libyan independence was declared on 24 December 1951. [Due to peculiar international circumstances it was only in 1955 admitted to the UN.) The constitution provided for a hereditary monarchy under a Sanusi King and a representative federal government consisting of two houses (a Senate and a House of Representatives). The King was endowed with extensive powers, including the right to select and dismiss the Prime Minister, to appoint half the Senate and to dissolve the elected parliament. The political system never matured. The first elections to be held on 19 February 1952 resulted in a victory for government candidates, but voting results contested by the opposition parties. Demonstrations ended in violent clashes with police forces. As a result, all political parties and programmes were suppressed. From that moment, Libyan politics gradually degraded into the assertion of family, tribal and parochial interests.

The next two decades witnessed increasing pressure on Libyan society. An unprecedented oil boom was the main cause. Libya's first oil was struck in 1955; In 1962 it joined OPEC; and in 1969 Libya had already become the world's fourth largest oil producer. Oil revenues ended Libva's dependency on foreign financial aid and allowed a more assertive policy. In order batter to cope with the exigencies of oil exploration, in 1963 the cumbersome federal system was abolished. Social changes set in with developing oil industry. Urbanisation and industrialisation gave birth to a new stratum of traders, service-men and technicians; petroleum and dock workers started to organise in trade unions. The new social groupings were denied political expression. Subsequent tensions were heightened by foreign politics. During the Suez crisis (1956) and again in 1967 there were violent outbursts of Arab nationalist feelings. But Libya, a member of the Arab League since 1953, was fied to the Wes! in its foreign policy by the presence of British and US military bases. The government, though briefly joining the Arab oil enbargo of 1967, had no means adequately to meet widespread popular support for a Nasserist policy. This undermined the King's authority.

On a September 1969, Idris was deposed. In spite of an initial wave of popular enthusiasm, the revolution remained entirely an army affair. It had been planned and implemented by a movement of "Free Officers" modelling itself on the Nasserist revolution. A Revolutionary Command Council (RCC) took control of affairs. It consisted of twelve officers under the general leadership of Colonel Mu'ammar al-Kadhdhaff (Gaddafi). Political parties remained suppressed. An attempt at broadening the RCC's political base was made by creating the Arab Socialist Union (1972). Lack of cadre, apathy and hostliity from traditional leadership caused its failure. Another attempt was made in 1973 by the proclamation of the popular revolution. Its ideology was set forth by Mu'ammar al-Kadhdhāfi in his Green books (see Bibi.). In these, he propagated his Third World

theory which refuted parliamentary democracy well as class domination. Libya to be governed by Popular Congresses [multamarit shalbiyya] and Popular Committees (lidida shalbiyya) in every section of society. On 2 March 1977, power was officially transferred to the people and the country renamed the Diamahiraya (Masses' Republic).

In oil policies, republican Libya took mationalistic stand, leading to a sharp price increase and a major share in production. On the international scene, the theme of Arab unity was paramount, though al-Kadhdhiff's Third World theory has

universalist aspirations.

(R. J. I. TER LAAN)

4. Ethnography and demography. Since the early 1860s, when Libya began to export oil on an international scale, the social and economic structure of its population has been undergoing a continuous process of accelerated and extensive change. Nonetheless, studies of Libyan culture and society and its institutionalised forms—the family, kinship systems, political organisation, legal procedures, religious beliefs and practices, etc.—must still take into account geographical and historical diversities

within the country and among its Inhabitants. The three regions of Tripolitania, Cyrenaica (Barka), and the Fazzan have had different economies, varying external connections, and experienced specific historical and cultural influences; and internally, each of these regions has been diversified in particular ways.

Along the Mediterranean coastline of 1,200 miles lies a fertile coastal strip nowhere broader than 50 miles. The barren Gulf of Sirte, an arc of some 300 miles where the desert comes right down to the sea, separates the settled coastal areas of Tripolitania from those of Cyrenaica. These areas well-watered, enjoy a Mediterranean climate and contain the principal cities, towns and villages inhabited by the overwhalming majority of the country's population. The western coastal zone includes the capital city of Tripoli; the inland hills of Diabal Nafusa, with sufficient cainfall for habitation, and ancient olive groves autrounding small Berber-speaking towns and troglodytic settlements formerly inhabited by Libyan Jews; and, between the fertile coast and the hills, the arid plain of Djafara. The eastern zone contains the country's second largest city, Benghazi, and the Diabal Akhdar mountain range which runs in an arc parallel to the coast from Derna to south of Benghazi and whose uplands, rising to 2,000 feet, receive plentiful rainfall.

To the south of this strip lies a second zone which in the past has been too arid for permanent settlement, but which is sufficiently watered to provide grazing and crops of barley for nomadic herders. Although rains were uncertain and the hot wind from the south (gibii) could "shrivel plants like a flame", this was the country's main barley-producing

The divisive geographical features of Libya were initigated by trade, religion and, finally, by the political unity created by Italian colonisation, beginning in 1911 and furthered by the Second World. War. Before the opening of West African ports in the 19th century, a good proportion of the wealth of tropical Africa had reached Europe by way of Libya, From the Fazzán and Cyrenaica, gold, ivory, ebony, ostrich feathers and slaves transported to the emporta of Tripoli and Benghezi had sustained oasisdwellers, camel-herders and merchant townsmen. The Fazzān had been a wealthy community of slaveowning merchants, Berber-speaking Tuaregs with trading networks as far as Timbuctu, in parts of the Sahara and into the Western Sudan; while Cyrenaica had controlled the caravan conte through Kufra to Wadai. When this commerce ceased, the Tuareg moved further west while the former Tebu-speaking slaves remained in the oases, subsisting as crop-sharing peasants until the oil boom. of the 1960s. Most of these areas, as well as the Diabal Akhdar and the tribes in the plain of Diafara, were more or less autonomous and maintained their own locally-based social structures.

Until the 1950s, at least four-fifths of the population of Tripolitania lived from agriculture and animal-rearing. In the Djafára, a number of tribes, integrated in a complex social and economic pattern that included sedentary peasants, transhumants, and oasis cultivators, were linked by suff [q.e.] relations of alliance which transcended other loyalties. 760 LĪBIYĀ

In Cyrenaica, as well, the combination of nomadism. pastoralism, and some cultivation, along with the significant sessonal variations in climate, assumed a characteristic form of social organisation, viz., the segmentary tribal system. Throughout Libya (and elsewhere in North Africa and the Middle East), the disposition of non-urban groups reflected the distribution and exploitation a natural resources, and the usage of common concepts, especially that of the segmentary tribal system, was widespread and of central importance. Nonetheless, these shared concepts often glossed over diverse adaptations to different types of ecologies. Thus, for example, in Cyrenaica the virtually sedentary cow and goat herders of the Diabal Akhdar and the camel and sheep pastoralists of the semi-desert was differed significantly in the pattern of their social relationships. The idiom of "tribe" also nominally existed in the cities of the coastal area, but the urban elites with their cosmopolitian values and social structure had more resemblances and affinities with their urban counterparts in the Arab and Muslim world than they did with the tribesmen of their hinterlands.

Libys, like the rest of predominantly Berber North Africa, had been invaded in the 5th/22th century by the Banū Hilāl (q.o.) and Banū Sulaym [q.v.], some of the former settling in Tripolitania, and the latter in Cyrenaica. These tribal movements from the east accelerated the process of Arabisation and the spread of Islam and produced a fusion of cultures and races. Only small pockets of Berberspeakers have resisted. In Tripolitania there are communities of sedentary agriculturalists along the northern fringes of Diabal Nasūsa between Yelren and Nalut, and on the coast at Zuara; these Berber-speakers, who are further distinguished by their adheronce to the Ibadiyya [q.s.] sect, constitute an estimated 4% of the population of Tripolitania; in addition, there are in the cases of Ghadamès and Ghat Berber-speaking Tuareg. To complete the linguistic description, mention should again be made of the Tebu of Fazzān and southern Cyrenaica who speak their own language, a Sudanic dialect. Finally, amongst 🖿 Arabic-speaking population, the Libyan Jewish communities deserve inclusion: before emigrating on messe during the decade following the Second World War, the Jews numbered some 30,000, most of them in Tripolitania. Their communities had their own internal social structures and values, and they played an important role in economic life, particularly trade.

In regard to religion, the overwhelming majority of Libyans have long adhered to the Sunni creed and followed the Maliki school of law. Yet neither their beliefs, nor the history of the country, may be understood without taking into account the revivalist movement of the Sanūsiyya [q.v.], a neo-Sūfī order established by Muhammad All al-Sanusi (1787-1859). The order, founded on a network of lodgus, spread along the desert mem from Tripolitania to the Sudan. With his headquarters in the interior at Diaghbub, a strategic centre for consolidating power and spreading the creed among tribes along the caravan routes, the head of the order created a political-religious organisation that was to lead the opposition to Italian penetration and eventually become transformed into the Libyan Kingdom under the rule of a descendant of the founder, King Idrls, The Sanusi order, as an Islamic revivalist movement, gave the population of the country a religious seal and, aroused by Italy's attack, a sense of unity that developed into Libyan nationalism.

During the period of Italy's colonisation of Libya, a large number of agricultural estates belonging to Italian individuals and development companies were established: a programme of state and landgrant colonisation in the 1970s [11] followed by large-scale agricultural settlement by Italian poasant families in the 1930s. The invasion and the colonial occupation disrupted and influenced the economic and social life of the indigenous population in [11] myriad of ways: e.g. there was an increase in sedentarisation among nomads, the breakdown of corporate groups, the spread of education, and a massive exodus of poor rural pastoralists and agriculturalists to take up wage labour in the cities and towns of the coastal region, especially after the Second World War.

Since independence in 1951, the government has created a new group of Libyan farmers by transferring to them former Italian lands (and eventually nationalising those lands in 1971) and establishing a National Agricultural Settlement Agency. Moreover, it has instituted policies for land use, irrigation, rural settlement (and, since the revolution of 1969, a state policy for rural development with projects planned for the Dialdra plain, Diabal Akhdar, Kufra, Serir and Fazzān), and has generally sought to raise the contribution of agriculture to the national economy. But because of the phenomenal development of oil and the growth of industry and services, agriculture has declined significantly since the pre-1961 period when it involved 70% of the labour force.

In 1964 oil in Libya began to flow me an international level. Since then it has transformed the country from a poor agricultural and desert backland to a land affluence and one of the biggest oil exporters in the world. With an estimated annual average income of \$ | billion per year (1978) and | per capita Gross National Product of \$ 6,310, Libya has become the richest country in Africa and the fifteenth richest country in the world (1977 World Bank Report). The national economy now depends on the oil sector, which accounted for about 62% of Gross Domestic Product in 1980. The government (renamed since 1973 the Socialist People's Libyan Arab Jamahirjya, to replace the Libyan Arab Republic established following the coup d'état led by Colonel Mu'ammar al-Kadhdhāfī (Gaddafi) in 1969) has concentrated in its latest Development Plan (2976-80) on the needs of electricity, water supplies, sewage and housing, and the creation of three major industrial complexes. It is the urban sector, where one-third of the labour force are foreigners and less than 3% women, which now receives governmental priorities.

Libya is on the way to becoming a highly-urbanised society. About half of its population in 1978 of 3,014,100 (of whom 2,597,600 are Libyans) live in towns of 20,000 or larger. Its accelerated urban growth results from migration, natural increase and tenmigration of foreign labour. Between 1966 and 1973, towns of 25,000 m more population grew by 30% annually, we of the highest rates in the world. (Natural increase for the same period was 4.2%.) The urban regions of Tripoli and Benghazi (10% of the country's total area) contain 92% of the total population, include fourteen of the fifteen towns with a population of at least ro,000, and are responsible for 86% of Libya's agricultural production. The city of Tripoli has grown from a population of some 30,000 at the beginning of the century, to 110,000 (1931), to 240,000 (1954) and to an estimated \$20,000 in 1980; while Benghazi, according to the 1980 estimate, has some 400,000 inhabitants. By the end of this century, # is expected that of Libya's population of 5.5 to 7 million, 67% to 74% will live in cities of 20,000 or more, i.e., that the number of city-dwellers will triple or quadruple. The study of social and cultural changes consequent to these processes greatly increases the challenges to Libyan ethnography.

LIHYA-YI SHERIF, the hairs of the Prophet. In imitation of the Prophet's practice shaving of the hair and heard later became a summ. According to al-Bukharl, during his penultimate and last pilgrimages, Muhammad permitted people who wanted to get his hair when he was being shaved (Ahmet Zebidi Zeynüddin, Sahih-i Buhari muhlasarı tecridi tarih tercemeti, tr. Ahmed Naim-Kâmil Miras, Istanbul 1926-46, vi. 193-8, x. 442). The hairs of his head and heard, thus obtained, were preserved and later circulated in all Islamic countries. People kept this hair in a bottle, wrapped in layers of green

cloth, in mosques, palaces, etc., opening this on public festivals such as during the days of Kandil, Bayram, and in the second half of Ramadân. In the houses of the rich, the Lihya-yi Sherif was regarded with respect and placed in an honoured, elevated position. In the mosques it stood on a high stool on the landing above the last stair of the pulpit (Osman Ergin, Türkiye maarif tarihi, Istanbul 1939-43, i, 172; Mehmet Zeki Pakalin, Osmanis tarih deyimleri ve terimleri sözlüğü, Istanbul 1971, ii, 366).

Although it means properly a hair from the head of heard of the Prophet, it is called Sakal-! Sherif incorrectly by the public in the Turkish-speaking countries, meaning the Prophet's beard only.

The Libya-vi Sherif is today kept in a silver box at the Tookam Palace, together with the other relics of Islam, in the Imperial Chamber (Khāss Oda), in the Pavilion of the Holy Mantle (Khirka-yi Sa'adat Dāriresi) (Kemal Çığ, Relics of Islam, Istanbul 1966, 7). Two other examples which belong to the Yikha Palace, now transferred with other objects to Istanbul University Library, are however in boxes encrusted with mother-of-pearl on which meeting from the Kur'an are written. As well as green cloths, these are wrapped in a kind of gauze with inscriptions printed on it, called destinal ("napkin"), specially made (Ismail H. Baykal, Endorun mektobi tariki, Istaabul 1953, 148) for the visits to the Holy Mantle organised by the Sultan-Caliph on 15 Ramadan and then distributed to the courtiers and other people invited to the ceremony [see KRIRKA-YI SHERIY].

The ceremony of visiting the Holy Mantle is explained at length in many Ottoman writers. Although the Libya-vi Sherif is kept with the other relics there, it is never mentioned, and the Mantle of the Prophet occupied the most important place in these ceremonies (H. Z. Uşaklıgit, Saray ve ölesi, İstanbul 1966, 223; Leyla Saz, Haremin içyüzü, İstanbul 1974, 125). It is interesting to note that in histories such as those of Silahdar - Selaniki, - find much information about the Holy Standard and the Holy Mantle's being removed from their places and sent away in times of crisis, and about help being expected from them when the sultans or the Ottoman army were in trouble; butn one of these authors writes anything about the Libya-yi Sherif (I. H. Uzunçarsılı, Osmanlı devleti'nin saray teşkilatı, Ankara 1945, 250-60).

LIHYAN, people and State of early Arabia.

1. Libyan and Libyanite in epigraphy. Inscriptions discovered in the north of the Highar and speedily identified as "Libyanite" have preserved the names of at least six kings of Libyan, a kingdom which must have existed for several conturies in pre-Islamic times. The great majority of the Libyanite inscriptions found in the valley of al-Ula and its immediate surroundings, especially in the neighbourhood of al-Khurayba, the site of ancient Dedan, not far to the south of the great Nabataean centre of al-Hidjs [q.v.], i.e. modern Madalin Salih. Not only Libyanite, but also other inscriptions are found more or less considerable numbers in the same area: Dedanite, Minaean, Thamudic,

762 LIHYÄN

Nabataean, Hebrew and Arabic, C. M. Doughty, Ch. Huber and J. Euting were the first travellers to copy Libyanite inscriptions and to report on the archaeological remains in their vicinity. On the basis of Enting's documents in particular, D. H. Müller presented a first interpretation of the texts. Close to 400 Libyanite inscriptions and graffiti were subsequently published by A. Jaussen and R. Savignac in their monumental Mission archéologique en Arabis. In recent years, many more have come to light, for instance those included in some of A. Jamme's publications, particularly in various volumes of his Miscollandes. Most important was the discovery, in a mountain gorge near Bi'r al-'Udhayb, to the west of al-Khurayba, of a group of texts connected with a place of worship of Dhu-Ghābat, the principal delty of Lihyan at the time,

The Libyanite inscriptions - written in a South Semitic alphabet, related to but distinct from the South Arabian, Declarite, Thamudic and Sataltic scripts. Although the evolution of the South Semitic letter forms is not yet sufficiently clear in all its details, it has become generally accepted, since H. Grimme (1930, 1932), that the Dedanite inscriptions are older than the Lihyanite On both historical and palaeographic grounds, these Dedânite inscriptions are usually dated, with F. V. Winnett (1937, p. 50), to the sixth century B.C., = slightly later: cf. Winnett, in Winnett and W. L. Reed (1970, pp. 114 ff.). It is not known when the Dedanite supremacy in the region was replaced by the Libyanite one and after how long an interval, I any. It seems certain, however, that the kingdom of Libyan flourished at least throughout the 3rd century B.C.; the Minaean inscription found in Dedan and now dated to approximately this period points to the presence of a colony of Minaean traders without implying, contrary to what was previously believed, Minacan political domination, cf. A. van den Branden (1957, m. 16) and J. Ryckmans (1957-8, p. 243; 1961, pp. 54 ff.). The name of certain kings of Libyan, TLMY, may be another indication that the Lihyanite rulers were to some extent contemporaries of the Professies of Egypt, if the identification of that name with Piolemy, suggested by E. Littmann, in J. Enting, Tagouch, ii, 225, and W. W. Tarn Is correct. But the name could be Semitic, and it has been compared, most recently again by al-Ansary (1970), with that of Talmay, king of Geshur (11 Sam. ili, 3 and xiil, 37; I Chron. iil, 2). The southward advance of the Nabataeans probably caused the downfall of the Libyanite kingdom. In this connection, three short Nabataean inscriptions, found south of Tayma and written by a certain Mas adu, who calls himself king of Lihyan, are often quoted. Various dates have been ascribed to these inscription: the 2nd century B.C. by A. Jaussen and R. Savignac (Mission, il. 221), the middle of the 1st century B.C., "but before the final Nabataean conquest of Dedan" by W. F. Albright (1953, p. 7) and, less likely, the ast century A.D. by W. Caskel (1954, p. 42). Among the deities worshipped by the Libyanites, the inscriptions mention, in addition to Dhu-Ghabat, Hallah, Lat, Han-'Uzzay, Han-'Aktab, Ha-Kütbay, Bafalsamen, Humam, Ha-Mahr, Khardi, Salman and Wadd (the vocalisation is purely conventional). These and other deities are also encountered in composite proper names such = Zéd-dhû-Ghâbat, Wahb-Allah, 'Amat-Usza, Diaram-han.'Aktab, Diaram-Kutba 'Abd-Manat, etc. The site of ≡ temple was discovered in al-Khurayba by A. Jaussen and R. Savignac (Mission, E, 56 ff.). Its walls were probably ornamented on the inside with large statues; parts of several of these statues were found lying in the débris. In the central court of the temple, there was a stone basin, circular in form and more than four metres in diameter.

The language of the Lihyanite inscriptions is an early form of Arabic. Some differences with Classical Arabic are easily observed. The defective spelling of words like bt (cf. Classical Arabic bayt) and 's (cf. Classical Arabic 'Aws) shows that the Libvanite phonemic system comprised the vowels ? and &. After nasals, i may have been realised in the and is occasionally spelled conformingly, e.g. buth instead of bat-daughter. The article has the form h-; habefore 3, and, optionally, 8; ht- occurs in inscription. The dual pronominal suffix -hmy (cf. Classical Arabic -huma) did not end in -a because, in Lihyanite orthography, final long -s is written with the letter -k. The nominative dual status constructus is also spelled with final -y and, for that reason, cannot have ended in -d. The perfect, third person m. sg, of the causative stem of verbs with identical second and third radicals is frequently not contracted, 'all or hall; but contracted forms are also found on occasion. A systematic analysis of the inscriptions will undoubtedly reveal other peculiarities of Libyanite Arabic.

(A. J. Drewes)

2. In Islamic sources. The Islamic historical and genealogical sources consider the Arab tribe of Lihyan to be a branch of the Hudhayl [q.v.], and ascribe to it the genealogy Lihyan b. Hudhayi b. Mudrika b. al-Yas b. Mudar, i.e. Lihyan was attached to the North Arab stock. When and how the Lihyan came to the position in which we find them in the 6th century A.D., forming part of the Hudhayl and established in a territory considerably to the south of their original home, sc. now in the country to the north-east of Mecca, we cannot tell, on account of the complete absence of documents. Muslim tradition has lost all memory of them and confounds them apparently under the general designation of Thamud [q.v.] with the Thamud proper and the Nabataeans of al-Hidir: a memory, but wery vague one, of the old kingdom of Lihyan may perhaps have survived in the isolated mention in m tradition that the Libyan were "remnants of the Djurhum", who later became part of the Hudhayl (Tabari, i, 749, 11-12 [see prornun], following lbn al-Kalbi: Tadi al-arus, x, 324, 1-2, following alflamdani, probably in al-Iklil, since the passage is not found in the text of the Dinziral el-Arab).

In the period just before and after Islam, the Lih yan do not seem to have had a history independent of their brethren of Hudhayl; it is only rarely that they are mentioned apart from them, e. . in Hamasa, 34, a propos of their battles with the warrior-poet Ta'abbata Sharras; Yakût, Buldan, ii, 272, iv, 104 (cf. the Hamasa of al-Buhturi, 80-1; Ibn al-Diarrah, ed. H. H. Brau, no. 86 = SBWAW, ceiii, no. 4, 1927, 31), ii, 6x4, of a battle with the Khuzā'a. The poets of this tribe are as a rule reckoned among those of the Hudhayl-e.g. Malik b. Khalid al-Khunnasi, al-Mutanakhkhil al-Khuna'l, etc. At the time of the preaching of Islam we find them, like the rest of the Hudhayl, under the political influence of the Kuraysh. This explains their hostile attitude to Muhammad, which resulted in the murder of their chief Sufyan II. Khalid b. Nubayh by 'Abd Allah b. 'Umays at the instigation of Muhammad. This murder was cruelly avenged by the Lihyan, who slew several Muslims in their turn (the yourm al-Radif', 4 A.H.). As there is no further mention of hostile relations between the Muslams and the Libyan, it is probable that the latter were included in the submission which the Hudhayl made to Islam [see HUDHAYLL.

After the triumph of Muhammad, and in the periods following, there is an almost complete lack of information about the Lihyan, and there are very few persons of note belonging to this tribe: the grammarian al-Lihyani, whose tull name was 'Ali b. Hāzim (Khāzim) or b. al-Mubārak, d. in 222/837 or 223/838 [cf. al-Zubaydī, Tabakāt al-nulāt, ed. Krenkow, in RSO, viii, 145, no. 125, with bibliography; Flügel, Die grammatischen Schulen, 51) perhaps belonged to it, but other sources (Yākāt,

Irshād, v, 229; Tādi al-farūs, x, 324, 19) trace his nisba "al-Lihyant" to the unusual length of his beard (lihya).

LÎM, LÎMÛN [sec nuhahabapāt]

LIMASSOL [see KUBRUS]

LIMNI (Turkish form of the Greek Anjavog, in older Ottoman historical works Limoz and Ilimli, in older Greek sources also Anprog. Stalimene in mediaeval western sources, Lemnos in modern usage) an island in the northern part of the Aegean Sea, So km, west of the entrance of the Dardanelles (Canakhal's Boghazi (q.v.)) halfway between Mount Athos and Tenedos (Bozdja-Ada [q.v.]). The island, of ca. 470 km2, has been virtually treeless since long before Ottoman times. Agriculture is of local importance only. Its famous export product since antiquity is a sort of volcanic earth which had reputedly medicinal power, terra limnia, fin-i makktam, which used to be dug once yearly with some ceremony. Lemnos today has a Greek population of about 25,000 which is constantly decreasing. Myrina (formerly Kastro, Turkish Limni) on the western coast is the capital of the island that forms a part of the province of Lesbos of the Republic of Greece. There is a military air base at Mudros. The large harbours of Purnia in the north and Port Mudros in the south, almost cutting Lemnos in two halves, are not much used any more

Lemmos in the Middle Ages was part of the Byzantine Empire. It suffered the depredations of corsairs, Arabs from Crete (Thritish [q.v.]) in the 10th century, and those of Saldjüks from Anatolia in the 11th century. With the partition of the Empire after the Latin conquest (1201), Stalimene became an imperial fiel granted to Filocalo Navigajoso and to his descendants in 1207. Byzantine rule was restored by the Emperor Michael Paleologus between 1276-8. Prisoners of state were held in the island, e.g. the Ottoman pretender Düzme Mustafå in 823-5/1419-20. Shortly before 1453, Dorino I Gattilusi (1426-55), Lord of Lesbos (Turkish Midilli [q.v.]), acquired the whole of Lemnos as a fief. After the fall of Constannople (29 May 1453), the Byzantine authorities fled. Thanks to the diplomatic activities of Critobulus, the Byzantine-Ottoman historian, who was a judge in nearby Imbros (Imroz [q.v.]), the Gattilusi dynasty of Lesbos was granted Lemnos and Thasos (Ta \underline{sh} öz [q.v.]) as flefs by Sultan Mehemmed II. subject to m tribute of 2,325 gold pieces m year. Domenica Gattilusi, son and successor of Dorino I, was in 1455 granted Lemnos only. In 1456, however, the inhabitants appealed to the sultan to be directly governed by him. From this time, the first kandaname of Imbros, Lemnos and Thasos must be dated, and this was revised by Selim 1 in 1519 (cf. Barkau, Kanunlar, 237-40).

A papal war fleet commanded by Ludovico, Cardinal Scarampi, captured the island in 1457, but in 1459 the Ottoman admiral Khādim Ismā'il Bey retook it. Critobulus Intervened once more to maintain its special status, which led to the grant of Lemnos (plus Imbros and Enos on the mainland

(Turkish Enez)) in 1460 to the ex-despot of the Morea Demetrius Paleologus in return for a tribute of 3,000 gold pieces a year. A Venetian force conquered the Island in 1464, and held it till the peace concluded in 1479. Gedik Ahmed Pasha [q.v.], kapudan pasha, had the fortresses repaired and Anatolian subjects were settled there. A regular administration was now to pwith a coycode, a kddi and kodiologis in charge of the native Greek population. Limni became later a part of the province of the sandjak begi of Gelibolu (i.e. of the Ottoman admiral). Towards the end of the x6th century, Lemnos, together with Chios (Saktı [q.u.]), was the only prosperous island of the Archipelago, with 74 villages, including Turkish Muslim ones.

Its strategic position led to repeated Venetian attacks and its conquest in 1656, undone a year later by Topal Mehmed Pasha after a 63 days' siege of Kastro. Following the destruction of the Ottoman fleet near Ceshme on 5 July 1770 by the Russian fleet of Count Alexis Orlov, Lemnos suffered a Russian attack. An Ottoman squadron defeated the Russians in Mudros Bay, and this success brought Diazâ'rti Hasan Bey [q.v.] the titles of ghāzī and pasho. After 1774, Ottoman authority in the Archipelago had to be reinstated, which led to a harsh

régime and subsequent popular unrest.

During the Russo-Oftoman war of 1806-12, a division of Admiral D. Senyavin's fleet occupied Lemnos in 1807. In the same year the kapudan-payla Seydl 'All Pasha confronted the enemy in the battle of Athos, west of Limni (30 June 1807). Lemnos did not play an active role in the Greek War of Independence. When the Ottoman administration underwent the reforms of the tanjumat, Lemnos in 1283/1866 became one of the 4 sandjaks of the vilayer of the Diază'is-i baler-i sefid [q.v.], with the kada's of Bozdia-Ade, Imroz and "merker", the latter subdivided into the safeipes of Bozbaba (Strati = Aghios Eustratios Island) and Mudros. An Orthodox bishop resided at Kastro. There was a small garrison, and a government steamship had its station there. In 1312/1894 the population consisted of 23,499 Ottoman subjects and 192 foreigners (in the 1310/1892 statistics, there were 34,451).

During the Macedonian crisis, I Powers sent a naval force to occupy Lemmos's castle, customs house and telegraph office (5 December 2905) in order to press the Porte to introduce reforms. At the outbreak of the Balkan War, the main division of the Greek fleet under the flag of Admiral Paul Koundouriotis steamed straight to the island {19 May 1912}. The next day, 1,500 troops were landed and these occupied Lemnos after I short fight with the 30-man-strong Ottoman garrison. The mutesarrif and leading Muslim civilians were deported. A Greek naval base was established at Port Mudros.

The Treaty of London (that of St. James) of 30 May 1913 confirmed the Greek annexation. During World War I, the Venizolos government lent Lemnos to the Allied Powers. An Anglo-French naval base and army camp were established at Port Mudros, from where the Gallipoli campaign was directed. It was here, aboard the British battleship HMS Agamemnon, that an Ottoman delegation led by the Minister of Marine Hüseyn Ra'lli [Orbay] negotiated with the British plenipotentiary Admiral Arthur Calthorpe and concluded the armistice of 30 October 1918 ending hostilities between the Allied Powers and Turkey.

At the Treaty of Lausanne (24 July 1923) the new Republic of Turkey recognised formally the loss of Lemnos and other islands. With Samothrace (Turkish Semadirek), Imrot (Gökée-Ada) and Tenedos (Bozdia-Ada), the last two baving been restored to Turkey, Lemnos formed part of a demilitarised zone. The 2,500 Muslim-Turkish inhabitants of Limni had already left their island in 1920, and Greek refugees from Anatolia took their places in 1923.

LINEN [see KATTÄN]

LINGA, minor seaport, modern Bandar-i Linga, on the northern shore of the Persian or Arab Gull, in lat. 26° 34' N. and long. 54° 53' E., to the south of Laristan [see LAR, LARISTAN] and lacing islands of Kishm [q.v.] and the Tunbs. Linga has a harbour of some depth, allowing traffic by dhows and coastal craft; behind the town lies a salt marsh, and then the Band-i Linga mountains, which rise to 3,900 ft/1,190 m. The population, formerly largely Arab, is now predominantly Persian, but with strong admixtures of Arabs, Baluchis, Indians and the descendants of black African slaves, these comprising both SunnIs and Shiffs.

The old port was at Kung, | miles/13 km. to the east, where the Portuguese retained a footing till 1711, long after they had lost Hurmuz (q.v.). In 1760, the Kawasim Arabs [q.v.] under Shavkh Sallb came from Ra's al-Khayma and established footholds at Linga, which they seized from the kalantar (q.v.) of the Diahangirl district, at Shinas and on Kishm Island, till they were in 1765 expelled by Karim Khan Zand [q.v.]. In 1809-10 the British naval expedition from Bombay which attacked the Ķāsimi pirates at Ra's al-Khayma went on to take Linga and other Käsimi-held ports on both the Arab and the Persian shores of the Gulf. In 1887 the Persian imperial government extended its control over Linga and deposed the last hereditary shareh of Kadlb.

carrying him off in chains to Tehran.

Linga was at this time still a flourishing port, a centre for pearl-fishing, with Indian merchants residing there; an import centre for textiles coming into Persia; and an export centre for Persian tobacco. There was still some slave-running of Persians and Baluchis into the Arabian peninsula and of Somalis and black Habashla into Persia which the Persian authorities in Shiraz were unable or unwilling to stop. Curzon in 1890 estimated the population of Linga at 10,000. After the assertion of Persian central government control, and the inclusion of Linga within the reformed government customs administration, many of the old-established merchant lamilies moved to the Arab shores, e.g. to Dubayy, Bahrayn and 'Uman, and in recent times, Linga has been only a shadow of its former self, completely overshadowed by such ports as Bushire and Bandar Abbas. The population in the 1970s was 9,404. Linga is also administratively one of the five bakhshs in the shahristan of Lar in the ustan of Fars, the population of the bakksh being ca. 41,000.

LION [see AL-ASAD; MINTAKAT AL-BURÜD!]

LIPKA or Lunka, Lunka, the meet given to the Tatars who since the 14th century inhabited Lithuania, and later the eastern and south-eastern lands (Belorussia, Volhynia) of old Poland up to Podolia, and after 1672 also partly Moldavia and Dobrudia. Derived from the old Crimean Tatar name of Lithuania, the record of the name in Oriental sources (لَيهَةُ in 926/1520, later الْبِيقَةُ V. Véliaminol-Zernof, Matériaux pour servir à l'histoire du khanat de Crimée, St. Petersburg 1864. 3. 4, 720; also البقه and البقه Silandar ta'rikhi, i, Istanbul 1928, 615, 638, and C. Orhoniu, Liphalar, in TM, xvi [rgyr], tables I, VI) permits to infer an original Libbs > Lipks, from which Pol. Lipks was formed (contamination with Pol. lipka "small lime-tree"; this etymology was suggested by the Tatar author S. Tuban-Baranowski, Skęd powstala narws Lipków, in Wschód, iii [1932], 96-8). A less frequent Polish form, Lubka, is corroborated in (Lubba >) Lupka, the Crimean Tatar name of the Lipkas up I the end of the 19th century (Ewliya Čelebi, Kniga piate<u>sh</u>astni<u>va</u>, ed. by A. S.Tveritinova,

l. Moscow 1961, 254, n. 3).

The Tatar settlements in Lithuania date back to the first quarter of the 14th century. Lithuania was also to provide a refuge for various exiles from the Golden Horde in later years. However, Tatar colonisation on a mass scale in Lithuania is commonly associated with the person of the Lithuanian Grand Duke Witold (ca. 1352-1430), a supporter of the [Chān Tokhtamish and his sons in their struggle for power within the Horde. Witold's expedition to the banks of the Don in 1397 gave a rise to woluntary and long-lasting immigration of large masses of Tatar population from the steppes to Lithuania. The newcomers, who were brought to settle at the very centres of power (Vilna, Troki and others), while maintaining their tribal organisation and freedom of the Islamic cult, were enlisted to do military service in separate units, and were endowed for this with land and exemption from the taxes. The nobility came in time to be put me par with the Lithuanian and Polish nobility, whereas the former tamphas performed the function of coats-of-arms (S. Dziadulewicz, Herbarz rodzin tatarskich w Polsce, Vilna 1929). The poorer part of the Tatar population engaged in various activities such as waggondriving, trade with the East and tanning, a craft traditional with Turkic peoples. Certain of the Lipkas also provided some dispatch-riders sent to the Crimea, and official interpreters for mutual contacts with Turkish and Crimean embassies. The privileges granted to the Lipkas by Witold were to be later reaffirmed by the successive Grand Dukes of Lithuania and Kings of Poland, Nevertheless, they were exposed to the envy of the magnates and nobility and of the Roman Catholic clergy well, which in turn provoked the first manifestations of ill-will among these Muslims towards their adopted land. Their complex situation was adequately depicted in the anonymous Risdle-yi Tatar-i Leh by one of the Lipkas who, during ■ stay in Istanbul in 965/1557-8 on his way to Mecca, wrote his account for Süleyman the Magnificent (from a 18th century copy thereof, no longer extant, the Turkish text with Polish translation and commentary was published by A. Muchliński, Zdanie sprawy o Tatarach liteushich . . ., Vilna 1858), The rule of the fervent Catholic Sigismund III (1587-1632) and the Counter-Reformation movement brought a number of restrictions to the liberties granted to non-Catholics in Poland, the Lipkas

760 LIPKA

unong others. To this can be attributed the intervention by Sultan Murad III with the King in the matter of liberty of religious cult for the Lipkas, undertaken in 1000/1591 upon the request of two Muslims who had accompanied the King's envoy to Istanbul (Z. Abrahamowicz, Katalog dokumentów turcekich, Warsaw 1959, no. 236). In 1609 the mosque Troki was destroyed and Tatar women were accused of witchcraft and burnt. P. Czyżewski, in retaliation for his father's death at the hands of a Lipha, published a pamphlet, Alfurkan tatarski praedsicry . . . (1616), abusive towards the Muslim creed and its believers. It gained wide popularity (republished 1640, 1643) despite the Apologia Tatarów by Azulewicz (1630). The Lipkas who had defended their new land in the wars against the Teutonic Order and Muscovy, and even the borderland territory of Poland against the attacks of Crimean Tatars, on the other hand, as early as in 965/1537-6, having the author of the Risale for their mouthpiece, had expressed their wish to be reintegrated with the world of Islam and even of having their land subjugated by the Padishah. Now, ostracised they were and in view of the material difficulties in the Polish army, they partly joined the Turks when the latter invaded Poland in 1672, Köprülüzâde Fädl! Ahmed Pasha made Poland, by the Buczacz treaty of 1083/1672, refrain from putting any obstacles to their emigrating to Islamic lands; however, their pro-Turkish enthusiasm was was abate. A. Kryczyński, who had once served in the Polish army, and later was made commander (muhā/ir) at Bar, the centre of one of the four sendials within the new sulfayet of Podolia, and a fervent promoter of the idea of serving the Ottomans, perished at the hands of other exiles in October 1673 (Silahder tabelkhi, i. 638; S. Kryczyński, Bej barski, in RT, ii, 229-301). Some of the Lipkas availed themselves of the Amnesty Act and returned to Poland (K. Grygajtis and J. Janczak, Powrót Lipów pod sztandary Rzeczypospolitej, la Sohótka, 1980/2, 181-9). They also took part in the battle of Chocim on the Polish side under the command of John Sobieski (1673). The reign of John III, a protector and patron of the Lipkas, was also noted in their history by wave of conversions to Roman Catholicism, a fact which roused the displeasure of Khan Sellon Girey I in 1095/1683 (Vel'yaminov-Zernov, op. cit., 720). The Lipkas fought in 1683 under King John III at Vienna, and their merits were recognised and rewarded at the 1684 Diet. Nevertheless, there were as many of them as 472 at Kamieniec Podolski, and lesser numbers were stationed at other Podolian castles occupied by the Turks (Orhoniu, op. cit., 71; Lipkas also to be found in the Defter-t misnames-yi zufamā me erbāb-i ilmār-i cyālet-i Ķamaniće ber mūdjib-i tashih fi sens 1098 [= 1682] at the Wojewódakie Archiwum Państwowe, Poznań).

The next considerable emigration of the Lipkas to Turkey took place early in the 19th century, in connection with the victory won by King Augustus II over the Polish-born King Stanislas Leazzayński, whom the Lipkas had supported in his war against the Saxon King. Those of the Lipkas who stayed on in Turkey after 1673, m well as the new emigrants, were settled in Moldavia (the "Puste Pola Tatarow Lipkow Libka Tatarlerinugn (sici) Topraghi and the Lipkas Libka Tatarlerinugh (sici) Topraghi and la Pologne divities for provinces et paiationals..., Paris 1772, no. 23), Dobrudja, and even Anatolia (in the sandjak of Khudawendigar [q.v.] and on the Kizil Irmuk [q.w.]).

Formerly a constant threat to Polish borderland areas, after 1699 they served the borderland pastes as interpreters in the peaceful relations with Poland. In Poland they enjoyed the favour of the last King Stanislas Augustus (1765-95), and later had their shares in the national Polish uprisings against the Tsarist government; they also served with the Poles in the Napoleonic army. On the other hand, the Russian Empire opened to them a way to a lawful career and education; what was more, the Lipkas owed to it a stimulating contact with the other Turkic Islamic peoples (those of the Crimea and of Adharbāydjān). This atmosphere of religious and national revival, of animated contacts with Turkey and the other Muslim lands, as well as with the centres of Muslin: learning (Sarajevo, Cairo), distinguished also the activities of the Lipkas in restored Poland (after 1918). An important part was performed by the Cultural and Educational Association of the Tatars in the Republic of Poland (established 1926) and personally by Dr. J. Szynkiewicz, mufti since 1926, an orientalist who was in close contact with the Polish Islamist T. Kowalski (Cracow) and two Karaim Turcologists, S. Szapszał (Vilna) and A. Zajączkowski (Warsaw). In Vilna, where the world had his seat, a Tatar National Museum was founded in rozo, and the Tatar National Archives in 1931. Several journals were published: Przegląd islamski (1930-34), Zycie Interskie (from 1934), and the Rocznik Tatarski (= RT) dealing with scientific research (t-iii: Vilna 1932, Zamość 1935, Warsaw 1938; vol. iv, destroyed by the Nazis, 🚃 published). In 1936 a Tatar cavalry unit was founded within the Polish Army; they were the traditional horse-tails (/ugh). The forms of Muslim religious activities in Poland were finally established by the relevant Act passed on 24 April 1936. The outbreak of the Second World War did not permit completion of the building of the mosque in Warsaw. Tatars participated in the Polish resistance movement and fell victims to the Nazis during the occupation. The westward shift of Poland's frontiers after the war, and the emigration of the Muffi Szynkiewicz, who had not left any followers of his stature, were detrimental to the general situation of the Lipkas. Some of the Tatar intellectuals, however, supported by the Polish state, have focused their attention on religion, contacts with the Muslim world, history, mosques, burial grounds and other monuments of the Tatar past in Poland (M. Konopacki, Les musulmans en Pologne, in REI, 1968/1; A. Miškiewicz, Tatarzy polscy w lalach 1918-1980, in Novum, 1980/8, 83-109).

The author of the Righe reckoned that there were a hundred settlements of the Lipkas, with a corresponding number of mosques, in Poland, and numbered their population 🔤 200,000, which seems greatly exagerated, 1brahim Pecewi, quoting the statement made by a messenger of the Lipkas to the muft! at Akkerman, mentions sixty villages with mosques (Ta³ri<u>kh</u>, i, Istanbul 1283, 472, quoted by A. Muchlifiski, Izaledovanie a proiskhozhdensi i sostoyanii liloushide latar, St. Petersburg 1857, 60-1, and Orboniu, op. cit., 63), In 1932 there were about 5,000 Muslims in Poland, with 16 mosques and one under construction, and two prayer-houses (RT, i, 313). At present, their approximate number in Poland exceeds 2,000. There are only two mosques, in the villages of Boboniki and Kraszyniany (Boghanut, Kurshun among the Tatars), of which the former, devastated by the Nazi troops, has been rebuilt on a government grant. Since the 19th century there has also been a Muslim community in Warsaw with an old burial ground; two new ones were established after the last war in Gdańsk and Szczecin, where the Tatar repatriates from the East had come to settle.

The author of the Risale reports that the imams were brought by the Lipkas partly from the Crimea and the Horde. Pečewi relates that litigious matters of religious and legal nature were submitted by them to, e.g., the mufti at Akkerman (loc. cit.). Their contacts with the Muslim clergy in Turkey (also attested by the references in contemporary Turkish authors; Orhonlu, op. cit., 66) are recorded still in the 18th century (Czartoryski Library, Cracow, no. XVII/1080). The author of the Risale, a fervent Musfim himself, had deplored the fact that some of the Lipkas assumed the Christian creed, that the knowledge of Arabic was dying out among them and that, still worse, they tended to forget their own language, so that verlüler lisant ile soylemeye başhtadilor and nobody but the newcomers knew the "Ottoman" language. Pečewl's informant had equally stressed that the Lipkas on copying the Kur'an 'arabi khaff ile commented upon it Lek kejeresi lisäni ile (loc. cit.). Ewliya Čelebi had at first called them soberly Lok kralina tābi' ummet-i Mukammed'den Libķa ķazmi, and numbering them into the "Tatar" nations, justly regarded their language as belonging to the Shvonic family (Seyühal-name, ii, 99; v, 138, 146). Later, however, when the name of the Lipkas was cited to him at Újvár-Neuhausel (Nové Zámky, in Slovakia) by the Crimean Tatar adversaries of the Swedes in Poland in 1656 [cf. Ltw], he wrote how in that "Sweden" which he had allegedly visited along with the Tatars in :663, he found 800,000 (vi. 368) or z,000,000 (x, 27) gocer ewli Tatar, adding to this that they did not know Tatar at all and spoke among themselves only ifaliyan lisani disert (vi. 368). In fact, the Lipkas, as a result of their intermarriage with the Poles and Belorussians, abandoned completely their native language; however, though Polish and Belorussian became their predominant languages, even in religious writings, they were spelt in Arabic alphabet (such texts in both languages are quoted by Muchlinski, Issledovanie ..., 62-70; in general, A. K. Antonovich, Belorusskie leksil, pisannye arabskim pidmom, i ikk grafiko-orlografičeskaya sistema, Vilna 1968, with detailed bibliography). Furthermore, the Polish and Belorussian as spoken and written by these Muslims were enriched with many loan-words taken from the Muslim creed, community life, and everyday activities, of Arabic, Persian and Turkic origin (A. Woronicz, Szczątki jęcykowe Tatasow literaskich, in RT, ii, 351-67, with a vocabulary listing similar words and phrases). This cultural ambiguity can be also observed on the tombstones of the Lipkas, where the half-moon and the glabildateys formula in Arabic are usually followed by the proper written in Polish or, formerly, sometimes in Russian. In times, however, even the knowledge of the Arabic alphabet has been dying out among the young generation. Hence when J. Sobolewski wrote his Wyklad wiary mahometanskiej czyli islamskiej ("Exposition of the Muhammedan or Islamic creed", Vilna 1830), with an explanation of the religious rites and prayers, he did it in Polish only; the book was destined for his many co-religionists who were unable to read the traditional kitabs in the Arabic alphabet. The Polish translation of the Kur'an by Jan Mirza Tarak Buczacki (Warsaw 1858) was founded not upon the original only, and was provided with commentaries derived from the French translation of the Kur'an

by Kazimirski, which, to cite J. Szynkiewicz, "were often offensive to the religious feelings of a Muslim" (Literatura religijna Tatarón literakich i jej pochodzenia, in RT, ii, 140).

The Tatar national and cultural revival in interwar Poland was, however, largely due also to some of the Roman Catholic Lipkas (S. Dziadulewicz, S. Kryczyński and others). Lipkas converted to Christianity were also among the ancestors of the celebrated Polish writer H. Sienkiewicz (1846-1916; Nobel Prize for Literature 1905). The Tatars, who since the 14th century had been settled on Polish territories as war prisoners, were soon converted, with just a vague memory left of their origin (the names "Tatar" or "czabany", pl. derived from Turkic cobes "shepherd", as in the surroundings of Chrzanów near Cracow) and their traditional occupa-

tions (tanning and horse-breeding).

LISĂN AL-'ARAB [see ibn manzûr] LISĂN AL-DÎN [see ibn al-<u>kh</u>apîb] LISBON [see burturâl; al-u<u>sk</u>bûna]

LISS (A., also lass, luss, pl. lusits, with mardars luşüşiyya, lalaşşuş (see LA1, viii, 355-6, and Lane, s.v.), one of the two main words in Arabic for thief robber (the other being saris); in Persian we have duad "thief", durdi "theft", and in old Turkish oghel, Ottomen khayrsis, modern hirsis. Arabic list and the unassimilated variants life/ust must have appeared in the language during the Byzantine period, presumably via Syriac lesta, whilst there exists the form listle, closer to the Greek original knowne, in Mishnale Hebrew and Palestine Jewish Aramaic (see S. Krauss, Griechische und lateinische Lakumorter im Talmud, Midrasch und Targum, Berlin 1898-9, ii, 315; Frankel, Die gramdischen Fremdworter im Arabischen, 284; J. Schacht, An introduction to Islamic law, Oxford 1964, 9). Liss, etc. do not appear in the Kur'an, where we have sarik and sarika (V. 42/38, XII, 70, 73), but nevertheless they are found occasionally in pre-Islamic poetry (linns' al-Kays, Labld), and then quite frequently in the Umayyad period (for full documentation, me the forthcoming entry 5.v. in WKA).

In general, the pre-Islamic Araba did not recognise theft as m highly reprehensible crime, and it was not condemned unless the victim was m member of the kin-group or a giar within it (hence Djamil al-"(Idhri could satirise a man's father as "the one who stoke a guest's cloak", Hamisa of Abû Tammām, 155); the injured party was normally left to secure redress himself and recover his property (see G. Jacob, Altarabisches Beduinenleben mach dan Quellen ge-

schilder! Berlin 1897, 217-18). Only with the coming of Islam did thelt and brigandage become crimes punishable under the <u>Shari's</u>, and fuddid were laid down both for simple theft (now called in legal parlance al-sirka al-nghrā) and for brigandage and highway robbery (al-sirka al-hubrd or haf al-farik); for the legal aspects these crimes, see skrik. And of course, the carrying-off of camels and other beasts in the course of gharw [q.v.], the raiding of hostile tribe, was always regarded as perfectly legitimate.

Bedouin society up to the present day has preserved much of the ancient ethos in regard III thieving, with the Kur'anic penalty of amoutation only sporadically applied, even in the towns. In eastern Arabia, H. R. P. Dickson noted that amongst the local Bedouin, stealing from Irlend or foe was regarded - something shameful and dishonourable, 'ayb, but not treated as a crime (The Arab of the desert, a glimpse into Badawin life in Kuwait and Sau'di Arabia, London 1949, 531-2]. Where penalties for stealing are applied, they often involve the infliction of indignities rather than mutilation and suchlike severities. Doughty, whilst journeying with a pilgrim caravan, observed the beating of a servant who had stolen from his master, although the leader of the caravan did in fact have the power of life and death in regard to crimes considered as really serious. In the town of 'Anayza in al-Kasim, he noted that thisves were beaten with green palm rods (because dry ones would have broken their bones) by the multawar's or elders responsible for order and decency, but amputation was not practised, and petty theft, if not openly paraded, was disregarded (Travels in Arabia Deserta, London 1926, i, 14, 69, ii, 368-9). In Jordan, Jaussen registered humilliating punishments amongst the Bedoutns there for stealing, such = tearing out the offender's beard hair by hair (Coutumes des Arabes au pays de Moab, Paris 1948, 229-30), forcibly shaving or plucking out the beard being an ancient Near Eastern way of showing contempt for someone, cf. Hamun King of the Ammonites' shaving off half the beards of David's servants (II Sam. x, 4-5). Only when a man showed himself as - habitual thief, thereby bringing dishonour on his kin, was he likely to be outlawed by them, becoming - outcast in respect of that particular offence (A. Kennett, Bedouin justice, laws and customs among the Egyptian Bedouin, Cambridge 1925, 21).

Within the Bedouin life of pre-Islamic and early Islamic times, the list was in many ways hardly distinguishable from the outcasts and desperadoes of the desert known as safalik and futak [see suit 0 k]. who lived outside the tribal system with every man's hand against them; the poetry of these sa'dlik and fidials attracted the attention of philologists of the Abbasid period, and more recently, has attracted that of modern western and oriental scholars (see e.g. Yüsuf Khalit, al-Shu'ara' al-şa'diik fi 'l-'aşr al-didkili, Cairo 1959; Sezgin, 6.45, ii, 133-45; and arts. AL-BHANFARÂ, TA'ABBAŢA SHARRAN, 'URWA B. AL-WARD). But the activities of those described as layer proper seem also to have been isolated for study by the philologists and compilers of adeb works. Thus we have mention in the literary sources | - Akhbar al-lurse, containing poetry of well-known thieves and brigands amongst the Arabs, by the pupil of al-Aşma9, Abû Sa9d al-Hasan b. al-Husayn al-Sukkari {212-75/827-88 [q.v.]}; see Brockelmann, 1°, 108-9; Sezgin, ii, 63, 1331, and of a Kilāb al-Sail "I-sirke of Abu Muhammad al-Hasan b. Ahmad al-A'rabl, called al-Aswad al-Ghandadjani (d. ca. 428/1036-7, Sezgin, li, 68, 88). The contemporary Syrian scholar 'Abd al-Mu'in al-Mallûhi has collected the names together of So his poets of the Islamic period, together with their surviving verses, see his Ash'ar al-lusus was ashboruhum, in RAAD, xlix (1974), 362-76.

With the awakening, from the 3rd/9th century on-wards, of a distinct interest among Arabic authors in low life and in the criminal and semi-criminal underworlds of the burgeoning Islamic towns, in find a certain amount of information on the activities of those thieves and brigands in the urban environment, although there are emough continuing references to criminal activities in the countryside and deserts (e.g. the rustlers of thoroughbred horses and camels, the thieves of the latter being known as khurāb, sing, khārāb, see C. E. Bosworth, The mediacual Islamic underworld. i. The Band Sasān in Arabic life and lore, Leiden 1976, 118) to show that rural crime and brigandage never disappeared.

A writer of such varied interests as al-Diabiz shows special interest in the tricks and stratagems of the sophisticated criminals of his time, and he seems to have written a special work on the hiyal al-lusis. partially extant and cited in subsequent adab works (e.g. possibly in al-Baybakl's K. al-Mahāsin wa 'lmasázi, ed. Schwally, 521-3, without explicit mention of the title here; cf. Ch. Pellat, Gabiziana. 111. Essai d'inventaire de l'œuvre gabigienne, in Arabica, ili [1956], 164, no. 95). The compilers of collections of anecdotes were eager to include tales about clever thieves, and in the opening of his Nishuar si-muhadara al-Tanokhi lists among the interesting tales which he had heard in the course of his meet those of fanatically-inspired assassins using knives (askáb at-'asabiyya wa 'l-sakakin'), of brigands and thieves, and of profligates and rowdies (ahl al-khasara wa 'l-'ayyaran) (ed. 'A. Shaldil, Beirut 1391-3/1971-3, i. 4). Several of the succeeding anecdoies do in fact deal with the ruses of crafty evildoers, see e.g. 1, 156-8, nos. 79-80, vii, 96-102, 250-1, nos. 37-9, 144, viii, 218-28, nos. 96-8. One of these tales actually deals with mody of thieves and bandits in India called the Banuwaniyya, whom al-Tanükhi equates with the Arab mustal/i, the cut-purse who follows and steals up behind a person to rob him, and from whose activities Muslim traders in India suffered [cf. also the Banuwani of al-Djabiz, cited in Bosworth, op. oit., i. 37); Muslim authors seem to have been aware of the existence of organised groups or castes of dacoits and thugs in India, grouping these criminal bodies with the Bedouins of Arabia and predatory Iranian peoples like the Kurds, the Balüc and the Kuficus [see Kure] as examples par excellence of violent and uncontrollable brigands. One should note also the connection in certain sources of gambling [see grade] and thieving, in the notinfrequent phrase itss muddmir "third and gambler" (see F. Rosenthal, Gambling in Islam, Leiden 1975, 114, 153)

The authors of makindi [q.v.] and other works of the picaresque genre likewise found here material around which they could weave incidents involving their respective heroes. Thus Badi' ai-Zamān ai-Hamadhāni wove saveral of the adventures of Abu 'I-Fath al-Iskandəri around the activities of impudent thieves, such as those who stole surreptitiously from the ranks of prostrate worshippers during the saidi, those who ascended house walls and used grapnels for purloining articles inside the rooms, and those who burrowed into cellars and vaults from the outside or from adjacent houses (the makkābān = aṣḥāb al-

nach) in further, Bosworth, op. cit., i, 200-3). Especially valuable evidence on this type of activities is to be found in the chapter on lalassus and associated malfeasances in al-Raghib al-Işfahanl's Muhādarāt al-udaba? (ed. Cairo (287/1870, ü. 108-12, ed. Beirut 1961, fif, 189-99). Al-Işfahânî cites as an outstanding figure amongst successful criminals one Uthman at-Khayyāt, who as a skilful practitioner himself (called al-Khayyāt, not because his original profession was that of tailor, but because he "sewed up", khāja, the holes bured into houses for felonious purposes so neatly that they were almost undetectable) bad apparently become something of a semilegendary figure by al-Raghib's time (the Dawad al-Calabi Library in Mosul-whose contents are now dispersed and their location largely unknowncontained # Hikayat 'Uhman al-Khayyat fi 'l-luşüş ura-masāyābu, 💴 Pellat, Inc. cit.; and one wonders whether there is some connection with the here of two anocdotes given by al-Tanükhi, named as Abbas b. Khayyāta and described m a supremely clover thief of Başra, see Nishwar, vii, 97-102, nor. 58-9).

According to this 'Uthman, there were live main categories of thieves and brigands: (1) the muhital or "trickster", who worked by stratagems and who did not kill in the course of his crimes and was therefore looked down me his more desperate and violent confrères; (a) the sahib ai-layl or "worker by night", the nocturnal housebreaker, who got in either by boring or by scaling walls (the unitasallik), and the robber with violence (makabir); (3) the sahib al-fartle or "gentleman of the road", the highwayman or brigand; (4) the mabbash or "burrower, excavator", said to be well-known and presumably a man who dag up people's buried treasure hoards; and (5) the khaumik or "strangler, assassin", who may work by suffocating his victim, but may also be a disemboweller (báfidi) or one who pounds his victim's head with a stone (rddikh). He then goes on to detail the types of confederates and auxiliaries (fauna) whom criminals employed, e.g. to "case" likely premises for a future break-in or to create diversions whilst a raid could be made (for further details, see Bosworth, op. cit., L ror-6).

Dibliography: Given essentially in the article. On the legal status of highway robbers and thieves, see Majid Khadduri, The Islamic law of nations, Shaybani's Siyar, Baltimore 1966, 247-50.

(C, E, Bosworth)
LITERATURE [see ADAB; ARABIYYA; GHAZAL;

MADII); MAKAMA; MARTEIYA; SHI^er; TA⁹RI<u>ki</u>, etc.) LITHAM (A.) (sometimes also pronounced liftim), the mouth-veil, is a piece of material with which the Bedowns concealed the lower part of the face, the mouth and sometimes also part of the nose (see the commentary al-Hariri, ed. de Sacy, Paris 1821, 374, 2). According III the LA, lifam is a mouth-veil which also covers the nose top (arnahat al-anf) and is worn by women. It served the practical purpose of protecting the organs of respiration from heat and cold as well as against the penetration of dust (cf. Dhu 'l-Rumma, no. 5, 43, also no. 39, 24 and 73, 16; and the commentaries al-Mutanabh!, 464, 27, and al-Hariri, 374, 2). It also made the face more or less unrecognisable, and thus formed a protection against the avenger of blood (Goldziber, in ZDMG, ali [1887], 101). The lithdm was therefore also sometimes worn as a deliberate disguise by people who not usually it; thus in the roor Nights (ed. Macnaghten, l. 878) it is worn by a princess, who disguises herself as a man, and (ibid., ii, 59) by a woman for similar reasons. A denominative verb

has been formed from hiphins, the fifth form of which in particular means "to put the hiphins" (e.g. Aphini, viii, 102, 20; xxi, 55, 19; Aphini, ed. Kosegarten, 121, 13; Wright, Opuscula arabics, iii, 2; al-Hariri, Mahamai', ii, 433, 2), while the eighth form in the meaning "to put on something as a hiphins" is generally used only metaphorically (see below). Talkhima usually means a woman's veil (Cherbonneau, in J.A. [1849], i, 64), but lathhimat al-bayaid is also found as the distinctive dress of a particular office under the Fāṭimids: their chief hidis wore it along with the turban and taylasan (de Sacy, Chrest., ii, 92). In general, however, the litham does not seem to have been worn by town-dwellers.

The lithum has no considerable importance for Islam from the purely religious point of view; it is forbidden along with certain other garments for the

materias (al-Bukhārī, i, 300, below).

The custom of wearing a litham was generally disseminated among the Sanhādia tribes [q.v.] in north-west Africa, who are therefore described as lithim wearers, mulaththiman or autad al-mutalaththima; as the Almoravids originated in one of their clans, the Laintuna [q.o.], the litham thus came to have a certain political significance. The custom of wearing a litham (below the wikab, see al-Bakri, 170; the litham is also mentioned by al-Ya'kubl, Ibn Hawkal, Ibn Battūta, Ibn Khaldūn, etc., cf. Corso, 151) was found in other parts of Africa also, e.g. in Kānem (al-Maķrizī, i, 193, 33 f.) and still prevails among the Tuareg. The Tuareg veil has been the object of several special studies (see Bibl.). Amongst the Triaregs, it is not called lithom, but tegulmust or shish ("muslin"). Its origin seems to be pre-Islamic and perhaps even prehistoric. Among the ancient paintings and rock engravings found by Leo Frobenius there are human figures without mouth and nose, but with only two eyes. The primary motive for a veil seems to be magical, to protect the ways of life from evil forces. These Africans retained their voils even on journeys into the eastern lands of Islam, where it was not the fashion, while their women went unveiled. A tradition of late invention explains these remarkable customs by a story that one occasion during an attack on a village, where there were many women but only a few men, the men put on veils and the women took ____ to deceive the enemy as to their real numbers (Goldziher, in ZDMG, xli, 101); another story has it that after the fall of the Umayyads, - members of the Umayyad family and their clients escaped to Africa disguised as women and that the wearers of the litham are descended from them (Wustenfeld, Der Tod des Husejn, p. viii). According to al-Bakrl (text, 170, ic. 321), they never took off the hitham, and if of them fell in a battle and lost the litham, not even his triends could recognise him till the litham was put on him again; they also called other men who did not wear the fitham "fly-mouthed" The Almohads, particularly Ibn Tümart, opposed the voiling practised by the Almoravids. They continuously insisted that it was forbidden for men to imitate the dress of women, but they did not succeed in abolishing the custom of wearing the litham (Goldziber, in op. sit., 102). Among further passages where the term mulathikim occurs in this sense may be mentioned 'Abd al-Lattf, ed. de Sacy, 483, 48 (with other references); Fleischer, Kleiners Schrifton, ii, 243 (discusses several passages); Marquart, Die Benin-sammlung, Index, s.v. Lijamirager,

The word hithin and its derivatives was very much used in figurative language, especially by poets.

From expressions like "to kiss the lips of the beloved. one, which are under her litham? (Dozy, Velements, 400; cl. md last al-lithamays = "the face" in al-Mutanabbl, 464, 27) develops the meaning of I-th-m "to kiss" ('Umar b. Abi Rabi'a, ed. Schwarz, 6, 207; Ibn al-Parid, Diwan, Marseilles 1853, 125, l. 5 from below) and especially talathama — "to kiss another"; mattham, the place which is kissed (al-Farazdak in Docy, Supplement). A girl is given a lithem weven out of her own hair (roor Nights, Breslau edition, ii, 52, 2); the camel has a litham of foam around its mouth (Dhu 't-Rumma, 76, 17); the wolf is ahamm al-hitham = "black in the region of the muzzle" (al-Tirimmah, 4, 35; of the wolf, we find it said in Hamasa, i, 762, 17, lam yatalaththam); the wine-jar has a lightm, i.e. a place of cloth over its mouth (malikum; Mujaddaliyyat, ed. Lyall, no. 125, 7; also al-Akhtal, ed. Salbani, 85, 2 and 'Alkama, ed. Socin, ii, 43, on Jars); the son is darkened by clouds of dust and is thus given, it were, a mouth-veil (illathand, al-Mutanabbl, 601, 15); "as the day (nahâr) doffed its hithâm" as a description of dawn I Ibn 'Arabshah, ed. Golius, 64, 3, from below; cf. the commentary = al-blariti, Makansis, 240, 10: kashafa [al-subk] al-lithāma; many titles of books also begin with Kashf al-lithim, cl. Brockelmann, S III, 915, 937 (eight titles with kash/ allitham and one with imital al-litham); the litham is to be taken from the walls of buildings, i.e. they are to be exposed (Imad al-Din, ed. Landberg, 65, 12); to doff the lithem of one's origin - to confess it freely (al-Hariri, Makamati, ii, 426, 3); the archangel Israfil has one of his four wings velled like a vast raouth-veil (illathama) from heaven down to the seventh earth (a)-Kazwini, ed. Wüstenfeld, i, 56, below); a voice may be hidden, malthum (Taraia, ed. Ablwardt, no. 5, 26 = ed. Belrut 1886, to); a further metaphor is found in Ibn al-Farid, in de Sacy, Chrest., iii, 55, 1999 25.

Bibliography: in general, cf. Dozy, Vilements, 399-400 and Suppliment, il, 516; and for the veils of Muslim women, in general, cf. Snouch Hurgronje, Twee populaire dvalingen verbeterd, in Verspr. LITHOGRAPHY [see MATHA'A] LITHOMANGY [see TARK]

Revised American edition 1969, characters nos. 4093, 933), also known as LTU CHIAL-LIER (Matthews', nos. 4093, 629, 6003), 12th/18th century Chinese Muslim scholar (translator, theologian, philosopher and biographer of the Prophet Muhammad), the most prolitic Chinese Muslim author and probably the best-known literary figure yet produced by the Chinese Muslim community.

A Hui (Chinese-speaking) Muslim, Liu Chih was born in Nanking ca. 1081/1670. Little li known of his class background or early childhood, but it is safe to assume that he irom a well-to-do family. His father Liu Han-ying (Mathews', nos. 4093, 2039. 7489) is said to have "ceaselessly regretted" (Pelliot, op. 612 in Bibl., 415, n. 1) the paucity of Islamic works

available in Chinese, and indeed, some sources have credited Liu Han-ying (under the pseudonym Liu San-chich, Matthews', nos. 4093, 5415, 774) with the authorship of two short Islamic tracts (Pelliot, ibid.): certainly, Liu Chih seems to have manifested an early interest in the study and translation of Islamic works. Liu tells us that he prepared himself for his life's work—the propagation of Islam through the medium of the Chinese language-by undertaking prolonged linguistic and philosophical studies. At the age of 15 he began a study of the traditional Chinese classics and histories which lasted for night years. This was followed by a six-year study of Arabic and Islamic religious literature, a further three years study of Buddhism, and finally, one year studying the Tanist classics. Liu completed his universal education by reading 137 Hsi-yang (Western) books of which Ford, 150 (see Bibl.), writes: "this may seem ■ large number for that period, but it was over a century since Matteo Ricci had arrived in Peking (1601) and he and his successors, together with the Chinese scholars associated with them, had produced a whole series of works on geography, astronomy, mathematics, mechanics and religion, including some touching on Confucianism. It is therefore quite possible that there was a collection of that number at Nanking and that Liu had seen it",

From the age of 33, Liu was to concentrate on making Arabic and Islamic works available to his Chinese co-religionists. It is clear that he also wished to make Islam philosophically acceptable to the Confucian Chiuese establishment. As Ford (ibid.) points out: "his leaving towards Confucianism more marked than that of any other Muslim and it has sometimes been questioned whether he did not compromise his Muslim principles. After ten years of study, he writes, it came me him like a flash that the guiding purpose of the Qur'dn was similar to that of Confucius IIII Mencius. 'The Sacred Book', he wrote, 'is the Sacred Book of Islam, but is (the Confucian concept of moral propriety) in the same h which exists everywhere under beaven' ". In Liu's attempt to reconcile Confucianism and Islam. the traditional dilemma of Chinese Muslims-geographically and culturally isolated from the rest of der al-Islam can clearly be seen. The same may be said of Liu Chih's personal dilemma—the almost instinctive desire of a Muslim member of the Chinese literati in ethnocentric 12th/18th century China to make his "barbarian" religion culturally and politically acceptable in his native land (Liu lived at a time of rapidly-deteriorating Han Chinese-Hui Muslim relations), whilst at the same time strengthening the Islamic affiliations of the Chinese Muslim community.

Liu Chih telis us that after completing his preparratory studies, he wrote several hundred manuscripts, of which only about one-tenth were published. His first major work, Tien-jang hsing-li ("The philosophy of Arabia"-preface dated 1116/1704) deals in some depth with questions of cosmology, creation, the nature of man and the unity of God. In the preface to this book, a contemporary non-Muslim mandarin, the Vice-Minister of the Board of Ritual, wrote: "the ancient Confucian doctrine has been undermined at different times by Buddhists and Taoists . . . now, however, in this book of Llu Chih we see once more the way of the ancient sages, Yao and Shun, King Wen and King Wu, and Confucius. Thus although his book explains Islam, in truth it illuminates our Confucianism'. Similarly in the preface of Lin's Tien-fang tien-li che-yao-chiai ("A selection of important Arabian (i.e. Islamic) rales 🔤 cere-

monies"-preface dated 1122/1710), the Vice-Minister of the Board of War we to write that after discussing the Muslim religion with Liu he had found that it upheld the traditional Confucian values of loyalty to the sovereign, filial piety and brotherly love-in short, that Islam was not to be equated with "heretical and vicious sects" which were opposed to the established (Confucian) order (Ford, ibid.). This early Ch'ing attitude to Chinese Islam was to change radically by the latter half of the rath/18th century when North-West China was shaken by the rebellion of Ma Ming-hain [q.v.], and still more = after the mid-13th/19th century risings of Ma Hua-lung and Yackub Beg [q.m.]. Liu's Arabian rules and ceremonies was less kindly reviewed in the 1197/1782 Catalogue of the Imperial Library, which states: "The style of this book is extremely elegant, but if the base is wrong to start with, fine words avail nothing". In 1710, the tame year as the publication of Arabian rules and ceremonies, Liu also produced mahort handbook entitled Tien-jang tru-mu chiai-i ("An explanation of the Arabic alphabet"), essentially a guide to the Arabic script intended for the me of Chinese Muslims.

Undoubtedly Lin Chih's greatest work-he himself it both the zenith and climax of his life's work -was his biography of Muhammad, Tien-fung skiksheng shih-lu nien-p'u ("An accurate biography of the Arabian Prophet", Nanking 1137/1724, first published 1193/1779). This book has been wholly or partially translated into Russian, French, English and Japanese, and is certainly the most widely-known of all Chinese Muslim books. Liu's biography of Muhammad was based on a number of Arabic and Persian language works, the chief of which has been transliterated by Pelliot as Tardiuma Musiafa, a work which remains unidentified. A list of 67 reference works in Arabic and Persian used by Liu in his researches has been studied by the Japanese scholar Kuwata Rokuro (see Bibl., also Ford, op. cúl., 151).

Liu Chih tells us little of his personal life. We know that he was a bookworm, and that because of his studiousness he me considered rather dull by his relatives and friends. Liu travelled widely, primarily in search of Arabic and Persian texts. Whilst on route "he pursued his reading among the dust of the carts by which he travelled, and even when riding on his beast" (Mason, The Arabian Prophet, p. xii).

Before the Communist conquest of China in 1949, Liu Chih's tomb, which could still III seen outside the southern gate of the city of Nanking, was regularly visited by Chinese Muslim pilgrims. It is not known whether the tomb still exists today, but it should be noted that in 1973 the tomb of Sayyid Wakkas, by tradition the father of Chinese Islam, was restored

by the Chinese government.

Bibliography: The first European language analysis of Liu Chih's work me made by the Archimandrite Palladius (Piotr Ivanović Kafarov) under the title Kilaishaya literatura Magometan: isloghemie sodershasiya na hitaishom yarihe, pod anglaviem Iui lan'chahi shen shi ln, sostavlennos Liu-tsa-liang ("The Chinese literature of the Muslims: survey of Islamic works in Chinese entitled Yil-lin-shih san-shi-liu, compiled by Liu Tru-liang"), ed. V. V. Grigor'ev, St. Petersburg 1874 (cf. Trudi VOIRAO, zvil [1887)], 149-88]. Pelliot says of this work: "cette publication n'est elle-même qu'un extrait d'un travail plus considérable de même titre, rédigé par Palladius me 1848 et 1859, et qui ... menfin paru en 1909"; in

fact, the work referred to by Pelliot (op. cit., 414, n. 1) first appeared in Trudi VOIRAO, aviil (1887), 163-496 (repr. 1909); see Kitaishaya literalura Magometan, pokoinago a. arthimandrita Palladiya . . . izdal yeromonakh Nikolai Adoraishii ("The Chinese literature of the Muslims, by the late father Archimandrite Palladius, ed. post-humously by the monk Nikolai Adoratskii"), St. Petersburg 1887, 1909. For an early translation of Liu Chih's Tienfang tien-li che-yao-chiai by C. F. Hogg, m the Chinese Recorder, xxxvl (Shanghai 1891), 545-53, under the title Mohammedanism-laws and exemonies. A short notice appears in M. Broomhall, Islam in China, London 1910, 73-5. An analysis of Liu Chib's work may be found in A. Vissière, Analyse d'onvrages chinois-Makemelans, in D'Ollone, Recherches sur les Musulmans chinois, Paris 1911, 389-417, 421-5; also in RMM, xill (1911), 30-63. A number of Liu Chih's works and listed in C. L. Ogilvie and S. M. Zwemer, A classified bibliography of books | Islam in Chinese and Chinese-Arabic, in the Chinese Recorder, glyili (rg17), 652-9, see nos. 6, 7, 13, 20 (?), 21 (?), 43, 71, 77. For a translation of Liu Chih's Mu-min san-tan ching ("Muslim three-character classic") by F. L. M. Cotter and K. L. Reichelt, see MW, viii (1918), 10-15; also in the Chinese Recorder, 1 (1919), 645-52. [This is the same work as Liu Chih's Tien-lang san-tax ching ("Arabian three-character classic") mentioned by Mason in JNCBRAS (1925). cited below.] For a preliminary examination of Llu Chih's T'ien-fang chih-sheng shih-lu nien-p'u, see I. Mason in Journal of the North China Branch of the Royal Asiatic Society, li (1920), 159-80, under the title A Chinese life of Mohammed. Certainly the most interesting English-language work - Liu Chib is Mason's The Arabian Prophet: a life of Muhammed from Chinese and Arabic sources, Shanghai 1921; this work is an extensive (though not full) translation of Liu's Tien-fang chih-sheng shih-lu. A list of more of Liu Chih's works also appears in Mason's Notes on Chinese Mohammedan literature, in JNCBRAS, Int (1925), 173-215, see nos. 260, 262, 274, 277, 278, 284, 287, 312. The fullest translation of Liu's biography of Muhammad is in Japanese; see Tanaka Ippei, Tempo Shissi júlskroka, Tokyo 1930. Also in Japanese, see Kuwata Rokuro, Lin Chih no ts'ai-ching shu-mu ni tsuite, in Ichimura hakushi kohi hinen Toyo-shi ronso (Ichimura Fostschrift), 1933, 335-53. A short notice may be found in Fu Tung-haien, Chung-huo hisi-chigo shih ("A bistory of Chinese Islam"), Shanghai 1940, 160-1 (Taipel reprint 1970; Japanese tr. Itô Akira 1942). Also in Japanese, Kadono Tatsudo, Kaijo Ryuchi (sc. Liu Chih) "Tenko Tenrei yaku yökai" ("The Muslim scholar Liu Chih's 'Selection of important Arabian rules and ceremonies' "), in Shina Buhkyo Shigahu, iv/t (1940), pp. 13. See also the monumental work on Chinese Islam of Taxaka Ködő, Chügoku ni okeru Kaikyō no denrai to sono gutsū ("Islam in China: its introduction and development"), Tokyo 1964, 1270-91. The most recent English language notice is J. F. Ford's Some Chinese Mwsisms of the seventeenth and eighteenth centuries, 149-52. D. D. Leslie, in his Islam in China to 1800; s bibliographical guide, in Abr-Nahrain, xvi (1976), 16-48, states that Liu Chih's tombstone chituary is to be found on pp. 11077-11080 of the 1970 edition of his T'ien-fang tien-li, me Leslie, op. cit., 35. (A. D. W. FORDES)

LIVADYA

LIVADYA (Asphibeta), a town in central Greece in the slopes of Mount Helicon, bordering the vast fertile plain of Boeotia. Nearby is Lake Kopais, reclaimed between 1883-92. The local centre of agriculture and the sest of a bishopric, Livadya was in the Frankish Middle Ages one of the important eastles of the Duchy of Athens. In Ottoman times (1460-1829) it developed into in prosperious urban centre and grew into the largest city of central Greece, after Athens, with the highest number of Muslim citizens to the south of Thessaly.

The origins of Livadya go back to the remote antiquity. Since the 8th century B.C., it was one of the minor Boeotian towns, living in the shade of the mighty Thebes. As is the case with many Greek cities, little is known about the town in the early Middle Ages. As an urban centre it appears to be the successor of the ancient city of Orchomenos/Skrlpou, the seat of the Byzantine administration since the 8th century, which declined during the trth and 12th centuries. The castle of Livadya, situated a steep conical hill overlooking the city on the south-west, must have been founded by the Franks ofter 1204, when it was included in the Duchy of Athens. The Catalans of the Grand Company occupied Livadya after the battle of Skripou in 1311 and held it till 1379-80, reconstructing the castle to the form It largely has today. At an unknown date, the Navarrese, who had captured the town in 1378-80, ceded Livadya to the Florentine Norio I Acciaiuoli, but almost immediately afterwards it was taken by the Ottomans under Ghazl Ewrenos, who kept it for almost a year (1592-3). Ytldirim Bayerid's armies, marching to the Morea in 1397, seem to have passed by Livadya, reconquered by the Franks under Bertranet Mota. The unceasing warfare of the second half of the 14th century, and at least four epidemics of plague (1348, 1372, 1374, 1388) depopulated the land to a large extent. The Acciaiuolis tried to remedy this by settling ten thousand Albanian families who had been ousted from Epirus by Carlo Tocco. The reign of Antonio Acciaiuoli (1403-35), an Ottoman vassal, was more = less peaceful. There must have been some recovery, interrupted only by the plague of 1423. During the "Varna crisis" of 1443-4, the Livadya area was plundered and occupied twice, first by the Ottomans under Turkhan-oghlu 'Ömer Beg in 1460, as retaliation for the treason of Nerio II, who had forsaken the Ottomans, and then by the troops of Despot Constantin of the Morea, The last Florentine Duke of Boeotia, Antonio II, alse an Ottoman vassal, was removed in 1460 when the duchy became an Ottoman sandiak without much upheaval. This is perhaps the reason why the Ottoman chroniclers pass over the acquisition of Boeotia in silence. After Chalkis had been wrested from Wenetians (1470), this large walfed city and important harbour became the capital of the sandiak, called Eghribos (from Euripos), and Livadya the seat of a hadillh.

The Ottomens seem to have settled mainly in the Catalan eastle and in a cluster of houses below it, on the banks of a torrent. There Turkhan-oghtu oner, the Ottoman governor of Thessaly, constructed an hammon and a domed mosque with some guestrooms that was to become the centre of Islamic life for the next three-and-z-half centuries. The castle guarded by a garrison of a few dozen soldiers. The mosque is mentioned in the Wakf-name of Comer Beg, its steff being paid from the vast urban property of the Turkhan-oghlu clan in Thessaly.

The Ichal defter M.M. 66 from 871/1466-7, is

apparently the oldest preserved Ottoman register containing information on Livadya. In the mentioned year, the town was a nation of the sandiah of Tirkhāla (Trikhāla) containing r64 Christian households and 24 bachelots are well as a Muslim community of 57 households and 25 bachelors. The Christian group abould be regarded as the autechtonous population of Livadya, the relatively large Muslim group as the product of a deliberate policy of colonisation after the town had been annexed.

In this same year the administrative district of Livadya contained 47 Greek ("Rûm") villages and 30 gatures inhabited by Albanians ("Arnavud") A year after the conquest of Eghriboz (Chalkis), in \$75/1471, the town and the district were detached from Tirkhala and added to the newly-formed pandiak of Ephriboz, as is mentioned der kenar in the 871 register. Another der kende note in the same register mentions that in Dhu'l-Hidde of 876/May-June 1472, Livadya was entrusted to 22 soldiers. of the garrison of Eghriboz, soldiers bearing Muslim Turkish names and coming from a number of places in the Balkans (Pirlepe, Fanari (Thessaly), Nighbols, Izdin (Lamia), Yaubol Serfidie, Serres, Berat in Albania, etc.) thus giving an indication of where the first Muslim settlers of Livadya came from,

During the 15th contury, Livadyn shared in the general expansion of the cities of the Ottoman, empire. The census registers of the sandjak of Eghribor, preserved in the Başbakanlık Arşivi in İstanbul, give exact information me the fast-growing number of inhabitants as well as me the number and scope of the Islamic institutions founded in the city in that period. The Mufassal defter of 1506 (T.D. 35), which records some of the wab's of the sandiah of Eghriboz (but no data on the population of Livadya), mentions a mu'allim-bhans of Hasan Beg b. Mūsā in the city and a sawiye of Ayas Dede, which provided lodging for travellers. Both foundations were maintained from the rents of some shops, watermills and gardens in or the town. According to the Icmail defter (no. 367) of 1526-28, Livadya numbered 427 households, 295 of which were Christian, divided in four makalles under their priests (49 of the Christian families were registered as cultivators of rice, Zeltnikdjiyan). The Muslim community, consisting of g6 households, was apparently not yet crystallised in mahailes. The Defler also mentions a community (djamitar) of 36 Jewish families. Thus the population of Livadya was then 70% Orthodox Christian, 22% Muslim and 8% Jewish. According to the Kambimime of the city and the district of Livadya, contained in the same register, the Muslim citizens paid only the tithes and nothing else. This source also states that the Jews had come from the West and that among the Christian inhabitants there - Albanians and Visch nomads. The Albanians enjoyed some minor tax facilities. The city was by then a khass-i hümäyün. T.D. me: 195 from 1539-40 mentions a garrison of 36 men in the castle of Livadya. This number could be so low because the city was safely situated in the interior of the country and had little we fear from an enemy attack [Chalkis and Athens, both on the coast, had then 357 and 114 men respectively, including diaders, gunners, etc.).

A further witness of the vast expansion of Livadya in the 16th century is the Mulassal defler of 1569-70 (T.D. 484). It mentions 552 Christian, 317 Muslim, and 32 Jewish households. The Christians still lived in four makalles, but the Muslims had by now formed five makalles, grouped around their mosques: the Djami'-i 'Ailk-i 'Omer Beg, the Djami'-

LIVADYA

i Bali Beg, the Mesdjid-i Mustala Voyvode, the Mesdiid-i Muslih al-Din and the Mesdiid-i Mahmud Celebi. The rapid augmentation of Muslim inhabitants did not primarily result from conversion of local Christians, for the 1570 register, written when the peak of conversions to Islam was over, gives but 15% converts among the Muslims. In the 16th century, the cultivation of rice in the fertile and wellirrigated plain east of the city expanded likewise. The 1526 register mentions 51 Christian fellukdiis living in Livadya; that of 1570, recapitulating the registrations of the intervening years (not known to us) gives 53 "old" Christian leltükdiis and 16 "now" ones besides 16 "old" Muslim lettakdiis and no less than 43 "new" ones. Only 3% of these 59 Muslim cultivators of rice were converts, which means that they must have come from elsewhere, most probably from Thessaly with its massive population of Muslim Turkish colonists. The celtithdis of Livadya had a privileged fiscal position, since they were exonerated from the 'amarid-i diminiyye and the tchalif-i "biffinge, a status given to them by "previous Sultans" and renewed ever since. The cultivation of rice in the marshy Kongis area thus goes back at least to Bayeald II or even Mehemmed II, The Muslim population of Livadya as a whole had a specific status. It was exonerated from the 'accarid and the tekalif taxes and the duty of earsmen of the fleet, but was expected to form a military reserve in case of attack. This status, based on "orders of the previous Sultans", probably goes back to the time of Mehemmed 11.

The 1570 register shows a major shift in the ethnic-religious composition of the Livadya population: 62% was Christian, 35% Muslim and only 3% Jewish. It had the highest number of Muslim citizens of the entire sandjad of Eghriboz (in that year, Eghriboz aumbered 194 Muslim households. Thebes (Istifa) 121 households and Athens 56 households). This expansion of Islam as well as the further growth of the lown continued throughout the last quarter of the 16th and first half of the 17th century, al-

though exact numbers are lacking.

The meet detailed description of Islamic Livadya in the 17th century is given by Ewliya Celebi (Sayahat-name, viii), who visited the city in 1078/1667-8. By then it appears to have reached its widest expansion. There were 2,020 houses, six Christian inaballes, inhabited by Greeks, Latins and Armenians, and seven Muslim maladles. The latter were principally the same me those mentioned in the 1570 register, but the mesdieds had now became mosques. Ewliyà Celebi does not mention the mesdid of Mahmad Celebi, but adds as a new building the Mosque of the Tanneries, commonly known as Suleymaniyve, and notes three mahalle mesdids. According to Ewliva, the mosque of Goter Beg was a small building in ancient style, with a pleatiful congregation. The mosque of Ball Beg, also in old style, had an inscription in Arabic, dated 931/1324-5, which Ewliya quotes in exicuso. There were, furthermore, three dorvish tekkes, three mektebs and two medreses. The existence of the latter is not attested obsowhere. liwligh gives a very accurate description of the castle, then guarded by fifty men who had their houses inside the walls. Like the European travellers after him, Ewiya extols the beauty of the town, situated on seven hills and dales, and its spacious and prosperous houses, fountains and coffeeshops. Among its population were many rich and notable persons. According to Ewliyl, part of the auth property of the Hely City of Medina and was governed by a Voyvode of the Kizlar Aghasi [q.v.], who had jurisdiction over this walf. Commanding 200 men, he administered justice and had the right of capital punishment. Ewliya's information suggests that he paraphrased stipulations from state documents. Greek sources attest that Livadya was part of the domain of the Wälide Sulfan, thus reflecting the situation in the last part of the Ottoman period. On an Ottoman list of haddles of 1657-8, Livadya ranked sixth in the hierarchy of twolve states.

Spon and Wheler, who travelled in 1675-6, relate that the town was inhabited by "Turks and Greeks" and a few Jews, living from the production of woollon cloth and trade in corn and rice, which was exported to all of Greece. The Turks possessed "five or six" mosques, the Greeks as many churches. They also mention a caravanseral and say that the mosque of Omer Beg was originally a church, dedicated to St. George. According to Richard Pococke, who visited Livadya in 1745, the town was inhabited by an almost equal number of Greeks and Turks. His information about the number of houses seems unreliable. Pouqueville, who visited the town shortly before 1800, gives a "cadastre du Valvodlik de Lebadés" with the names and numbers of the inhabitants of all the villages of the district. Livadya itself counting 2,000 households. In the same period, Col. Leake found Livadya singularly beautiful, possessing an air of opulence not found elsewhere in Ottoman Greece. According to him there were 1,500 houses, only 130 of which were Turkish. Henry Holland, travolling in 1815, noted that Livadya - "still retaining the reputation as one of the principal towns. in modern Greece" with nearly 2,000 houses, "many of them very large and inhabited by wealthy and respectable Greeks." There still five mosques. with minarcts, but the Turkish population was very small. Economy was still based on agriculture, exports consisting of wheat, barley, maize, cotton, wool, cheese, honey, etc., and estimated in 1805 at 250,000 kiles (bushels). The reason why the Muslim-Turkish part of the jahabitants of Livadya declined so markedly in the 18th century is not known in detail.

In the first decade of the 19th century, the powerful Teperilenii Ali Pasha tried to extend his direct control over Livadya. He was unsuccessful in attempting to lease the taxes of the area, but succeeded in enlarging his influence, acting as inspector of the Passes.

In the second half of the Ottoman period, especially in the 18th century, the type of land tenure and the administrative system favoured the development of a powerful Christian bourgeoisis that took control of production and commerce. The main representative of this class was Giannákis Stamou Logothetis, a progressive and cultured man who was in touch with the liberal movements of Western Europe. The general prosperity of the Livadya area was attributed to men like him.

During the Greek War of Independence, the town was several times plundered and burnt and at the end nothing but rulus remained. After 1829, Livadya was rebuilt gradually. In 1889 there were 4,990 inhabitants; in 1907, 7,089; and in 1928, 12,585, more than during the last century of Ottoman rule (approx. 10,000). In 1928 the expansion virtually stopped (in 1961 there were 12,609 inhabitants), but in recent years there is again some growth. No traces of Islantic buildings are preserved except for a fine vaulted stone bridge and an 18th century clock tower. The Catalan castle, wrecked through an earthquake in 1894, stiff exists in ruined condition.

Bibliography: A history of Livadya based on Ottoman sources remains to be written. Modern Greek literature deals mainly with the events of the War of Independence and recollections of the Greek part of the population. Very informative is: I. Γιαννόπουλος, 'Η διοικητική δργάνωσις της Στερεάς Έλλάδος κατά την Τουρgogriav, Ph. D. dies. Athens 1971 [J. Giannopoulos, The administrative organisation of Stered Hellas during the Turkohratia]. For the pre-Ottoman period, see K. M. Setton, The Catalan domination of Athens, rev. ed., London 1975; J. Koder, F. Hild, Tabula imperii Byzantini, Hellas und Thessalia, Vionna 1976 (both with extensive bibl.) and W. Miller, Essays on the Latin Orient, London 1921; for the Catalan fortress see A. Bon. Forteresses médiévales de la Grèce centrale, in Bulletin de correspondance hellénique, |xi (1937), 187-206. The Ottoman documents used here have not been published, except the was/-name of Omer Beg, Greek translation of which we be found in Epaminondas Pharmakidis, I Larisa, Volo 1926, 288-310. The official Ottoman list of badiliks of Rumeli published by Özergin in Ord. Prof. İsmail Hakkı Uzuncarsılı'ya armağan, Ankasa 1976, 252-305. For travellers' accounts, I Jacob Spon and Georg Wheler, Nauheurige Rayse door Italien, Dalmatien, Grieckenland unde de Levant gedaan in de jaren 1675 en 1676, Amsterdam 1680 (also in English and German versions); R. Pococke, Beschryping van het Oosten en van eenige andere landen, Utrecht-Amsterdam 1780 (also in English and German versions), iil/2; W. M. Leake, Travels in Northern Greece, London 1835, 119-20; F. C. H. L. Pouqueville, Voyage de la Grèce, and ed., iv, Paris 1826, 159-75; H. Holland, Travels in the Ionian Islands, Albania, Thessalia, Macedonia, etc. 1812-13, London 1815, 395; J. A. Buchon, La Grèce Continentale et la Morte, voyage, sejour et études kistoriques = 1840 en 1841, Paris 1843, 220-6; A. Philippson, Die Griechische Landschaften, Frankfurt 1951, I/1, 449-66; Buedeker's Geischenland, Leipzig 1888, 164; Population de la Grèce au recensement du 19 Mars 1961, Athana 1962, 533; Megale Ellenike enkyklopcideia, xv, 870-1. The anonymous Greek manuscript no. 93.3 from 1795, preserved in the Gennadius Library at Athens, contains a mass of information me the political, social and economic situation of Levadya, Salona, Vostitta (Aeghion) and Corinth for the late 18th century. An edition and a critical study of this singularly important manuscript was given by Σπύρος 'Aσδραγάς (Spyros Asdrachas) in the periodical Emorec [Epoches] of May 1958.

(M. Kirl) LIVNO (in pre-modern Slavonic texts, often written as Hlivno; in older Ottoman texts variously written as Iflevno, Ihlivne, etc.), a town in Bosnia situated at the spur of a mountain at the eastern edge of the homonymous polic or plain in a very dry and stony karst landscape on the approaches to Dalmatia. Today, it is a small local centre far off the main thoroughfares and little-visited, but in the 16th and 17th centuries it was a centre of Ottoman power, seat of the sandjak begs of Klis, and bulwark Islam the western frontiers of the empire. Until World War II, Livno bossted five domed and lead-covered mosques from the classical period of Ottoman architecture, thus ranking second 🔳 Bosnia, immediately after Sarajevo, in this aspect, demonstrating importance which the place once had as a centre of Islam.

The town of Livno is an Ottoman foundation from the early roth contury, whose expansion was greatly promoted by various members of the sandiak administration residing there. The castle of Livno, now a ruin overlooking the town, is much older. It is mentioned by Constantine Porphyrogenitus (10th century A.D.) as Hiediana, one of the eleven sugas of the kingdom of Croatia, situated on the border between the Serbian and the Creatian lands. In the later Middle Ages, Livno belonged to the kings of Bosnia. It is mentioned as "Grad Hlivanjski" in 1400 (Mikiošić, Monuments, 248-9). In the first half of the 15th century, it was ruled by the family of Vukčić, King Tomas resided in Livno in 1444 (H. Sabanović, tr., Evlija Čelebija pulopis, i, Sarajovo 1957, 154). The castle is again mentioned in 1466 as being guarded against the Turks by Vladislav Hercegović, a son of Duke (Herceg → Hercegovina) Stjepan lone of Vladislav's brothers became the later famous Grand Vizier of Bäyezki II and Sellm I. Hersekoghlu Ahmed Pasha). The Ottomans captured the castle of Livno between 1466 and 1485. The exact date is not known, and is an object of controversy. The Tahrir defter no. 18 of 890/1485 mentions Livno as centre of mudhive; it possessed then a civil population of 27 families and 26 temporary residents.

In the first decades of the Ottoman period, there was only one mosque in Livno, the <u>Kh</u>ūnkār <u>Djānif</u>, or Starogradsko Džamija, in the castle, serving the needs of the garrison. In the first decades of the roth century, a Muslim suburb grew up around the Balagina Mosque (Balaguša), built according to its Arabic inscription in 920/1514. This building, stiff preserved, is the first of the domed mosques of Livno. Soon afterwards, the Džumanuša Mosque of Sinān Čāwūšh from 935/1528-9 was erected, also a domed structure (destroyed in World War II). The open town of Livno sprang up below the castle on sloping ground, with the older quarters at the foot of the castle with newer ones further down the hill.

Livno remained a sakive of the kaddilk of Neretva until some time in the first quarter of the week century. After the conquest of Skradin in 928/2522 (Pelowi ta'rikki, 1, 72), Livan was included in a newlyfounded additte, which had the Dalmatian town as its centre. În 1537, Murăd Beg Tardić (a Dalmatian convert from Sibenik) captured the fortress of Klis facing the Venetian base of Split (Spalato) and besandiak begi of the newly-formed sandiak of Klis (Pečewi, i). As Split was too vulnerablysituated to suit the requirements of an administrative centre, the residence of the beg was set up in Livno. They resided there especially in the latter part of the 15th century, which induced Italian and German sources to speak of "the sandiah of Livno". In 1648, during the Cretan War, Klis | lost for the Ottomans, but the sandjab kept the name of its former titulary capital,

The second half of the 16th century and first half of the 17th century ment the time of the greatest expansion of the town. According to the Tapu defier no. 185, 1-7 and no. 284, 67-73, both from 960/1553, the "Layabo of Hivne", part of the khāss of the Mir-Liusi of Kils, Ahmed Beg, numbered five mahalles with 262 households (khāses) and 170 bachelors (mūdiered), thus totalling es. 1,340 inhabitants. Only nine households were Christian, and all others were Muslims. Four of the town quarters were called after the mosque around which they had sprung up: Mahalle-yi Djāmi'-I Sinān Cawagh, with 50 khānes, 43 mūdiereds; Mahalle-yi Djāmi'-I Hamza, with 35 khānes and 26 mūdiereds; Mahalle-yi Mesdild-I

LIVNO 775

Pehliwan Hüseyn, with 73 khanes and 46 mildjerreds; Mahalle-yi Mesdild-i Hüseya Etmekel-zäde, with 48 Mares and 53 midjerreds; and Varosh of Hlivne, with 19 Muslim Manes and nine Christian Manes. Other Ottoman registers, from 22 years later, testify to the rapid development of the town in those years. The Tapa defter no. 533, 320-30, and the T.d. 546, 298-307, both from 982/1573-4, mention seven makelles in Livno. Added to those mentioned in 1553 are the following now wards: Mahalle-yi Djami'-i sherff-i Mehmed Azha, Mahalle-yi Diami'-i sherff-i Mehmed and Mahalle-yi Ferhad Beg. The number of inhabitants is given - nefers (single individuals, persons), 653 men and a separate group of 40 tanners, an indication of the function of the town as a centre of handkrafts besides being an administrative centre. If three-quarters of the number given were family heads, this would make a total population of little less than 3,000 souls, which is indeed a spectacular growth. The second mosque mentioned in the T.d. of 982 is the so-called Perkusa Diamija, built according to its Arabic inscription in 971/1563-4 by Sipahl Meluned. It was the third denied mosque of Livno, and existed till World War 11. The abovementioned Ferhad Beg was a Şokollu-zade (Sokollović), a naphew of the Grand Vizier Mehmed Sokollu. Ferhad was sandjok begi of Klis between 1566 and 1574, and is known to have crected a large serai in the lower town of Livno. The last quarter of the 16th century saw the erection of two more domed mosques: the Begluk Džamija of Şokollu-zādo f.ala Mustata Pasha = 085/1577-8, built during his term as sandiak begi of Klis (1574-7), and the Glavica Džamija, buišt by a Důkatar-oghlu Hadjdíj Ahmed in 996/1587-8). Both buildings are preserved at the present time and still have their Bauinschriff in Turkish. Four more mosques and a Clock Tower (1659) were built in the course of the 17th century: the Tepet Džamija, Borusa Džamija, Piragic Džamija (demolished in 1918), and the Pasina - Atlagić Džamija. The latter was most probably built by Mohmed Pasha Atlagic, the most important member of the Livanjsker family of Atlibegović, or Atli-agi. Mehmed Pasha Atlagić was sandjak begi of Klis in 1685-7 and vizier of Bosnia ■ 1687-8 (H. Kreševljakovie, in Hrvatskoj Enciklopediji, ast. Altagići). With the crection of these buildings, the architectural outlook of Livne acquired its definitive form. The only known important group of buildings of the 19th century I the mosque, mekleb, tekke IIII water-supply system of the brothers Mahmud Beg and Derwich Beg Bushatll. The mosque, the Milosnik Džamija, built in 1291/1874-5, was restored in 1978.

When Ewliya Celebi visited Livno in 1070/1059-60, he found a fully-developed Muslim town, the seat of a hadi (the Ottoman list of hadilits of Rumeli of 1078/1667-8 also mentions "lhlivno" = seat of a kādi), a number of officials of the provincial administration as well m a diadar who commanded a garrison of 600 men. The open town below the eastle was composed of nine mahalles and had 1,100 stonebuilt houses, covered with shingles, 13 mosques, of which were Friday mosques (for three of them, he gives extracts from the inscriptions), three medreses (attached to the mosques of Dükat[ar]oghlu Hadidil Ahmed, Sipahi Mehmed and Lala [Mustafa] Pasha), five nicktobs, six tekkes, one hammam and 300 shops. With 5,000-6,000 inhabitants, the town clearly reached the limits of self-sufficiency for a poor karst land like the Livno district. The "golden age" of Islamic Livno ended in 1686 when, during the great war against the Christian coalition, Stojan Janković captured the town and burnt it down. The Starogradsko Džamija in the castle and the Borusa Džamija were destroyed and not rebuilt. Since that time and throughout the 18th century, Livno was the seat of the Livanjsker kapetanas, a function which was in the hands of the Atlagić family till 1711. The most famous captain of Livno was Firdūs in the first half of the 19th century. Parts of his fortified house (kula) still exist.

At the beginning of the 18th century, with the border areas lost to Venice, the sandjak of Klis comprised four kādīliķs: Akhisār (Prusac), Gölhisār (Jezero), Novosel and Livno, the latter with the ndkiyes of Livno, Giamoč, Grahovo and Satomíševo, Livno recovered slowly from the destruction of 1686. The castle was maintained throughout the 18th and the greater part of the 19th centuries. In 1833 still had 34 guns. The Ottoman period ended in 1878, whon the Austrian-Hungarian army captured Livno after an obstinate defence. The town continued to flourish until the beginning of the present century as a small centre of grain and live-stock trade and silver filigree-work, until a great conflagration in 1904 swept away than 500 houses. Before that date it had, according to the Encyclopusdia Britannice, 1911 edn. (xvi, 816), about 5,000 inhabitants, thus maintaining the level of the 17th century. According to the Basdeker, Osterreich-Ungarn of 1913, 422. Livne had still 4,700 inhabitants, but this recovery was temporary. After 1918, when it was incorporated in the kingdom ■ Jugoslavia, ■ large part of its Muslim population departed. When Pelletier visited it in the early thirties, Livno had but 2,200 inhabitants (Pelletier, Sarafeve et sa région, Paris 1934). During World Wat II, Livno was three times occupied by German and Croatian Fascist forces and as many times liberated, lastly in October 1944. During these events, I the hitherto-preserved mosques but = (Balaguia Di.) were deliberately destroyed m heavily damaged, together with the entire town. The ruins of the Glavica Diamija and the adjacent Clock Tower, together constituting the landmark of Livno, were restored in 1963.4. The Begluk Džamlja of Sokollu-zade Mustafa was restored in 1971-2, and the Zavra Džamlja and Čurcinca Diamija, both wood-covered halfs, in the seventies.

In 1953 Livno numbered 3,672 inhabitants, among whom is a small Muslim minority. The centre of gravity of the post-war town has shifted to the flat grounds of the plain below the totally-ruined Ottoman town. In the old parts, now under the protection of the Service of Ancient Monuments of Bosnia, only construction in local style is allowed, thus creating a harmony with the preserved Islamic monuments.

LIWA' (A.), in Ottoman liwd.

1. For the meaning banner, flag, standard

2. In the Ottoman empire the word indicated a province, several of which were at a certain moment joined into an eyalit, later wildyst [see wildyst]. The term lines, synonymous with Turkish sandjak [see SANDIAK], was mainly used in official documents. Accordingly, wit lines (from Arabic amir al-lines) stood for sandjak begi [see sec], the governor and military commander of a lines sandjak. From the middle of the 19th century onwards there was also used the term militsarvifile, derived from the title militsarvif. Of all the states issued from the Ottoman Empire, only 'Irak kept the term lines' (up till 1974) to indicate a province. In the army of 'Irak, lines' indicates a brigade, smit al-lines' brigadier (as in Egypt until 1939).

LIWAN (see IWAN).

LIWAT (A.), sodomy. There does exist in Arable a verb ldfs meaning "to attach oneself, to join oneself to", but limit appears to be rather a musdar of late or lawers, denominative of Lut [q.v.], i.e. Lot; in modern Arabic there are also the terms liwaja, saulatraja, talaurraj, etc., 25 well as a large number of euphemisms and of dialectical and slang terms. The homosexual is called last or latif (pl. lasa), or mulawit, when he is the active partner, although the distinction Is often difficult to establish; the passive is ma'bun. and his perversion, about; among the synonyms, the most common is mukkonnath, generally translated as "effeminate", although in normal usage it refers to the genuine hermaphrodite (see A. Bouhdiba. La sexualité en Islam, Paris 1975, 55-7). In the Muslim West in the Middle Ages, a special term, hand (pl. hind) was used in reference to professional male proxtitutes (see below).

In a number of verses of the Kurbin relating to Lot and his people, the word fdhisha, which may be rendered as "depravity", is clearly an allusion to the vice in question, but this is even more strongly indicated by the pejorative nature of the remarks and questions attributed to this prophet; inna-kum lata'tuna l-ridjāla shahwatas min dani'l-nisd', bal antum hosem " musrifan "You commit the carnal act, in lust, with men and not with women, you - indeed an impious people" (VII, 79/81), n-tuna-kum lata'tuna'l-rididla? (XXVII, 55/54) and a-ta'tana 'I-dhukrdna? (XXVI, 165). The punishment inflicted upon the people of Lot, in the Kur'an as in the Bible (Gen., xix, 1-23) leaves no doubt as to the way in which sodomy should be regarded by Islam. even though it is not explicitly condemned by the Holy Book, which indeed allows a certain ambiguity in passages where the believers are promised that in paradise they will be attended by measervants (ghilman, LII, 24; wildan, LVI, 17, LXXVI, 19).

The statements of hadith are, on the other hand, perfectly clear and particularly harsh, as is noted by al-Nuwayrī who, in his Nikāya (ii, 204-10), has conveniently collected them together, with the addition of the opinions of the Companions and the futaha' on the subject. The Prophet is alleged to have said that what he feared most for his community were the practices of the people of Lot (although he seems have expressed the same idea in regard | wine and to female seduction: Nihāya, il, 198). According him, both the active and the passive agent must be killed (yuhtaltuktutā 'l-fā'il wa 'l-maf-tāl biki, terms which were subsequently to be applied, in grammar, to the subject and the direct object) or, more precisely, subjected to the punishment prescribed for the man guilty of sind [q.v.], the fornicator, that is, death by stoning (fa-idinma 'l-asid wa 'l-asfal), The man who sodomises another or inflicts the same treatment in a woman, will in the Day of Resurrection he regarded as more reprehensible than carrion; needless to say, III will suffer eternal damnation, unless he obtains pardon through repentance. The Instful kissing of madolescent is enough to earn a thousand years in Hell.

By the very fact of their existence, these hadiths show that, while probably not very common in Bedouin society, homosexuality was not totally unknown in Arabia of the pre-Islamic period. For proof of this, one need look no further than the story of Dhū Nuwās [q.a.], who was compelled to kill Jhū Shanātir in order to escape his advances. Proverbs of the form sitra; min... (al-Maydānl, ii, 205) testify to the antiquity of the term and of the idea which it expresses; al-Maydānl cites the ex-

LIWAT

pression alway min Dubb, making the last word ("bear") into a proper name; similarly al-Diahiz (Mujākharat al-djawārt wa 'l-ghilman, in Rasa'il al-Didhis, ed. Hårûn, if, 136-7) quotes a Hidjazi proverb. alway min Dik, in which Dik ("cock") would also be the name of a person; these councidences are curious, to say the least. Whatever the case may be, animals are we exempt from this vice: al-Diahly himself (Hayawan, iii, 204) cites the example of a maban herse, perhaps castrated at an early ago, which pursued male horses, mules and donkeys. The same author to have been the first to seeak (ibid., vii, 178) of a fabulous animal, the 'addr, which was in the habit of assaulting the whom it encountered; its victims suffered a worm-infected anus and died as a result (cf. al-Masfüdl, Murüdi, fii. 319-20 - 1 2203). In his Mufakhura, he also montions a marla of Khura'a, Maymun b. Zayd b. Tharwan, who was a hi if in Kuta and who became proverbial under the nickname of Siyah, but was apparently viewed with an indulgence that spared him any punishment.

However, in the course of the 1st/7th century, a number of precise cases of lata subjected to exemplary penalties reported, especially by al-Diable and al-Nuwayri. Abú Bakr condemned a homosexual to be buried beneath the débris of a wall, and prescribed burning allve as the penalty for all those guilty of such practices; in this respect he was followed by 'Abd Allah b. al-Zubayr and Hisham b. 'Abd al-Malik. For his part, 'All b. Abi Talib ordered the stoning of a last and had another thrown head-first from the top of a minaret; according to Ihn Abbas, this last punishment must be followed by stoning. Abd Allah b. Umar went a step beyond the sum demnation predicted by the Prophet, reckoning that these people would be resurrected in the form of monkeys and pigs. The famous letter from - Umayvad catiph [see grast, IV, 1087b] ordering the governor of Mecca or of Medina . "hold a census" of the multiannathus of the town corresponds to a real situation, even if the tradition itself is contrived.

In fact, the increase in prosperity brought about by the rich flow of spoils from the conquered lands was accompanied, paradoxically, by the corruption of morals in the two holy cities. As regards the subject which concerns us here, information relating to the development of music and song reveals the presence of mukhannathan, who were apparently for the most part Ill foreign origin. It may thus be assumed that from this time homosexuality became less of a rarity as the result of a rapid process of acculturation. A defender of paedophiles, of lovers of ghilman, depicted in the Mujdkhara (ii, 116) of al-Diahiz, observes in effect that natural love is a feature of Bedouin culture and of simple mornlity and that if the ancient Arabs glorified woman, this was because they knew nothing of the refined pleasures of this world, which are only to be encountered in a highly civilised society.

All the same, it is not impossible that the decisive impaise came with the arrival of the 'Abbasid amay from Khurasan (cf. A. Mea, Ranaissance, Eng. tr., 358) and that homocexuality subsequently spread more widely under the new dynasty. In fact, tradition attributes to al-Amin tastes so deprayed that his mother, Umin Diaclar, was obliged to procure for him slave women with the physical characteristics sought after by life among boys and to dress them in masculine clothing, in the hope of inducing him to adopt more conventional morals (al-Mascudi, Munual, viii, 299-300 = \$5.3451-2). It was no doubt

such episodes that gave rise to the fashion for "masculine girls", ghulâmiyyat, a trend widely reflected in literature (see H. Zayyāt, al-Mar'a al-ghulāmiyya fi 'I-Islam, in Machriq [1956]). In Ifrikiya, the Aghlabid Ibrahim II was surrounded by some sixty catamites, whom he treated in a most horrific manner (see M. Talbi, Emiret aghiabide, 306, 317). At Cordova, 'Abd al-Rahman III had executed a young lad from Léon who was held as a hostage, the future St. Pelagius (Pelayo), because he had refused his advances (Simonet, Historia de los Mozárabes, 542; see also Ch.-E. Dufourcq, La vie quotidienne dans l'Europe médiévale sous la domination arabe, Paris 1928, 117-18). Homosexual tendencies are attributed to al-Mustasim and to some of his successors, and it is probable that this is not a case of slander designed to justify wice vigorously opposed by the fuhaha.

777

In general, the hadith relating to the punishment of the hifi (see above) provides the base for the opinions of jurists, but a distinction tends to be made, in the application of the legal sanction (kadd), according to whether the culprit is muksan or not, that is, in practice, whether he is married or celibate. Ibn Hanbal and his followers appear to be the most sovere, since they insist that in all the culprit must be put to death by stoning, while the other schools are in general content with flagellation, with or without banishment, if the man is not muksan; it should be noted in adultion that it is sometimes recommended that | prescribed penalty tone hundred strokes) should not be applied in full, and thu Hazm goes so far in to reduce the number of strokes to ten. These variations correspond to the uncertainties surrounding the definition of the penalty to be imposed for immication [see 2182] for details], but also betray a tendency towards indulgence; moreover, since proof is always difficult to establish, there is little likelihood of the punishment actually being applied. These circumstances do not prevent moral pundits from considering illegal a lustful glance in the direction of a beardless youth (amend), and the Hanballs forbid men to walk in the street with women or with adolescents (Men. Renaissance, Eng. tr., 362).

The legal provisions set out above are thus to a large extent theoretical, since homosexual relations have always been telerated. They were common in religious brotherhoods and in educational institutions (see A. Boubdiba, op. land., 146), and schoolmasters had an unenviable reputation in this respect, as is shown by many anecdores. The mudity of the public baths did nothing to discourage such practices, and the paragraph devoted by H. Pérès (Poésic andalosse, 341-3) to homosexuality in al-Andalus refers specifically to the pannain.

As regards women, the Aghdui (ed. Belrut, il, 110) mentions a love affair between a certain Hind (named, incorrectly, as the daughter of al-Nu-man b, al-Minothir by S. al-Manadidid, al-Hayet el-dinelyya Sind al-Arab, Beirut 1958, 14; see Mas adl-Pollat, index, under Hurāga) and Zarķā^a at-Yamāma, which would be the oldest example of Sapphism among the Arabs, but in this particular we we have a work of imagination, called moreover Kitāb Hind an-bint al-Naturan by Ibn al-Nadhn (ed. Cairo, 427), who cites a dozen love romances with female names in their titles (e.g. K. Rekoyya wa-Khadidia, K. Salma wa-Su'ad, etc.). Although Information is scarce, it is likely that sakhisihähi musēļaļa, while not widespread, existed - less than make homosexuality, since according to the relevant hadith it is also identified with sind (sihāh alnisă? zină bayun-hunna). These practices, which al778 LIWĀŢ

Djåhis (Hayarain, vii, 29) knew well, spread in parallel with sodomy, at least in the leisured classes of Arab-Islamic society, if we me to believe the rather late works of eroticism which will be mentioned in due course; in any case, at the end of the 3rd/9th century, Abu "I-Anbas al-Şaymari [q.e. in Suppt.] wrote a Kitāb al-Sakiākāt, of which apparently no traces remain. In addition, the sodomisation of women, although formally forbidden by the Prophet (see above and the hadith: lā la²tā l-nisā² min mehāshsh-hima | adbārihima| would seem to have been a fairly common practice (see A. Bouhdiba, op. land., 246-7).

Besides female prostitution (bigha? [q.v. in Suppl.]), there is abundant evidence of male prostitution. It is not known how much credence should be attached to an allogation by Ibn Hawkal (93, 95, tr. Kramers-Wiet, 97, 93), relterated in part by at-Idris! (Nusha, ed. Pérès, Algiers 1957, 70; ed. Naples-Rome, iii, 269-70), according to which the Kutāma Berbers "offer themselves to their guests as a token of hospitality, without any sense of shame", while at Séir, they are content to offer their male children. Inconsistencies in these passages are such as to cast doubt on the author's claims.

In any case, the presence of professional deviants (muladierun) in the larger towns has been frequently attested by travellers (see G. H. Bousquet, L'athique sexuelle de l'Islam, Paris 1953, 59), Mention has been made of transvestites, for example in Bougie (Idris, Zirides, 329, 591), in Tunis (R. Brunschvig, Hafsides, il, 273) where Leo Africanus (tr. Épaulard, 385) saw young boys prostituting themselves, in Fez, where the same author encounters what he calls chema (= hipa, a term of particularly common usage in Spain; Dozy, Suppl., s.v.) living with me in hosteliles. Such statements cover such a broad expanse of time that they cannot but 🍱 a reflection of a permanent situation which has, moreover, persisted into the present day (see, e.g. Bouhdiba, op. land., 233). It need hardly be said that the authors of works of airea utterly deplore these deviants and the moral corruption for which they are responsible, but not one of them is so severe as to demand for them the capital penalty ordained by the afore-mentioned hadith. According to Iba 'Abdua (Lévi-Provençal, Siville musulmane, Paris 1947, | 170), the hima are to be expelled from the town and severely punished if they return, since they are accursed of Allah and of the whole people; al-Sakati (Manuel hispanique de hisbo, od. Colin and Levi-Provençal, Paris 1931, 68, and gloss., 46; Spanish translation by Chalmeta, in al-Andalus, 1968 ff., | 161) speaks only of mukhan-ทดเล้ทัก (singers disguised as women), whom he forbids to wear their bair long over the temples or to attend banquets and funerals (see also Lévi-Provençal, Trois traités hispanique de hisba, Cairo 1955, 123). Although the repression of head, in the strict sense of the word, forms a part of the general censorship morals, these works contain few specific references to it.

It should be said that this phenomenon, while provoking the disapproval of a number of moralists loyal to the tradition of the Prophet, has for the most part been viewed with indulgence—if not actively condoned—even in circles which would appear to be furthest from it.

Firstly, homosexuality was a theme favoured by libertine poets who, especially from the rst/7th century onwards, glorified homosexual love quite shamelessly, often in terms of intolerable obscenity; in the interminable list of these poets, the first

place belongs without doubt \(\boldsymbol{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{

On the other hand, there are a great many poets who have not hesitated, at some point or other in their career, to sing the praises of a youth, in many cases no doubt, less from personal taste than from the desire to conform artificially with a general trend. In fact care should be taken not to accuse all such writers of libertinism, for it was conventional practice to glorify wine, women and favourites, without becoming personally involved in debauchery or violating the rules of Islamic ethics. We may cite, as a simple example, the theme of dabib, of "crawling", appropriate perhaps for an Imru' al-Kays who lived in a society where it was possible to crawl under the teat in order to approach a woman, but purely conventional in the see of a city-dweller like Ibn Shuhayd who, unlike the pre-Islamio poet, uses (apud Ibn Bassam, Dhakhira, if1, 244), in poetry of a high standard of sophistication, the masculine form to designate the person in question, whose sex thus remains undefined. Leaving aside the mystics, who frequently adopt an equivocal posture, the use, by poets whose morality is not suspect, of the mascaline form in their love poems, derives less from a desire to shock than from a sense of modesty and from respect for a tradition that was reckoned to be harmless, a tradition maintaining an ambiguity universally accepted and appreciated.

In the sphere of prose, the most significant, if not the oldest writing, is certainly the Mujakharat aldjawart wa 'l-ghilman of al-Diahiz who, always prone to cultivate the genre of munapara, debate, of which he is one of the pioneers in Arabic literature, presents in the form of a stylised dialogue arguments exchanged between homosexuals and men of normal sexuality. So as to leave no doubt as to his own tastes, this author saw lit to publish . Risála fi tajdil al-bajn 'ala 'l-şahr (ed. Pollat, in the Hawliyyal of mil University of Tunus, xiii [1976], 183-92) in which he plays on the different meanings of balu-"stomach" and pake-"back" in order to demonstrate, with a great deal of humour, the superiority of the former; he goes so far in to attribute to sorlomy the destruction of the people of Thamud [q.w.], which is thus accorded the passe status as the people of Lot.

In the Mufakhara, there are a number of anecdotes which testify to the popularity of stories of late from the 3rd/9th century; these were in find a place in collections compiled in later times for the entertainment of what were, in appearance ill least, the initial puritanical sections of society. A characteristic munifestation of this somewhat perverse taste is encountered in the work of al-Tawhidi, who devotes a chapter of his Intia, the 18th night (it, 50-60) ill mudjiln and naturally tells the story of a lati (it. Boundiba, op. land., 158).

The example set by al-Dikhiz in his Maddina has been followed by quite serious authors who have left analogous writings, among which we may mention al-Wasila bays al-result wa 'l-life by lim Hindû (see Brockelmann, S 1, 426) and the Kiláb al-Hihdyit by Badr al-Din al-'Ayal (see S, al-Munadigiid, in RIMA.

iii [1957], 335). In addition, the vice in question inspired a specialised literature all its own, notably consisting of advice on techniques of seducing young men (see S. al-Munagidid, ai-Haydt ai-diinsiyya, 52-4). The writers of works of eroticism (see pirns and add to Bibliography, A. Boudhiba, op. land., 171 ff.) mostly devote some space to sodomy; on this point, the most characteristic works are without doubt the Nuchat al-albib fi-ma la yadiad fi kidd (Brockemann, 1, 495, 11, 904) of al-Tilashi and the Nachwest al-sakuda of Muhammad Sādik Hasan Khān (Istanbul 1296/1878; see Bouhdiba, 178).

In the Mujakhara of al-Diahiz, which has nothing in common with the preceding works, the advocate for the diaudri claims (ii, 104) that there has never been a case recorded in which love for a youth has proved (atal, while tradition is full of examples of heterosexuals who have pined away, lost their reason or died for love. However, there are apparently authentic accounts which contradict this assertion. Al-Dabbi (Bughyo, no. 462; tr. Lévi-Provençal, En relisant "le Collier de la colombe", in al-Andaires. xv/2 [1950], 363-8) relates, after Ibn Hazm (although the text of the Tawk al-hamama, ed. and tr. L. Bercher, 301, is quite perceptibly different); "the incredible adventure ... of a certain Ahmad b. Kulayb, poet and grammarian of Cordova who, in 426/1035, died of grief because one of his fellowcitizens, a member of the Andalusian patrician class, persisted in rejecting his advances" (Levi-Provencal, Hist. Esp. mus., iii, 445); the same story is told by Yakut (Irskad, ii, 19 ff. - Udabit', iv, 109 ff.; cf. Mez, Renaissance, ling. tr., 359-60) who also re-lates (li, 23 if. = iv, 115 ff.; cl. Nez, 360-1), after al-Sanawbarl, the story of a bookseller of Edessa (al-Ruhā) named Said, whose sliop was a literary salon frequented by poets and in particular by a young Christian called 'Isa: Sa'd developed a violent passion for the latter, and did not pursuing him and dedicating poems to him; 'Isa became m mouk, and, finally denied access to the monastery. Said set fire to all his possessions and became a vagrant. He died eventually of consumption, but the governor of the town accused the monks of baving killed him and condemned the young man to death; the punishment was averted following the payment of a large sum of money, but when 'Isa went to visit his parents, the local children pelted him with stones and called him an assassin. A third story (Yakot, Iradd, is, 25 ii. = Udobd', iv, 122 ii.) tells of a poet in love with a young monk who pines away with grief and dies the very moment that he meets the object of his infatuation.

From anecdotes such as these one gains the impression, on the me hand, that the authorities and the people did not regard the inclinations of these homosexuals as immoral, and on the other, that monasteries and monks played an Inauspicious role. It is quite clear that poetry and works such = the Diyārāt of al-Shābu<u>rh</u>tl regard monasteries (see DAYR) as places of debauchery frequented by lovers of forbidden delights. One must, however, proceed with caution, because once again we are faced with a poetic theme whose treatment is analogous to that of the glorification | unnatural love by poets who are influenced by respect for a tradition than by any desire to become personally involved in the acts to which they refer. In this context, the adventure of the Andalusian post al-Ramadi, the account which is borrowed by H. Pérès (Poésis andalouse, 278-9) from a work of dubious authonticity, the Maimak al-aufus of Ibn Khakan, seem to us no more authentic than the braggings of ibn Shuhayd, in a poem composed in imitation of Aba Nuwss (H. Pérés, op. loud., 277-8).

The fact remains that in the Middle Ages, many attacks on Islam by Christians which, in their view, were permutted by the Kurban and which characterised the behaviour of Muslims; they based this opinion were 20/16 of Sura IV which they misinterpreted as referring to sodomy, without taking account of the condemnation of "depravity" which it contains (see N. Daniel, Islam and the West, the making of an image, Edinburgh 1960, 141-5).

It is indeed difficult to measure precisely the extent of the phenomenon, but it should be recognised that the separation of the series, which is particular feature of Islam, has played a significant role in promoting it (cf. Brunschvig, Hafsides, ii, 173), amoug women as much as among men, and the precautions taken against such behaviour (al-Nuwayri, for example, entitles the chapter cited above al-tahdhir min al-liwit) did not succeed in preventing it. It is now known that homosexuality, once regarded as a punishable offence, is caused as much by genetic as by social and psychological factors, but it that in the event the latter have played the leading role in the proliferation of what ramains, to a large extent, a vice.

Bibliography: Given in the article. LIYAKAT 'ALL KHAN, honorary secretary of the All-India Muslim League from 1936 to 1947 and prime minister of Pakistan from 1947 to 1951. was born in the Karnal district - Pandiab on 1 October 1895. He was the second son of a well-to-do landlord, Nawwab Rustam 'All Khan of the Mandal family, which claimed to have migrated 500 years previously from Iran and to descend from the Săsânid king Anûshirwân (lQuesraw I, 531-79 A.D.); British officials on the other hand considered the Mandals to be of Pathan origin, or perhaps Diats bailing from Samana in Pafiāla, Liyākat 'Ail Khān's grandisther, Nawwab Abmad 'Ali Khan, gave powerful support to the British in the Mutiny uprising of 1857-8, for which he was handsomely rewarded in the bestowal of honours and the remission

From 1909 to 1919 Liyahat All Khan attended the Muhammadan Anglo-Oriental College at 'Allgath. where he was notably successful both on the games field and in the classroom. After graduating, he read law at Exeter College, Oxford, getting his degree in 1921, and was called to the Bar in 1922. At Oxford he began to display political promise as a prominent member of the Indian Madills. On returning to India he settled down on the family estate in the Muzaffarnagar district of the western United Provinces and, despite family pressure to enter government service and his own training as a lawyer, aimed at politics. In 1923 he joined the Ali-India Muslim League, the organisation of Muslim separatist politics, and when in 1927 the League split over its response to the Simon Commission to inquire into India's constitutional progress, he supported the Dinnah group which boycotted the Commission, In 1928 he joined those representing the League at the Indian National Convention which discussed the Nehru Report. From 1926 to 1940 he was a member of the United Provinces Legislative Council, in which he quickly cause to play a prominent part, organising and leading the small but influential Democratic Party and acting as deputy president of the Council from 1931 to 1936.

In the 1930s and 1940s Liyāķat 'Alī Khān played the leading role, after Muhammad 'All Djinnah, in generating the revival of the All-India Muslim League. In the early 1930s, the League was crumbling, meeting only in full session between 1931 and 1936. In 1933, while visiting London on his second honeymoon, Livakat 'Ali Khan helped to persuade, and according to some was decisive in persuading, Djimuah to return to India to revitalise the organisation. In April 1936 he became honorary secretary, a position he held till 1947, even though from July 1930 are early 1938 he was associated with the laudlord party in the United Provinces, the National Agriculturalist Party led by the Nawwab of Cattari; the Muslim League leadership in the province, he declared by way of explanation, was too close to the Indian National Congress. In the early 1940s Liyakat 'All Khān prepared the League's organisation, and Muslims more generally, for the overwhelming victory of the 1943-6 elections. He sat on the League's major committees, he was chairman of the Central Parliamentary Board, he touted India to spread the League's message, he directed the Down newspaper which was founded in 1942 as the League's mouthpiece, and from 1940 ho led the League's party in the Central Legislative Assembly in Dinnah's absences, which were quite frequent. So highly did Dimnah value Liyakat 'All Khan that in supporting his reelection as honorary secretary in 1943 he described him as his "right hand".

In the two crucial years before the partition of India, Liyakat 'All Khan was at the heart of events. In late 1944 and early 1945 he attempted to come to an agreement with Bhulabhai Desai, the leader of the Congress in the Central Legislative Assembly, which would identify common ground and enable the Congress and the League to participate in forming an interim government, although he may have gone too far on his own initiative, as Djinnah disavowed the project. He was also closely involved in two further attempts to solve the constitutional deadlock, the Simla conference of 1945 and the Cabinet Mission discussions of 1946. When lowards the end of 1946 the interim government was eventually formed, Liyākat 'Alī Khān led the Muslim league bloc, defending Muslim interests with vigour. When that government's quasi-Cabinet offices were distributed, the Congress apparently trusting in the north Indian belief that Muslims were unskilled in financial matters, encouraged him to take the Finance portfolio, which gave him a say in all the activities of the interim government and enabled him through a masterly budget to impose his will on the political situation. Indeed, it is said that he used his powers to such effect that leading Congressmen, among them Sardar Patel, came to see partition as the only solution to their difficulties. After partition was finally agreed on a June 1947, Liyūķat. All Khân was marked out to be the first prime inhuster of the new state of Pakistan.

When Djinnah, governor-general and presiding genius of Pakistan, died on 11 September 1948, Liyāķat 'Alī Khūn came forward as the unchallenged ruler. He faced enormous problems: the state was divided into two parts separated by 1,200 miles of bostile territory; there were six million refugees; there were divisions of language, race and religion (13% of the population was Hindu); there was no administrative centre, efficient bureaucracy, political tradition or economic focus. That Pakistan survived these problems, in addition to the premature death of Djinnah, owed much to the wise leadership of Liyāḥat (Alī Khūn.)

He responded firmly to the threats levelled by an India still not entirely reconciled to the dismemberment of the subcontinent, and through his statesmanlike approach to International affairs did much to establish Pakistan in the eyes of the world. When in September 1949 India imposed a total trade boycott because Pakistan refused to devalue her rupes alongside the Indian rupes, Liyakat 'All Khan was unmoved, and eighteen months later India relented. When in both 1950 and 1951 India massed her forces on Pakistan's borders, he combined staunch reply with a readiness to seek an immediate resolution of differences by negotiation. It is sometimes thought that he need not have accepted India's offer of a ceasefire in Kashour in 1949, but it is difficult to see, in view of the condition of Pakistan and her resources at the time, what choice in had, in the world is large he maintained a determined policy of non-alignment; he attended the conferences of British Commonwealth prime ministers but quickly made it clear that Pakistan should not be "taken for granted", he made a personally successful official visit to North America in May and June 1950 but made no foreign policy commitment. He did, however, make commitments in the Muslim world and embarked on that search for a leading role amongst Muslim states which in the succeeding decades characterised his country's foreign policy. International Islamic conferences were held, and by mid-1951 Pakistan had signed formal treaties of friendship with Syria, Yurkey, Iran and Indonesia.

Within Pakistan, Liyakat 'Ali Khan's first concern was nation-building. He strove to make the fragments of the armed forces inherited from the British a truly national force, encouraging them to recruit as many of the under-represented East Pakistaids as possible and removing the remaining toreign officers. Brushing aside suggestions that, now Pakistan was won, the Muslim League had performed its task, he tried to mould it into a party of national construction. "Pakistan is the child of the Muslim League", he declared, "it is the duty of the mother to look after the child till it grows up", and to emphasise his point he became president of the Loague on 8 October 1930 and urged others to follow suit in drawing together party and government. Most important, he endeavoured to create a framework for politics in which all Pakistauis would be happy to work. There were great problems: autonomous provinces had to agree to surrender powers to the centre, a fair place had to be found for non-Muslim minorities, while the "uland", who knew that all sovereignty flowed from God and that they alone were equipped to interpret His law, had to be reconciled with those who believed that the people were sovereign and that power in politics should rest with their representatives. Livakat All Khan's first step towards creating a constitutionat framework was the Objectives Resolution brought before the Constituent Assembly on 7 March 1949. Although no more than a statement of intent, it marked out enough apparently common ground, particularly on the questions of sovereignty and minerities, for Pakistania to be able to proceed with constitution making. There followed the publication of the interim report of the Basic Principles Committee in September 1950 which created great, and in seems unexpected, opposition; the East Pakistanis were the most veciferous, fearing that their majority in the Constituent Assembly would be reduced to a minority, although they were more numerous than the West Pokistanis, Livakat 'All Kieliu responded by

postponing consideration of the report and deciding m hold general elections before grappling again with the constitutional issue. He has been criticised for this move, indeed for mishandling the issue altogether. On the other hand, his alm its holding elections was to create elected bodies which would be more firmly under central control. To this end, he used his powers as Muslim League president to vet applications for candidaries. He had just completed the task in the Pandiab, and was about proceed to the North-West Frontier Province, when on z6 October 1951 he was assassinated by an Afghan while addressing a meeting in Rawaipinds.

As a person, Liyakat 'All Khan was noted for charm, manners, simple tastes and an egalitarian outlook which led him of his own second to drop his hereditary title of Nawwab-zada. As a public figure he was noted as a practical administrator, as a witty speaker, and as a calm, shrowd and seitless politician, qualities which no doubt helped him to outstrip more experienced politicians in Dinnah's esteem. The full measure of his achievement will not properly be assessed until the Muslim League papers are fully open for consultation and the context of his last ton years is better understood. Nevertheless, he did much to bring Pokistan into existence and more than anyone else to nurture it through the first four very difficult years. Had he been spared, he may well have given his country a workable constitution, the lack of which came to be much felt. Rightly his countrymen bestowed upon him the title Karid-I-Millat, leader of the nation.

Bibliography: There is a description of Livakat 'All Khan's family in Sir Lepel H. Griffin and Col. Charles Francis Massy, Chiefs and families of note in the Punjab, revised ed., Labore 1909; memoirs of him will be found in Ziauddin Ahmad, ed., Quaid-i-bfillat Liaquat Ali Khan: lender and statesman, Karachi 1970; M. Rafigue Afral, ed., Speeches and statements of Quaid-s-Millat Lingual Ali Khan (1941-51), Labore 1967, and S. M. Ikram, Modern Muslim India and the birth of Pakistan (2858-2952), second ed., Lahore 1965; insights from those who worked with him closely can be found in Choudhry Khaliquezaman, Pathgay to Pakistan, Lakore 1961, and Chaudhri Muhammad All, The emergence of Pakistan, New York 1967. while his relations with Djinnah - considered in H. Bolitho, Jonnah: creator of Pakistan, London 1954; the background I his achievement will be found in Khalid B. Sayyeed, Pakistan: the formative phase 1857-1948, second ed., Oxford 1968; H. V. Hodson, The Great Divide: Britain-India-Pakistan, London 1969, and L. Binder, Religion and politics in Pakistan, Berkeley and (F. C. R. ROBINSON) Los Angeles 1961.

LIYUN, capital of the ancient kingdom of Leon and, at the present time, of the province of that name, to the south of the Asturias. The name comes from the Legio Septima Gemina Asturica, which established its costrum there in the reign of the Emperor Trajan. J. M. Blazquez (Extructura económica y social de España) includes it among the towns which were provided with walls during the Later Empire, and its role was very slight for the

whole of the Visigothic period.

The Arab geographers mention Liyun only rarely. Abu 'l-Fida' says that "Ibu Sa'id places it in 10'5' longitude and 46°55' latitude. It is a town in the seventh climate, in the land of the Djalalika. According to Ibn Saud, it is situated to the northeast of Zamora. It is the town of which al-Mansûr b. Abl 'Amir [q.v.] destroyed the main rampart. It lies on a river which flows into the Zamora river. It is the finest and most important of the towns of the Djalalika". Al-Himyari (K. al-Roud al-mi'ldr, ed. Lévi-Provençal, no. 164) makes it "one of the capitals of Castile/Kashtūla. It is a populous town, where business, commerce and stock-raising are carried on. The puople there are belicose and touchy". Al-Makkari (Nofh al-lib, ed. 1. 'Abbās, 1, 143, 346) mentions the existence of tin mines in the region of Francia and Liyun.

The geographers and historians knew perfectly well that there existed a kingdom, with a capital (kā'ida) of this name, but generally preferred to utilise for this state the ancient term Djillikiyya or Diallikiyya [q.e.]. The information which one can glean from the chronicles is very sparse, a faconic attitude probably due in part to the fact that political and military activity there passed at an early date, and thenceforth almost exclusively, into the hands of the people of Kashtala [q.v.].

At the time of the Muslim conquest, the occupation of Liyun is meationed neither by the Fath al-Andolus, the Ablibar madimala nor the Iftitab al-Andalus of Ibn al-Kūtivya. It is a reasonable assumption that the town was included in the capitulation of Petrus, Dux Cantabrine, which opened up all the Galicia-Asturias-Léon region. It was at that time probably a small, unimportant place with no Muslim governor. The Arab texts are indeed silent about it, and agree with the Chronica de Alfonso III in making Astorga and Oviedo the seat of "Munnuza", the Muslim governor of the region at the time of Pelaye's revolt.

The town must have been more or less officially abandoned at the time of the great rising of Eurbers who emigrated from northern Spain in the years after 123/741. According to the Chronica Albeldense (602), "Frucia, brother of Alfonso I, ontered Léon", and the Chronica do Alfonso III (615-16) specifically says that "Abela, Astorica, Legionem, Septemmancas . . . Onures quoque Arabes gladio interficiens xristianos autem secum ad patriam ducons", events whose veracity seems to be confirmed by the parallel version of the Akhbur madjunifa. It is essentially these texts which C!. Sanchez Albornoz depends on for his theory of the Despoblación y repoblación del valle del Duero, Buenos Aires 1966. A partial return, spontaneous and unorganised, by small cultivators and herdsmen must have taken place under the shelter of the ramparts of the town, since, according to Ibn 'ldhari (al-Bayan al-mughrib fl akhbar al-Andalus me "I-Magheib, ii, 346), 'Abd al-Rahmaa Il in 231/945-6 sent "his son Muhammad, who besiaged, bombarded, pillaged and burnt Léon, without however being able to destroy the 17-cubits' high walls". The Chronico Albeldense mentions under the reign of Alfonso "a campaign by al-Mundhir which is said to have reached as far as the town and which had to retreat with heavy losses", but one cannot tell from this whether it is the attack mentioned by the Bayan or not. The town remained uninhabited until 860, when Ordoño II "repeopled the deserted towns from which Alfonso I had expelled the Chaldaeans: Tuy, Astorga, Léon and Amaya" (Chronica Alfonso III, 619).

Ibn Hayyan (Muklabas, v, 120, 325, 344) makes Léon the capital (hā'ida, hadra, dür mamlaka) of Djallikiyya. The town was the objective of two raids by al-Mansur b. Abl 'Amir, one in 372/982 and the other in 376/986, leading to the sacking and burning of the town ("Udhri, Masslik, ed. al-Ahwani, 80).

Ibn 'Irihart (Bayan, Iv., 80), as well as 'Abd at-Wahtd al-Marrakusht (al-Ma'ajib fl talhhis akhbir al-Maghrib, 235, 268) consider Liytht solety as an urban centre since they make Altonso VII "the Slob-berer" lord of Cindad Rodrigo, Avila, Léon and Zamore, information also reproduced by Ibn Khaldun in his K. al-'Ibar.

As opposed to this view, 1bn al-Khatib (K. A'mall al-a 4dm, ed. Beirut 1956, 74, 241) speaks of it as a kingdom and not as a town ("the Christians of Kashtāla and Liyūn"). He has preserved for us an additional plees of information by including in the Curious Dhike al-ta'rif bind amkana min muliik alnasard bi '!-Andalus, which comes at the end of his A'mali, material which the Christian chronicles mention about the physician-ambassador Yûsuf b, Wakkar al-Isra'ili al-Tulaytuli. This chapter uses phonetic transcriptions of Christian names and titles, giving also the Christian equivalent for hidri dates; it is interesting to compare with this Ibn Khaldun, who, in his K. al-4Ibar, also changes at approximately this time summis [q.r.] into sumj. Ibn. al-Khatib reports thus that "in 148/766 [error for 768], Aurelio, brother of Froila, governed the turnitory of the Asturias, Galicia, Portugal and part of Léon"; "in 248/863 [error for, m the earliest, 866] Alfonso the Great transferred the dar al-mulk of his father to Léon and styled himself King of Léon"; and "Castilian separatism began under the reign of Garcia in 297/909 [correctly 911-14]", a period corresponding in fact to one of the phases of Castilian expansionism [see KASHTALA], Ibn al-Khatib then mentions the birth of the kingdom of Castile under Fernan Sanchez, and his struggle against the Léonese state before its merging into the kingdom of Castile and Léon, as well as the origin and the succession of Portugal. The information given by Ibn Khaidan in the chapter of the K. al-'lbar called "Notice on the Dialatika Band Idhfunsh, kings of al-Andalus after the Goths . . . ", although very similar to that of Ibn al-Khatfb, is not a mere piece of plagiarism but seems rather to come from a parallel source of information.

LIZARD [see DADB].

LODIS, a North Indian Aighan tribe and

dynasty, 855-932/1457-1526.

r. History. Aighan tribes from the mountainous Sulayman regions regularly migrated the plain of the Indus; they joined the invading armies auxiliaries in war, and came as traders or herdsmen during peace. They moved to the bills in summer and to the plains at the onset of winter. Among these emigrants were the ancestors of the Lödi sultans of India. For the Aighans in India generally, see Pathan and ROBELA.

The Lodis are related to a clan of the Ghilzay tribe of Aighānistān [see GHALZAV] and ruled over parts of north India for 77 years. Aighāns came to the Indus plains from Rôh [q.v.] as early as 934[711-12 with the army of Muhammad b. Kāsim, the conqueror of Sind, and allied themselves politically with the Hindū-Shāhī [q.v.] rulers of Lahore, and receiving part of Lāmghān [see Lāmghānār] for settlement, built a fort in the mountains of Peshāwar to protect

the Pandfab from raids. During Alptigin's government at Chazna, when his commander-in-chief Sebuktigin raided Langhan and Multan, the Afghans sought help from Rādia Diaypāl who appointed their chief, Shaykh Hamid Lōdi, viceroy of the wildyets of Lamghan and Multan. Shaykh Hamid appointed his own men as governors of those districts, and thereby the Afghans gained political importance; their settlements stretched southwards from Lamghan to Multan, incorporating the tracts of Banuh and Dērā Ismā'ti Khān.

Later, a family of the Lödl tribe settled at Multan, which was ruled in 396/1005 by Abu 'l-Fath Dawad, a grandson of Shaykh Hamid. There was also a strong Alghan element in the forces of Sultan Mahmud of Ghazna and Shihab al-Din of Ghur, The latter in his third campaign to India [see 6#0x105) had 12,000 experienced Aighan horsemen in his army, and he defeated the Radiputs under Radja Pithawra of Dibli. On his return journey, he settled in the hills of Roh, the Sulayman mountains, Ashnaghar and Badjawr-a trect extending from Kabul to the Indus-and appointed Malik Mufizz al-Din Ghuri at the head of 20,000 men to transplant the Afghans from Ghur to the new settlements, thereby paving his way for the conquest of Hindustan. Each clan was granted it it' in the environs of Nilab and the Indus.

Serving thus in the army of Shihab al-Din Ghori, the Afghans rose to power and settled over a large tract of land. Their leader 'All Kirmākh was appointed governor of Multan in 582/1186-7, Sultan Balban of the "slave kings" posted them m garrisons in Bhodipur, Kampila and Patiall against the Hindu rebels in the D6'ab. During the reign of Muhammad b. Tughfuk, they rebelled under their leader, Malik Shahu Lodi, in Multin = some time in 741/1341, and killed its governor. Since the time of seizure of the Pandiab by the Ghaznawids, the movements of Afghan merchants increased considerably. They started participating actively in the politics of northern India from the time of Muhammad b. Tughluk and particularly after Firuz Shah Tughluk's death (790/1388), during the decline of the Turbluk

dynasty and the weak rule of the Sayvids.

During the invasions of India by Timur (g.v.) in 801/1398, Aighans fought on both sides, Malik Khidr Lod!, Malik Bahā' al-Din Dillwani, Malik Yūsuf Sarwani and Malik Habib Niyazi joined the army of Timur at the head of 12,000 Afghan mercenaries. About this time, Sultan Shah's father Malik Bahram had come as a warrior-trader to Multan from Balot, a pargana in the Birûn-i Pandinad sarkar on the border of Balüčistán, according to the A'in-i Akbari. He quarreled with his two brothers Malik Mahmod and Malik Mawdil, and took service under Firus Shāh Tughluk's governor at Multān, namely Malik Mardan Dawlat, entitled Malik al-Shark Nasir al-Mulk (Tebakdi-i Akbari and Ta'rihh-i Mubarak Shāht). Malik Bahrām organised a tribal militia. After his death his sons Sultan Shah Lodl, Malik Firaz, Muhammad, Malik Khyadja and Mulik Kālā stayed in Multān while the city passed, during political confusion and unrest, into several hands, After the death of Malik Mardan Dawlat, his son Malik Shaykh and his adopted - Malik Sulayman were appointed after his death governors of Multan in succession by Firms Shah Turbluk. Malik Sulayman was succeeded in the governorship by his son Khidr Khan, the founder of the Sayyid dynasty at Dibil (see DIRLI SULTANATE), who had been appointed governor of Multan and the Pandiab

by the Tughtukids in recognition of his military service, but later betrayed the Tughtukids and joined the invading Mongol force under Tugur.

Sulfan Shah Loui, who succeeded his father Malik Bahram as chief of the Afghan mercenaries, distinguished himself in the service of Khidr Khan and helped him in overpowering the Tughlukids. He succeeded in killing Multu Ikbal Khan, the de facto ruler of Dihll and the staunth supporter of Mabmūd Tughluk, in the battle of Adjodhan fought on the banks of the Satiadi [18 Dlumādā | 808/11 November 1405). Thus Multan, together with the Pandiab, seceded from Dihli, and Sultan Shah Lodi was put in charge of Sirhind with the title of Islam Khan. During the time of the Sayyid Sultan Mubarak Shah, of Khich Khan, the Aighan chief Sultan Shah Lodi obtained power and held Sithlind with the neighbouring districts in diagir [q.v.]. He settled there with his four brothers and gathered a strong contingent of 12,000 horse, mostly of his own tribe. Malik Kala married his uncle's daughter, received Dawrala (Sirbind sarkar) in diagir and served under Nasir Khan, who held Multan m governor on behalf of the Sayyid Sulfan Khide Khan. His child was named Babial, the subsequent founder of the Lod1 dynasty at Dihli, He died in a struggle against the Niyāzī emigrants in the Indas valley, and the child was brought up by his uncle Mailik Sultan Shah Lodi at Sirbind. Finding him a soldier of promising character, Sultan Shah Lodl gave him his daughter. Shams Khātūn, in marriage. Once in Sāmāna be visited a local holy man, Sayyid Abban, with two companions, (Ta'rikh-i Shaki, 3: To'rikh-i Dawadi, Sarkar ms., 4); the Shaykh demanded 2,000 lanks in exchange for the throne of Dihli if any - of there was willing so to hazard for it. Bahlul Lodf had with him only 1,300 lankes which Mi instantly offered, and was congratulated in the future ruler of India. Although he was taunted by his companions for this transaction, he drew Inspiration from the Shaykh's proposal and had me cause to regrat either the throne of Dihll or bis mift.

Sultan Shah Lodi nominated Bablul as his heirapparent in preference to his adult son Kuth Khan. On his father-in-law's death in Radiab 824/March 1437, the Afghan militia became divided into three camps under Kuth Khan, Malik Firaz, (son and brother of Sultan Shah Lodi [= Islam Khan] resspectively) and Bahlfil Lodi; the latter won over his uncle Malik Firuz to his side against the confederation of his rivals Kuth Khan and Muhammad 5hah, the Sayyid ruler | Dibit. The latter sent a force under his wazir Malik Sikandar Tubla and Diasrath Khokar m drive the Alghans out of Sithind and to deprive Bahful Lodi of his diagir. The Aighaus, defeated, fled to the bills. Malik Firuz was made captive and his son Malik Shahin Khan was killed. Bahlel escaped, and, on Diasrath's return to the Pandiab, he managed to re-gather his scattered army. Malik Piruz escaped from Dihli and joined Bahlül. The contrite Kuth Khan Lodi also joined Bahlul's camp. Thus remustering his forces, Bahlul Lodl recaptured Sirbind in 840/1436. The Sayyid Sultan Muhammad Shah sent a large force under one of his chiefs, Hådidi! Shudani, better known as Husam Khan, which was defeated at Kara (Kharar in Anbala district?) near Khidrābād Sadhūra, and Husām Khān escaped to Dihli while Bahlul established himself firmly in the Pandiab.

In 844/1440, when Dibli was threatened by Mahmud Khaldji I [q.v.] of Malwa, the feeble Sayyid Sultan of Dibli appealed to Bablul, who agreed to help

him on condition that Husam Khan the prime minister was to be replaced by his nominee Hamid Khān, The Sultan acted accordingly, without taking into account the implications, and Husam Khan was killed. Bahlül Lödi took the field with his contingent of 8,000 Aighan and Mughal militia and 20,000 of the royal army against Mahmud, who after a day's desultory fighting sued for peace, and retreated to deal with m serious riot in his own capital, Mandu [g.v.], and an invasion by Sultan Ahmad of Gudjarat. This retreating Malwa army was waylaid by Bahini. Dilyll was saved from annexation to Malwa, and Bahlul was awarded the title of Khan-i Khanan, and confirmed in his diagor at Sirhind, with Labore and Dībālpūr added to his fiel. He then rebelled against Muhammad Shāh and annexed Sunām, Hisār Firūza and other districts of the Pandjab. Twice he made unsuccessful attempts to capture Dibli, once during the time of Muhammad Shah [d. 849/1445] and again during that of his son and successor Sultan Ala al-Din Alam Shah (849-83/1445-78). Circumstances were in his favour. 'Ala' al-Dlu 'Alam Sheh was a weak ruler. His authority hardly extended beyoud twenty miles from Diblt; hence the epigrams at Dibli tā Pālambādshāhi Shāh 'Alam ("'Alam Shāh's rule extends from Dihli to Palam"). The ill-advised Sultan planned to kill his prime minister Hamld Khān, who escaped from Bada'un, occupied the palace of Dihli and invited Bahlul to take over. The latter came, but eleverly declined the offer as the time was not ripe. Subsequently seizing an opportunity, he had Hamid Khan arrested by Kuth Khān Lodi and occupied Dihli. He offered the throne to Sultan 'Ala' al-Din 'Alam, who however abdicated in favour of Bahlitt, preferring himself to live a life of ease and seclusion at Bada'un. Bahlul, thereupon, ascended the throne of Dihli with the title of Abu 'i-Muzaffar Bahlol Shah on 17 Rabi' I 855/19 April 1451.

After the capture of Dibli, Bahlul extended his territory over north India up to Diawnpur [q.v.]. The last decades of the 9th/15th century witnessed fluctuating struggle between the Sharki dynasty of Djawnpur and the Husayn-Shahl dynasty of Bengal, and then between the Lodis and both of them. Bihar remained throughout a bone of contention. At first, Bahlül succeeded in driving out Husayn Shāh from his capital (Diawnpur)
capital (Diawnpur) castern possessions of Cunar, Cawne and Bihar. The Lodi Sultan proposed in maintain the status que, provided that Rusayn Shah did not barbour his enemies, but the latter was bent on recovering his lost territory. (An inscription confirms the control of Husayn Shah over Bihar in 892/1486-7, but it was annexed by Sikandar Lödi and put in the charge of Darya Khan in 901/1495-6, as in evident from another inscription.) Husayn Shah Sharki was driven to Kahalgaon, 23 miles east of Bhaga/pur. The Dihli army crossed the Ganges from Paína, while another contingent marched from Darwishpur via Kuthighpur near Manër Sharf, against the Bengal Sultan 'Alla' al-Din. To oust the Lodi troops, Prince Daniyal was sent by his father at the head of Bengal army towards Munger (Monghyr). The two armies stood facing each other for some time and ultimately a non-aggression pact was signed at Birh to the west of Monghyr. Even after this, the boundary remained fluctuating. Bhagalpur me perhaps, the western extent of the Bengal sultanate during the height of Lodi power; Sikandar Löd?'s bounds definitely extended up to Barh in the east (cf. JBRS [1955], 358-63).

Bablul considered himself a chief of chiefs rather

784 LÕDÍS

than an absolute autocrat. The Afghan chroniclers speak highly of his simplicity, sense of social equality, bravery and generosity. In tollowed strictly the Shaifa, and spent much time in the company of learned and pious men. He died in Shaiban 891/July 1468 at Malawali near Saket, a short distance from 'Afgath [q.v.]. His body was brought to Dihli and buried in the Bagh-i Diud.

Before his death, he ensured Lôdi dominance in north India by placing his second son Bārbak on the Djawapur throne and assigning Mānikpur to 'Ālam Khān Lôdi, Bahrayê to his nephew Kālā Pahār, Lakhra'ô and Kālpi to A'zam Humāyūn Lôdi, and Badā'ôn to Khān Djebān Lôdi, while Nigām Khān held the Pandjāb, Dihli and most of the Dô'āb.

He was succeeded by Nipām Khān
Sultān Sikandar Lödl, who reigned until 923/1527-18. Bahlūl
chief of chiefs; Sikandar Lödl considered himself a fully-fledged Sultān. He was a good administrator, a just ruler and a good poet. He was able to control the unruly Aighāns by introducing the system of inspection, auditing accounts and registering a hilya (descriptive roll) [see pagit u raspitus in Suppl.].

Sikandar Locil was succeeded by his son Ibrahlm Lodi at Agra on I Dhu 'l-Ka'da 923/22 November 1517. To establish bimself, he had to fight against his rival brother Sultan Dialal al-Din of Kalpi and other rebels. After nine years, M had to light a defensive battle at Pinipat [q.v.] against the Mughal invader Muhammad Babur of Farghans. The Afghan Sultan, who had been betrayed by Dawlat Khan Lodi, lost the battle, was killed on Friday, 8 Radiab 932/20 April 1526, and was buried by the roadside. Although the Alghan sultanate passed into the hands of the Mughals after about 77 years' rule, the Afghans continued to fight against the surerainty of the Mughals under the Karranis and Nültanis in Bengui until they were finally subjugated by the Mughai emperor Djahängir at Nekudiyala about

30 miles from Dacca in 1021/1612.

Ibrahim Lödi possessed military skill, but lacked tact and moderation. His idea of monarchy in which kin relationship was not counted was in accordance with the traditional idea of monarchy in India, but his repression in the powerful nobles of the Nühanl, Farmulf and Lodi tribes caused his fall and death. He took drastic steps for establishing his suzerainty, but failed miserably in crushing the nobility which had reduced the Sultan to a meet figure-head from the time of Muhammad b. Tughhik onwards, which had been granted much license by his grandfather, but which had been largely controlled by his father, with his benevolent and tactful methods, mothods which Ibrahim Lodi himself lacked. He did not know how to win over and conciliate an aggricated noble and was opposed to the equality which was a tradition of his own Afghan race. He hardly tried to patch up his differences with his nobles and to set up a joint defence against the invading Mughal force under Babur. A correct use of the wealth which he had amassed in great quantities, and conciliation of his nobles, would have earned the loyalty of the nobility to him and helped him in bringing a still larger and stronger army to the battle field of Panipat than he could in fact assemble there, thus presenting a united resistance to the Mughala.

2. Administration. After years of insecurity, a stable government was established by the Lôdis, essentially a military oligarchy; for, with the exception of a few Rādipūts, all officials and didgleddes were Afghāns, mostly of the Lôdi, Nūhāni, Farmūli and Sarwāni tribes. Bahlūl had considered himself

as primus unter pares; Sikandar Lôdt insisted on the dignity of a sultan, thereby going against Aighan tradition. For the civil administration under the Lôdis, see parisa. 6. India (a) The Sultanate of Dibli, and wizara.

3. Social and cultural life. Timur's invasion caused considerable damage to Indian culture in the Sultanate period, which shifted from Dihll to provincial capitals until the establishment of the Lödl dynasty. Sikandar Lödl's reign witnessed a renaissance of learning and culture in Dihll. Hindûs began to take interest in Muslim learning and Dungar, a Hindû poet, taught in a Muslim college. Sikandar patronised music, and gathered poets and musicians in his court. The Sultān's cultivation of music led to the compilation of a rare work, the Lahdjat Sikandar Sadhi wa-laja'if-i lā-mutanāhi, a ms. of which is preserved in the Tagor library of Lakhna'o University.

There was some rapprochement between Muslim Süffs and Hindil yögis; the Bhakti poets Caitanya, Kabir, Nānak and others compelled some popular attention in the 9th/15th and 10th/16th centuries, under Sikandar Lödi and his successors. There some contemporary instances of social intercourse between Muslim saints and Hindil yogis, and of Muslim followers of Hindil saints, and vice-versa. See further HINDIL, and also KABIR; HALIK MUHAMMAD

mayasi; manali, in Suppl.

(S. M. IMAMUDDIN)
4. Architecture. Lödl architecture is described in the articles diff. Sultanate, art, and hind, vii. Architecture. There are many sites not mentioned in those articles where monumental tumbs of the Lödl period are found, especially in the neighbourhood of Sirbind (4.0.), Sohna and other towns in the Mawat, and in the environs of Agra. There is still an adequate study published on Lödl architecture as a coherent whole, and a competent survey is badly needed. Recent research suggests that later Dibli Sultanate architecture in the regions of eastern Uttar Pradésh and Bibar has many features of a regional style not described in the classification of styles in Bind, vii.

5. Coinage. Gold and silver coint, alread) very scarce under the Sayvids, were not continued by Bahidi. His standard coin (= knhh), a billon issue of 9.2 to 9.4 gras., was of a traditional north Indian (80-rati) standard, but issued in sufficient quantity for the sobriquet of bahidit to be applied to it. Sikandar's standard lanka was a 32-rati piece, hence of less than half the value of the bahidit. The oil Ibrāhim are confined to copper small change. There are a few issues of autonomous Lödi governors from e.g. Kaipi [q.e.]. See further DAR ALPARE and SIKKA. (J. BURTON-PAGE)

LOGIC (see MANTIK). LOJA (see LAWSKA).

LOMBOR, an island belonging to the Indonesian province of the Western Smaller Sunda Islands (Nuss Tenggero Busal). In the west it is separated from Bali by the Bali Strait, in the east by the Alas Strait from Sumbava. It is some 4,670 sq. km. in area, and has approximately 1,850,000 inhabitants. There are extreme differences of climate between the humid western and the more arid southern and eastern parts in the island. Mount Rinjani (3,730 m.) is one of the highest mountains in South-East Asia. Mataram, situated close to Lombok's west-coast, is the provincial capital. The Island is divided into three kaonpoten (regencies): West, Central and East Lombok.

The main population group, comprising as. 95%, are the Sasaks who me nominally adherents of Islam. Approximately 3% are of Balinese origin, in addition to ""orang Buda" who keep to old animistic beliefs, some Chinese, and few Arabs (about 140 in West Lombok).

Influence of Mahayana Buddhism in the 8th and 9th centuries A.D. is suggested by some recently-discovered Buddhist statues in the eastern part of the island. After the conquest of Bali by the paiss Gajah Mada from the Hindu-Javanese empire of Majapahit in 1343, Lombok met with the same fate. On the initiative of Trenggana (1521-46), the third ruler of the first Islamic kingdom on Java, Demas, Islam was introduced in Lombok among the Seseks.

Tensions between the Sasak rulers and the kings of Sumbawa during the 17th century finally led to the intervention of the Balinese kingdom of Karangasem, which established its supremacy to Lombok at the beginning of the 18th century. Mataram, close to the western shore and thus in neighbourhood to eastern Ball, developed as the most influential tentre on Lombok. Its king was counselled by Balinese nobles, and the districts, too, were governed by Balinese, whereas their decisions were executed by Sasak officials who were often descendants from the old indigenous nobility.

In 1849, Karangasem lost its supremacy over Mataram, which maintained closer relations with the Dutch at Batavia. But the Balinese noblity still tried to develop western Lombok into a second Bali, and by court declaions Sasaks were eventually made slaves and had to in that rôle. Finally, the Sasaks asked the help of the Dutch Indies government, which organised in 1804 an expedition against Lombok "to protect the Muslims", to abolish the dynasty, and to turn Lombok into a Dutch colony. Besides its political consequences, this expedition resulted in the discovery of the manuscript of the Nagarahragama, a chronicle of the kingdom of Majapahit from the 14th century.

Although the Sasaks are usually considered to be Muslims, old customs, beliefs, and rules (adat) are still dominant. Especially during the 19th century, two parallel movements brought some change into the traditional social structures: the attempts of certain circles of the pobility to exert a greater degree of power, which they justified with adat convictions, and which was based on the eventual support of the Dutch; and, the other side, the attempts of mainly commoners to gain some influence too. For them, Islam with its more democratic concept of society, provided sufficient motivation, and at the feelings among the people.

It was the latter group, however, who in the course of time proved to be more influential than the former one. The features of this development are similar to those in other rural areas in Indonesia. The traditional nobility, which - descendants of the original semidivine here has a strong attachment to adat, disqualified itself by its affiliation to the foreign powers who ruled the area, whereas for the Muslim preachers, lacking those affiliations and usually themselves originating from the lower strata of society, it was much easier to convince the commoners that they were defending their interests. Externally, they were opposed in the habits and convictions of traditional Sasak culture. But as they were usually oriented towards Islamic traditionalism, a number of Sasak cultural and ceremonial notions were in effect absorbed into their understanding and practising of Islam. Besides the questions of leadership and social control, it was especially in regard to the matrimonial customs and kinship relations where discrepancy between adat and Islam was felt, and this caused internal tensions in Sasak society, which on the whole is moving towards a gradual acceptance of the custom and habits of traditionalist Muslims. This happens mainly through intermatriage between adat-obeying and Muslim partners, where the former one adapts himself to the Muslim partner. But the transition from adal to Islam is much less a matter of changing doctrines than of changing practical behaviours, and it is mainly obedience to certain demands of the Shari's which serve as the criterion for considering someone as a Muslim or not.

LORCA [see LUNKA].

LOS PEDROCHES [see PARS AL-BALLUT].

LOT [see LOT].

LUBAN (laban, lauban) is frankincense, the dried-up sap produced by notching some kinds of Boswellia, obtained in Somalia and South Arabia in the form of yellow resin-grains. As is well-known, the term is Old Semitic: Assyr. lubanu, old South Arabian I-b-n, Hebr. Ibonā, Aram. lebontā (lebottd), Eth. laban, from which have been derived the loanword λίβανος, λιβανωτός, Latin olibanum, with derivations in the Romance languages. The name can be traced back to the original meaning "white" (Hebr. labdes), after the colour of the fresh, milk-white gum-resin, exuded abundantly from the notched trunks and after time solidified into yellow grains, which are then detached from the trunks or gathered from the soil. At least m often as ludge, there appears in Arabic the synonym kuadas, according to most authors of Persian origin, but perhaps to be derived from yov8poc "grain"; this term may have become an independent form, derived from the combination χόνδρος λιβάνου "frankinceuse-grain".

The trankincense trade is extremely old and has been treated repeatedly—but at times inadequatelyin comprehensive descriptions. In the first place, frankincense together with myrch-formed the richness of the old South-Arabian states of the Minagans and Sabagans; the loss of the frankingense monopply was one of the main meet of the collapse of this commerce fundamental for their existence, and consequently of cause of their downfall around the middle of the 5th century A.D. (see the good survey by W. W. Müller, All-Südarabien als Weihrauchland, in Theol. Quartalschrift, exlix (1969), 350-68). The Arabic sources point in the same direction. According to al-Aşma'l, three items were found only in the Yemen, and indeed abundantly there: of-wars (curcuma, a dye-plant), al-lubán and al-'asb (Peterium) (cited in al-Dinawari, The book of plants, ed. B. Lewin, Wiesbaden 1974, no. 627). According to Bedouin from 'Uman (in al-Dinawari, Le dictionnaire botanique, ed. Hamiduliah, Cairo 1973, 971, 979), frankincense is only found in al-Shihr. Shihr 'Uman in fact, as a small briar which reaches up to two cubits high and which grows only in the mountains; its leaves resemble those of the myrtle [see As in Suppl.], as do its fruits, which have a bitter (read marára instead of harára) taste; its resin, also used for chewing and called kundur, wells up in some places struck with the hatchet and stays there until harvest. According to al-Dimashki, Nukhba, od. Mehren, St. Petersburg 1866, 87, frankincense is obtained on Sukutra (Socotra) and in some regions of the Yemen. After Matt. ii, 11, al-Tabari, i, 729, 1, reports verbatim that the Magi brought gold, frankincense and myrth. Lice infestation is caused by two different things: by taking excessive delight in dried figs and by burning frankincense (1bn Kutayba, ^{c}Uy za, iti, Cairo 1930, 294).

The best frankincense comes from the male plant (lubán dakas - the λιβανωτός άρρην of Diuscorides); it is white and firm and has round grains which are gummy when broken open. The whits frankincense (Indán abyad - Albertot Aguado) | also named as a noble variety; finally are to be mentioned the Javanese (in fact, Sumatran) frankin-(lubda diawl), i.e. benzoin, obtained from various kinds of styrax-trees whose fumes are said to remove a cold in the head, and the reddish, Indian frankincense. When, however, the geographers speak continuously of the frankincense of Arabia, this statement is based more on a literary topos than on knowledge of things on the spot. The critical Marco Polo remarks explicitly that he does not want simply to repeat these literary accounts, but to report the personal information of the frankincensetraders. According to these tast, frankingense was particularly cultivated in two regions of South Arabia in "Escier"-apparently al-Shihr-and "Dufar", the ancient Zafar. In al-Shihr, he further reports, the lord confiscates the entire harvest, pays the cultivator a low price, and sells it to the traders at a sixfold price (for this report, see W. Heyd, Ristoire du commerce du Levant, ii, Leipzig 1865, 614-16). Some other places named by the geographers which produced frankinceuse lie close to each other and belong to the region of Makra [q.v.]. The fact that at times scanty production of frankincense could not always satisfy the sustained and high domand in East and West, led to numerous adulterations (S. Labib, Handelsgeschichte Agyptons im Spätmittelatter, Wiesbaden 1965, 334). Nahray bon Nissim, a Jewish scholar, merchant and banker, called al-tagis almaghribi and well-known from the Genisa documents, carried on a widespread trade in frankincense in the Mediterranean area in the 5th/11th century (S. D. Goiteln, A Mediterranean society, I, Berkeley and Los Angeles 1967, 154).

The medicinal use of frankincense, described tensively by Ihn al-Baytar, goes back for the greater part to Dioscorides, from whom was also borrowed without examination the enumeration of several kinds, together with their Greek names. According in him, frankincense has a beating, drying and astringent power, expels darkening of the pupils, causes wounds to scar over and checks haemorrhage. It softens virulent abacesses and, applied in combination with vinegar and pitch, removes warts and eruptime. It is good for earaches and, combined with other medicines, for illnesses of the trachea and of the intestines. For healthy people, it can be dangerous, for it may cause madness and, if drunk with wine, even death. Frankincense is burned by putting it in a mussel-shell and setting fire to it. Shortly before it is fully consumed it must be covered up so that the fire is smothered completely in order that the frankfucense is charred and not reduced to ashes; it can then me easily be pulverised. Various supplementary observations were made by the Arab physicians, such = the following: frankincense "burns" pathological phiegms, dries up excessive humours in the breast, strengthens the stomach and warms up a cold liver. Dissolved in water and taken daily, it increases the reasoning power and eliminates loss of memory. It checks diarrhoea and vomiting, calms palpitation of the heart but can also lead to mental disturbances. When chewed, it strengthens the gums. Its bark is good for haemorchages and intestinal ulcors. The back of the frankincense-tree was often adulterated with that of the stone-pine, but the fraud could easily be detected; when burned, pine-resin smokes while frankincense burns with I flame. Aparl from genuine medical science, frankincense is until now still of great importance in popular medicine and magic, cf. e.g. for Egypt, M. Meyerhof, Der Basar der Drogen und Wohlgerüche in Kairo, in Archiv für Wietschaftsforschung im Orient, iii, 3/4. Berlin 1918, 202, and for North-West Africa, Helga Venzlaif, Der marchkanische Drogenhändler und seine Wara, Wiesbaden 1977, 67 ff.

(A. DIETRICH)

LUBNAN, Arabic name of the Lebanon. The Lebanon belongs to the sphere of Arab culture and of Islamic civilisation. It is also one of the components of the Christian world and of the French-speaking community. Created # state in 1920, it seeks its justification, # do all the countries of the contemporary Near East, through the quest for # vary ancient identity. With the prosperity of their merchants, with the Biblical symbol of the cedar # their flag, or with the violence of the civil war which broke out in 1975, the Lebanese are # part of the myths and realities of the peoples who, from the Mediterranean to Mesopotamia, have based their civilisations on the patriarchal family, agriculture, the city, commerce and God.

The modern State of the Lebanon was proclaimed of September 1920 by General Gourand, High Commissioner of the French Republic to the Levant. Within the troutiers allotted to it, and which then carned it the title of "Greater Lebanon", it occupied an area estimated today as close to 10,450 km², measuring no more than 210 km from north to south, and with a breadth of 40 to 75 km from east to west. It

is bordered to the north and east by the Syrian Arab Republic, to the south by the State of Israel, and the west it has an open coastline in the Mediterranean. Like the mutasarrifiyys of Mount Lebanon, the Ottoman sandias which preceded it, dating from 1861, it took the name which had into the attributed, progressively, to the whole of the mountain range which stratches from the Nahr al-Kabir, in the north, to the Nahr Litani, in in south; it contains, furthermore, part of Upper Galises in south, the central plain of the Bigas (the Coelesyria of Antiquity), and the western foothills of the Anti-Lebanon and of Mount Hermon.

In Implementation of Article 22 of the Treaty of Varsailles which created the system of mandates, and of the Treaties of San Remo (25 April 1920) and of Lausanne (24 June 1923) which officially brought about the end and the dismemberment of the Ottoman Empire, the Council of the League of Nations, with its decisions of 24 July and 29 September 1923, placed the Lebanon under a mandate entrusted to France. On a6 November 1941, General Catroux, on hehalf of the leadership of Free France, recognised the Labanon as "a sovereign and independent State". In October 1943, following the election to the Presidency of the Republic of the Maronite Christian Bighara at-Khūri and the appointment of the Sunni Muslim Riyad al-Sulb as President of the Council of Ministers, the ministerial declaration of the new government affirmed, with all the ambiguity necessary to a compromise, that "the Lebauon is a homeland whose countenance is Arab, which will benefit richly from the civilisation of the Arabs." It became a member of the Arab League me the foundation of the latter in March 1945.

Greater Lebanon had taken the most of the Lebanese Republic when it was endowed, in 1926, with constitution establishing = parliamentary and liberal régime. In 1943, when the Lebanese Government, with the support of public opinion, took its own destiny properly in hand, it set the seal on these institutions by means of the National Pact (al-Mithak al-materi), a verbal accord which, in particular, defined the division of the responsibilities of power between the different religious communities; it thus entrusted the Presidency of the Republic to ■ Maronite Christian, the Presidency of the Council of Ministers to a Sunni Muslim, and the Presidency the Chamber of Deputies to a Shiff Muslim. Herein lies the heart of the problem. Under the cover of a constitutional regime inspired by the French Third Republic, Lebanese political and social life was to be regulated by a sectarian division III responsibillities, conforming to the development which it has experienced since the beginnings of Islam [see DHIMxil and the changes that it had undergone in the Ottoman Empire in the period of the Tansimis [q.w.], If the declaration of 1943 stated that the Lebanon is a "homeland" (wefan) of Arab countenance, the Constitution made it a "nation" (umma). To which structure was the action of the state therefore to respond?

Social culture imposes its norms here, digging its root into a very distant past; there is more of history in this than in all the "Phoenician" justifications put forward today by the Christians, in in the unicity of civilisation to which the Muslims lay claim.

Populated from the very dawn of history, the coast accommodated active ports, the memory of which has been perpetuated by the Biblical texts, and of which contemporary archaeology has revealed

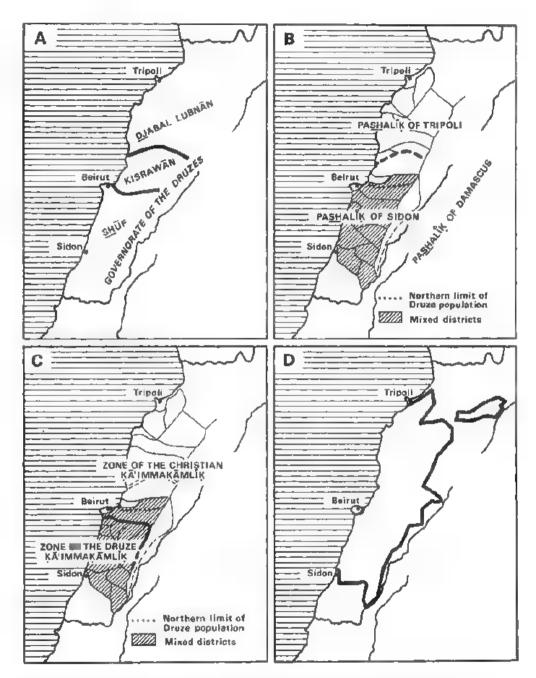

Fig. 1. Stages in administrative unification (after D. Chevailler, La société du Mont Liban à l'époque de la révolution industrielle en Europe, Paris 1971).

A. The historic regions; B. The Mountain inder the Shihāb family; C. Lebanon and the two kā²immakāmilķs, v843-61; D. The Province of Mount Lebanon in 1861. the stages and the levels of habitation, such as those superimposed on more than three millenia of glories and disasters in the remarkable site of Bybios (Diubayl). Under the Roman domination and the rise of Mediterranean treffic which accompanied it, 30,000 spectators could be accommodated in the immense hippodrome constructed in Tyre (Sūr) and recently brought to light, excavations having begun in the 1960s.

Shrouded by its forests and its rocks above the narrow coastal strip, the mountain was also penetrated by man at a very early stage, as is shown by its Canaanite and Aramaic toponyms; its inhabitants, probably fairly dispersed until the end of the aucient period, made a living through the expioltation of timber, transporting it on the first stage of the long route which led from Tyre and Sidon (Saydā) to Asia, and through brigandage. The haunt of the gods worshipped by the cities of the coast, it also attracted pilgrims to shrines adjoining the ruins of temples built in the Roman period.

After the mission of Muhammad, the Arab conquest, by modifying the horizons and the nature of power, while the coastal plains, open to the and giving access to all ventures coming from

790 LUBNĀN

the West, formed a passage hardly favourable to the prosperity of a sedentary life in the absence of security, the Lebenon range became one of the marches of western Syria where Muslim and Byzantine adversaries confronted one another, perhaps through the intermediary action of unruly local inhabitants with an aptitude for warfare. Furthermore, the virtual autonomy enjoyed by those who had established themseives there was favourable to the maintenance and development of heterodox and minority religious tendencies.

On the western slope of a mountain already largely deforested, between its first escarpment dissected by deep gorges and its high calcareous plateaus I the north or its ridges to the south, conditions for agriculture and human settlement were particularly favourable at altitudes between ood and 1,500 metres, since here erosion had uncovered soft and fertile mission of chalk. Sandstone, mari, clay and basalt rock provide a seem open relief in this area, where the climate is temperate, the air salubrious and water plentiful. Annual rainfall at this altitude in fact reaches levels of between 1,000 and 1,500 mm; most of the rainfall ____ from November to March, but, during the summer season, the high calcaroous surfaces retain the water which they have absorbed over the winter in the form of snow. The Lebanese mountain range is well-irrigated at = latitude where water is rare, because it stops the humid air currants coming in from the west; it forms a barriage between the sea and the stoppe. Behind the sheer eastern face, the inland depression of the Bikat [q.v.] becomes much more dry; climatic contrasts are accentuated: the Mediterranean littoral is replaced by the Syrian plains which stretch beyond Anti-Lebanon. The Bik4° me the wheat-growing region to which the mountain people came in search of part of their cereal requirements; as m result, it became a disputed territory because, as an enclave also penetrated by nomads, it became a prey to the rival and destructive aspirations of distinguished families who sought to impose their control on the mountain region, and of those who governed in

Over the centuries, the mountain people constructed and maintained walls of dry stone to retain the arable soll on the alopes, thereby establishing narrow fields which were arranged in successive and horizontal layers; these were put to full use when the farmers became capable of developing the cultivation of the vine, the clive and the mulberry. This remarkable and intricate system of terracing was an eloquent testimony to the need for regulating work communally in order to guarantee that of each participant, not only because they were subject—not without legal disputes—to the easements of rights of may, of distribution of water and of crop rotation, but also because the security of each element depended on the maintenance of the whole.

The men who constructed and cultivated these terraces were organised according to the two modes of grouping fundamental throughout this historical milieu: the patriarchal family and the religious community. Social life was at first determined by a system which sanctioned marriages within the framework of paternal parentage to form a patriarchal family which was turned in upon itself and of which the identity was established through a patrilineal genealogy and through references to a more or less legendary ancestor. Within this context, the family group found expression for its defensive reflexes ("my brother and I against the sun of my paternal

uncle, my paternal uncle's son and I against the stranger"), its obligations towards neighbouring family groups and its dependent relationships with more powerful families. In fact, the nature of its internal constitution did nothing to prevent, in the field of exterior contacts, the forging of links of solidarity and the establishment of hierarchies: the role of the latter was still significant in the 19th century among the families of the mountain region. This system, largely pre-Islamic in its origins, was adapted to different types of economic and political organisation, arriving progressively at its fullest expression during the Islamic period, in this mountainous milieu—it should be stressed—just 📰 among the Arab tribes, nomadic, sedentary or sedentarised. of which the conquest did nothing more than establish norms within the general cultural ambience. Thus it me not confined to religious community. but common to all, even though it underwent evolutions and variations in the course of the centures; furthermore, the identifying marks of social culture which it entailed, and the experience of which we vigorously maintained through the everyday vocabulary of the Arabic language, were shared by the mountain people with their entire human environment, with the inhabitants of the interior as with those of the coast, and with those of the towns as with those of the plain,

However, the higher collective consciousness relied for its support on something beyond this organisation, which could only engender unstable litions between separate and rival aguate groups; it became crystallised at the level of religious community which ascribed itself to a universalism of divine essence and thereby corresponded to a unitary aspiration where the social body ideally expressed its instinct for survival in its cultural identity and through its willingness to transcend personal interest. Islam was the perfect response to this need, while allowing the survival under its protection of other revealed religious which had proved satisfactory. While each religious community transcended the divisions of the family groups which composed it by uniting the latter in a common (aith, the different communities became juxtaposed in their turn in hierarchy imposed by Islamic Mw, analogous, in fact, to that which proceeded from the structure of society, The effects of this situation were to a great extent accentuated by the schisms and heresies provoked by the fragmentation of each of the great monotheistic religions into tendencies, different interpretations, communicas, liturgies, doctrinal and judicial schools, themselves forming faud'if (sing. f4'ifa), possessing their own distinctive characteristics in the service of the one God, and was exacerbating them in the course of continual confrontations between the communities. The historical ambiguity of the Lebanon. compared with other groupings of the region, consists in the fact that it was constructed on the banding together of minorities to form a majority.

How did the distribution of those who fostered their idiosyncracies in this mountain refuge develop? The reply to this question is most the keys to the progressive definition of "the Lebanon" by its own inhabitants. It is not to be easily answered, however, first because minformation on the population during the mediaeval period is still fragmentary and uncertain, furthermore because hypotheses on this subject have been exploited to develop fallacious or emotional claims which have served migathy community and political choices in contemporary Lebanon, with consequences that have not been

LUBNĀN

solely doctrinal. Passions are aroused and polemic crupts as soon as it becomes necessary to determine the appellation, past or present, of this mountain chain overhanging the Mediterranean, with the vindication magation of claims of affiliation with the populations settled there, whose origins, in fact, are so often lost in the obscurity of time and in successive human migrations. The controversy continues when the effort is made to define the society and personality of this region in the Ottoman period, with incantatory references to the Occident or to the Orient, the whole being a splendid mental and verbal confusion of all the ideological and academic models. Genuine scientific endeavour has suffered from these practices; on the other hand, their analysis makes for a better understanding of the mentalities involved and of their significance in the Lebanese context.

In the context of each religious group, the collective imagination and, consequently, the emotional outlook of the community are nourished by accounts of the origins of the group. In the case of the Maronite Christians, they have appeared to be all the more important in the Ottoman and contemporary periods because they have explained, or justified, their geographical and human association with the ancient and Biblical designation of "Lebanon", and the extension of the latter over the whole of the country. The stages in the mental realisation of this territorial appropriation are instructive. In the 16th and 17th centuries, following the epic and liturgical work of the bishop Dibra'll b. Kila'i, one of the preoccupations of the Maronite chroniclers, in particular of the patriarch Istifan al-Duwayhl, had been to arrange and give shape to stories of monks who had lived as recluses in the canyons of the Radishā under the patronage of the saint Mārim-or as successors to the patriarch Yuhanna Maruu-and had exercised ministry among the peasantry of the neighbourhood. These authors also insisted - the cohesion of the community around their patriarch and on their obedience to the orthodoxy of the Roman Church, which consolidated relations with Catholic Europe at a time when the Maronites were extending their territorial base in central Lebanon, coming into conflict with authority and encountering various spiritual and economic trends. To hagiography and to annals perpetuating the consciousness of the Maronite community, there may be added, especially since the end of the 19th and the beginning of the 30th centuries, the exploitation of scholarly works with a view to laying claim to a very distant past. Thus the Jesuit priest Henri Lammens had taken again the study of the "Mardaltes" (cf. EP, s.v.), a rather mysterious people which he believed could have established roots in northern Lebanon after Byzantium had diverted its religious turbulence into opposition to the Muslims, and Maronite authors recognised more some of their uncestors there, even though these last were tarnished by heterodoxy, However, a question then had to be answered: in relation to Islam and to the "Arabs", was this population to be regarded as allogenous or indigenous? The construction of a national past, conceived an uninterrupted chain of events, also led Christian authors to claim kinship with the Phoenicians, as they saw in this approach the best interpretation of implantation in time and space.

The monuments which the Crusaders left behind at Tripoli, Beirut and Sidon and on the footbills of the mountain, constitute for their part evidence for those passions which appropriate this past or reject it. Leaving aside sentimental and political reactions, it is nevertheless legitimate to wonder with what populations the "Franks" really came into contact. In the central and northern parts of the mountain, it were very probable that the dominant tonality was then provided by a population that was either Shiff or influenced by Shiffsm. Thus when the Mamlüks, operating from Damascus in the name of orthodox Sunnism, sought, # 704/1305, to recall where the power of the state was situated and to which community it belonged, it was against these rawāļid (sing. rājida), "people III dissent" or "recusants", as Ibn Taymiyya condemned them, that they launched in the direction of Kisrawan their victorious and devastating campaigns. This dispecof the Shi'is was favourable to an influx of Maronite population, moving in from the north, and to mextension of the authority of distinguished Druze families [see DURUZ] around the Gharb and the Shuf, The chronicle of Salib b. Yahya, written in the 15th century, clearly shows how the hierarchy of the family groups became established - the mountain by means of the fiscal and military organisation of the Muslim states (the system of ikids under the Mamiliks, to be replaced by the mukaja's under the Ottomans). It in this encounter between a population of settlers and en authority which derived its administrative legality from the centre of Sunni power and its structure from social culture that there was established the "Government of the Druzes" which European travellers discovered in the Ottoman period, and where one of the axes of the modern Lebanou progressively took shape.

With the dangers posed by the Franks and Mongols removed, the Ottoman conquest of Syria in 1516 was, in fact, a decisive moment for this mountain region. It had ceased to be a disputed frontier; it became a centre for mean which, for all its undoubted difficulty, was situated at the meeting-point of the great land and maritime communications routes of the vast imperial Ottoman federation. Its inhabitauts found in this the opportunity to develop their own activities, and thereby, also the means of affirming their own originality. The Ottoman régime favoured the expansion of regional networks for the relaying of long distance trade; the mountain people were thus able to obtain improved profit from their cultivated terraces, producing grapes and oil, and especially silk in the central regions, cotton and tobacco in the south. Their outlets were initially the local centres of manufacture and consumption, Damascus and Aleppo being the leading customers. Major commerce radiated from these inland terminals, both on interior routes and towards the coastal ports, Tripoli, Beirut, Sidon, which put them in contact with cabotage traffic plying between Palestine and Anatolia and with Egypt, the Maghrib and the ports of Christian Europe, Marseilles in particular, whose merchants, consuls and agents joined together in conducting their business under the system of capitulations [see IMTIYAZĀT],

As a mainstay of the power of the sultanate which maintained through control of the towns and the plains. Sunal society first put down its roots in the centres for the radiation of religion, justice and authority. In the some studied here, the Sunnis were located principally in the ports, the coastal plains and the Bikh's; the dignitaries of Sidon undertook with those of Damascus rich exchanges in the form of merchandise, marriages and spiritual brother-hood, while Moroccans were to be recorded in thegensalogies of Beiruti families. The old communities

792 LUBNÁN

of the Melkite Church of Antioch also shared in the revival of the cities and the development of the plains; in 1724, their fragmentation into two hierarchies, one of them "orthodox" and remaining under the jurisdiction of Constantinople, the other "catholic" and bowing, amid controversy, to that of Rome, bore witness to the effects of the milieu which they reasserted their vitality. Between, the "Greek Orthodox" monastery of Balamand (formerly the Cistercian Belmont) and the office plantations of the Kūra, to the south of Tripoli, and, on the other hand, the agricultural development which grew up around the "Greek Catholic" monastery of Saint Saviour, Dayr al-Mukhallas, land dominated by the Djunbulat Druze family, these two rites also maintained monasteries such that of Shuwayr, where a printing press was installed during the first half of the 18th century, in this centre of Christianity which the Kisrawan and the Matn were to become.

Between the Djabal Lubuda to the north and the Diabal al-Shuf to the south, the movement of Maronite population towards the south of the mountain effectively turned this region into a religious local point, an agricultural zone accessible to commerce, and formed mukdja'dt administered by families of Maronite Maykhs within the context of the "Government of the Druzes", the hukm Diabal al-Shaf ma-Kisrawan of the local chroniclers. Forces which came into contact here also clashed. The Jesuits had sent their first missionaries to the Levant two decades after the Council of Trent, and they had assumed direction of the seminary founded in Rome, in 1584, for the training of young Maronites. It was therefore no paradox that the communities of oriental rite attached to Rome were among the first to feel the impact caused by the renewal of religious activity in Europe and contributed to its repercussions. Under the influence of the Holy See, the Maronite Church underwent a movement of reconstruction which affected monasticism and the hierarchy, and munuber of synods, including that of Luwayza in 1736, had to be convened for the new rules to be discussed, accepted and imposed. Better organised, it acquired material strongth through the donations and wak/s of which it was the beneficiary; monasteries became institutions of education where, alongside liturgical Syriac, the Arabic language was cultivated as a means of instructing the faithful and of better understanding the sacred texts. The milieu regained its rights through the use of Arabic and the social structure; thereby, the Maronite Church "naturalised" its western elements. By virtue of the authority of its patriarch and the work of its monks on the popular level, its influence in the community grew in comparison to that wielded by the mukaja adjis, the title born by members of families responsible for the levying of a contractual tax on a district, mukāla'a.

Among the dignitaries (a'yān) of old Maronite stock, some advanced in the echelons of the ecclesiastical hierarchy, whilst others acquired the title of honorary consul in dealings with the representatives of the king of France; but the maintenance of their power derived from their role in the Ottoman fiscal system. After their conquest of Syrta in 1516, the Ottomans had retained the administrative divisions of the mountain region, following the example of their predecessors and on the basis of the ethnic distribution; the north belonged to the evilayed of Tripoli, the centre and the south, where the "Government of the Druzes" hold sway, to that of Damascus.

In 1660, in the wake of campaigns which the Porte had been obliged to conduct in order to suppress the rebellious ambitions of the Druze amirs of the leading family of the Matn, a new pashalls, whose governor resided at Sidon, was created to ensure better control of the Druzes and the Maronites. Detached from that of Damascus, its territory included the central and southern part of the Lebanese range and northern Palestine: however, the pasha of Damascus retained seniority over those of Tripoli and Sidon. The latter made attempt to exercise direct authority over a mountain range that was difficult of access and inhabited by well-organised groups; in common with the usual practice of the Ottoman administration, they relied on local leaders for the levying and submission of the tribute, the most tangible sign of the sultan's power. In doing so, they were obliged, on the regional level, to adapt themselves in the structure and hierarchy of this society as to utilise it in a manner favourable to the maintenance of their control, expression and assurance of the sovereignty of the Porte, even though the latter was far away and incapable of applying consistent coercion.

The principal tax, the miri, was linked to the primacy of agricultural production; it was therefore levied on produce. It was farmed out and the leaseholder was subject to annual confirmation; the anir-or sometimes two or three amirs simultaneously-entrusted with this role belonged to the family of the Ma'n from the time of the Ottoman conquest to the last quarter of the 17th century, then to that of the Shihab. The delegation of this authority consequently led to the pre-eminence of one family over the others, and of one andr over his kinsmen; the latter was obliged to lead a life of constant duplicity in order to reconcile the rules imposed on him by his social milieu with the obligation | hand over revenue to the imperial financial chest and thus retain his post. According to the total sums determined by the Porte and demanded by the pasha, each year it was his duty to divide the amounts to be levied between the makaja adjis responsible for collecting the tax from the mukdia di under his jurisdiction, The "Great Prince", the translation adopted by European travellers for the title of al-amir al-kabir, also took the title of al-hakim to assert his authority in the hukm Diabal al-Shif wa-Kisrawan. Following the example of the controlling family, those senior families which exercised authority over others, and whose members with the most important landowners, took responsibility for the collection of rents in the mukaja'at, where their social and proprietorial power was thus guaranteed; but in the effort to exert and retain their authority, the muhāja adjūs themselves out in internal rivalties, which were the visible results of the division of society into juxtaposed and opposing groups, and which were revived by the ambitions and intrigues of the sultan's representatives. Thus in 1711, near the village of 'Ayn Dasa, the Kays! faction of the emir Haydar Shihab crushed the Yement faction; - order to establish more firmly the supremacy of the Shihab, amir Haydar then proceeded to make a new division of the muhitatat among powerful families, strengthening of them and weakening others. But the Porte was also capable of dismissing amirs (see KAYS *AYLAN]. Knys and Yaman in the Ottoman period].

School text-books appeal to the consciousness of present-day Lebanete through the history of two "heroes", the amir Fakhr al-Din II Main [q.v.] and the dmir Bashir II Shihab [q.v.], who contributed to the vision of independence for their country in

LUBNĀN

a unitary fashion that transcended divisions and sectional interests. Both of them, one at the beginning of the 17th century, the other at the beginning of the 19th, exercised authority of a power and extent that had hitherto been unknown in the region; while exploiting the weakness and rivalries of the Turkish governors, they also looked for support to those states which, in the Mediterranean basin, testified to the regenerated power of Europe. But on each occasion, the Porte succeeded in frustrating their ambitions. When the Druze Fakhr al-Din, with this son 'All, took steps to expand his umlrate and to render it autonomous, the Ottomans resisted him with the same determination that they had shown in suppressing Shi'ism in the interior of their empire and in combatting Safawid Persia on their eastern frontiers. Fakhr af-Din, forced to take refuge at the court of the Grand Duke of Tuscany in rors, returned in rors, but was finally captured near Diazzin and sent to Istanbul where he was executed in 1635. In a totally different historical context, the amir Bashiv II Shihab also died in Istanbul, in 1850, but of old age, after he had been forced to abdicate his power in 1840, when the Ottoman government, undertaking a programme of political reform and driving the Egyptian troops of Muhammad 'All out of Syria, refused to renew his appointment. However, for more than a half-century, from 1788 to 1840, he had thrown all the force of his strong personality into giving the people of the Lebanese range a unity of purpose. To this end, he followed the policy of his predecessors which consisted in adding to the territory of the "Government of the Druzes", belonging to the pashallh of Sidon, that of the land of Djubayl, north of the river Mucamaltayn, which was a dependency of the pashalik of Tripoli; he demoted the leading mugaja adjts, like the Druze shaykh Basistr Djunbalit [see Dianbulat]. and made use of the support of the Maronites, who had become the largest community in the mountain region. But as the intermediary of a liscal system which became more and more oppressive, and subjected to the coercions of Muhammad 'All during the presence in Syria from 1832 to 1840 of Ibrāhlin Pasha's Egyptian army, he left his country in a state of full-scale revolt on the part of the mountain people. This led to the climination of the greatest of the "old style" dignituries, since the central Ottoman power, m seeking to reassert its control, struck at the leadership first; his departure spelt the dissolution of a system.

What situation was discovered by the Porte, when it re-established its authority with the support of a British military expedition and reformed it through its policy of Tangimat? Since the beginning of Ottoman domination, the active centre of Syrla had shifted from the east towards the west; Lebanese overtures towards Mediterranean Europe and the demographic growth which had enabled the Maronites to spread from the north to the south of the mountain had worked in favour of this orientation and had benefited from it. However, in this material, human and religious context, arboriculture, producing timber in commercial quantities, had been considerably developed to the detriment of edible crops; at the beginning of the 19th century, the cereals which the mountain people harvested from their soil were sufficient to feed them for only three or four months of the year, the remainder having to be bought. The need to guarantee their subsistence thus put them into still further dependence on the Turkish governors who controlled the tertile plains; although the meirs attempted to remedy this necessity by a permanent extension of their influence over the Bikac, their efforts were in vain. On the other hand, commercial exchanges turned the mountain range into a zone of monetary circulation, and its economic development affected favourably its population growth; but, at the end of the 18th century and during the first four decades of the 19th, increasing pressure of taxation, linked to the effects of Ottoman monetary manipulations, had caused a massive depletion of financial resources and led to an impoverishment which was all the more powerfully felt because the cultivable areas of the mountain had reached a point of demographic saturation in terms of the development possibilities of the period. This in turn led to social tensions between, on the one hand, the mulaja adjis, themselves impoverished and weakened by the policies of omir Bashir II and by their own numbers and rivalries, and on the other, the tenant farmors who found it increasingly difficult to cope with increasing taxes and rents on contracting land space. On the Maronite side, the enfectionment of the nobility (atvan) led to a regrouping in the framework of the community under the leadership of the clergy, with resulting profit to the latter's role. On the side of the Druzes, who had not experienced the same demographic increase, and who therefore were subjected to the continuing influx of Christian population simultaneously with the renewal of economic and political activity in Europe, there was a contrary regrouping behind the major traditional families, the social backbons of the community; a migratory movement also took place towards the Syrian interior, towards the Hawran [q.v.]. Social tension thus also led to community confrontations in the "mixed areas" which were inhabited by Druzes and Christians; the clashes which easned were a part of the general marest which affected Syria in this period.

With the regulations of 1842 and 1845, the Porte imposed a new administrative system which gave preferential terms to the Christian population but retained the division of the mountain, the northern part being entrusted to a Christian harimakam and the southern to a Druze kā imakām; both were lunctionaries placed under the authority of the Turkish governor who was now resident in Beirut, and were assisted by a council "like those which already exist at all points of the empire". It was the renewal imposed by changes in Europe that was manifested behind these modifications, behind new forms of intervention by representatives of European powers in Lebanon, especially behind the activities of the consuls of France and Great Britain posted to Beirut. This port was regularly visited by steamships after 1835; although the major cities of the interior underwent a crisis in their activities, it was the major regional beneficiary of the expansion in trade, especially after 1850, when its commercial affairs followed the rhythm of western economic trends, and the changes in the laws of property ownership introduced into the Ottoman empire (confirmed by the Khall-i Hümäyün of 18 February 1856) stimulated the development of new commercial and financial enterprises. Its population grew and diversified, especially in its Christian components (6,000 inhabitants at the beginning of the 19th century, 60,000 in 1860, 130,000 in 1914). In the mountain region, industrial initiative was introduced by the French, who installed new systems for the spinning of silk; they diverted deliveries of cocoons for the benefit of their establishments, thus breaking the links between the small-holders and the influential families and

LUBNÂN

thereby contributing further to the decline of the latter. These economic changes, while favouring the prosperity of those who were the intermediaries, chief among whom were the Christians, bad an adverse effect me the disadvantaged communities and led to aggravation of social and religious tensions. In 1859, an agrarian revolt saw peasants in conflict with shayeds in Maronite Kisrawan. However, the Christians benefited overall from these transformations, while Muslims and Druzes were, overall, prevented from playing any part; claiming the "equality" promised by the reforms, reinforcing the status of the community with the support of France and of the Roman Church, profiting from a European expansion which both rivalled and dominated the traditional economy of the Near East -all these activities on the part of the Christians were in the eyes of the Muslims crimes committed by a people whom they mever ceased to despise, in opposition to their past supremacy and to their presexistence. An incident in May 1860 touched off conflict between Druzes and Christians, and was followed by massacres of Christians in "mixed areas" and in Damascus. To limit intervention by the European powers, the Turks restored order in the most brutal fashion; however, this did not prevent the arrival in Beirut of a French expeditionary force, which Napoleon III had also sent for the purpose of furthering the Mediterranean and Arab espects of his policy.

794

The result of these events, of the presence of French troops until June 1861, and of the negotiations held between the Porte, France, Great Britian, Austria, Prussia and Russia, was the creation of a province of Mount Lebanon. Administrative unity was thus confirmed by law. Although it was nothing more than a sandiak or mutasarrifiyya, the agreement signed at Pera on 9 June 1861 made it clear that: "The Lebanon will be administered by a Christian governor appointed by the Sublime Porte and responsible directly to it." The Porte and down the condition that this Christian governor be chosen from among the non-Lebanese subjects of the Sultan. The majority of the population of the province was Christian; order was maintained by its own police force and it was the beneficiary of a special fiscal system; it included neither Beirut, - Tripoli, nor Sidon, but its links with Beirut developed continuous-Iv to their mutual enrichment in economic and human terms. Although its relatively autonomous status was guaranteed by the signature of five European powers. Mount Lebanon ___ the less included in the general administrative modernisation of the Ottoman empire; the abolition of the ancient privileges of the musafa adjis, the judicial equality of the Muslim and Christian communities, the representation of these communities on the madilis which advised the governor, all these corresponded to the general conditions applied to the administration of provinces as laid down by the law of 1864.

Beirut and Mount Lebanon were the centres of important movements in terms of products, people and ideas. The economic expansion introduced from the West was most clearly marked by the development of sericulture under the control of the city of Lyons, the capital of the industry; French participation in companies formed for the construction from Beirut to Damascus of a carriageable highway (1863), later of a railway line (1805); the extension of the port of Beirut; the architectural improvement of this town; and the founding of banks and trading houses. The increase in population and social presents.

sures led to waves of emigration towards Egypt and the Americas. The Arab literary renaissance, the mahan [q.u.], expressed awareness of these encounters; besides the education provided by the Syrian Protestant College, founded in 1866 under the auspices of M American Presbyterian Mission, and by the Jesuit University . St. Joseph (1881), the pedagogic and literary activities | the mufallim Butrus al-Bustani [see AL-BUSTANI in Suppl.) and of numerous other writers, journalists and scholars led to a crystallisation of consciousness in the confrontation with all the human, spiritual and geographical dimensions which had been brought into play, and m posing the problem of the affirmation of the personality amid all these transformations. But although for many of the initiators of this intellectual revival the fact of belonging to a manual civilisation was something that must transcend religious differences, ambiguities none the less survived at all levels of cultural awareness, since the idea of nationhood proposed by Europe was balanced, on the one hand, by a "Lebanonist" conception, especially among the Maronites, an Arab ideal for a uniting of energies going beyond community distinctions, and on the other, by - Ottomanist faction for whom the Ottoman State was the guarantee of Islamic civilisation in the face of western domination. In rour, Shakib Arslån fought the Italians in Libva alongside the Turks; in June 1913, the Arab Congress, convened in Paris, proposed a decentralisation for the benefit of the different Arab provinces.

The war and the defeat of the Ottomans in 1918 gave an impetus to Lebauese development. Three Lebanese delegations, including one led by the Maronite patriarch, attended the Peace Conference to claim from it the maintenance and even the expansion of their territories. In 1920, the French military intervention against the Arab Kingdom of amir Faysa! permitted the creation of the State of Greater Lebanon which was placed under a mandate entrusted to France. This state was established around a Christian, mainly Maronite, nucleus, which constituted a majority, although all the other lands of Arab culture were populated predominantly by Muslims. But the former province of Mount Lebanon was expanded with the addition of Beirut, Sidon, Tripolt, 'Alckar, the Bika', the Wadi al-Tayon and the Diabal Amit where Sunni and Shiff Muslims were present in large numbers. This situation aroused two principal attitudes: on the one hand, the Christians had no intention of accepting a position of interiority in a Republic of which they considered themselves the architects; on the other, the Muslims speculated as to what their status was me be within a political entity which had not been founded according to their aspirations. Numerous factors came into play in this context, in particular: the nature of groupings and relationships in the community frameworks or the political parties; demography, increasingly favourable to the Muslims; the question of ability to cope with all the necessities of the modern world; and the economic role and the place of manual labour, not only in terms of the different social levels but also in terms of the communities. While some ShI'l leaders were quite prepared m throw in their lot with the system, the ruling circles and the populace of the Sunni community expressed strong reservations and they took the opportunity of showing where their feelings lay at the time of the 1925 revolt. However, a compromise was devised, one of its principal Sunni initiators being Rivad al-Sully, in 1936 it was agreed, following Pranco-Syrian

LUBNĂN 795

and Franco-Lebanese negotiations, that the Lebanon would continue to exist within its present frontiers and would retain the representation of the communities which had been confirmed by its parliamentary constitution. In 1943, the National Pact, already mentioned, was a decisive factor in the Muslim adhesion to the Lebanese identity. In March 1945, the Lebanon was among the founders of the League of Arab States.

Under all the presidents of the Republic who have succeeded one another since independence (Bishāra al-Khūrī 1941-52, Kamil Sham'un 1952-8, Fu'ad Shihab 1958-64, Charles Hilū 1964-70, Sulayman Farandilyya 1970-6, Ilyas Sarkis 1976-82), each serious crisis has renewed the fragmentation of the communities, but has also revealed the growth of a Lebanese consciousness among the majority of a population which has become accustomed to living in the framework of the Lebanese State. In February 1958, many Muslims greeted with enthusiasm news of the foundation of the United Arab Republic; but while bloody civil unrest engulfed the country between May and September of the same year and provoked, in the international and Arab context. the landing of American troops on 17 July in application of the Eisenhower Doctrine, the programme of reforms instituted under the presidency of General Fu²ad Shibab was accompanied by the emergence of a genuine Muslim Lebanonism. At the same time. Kamal Diunbalat, m much in his capacity as an aristocratic Druze of the Shut as in his role in leader of socialist movement, appealed to a fundamentally Lebanese patriotism in his effort to bring the country into the bosom of Arab solidarity. The Sumi leaders and the Muslims as a whole were placed in the reality of the Lebanese state as a cadre for the future, but they demanded institutional reforms which would give greater recognition to their numbers and to their talents in the control of the Lebanon. In a state where all civil life is defined by the fact of belonging to a religious community, this claim was supported the basis of modifications arising from the demographic separation. It is, in fact, the Muslim populations that have increased most rapidly; this development is most clearly marked within the Shiff Muslim community, the most disadvantaged in the country, which has become the most numerous. The Shift labour force has therefore tended to leave the impoverished rural zones of eastern and southern Lebanon, the precise where Israeli raids have contributed to the acceleration of the migration, to seek work in the expanding industrial sones of the Beirut region. A social problem has thus prolonged the process of political demand and demographic change; this has been reflected in the actions of the political parties of the Left, who have also sought, in a similar manner, to channel the discontent of the peasants of the north whose agitation, since 2970, has been directed against the major landowners and has called into question the authority of the state. They have also acquired, through their new militancy, a stronger "Muslim aspect".

This evolution has come about in a period of economic growth whose profits have been most unevenly distributed. Since 1967, the ascending curve of the Lebanese economy has followed that of the increased wealth of the Near East as a whole; petrodollars, "Arab" assets which are essentially the property of Muslinis, have been invested in Lebanese banks, of which the majority are controlled by Christians. At the same time, the Lebanon has not only counted in the resources deriving from its "services",

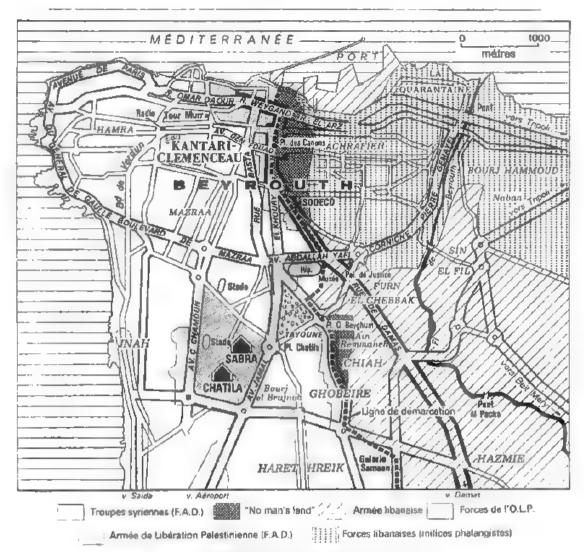

but also on those produced by its industry, which has undergone a vigorous expansion in the suburbs of Beirut and Tripoli, exporting 80% of its production to Arab markets. While Lebanese technicians and businessmen, including Christians at the higher echelous, have taken the opportunity of practising their skills in the developing Arab countries, the contracted labour force in the construction industry of Beirut is of Syrian origin; thus, through its recent economic development, the Lebanon has become still more integrated into the life and destiny of the Arab world.

Paradoxically, this situation has been cruelly underlined since 1973 by the internal consequences of the recession of the western economy, for the Lebanon has also remained closely linked to the latter; the extension of social malaise has rendered political demands bitter and has accentuated the impact of the Palestinian presence. This dates from 1948 (the foundation of the State of Israel), but it has only begun to pose a real problem to the authority of the Lebanese State since 1967, when IIII Palestinians consolidated their political orientation and took on the role of an armed organisation. Now, while the Palestinians will alongside other Lebanese groups in a structure consistent with the norms of Arab society, and while they have exploited the lberal Lebanese régime to act, as independently as is possible, towards invoking the solidarity of the Arab nation, they have none the less remained very distinct from the remainder of the population, they lay claim to a land which is not the Lebanon. The sovereignty of the Lebanese state has suffered as a result of their military activities in the frontier regions of the south and, consequently, as a result of repeated Israeli incursions; but, besides the members of the front of progressive parties, all Muslims have felt sympathetic to their cause and have often offered them support in internal political action.

The resentment at this situation felt by the Christians, and especially by their Maronite majority, has been channelled by the Lebanese Phalanges. Although of Arabic language and culture, the Christian population has developed and rediscovered an isolationist complex in . Arab world where the movement towards secularisation tends to work to the advantage of the institutions of the majority, i.e. the Muslims and where, equally, politically active movements have been mobilised in the of Islamic ideals. This sense of insecurity has also been shared by those business circles which, while reaping the benefits of trading with the Arab countries, participated in the workings of the western economy. On the other hand, the movements of the Left have integrated their denunciation of the injustices of the system with revolutionary Arab perspectives. As a result of the oxigins of modern Lebanon as well as of present-day circumstances, the internal crisis has taken - Arab, Islamic and international dimensions, and is nourished by them.

After February 1975, the repression of political and social unrest at Sidon illustrated the limited capabilities of the Lebauese army, itself a multi-religious organisation. On 13 April 1975, a coacicarrying Palestinians was machine-gunned by Phalangists near Beirut; twenty-seven passengers were killed. Since then, the authority of the government has progressively disintegrated. At the beginning of the 1970s, a whole generation of students had dreamed of a fraternal future for the Lebauon, to be achieved by the erosion of community divisions; this dream has been shattered. While the sovereignty of the state has been called into question, and the ancient

796 LUBNÂN

Vig. v. Reirut in 1981 (after Le Monde, 19 May 1981).

structures of the familial group have been damaged by modern urbanisation and industrialisation, religious segregations have shown themselves to be all the more active m the level of collective consciousness, since they have remained the principal touchstone of identity and therefore the principal framework for community solidarity. In the agony of the civil war, political and social conflicts have been kept alive by the most ancient segregational structures of Near Eastern society: the polarisation of passions according to religious allegiances has been the most symptomatic expression of this at the conscious level. How is one to contemplate the idea of the partitioning of the Lebanon menvisaged by the minorities, the constitution of semi-autonomous fraternities of combatants, principally within the popular Muslim milieu, the conflicting claims of fragmentation and unitary ideologies, in the unequalled violence of the fighting since September 2975, without reference to this conglomeration of sociological and historical data?

The Lebanese crisis which began in 1975 owed its seriousness to internal causes which in their turn reflected the changes in the Arab world and the social, cultural and political tensions which had become acute throughout the Near East. At the beginning of the war, two powers with an interest in the existence of the modern Lebanon made official approaches to the different Lebanese parties: Syria, with repeated missions on the part of its Minister of Foreign Affairs, France with the fact-finding missions of Maurice Couve de Murville and Georges Gorse. In June 1976, Syria sent a massive force into the Lebanon under the cover of the Arab Peace-Reeping Force in order to restore calm. In spite of truces, the sound of gonfire is still to be heard, across alliances and the reversal of alliances (especially after the Camp David Accords), across struggles for hegemony within each politico-religious faction. The continuing prosperity of the banking sector has no doubt compensated for the massive destruction of property and the aggravation of social disparitles. From 1840 to 1938, civil disorders in Lebanon had been resolved only by the intervention of western armies. Since 1976, the presence of the Arab Peace-Keeping Force has shown that a

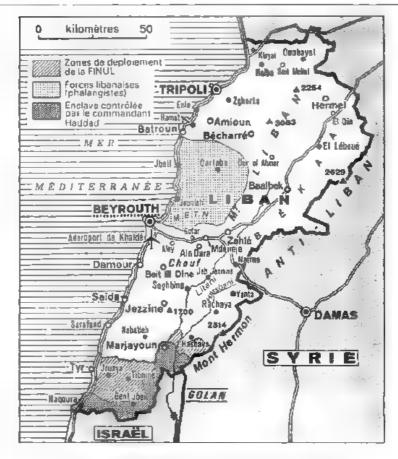

Fig. 4. Lebanon in 1981 (after Le Monde, im May 1981).

solution should be found through Arab negotiation, but having regard to international repercussions and to the conflict with Israel which led, in 1978, to the despatch of a United Nations Interim Force in the Lebauon (U.N.I.F.L.).

It is estimated that the Lebanon has close to three million inhabitants. It is they, residents or temporary emigrants, who ensure the existence of their country. Though each continues to feel part of a minority in relation to his compatriots, the adhesion of the majority of the Lebanese to the Lebanon is symbolically represented by the celebration of the Day of the Flag; but, while they are aware of belonging in the same entity and are determined to maintain it, they do not share the same national vision.

(D. CHEVALLIER))

LUBOD (pl. of liba, labad), felt. The production and craftsmanship of wool [see 507] was very prosperous in the mediaeval Muslim world, and supplied a variety of articles not only for refined and wealthy customers but also for the popular market in the form of relatively inexpensive clothing. In more recent times, local woollens have not managed to compete with European products (E. Ashtor, Les lainages dans l'Orient médiéval, in Atti Inst. F. Dattini. Florence 1976, 657-86). Feit was one of the less expensive products among the woollen articles manufactured locally (and probably not threatened by imports from Europe), but there were also felts of high quality which were dyed (see for their colours, below) or embellished (Ibn al-Zubayr, al-Dhahha'ir, 87: ■ royal cloak of Byzantine origin).

As elsewhere, felt was manufactured in the Muslim world at that time by pressing wool between pieces of wood, etc., m process often combined with moistening and binding by means of samgle (i.e. gum; for the Middle Ages, a description is supplied by Ibn al-Ukhuwwa, Ma'ālim, 231, and for the beginning of the modern period, by al-Kāsimi, Dict. des métiers,

ii, 399-400).

The maker of felt was called the labbad, lubuds. and labdofd! (Ibn al-Ukhuwwa, los. cit.; al-Makrizi, Khitat, Beirut ed., i, 194; al-Kāsimī, loc. cit.). The names of a number of articles are derived from that of "felt": cap (libda), cloak, or piece of felt worn over the outer garment (lubbada), moquette (kibd, labad), saddle, or a piece of felt put under the saddle, especially among the nomadic Arabs, etc. (al-Nabigha and Imru' al-Kays, ed. Ahlwardt, 7. 149; Diwan al-Hudhallyyin, ed. Wellbausen, 86; Diarir, ed. Sawi, 139; Ibn Kutayba, al-Ma ani, 944 but it is not known if this libd of the Arabs of the pre-Islamic and early Islamic periods, was manufactured like the felt known in sedentary civilisation]; al-Shabushtf, Divarat, Baghdad 1966, 199; Ibn Hayyan, Akhlah al-nabi, Cairo 1959, 151; al-Raghib al-Isfahani, Muhadarai, Beirut 1962, iv, 377-8; Ibn al-Zubayr, op. ad., 60, 245-6; al-Zamakhshari, Asas, Cairo 1960, 432; idem, Mukaddimát, Leipzig 1830, 63; al-Makrīzi, op. cit., ii, 99, 256, 338; LA. Beigut 1955, ili, 386, 387; Laus, i, 2646; S. Frankei, Fremdwörter, 103; Dozy, Vétements, 395; idem, Suppl., s.v.).

In fact, felt was also used for the manufacture of items whose names an not derived from it, such as clothing and hats (see some of the above sources and al-Diable, according to Ch. Pellat, in Arabica, i, 103 (musuk of felt); Ibn Hawkal, tr. Kramers-Wiet, 113; Dozy, Vetements, 114, 251, 267, 366; kalansuwa, farbush, for example), linings of jackets (A. Miquel, La géographie humaine, ii, 499-the case here in point is the equipping of m Muslim expedition, outside the Islamic world, with clothing manufactured in 'Irak), blankets and mattresses (al-Tanükhi, Faradi, Cairo 1955, 139: mattresses of less affluent people), ropes (possibly; see below). Felts were available in several colours, apart from the natural colour (red.: al-Djabiz, op. cit., 158-9; al-Shabushti, loc. cit, :-black: Ibn al-Zubayr, op. cit., 145-6).

The felts came from various regions and countries: from China (refined and rare felts, in the Muslim world, al-Djahis, loc. cit.; al-Tha'alibi, Lata'if, tr. C. E. Bosworth, 142), from North Africa (al-Djahiz, loc. cit.; al-Iştakhri, 15; Ibn Hawkai, op. cit., 113; al-Thatalibi, loc. cit.; Ibn al-Zubayr, op. cit., 47), from Armenia and Khurasan (al-Diahis, loc. cit.; Ibn at-Zubayr, op. vit., 60; al-Hamadani, Tahmile, 22). The Turks, in common with other peoples of Central Asia (A. Miquel, op. cit., ii, 156, 159, 234), used large quantities of felt, for clothing as well as for the making of tents, but there is no evidence to show that felt was exported from these regions to the centre of the Muslim world. Felt from Talakan (in Khurāsān), strong and resilient, we used possibly for the weaving of a kind of rope rescue-ladder (al-Masfüdi, Murūdi, vii, 117 - § 2799). In Samarkand (Transoxania) and Damescus (Syria) there were specialised quarters in the suburbs or in the town, for the manufacture and sale of felt (Yakut, iv, 345).

(J. SADAN)

LUCKNOW [See LAKENAW].

LUDD, the Arabic name of Lydda, the ancient Hebrew Lodd, we town in Palestine to the south-east of Jaffa (Yāfa, Yāfo) and 17 km, in direct line from the Mediterranean shore.

Ancient history. Ludd is extremely ancient, and its name is believed to appear in the list of towns conquered by the Egyptian King Thutmos III (ce. 1468-1436 B.C.) (cf. Alt, Essays, 138; Aharoni, 149). The name of Lodd appears four times in the later books of the Bible (I Chron. viii, 12, the building of the city by several families belonging to the tribe of Benjamin; Ezra, ii, 33; Neh. vii, 37, xi, 32-5). The Hebrew was preserved in the New Testament (Aú88a, Acts, ix, 32), and through it has cutered, in the Latin form of Lydda, into the European languages. After the British occupation in 1917, the name of the city was given to the whole district, which was called "the District of Lydda". Early in the 3rd century A.D., the Greek name Diospolis must have been given to the town by Emperor Septimus Severus, who visited the place in 200-1, when the town me given Roman city rights and coins were struck there (cf. Smith, 121 n. 3). Although the name Diospolis survived until the Islamic conquest, the local Jewish and Samaritan population continued to me the original name of Lodd, which appears frequently in Talmudic literature (e.g. Pal. Talmud, Shevi'it, 9; Babylonian Talmud, Megilla, 3b-4a; Sankedrin, 32b, 74a; Sukha, 2b; Hullin, 56b; The minor tractales of the Talmud, London 1965, 127, 391, 341).

1,UDD 799

During the whole of the Second Temple period, the city was one of the major Jewish centres, although in the Hellenistic and Roman periods it occasionally remained outside Jewish domination, The Seleucids ceded it to Jonathan Maccabaeus in 145 B.C. and 83 years later, Pompey detached it from the Jewish state. In 48 B.C. Julius Caesar restored it to Jewish rule. In 44 B.C. after the murder of Caesar, Cassius, who appeared in the country with a large Roman army, sold its population as slaves when the town failed to pay the high tribute imposed on it (Josephus, Wars, I, ch. xi, 2). The city revived and even flourished as a centre of Jewish learning and a home for Jewish spiritual leadership after the destruction of Jerusalem in 70 A.D. (Smlth, 121 and m. 2).

Once Christianity was proclaimed the state religion by Constantine, Ludd instantly assumed an important place in Christian thought, mainly because the healing miracle which St. Peter performed on the paralytic Aeneas (Acts, ix, 32-5. Cf. Hieronimus, in Reland, Palaestins, 877), which is said III have been the cause of numerous converts III Christianity in the city and its environs. However, the real sanctity of Ludd and its major fame in the Christian world are due to the belief that it is the birthplace of St. George, who is probably the most venerated hero in Eastern Christianity and who was from obscure origins to become "not only the virtual patron of Syrian Christendom and an object of Muslim reverence, but patron, as well, of the most Western of Christian peoples. St. George of Lydde is St. George of England . . ." (Smith, 122). His fame must have been due to his martyrdom, on the eve of the triumph of Christianity, under Diocletian In Nicomedia in A.D. 303, after which his relies (or his head only) were brought to Ludd and buried there

Early Christian travelers refer, therefore, to Ludd the place where the saint is buried. At some time during the Byzantine period, probably under Justinian, a church was built over the burial place, the altar of which must have stood over the tomb itself, and a monastery which was also established in the city was dedicated to him. The church, however, appears not to have been dedicated to him, since traveliers mention only the tomb and the monastery (Smith, loc. cit.). The archaeological survey in which were discovered and carried out by Clermont-Gameau (Archaeological researches, 1i, 98-103, 341-6; cf. SWP, Memoires, ii, 267-8). The town became, already in the 4th century an episcopal see (despite partial destruction after 🖿 anti-Roman revolt in 351) and retained this position until modern times, even after its cathedral was destroyed and its Christian population reduced to a negligible number; there was even a Synod of Diospolis early in the 5th century. The signatures of several Bishops from Ludd appear - conciliar documents; Actius Lydensis at the Council of Nicaea (325), Dionysius Diospolitanum at the Council of Constantinople (181); Photinus Diospolitanus (as well as Photinus episcopus Lydae) at the Council of Chalcedon (452) (Reland, op. cit., 878-9. For more references concerning Ludd in classical literature, cf., Avi-Yonah, Gozeteer, 75).

Topography. The town is located on the border between the coastal plain and the Shephela, in an extensive area of flat land, ———— 40-50 m. above sea level, which came to be known after it as "the Valley of Lod" (cf. Pal. Talmud, loc. cit.). The area enjoys — very good amount of winter rain (annual average of above 500 mm.), and its alluvial soil

stores large quantities of excellent water which have rendered the environs of the city extremely lertile in all times; this, in addition to the rich soil and generally warm climate, made the town famous for its agriculture. It was always described by travellers as being encircled by olive groves and vineyards (and in modern times, citrus plantations). Cotton grows very well in the area, and in the later Ottoman period it was cultivated extensively me a major cash crop. The cultivation of cotton ceased during the British Mandate, but was renewed in a most extensive form in Israel. Plants used in the dyeing industry, for which the town had also been very famous (until the building of Rainia), must have also been grown around the city. The virtually unlimited possibilities offered by the natural conditions explains the place's attraction for settlers, who repeatedly restored it after the frequent calamities, whether of human or natural making, which befell it throughout its extremely long history.

Its position made Ludd from ancient times important station on the eastern and more frequented branch of the Via Maris which runs from Gaza via Yavneh (Ar. Yubnā) and Ludd to Antipatris (Ra's al-'Ayn) and thence via W2dl 'Ara (ancient 'Iron) to the Valley of Jezreel. This route running along the eastern slopes of the hills of Samaria, though longer than the one running parallel to the coast, was deemed easier and safer. It attained especial importance in the post-Crusader period (mainly under the Mamiliks), and has since served as one of the major traffic routes in the country. The road connecting Jerusalem to Jaffa also passed via Ludd, thus making It into an important crossroads, a position which the city regained in modern times after the construction of the Jaffa-Jerusalem milroad at the end of

the last century (see below).

Early Islamic history. According to al-Baladhurl's tradition, Ludd was conquered by 'Amr b. al-'As after the conquest of Nabulus and Samaria (Futah, 138/13). Al-Tabari relates that the city capitulated in 15 A.H. and quotes the agreement made with its inhabitants. It is the standard formula of capitulation treaty known from other places in Syria which were reportedly taken without war (sulam), and stipulates aman (protection) for the conquered inhabitants' life and property, guaranteeing the safety of the religious institutions in return for a payment of a unfixed sum of divya (al-Tabari, i. 2406-7). Very soon after the Islamic conquest the town underwent a process of rapid deterioration, mainly due to the growth of Ramla = a major administrative, economic and cultural centre in the Djund Filestin (the Byzantine Polostlina Prima).

Ramla - built by Sulaymāu b. 'Abd al-Malik with the intention of serving as the capital of the province, after a long period in which the Diend Filastin had been devoid of proper administrative centre. Having discarded, for obvious reasons Caesarea, the Roman-Byzantine capital of Palaestina Prima, the Muslims made Ludd into the permanent seat of the administration. The city was, however, too Christian in ethos for the taste of the Umayyad rulers, especially after the inauguration of 'Abd al-Malik's Arab-Islamic reforms. When Sulayman was nominated by his brother al-Walld I as governor of Palestine, he took up residence in Ludd, but immediately embarked upon the grand scheme of the building of Ramla (Futuh, 143; Yākūt, s.v. "Ramla"). Once the ____ capital was established, Ludd almost instantly fell into oblivion. The Islamic traditions Boo LUDD

unanimously confirm this by saying that the building of Ramla was the reason for the destruction of Ludd wa-kāna dhālika sabab kharāb Ludd, Yākūt, loc. cit.). Some traditions even say that Sulayman destroyed the homes of the jahabitants of Ludd in order to force them to move to his new capital. Al-Yackubi, who specifically mentions Sulayman's destruction of Ludd, emphasises that in his own time it was already in ruins (Buldan, 328). The traditions relating to its deterioration are all intensified by the Islamic accounts of its past glory. Thus Ibn al-Fakih speaks about the splendid buildings of Ludd, which impressed the Muslim beholders so much that they believed that they were built for Solomon by the dinn (Muchtasar, 117). This tradition must refer to the Byzantine basilica of Ludd, which had been built over the tomb of St. George. It is believed to have been destroyed by al-Hākim 🖿 398/1008 and rebuilt by King Stephen ! (St. Stephen) of Hungary (997-1038). However, by then the church of Ludd had already been colebrated in the Islamic eschatological traditions. Al-Mukaddasi, in the second half of the 4th/roth century, mentions the church as the most prominent feature of the city and adds that 'Isa will kill the Antichrist or Dadidial [7.v.] at its gate. In his time, the place had already undergone - process of Islamisation, for he refers to a large Friday mosque which served . prayer place not only for the Muslims of Ludd but also for the inhabitants of its environs, including even those of the provincial capital Ramla (al-Mukaddasi, 176; Le Strange, Palestine, 493).

The place which Ludd occupies in the Islamic eschatological tradition must have been born out of the popular mixture of legends connected with the image of St. George and the Jewish traditions about the false Messiah (or in Aramaic, Meshika daggala, hence Arabic Dagidjal). Some of the Islamic traditions about the death of Dadidjal at the gate of the church of Ludd, or at the gate of the city, identify their Jewish origin. According to these accounts, Umar used to show great interest in the subject, and persistently searched for information about it. After the battle of Adjuadayn [q.v.], when Ludd was captured, . Jew told Umar that the Muslims would kill Dadidial "a little more than ten cubits from the gale of Ludd" (al-Tabari, i, 2403, Ibn al-Athle, ii, 388, 390; Abu 'l-Fidā', Taķwim, 227). In a tradition attributed to al-Zuhri, Jesus, at the head of the Muslims, would follow Da<u>didi</u>ăi and kill him at the gate of Ludd (ibn Kathir, ii, 99; al-Bakri, 490). Similar eschatological traditions are numerous, and the whole theme has been elaborated upon in great detail by Ibn Asakir (ed. Munadidiid, i, 149-52, 184, 215-17, 228-9, 232, 256-7, 260, 294-5, 606-19; Tahdhib, i, 48, 295).

It is very possible that the tradition grew some-how out of the idea connecting St. George and the dragon, which can be traced to the 6th century, when the legend of Persus and Andromeda was transferred to St. George. There is no doubt that the magnificence of the Byzantine church and later the Crusaders' cathedral of Ludd, as well in those local legends woven around the image of St. George, furnished the proper background for the development of the Islamic traditions concerning the church in particular and the city of Ludd in general. The core of the traditions in which the false Messiah dies in Ludd is Jewish, From this point of view, those islamic accounts emphasising the Jewish connection with the tradition are correct. Clermont Ganneau suggests, however, that the Dadidjal in this case represents the dragon, while St. George, who

transformed by the Islamic popular tradition, into al-Khidr [see Al-KHAOLR], kills it (Smith, 123).

The feast of St. George on 23 April continued to be celebrated under Islam, and its ceremonies at the church were also attended by Muslims. Three verses by al-Mu'allā b. Tarii, the caliph al-Mahdi's poet-singer freedman, in which he talks about his "coming intentionally to Ludd on the feast of main singlis" (sic), where he saw "ladies like gazelles in their covert", attest to the popularity of the feast, at least in the pre-Crusader period (Yākūt, s.v. "Ludd"; Aghānī, vi, 46-7).

The Byzantine church is described by all the early Christian travellers. On the eye of the invasion of the Crusaders in 1099, the Muslims destroyed it again. The Crusaders found Ludd and Ramla deserted, and thus were easily able to establish a corridor from Jaffa to Jerusalem, whence they could mount their attack = the Holy City as well as widen their hold on central and southern Palestine. In Ludd they built in 1150 a new cathedral with much splendour and magnificence, over the remains of the previous Byzantine church and the Saint's tomb. They dedicated it to the Saint, because of its location as well as because of the then prevalent belief in his intervention in their favour during the siege of Antioch. The new cathedral "was a great pile, capable of use as a fortress" (Smith, 122). Toward the end of the rath century, the cathedral attained even greater attention and significance when St. George was adopted by Richard Coour-de-Lion as the patron saint of England, in addition to the veneration be already enjoyed as the patron saint of Castern Christianty (it was, however, only under King Edward III that St. George actually became the patron saint of England, ibid., 122 n. 3). Moreover, under the Crusaders, the name of St. George replaced the name of the town, so that during the whole of their period it came to be known as St. George, and pilgrims call it by this name until the 16th century (ZDPV, x, 215; xi, 195). Evon the Jewish traveller Benjamin. of Tudela speaks about his visit to St. George, erroneously identifying it with the Biblical Luz (Early travels, 81, 88).

In 563/1187, following the battle of Hittin [q.v.], Saladin conquered Ludd (Abū Shāma, ii, 89), but the effect on the town of this conquest was felt only three years later. In the framework of Saladin's policy of dismantling the main coastal fortresses, he demolished Ascalon ("Askalan) and proceeded to dismantle on 3 Ramadan 587/24 September 1911 the fortress of Ramla. On this occasion he also demolished the Cathedral of Ludd (Abū Shāma, ii, 191; Ibn al-Athfr, xii, 47, Zettersteen, 235). Al-Yafif, ili, 46t, erroneously speaks about the demolition of the whole town. Mudjîr al-Din, ii, 419, remarks that with the destruction of the church the town became "a village like the other villages" (cf. Robinson, Bibl. res., tii, 54-5; De Vogüé, Eglises, 363). When peace negotiations began between Saladin and the Franks in 588/1192, the former suggested that the King of Jerusalam should receive Ludd to compensate him for his losses in the dismantled Ascalon (Abú Shāma, ii, 200). The strategic importance of Ludd as an inland station on the main route from Egypt to Syria (cf. Mudilr al-Dia, loc. cit.), which had, in the previous period, been lost to Ramla, must have been at least partly resumed during the Crusader-Ayyubid period. In 601/1204-5, during the negotiations between the Franks and al-Malik al-'Adil, they demanded and received Jaffa as well as what amounted to the lease of Ludd, Ramla and their environs (al-Makrizi,

LUDD 6or

Sulāk, ii, 164). The min of Ludd appears in the sources again in connection with the peace treaty of 626/1229 between al-Malik al-Kümli of Egypt and the Emperor Frederick II. In this treaty, which provided for the cession of Jerusalem to the Franks, Ludd was also handed over to the Crusaders' sovereignty, togother with some other villages which were part of the territorial corridor between Jaffa and Jerusalem, which came under Frankish domination (Sulāk, ½1, 230; al-Kalķashandi, iii, 429). In 666/1267-8, Ludd was conquered by Baybars, who must have dismantled whatever remained of the church (Sulāk, ½2, 565), the stones of which were later used to build the bridge to the north of the city in 671/1273.

The development of the inland branch of the Cairo-Damaseus route for the eastern branch of the Via Maris), in the course of which the great enginsering enterprise of building the monumental bridge of Ludd we undertaken, was part of Baybar's policy to demolish completely the coast of Syria and Palestine. This policy began in fact, with Saladin and was later used by the subsequent Muslim rulers. In view of the Mamlük weakness on the sea and their inability to prevent the free naval activity in the Mediterranean, Baybars and his successors followed the strategy of abandoning the demolished shore and creating a strong line of inland fortresses. The unprecedented attention paid to the inland routs to Damascus passing via Ludd was part of this overall Mamfük strategy (cf. Ayalon, BARRIVVA, ii, and idem, The Mamiaks and naval power, 7-10).

Clermont-Ganneau, who studied the bridge as well - the church of Ludd, remarked that whole parts of the Crusaders' cathedral were used for building of the bridge (RAO, i. 270-1; cf. Prawer, ii, 424); modern Islamic art historians, however, doubt this theory. The bridge is known as Diss Dindas, after the name of a neighbouring village, and has been in constant usage since the time of its building until this very day. Two almost identical inscriptions on both its façades commemorate its building; it was ordered by Baybars and executed by 'Ala' al-Din 'All al-Sawwak b. Umar in Ramadan 671/April 1237 (Clermont-Ganneau, loc. cit.). On both sides of the inscriptions Baybars' famous heraldic symbol, the leopard, is carved in relief with its paw raised strike a miserable animal resembling a mouse, believed to represent the king of Jerusalem or the Crusaders in general (cf. Prawer, ii, 461-2).

Ludd revived = a consequence of the development of this major traffic route, especially since the early Mamiliak sultans paid great attention to the orderly and movement of the royal postal services barid [q.v.] between the imperial capital of Cairo and the major provincial capital of Damascus. In the Mamilik administrative division, Ludd was made into a centre of a subdistrict, 'amal Ludd (al-Raikashandi, iv. 100). Ibn al-Furat (vii. 225) speaks in 680/1281 about wildyst si-Ludd wa 'l-Ramis, After then, Ludd is mentioned an important station on the road between Cairo and Damascus (e.g. in Suiāk, 1/3, 824-5; Ibn Hadjar, Durar, I, 512). Nevertheless, it did not regain its former splendour, for during the Mamilik period also, it was overshadowed by Ramia. Mudilr al-Din describes the place in this time, namely the very end of the Mamilik period, = a pleasant village with an active Friday mosque. The singling-out of the mosque of Ludd is understandable in view of the fact that its monumental structure was far beyond the needs of the little village and served the population of the neighbouring villages well. Mudifr al-Din adds that to the east of the city there was a mashkad venerated as the tomb of the famous companion 'Abd al-Rahman b. 'Awf. There is no question that the mashkad and the local traditions around it were a post-Crusader invention; (in actual fact, Ibn 'Awf died in Medina and buried in the cemetery there of al-Baki' [q.v.], Ibn 'Abd al-Barr, Isti'āb, ii, 850; Mudjir al-Din, 419).

The Grand Mosque was also built at the order of Baybars, in part over the sites of the Byzantine basilica and the Grusaders' cathedral, with the building material taken from the ruins of both. On one of the columns of the mosque a 6th century Greek inscription which had belonged to the Byzantine church can still be seen. The mosque built by Baybars is called al-Diami' al-Umarl. The long inscription in early Mamluk naskli script over its entrance is the only detailed source concerning its building. It runs as follows:

"... ordered the building of this blessed Friday Mosque our lord the Sultan al-Maiik al-Zahir Rukn al-Dunya wa 'l-Din, Abu 'l-Fath Baybars al-Şalihl, the associate of the Commander of the Faithful, may God make his victories glorious and forgive him. This was done under the direction of the servant, yearning for the mercy of his [divine] Master, 'Alā' al-Din 'Alī al-Sawwik al-Şalihl, may God forgive him, in the month of Ramadān 666 (began 15 May 1268)." (L. A. Mayer, Muslim religious buildings, 31).

This means that the mosque was built shortly after the conquest of the city. The work was executed by the Alá' al-Din al-Sawwak who was later charged also with the building of the bridge but of minum nothing else III known (Mayor, ioc. eit.). Another inscription on the grand mosque, hitherto unpublished, bearing the some of Kalitbay and dated 13 Ramadán 892/2 September 1487, commemorates the abolition of certain unjust taxes upon the inhabitants of Ludd. Of special interest is the fact that the name III the powerful local leader of Diabal Nabulus, Khalll b. Isma'll, hitherto known from filterary sources only, appears in this inscription as officially participating in the affairs of Ludd. This may be explained by the fact that a few months earlier in 891/1486, the amir Akbirdi, the great dawadae, arrived in the environs of Ludd and Ramla, whence he set off to recruit warriors for the war against the Ottoman Bayerld II. Khalii b. Ismāfil was officially nominated to the mashyakha of Diabal Năbulus and took an active part in this recruiting activity, through which he must have widened his scope of influence (but clashing with the nd'ib of Jerusalem, Mudifir al-Din, 566, 669).

The Bedouin element, which during the Fatimid period was predominant in the coastal plains of Palestine, and particularly around Ramla and Ludd, reappeared in a major factor in the history of the country in the post-Crusader period, again easily establishing itself ground Gaza (Ghazza) on the one hand and around Ludd and Ramia on the other These areas have always been within easy reach of the nomads, who took advantage of the weakness of the Mamiûk and later also Ottoman military and administrative hold - the country. The environs of Ludd in both periods were completely at the mercy of Bedouin tribes, mainly of the Sawalma, the Kushuk and the Sawtariyya, who replaced the Banu Diarrah of Tayyi'-the predominant tribe of the Fatimid period in Palestine.

According to Oppenheim, the Sawalma and the Kushūk arrived in the Ramla-Ludd region from Lower Egypt at the beginning of the xxth/xyth century; but the Sawalma, the leading tribe of the area, LUDD

definitely arrived earlier, for in 1622 they took part in ■ coalition (with Bedouins from the Nabulus area and others) which aided Alimad b. Turabay, the Bedouin amir of Ladidium [q.v.], in his war against Fakhr al-Din il (Sharon, The political role of the Bedouins in Palestine . . ., 28-9).

The Ottoman period and modern times. Throughout most of the Ottoman period, Ludd was completely overshadowed by Ramla. It was a small village, which in judicial matters fell under the jurisdiction of the deputy kadi of Ramla (Heyd, 55-6). In spite of its small size, it retained some of its importance as being situated me the central postal route of the empire. When in 2552, Roxelana (Khurrem Sultan [q.v.]), the favourite and later wife of Sultan Sulayman the Magnificient, established her famous endowment (Smares) in Jerusalem, Ludd was one of the many villages which were made web/ for it (ibid., 143, B. 1, doc, 90, and R. 7; QDAP [1944], 170-94).

The European travellers who visited the town in the Mamlük and Ottoman periods and of little value for the history of Ludd until the 19th century, when the systematic research of the Holy Land began. They all repeat the same description of a small village in the midst of a fertile environment, emphasising the impressive rains of the Crusader cathedral. At time during these periods, an alter was built by the small Greek Orthodox community, who used to assemble the place for regular prayers. In spite of Ludd's fertility and favourable location on a major commercial route, it was not until the second half of I roth century that it began to revive. In the middle of the century the number of its population, according to the 185; census, was only 2,345 (the number for the neighbouring villages being 4,400, SWP, ii, 279). The increased attention paid by the Ottomans to Syria and Palestine in the second half of the century, which entailed improvement in the internal security, mainly in the central parts of the country, and the keeping of the Bedonin in closer check, had an immediate influence on the fortunes of town. The systematic European scholarly investigation of Ludd, which began with Edward Robinson in 1838 and continued particularly in 1852, and followed by the Palestine Exploration Fund (Conder, Kitchener and others), drew European attention to Ludd and its past. In 1871 and again in 1873-4 Clermont-Ganneau prepared a most detailed study of the town and its environs, which included a detailed study of the Byzantine basilica and the Crusaders' cathedral. At this time work began on the rebuilding of the present church of St. George, partly on the ancient foundations not included in the mosque. Once completed (on a far smaller scale than the former edifices), the church became the focus of popular colebrations twice a year, on 24 April, the birthday the Saint, and 16 November, the day in which his relies was brought a Ludd (SWP, Memoires, II, 468).

In spite of this steady growth of the town, its real development came with the building of the Jaffa-Jerusalem railway, which began in 1890 in accordance with a firmin granted by the Ottoman sultan to Joseph Navon Efendi. On 26 September 1892, the railway was inaugurated and Ludd was transformed almost overnight and began to over-

shadow Ramla.

When the First World War broke out it regained its significant strategic value, serving the logistic efforts of the Turks and Germans. On 15 November 1917 General Allenby's army entered Ramla, and dispersing a retreating Turkish column, took Ludd two days later.

Under the British administration, Ludd (now officially called Lydda) flourished very rapidly, mainly because of the wide-gauge railway (143.5 cm.) with which the British replaced the old (105 cm.) Ottoman one, connecting Jaffa via Ludd not only to Jerusalem but also via Rafah and Kantara to Cairo. Hence towards the end of the thirties of the present century, Ludd became one of the most important rail junctions in the Middle East. In 1934, the first airstrip was built near the city which developed into an international airport, inaugurated in 1937, and today the major international airport of Israel, Ben Gurion Airport. All this contributed the population growth of Ludd. By 1922 it numbered 8,103 inhabitants, exceeding for the first time the population of Ramla (Barron, Report ... centus of 1922), and by 1947 it was about 19,000 (2,000 Greek Orthodox and the rest Muslims).

An earthquake 🖿 11 July 1927 damaged the town very badly, destroying 500 homes and killing 40 people. Severe earthquakes had occurred formerly

in 1033 and 1546 (PEF, QS [1927], 175).

On 11 July 1948, in will course of the Arab-Israeli War, Ludd was conquered by Israel. Out of its former Arab population, only 1,056 remained in the town. Very soon modern outskirts grew up around it, and by 1958 its population reached the figure of 19,000, most of them Jews from the Arab countries. The rapid growth of the airport and the Israeli air industry have in the subsequent 20 years doubled its size and population (the latter standing at 40,000 in 1980).

(M. SHARON) LÜDHIANA, a district and town in the Dialandhar division of the Pandjab state of the Indian Union. The tract is an alluvial plain, covering 3,514 km. and bounded on the north by the river Sutlei, Generally, it has been a frontier area. On the high road from Central Asia, it has been crossed by successive waves of conquest or immigration, while over the last 250 years it has seen struggles for supremacy between the Durrant Atghans and the Mughais, between the Sikhs and the British, and recently between India and Pakistan. In 1809 Ludhiana town became a British frontier cantonment, and the district gained most of its present form after the Anglo-Sikh war of 1846. Since the partition of India in 1947 it has been close to the Pakistan troatier. Before partition, nearly 18% of the district's population were Muslims; now they form less than 1%, 300,000 Muslims having migrated to Pakistan. The town of Lüdhiana stands on the Grand Trunk

Road and is important junction on the Northern Railway. It appears to have been founded in the 9th/15th century by the Lodi rulers of Dibli, from whom it took its name. In the 19th century it was an important Wahhabi centre, and in the great uprising of 1857, Shah 'Abd al-Kadir, a prominent Wahhabi and friend of Sayyid Ahmad Burélwi, took the lead against the British. In the 20th century 'Abd al-Kädlr's family remained prominent in the resistance to the British, a great-grandson, Mawlana Habib al-Rahman, leading the Khilafat agitation of 1919-23 and, as President of the District Congress Committee, the civil disobedience movement of 1930. In the 1930s, the town was the centre of the Abrars, religious idealists, Indian nationalists, and for a time the leading Muslim party in north-west India Consequently, Ludhiana returned the only Muslim Congressman from the whole Pandiab in the 1937 elections, although by the next elections of 1946 the Muslim League was able to capture the seat with ease. Since 1947 the area has seen striking industrial and agricultural growth; it is one of the most prosperous regions in India.

LUGHA (A.), "speech", "language" in current usage.

The term does not appear with this min in the min ancient texts. In the Kur'an it is exclusively had which mused to express the concept of "language" and not lughe, which is completely absent from the Kur'anic text: bi-lisan 'semblyy' mabin ("in clear Arabic language"), XXVI, 195; and wa-ma

arsalnā min rasūlia illā bi-lisāni kawmiki ("all the messengers whom We have sent [to Mankind], We have made them speak in the language of their own people"), XIV, 4. According to J. Fück and Nöldeke, it was that this term is non-existent in the "ancient poetry of the Bedouin' (see Fück, 'Arablya, French tr., 195) but this cannot be asserted because there is not yet available an exhaustive inventory of the vocabulary of those ancient poetic works which have survived. Lugha cannot have acquired the sense of "language" or "speech" until the end of the and/8th century. Before this date, the term always appears with the very specialised sense of "manner of realising an element of language" particular to an ethnic group, a tribe or a locality; whence the meaning of regional or tribal "variant of realisation" which it possesses in the works of the grammarian Sthawayh (d. 180/795). It is appropriate to stress the fact that, in the writings of this author, and of his contemporaries, lughe does not denote the full range of linguistic particularities associated with ethnic group, 🕷 other words a local patois 🚾 a dialect, but only a local variant. Thus in the expression lughat ahl al-Hidjär (Kitáb, 1, 28, 36, 187, etc.), lughat Hughayl (ibid., il, 191), it concerns special "manner" of the Hidiazians of treating the particle md like the verb laysa ("not m be") and the "manner" in the Hudhaylites of forming the plural of words of the type diawro in diameral. This sense of "variant" or of "regional variety of realisation" is clearly illustrated in the use, by Arab grammarians and lexicographers, of the dual or plural form of the word lughe in expressions such as amend Ma'dikarib fa-fihi lughāt ("as for the name of Ma'dikarib, there exist several variants", Kitab, ii, 50) and the lexicographical phrases file lughation and fiki thalathu lughat. In view of the fact that a "regional or tribal variant" is always regarded, by those whose own speech does not include this variant, as a deviation and often also as an incorrect expression in terms of their speech, it comes as no surprise to find that the word lughe is derived from a root legier of which the essential meaning is precisely the idea of digression from certain norm of expression, whence the very strong and of a co-derivative of lughe, laghu, "Inconsistent", "Incomplete construction, lapsus"; whence also, by transposition to the content alone—even if the form is "correct" "subject without point or interest" (see LA, art. l-gh-w). This is confirmed, furthermore, by the eminent scholar and lexicographer Ibn al-A'rabi: "the of lugha is derived from this idea (of deviation): im fact, (it im stated that] certain speakers produce locutions by which they depart from the manner of speaking (lugha) of certain others" (ibid.). Another word, labo, which already has in the works of the most aucient grammarians the very strong sense of "incorrectness" and of "solecism" (cf. Kitāb, i, 304), alternates with lughs in the texts collated by researchers into Bedouin culture [see Lahn al-'Anna]. For example, this remark reported by the disciples of the eminent Abū 'Amr Ibn al-'Alk', made by of his informants, Abb Mahdiyya: laysa hddhā min lahnī wa-lā min lagns knowns "this is not my manner of speaking nor that of my tribe", al-Käll, ill, 39, repeated by al-Zadjādji in his Madjālis al-Sulamā', 3). In his Andli, al-Kall in quite explicit: "Lahn also signifies lughs according to al-Asma'l and Abu Zayd, and it is in this sense that it is to be understood in the saying of the callph 'Umar "Study . . . the labs in the same fashion that you study the Kur'an 804 LUGHA

(ibid., i, 1). Iba Abl Dawid, author of the Kilab al-Masahif (d. 316/429), mil lohn in this sense in his article Ikhtiläf alhan al-'Arab fi 'I-masabif "the divergences of labor specific to Araba in texts of the Kursan," and at the very beginning of this article he asserts that "al-alhan (pl. of lakn) are the lughdi" (ibid.; see in this context the excellent studies devoted to the word lake by J. Fück in Arabiya, appendix). There is, however, the general sense of "manner of speaking" without reference to a particular element in the following passage: bi-kalāmikim wa-djā'a "l-Kur'anu bihallimi in shatikim "they are addressed in their own language and the Kur'an has used their lugha" (Kitab, i, 166-7). This general is also to be inferred from these expressions in the Kitab: fl djami' lughat al-'Arab "in all the manners of speaking (or linguistic usages) of the Arabe" (1, 120); man kan al-nase min lughatiki "those whose habitual linguistic usage is to employ the accusative in this case" (ibid., ii, 263); and illd man id yu'khadh bi-lughatihi-"except these whose manner of speaking is not acceptable" (sbid., ii, 264).

These variants and the different manners of realizing the elements of 'Arabiyya constituted, in the period of the major "field-studies" made by Arab researchers (al-lughausiyyan), especially in the and and 3rd/8th and 9th centuries, the essential material towards which the analyses of the grammarians (alnahwiyyan) were directed. The term nahw which ultimately to denote "grammar" and which is to opposed to lughs taken in this and of "liaguistic material" (compiled from the mouths of Arabic speakers) itself signified, initially, "a type of expression" (cf. hādhā 'l-nahw min al-kalām; Kitāb, i, 491). Tous the nahuryydn ("grammarians") were the individuals who studied the anka" for autume, pl. of nakw; see Kildb, ii, 381: "types of expression heard from the mouths of Arabic speakers") with the purpose of making an exhaustive examination and of formulating rules. It is nevertheless clear that the sense of name in these usages does not contain the idea of deviation, which is the specific nature of the word lughe and of lake, the latter having a much stronger sense and ultimately taking on, in the 3rd/9th century, the meaning of "incorrectness"

When applied to pronunciation, the lughat al-'Arab, insofar as they constitute optional variants. contrasted with variants conditioned and dictated by the physiological laws of articulation: there in talk in this case of badal (= variant) due to the dariira (constraint imposed by these factors; cf. lbn Dinni, Sier al-pinasa, i, 78) or to the system of the language; it is then a matter of santa, that is, of a formal process effected on an element of the language (cf. Ibn Djinni, Khasavis, i. 371). In the context of the oral reproduction of an existing and memorised text (in effect, the Kur'an and poetry) these variants-both lughal and conditioned variants -are called audiuk al-kirā'ātļal-'adā' by grammarlans and by specialists in Kur'anic diction alike (Ibn Kutayba, Talwii, 33). Lugha was also contrasted with luthgie; in the period of the early grammarians, this latter term denoted a deviation in the pronunciation of a number of phonemes (not exclusively shays, as is often believed; cf. al-Djabiz, Bayan, i, 34), but this a case of individual and not collective deviation, it was sometimes difficult at the first attempt to distinguish between a regional variety and a purely individual variety, as is shown by this statement from the Kikib al-'Ayn: sami'nahii fa-la nadri a-lugha am lulhgha-"we have heard it well, but we do not know if it is a regional variant or a [simple] individual pronunciation" (1914., 1, 128).

The attitude of Arab lexicographers and grammarians towards linguistic data—the lughdihas not always been properly understood by contemporary authors. The norm (the "norm" of the linguist E. Coseriu and the "idiom" of the linguist J. Gagnepain) is for them the result of a choice, but this involves the choice of the native locutors themselves (fusuha' al-'Arab, the "native speakers of 'Arabiyya"). When this choice emanates from the greater part of these speakers, Sibawayh refers to kazel alfamma "the way of speech of the majority (Kildb, i. 228, ii, 263; variants: kapl cammat al-nas, ibid., j. 263, 293; kawi 'ammai al-'Arab, kawi al-'Arab Bullikim "the manner of all Arabic speakers", ibid., i, 477, ii, 303). Ibn Dinnl, for his part, was to me the expression lughat al-haffa-"the manners of speaking of the majority" (Khasā'is ii, 13). It could also be the case that this convergence of usages was facking: each lughe was then considered a norm in itself. "All the lughat", declares Ibn Djinni, "may be regarded as probative references (hudidia-with regard to the norm), and when two different lughat have the same range of usage and me equally accepted by the hiyas (Ibn Djinni speaks in this context of two kiyas, i.e. two different systems), it is not permitted to prefer one of them at the expense of the other" [soid., ii, 10). Attention should also be drawn to the remarkable assistence with which Sibawayh (in common with his masters and disciples) arges the reader to rely upon soma", upon attested facts only and above all "to accept among these [types of expression which Sthawayh cites) only those which Arabic speakers have themselves accepted and to treat them in the same fashion listaksin min hādhā mā istaksana al-t Arab wa-adirihi kama adisawka, Kitab, 1, 252). Iba <u>Di</u>inal also asserts (Munsif, ii, 240), "Samde can annul the action of hiver". This assumes, as this author explicitly states, that "everything which highs permits is not necessarily actualised in reality" (Khasalis, i, 117}.

In fact, the only criterion of normalisation which has been retained by the Arab scholars is that of the maximum extension of usage with the domain of Arabiyya (the hour domant al-Arab cited above) and of the most widespread inter-comprehension. Whence the degrees of "clarity" applied to lughai: fasthlafsak. The Kitab of Sibawayh is also full of these appraisals: hodha 'arabi kathir "this is Arabic of widespread usage"; hadha akthar "this is more widespread"; and akthar un-a raf-"more widespread and better known" (see Kitab, i, 27, 43, 74, 78, 258, etc.). When two lughas, or me, were in competition, some were described as being "Arabic" and sasana djayyida ("good"), others = ahsan or adjwad ("better") or kabiha or radi'a ("bad"); here it is no longer a question of value judgments, but of acceptability applied solely to the subjects of speech and on the basis of the most widespread usage (cf. the expression 'arabi diayyid kathir, al-asi al-akther, ibid., i, 27, 60). The geographical recurrence of lugha was assessed with the aid of the following scale: muttarid - perfectly uniform, recurrent or general (100%); ghélib - predominant (86%); hathir - widesproad or frequent (65%); hall less widespread or less frequent (13%), and nadir tere or isolated (4%) (see Mushir, i, 234). It may be noted that this scale is applied equally to the frequeacy of an element or linguistic form within one grouping; see in this context the contrast between muttarid fi 'l-isti mail "general in usage" and

805

muttarid fi "l-kiyas "general in terms of kiyas", in Khasa'is, i, 96 ff. and Hadj-Salah, Linguistique arabe et linguistique générale.

LUGHA

As opposed to nahe, ingha is the very essence of language, in other words that part which is not constructed (by induction), inconsistent with the rules of grammar mon-predictable or non-deducible by means of these rules. It is primarily a matter of samac, that is of crude identifications. Thus the entire range of data recorded from the mouths of speakers of 'Arabiyya constituted the lugha (taken as a collective: the ensemble of all the lughest duly identified). Analysed in groups of items, it is vocabulary opposed to grammar; included in it, sarity so, were not only the lexical unities offectively in use-along with their regional variantsbut also colloquial expressions, in the form of idioms or amthal (pl. of mathal in the very broad sense of "stereotyped figure of speach" or "cliché of widespread diffusion". Cf. the first compilations of amthal which have survived to the present, comprising collections of idiomatic figures, and not only of maxims and proverbs; see e.g. al-Fahhir by al-Mufaddai b. Salama, Cairo 1960).

The non-predictable character of lugha (as crude fact and/or as vocabulary of a formal system, that of nake) has been well described by Ibn Dimil: "the language of the Arabs comprises two sorts of elements: those elements that one is obliged to accept as such, with their configuration, for example, and not on the basis of a rule; such elements are: had/ar (stone), dar (house) . . . and another type that may be apprahended through kiyas". (Khasa'is, ii, 42). "Hadiar may be analysed in a root (h-dj-r) and a system (Cta Can Ca), but the fact that these unities combined in hadiar arrive m the meaning of "stone" is a fact of samā'; all that can 🔳 done is to memorise it (yulifas). It is also in this that this remark of the lexicographer Ibn Fáris (d. 395/1004) is to be interpreted: al-lugha la in'khadhu kiyasaa nahisuku nahnu al-fan-"the data of the language cannot be obtained, in era, as far as we concerned, through hiyds" (Sdhibi, 13).

Lugha, initially "regional variant of realisation" or "datum of the language", comes to designate the ontire speech of an ethnic group and even to be identified with the word lists which signifies "tongue" and "language". This identification is however absolutely unknown to the first generations of grainmarians (up to and including Sibawayh). It appears sporadically at the end of the and/8th century (see the use of it made by the jurist and leader of the lawschool al-Shafi's in his Kisala, where he employs the word lughs with the me of lisses only once (p. 564) and lisan in all other cases). It was probably in the period of the great controversies of the 'ilm al-kalam that such a usage came into being; al-Diable in fact uses in the still a e of speaking, but enlarged to cover the entire language of an ethnic group (regional speech types, "Arabiyya, languages other than Arabic; see Bayan, i, 161-2 and Haynwiss, v. 299). The sense of regional variant anplied to a single linguistic element or item is, however, retained until a very late period.

The science of lughal, which became the science of lugha or the data of the language, underwent a prodigious development following the major researches initiated by the very founder of this branch of science, Abū 'Anır Ibn al-'Alà' (154/770), that is, in the period when his immediate disciples such as al-Aşma'l (d. 213/838), Abū 'Ubayda (d. 209/826), Abū Zayd al-Ansārl (d. 213/831) and the

Kūfans al-Mufaddal al-Dabbī, Iba al-Afrābī, Abū Amr al-Shaybani, etc., made immense journeys of investigation across the Arabian peninsula. This gigantic effort of collection and codification of data (which continued until the total disappearance of the spontaneous mastery of Arabiyya = al-fasaka, the end of the 4th/10th century) resulted initially is the composition of innumerable monographs on the lughat al-haba'il "the variants of realisation specific to the Arab tribes", on amthdi or "cliches", namadir or "hapax legomena", toponymy, the vocabulary of flora and fauna, onomastic, types of verbs, masdars, the extension of use of schemes, etc. (on this subject, see H. Nassar, al-Mu'diam al-'arabi. Cairo 1956). To this, there is added the collection and codification of variants in reproduction of the Kur'anic text which were drawn from those who had belonged to the school of the Tabifan or from their disciples. All Arabic lexicography of later centuries is based on these monographs.

Lugha as a datum constitutes, for early grammarians as well as for philosophers, the product of a wad, that is of an institution. The same furthermore applies to the rules of grammar themselves because they are different from one language to another (cf. Mushir, i, 48) and, above all, because they do not result from the application of more primitive rules, but by induction from the acts of discourse of Arabic speakers (makā yis mustanbata min istikrā) kalam al-'Arab; Aba 'All al-Farisi, al-Tahmila, fol. r). The difference, as has just been observed, resides in the fact that lugge is the non-inductive ensemble of linguistic items. "By the wad" of an articulated sound" declares al-Radl, "is meant the primitive assignation of an articulated sound (loft) to a certain significance (mains) with the intention of seeing this significance become the object of conventional usage within a community" (Shark al-Kāfiya, i, 3). Thus everything which is not imposed by institution (mand \tilde{u}^{c}) = the symbol of something is outside the scope of lugha, outside was. Among other examples of this me the following: sas, kak, kadi, etc., which have not been retained by the founder of the language for reasons of phonetic incompatibility (tanafur al-huruf; soe Khasalis, i, 34). Lugha is, from this point of view, an istilah or social institution tacitly accepted by its users; but a distinction is also drawn between these two terms, because it is considered that lughe is always a primitive institution, while is tilly can be an innovation, a technical neologism (cf. Bayan, i, 139-40), wheace the pairs ast al-wade or ast al-tughatistildh language/ metalanguage and wook ai-iweha/wook thant primary institution/secondary institution (cf. al-Radi, ibid., ii, 1:6; al-[]]urdjānī, Dalā'ii, 24, 193, 308; and al-Fárābi, Kitdb ni-Hurûf, 148). It is also in this context that a distinction is drawn between wad aitugha as an organisation and code established by social institution and und al-haldm, which is the arrangements of discourse and the choice of its elements by the individual speaker (al-Djurdian), op. sit., 64, 69, 79, 81).

Wad constituted for the majority of the Mu'tazills a purely human convention (mumida's — code), and for other thinkers, an institution which is divine, or at least inspired in men by God (imm't), illum; see in this context Mushir, i. 8-28 and Loues, L'origine du language d'après les grammairiens arabes, in Arabica, x-xi). It does not seem, however, that these two positions were — clearly stated in the works of the major Arab linguists and philosophers. In fact, al-Agh'art (d. 324/935-6), to whom — attri-

buted the idea of the divine institution of the language, has a rather inconclusive attitude to the subject, judging by the lukewarm opinions of his disciples. The same applies to the Imam al-Haramayn and to al-Ghazall (see Murkir, 1, 20). A similar position is adopted by the Murtazili grammarians Abū 'Alī al-Fārisi and Ibn Djinni (who attributes to Sībawayh's pupil, Abu 'I-Hasan al-Akhfash, the same cautious attitude; see Khagā²iş, 1, 4x).

Considerably more interesting is the problem which the Muftazills raised towards the middle of the ard/oth century, that is, the absolute arbitrariness of the linguistic symbol compared with the 40 less absolute immutability of the lughs. These two extreme positions were represented, the first by Abu I-Husayn al-Salihi and the second by Abbad b. Sulayman al-Saymari (ca. 230/854; see the Makaldt of al-Ash arl, ii, 186, and i, 250). The argument of 'Abbad men as follows: "If there existed no particular relationship between articulated sounds and the objects they signify, the assignation of each of these signifiers to a signified object would be tantamount to choosing a possibility of assignation without any motive (tardith bi-dan muradidith), which is absurd" (quoted by al-Razl, Tajsir, I, 22). The other Mu'tazilis did not follow 'Abbad: "There is no necessary relationship", the hadi "Abd al-Djabbůr (415/1025)
to say, "between the expression (41-5ibâra) and the content, such that we cannot exist without the other" (Mughest, v. 20). For al-Salihi, such arbitrariness has no limits since it is possible, he claimed, "to change today the names [of things] and the lugha as it presents itself to us at the present time" (kalb al-lugha; Makalat, ii, 186). Later, these two opinions came to be reconciled: "As for those things which have become the object of econvention" the kadi 'Abd al-Djabbar was to assert, "it is certain that they could have been established according to mentirely different system with the same validity. But the moment that these objects are fixed by a conventional system, they we assimilated, for the user, to that which could not be otherwise than it is" (Mughai, xvi, 191). In the meet period, Ibn Sida reproduces this dichotomic formula which summarises well the reconciliation of the two extremes: "Language is constraint (idlinariyya), although the conventional expressions of which it is composed have been (at the moment of mode) freely chosen (ikhliydniyya] (Biukhassas, 1, 3).

The expression 'im al-lugha (or 'ulum al-lugha), has always denoted, as opposed to 41m al-natur for 'i'm el-'Arebiyya), lexicology or more exactly the science of the datum of the language (cf. sl-Zadjdiadit, Idah, 79; Ibn Faris, al-Şahibi, 31; Ibn Yalish, Sharh, I, 4; al-Radl, Sharh, I, 4; Muzhir, passim, etc.). Ibn Khaldun defines film al-lugho as "the science of the instituted elements of the language" (hāghā 'l-'ilm kuwa bayān al-mawdū'āt al-luzhawiyya; Muhaddima, 1059), a science which he includes along with 'tim al-nahw and 'ilm al-bayan (style) among the al-tulum al-lisaniyya (ibid.). Besides this expression, there was also another: fikk al-lugha which functioned as a synonym of 'ilm al-lugha, but it seems likely that this was a more specialised branch of the same discipline, that is, the study of the semiological distinctions and affinities which exist between the elements of vocabulary (cf. the work of Ibn Faris cited above, I Fish al-lughe of al-Tha alibi and the Muchasses of Iba Sida, as well as the definitions of Ibn Khaldun, Muhaddima, 1060-1). The very frequent modern usage of lughe with the sense of "language" has led certain of our contemporaries to attempt to employ the expression 'sim alsignato represent the modern concept of 'linguistics', which is not entirely appropriate because this signification has had, and still has, the sense | lexicology. A different | exists to denote this concept: 'time alsistan' (often abridged into lisawiyyat), which alfarbl employs in his works and in particular in his light alsistan, where | envisages in a very distinct tashion the possibility of constructing | general linguistics extending to all languages and no longer to one particular language (8-x3, xx).

LUGHA, 'ILM AL- [see LUGHA].

LUGHAT-NAMA [see DZHKHUDA, in Supplement].

LUGHZ (A., pl. alghir) "enigma", MU AKMĀ (pl. Muc'ammaydi) "word puzzle, verbal charada", UMDITYVA (pl. ahādi*) "riddle, conundrum", threa Arabic terms often used in m ligurative sense, but basically referring to three kinds of literary plays upon words which are fairly close in type to each other.

The enigma is generally in verse, and characteristically is in interrogative form. Thus for falak "heavenly firmament": mā "adam" fi 'l-hakhi, lākin turā [] min-hū undjūde" haythumā stabbalak [] [...] fa-in kafa'nā ra'sahū fahma lak "What is the thing which in reality has no existence, but nevertholess you see it in existence wherever you confront it [...] and if we cut off its head {= fa}, it will be yours {= lak}?".

The mu'ammd is to be distinguished from the inghz by the absence of the interrogatory element and by the fact that the sense of the passage, also in verse, had been made "blind" by various procedures. Thus it may be formed by designating one or more words by various clues to the letters forming it or them is by allusious relating to the promuciation; the alphabetic value, the numeral value of the letters, misreading or inversion (fails). Mostly, no account is taken of the vowels in oll letters without phonetic value. Good taste is the rule.

The invention of the mwfammā is attributed to Khalli b. Ahmad, the inventor of prosody, while the Persians of course attribute it to fall b. Abi Tālib.

The following is an example of mulammā on the name Alimad: awwaluku thālithu tuffāhata [] warābīlu 'l-tuffāhi thānīkī [] Warawalu 'l-miski lakā (hālithus [] sta-ākhiru 'l-warāi li-bāhihī 'l-ts first is the third of [the word] tuffāha (apples) = A; and the fourth of [the word] tuffāha (apples) is its second = H; and the first of [the word] misk (musk) is its third = M; and the last of [the word] marā (roses) is the remainder of it = D".

The mu'ammā was used by many poets (in particular by Abū Nuwās; see E. Wagner, Abū Nuwās,

Wiesbaden 1965, 380-3).

As for the whatiyya, this term denotes a simple guessing game (e.g. "Guess what I have in my hand"), but can also mean a type of enigma fairly close to the lughs. Thus for salsabil "wine": ma ridgu kawli "mukādii [i in kāla: nṭlub ṭarkā "What is the alternative meant by the person setting forth a riddle when he says: ask (-sai) the way (-sabit)?".

In colloquial Arabic, riddles and conundrums have been collected by A. Giacobetti, Recueil d'enigmes arabes populaires, Algiers 1916; J. Quemeneur, Enigmes tunisiennes, Tunis 1937; they have been made the subject of a paper by A. Hamidou, Devinettes populaires de Tlemcon, in KAfr. 372-3 (1937), 357-72 and of a study in IBLA (1943), 191-213; numerous examples be found in ibid., 1937, 1938, 1939, 1941 passim, 1943, 214-62, and 1945, 420-9. For the riddle in Turkish see BILMEDIR.

AL-LUHAYYA (Ar. "small beard", Yahya b. al-Husayn, Chāyat, ii, 569 n. a), a small port on the Red Sea coast fu the Yernen Arub Republic (lat. 15' 42' N., long. 42° 41' E.), ca. 110 km. north of al-Hudayda [g.u.; see the map accompanying 'Asiri), and altuated at the northern end of a narrow and shallow bay formed between the mainland and a coral reef. The bay is continued northwards past the town by a narrow boat-channel, at the entrance of which small craft may moor. Larger vessels be about 5 km. south-west of the town in m open roadstead between the mainland and the offshore island of al-Urmak. At very low tide, not even small boats can reach the town when loaded.

(M. BENCHENES *)

A. Sprenger's identification of al-Lubayya with Ptolemy's Μαμάλαη κώμη is not proved, nor is it certain that the port is identical with Ναπηγούς κώμη, Sambrachate ■ Leupas (Pfiny), as proposed by R. Glaser.

When Affonso d'Albuquerque entered the Red Sea in 2513, he called at al-Lubayya (Luya in the Portuguese sources). The port then belonged to the territory in the Imain in San'a', to whom tribute was paid. Previous to the roth/roth century, al-Luhayya, like other ports on the Arabian coast such as al-Hudayda, Kamaran Island, al-Mukha (Mocha) and Zahld, had been in the power of the Rasilids [q.v.], and their beirs the Bant Tähir, whose last monarch, 'Amir b. 'Abd al-Wahhab, was defeated in 1515 by the lirearms of the Mamlük forces under Salman al-Rumi and Husayn Turki (Serjeant, The Portuguese, 29), sent by the sultan Kansawh al-Ghawri [q.v.]. The ruler of al-Luhayya, Fakih Abû Bake b. al-Makbul al-Zayla'l (of Zayla' [q.v.]), supported the Egyptians, made the Mouths for al-Ghawri and, after the Mamilik forces had damaged the port of al-Hudayda, opened up the road leading inland. With one hundred men armed with muskets (banddib), he then advanced against Mawr. Abû Makhrama (Schumann, Political history, 19) and Vahya b. al-Husayn (Ghāyat, ii, 644) remark that this was the first time fire-arms were used in the Yemen; see however Schumann, op. cil., nn. 18, 92. After Sultan Sellm I had conquered Egypt, Ottoman suzerainty was quickly recognised by the Egyptian forces in the coastal towns. According to the Tarible al-Shiker (Scrieant, op. cit., 51, 170), the Portuguese, after m unsuccessful attack on Diudda (see, however, EP, ii, 572a) in 923/1517, turned back to Yemen, pursued by Salman "or one of his men" who took a Portuguese grab (Ar. ghiarab "brigantine") near al-Luhayya. This story, confirmed by Jožo de Barros (Decadas, iii, 1, 6), refers to Lopo Soares de Albergaria's expedition in the Red Sea.

In 1635 the Imam al-Mansur bi'llah al-Kasim b. Muhammad [q.w.] succeeded in expelling the Turks, and al-Luhayya again came into the possession of the Imams of San'a'. Around 1650, ships sailing between Massawa and al-Mukhā on behalf of Banyans sottled in the latter port apparently used to anchor at the port of al-Luhayya (Van Donzel, Foreign relations, 134-6, 139). On his return from Ethiopia to Yemen, Abmad b. al-Haymi, the envoy of Imam al-Mutawakkii 'alā 'llāh (1054-87/1644-76)

the Ethiopian king Fāsiladas (1632-67), disembarked at al-Luhayya.

During his stay at al-Luhayya between 29 Decembor 1762 and 20 February 1763, C. Niebubr was amicably received by smir Farban, a black African. appointed as governor (dola) by the Imam of San's? He was told that the town me not older than three hundred years and that its foundation, is the case with Bayt al-Fakih and al-Mukha [q.vo], was connected with a local Muslim saint, shayak Salei (Salib), around whose cell and later tomb the original settlement grew. The descendants of the shapkh were still revered in al-Lubayya in Niebuhr's days. The town had no circular wall then, but me the landward side there were some twelve towers, armed with a few cannon and tying at a distance of 220 double steps from each other. The highly-placed entrances were accessible only by a ladder. The towers, however, were not worth much as defence works; the Hāshid and Bakli tribes (see Hāshid wa-baklı) (see also Niebuhr, Beschreibung, 258-62, and Robin, Les hautes terres) marched across them and burned the town, and on a rumour of another attack, the inhabitants fled to al-Urmak. Since the water brackish, it had to be fetched at some distance. The people, among whom were some forty Banyans, lived off commerce and fish. Although the coffee was of inferior quality compared with that of Bayt

al-Fahih, it was cheaper, since transport to the more important port of al-Djudda was inexpensive. In al-Lubayya merchants bought it for customers in al-Djudda, Egypt and Turkey, and some Cairenes used to come over in order to acquire it in person. Lime was made by burning coral in the open air, and rocksalt was cut in the neighbourhood. Although Niebuhr describes the town as rather poor, al-Luhayya had to pay mouthly 2,000 thalers to the Imam of San'a', and during the mausim (April-June) when Indian vessels were calling, 3,000 thalers, more than al-Hudayda had to bring in. The arrival of Indian vessels at al-Luhayya around 1770 is confirmed by Bruce (Travels, i, 323). Niebuhr also relates that one of the rich merchants of ai-Luhayya had obtained several kinds of aphrodislacs from "englandischen Wundärtzen" (Reisebeschreibung, i. 304, not "Wunderärzten" as in Th. Hansen, Reise, 246, "miracle doctors", idem, Arabia Felix, 221), so English ships must have called at al-Luhayya around 1760, at least occasionally.

In the rath/18th century, the power of the Imāms of Ṣan'ā' declined sharply, and many towns declared themselves independent, while the Sharifs of Abū 'Arish [q.e.] grew more powerful. In 1730 only the coastal land between al-Luhayya and al-Mukhā remained in the Imām's possession, and by 1790 the coastline between al-Kunfudha [q.v.] and Bayr al-Fakih, including al-Luhayya, was under the authority of the Sharifs of Abū 'Arish (Baldry, Il-Yamon, 158). At that time, the monthly revenue of al-Luhayya was roughly computed at £600 (Bury, Arabia Infelix,

(19).

The rise of Wahhabi power at the beginning of the 19th century forced Sharif Hamad Abu Mismar of Abū 'Arīsh to give allegiance to 'Abd al-Wahhib Abū Nukte, whom Satud II had appointed governor of the Tihama (Philby, Saindi Arabio, 13). When in race he revoked his allegiance and restored the revenues of the coastal towns to Ahmad b. Manşür 'All, the Imam of San'a' (Salt, A royage, 125; Playfair, A history, 129), the Wahhabis despatched an army by sea to Diayzan [q.v.], from where it advanced southwards, looting and burning al-Luhayya and al-Hudayda. Under Wahhābi rule, an attempt was made to develop the port of al-Luhayya, and negotiations were opened with the English East India Company to start a factory (Lord Valentia, Voyages, ii, 385, quoted by Ritter, Erdkunde, 884). When Ehrenberg visited the port in 1825 (Ritter, Erdkunds, 192 n. 485) a Persian ship was blockading the harbour in order to force the doin Fath Allah to pay m debt. By then the walled town had been deserted. Abū Mismār me forced to give allegiance again to the Wahhabis, but shortly afterwards he associated himself with Muhammad All, the viceroy of Egypt, and in an agreement, authority in the Tihama was surrendered to Muhammad All, who restored that territory to the Imam of Şan'a' in return for a payment of 20,000 bahars of coffee (El Batrik, Egyptian-Yemeni relations, 282). When in 1832 the Ottomans rewarded the Albanian Mehmed Ama Türkee Bilanez with the governorship of Hidjāz for having mutinied in al-Hjudda against Muhammad All, he occupied several coastal towns, but by 1837 the whole of the eastern shore of the Red Sea was in Egyptian hands (El Batrik, op. cit., 286), although Husayn Efendi from Belgrade was governor of al-Luhayya when the French botanist Botta visited the port in 1836 (Ritter, Erdhunde, 756). When the Egyptian troops moved southwards, Great Britain, having occupied Aden in 1837, exerted pressure on Muhammad 'All to evacuate the Arabian peninsula. The

Egyptian forces accordingly left the coastal towns in 1840 and the territory was surrendered to Husayn, the Sharlf of AbG 'Arlsh, In 1842 the latter admitted his dependence on the Ottoman Sultan and was created a Pasha and governor of the sea coast (el-Khazraji, History of the Resultyy dynasty of Yemen. ed. Redhouse, i, Introd., 35). In 1844 the Imdes Mansur 'All tried to recover the territory, and after his deposition in 1848 his successor occupied several coastal towns and imprisoned Sharif Elusayn. But the latter escaped and re-established his authority over the Tihama (Redhouse, op. sit., i, 36). In 1849 Ottoman troops under Tewfik Pasha occupied the Yemen, and after the latter's untimely death, 'Abd Allâh b. Muhammad 'Awn o! Mecca was appointed governor of the whole of the Tihama. Opposition to Turkish rule continued, however, among successive Zaydī Imāms, Sharifs of Abû 'Arish, tribal thayths and occasionally the Sharlfs of Mecca. After subduing the Sharlfs of Abu 'Arlsh, the Idrisi family in Şabyā [see Asīr, i, 709b] became fierce opponents to Turkish rule, m that the Ottoman forces were compelled to withdraw to the principal garrison towns. The opening of the Suez Canal in 1860 enabled the Ottomans to despatch troops rapidly to Yemen, and in 1871 they subdued 'Astr. In 1872 San'a' became the centre of the Ottoman government in the wildyet of Yaman, which was divided into four sandiaks, each headed by a mutasarrif: Markaz, 'Asir, Ta'izz and al-Hudayda, al-Luhayya being a kadā' of the latter (Wenner, Modern Yemen, 62, n. 5). Its population was estimated in 1881 = 2,000. In 1882 Muhammad b. 'A'id of the 'A'id family of the Banu Mughayd, who had been granted the hereditary chieftainship of the highland tribes of 'Asir by Faysal b. Sa'ud [q.n.], cut off the Turks in Abhā [q.v.] from the coast, and the Banu Marwan, who inhabit the region between Maydl (Mldl) and Harad, attacked al-Luhayya. The coastal towns were the only Turkish strongholds amidst the "state of almost chronic rebellion" (Baldry, op. cit., 169) in 'Asir and Hidiaz, and served as bases for expeditions against the rebellious inland tribes. In 1899 even the garrison of al-Luhayya came under attack. When a telegraph line was constructed between al-Luhayya and al-Maydi, Turkish soldlers guarding the workmen were attacked. Al-Maydl, north of al-Luhayya, was captured by tribesmen loyal to the Imdm and became a centre for the illegal import of arms. In 1906 the Turkish troops were withdrawn from al-Luhayya and al-Maydi, but not for long, because in the same year they marched from al-Luhayya to Ḥādidia, accompanied by Boni Pasha, a shaykh of the pro-Turkish Band Kays region east of al-Luhayya. who inhabit the Shortly afterwards, Turkish soldiers of the al-Luhayya garrison joined others from Diayran, Zabid and al-Mukhā in their march on al-Hudayda in order to demand their discharge papers; many had served seven years in Yemen but had received less than one year's pay (Baldry, op. cit., 178-9). In 1909 Sayyid Muhammad b. 'All al-Idrist of Sabya came to the assistance of tribes living to the east of al-Luhayya who had been forced to pay illegal taxes levied by Bonl Pasha. He occupied the port, but it was soon recaptured by the Turks, for in the same year two gunboats, two transports and nine battalions were sent from Istanbul to al-Hudayda and al-Luhayya. The latter port became Riffat Pasha's base for launching attacks against the Idrisl tribesmen. In 1911 the Käⁿim-makäm of al-Luhayya set out with 200 troops against the inhabitants of alZuhra who had captured a caravan of eighty camels. He was, however, defeated and besieged in al-Zuhra. Later that year, the Bana 'Abs seized the wells outside al-Luhayya, but due me dissension among the Arabs, Hamell Bey, arriving from Kamaran, was able to regain them. Shortly afterwards, however, Hamdi Boy suffered a severe reverse in al-Luhayya itself. A new Turkish expedition was prepared against Sayyid Muhammad, Liamdi Bey having 2,500 troops ready in the port. But the advance was postponed because of the outbreak of the Turkish-Italian war in 1911 (see Green, Italian relations). In 1912 the Italian navy bombarded al-Luhayya and extended the blockade of the coast to a point 15 km, north of the port, while 6,000 followers of Sayyid Muhammad moved against al-Lubayya. The whole coast between al-Kunfudha and al-Luhayya was now under the effective control of Sayyid Muhammad.

On the eve of the First World War, the Ottoman government desired to settle the difficulties in Yemen. Imam Yahya of San'a' and Sayyid Muhammad (see al-Kibsi, Imam Yahya) agreed to observe ■ truce. Most of the Turkish troops were withdrawn from Yemen, only small gardsons remained in the main towns of the Tthama. During the War, Sayyid Muhammad signed a treaty with the British Resident at Aden (May 1915) and overran much of the northern Tihāma. He did not, however, succeed in taking al-Lubayya because of the Turkish artillery (Handbook, i, 141-2; Philby, Arabia, 239; Rihani, Around the coasts, 166-7). After the War, the Turks evacuated Arabia. In 1339/1920 Sayyid Muhammad concluded a treaty with Ibn Sa'ad (q.v.), but after his death Imdm Yahya in 1925 annexed the entire Tihama and its ports as for north = al-Maydi. During the war with Imam Yabya, Safudi forces occupied the coast as far south as Bayt al-Fakih, including al-Luhayya. The treaty of al-Ta'il in 1353/1934, defining the frontier between Sa'odl Arabia and the Yemen, led to the attachment of al-Luhayya to Yemen.

in 1970 the population of al-Lubayya was estimated at 5,000. At present, the port has no cial significance and is only a small base for fishing boats (saubuk), traffic being limited to coastal shipping. The seaborno trade is now control at the modern facilities of Almadi, the new harbour of al-Budayda.

VAN DONZEL)

LUKATA (A.), an article found (more precisely: "picked up"). The leading principle in the Muslim law regarding articles lost and found may be said to be the protection of the owner from the finder, sometimes mingled with social considerations. The picking up of articles found is generally permitted, although it is sometimes also said to be more meritorious to leave them. The finder is bound to advertise the article which he has found (or taken) for a whole year unless it is of quite insignificant value or perishable. The particulars of this advertising are minutely regulated by special rules. After the termination of the period, the finder, according to Malik and al-Shafiff, has the right to take possession of the article and do what he pleases with it, but according to Aba Hantia, only if he is "poor"; but the use of the articles as religious alms (sadaļa) even before the expiry of myear is permitted in a preferential clause by Abu Hanifa and Mālik. If the owner appears before the expiry of the period, he receives the object back, as he does after the expiry of the period if it is still with the finder; but If the finder has disposed of it in keeping with the law, he is liable to the owner for its value; Dāwad ai-Zāhirī alone recognised no further claim by the loser in this case. The establishment of ownership is facilitated, compared with the ordinary process in Mölik and Ahmad b. Hanbal (in al-Bukhārl aiso; el. his superscription to Luhata, bab 1). As regards the finding of domestic animals in the desert, there are special regulations which are less onerous for the finder in the case of injured animals and more onerous when they are not injured. Al-Shafiff and Ahmad b. Hanbal have similarly sums special regulations for articles found in the Haram, the sacred territory in Mesca, which at bottom go back to the old idea of special right of ownership by Alläh in the Haram and articles found in it.

These prescriptions of the fish are based on certain hadiths which have been handed down with several variants (cf. al-Bukhāri, Lukuja; Muslim, Constantinople 1329 ff., v, 133) which need not be quoted in detail here - they agree with the principles in all essentials. But it may be mentioned that in a very old stratum, later worked over, there is mention of a two- three-year period. In the conception of the primitive jurists, the article found is sometimes described as deposited (wad!'a); further, out of special religious scruples, one is careful not to pick up found dates and eat them, as they might belong to the zakdi; finally, there is a hadith which forbids the Mecca pilgrim (kádídí) to pick up articles found at all. From the superscription by Bukhāri W Lukaja, bāb rr, it is evident that found articles might be handed over, m used m be handed over, to a government office; but their retention in the finder's care is justified by quoting a special tradition.

None of these traditions can be considered historical; at most, the prohibition by the Prophet in his oration after the occupation of Macca from keeping articles found in the Haram without advertising them (cf. above) may be genuine on account of its antiquated terminology. Lugaja is not mentioned

in the Kuran.

Bibliography: In addition to the pertinent sections in the fikh and hadith collections, cf. Th. W. Juynboll, Handleiding tot de kennis van de mohammedanische west, 386; E. Sachau, Millammedanisches Recht, 639 ff; D. Santillana, Istiturioni di diritto musulmano melichina, i, 328-9. (J. Schacht)

AL-LURKAM, DIABAL, the name which the diseval Arabic geographers give to the mountain chain which is situated in the northern part of Syria and for long formed the frontier between the Islamic and the Byzantine lands. In classical it was known as the Amanos/Amanus (Khamanu in the cuneiform inscriptions), but by the Turks as Alma Daghi (Elma Dagh in modern Turkish); since it has not been treated under ELMA DAGRI, it has seemed useful to consider it here, even though the Diabal al-Lukkam does not correspond exactly to these ramilications of the Taurus Mountains, which detaches itself from the dolomite massif of the Karadede Dagh in the region of Mar'ash, to the south of the Pyramus (Djayhan), running parallel to the chains of the Taurus and Anti-Taurus, surrounding with its eastern ridge the Gulf of Alexandretta, and falling steeply into the sea to the south of Ra's al-Khinzir (5,100 ft.), together with the Diabal Mūsā or Diabal Alimar (5,750 ft.).

The deep transverse valley of the Orontes and the morasses of al-'Amk [q.w.] separate the Alma Dagh from the Lebanon chains, which differ also in their geological formation (mostly limestone) from that of the Taurus system. With its off shoots, the Alma Dagh cuts off Cilicia entirely from Syria and the Mesopotamian hinterland; apart from a few passes that me mere mule-tracks, the pass of Baylan [q.w.] is the only connection between Asia Minor and Syria and has always been much frequented. The heights of the several mountains are not yet accurately

known; the average height is said to be 3,650 ft., and some peaks reach 7,300 ft. or more; as the highest point, Dormeyer gives the Menhör, 7,450 ft. In the northern part, jagged and steep peaks prevail; in the south, more rounded outlines. The Alma Dagh with its fresh verdure is an attractive sight, for its sides are thickly overgrown with trees, out of which the bare delomite peaks project. The ridge of the Alma Dagh north of Iskandarfin formed in Ottoman times, together with the sides sloping to east and west, an administrative unit, the Sandjak Dlabal Barakat; cf. Sachau in SBPr. Ak. W. (1892), 314.

Locally, more common name is used for the whole of the Amanus; in the reports of European travellers and in the maps based on these, this fact has caused considerable confusion as to the nomenclature, because the same name is sometimes used for a part, sometimes for the whole. For the northern part of the Amanus we find the name Grawr Dagh or Diawur Dagh, i.e. the mountains of the infidels; H. Kiepert in his Carte zénérale de l'empire Ottoman (Berlin 1802) makes the Alma Dagh reach about as far as Işlāhiyve (Nicopolis, lat. 37" N.); the continuation of this mountain-chain as far as the neighbourhood of Mariash he takes as Gyawr Dagh; cf. also H. Kiepert's map for Sachau's Reise in Syrien und Mesopolamien (Leipzig 1883). In . Kiepert's map for von Oppenheim's Vom Mittelmeer zum persischen Golf (Berlin 1900), Alma Dagh only appears as the name of one single mountain massif to the morth of Baylan; the name Grawt Dagh does not appear at all on it, in its stead 🚃 find Sur Dagh, Adje Dagh and Göydje Dagh as names of single peaks between Martash and Islahiyye. The northern Grawr Dagh is connected, according to E. Recius, with the southern mountains by a mountain plateau in the depth of which is situated the Grawr Göl (i.e. lake of the infidels). The name of Grawr Dagh is occasionally extended to the whole of the Amanus (e.g. on the map of Favre and Mandrot), Reclus does not call the southern Amenus Alma Dagh, but, in accordance with a number of travellers, Akma Dagh. Benzinger is evidently mistaken in calling the southern part of the Amanus Grawr Dagh and the northern part Akma Dagh. Czernik seems to stand quite alone in calling the Amanus Kara Dagh; this name is evidently the Turkish translation of Diabel al-Lukkam (also al-Ukkām), the "black mountains" (white, Arabicised from the Syria' akkāmā - "black") of the Arab geographers of the Middle Ages, the μεύρου δρος of the Byzautines; for the name al-Lukkam designating nearly the same . Amanus, cl. Sachau, op. cit., 325. By a misnomer, the Alma or Akma Dagh in its more limited sense (north of Baylan) is also often called Nawlu Dagh by travellers, which name according to Kotschy (cf. also the map by R. Kiepert, mentioned above) belongs only to the northeastern part of the Diabal Acads (south of Baylan).

(M. STRECK *)

LUKMAN, a legendary hero and sage of pre-Islamic Arabia. He appears in the Kur'an as monotheist and wise father giving pious admonitions to his son. In later Islamic lore, he became the creator of fables par excellence and a striking parallel of Aesop.

I. Lukman in Old Arab tradition. The Arabs of the Djahlliya knew of a certain Lukman b. 'Ad. The connection with the long-lost tribe of 'Ad [q.v.] places him in the dimmest recesses of the Arab past. The two attributes apon which his fame apparently rested were his wisdom and his longevity. Many early poets, including Imru' al-Kays, al-Nablgha, al-A'sha and Tarafa, celebrate his wisdom (Horovitz, Koramische Untersuchungen, 133-5). To be "as wise as" or even "wiser than Lukman" are standard compliments in panegyrics. Because of his proverbial wisdom, Lukman was credited with being the architect, or one of the architects, of the famous Ma'rib (q.v.) dam (e.g. al-Mas'ndi, Muradi, iii, 366).

In ancient Arabian legend, Lukman was ai-Musammay ("the Long-lived"). He is granted a long life. (According to later Muslim tradition, this was a reward for his piety, in contradistinction to the wickedness of his people.) From among several choices offered him, he chooses the duration of the lives of seven vultures, the vulture (nasr) being the most popular symbol of longevity among the Arabs (Goldziher, Abk. zur arabisch. Phil., Leiden 1899, ii. pp. li-lii; cf. Ps. clii, 5, where the Hebr. cognate nester, meaning "eagle", has the same significance). Lukman aurtures and protects such of his seven vultures in turn. The last one is named Lubad which means "enduring" or "remaining" (LA and TA, s.v.). He finally dies, however, and with him Lukman. This story is cited in explanation of the Real Arah proverb "eternity (al-abad) outlasts Lubad" (ni-Maydani, Amthai al-Arab, Calco 1310/1892-3, i. 290-1). According to the different versions of the tale, Lukman lived 560, 1,000, 3,000, or 3,500 years. In Islamic times, he is considered second in iongevity only to al-Khidr (al-Sidjistani, K. al-Mu'ammarin, ed. Goldziher, in Abh. zur arabisch. Phil., il, 2).

It is difficult to know what details beyond this essential nucleus are of pre-Islamic origin and what are the creations of later Muslim narrators. It is possible, for example, that the tradition that includes Lukman among the ambassadors sent by the drought-stricken "Adites to pray for rain at the Ka'ba may have its roots in pagan Meccan lore (al-Tabarl, i, 235). Already in its pre-islamic form, the Lukman legend exhibits motifs found elsewhere. R. Basset [Loomán Birbere, pp. xxvii-xxix) finds a remarkable parallel in the interpretation given by Sidonius Apollinarius of Romulus's watching for twelve birds. The birds turn out to be twelve vultures, signifying hat Rome will endure for twelve centuries.

2. Lukman In the Kur'an and the Islamic tradition. Sara XXXI, which belongs to the Third Meccan period, bears the source of Lukman. No allusion made to either his 'Adite origin or his longevity. Likewise, there is no mention of Lukman in connection with the various references to 'Ad and its prophet Had throughout the Kur'an.

The Kur'anic Lukman is a sage who is found only in the sura that bears his name. He first appears in v. 12, where it is stated that God gave him wisdom or, perhaps in has been recently suggested, a book of maxims (see D. Gutas, Arabic wisdom literature: nature and scope, in IAOS, d [1981], 50-4, 57-8). In vv. 13 and 16-19, Lukman offers plous counsel to his son. The admonitions bear the unmistakable stamp of ancient Near Eastern wisdom literature, Three times, he begins with the fermula "O my dear son" (yet burnayye) that prefaces so many of the aphorisms of Abikar (Ar. Haykar). R. Harris has pointed out the parallel between v. 18: "Be modest in thy gait and lower thy voice, for the most hateful of voices is that of the ass", and Ahikar's maxim: "Incline thy head downward, soften thy voice, and be courreous . . . For if a house could be built by a loud voice, the ass would build many houses each day" (Harris malti, The story of Akikar, p. lxxvi; cf. Ar. text in ibid., 4, 11). Even though vv. 20-34 no longer cite Luknian, they partially reflect the same genre. Thus v. 27: "if all the trees on the earth were pens and the sea were replenished after it with seven seas (of ink), the words of God would not be exhausted" can be traced back to Jewish wisdom literature, where it is found in numerons variations (R. Köhler, Und wenn der Himmel war' Papier, in Orient, v. Occident, ii, 546-59; idean, in Ethnolog. Mitteil, and Ungarn, i, 311-23, 441-53; H. I., Strack and P. Billerbeck, Kommentar zum Neuen Testament aus Talmud und Midrasch, Munich 1956, ii, 587). However, this verse is later than the cest of the sura and was revealed in Medina during a dispute with the Jews. Its inclusion indicates that it was considered appropriate to the general tone of the sura.

Once the Kur'an had consecrated Lukman as the wise atterer of proverbs, everything that was thought pious or sensible could be attributed to him. Wahb b. Munabbih is credited with saying that he had read 10,000 chapters (bāb) of Lukman's wisdom (Ibn Kutayba, K. al-Ma'ārif, ed. Wilstenfeld, Göttingen 1850, 27). The Arabic collections of proverbs (notably that of al-Maydani) attribute much to Lukman (see Basset, op. eit., pp. xliv-liv). Al-Thaflabl devotes a chapter of his Kisas al-anbiya? (Balak 1286/1869, 275-7) to the wisdom of Lukman. Many sayings seems to link up with the Sara of Lukman, v. 14 advises reverence for parents, but warns against being led astray by them to worship false gods. Al-Thaflabl's authority makes Lukman say: "Be amenable to your friends, but never so far as to act against God's laws". There is much that is reminiscent of Ahikat. For example, Lukman teaches: "A father's beating his son is like water for a crop." The parallel maxim in Ahikar states: "Space not thy son, for strokes of the rod are to a boy like dung to the garden." Lukmán says: "When thou seest people who remember God, join them: If thou hast knowledge, it will be useful to you with them, and they will increase it; if thou hast none, they will teach thee; and when thou seest people who do not remember God, do not join them; for if thou hast knowledge, it will not avail thee with them, and if thou art ignorant they will increase your ignorance",

812 LUKMĀN

Abikar says: "Join the wise man, then thou wilt become as wise as he, but join not the brawler and babbler, lest thou become associated with him". Lukman gives excellent advice for one going on a journey, and also adds that he should be armed. So too does Abikar. Al-Maydanl (Amthāl, i, 97) attributes to Lukman the dictum: "Consult the physician before thou fallest ill!" This corresponds to the advice of Ben Stra: "Honour the physician before thou hast need of him" (Ecclesiasticus, Exxiii, 1).

It may be that many of these proverbs that belong to the general treasury of Near Eastern wisdom literature had already begun to penetrate into the Arabian Peninsula in the Diahill period. The Christian Arab poet 'Adi b. Zayd [q.o.] of al-Hira knew of Ahigar, whom he calls al-Haykär (see Nöldeke, Untersuckwagen num Achique-Roman, 25; also Goitein, The present-day Arabic proverb, in idem, Studies, 371, 376 ft.). Aiready at this early time, the dicta of loreign sages may have begun to accrue to the indigenous Lukmān al-Hakim.

Muslim legend is fond of making the sages and wise and of the past into prophets. But since the Kur'an merely says that Lukman received wisdom from God, all of the traditional scholars with the sole exception of Tkrima agree that he was not a prophet (al-Tha labi, Kisas al-anbiya), 275). Nevertheless, he receives mention in most of books of the hisas alanbiya? genre [q.v.]. Most accounts tell that God offered Lukman the choice between becoming a prophet or a sage, and that he chose the latter. He becomes vizier to King David, who tells him: "Blessed art thou, O Luloman. You have been given wisdom and spared tribulation, while David has been given authority and has suffered trials and rebellion" (ibid.). Most of the traditions give him a hiblical genealogy connected variously with Abraham, Job and even Balanin (see 4. below). He is said to have lived down to the time of the prophet Jonah. He is also called judge of the Jews (ibid., 275, citing al-Wākidī). Some accounts make Lukmān the author of a book. Supposedly, Muhammad was shown the scroll (madjalla) of Lulunan and asked if the book in his possession was comparable to it, III which the Prophet replies: "These are indeed fine words, but what I have is better, namely the Kur'an By God" (Ibu Hisham, Sira, Cairo 1375/1955, i, 427; also al-Tabari, i, 1208).

3. Lukman the writer of fables. At some time during the Middle Ages, Lukman came to be regarded as the author of fables as well. This is perhaps due in part to the fact that amthal means both proverbs and fables in Arabic. Lukman thus became the Aesop of the Arabs. Much was transferred to Lukman that was told in Europe of Aesop. The tendencies to this can be traced quite early. The Kur³ānit commentators already relate traditions that he was a "thick-liqued, flat-footed black slave" of Ethiopian or Nubian origin (al-Tabari, Tafsir, Bûlâk 1328/1910, xxi, 43). He is also said to have been an Egyptian, a carpenter, a shepherd, and to have had deformed legs. These features are obviously modelled on the story of Aesop. So too are several of the anecdotes about Lukman. For example, Lukman's master orders him to butcher a sheep and set the choicest parts before him. Lukman gives him the tengue and the heart. His muster then orders him to slaughter another sheep and bring him the worst parts. Once again Lukman sets a heart and a tongue before him, for there is nothing better than good tongue and a good heart and noth-

ing worse than evil ones (in Maximus Planudes, Vita Assopi, only the tongue is mentioned and not the heart; see Eberhardt, Fabulas Romanenses Grasce conscriptor, Leipzig 1872, 259). On another occasion, Lukman's fellow-slaves eat their master's figs and Lukman. At Lukman's suggestion the master makes them all drink warm water. Lukman vomits only water, the other slaves figs and water. Once, Lukmān's master in his cups had wagered he would drink up the sea. Sobered, he asks Lukman's advice. The latter demands of those who had taken up the wager that they should first dain up all the rivers flowing into the sea, as his master had promised to drink up the sea only but not its tributaries. This last motif is widely disseminated in folk tales of the type of the Emperor and the Abhot (Aame-Thomson Type no. 922; the folktale and its parallels are discussed at length in W. Anderson, Kaiser and Abt, FCC no. 42, Helsinki 1923, especially p. 139, where reference is made to Lukusin; also Chauvin, Bibliograbbie, vill. 60-2). These anecdotes are also found in the biography of Aesop by the zath century monk Planudes, who drew upon older material. The story of the wager to drink the me is known mearly as Plutarch's Dinner of the seven wise men (Plutarch, Moralia, 151B-E) and the Midrash (Levitious Rabba,

The older A:abic literature does not know fables of Luknian. They first appear in the later Middle Ages. The Paris manuscript published by J. Derunbourg is dated 1299 and is from Christian circles. It contains 41 fables. These man have been published frequently and discussed in detail, especially by Derenbourg, Basset and Chauvin. Out of the 41 fables. only no. 22 has no clear parallels: the thorn bush begs the gardener to tend it me that kings may delight in its flowers and fruits; the gardener waters it twice a day, and the thorn bush overruns the whole garden. Basset (Loquida Berbère, 98, u. 1) posits a possible connection with Jotham's parable in Judges, ix, 8-15, while H. Schwartzbaum has suggested a link with the talmudic proverb-fable about the thorn and the cabbage (The Mishle Shu'alim of Rabbi Berechiah ka-Nakdan, Kiron 1979, p. xivii, n. 80, citing BT Baba Qama, 92a-b). All the other Lukman fables with the exception of the thirteenth (the guat and the hull) are found in the Syriac fables of Sophos (= Aesopus) published by J. Landsberger (Die Fabeln des Sophos, Posen 1859). The only fables of Lukmin not found in the Greek Aesop are 140. 9 (the gazelle in the well), no. 22 (the thornbush), no. 24 (the wasp will the bee) and No. 40 (the man and the snakes). It has further been observed that in these fables, a number of important animals that were indigenous among the Arabs, such = the ostrich, the hyena, the jackal and the camel, play no part. As these fables first appear in the later Middle Ages, and on the basis of other ovidence, there can be no doubt that we have here a translation and adaptation of the Syriac version of Aesop originating in Christian circles in Mamilik

4. Lukman and related tegendary figures. Lukman is a composite, and hence a many-sided figure: he is a musammar, here, sage, maker of proverbs and author of fables. It is no wonder then that he has often been compared and identified with other legendary herces, such as Prometheus, Alkmalon, Lucian and Solomon. Muhammad b. 'Aff al-Zawzan males Lukman the teacher of Empedocles (Ta'rihh al-Hukmud', in M. Amari, Bibliotea Arabo-Sicula, Leipzig 1857, 611). Three of these equations deserve closer examination: (1) with Balaam. (2) with Ahikar

and (3) with Aesop. The identification with Balaam is old. Al-Thafalabi and al-Baydawi (although not al-Tabari apparently) give the following genealogy: Lukman b. Bacur b. Nahur b. Tarikh. It would seem that some Muslim exegetes sought for something corresponding to Lukman in the Bible. They found this in Balaam, as the roots b-l-4 and l-h-m both mean "to swallow". This identification may have been reinferced by the talmudic tradition that Balaam (and also Job) was one of the seven gentile prophets who preached to the nations of the world (BT Baba Baira, 15b). This became Muslim tradition which entered the Hebrew Mishle Sendebar, where Lukman is of the seven wise teachers of the king's son (ed. and tr. M. Epstein, Philadelphia 1967, 54-5), and also the Disciplina elericalis of the Spanish Jewish apostate Petrus Alfonsi (ed. A. Hilka and W. Söderhjelm, Heidelberg 1911, 3l. where it specifically states: "Balaam qui lingua arabica vocatur Lucaman". It is clear that for Muhammad and his contemporaries, there was no confusion between Lukman and Balaum. Neither is there any confusion in al-Tabari, who does not make Lukman the son of Beor and who relates the story of Bal'am b. Ba'ur in its proper place and with the correct details (al-Tabarl, i, 508-10). On the other hand, al-Tha'labl makes Lukman Beor's son, while at the same time devoting a full narrative to Bil'am b. Ba'ara (Kişaş al-anbiya), 186-9). Al-Tha abl and others like him were probably aware of the inconsistency, but wished to connect Lukman with the Bible at any cost. Horovitz has suggested that perhaps early Muslim traditionalists' Jewish informants connected Lukman with the fidomite king Bela son of Bent in Gen, xxxvi, 32 (Jewish proper names and derivatives in the Koran, in HUCA, ii [1925], 173 f.), and that this was the source of the confusion.

Lukman's similarity to Ahikar was also noticed long ago, but it was only in the early 20th century that the identification found a vigorous champion in Rendel Harris, who devotes ch. vii of his Story of Ahibar to it. He bases his identification on the agreement of Sura XXXI, 18, with Ahikar's warning about the voice of the ass, the formulaic "() my son" in both, and the Arab hypotheses which compare Lukman with other figures in legend and history, notably to the relationship of Lukman, Ahikar and Aesop. The arguments, however, are not convincing. The Abikar legend was known in the Arab world, and a considerable number of Arabic and Karshûn! manuscripts have survived. Many of the aphorisms attributed to Ahihar, like those attributed to Lukman, were part of the common stock of Near Eastern lore and may be found in the Bible, the Apocrypha and elsewhere. The use of the introductory formula "O my son" was standard in admonitory literature of this sort, and is found in Proverbs and Ben Sira, to mention only the most outstanding examples.

Any real relation between the personalities of Lukman and Abikar comes through Aesop. The story of Aesop shows originally a close relationship to that of Abikar. The later legend of Lukman has borrowed much of the story of Aesop and thus become obliquely like the Abikar story, but in reality Lukman is not directly connected with Abikar but with Aesop.

5. Lukman in Persian and Turkish literature and lore. Lukman was a fairly popular figure in Persian literature. A lengthy chapter is devoted to him in the 5th/1rth-century Persian Kisas al-antipa' of al-Nistburi (ed. H. Yaghma'i, Tehran 1340/1961, 333-8), which contains anecdotes found in the Arabic kisas as well as some new material. Rūmi dovotes several stories to Lukman in the Mathuard, in addition to the well-known anecdote of Lukman's innocence proven by drinking warm water (Mathaeol, ed. Nicholson, GMS iv/r. London 1925, 220-1), Lukman appears as an idealised ascetic who is a pure slave (banda-yi pak) to his earthly and heavenly masters and thus a master of himself and free from sensual passion (khwadia bad we as have dade bild). In this story, Lukman is the true master and his master the slave. He exchanges clothes and roles with Lukman when they travel. He would gladly set him free, but knows that Lukman has found true freedom in servitude (ibid., 326-9). In another anecdote, Lukman's will only eat from which Lukman has partaken and is enrantured even with the scraps. One day upon receiving a gift of a melon, he gives Lukman slice after sike. The latter eats it as if it were honey. When the master himself tastes the final slice bis month is blistered by the sourcess. He asks Luluman how he could eat such poison. Lukman replies that he had received such bounty from him that he could not do otherwise. The love of the giver makes the bitter sweet (ibid., 329-32). Saidl relates a story in which Lukmân is once again - idealised ascetic in the Persian would. By mistake, he is placed into cruel slavery for a year, bearing all in silence. When the mistake is realised, he harbours no grudge and says that he has learned compassion from the experience Bustan, in Kullivyal-i Saidl, ed. M. A. l'arughi, Teheran 1964, 328).

Lukman was known to the Turks from both Arabic and Persian literature. In addition to his standard roles, he also appears in Turkish folklore as an Arab physician by extension of his title hakim (see W. Eberhard and P. N. Boratav, Typen türkischer Volksmärchen, Wiesbaden 1953, 346). In one tale, Lukman teaches the adventurer Mehmed the Mad how to cure the wife and daughter of the king and the wife of the grand vizier, all three of whom had grown hores (W. S. Walker and A. E. Uysal, Tales alive in Turkey,

Cambridge, Mass. 1966, 33).

Leroy, Vie. préceptes et testament de Lokman, in ROC, xiv (1909), 225-55, where some very important texts are given; H. Schwartzbaum, Jewish and World folklore, Berlin 1968, contains many references and parallels to Lukman; H. Halm, Kosmologie und Heilslehre der frühen Ismäfiliga, Wiesbaden 1978, 34 if., for Lukman's place in the esoteric doctrines of the Seveners. Still very useful for the fables of Lukman and their many relationships is V. Chauvin, Bibliographis des ouvrages arabes, Liège 1892-1922, iil, 1-82. For Ahikar, see T. Nöldeke, Untersuchungen zum Achigar-Roman, In AGW Golf., Phil.-bist. Kl., N.F. xiv/4, Berlin 1913; F. C. Conybeare, J. R. Harris and A. S. Lewis, The Story of Akibara, Cambridge 1913; R. H. Charles (ed.), The Apocrypha and Pseudspigrapha of the Old Testament, Oxford 1913, 715-84. (B. HELLER - [N. A. STILLMAN)) LUKMAN M. SAYYID HUSAYN AL-ASHORI

an-Husayni at-Urmawi originated from Urmlya in western Persia. It is not known when he, or perhaps already his family before him, migrated to the Ottoman empire. Nor do maknow much about his studies and career. He was apparently protégé of the Grand Vizier Mehmed Sokullu (d. 987/1579) and of the influential khôdja Sa'd al-Din [e.v.] whom he

praised as his benefactor in one of his works (Rieu, Catalogue of the Turkish manuscripts in the British Museum, 53b, and H. Sohrweide in Der Islam, xlvi (1070), 202). In 1560 Selfm II appointed him as Shehndmedji (official historian-panegyrist; for this office, Babinger, 163-4); as such he was the successor of Effatun Shirwant and Fethuliah 'Arif. In his works, Lukman gives two different dates for this appointment: Shawwal 976/March 1569 (N. 'Asim, in TOEM, 430) and the end of Muhacram 977/middle of July 1569 (A. Tewhid, in TOEM, 107, and Rieu, Catalogue, 53b; see also Babinger, 164-5). To this office was attached a sifemet which yielded yearly between 30,000 and 34,000 akles (TOEM, 430-1). As Shāhnāmedji, Lukmān was mainly active during the reign of Murad III (982-2003/1574-95); he is said to have been deposed soon after the latter's death and appointed as Defterdar [q.v.]. He died in 1010/1601-2 (Othmanli mulellifleri, iil, 136) or later (TOEM, 432; Babinger, 165).

As was the with his predecessors, Lukinan's literary gifts were under discussion. It is noteworthy that contemporary biographers of poets and learned men do not consecrate a section to him in their works. The well-known historian 'All (d. 1007/1599). the other hand, criticises him caustically (TOEM, 431 and Schrweide, op. cit., 290-2; but see Rieu, Catalogue, 53b). Until now, Lukman's extensive literary production taken has been into account mainly by art historians because of the costly presentation of several manuscripts and because of the miniatures by well-known painters which they contain. The pictures are a culminating point of historical Ottoman miniature-painting (I. Stchoukine, La peinture turque, I, Paris 1966, and N. Atasoy and F. Çağman, Turkish miniature painting, Istanbul 1974). From a literary and historical point of view, Lukman's works have hardly been evaluated; because of his office as court poet, whose task - to extol the ruling dynasty, the choice of his themes was limited. Inevitably, many themes had me be repeated and partly treated in the various works almost at the same time.

Lukman's works, written in Persian and Turkish, in both poetry and prose, are the following: 1. Zafarnama, known = the History of Sulfan Sulayman, deals with the final years of the suitan (1561-6). Brought m an end in 986/1578-9, it is an epic Persian poem, written in the mette (mulakārib) as Firdawsl's famous work. It was described by V. Minorsky, The Chester Beatty Library. A Catalogue of the Turkish Manuscripts and Miniatures, Dublin 1958, no. 413. 2. Kiyafat al-insaniyya fi chama'il alchmaniyya, also known as Shama'il-i cothmaniyya or Shama'il-nama-yi Al-1 'Othman, describes the first twelve Ottoman sultans and gives, besides their portraits, short pieces of information on their reigns. It was probably finished in 987/1579-80 (Atasoy and Çağman, op. oit., 39). Rieu, Catalogue, 54a, gives the year 997, but this is likely to be an error since the Munich manuscript, which he quotes as evidence, contains another of Lukman's works. 3. Shah-nama-yi Salim Khen, epic Persian poem on the reign of Sellim II (974-82/1566-74). According to the colophon of the illuminated manuscript in Topkapi Sarayı Müzesi, which was prepared for the benefit of the sultan, the poem was finished in Dhu 'l-Hidjdia 988/January 1581 (Atasoy and Çağman, op. cit., 34). The signature of the manuscript must read: A. 3595, Table 16 and p. 80, 27, see also Karatay, Farsça yazmelar kataloğu, no. 788, where no date of the work or of the manuscript is indicated. 4Hunar-nāma, a Turkish work in prose in two volumes. The first volume, composed between 982/1579 and 002/1564, describes the appearance, the qualities and the virtues in the Ottoman sultans as far as Sellm I (918-26/1512-20), together with the most important events of their reign. The second volume was finished in 996/1587-8 and deals with the reign of Sultan Süleymän (926-74/1520-66). The work is written in simple Turkish. Originally, two other volumes were planned - Selim II and Murad III, TOEM, 103-rt, and further, Karatay, Turker yazmaler kalaloğu, no. 688-9; Atasoy and Çağman, op. cit., 44-6. 3. Shahanshah-nama, m epic poem in Persian on the reign of Murad III in two volumes. The first volume comprises the period until 985/1577 or 989/1581. In the Hunar-ndma, Lukman says that he presented the work, consequently this first volume, to the sultan in the middle of Ramadan 085/ end of November 1577 (TOEM, 107-8), probably for it to be checked beforehand, as was usual in such cases. Atasov and Çağman, op. cit., 36, 50, take the year 989/1581 from the colophon of the manuscript, Karatay, Farsca yarm., no. 792, attributes the first volume not to Lukman, but to an unknown predecessor in the office named 'Ala' al-Dia Mansur Shirkel. However, only the above-mentioned Eflátůn and 'Ārif are known = Lukmān's predecessors. Volume ii deals with the period 990/1582 to 996/1588. The text was finished in 1007/1592-3, but since the making the finishing off of the manuscript stretched out until 1006/1597-8, the finished work could only be presented to Mehemmed III (root-12/1595-1603). 6. Zubdat ni-tandrigh, a universal history in Turkish prose, arranged genealogically, in four sections: 1. The creation of the world, 2. the Prophets, 3, the life of Muhammad, the caliphs and the Islamic dynasties, 4, the principalities in Anatolia and the Ottomans until the year 991/1583. The work was possibly finished after the death of Morad III (1003/1595), whom the Dublin manuscript mentions as having died. Minorsky, op. cit., no. 414, suggested Nasab-ndma as another possible title. Karatay, Türkçe yazın., no. 678, calls it Süsüanama; the Zubdat which he ascribes to Lukman in no. 733 seems to be another work, 7. Mudimal alhimer, a history of the Ottoman dynasty until ogalings, in Turkish prose, Only the sultans Suleyman, Sellim II and Murad III are dealt with in detail, and the two last mentioned in a purely annalistic way; see Riou, op. cit., 54-5. 8. Shak-nama-yi Al-i Othman, a rhymed chronicle - Turkish of the Ottosultans, covering the beginning of the dynasty until 999/1590-1, and written in the same year; see Rieu, op. cil., 186-7.

Besides these principal works, Lukman is said to have left some other writings or translations (TOEM, 107; Babinger, 165). The Sar-nama, famous for its illustrations and composed by an unknown Dimba secretary, was erroneously ascribed to Lukman by R. Ettinghausen (Türkische Miniaturen 10m 13. bis 18. Jahrhundert, UNESCO Taschenbücher der Kunst, Tafel-Verzeichnis 18-21), see Karatay, Türke yarm., no. 703; Atatoy and Çağman 39-42.

Bibliography: given in the text.

(H. SORRWEIDE)

KAPIREN RAMPORI, was a great Musta li-Tayyibl Isma lile savant of India and was given the title bab at 'ilm ("the gate of knowledge") by the thirty-ninth day, Ibrahim Wadih al-Din. He was the teacher of Isma'll b. 'Abd al-Rasti' al-Madidū', the author of the Fibrist. He died on M

Dimuada II 1173/27 January 1760. His works, very few of which seem to have been preserved, deal with the history of the da'wa in India, biographies of da wa dignitaries, Isma'lli doctrine, and the refu-

tation of dissident groups.

His son Wallbharl (or Wall Muhammad) was also a distinguished scholar, while his grandson Hibat Allah. the mentor of the forty-third dair, "Abd-1 "All Say! al-Din, was considered one of two learned men of his time, the other being 'Ail b. Sa'ld al-Hamdani. For a while, Hibat Allah supported the son of al-Madidu', who had claimed to be al-hudidia al-layli of the hidden imain with whom he was in contact. In 1201/ 1786-7 he was honoured in the dains by the fortysecond day, Yusuf Nadim al-Din. He died probably after 1214/1799-1800.

LÜLEBURGAZ (in old texts variously written Birghos, Bürghüs, Borghüs, Catal Burghaz, etc.; the form "Luleburgaz" is of recent date and related to the industry of pipe-making), a town of than 25,000 inhabitants in Turkish Thrace and a minor administrative and agricultural centre on the highway from Edirne to Istanbul, 75 km. south-east of Edirne. It is situated on level ground in a wide valley on the southern bank of a tributary of the Ergene River. In the past it was one of the largest caravan halting-places on the Belgrade-Edirnelatanbul highway, the chief artery of Ottoman Europe. In addition, it was an administrative centre; in the 15th century, a nahiye, and from the 16th century, the seat of a hadd in the lived of the Pasha. Hadidi Khalifa (Rumeli und Bosna, Vienna 1812, 20) mentions it as a haga of the sandiak of Vize, Ewliya Celebi as belonging to Kirk kilise. In the 18th century, it belonged (ande again?) to Vize. In the second half of the last century, it belonged at first to the sandjak of Tekfürdaghi (Tekirdağ), in which Vize was incorporated (Sal-names of the Edirue wilayet of 1281-3/ 1864-76). Later, it was incorporated in the sandjak of Kirk kilise (cf. Sal-name for Edirne 1310/1892-3). Today it is a part of the il (vildyet) of Kirklarell,

Litleburgaz goes back to a Byzantine stronghold, Arkadiopolis (Tomaschek, Hamus-Halbinsel, 324; Jireček, Heerstrasse, 133). The name Burgaz is a corruption of the Greek Pyrgos "tower", thus giving

a hint of the size of this castle.

The Ottoman chroniciers (Oruč, 'Āshlip-pasha-zāde, Anonymus-Giese, Neshri, Sa'd al-Din) unanimously place its conquest between 759/1358 and 761/1360, and all of them noted that the castle was deserted when the Ottoman gharis took it. They burnt it down, according to the first three sources, demolished it from one side to the other according to Sa'd al-Din, and levelled it according Meshri. When Bertrandon de la Broquière passed through it in 1433, he noted "a town which they call Pirgasi which has also torn-down walls and where no others reside but Turks". The accounts of r6th century Western and Ottoman travellers, as well = the extant ====== ments, allow us to reconstruct the resurrection of Lüleburgaz. Arnold van Harff, passing through it in 1499, is still silent about it. De Schepper called it in 1533 already "la ville Bosgais", but had to pass the night in a local school. By then it must have been

a small borough with a Friday mosque and a samman. The latter is mentioned by Mehmed-i Ashik. The mosque, the Eskl Diami', or Kādi Diami'i, is stili extant and situated near the bridge. It is work of the early classical phase of Ottoman architecture, from the time of Bayeald II or from a few years later. When Hans Demschwam (ed. Babinger, 242) passed through "Borgas" in 1555, he still saw the rate and walls of the old castle and noted a stone bridge over the river; but he still had to spend the night in Karlshthan, a settlement to km, to the south-east of Luieburgaz, which possessed three caravanserais. A few years after Demschwam's visit. the Beglerhegt of Rumell and later Grand Vizier, Sokolly Mehmed Pasha, laid the foundations for the total reconstruction of the town and its transformation into a caravan halting-place of the first order. A new stop between Karishtiran and Baba eski was a necessity because the distance between the two was ise too great (43 km.) to cover in one day. In 967/2599-60 he completed his exquisite demed mosque and vast medrese with 24 student cells. A long inscription, still preserved, gives the date in the form of a chronogram. Seven years later he completed the crection. of two spacious caravanserais, with separate stables for camels and horses, separate rooms for female travellers and state officials, an "imaist, a double kamman, a school and street lined with 65 stonevaulted shops between the medrese and the caravanserais. The whole complex covers = area of 170 X 150 metres and is of the most harmonious civic centres - erected by the Ottomans. The works designed by the famous architect Sinan and appear in minimum places in the lists of his works drawn up by his friends and contemporaries. The date of completion of the two caravanserals is given: in the extant inscription in the form of a chronoguam, whose numerical value gives 973/1565-6, the first year of Sokollu's Grand Vizierate. The chronogram also found its way to the work of Ewliya Celebi (iii, 301, of the printed edition). This date is further corroborated by the notes of the Italian traveller Marc Antonio Pigaletta, who saw the workmen still active in 1567. Since that time a host of travellers have mentioned the buildings, cither with a few words or with a detailed description.

Melchior Besolt called "Pregasch" or "Burgasch" in 1584 a "stattlin" and described the buildings in detail. He mentions the "line new stone bridge", also built by "Mechanied Basscha", who likewise laid out a stone paved road half-a-mile long. Mehmed-l 'Ashik remained some time in "Birghos" in 986/1378-9 and 998/90, and called it "a small town without walls". He mentions a ruited and uninhabited castle and noted that the Grand Vizier Mehmed Pasha "constructed in Birghus a pleasant mosque, having within the circuit of its enclosure a lofty medrese and for the overnight stay of the sons of the road a large ribal and a public kitchen. It was ordained that for all guests a plate of food from the kitchen was placed before every fireplace of this ribal. A hamman and a small market street were built next to the mosque. In Birghos is further an unprotentious old hammam. The environs of Bleghos comprise well-cultivated land which yields excellent grain". The account of Mehmed-i 'Ashik passed in a shortened form into the work of Hadidil Khalifa, see Rumeli und Bosna. Reinhold Lubenau, travelling in 1587-8, called Lüleburgaz a. "feiner Marckt", and adds the detail that the buildings were partly situated in "schoner, groser Gartten". All buildings were covered with lead. Luberau found the mosque especially beautiful,

and adds that all travellers, Turk, Jew or Christian, received three times a day a dish of rice and mutton, this for three days in succession. The most detailed description of this Turkish "Grand Hotel" is from Ewllya Celebi, who visited the town in 1061/1651. It was then a kiddlik in the sandiak of Kirk kilise; a township of 700 bouses, divided into six mahalles. It had five places of prayer, of which three wore Friday mosques, 300 shops and seven mektebs. All travellers, regardless of their religion, received twice daily a dish of soup, a loaf of bread, a candle and fodder for their horses. On Fridays they got stewed rice with meat and onions and sweetened saffron rice (serde). A number of other travellers mention the buildings and the free distribution of food, but add bardly any me details.

Lüleburgaz continued to function as a caravan halt throughout the 17th and 28th conturies, but it manual to have remained a relatively small place. This period of prosperity ended abruptly in 1214/1799-1800 when a gang of Redfalis under the robber baron Kara Foyd captured it and burnt it down, together with the two caravanserals. When, under Mahmûd 11, order was restored in Thrace, the caravauserais had to me rebuilt from their foundations. An inscription with a long eulogy on the good works of Mahmud, placed above the old inscription of 967/1559-60, still reminds us of this work. The vaulted shopping street and the two caravanserals, as they appeared just before the fire, are depicted in two very accurate drawings by Luigi Mayer, Lilleburgaz remained a small place throughout the 19th century. The Sal-name of the Edirne wilayer of 1287/1870-1 calls it the centre of a kada? with 13 villages, and with 2,056 male Muslim inhabitants and 3,429 male non-Muslim inhabitants. The town itself numbered according to the Sal-name of 1291/1874-5. 984 houses with 834 male Muslim inhabitants and 1,328 male non-Muslim inhabitants. There were three Friday mosques, two mesdids, one church, one synagogue, 282 shops and one hammam. The size and shape of the town had thus remained basically the same in the time of Ewliya Celebi.

With the Russo-Turkish war of 1877-8, all territories beyond Edirne were lost and the caravan road suffered an eclipse. The two caravansorals of Lüleburgaz and the 'imded were taken by the army and transformed into a barracks for the cavalry and the fourth battery of gunners. The old Kadī Djāmi'i was turned into an ammunition store. The Sal-name of 1310/1892-3 gives the mumber of buildings the town, but adds the name of two tekkes, of the Gulshaniyya (see Gulshan!, makhim) and one of the Nakshbandiyya [q.v.] order. This also gives detailed information about the composition of the population of the district of Lüleburgaz. The total number of inhabitants had augmented considerably, from about 10,000 in 1870 to 15,313 in 1893. The Muslim population had grown faster than the non-Muslim element. The Muslims now numbered 7,079 males and females altogether, and there were 6,450 Greeks (Rüm), 720 Bulgars, 220 Jews, 662 Gypsies (largely Muslim), and 38 Armenians, besides some non-permanent residents, also largely Muslim.

During the First Baikan War, Lüleburgaz occupied by the Bulgarian army, but the Turks took it back in 1913. From 1918 till 1923 the town and all of Thrace mean occupied by the Greeks. After Thrace had returned to Turkey and the Greek population had been exchanged for Turks from the now Greek Macedonia by the provisions of the Treaty of Lausanne, Lüleburgas recovered slowly from the blows which it had received. The town was to profit greatly from the decay of Edirae in the forties and tifties. and did not cease to develop when Edirne recovered. In 1958 Litteburguz numbered 13,000 inhabitants; today this has passed the 25,000 mark. It is at present a prosperous and relatively well-built town, almost entirely Muslim Turkish. The two caravanserais and the 'imaest of Sokollu Mehmed Pasha disappeared In the troubled times around World War I; but the thosque, medrese, hammam, shopping street and mekieb are still standing, and rank among the best of all extant monuments of Muslim architecture

in European Turkey outside Edirne.

Goodwin, A history of Ottoman architecture, London 1971; Feridun Akozan, Türk külliyeleri, in Vakiflar Dergisi, viii, Ankara 1969. (M. Kiet.) LULI, of the names for gipsies in

Persia; parallel forms are: in Persian, 1911, 1811 (Farkang-i Djahangiel); in Balüci, löri (Denys Bray, Census of Baluchistan, 1911, iv, 143, gives the popular

ctymology (rom lor - "lot, share").

The name lall is first found in a legend rotating to the reign of Bahram Gur (420-38 A.D.). At the request of this Sasanid King, who wished to amuse his subjects, the Indian king Shangal (?) sent to Persia 4,000 (22,000) Iudian musicians. Hamza (350/961), ed. Berlin-Kaviani, 38, calls them al-Zutt [q.v.], Firdawsi (Mohl, vi, 76-7), Lüriyan; Thafalibi, Ghurar el-siyer (ca. 429/1037), ed. Zotenberg, 567, says that from them are descended the black Luri (al-Luriyun alsūdān), skilful players of the flute: the Mudjmal altaudrikk (ca. 520/2226), tr. Mohl, in JA, xii (1841), 515, 534, confirms this origin of the Luri. The Luri (plur. Luliyan) are often mentioned by Persian poets. Manüčihri (Dāmghān-Diurdiān-Ghanu, 5th) 11th century), Diamāl al-Dīn 'Abd al-Razzāje (d. 389/1192, Iṣfāhān), Kamūl Ismaʿll (d. 535/1237, Iṣfāhān), Hālit (d. 791/1389, Shrāz) are that the lalis "black" (like night), petulant (shūkh) and elegant (shangūl), that they play the flute, that their way of living (bunagāh "baggage") is irregular. The Persian dictionaries explain lārtilāts as "shameless, gay, sweet, musician, woman of light morals", etc.; cf. Vullers (the quotation from Amīr Khusraw (d. in 725/1325 in India), s.v. Lur, refers rather to the inhabitants of Luristān).

The origin of the name fills has not yet been investigated. The term to mapplied to the inhabitants of the town of Sind which the Arab authors call Arûr or al-Rûr (cf. Aras > al-Rās; Alān > al-Lān). This town has been conquered by Muhammad b. al-Kāsim before 95/714 (al-Balādhurl, 439, 440, 445). According to at-Biruni, India, ed. Sachau, 100, 130, the town of Artir (Aror) lay 30 farsaghs south-west of Multan and 20 farsakhs above al-Mansura. In Elliot and Dowson, History of India, London 1867, i. 61, 363, the town is called Alor. This town, the old capital of the Hindu radia's of Sind, is now in ruins (on the Indus, in the taluka of Rohri in the district of Sukkur; cf. Imperial gazetteer of India, Oxford 1908, vi, 4 and xxi, 308: Aror and Robri). The change of "Arori/Ruri into Lori/Luil is readily explained by the phonetic law of dissimilation of the two es especially after the change from Aror (Indian) to al-Rür (Arabic). The descendants of the Indian musicians of Bahram Gur (i.e. the gipsies) seem make been called after the most important town that the Arab invaders had known, and perhaps before them, the Sasanids. This explanation would locate quite precisely the original home of the lait/last, without in any way prejudicing the ethnic relationship of this tribe.

The term Mit-Wel (unknown in Khurasan, Ivanow 1914) is particularly found in the south-east of Persia, in Kirman and in Balūčistān. Lūli or lūli is also found in Turkestan: Babur, ed. ilminsky, 358, 457, uses "Lull" in the end of "player"; Abu T-Ghazi, ed. Desmaisons, 241, 258, 276, 282, mentions in the gth/15th century = Shaybanid prince of Marw and Abiward, son of a Luli woman. Mayev, Investing Ross. Geogr. Obsht., xii/4, 349, and Geogr. Magazine (1876), 326-30: Lüll in Eastern Bukhārā; Grenard In Dutreuil de Rhins, Miss. scient, dans la Haute Arie, Paris 1898, il., 308: Loll and Agha in Chinese Turkestan; Valikhanov, Solineniva, in Zopiski Ross. Geogr. Obshit. po Etnografii, xxix (St. Petersburg 1904), 43: Lulu (sic) and Multani in Kashghar. Lastly, it has been suggested that the more of the glosy tribe in Syria, Núrl, pl. Nawara, is derived from Luli (cf. Père Anastase, in Machrig, v [1902], tr. in Inal, of the Gipsy Lore Sec. [1913-14], 298-319).

The Lori/Lali gipsies (cf. the reference above to their dark skin) must be clearly distinguished from the Lur (g.v.) highlanders who live in the southwest of Persia, have a jair skin and speak an Iranian dialect with no trace of Indian elements. The situation is, however, slightly complicated by certain minor points. In the first place, the use of the terms Lüll, Luri, Lur, etc., is not always quite clear. In the confederation of Arab tribes of Fars there is a Lur clan; Sykes, Ten thousand miles in Persia, 330: Rittich, Popësdha v Belučistën, in Isv. Ross. Geogr. Obghé. xxxiil/1 (1902), 69, speaks of a Lori section (Persian pronunciation of Luri?) among the Luli

of Kirman. Edmonds notes the existence of a Luri (?) clan in Luristan in the Dashenan division of the Bayranwand group. In Kurdistan there is a clan Luri-i Kulangar (see sunsa).

Still more confusing is the fact that some Lurs follow the profession of acrobats, bear-leaders, ropedancers (cf. Cirikov, 277). As early in the 8th/14th century, Shihāb al-Din Ibn Fadi Allāh al-Umari mentions the talent of the Lurs in these directions, and in in own day we find wantering troops of Lurs as far north in Tabriz, where there is a permanent colony of Karači gipsles, professional actors and singers. It is possible that the special qualifications of the Lur and gipsy players differ somewhat; the Süzmäni of Kurdistân (cf. saarul-1 20kib and senna), who excel in singing and dancing, are in acrobats. But we must first of all wait till a special investigation settles to what precise section the wandering Lur artistes belong.

There is nothing impossible in a gipsy infiltration into Luristan. Whatever was the ethnic entity covered by the name Zutt (on the confusion of the Zuct with the Larl, see above: Haniza, Tha'alibi) the existence of Zutt colonies in Muzistan is known as early as the time of al-Hadidiādi [q.v.] (cf. Hawmat al-Zutt between Arradian and Ram-Hurmüz; the modern town of Hindiyan ("the Indians") may have a similar origin). According to al-Baladhurl, 382, when in the second quarter of the rst century A.H. the Zutt had apostasised from Islam, they were joined by the local Kurds, which provoked the punitive expedition. of 'Abd Allah h. 'Amir b. Kuraya [q.o.] to Idhadi [q.n.] (= Malamir, the future capital of Lur-i Buzurg). The alliance of the Zutt and Kurds (= Lurs [q.v.]) at = early a date is curious. Under at-Rar, Yakat, il, 833, mentions two places in Sind and a small district (mākiya) under Ahwāz In Khūzistān. Schwarz, Iran im Mittelaiter, v. 663, identifies this Rur with the district of al-Lur [cl. LURISTAN]. In the light of what has been said above one might suppose the existence in al-Lur of a very ancient Indian colony. But as our sources contain no positive confirmation of this hypothesis (according to Ibn Hawkal', 176. the "Kurds" were predominant in al-Lut), the questions of the origin of the name al-Rur in Khuristan, of the identity of this al-Rûr with al-Lûr and of the remoter origin of the name Lur must for the present be left open. In any case, even if the Lur came from the town of al-Lur, the origin of the name would not necessarily settle the question of the ethnic origin of this people.

As to the general question of the gipsics in Persia, their names in the provinces other than Kirman and Balücistan were in the early years of this century:

Balūčistān were in the early years of this century: in Khurāsān: Kirshmāl (in which a fantastic popular etymology sees ghayr-i shumār, interpreted as "inaumerable"; in Transcaucasian Turkish dislects biršāmal "rascal"; ... the comedies of Fath "Alī Aķhundov [see Aĸguno-thoa];

in Astarābād and Māzandarān: Djūgī and Gāodārī;

in Adharbāydjān: Karači (which in Čaghatay Turkish means "faithful servant, person near the hān", Abu 'l-Ghāzī, 145, and Bugadov, il, 45); in Fārs (and elsewhere): Kāoli (= Kābulī).

The names mentioned may have corresponded to slight local distinctions not yet fully known. Gobineau collected the following names of particular tribes leading a nomadic life in the north of Persia: Sanād (?), Kāsa-tarāṣḥ, "cup-makers", Budāṣḥī, Adenesīr [Aḍḥarnarsè?], Zargar-i Kirmānī, "goldsmiths of Kirmān", Shahriyārī (winter at Hamadān, summer

Damāwand), Karşi, To'āt-ţahīb (damar + tabīb "sheep-doctor"?), Gāobāz, Bāsh-kāpān (in Turkish bash "head" + kapan "he who selzes"?), Gāodārī (bold hunters in Māzandarān; cl. de Morgan), Kāshī and Barhumbūn. According to Newbold, the Persian gipsies fall into two classes: Kāoli (or Ghurbati) and Gāobāz.

As names applied Persian gipsies in general, de Gobineau gives Beshawan/Peshawan (cf. the of the Armenian and Transcaucasian gipsies, the Bosho) and Odiūli (?). The following names have a general and neutral character: Ghurbati, "living in a foreign land" (according to Ivanow, the Persians, who fuse gi and §, see in hurbati an offensive allusion to the promiseuity (hurbat, "relationship, consanguinity") of which isolated communities in all ages have been accused; the is sometimes transcribed hurbati and hurbatily, Fiyūdi (from the Arabic, fuyūdi, "courlers"). Ustākār, Āghā, Gharbāl-band "sievemakers".

The number of gipsies in Persia was in the early years of this century estimated at 20,000 families, or 100,000 souls, of whom 5,000 families were Adharbādiān and 300-500 families in Kirmān (Sykes). The gipsies had an organisation of their own, at the head of which was the chief of the Shah's man (shafirbāski) under whom were the provincial deputies (haldstar). In eastern Persia, the gipcies were very little different from the Fersian peasantry (Sykes, Ivanow). In Khurásán they played a considerable part in the life of the rural community as artisans, making and repairing tieves, chains, combs etc. In Astarābād, the Gāodārī were coppersmiths, carders of wool and cetton (de Morgan). Throughout Persia one sees the black tents of the nameless illit who must be gipsies. If remains to be seen also whether the Kurd tribes bearing names like Kharrat ("turners"), Lutr-i Kullhgar ("hatters") are not of gipsy origin [see SENNA]. In the towns, such as Sabzawar, NIshapur and Tabriz, the gipsies had quarters of their own. There were troops of gipsy dancers and musiclass in Persia, but they did not seem to be very popular. Ouseley gives a description of the comic performances and of the marionette theatres of the Karadi (Tabriz). The dancing and singing girls of the Süzmani tribe in Kurdistan were often described by travellers; cf. notably: T. M. Chevalier Lycklama a Nijeholt, Voyage en Russis, au Caucase et en Perse ... pendant les années 1866, 1867 et 1868, Paris 1872-4, iv, 30-70; Čirikov, Puletoi zhurnel, 282, 299, 130; Khurshid Efendi, Siyahet-name-yi hudud, Russian tr., 119; cf. T. Thomson, The Scormance: are they Gypsies? in Just. Gipsy Lore Soc., il (1909), 275-6.

The language of the gipsies of Persia (Sykes, de Morgan, Ivanow) has taken its morphology from modern Persian; its vocabulary also is full of Persian words (cf. the lists in de Morgan); Indian elements seam to be rarer than in Romani B Europe; the language of Kirman and Khurasan (Sykes, Ivanow) contains a large number of unrecognisable elements. Longworth Dames out of 96 words in Sykes's vocabulary found 12 Indian, 4 Arabic, 28 Persian and 52 of unknown origin. He preferred m regard this dialect rather as an artificial secret jargon. Denys Bray (quoted by Ivanew) in any case confirmed the fact that the Lori of Balasistan is learned by the children = a separate language ("is at any rate acquired naturally by Lori children, as a language for the home circle").

The Süzmäni used Kurdish mainly, According to Cirikov, they were called Dumm!, which must correspond to Dūmān (= Dūm, the name of a low caste in India, from which comes the well-known name for gipsies Rom). The vocabulary of the Dūmān (Baglidād, Aleppo?) as collected by Newbold, JRAS (1856), 303, from an informant from Altun-köprü, is full of Kurdish words: kānar, "stone", khoi, "salt", lāwsk, "boy". A Kurd tribe in the east of Bohtān bears the suggestive name of Sindi/Sindiyān (the "Sindis"). According to the Sharaf-nāma, the chief of the Kurdikān cian (of the Zrāki) had married a gipsy woman. In discussing the relationship of gipsies and Kurds, it should be remembered that in 220/835 as section of the Zuți settled in Khāniķīn, i.e. = the gates of Kurdish territory; of, de Goeje, Māmoire, 30; Tabarī, iii, 1168.

According to Sampson, two categories of gipsy speech may be distinguished, according to the fate of the primitive Indian aspirated mediae: the one changes them into aspirated tenues, i.e. Prakrit, bhdini > phen (Armenia, Europe), the other deprives them of aspiration, bhdini < ben (Persia, Syria, Egypt). The interest of the Persian dialects lies in the fact that Persia was the first country which the gipsies solourned after leaving India (probably in the Sasanid period). In majery dialects of Persia, as yet very insufficiently studied, we may expect to find traces of a rather archaic phonetic system. Oussley, for example, found among the Karati of Tabriz the word behn "sister" which must be older than phen or ben (cf. also ghord in Gobineau).

Literary references to the Lüllyan or Luriyan are to be found in many classical Persian authors, in-including Badl's, Mus'abi, Firdawsi, Manucihri, Hafir and 'Uhayd Zākāni, who variously describe them as musicians and dencers, vagabonds, thieves and prostitutes.

In modern times, the general term for the gipsies In Iran is koull, but a wide variety of manuare used locally. Apart from those listed earlier, the following may be mentioned: alwif, ghurbatil, glidni, harami, helilani (Zandjan), lawand, tüşhmül, yüt and zangana. No up-to-date population statistics and available, but such information as there is suggests that the figures quoted by Sykes must by now be considerably reduced. The main centres **and** still Fars, Arāk and Ā<u>dh</u>arbāydjān. Dhukā' quotes some notes by Pīrūz Bāķirzāda on a group of kawiis settled in Kūt Abd Allāh (to km. south of Ahwaz) since the turn of the century. According to Mughdam, the ghurbats of the Wats area (between Hamadan and Arak) spend five months on the land and seven travelling (dewra-gardi). They do me give their daughters in marriage outside the tribe, but apparently may take non-howli wives. The main present-day occupations of the gipsies of Iran, as elsewhere, include basket-making, tinkering, singing and dancing, magic, fortune-telling and making of spells and charms.

(V. MINORSKY -- (L. P. ELWELL-SUTTON)) LU'LU' (pls. la'dit', la'dit, the pearl. The word is often used \blacksquare a synonym of all-burn (q,v_*) , and the difference in meaning between the two cannot be defined with precision. With coral and amber, the pearl belongs to the organic products associated, however-as is still the case in our days-with the precious stones (diamakir), and thus with the minerals (maradin). Yet the difference between the pearl and the real minerals was well-known; the former changes quickly because it is of animal origin (al-Akfāni, in Wiedemann, Aufsätze, i, 845). In the way, the Jews in antiquity had considered the pearl as belonging to the minerals, but since the Tannaitic period to animal products (I. Löw, Found und Mineralien der Juden, ed. A. Scheiber, Hildesheim 1969, 227). Ibn Māsawayh, Djaudhie, 24 f., enumerates 27 varieties of precious stones, among which come the lulls' in the first, the passas (ruby), the sumurrud (emerald), the mis (diamond), etc. Al-Biruni, Djamahir, 6r, declares that there were "originally" (fi 'l-asi) only three precious stones, namely the yakut, remerred and levie's. Elsewhere (tos) he says that the la'la' consists of two kinds of pearls, a bigger one (durr) and a smaller www (wwwdjān). Likewise al-Hīfāshī, Achār, 242, who adda that dinmker, diumbs and stadts are synonyme of the pearl in general, while duer, habb and harida indicate the unpierced pearl and lullul the pierced one. Terminology is, however, fluctuating; for further details, see the Bibl.

The authors mentioned above also describe in fair detail the various kinds of lu'lu' according to colour (white, yellow, lead- ivory-coloured), form (globular, oblong, olive- or turnip-shaped, conical, flattened, almond-shaped, notched), size, structure (various shells), compactness, consistency, weight and value, its changes by means of external hifluences (oils, all acid reagents, in particular still lemonade, and further, the heat of fire and friction against coarse objects), and finally, the places of its discovery, pearl-lishing and trade. Al-Birûni, op. cit., 134-7, moreover, has an interesting chapter on causes and elimination of worthlessness or faultiness of pearls. On the innermost layer of the pearl-oyster's shall, the so-called mother-of-pearl, we sanar. All those qualities of the pearl have their own very specific nomenciature, based on close observation. The calculation of the specific gravity of the pearl was amazingly accurate (according to al-Khāzini in Ullmann, Die Natur- und Geheimwissenschaften im Islam, Leiden 1972, 123). Even the formation of the pearl is explained correctly, namely by the infiltration of parasitic foreign bodies, bringing about growths which then solidify into pearls. At the same time, however, the curious (able will currency according to which pearls originate in the pearloyster from rain: every year the Southern Sea-the Indian Ocean-is agitated by heavy storms which force the pearl-oyster to emerge at the surface, where its two valves open and take in the rain. After that, the cyster snaps the two halves closed and dives to the bottom of the sea; from the rain-water, a precious stone grows like an embryo in the womb (al-Tamimi, Murshid, 35-8; Das Steinbuch aus der Kosmographie des ... al-Kazwini, tr. J. Ruska, Beilage sum Jahresbericht 1895/96 der prov. Oberregt. schule !leidelberg, 21 t., s.v. durr), or, according to the majority of the scientists, like the egg in oviparous animais (al-Akiāni, Nukhab al-dhakhā) is /ł ahwdl al-djawdhir, in Wiedemann, Aufsätze, i, 843).

For the finding-places of pearls and their recovery, see AL-DURR. Plentiful material is also to be found in the extensive lemma lu'lu' in WKAS, ii, 45-50, containing well-arranged synopsis of pieces of evidence for the metaphorical - of the word: the pearl is compared with teeth, tears, daw- and raindrops, small bubbles, with the goblet, with words and poems, letters, wisdom, boys, girls or women, with a face, with gazelles, flowers or blossoms, stars, currants, etc. The word appears also extraordinarily often in book-titles with an ornamental, metaphorical or metonymic meaning, mostly as "head title" before the real title, which is introduced with ft, see GAL S III, 919 ('ikā ai-la'āit), 944 (la'āli'), 949 (lu'lu'), 1083 f. (simp); the indexes to the separate volumes of Sezgin, GAS; Hadidil Khalifa, Kachf al-sunum, ed. Yaltkaya, ii, 1534 f., 1570 f.; lemā'il Bāshā, Idāb al-makudu, 396 f., 416 f.

820 ŁU'LU

Apparently a word for pearl-trader cannot be derived from durr, but only from lu'lu': la "zil or la"zil (WKAS, ii, 50).

For medicinal use of the pearl, WKAS, ii, 46. (A. DIETRICH)

LULUP ("pearl"), a neur often given as proper name to a person of servite origin, a guard or an officer or a leader of a special body of ghuldms (q.v.) in the service of a prince. Thus a Lu'lu' was the ghuldm of Ahmad b. Tulim (al-Mas'udi, Muradi, viii, 69 — § 319b); a Lu'lu' am chief of police in Baghdad in 324/935-6 (Miskawayh, i, 351); another was governor of Hims for the Ikhshid, and ill was he who am to capture al-Mutanabbi when the latter proclaimed himself a prophet and attracted a numerous following of partisans in the Syrian desert (Ibn Khalikan, ed. Bulik, 1299, i, 44).

Lu'Lu' al-Kable ("the elder" or "the senior") al-Dianalul al-Sayet played an important role at the court of the Hamdanids of Aleppo. The misba al-Sayfi indicates that he was in the service of Sayf al-Dawla, and in fact he is seen, during the reign of the latter, in 355/953, participating with the gharis [q.v.] of Khurāsān in an expedition mounted from Antioch against the town of Missise (Mopsuestia); the misba al-Dianrāhi suggests that he also served, before the Hamdanid prince, one of the members of the family of Dianrāhids [q.v.], but the historians give us no information on this point.

As chamberlain (hādjiā) of the Hamdanid Abu 'l-Ma'āl! Sa'd al-Dawla, who on his death-bed (382/991) committed his son Abu 'l-Fadā'li to his care (cf. Bar Hebraeus, ed. Sālhāni, Beirut 1890, 309, and Chronography, 179), Lu'lu' played his part, with other ghu-lāms, in having Abu 'l-Fadā'li recognised as successor to the emirate of Abu 'l-Ma'ālī. He subsequently acquired a position of greater importance through his daughter's marriage to Abu 'l-Fadā'il.

In the difficult situation facing the swis of Aleppo, threatened by the commander of the Fatimid troops, Bandiûtekin (Mandjûtekin) and by Fatimid ambitions, Lu'lu' followed a policy of caution, recalling the troops which Abu 'l-Fadā'il had sent to the south and avoiding further conflict with the Fatimids. When Bandiûtekin came, in Rabi' Il 383/May-June 993 and leid siege to Aleppo, Sa'id al-Dawia and Lu'lu' appealed for help to Byzantium, which, since the treaty of 359/996, had exercised a kind of pro-

tectorate over the emirate of Aleppo. As Yahya b. Sa'id al-Anțăki expressed it (PO, xxiii/3, 442) they "threw themselves at the feet" of the Byzantines. The emperor sent the governor of Antioch, Bourtzes (Burdil) with troops, but Bandjütekin drove them away and continued the siege which lasted until the beginning of 995. Lu'lu' seat another appeal for help to the emperor Basil II, who arrived in person with 13,000 men and forced Bandjütekin to raise the siege. Generously, the emperor excused Abu 'l-Fada'll from the payment of the tribute which the emirate had been giving to the Byzantines since the treaty of 359/969. In confrontation with Bandjütekin, III whom Abu 'l-Fada'il was prepared to surrender Aleppo, Lu'hu' showed himself more resolute than his master. He played an increasingly influential role in the conduct of affairs.

In 386/996, he persuaded Abu 'l-Fadâ'il to deal severely with the rebel governor of Ma'arrat al-Nu^cman, who subsequently went over to the Fatimid camp. In 388/998-9, Lu'lu' and Abu 'l-Fada'il made an attempt at capturing Apamela, which was relieved by the Duke of Autiock Damien Dalassenos (Yahya, PO, xxiii, 455-6). In Saiar 392/December-January 1002, Safid al-Dawla Abu 'l-Fada'il died, and Lu'lu' assumed full power, not besitating to rid himself of the two sons of Sand al-Davia, whom he banished to Egypt, and destroying some fortresses in the territory of Aleppo to prevent his enemies from installing themselves there. Furthermore, in order to maintain good relations with Byzantium, he ordered the imprisonment in the citadel of Aleppo of an adventurer named al-Aşiar who dreamed of renewing the holy war against Byzantium, which was a prospect deeply worrying the emperor. Ai-Aşfar had been a fugitive in Diazira, but the governor of this province, al-Waththab, handed him over to Lu'lu', thus putting an end to his activities (see Vahyā, PO, xxiii/3, 466-7). Lu'lu' continued to pay tribute to Byzantium and died in 399/1009-9. His son al-Mansur exercised power in Aleppo, but he little more than a governor under the Fathmids.

The character of Lulu' presents some favourable aspects, which are less to Loyal and geous, he saved the life of Sa'id al-Dawla in the battle which the latter bobliged to fight against Bakdiur, his rebellious Addito who had ambitions = take over control of Alappo. Taking the place of Saud al-Dawle next to the standard, and accepting the blows intended for the prince, he assured his victory. But according to a tradition related by Kamal al-Din, Sa'Id al-Dawla was poisoned by one of his concubines at the instigation of Lu?lu? Lu?lu? presents the image of a slave (ghulām) who, by his energy and ability, and favoured by external events, succeeds in hoisting himself up to a position of supremacy over an emirate, admittedly memirate of secondary importance. It could be said that he prefigures in the 5th/11th century what various of the Mamlüks of Egypt were later to become on a larger scale.

LULUY, BARR AL-DIN ARU 'L-FARI'TL AL-MALIE AL-RAHIM, a freedman, possibly black, of the last Zangids of Mosul, whose regime III prolonged. Designated by Arslan Shah I on his death in 607/1210-1 as regent of the principality III his young son al-Kähir, then by the latter (d. 615/1218) for his infant son, Arslän Shah II, he was officially designated, with a caliphal diploma, as lord in 619/ 1232. The chronicles mention him especially for his interminable minor clashes with the lesser surviving Zangids and their Muzaffarid allies from Irbil; he had, on the other hand, the support of the Ayyubid al-Ashraf, all this interfering with the intrigues of the Kh varazm-Shahs and first Mongol detachments. Later, he fought with al-Salih Ayyub in Diaztra and then with al-Nasir of Aleppo. In all these clashes, he appears far less as a successful military leader than as an astute diplomat. This ability and his longevity resulted in his being regarded as a power; it is for having wanted to marry his daughter that the first Mamfük Sultan, al-Mu'izz, was assassinated by his wife, Shadjar al-Durr, The last days of Lublub were clouded, however, by the Mongol invasion; after the fail of Baehdad and the caliphate, he succeeded in keeping Mosul as a vassal of Hülägü. He died in 657/ 1259, aged about 80. His sons soon had to renounce the succession and flee to Baybars in Egypt.

The chronicles tell us nothing of Lu'lu's internal administration. We know, however, that Mosul attained in this period a notable role as a craft (copperwork), commercial and cultural centre. The people from Mosul who are several times mentioned in Acre under Latin domination are possibly Christians, a large number of whom survived in Upper Mesopotamia. The al-Din Ibn al-Athir [q.r.] may have written his history of the Atabeks with the encour-

agement of Lu'lu'.

LUR (in Persian Lor with a short), Iranian people Ilving in the mountains in south-western Persia. As III the case of the Kurds, the principal link among the four branches of the Lurs (Mamäsani, Kühgilü'i, Bakhtiyari and Lurs proper) is that of language. The special character of the Lur dialects suggests that the country was Iranicised from Persia and not from Media. On the ancient peoples, who have disappeared, become Iranicised or absorbed in different parts of Luristan, see Luristan.

The name. Local tradition (Ta'vikh-i guida) connects the name of the Lurs with the place Lur in the defile of Man-rūd. This tradition is perhaps based on a memory of the town al-Lur mentioned by the early Arab geographers (al-iştakhri, 195, etc.), the name of which survives in Sahrā-yi Lur (to the north of Dizūti). There are several other place-names resembling Lur, namely Lir, a district of Diunday-

Sabur (Schwarz, Iran im Mittelaker, 666; cf. the Kühgliü'l tribe: Lirawi), which may be to Lur what pii in Luri is to pai "money" in Persian; Lurdjian (Yakut: Lurdadjian, now Lurdagan) according to Istakhri, capital of the canton of Sardan (between Küh-Gilü and the Bakhriyaris) and lastly there is a place called Lurt (Lort) near Saymara.

Al-Mas*udi alone, in his list of "Kurd" tribes speaks of the Lurriyya tribe (which may the Lurs connected with the district of al-Lur). In the 2th/r3th century Yakut uses the names Lur, Lurr, to mean the "Kurd tribe living in the mountains between Khūzistān and Işfahān"; he calls the country inhabited by

it bilde al-Lur, or Luristan.

These facts show the stages of evolution of the geographical term (perhaps pre-Iranian) into ethnic name. If however we seek an Iranian etymology for the name Lûr, its connection with the first element in Luhr-asp (aiready proposed by von Bode) at once suggests itself. According to Justi, Iraniaches Namenbuck, 183, Luhr is explained by *raghea "red". The place-name Rûr in Yêkût may supply an intermediary form. The Ta'rikh-i guslda gives a popular etymology Lur = lir "wooded hill" in Lurf.

Ethnology. If the linguistic data connect the Lurs with Fars, local tradition only regards as true Lurs the tribes who came from the defile of Man-rud. According to the Ta'rikh-i gusida, 539, 547, there is in the wildyet of Man-rod a village called Kurd. which there is a defile. The place called Lur is situated in this kel (the word means in Luri a "little ravine" of. O. Mann). The name Man-rud much resembles that of Mādiyān-rūd (the word midiyān III found as man/man in Luri; Zhukovski, iii, 158) but certain historical considerations make us look for it near Mangarra-Mungarra (cf. Ta'eikh-i guzida, 548, the place lying between Man-rud, Samha and Mangarra). The clans (gurah) of the natives of Kul-i Man-rud were later called after the places where they had settled, like the Diangru'l (Cangru'l, Diangardi) and the Otar! (Aztari). The governing family of the Atabegs of Little Lur belonged to the Djangraw! (the see of their clan is Salburi, Salghuri; the Salwizl in Alam-ard, 369, Sallwarzl in 'All Hazlu, Tadhkira, 135, and Salawarzt in Houtum-Schindler are to be corrected). The Ta'rikk-i gustão concludes by enumerating the 8 class (she'ab) of the two principal guran and the 18 other tribes (aludm) of the Lurs.

A few names (Mangarra, Anārakī, Diddakī) correspond to modern names. Finally, four clans are mentioned; Sāhī (Sāmī), Arsān (Asbān, Asān), Arkī and Bihī, who, although speaking Luri, are not Lurs; the people of the other villages of Mānrūd were peasants (rāstārā).

in ca. 500/1105, whundred (or 400) Fadlawi Kurd families arrived from Syria. They came by the north (Shuturan-Küb) and settled at first m the lands of the Khurshidi wastes (see LUR-I KÜĞIK; and of. Nushat al-kulāb, 70, under the word girdiākk). At the beginning of the 7th/13th century, new tribes flocked to the standards of Hazārasp of the Great Lur, Among them were two Arab tribes: 'Ukayli ('Akīli; of, the place of this name below Shushtar), a Hashimi one, and 28 different tribes (mutafarrika), among whom we find the Bakhtiyari (Mukhtari), the Diawaniki (Marasili), the Gotwand (cf. the village near Shūshtar), the Djāki, the Lirāwi, the Mamāsati (Mamasaul?), etc. According to the Sharaf-raims (i, 26), all these tribes also came from Syria. These waves of immigration must have had a considerable effect in the ethnic composition of the Great Lur. 822 LUR

It is probable that the immigrants —— Kurds and that traces of them still survived among the Kurds whom Iba Battūta (ii, 2r-30) found at the beginning of the 8th/24th century near Bahbahān and Rām Hurmūz when on his way to the capital of the Grand Lur. There has long been willage of Kurdistān on the Djarrāhī and it had even given its —— to this river. Shihāb al-Dīn al-'Umard (in Notices of extraits, xili, 330-2) mentions the existence of Lurs in Syria and Egypt and tells how Saladin (564-89/1169-93), alarmed by their dangerous ability to climb the steepest ramparts, had them massacred en masse. This anecdote throws a light on the causes which produced the arrival in (7 return to) Luristān about 600 A.H. of numerous Iranian tribes.

The southern part of Little Lur was exposed to infiltration by Kurds, especially through the valley of Karkha (cf. LAK; just to the north of Susa is a tree där-i Bāba, bearing the name of a clan of the Kurd tribe of Diuzkān, celebrated in the history of the Hasanwayhids [q.v.]; cf. Ibn al-Athir, ix, 146, 219) and exposed to Turkish and Mongol invasions (cf. the desperate fighting of the Atābegs of the Lur-i Kūčik against the Bayāt and Aywa [— Buhārlu?] Turks).

In the Safawid period, Turkish tribes were introduced into Luristan from the direction of the Küh-Ghü (where traces of them still exist), and Georgian and Armenian colonies to the north of the Bakhtiyari country. On the movements of the population under Nadir, the Zands and Kādjārs, me below. The ethnic situation gradually stabilised at the beginning of the roth century.

The names of the Lur tribes and groups are now quite well-known, and me we have lists going from 1836 to 1922, me comparison enables us to note the changes that have taken place meanwhite. Regroupings seem to be taking place more rapidly among the Lurs than among the Kurds, but the general framework of the tribal grouping remains essentially the same.

In 1881 (Curzon, ii, 274), there were 421,000 Lurs, of whom 170,000 were Bakhtiyari, 41,000 Küh-Gilü, and 210,000 Fayli. According to Rabino, this last acction numbered in 1904 31,650 tents (or 130,000 individuals) in Pish-Kuh, and 10,000 tents (or 50,000 individuals) in Pusht-i Kuh (this last

figure seems too low).

The Mamassaul (Mamassaul) group includes a main tribes: the Bakash, Djawidi (Djawi), Dushmanziyari and Rustami [see anotterin in EP]. The Kah-Gila group (Kah-Gala) includes three large tribes (Akādlarī, Bawl and Djāki). The first of these tribes (cf. the name of the old Turidish tribe of Aghadiarl) is of a composite character, for of its nine clans four (Afshar, Begdall, Caghatay and Kara-Baghll) Turkish (evidently the remains of the Shah-Sewen, to whom the government of Küh-Gliù had been given under the Şafawis) and a fifth clan (Tilakühl) bears the name of a district in Kurdistan of Senna (q.v.). Concerning the second tribe, Bawl, O. Mann notes that it bears the name of an Arab tribe of the neighbourhood of Ahwaz; but there is also mountain called Bawl to the south of Khurramābād. The third tribe, Diākī, is purely Lur and is composed of two main sections: Čārbunīča and Lirawi with very many subdivisions. This threefold composition of the Küh-Gilü group is typical of many of the Lur tribes.

As to the Bakhtiyārī, Sawyer as long ago as 1894 said that their territory was "thoroughly surveyed on a scale of 8 miles to the inch, nearly every tribe visited in their own encampment, everything appertaining to the Bakhtiaris may now be said to be known". But Curzon's tables (1890) still the last word available to the student. Of the two Bakhtiyari groups, Cahār-lang and Haft-lang, the latter is the more important at the present day. The Cahār-lang, who used to be in the south, are now mainly on the outskirts in the district north of the northern barrier (between Burūdjird and Gulpāyagān).

The main groups of Lur are: Tathan, Dlifan, Silsila (cf. Lax) and Bala-giriwa. The tribes of the last group are the Lurs par excellence and have important subdivisions: Dirigwand, Sagwand etc. It is possible that the Dirigwand are the real nucleus of the Lur race. Their chiefs are called mir.

In contrast to what we find among the Kurds, where the individual members of the tribe are usually much attached to their hereditary chiefs, the Lurs proper (Bālā-girlwa) are distinguished by a more democratic lealing. The power of the hereditary families of Adius is based on their "guard" (kaytul), but this power is considerably reduced by the authority of the chiefs of the class (tushmāl). The hidns are forced to court the favours of these wild, petty chiefs (Edmonds: "uncouth headmen"); the latter are amenable to the solicitations of their neighbours, and in this way the tribos are broken up and new groupings take place.

Little is known of the ethnology of the Lurs. The notes of Duhousset (who commanded a Lur regiment in 1859), Etudes sur la population de la Perse, 23, of Khanikoff, Aldm. sur l'ethnographie de la Perse, Paris 1866, 15, 110, 138, and of Danilov, only touch the surface of the subject. Duhousset particularly notes the peculiar (compressed) form of the skull of the Lurs. Edmonds emphasises the difference between the Lurs and the Laks; the latter - taller, have purer features and aquiline Their women main more beautiful than those of the Lurs. The hair of the Lurs is often chestnut-coloured; very heavily bearded are found among the Lurs (the Persians call Luristan ma'dan-i risk, "mino of beards"). The women do not seem to have such liberty among the Lurs as among the Kurds. According to Edmonds, there are no cases among the Kurds of women acting as chiefs of tribes. But you Hammer (ii, 239) mentions under the year 1725 the warlike exploits of the two daughters of the Wall 'Ali Mardan Khan.

The domestic life and manners of the Bakhtiyāris have found enthusiastic panegyrists in Layard, Mrs. Bishop and Cooper in his Grass, New York 1925. On the other hand, the Lurs have been very severely judged by most travelers, cf. Edmonds, in Geogr. Just. (1922) (ibid., the speech of General Douglas,

who was wounded by the Lurs in 1904).

Bibliography: for the Mamasani SHULISTAN in EI1) and the Küh-Gilü, cf. especiaily Hasan Fasa'i, Fars-nama-yi Nasiri, ... which are based Demorgay, Les tribus du Fars, in RMM, unii (1913), and B. Miller, Kolevlye plemena Farsa, in Vost. Shornik, St. Petersburg, ii (1916), 213-18. Cf. also the lists in Bode, Layard, Sheil, Baring etc. (summed up in Curzon, Persia, ii, 317) and those of O. Mann, Die Mundarten d. Lur-Sidmme, pp. zv-xxi. For the Bakhtiyari: H. Rawlinson, A march from Zohab, 202-6 (cf. Ritter, Erdhunds, ix, 210-15); A. H. Layard, Description of Khunistan, and especially Early adventures; Curzon, Persia, ii, 286-8. For the Lurs: the lists of Rawlinson (Ritter, Erdhunde, iv. 215-19), Bode, Layard, Čirikov, Houtum-Schindler, O. Mann, op. cit., p. axili, and especially the articles by Rabino, in LUR

823

RMM (1916), and C. J. Edmonds, in Geogr. Fuel (1929).

Religion, The Christian and Jewish colonies (cf. the evidence of Benjamin of Tudela) sattled in the village of Karkha since the Sasanid period may have left some traces in the country. A very curious tradition is the story of the conversion of the Bakhtiyaris to Christianity in the time of Constantine the Great (?) (Hanway, ii, 168). A mention in the Tarikh i Dishan-gusha, GMS, xvils, 216, shows that 650/1252 the multids (Isma'IIIs) had gained a footing around Gird-Küh. The Huruff beresy had probably also a following in Luristan, for the murid of its founder Fadl Allah, who attempted the life of Sultan Shahrukh in 830/1427, was called Ahmad Lur (Browne, Lit. hist. of Persia, ili, 366). In the Şalawid period, the well's of the Little Lur claimed descent from 'Abbas, son of the caliph 'All, whose tomb is shown near Sirwan (Masabadhan); cf. Rawlinson, in Ritter, ix, 402. The esoteric doctrines of the extremist Shi'a m widespread in Luristan. The great majority of the Lak are Ahl-l Hakk (q.e.) ('All-(lahl). The Sagwand, Papi and Badra'l tribes are also followers of this secret religion. In the belief of the Ahl-i Hakk, Luristan is the scene of the activities of the third avatar of the divine manifestation who is called Baba Khoshln and numbers among his "angele" Bābā Ţāhir [q.e.]. An important sanctuary of the sect, the tomb of Shah-zada Ahmad (the alleged son of the imain Musa Kazim), is in the district of Kus near BI-ew (territory of Kalawand) and is kept by Sayyids of the Papi tribe; these Sayyids wear red turbans which recalls the predilection for red of the old Muhammira - Khurramiyya [q.v.], whose flags were of this colour.

The religion of the Luis **IIII** little orthodox, even from the Shi'a point of view, that **III** the beginning of the 19th century prince Muhammad 'All Mirza had to send for a *inadjushid* to convert the tribes to Islam (Rabbino, 24). All the Lur and Lak tribes are officially Shi'is (contrast the attachment

of the true Kurds to Sunnl orthodoxy).

Language. Down to the beginning of the 20th century, our knowledge of the Lar diatects was confined to 88 words collected by Rich, to four Bakhtiyard verses in Layard and some thirty words collected by Houtum-Schindler. As late in the Grundriss d. iran. Phil., 1/2, 1898-1901, 249, we find the thesis stated that Lurl is closely related to Kurdish and may even be described as one of its dialects. The materials of Zhukovski (collected in 1883-6) were finally published the day after the death of the author (d. 4 December 1918). The morit therefore of having first established the important fact that Kurdish and Luti are calte separate ("eine tiefgehende Scheidung des Kurdischen von Luri") is due to O. Mann. This scholar has shown that although there are Kurd tribes in Luristan [see LAK], the true Lurs speak dialects which belong undoubtedly to the south-western Iranian group (like Persian and the dialects of Fars) and not to the north-western group (like Kurdish and the "central" dialects).

The Luri dialects which have none of the asperities of Kurdish [see Kurdish] fall into two categories. To the first belong the dialects of the Great Lur: Mamasani, Küligilu and Bakhtiyäri (the latter has a few insignificant peculiarities of its own); to the second belong the dialects of the Little Lur, i.e. of the Fayii Lurs.

Even the first group possesses very few special features compared with modern Persian. From the point of view m phonetics: -am m the end of m word becomes -om, -um (mikunām/ikusom; ādām/ ādhom); ū changes into i: pālļpli; intervocalie d gives dis (y): midikam/idhim; the combination -khi -ft give -hdh and -ht (t); duhhtar/duhdhar, edfifraht; mitial kh becomes h: khdnd/kond, etc. Peculiar to Bakhtiyari are the change of intervocalic m to v: didn't > didn't and the occasional change of sh to s: find > ish/in. It is remarkable that some of these phonetical peculiarities were long ago noted by Hamd Allah Mustawii (Ta'rikk-i garida, 537-8). He says that Luri (although full of Arabic words) does not have the peculiarly Arabic sounds, like his, ch, gh, f and k. Inflection: Plural in -gal, -ydl, -dl, e.g. ānhā, angāl; accusative in -ā, -nā instead of rā: yūnā got - inrā-guft: formation of the present: iinstead of Persian mi-; first Persian plural ending in -ima(n): ikhdrima(n) - mithdrim, Luri usually forms the preterite of active verbs as in Persian with the help of personal endings (active construction) and not like Kurdish and the majority of Persian dialects (including those of Fars) which give the preterite a passive construction. Vocabulary, In the present and preterite stems, Luri usually follows Persian, but we find stems and words unknown in Persian: iwanum, wandum, "to throw"; tar-, itdrom, "to be able"; sia, "eye", etc. From the Mongol period, Luri has kept several expressions like: tushmal, "chief of a clan", in Mongol, Mishamel, "official"; hayful, "guard of the khan", in Eastern Turkl "camp, laager", cf. Budagov, ii, 102; kürdn, "encampment", in Mongol, kuren, "camp, tent".

As to the Fayll group, their dialect differs vary little from ordinary Persian (Mann: "weiter nichts

als ein stark abgeschliffenes Persisch").

There are in Luristan a few islands of Kurda of some importance. Such are in the north the Lak tribes [q.v.]. Among the Fayll, the Mahki group (on the frontier of Kirmānshāh, at Hulaylan, and farther south) speaks a southern Kurdish dialect like that of the Kathur. The Kurdishūhān group (to the south of Pusht-i Kūh) speaks a "Kurmandil" Kurdish. Linguistic conditions in the Pusht-i Kūh still require further study.

Bibliography: P. Lerch, Ixsledovaniva, ili, pp. xi-xiv (German tr., Forschungen, ii); O. Mann, Kurza Skitta der Lurdialecte, in SB Pr. AW (1904), 1173-93; O. Mann, Die Mundarten der Leu-Stamme im stid-west. Persien, in Kurd.-Persische Forschungen, Berlin 1910, ii (bibliography, list of tribes, Mamasanî, Küh-gălü'i, Bakhtiyârî and Fayli texts); D. L. R. Lorimer, The phonology of the Bakhtiari, London 1922; V. A. Zhukovski, Makriali di'a izut, pers. naretii, iii: dialects of the Bakhtiyari Carlang and Haftlang, Petrograd 1922 (texts collected in 1883-6, vocabularies Bakhtiyari-Russian aud Russian Bakhtiyari); K. Hadank, in the preface to O. Mann, Kurdisch-Persische Forschungen, Berlin 1926, ii/1. On the Mamasani and Küh-gälül materials of Romaskevič, cf. Ball. Acad. de Russis (1919), 452.

Literature. The Lur tribes and especially the Bahhtiyarls have a rich popular literature, fairy takes, epic fragments, celebrating the exploits of their heroes (like Muhammad Takt Khān Car-Lang and Hādidil Hhhāni Haft-Lang), lyrics, songs sung at marriages (misinah) and cradle-songs (láldil). These pieces are often pretty and full of sentiment; cf. the collections by C. Mann and Zhukovski (the latter published an article on Persian and Bahhtiyarl lullahies in the Zhurn. Min. Narodn. Prosushi [Jan. 1889]); D. L. R. Lorimer and E. O. Lorimer, Persian

824

tales, London 1919, 197-351; eidem, Bahktiari tales (translations only).

There are also Lur! poets writing in the established literary forms: Husayn Kull Khān Haft-Lang (killed in 1882), Nadimā Mamāsanl, Daftarl, Fāyid (still alive in 1902), Îzadl (d. 1905), All Asghar Khān Nihāwandl (ct. O. Mann), A Mi'vadj-nāma-yi Bakhtiyārl by Shaykh 'All Akbar Mu'anunam mithographed at Tehran in 1314. A ghand by Mullā Zulf 'All Kurrānl mu published by N. Y. Marr in the Comptes Rendus de l'Acad. de l'U.R.S.S. (1922), 55-8; according to Marr, a tadhkira of Bakhtiyarl poets compiled by 'Ummān-i Sāmānl is in the library of Sālār-i Fātih. Another similar tadhkira comes from the pen of Ahmadl-yi Bakhtiyarl.

History. On the participation of the tribes of Khūzistān and Fārsān the fighting between Arabs and Persians in the early centuries of the Hidjra, see gurds. The caliphs interfered directly in the affairs of the country, especially in Lur-i Kūtik (q.v.). The fortunes of the Lurs were closely associated with the Iranian dynasties ruling in Khūzistān, Shīrax, Istahān, Hamadān and in the Zagros, sc. the Şafiarids, Būyids, Kākwayhida, Ḥasanwayhids and their cof the family of Abu 'l-Shawk

[See CANNAZIDS].

We have coins of the Büyids struck at Ichadi (Codrington). In 323/935 the Bûyid army marched through Luristan (Süs-Shapür-Kh vast-Karadi). The Hasanwayhid Kurds, whose capital was at Sarmādi (south of Bishtim), extended their dominious into the valley of the Karkha. Shapur-Khwast (= Khurramabad) formed part of their possessions about 400/ 1009 (Ibn al-Athle, ix, 89; Tadjarib al-umam, od. Amedroz, ii, 291, iii, 451). The Kākwayhid Garshāsp sustained a siege by the Saldjüks in Shapur-Khwast (434/1042). The amirs of this last dynasty later settled in northern Luristan: the family of Zangi b. Bursuk in Shapur-Khwast before 499/2105. Husam al-Din Alp-Kush at Dizh-i Mahki on the Karkha before 349/1154 (Rahat al-sudur, ed. Iqbál, 185). A Turk Husam al-Din Shahla or Aksari is mentioned as ford of Luristan and of a part of Khūzistan between 547/1152 and 570/1174-5. A long inscription (Kufle?) on a stele near Khurramabad is still undeciphered (cf. a copy in von Bode, il, 298; Rawlinson thought he recognised in it the name of the Atabeg Shudiat al-Din, but according to Curzon it has earlier date (5x7/1223).

In any case, all attempts from outside to subdue Luristan or to take parts of its territory affected the tribal system very little, the development of which came to a head at the coming of the Atabegs.

The principal source for the domestic history of the country is the Ta'rikh-i gusida (730/1330) based in turn on the Zubdal al-lawarikh of Piamal al-Din al-Kāṣhān! (of which the Preusische Stattsbibliothek only has the first volume, no. 368 of Pertsch's Catalogus). The Madima' al-ansib (cn. 743/1342-3) is based in Independent oral tradition, but is less accurate. The Diakan-drd, although late (its author, Kāḍi Ahmad, dled in 975/1567-8), uses unpublished data. The Sharaf-nāma (1105/1596) is based on the Zubdat al-lawarikh or perhaps a good copy of the Ta'rikh-i gusida. According to these sources, which supplement the statements of the Arab geographers, the situation in Lusistân about 300/912 was as follows:

The Shul [see gg0.tsrln]—who me not mentioned by the Arabs before the Mongol epoch—occupied a part ("half") of Luristan. The wildyst of Shulistan proper (To'rith-i gusida, 537, 539, 13) had a governor

named Nadim al-Din Akbar (according to the Madima' al-ansab, the title Nadim al-Din was bereditary among the Shull, while the Lur territory under the Shol (probably Küh-Güu) had a pishwa Sayf al-Din Mākām whose family had been prominent in the country since the Sasanid period; he was of the Rüzbihani tribe, which the Ta'rikh-i guzida mentions among the Lur tribes. The rest of Luristan was ruled by a family of Lur princes (independent of the Shull, of whom Badr ruled in the Great Lur and his brother Mansur in the Little Lur. Their dates are uncertain. Bade's successor was his grandson Nasir al-Din Muhammad b. Khalil b. Badr (according to the Madima" al-ansab, Nașir al-Din was a nephew of Awrang (Rang) b. Muhammad b. Hilâl). Naşîr al-Din was deposed by the Fadlawi Kurds, who founded the dynasty of the Atabegs of the Great Lur and ratied for support on tribes who were from outside Luristan (et. above, under Ethnology). The same Fadlawi drove the Shul out of their settlements.

We know nothing of Mansur, brother of the abovementioned Badr. The tribes of Little Lux were directly under the caliphs, and in the north were subjected in the invaders. The founder (in ca. 580/ 1184) of the native dynasty of the Athbegs of Lux-li-Kucik (q.v.) had to dispose of in rival Surkhab b. 'Ayyar (probably in scion of the dynasty of Abu 'l-Shawk which was called 'Ayyar/'Annaz; sed 'Amkirnsh.

The history of the two dynasties of the Aläbegs is filled with feuds, murders and executions, but in domestic affairs the state of the country was fairly prosperous. The Atabegs built bridges and madratus (Iba Baṭṭūṭa) and secured a peaceful existence for the inhabitants (cf. Ta'ribh-i gustda, 550). The revenues of each of the two Atabegs were estimated at a million dindrs, while each of them paid in the Mongol treasury a tribute of 91,000 dindrs only (Nuther albeilab, 70).

In the interval between the Mongols and the rise of Timus, the two Atabegs was vassals of the Mupaffarids. In 788/1386 and 795/1393 Timus ravaged Little Lur, but treated the Lord of Great Lur more kindly. In 795/1393 Timus passed through Küh-Gilü and Shülistän. The Timusids consolidated their power in Luristän, and in 837/1433-4 the last Atabeg of the Great Lur disappeared.

Salawid period. The lords of the Little Lur maintained their position, and by intrigue even succeeded in extending their power over the plain to the west of the mountains of Pusht-i Küh. After the execution of Shāh-wardi Khān, Shāh 'Abbās installed in his place a will descended from a lateral line of the old family. The possessions of this wall, Husayn Khān, were, however, somewhat reduced.

After the disappearance of the dynasty of the Great Lur, the power had passed to the chiefs of the tribes composing this tederation. Under Shah Tahmasp we find the title of Sardar of the local wide conferred on Tadj-Mir, chief of the principal class, the Astaraki. Fädj-Mir, having neglected his duties, was executed and replaced by Mir Djahaneir Bakhtiyari (the Astaraki and Bakhtiyari had come to Luristan after 600/1203-4; cf. Ta'rikh-i guzida). Djahångir, under the guarantee of Shah Rustam of the Little Lur, pledged himself to supply annually to the Safawid treasury 10,000 mules. In 974/1566-7 the governor of Hamadan === sent to remind him of his obligation (Sharaf-nama, i, 48). Henceforth, the Bakhtivari tribe becomes of the first rank and, as usual, gives its name to the whole confederation.

As to the Küh-Gilü territory, it was governed by

825

Mins of the Turkeman tribe (Shāh-Sewen) of Afshār settled among the Lurs. In 988/1580 m dervish impostor claiming to be Shāh ismā*i ■ had a considerable success among the Djāki, Djawāniki and Bandāni tribes, who killed several Afshār governors. In 1005/1596-7, as a result of the excesses committed by the Afshār as well as by the Lurs, the governor of Fārs, Allāh-wardi Khān, established the direct centre of his government in Kūh-Gūū (Ta³riāḥ-i-Ālam-ārē, 198, 358).

We do not know under what circumstances at the end of the Salawid dynasty (Fårs-nāma-yi Nāṣirī) the group of Mamāsanī tribes, who had migrated into the Great Lur (after 600/2203-4) occupied the ancient

Shalistan [g.v.].

After the Safawids: During the troubles provoked by the appearance of the Aighans before Isfahan, the wait of Luristan, 'All Mardan Khan Favil (a descendant of the Husayn, Khan appointed by Shah 'Abbas), played a considerable part. With 5,000 of his men he took part in 1135/1722-3 in the defence of the capital. He was even appointed commander-in-chief of the Persian troops, but the other Khāns refused to take orders from him. When the Turks invaded Persia in 1137/1725, 'Alf Mardan Khān abandoned Khurramābād (which was occupied by Ahmad Pasha) and retired to Khūzistān, from which he undertook a diversion against Bachdad, The Turks who had gone through the Bakhtiyarl country and reached Firuzan had to retire. Cf. 'All Hazin, To'rikh-i ahwal, ed. Balfour, London 1831, 115, 134, 137, 148, who was meye witness of the events; Hanway, The revolutions of Persie, ii 135, 159, 168, 238; Malcolm, History of Persie, London 1829, ii, 60-x; von Bode, Travels, ii, 281-3; Vou Hammer, GOR, iv, 227.

About the same time, several Bakhtiyari kadus (Kāsim Khān, Safi Khān) - mentioned as resisting the Aighan and Ottoman invaders, but they did not agree well with 'All Mardan Fayll, In 1137/1724 All Muhammad Husayn Khān Bakhtiyari recognised as his suzeraiu II certain pretender who claimed to be prince Saft Mirsa. The latter's headquarters were in Kuh-Gilo; he was not taken till 1740/1727-8 (Hanway, il, 168, 238; Mahdī-Khān, Tabrikh-i diahāngushā-yi Nādiri, Tabriz 1284, French tr. Jones, London 1770, p. xxvii) The Alghans do not seem to have penetrated into the Bakhtiyasi country, and their expedition in 1136/1724 against Küh-Gilü was a fiasco (Von Hammer, ii, 210; Malcolm, op. oit., ii, 449). By the treaty III 1240/2727-8, the Aighan Ashraf ceded Luristan to Turkey with other western provinces. The Turks kept it (nominally) till z149/ 1736, when Nadir re-established the status quo (Hanway, ii, 254, 347; Von Hammer, GOR, iv, 235, 317).

Under Nådir, a certain Turkoman chief named Båbä Khån Čapushiu (Cawushiu) was appointed beglerbeg of Luristán-i Fayil. On the other hand, 'Ali Mardàn II Fayil was entrusted by Nådir with diplomatic negotiations in Istanbul. Nådir in 1145/1732 passed through Küh-Gliü with his troops, where Muhammad Khån Bailië (the claimant to Shirāz) was defeated. The local Afshārs had to sup-

port Nadir, who was one of their tribe. Several expeditions were sent against the Bakhtiyarl, among whom a sum chief 'All Murad Mamlwand (Cahar-Lang) had collected together the malcontents. In 1145/1732 Bābā-Khān Capushlu was sent against him for the first time. In 1149/1736-7 Nādir Shāh took the field against him in person, going via

Diapalak and Burburdd. The Bakhtiyari country

assault on Kandahār (Mahdi Khān, op. cit., 116, 134, contains interesting geographical details; tr. Jones, l. 185, ii, 18; 'All Hazin, 232, 253; Malcolm, ii, 22).

The deported Bakhtiyari returned from Kharis, 22, 253; iii, 18; 'All Hazin, 232, 253; Malcolm, ii, 22).

was several times invaded, but the main blow was

directed against the little-explored country south of Shuturan-kuh. 'Ali Murad === captured and exe-

cuted. The Bakhtiyari were decimated and deported

to Diam and Langar (in Khurasan). A little later, a

Bakhtiyari detachment distinguished itself in the

immediately after the death of Nadir (Tarrick -i baid Nadiriyya, ed. Mann, 26}, and when the dynasty of the latter was extinguished, the Bakhtiyarl chief All Mardan Khan (who is not to be confused with the two walks of Luristan-i Fayll) attempted to play a big part. In 1163/1750, along with Karlin Khan Zand, he set up at Islahan a scion of the lateral line of the Safawids (Al-i Dawad, under the name of Isma'il III). The career of "guardian of the sovereign" acted by Nädir seemed to me certain for him also, but Karim Khan gained the upper hand; the troops of All Mardan, who included Lak of the tribes of Kalhur and Zangana, were defeated in r165/1752; he escaped to Baghdad, but died there by the hand of an assassin; cf. Mirza Sadik, Tobrikh-s gitt-gusha, quoted by Malcolm, ii, 61 and note e; Von Hammer, GOR, iv. 475, 477; R. S. Poole, The coins of the Shaks of Persia, London 1887, p. xxxv; Curron, ii, 289.

Karlin Khān [q.v.], who had disposed of his Bakhtiyāri rival, was himself a Lak of the tribe of Zand, settled in the immediate neighbourhood of Luristan i Fayil. On the movements of population in his time, see numbes and lank. In 1200/1785, when Djaffar khān Zand had to fall back on Shīrāz, a number of Lurs and of Turks assembled at Isfahān under former partisans of 'All Blurād Khān, but the town was soon occupied by Āḥā Muhammad Kādjār, who had nothing better to do than attack the Bakhtiyāris ('Abd al-Karlin Shīrāzl, Tairītā-i Zandiyya, ed. Beer, 29; Malcoim, op. cit., il, 179 ff.), which injured his popularity among the tribes.

The Lur Bakhtiyarl country was never completely assimilated during the century-and-a-half which the Kadiars reigned. A resume of the history of the Bakhtiyarls in the 19th century has been given by Curzon in ch. axiv of his Persia and the Persian question. At first the Kunurzi family, descended from the brother of 'All Mardan Khan (see above), came to the front, but the expedition of the governor of Isfahan Manučihr Khān Mu^ctamid al-Dawla (whose real name was Yenikolopov; he was an Armenian from Tillis) in rear put an end to the career of the Ilkhani Muhammad Takl Khān of the Cahār Lang group, and the family did not recover. In ca. 1846 the Bakhtiyarwand (or Baydarwand, a family which claimed to be descended from a shepherd named Papi) rose to prominence in the Haft-lang group, and in spite of the assassination in 1882 of its chief Husayn Kuli Khān (Hāgigji I)khārd) by order of the governor of Islahán, Nasir al-Din Shàh's eldest son Mas'ad Mirza Zill al-Sultan, under whose jurisdiction the Bakhtiyari country fell, the family and on to its wealth and importance. The tribul khaus did, however, now fall into a period of prolonged dispute over the leadership, with two factions of the likhania and Hadidi Ilkhanis on one side versus the Ilbegi family on the other. Eventually, a basic principle of power-sharing between the two families was established which was to endure until 1936, when Rida Shāb Pahlavī placed the Bakhtiyāri country under standard Persian civil jurisdiction; until this time. the country enjoyed virtual autonomy under the

rule of the IIkhani and the Ilbegi. The Ilkhani-Hadidii likhani group in fact enjoyed a superior financial and political position, in part because from 1300 onwards they drew investment income from Messrs. Lynch Bros, when the Bakhtiyarl Road, connecting Ahwaz, Shushtar and Islahan, was opened, and then after 1905 from oil concessions, whilst both families received subsidies from the British government during the First World War in return for Bakhtiyari support. The Bakhtiyaris also played a considerable role in the Persian Constitutional period, in alliance with the 5h!9 "ulama" and the urban-based constitutionalist reformers, achieving prominence in national as well as local affairs; by 1912 Bakhtiyari khans beld the governorship of seven cities in Persia, including Kirman, Islahan and Kāshān, and one was Prime Minister (Şamşām al-Saltana) and another Minister of War (Sardar Asad).

The centralising efforts of the Kadjars had more effect in Luristan-i Fayli (formerly Lur-i Kūčik) in as much as, as a result of the governorship in Kirmanshah of the energetic prince Muhammad 'All at the beginning of the 19th century, the old family of the udlis of Luristan found its rights reduced simply to the possession of Pusht-i Kuh (see Cirikov, 227). The Pish-Küb formed the Persian province of Luristan, Muhammad 'Ali Mirza with troops and artillery marched through this province. In 1836 Rawlinson followed him at the head of his Guraul regiment. After the famous expedition of Manucilly Khān (1841), his nephew Sulayman Khān Sahām al-Dawls, governor of Khūzistan, maintained order in Luristan, but for the second part of the 19th century Luristan was phinged more or less into a state of anarchy. It was not till 1900 that prince 'Ayn al-Dawla was able to restore order in Luristan, and 🔳 this time several explorers travelled freely in the disturbed province. But in November 1904 two British officers (Col. Douglas and Capt. Lorimer) on their way to Khurramābād were attacked and wounded by Lurs. A considerable agitation was stirred up among the Lurs (and III western Persia generally) by the appearance among them of the rebel prince Salar al-Dawla (several times after 2905). In spite of the efforts of the Persian government, Luristan remained closed till 1917, when with the help of foreign representatives several caravans went from Dizful to Burûdiird. About the same time, the Persian government conferred the rank of wellof Pish-Küh - Napar 'Ali Khān Amrā'i [see LAK]; cf. Edmonds in Geogr. Juni. (1922).

The advent of Rida Khan, later (1925) Rida Shah Pablavi, meant a declared policy by the central government of bringing the Bakhtiyar! country into the nominal framework of administration in Persia, part of which involved the forcible sedenturisation of semi-nomadic tribesmen; but with Rida Shah's deposition in 1941 and the period of weaker rule during the earlier years of Muhammad Rida Shah's reign, many Bakhtiyarls and Lurs reverted to the semi-nomadic way of life they had been accustomed to, and this last still prevails amongst an appreciable section of the estimated 500,000 Lurs and Bakhti-

yāris.

LUR-I BUZURG, a dynasty of Atabegs [166 ATABAK] which flourished in eastern and southern Luristan between 550/2155 and 827/ 1423, the capital of which was Idhadi [q.v.] Mālamir.

The oponymous founder of the dynasty, also known as Fadlawi, was a Kurd chief of Syria named Fadluya. His descendants (the Djihan-dra mentions 9 predecessors of Abū Tāhla) migrated from Syria, and passing through Mayyafarikin and Adharbaydian (where they made an alliance with the Amira Dibadi [?] of Glian), they arrived about 500/1006 in the plains north of Ushturan-Küh (Luristan).

Their (r) chief Abn Tahir (b. 'All) b. Muhammad distinguished himself in the service of the Salghurid Sunkur (543-55/1148-61) in an expedition against the Shabankara (q.v.). As a reward, Sunkur gave him Kuh-Giluya and agreed to send him to conquer Luristan. He succeeded in this. Abû Tahir assumed the title of Atabeg, and later quarrelled with Sunkur and made himself independent (ca. 550/1155). (The Madimat al-ausáb seems to confuse several individuals under the Ka'id 'All, to whom it attributes the following the defeat of the Shul [q.v.], the deposition of Nasir al-Din, last descendant of Badr, ruler of Luristan, and the deleat of the Khuzistan troops commanded by the Turk Eshek.)

Under the son of Abu Tahir, (2) Malik (sic) Hazārasp (600-26 or 650/1204-29 or 1252?), Luristån prospered, and new Arab and Iranian tribes flocked into it. Hazārasp drove out of Luristān the last remnants of the Shul and invaded Luristan proper. The Shot migrated to Fars. Hazarasp disputed with the Salghurids the possession of the fortress of Mandiasht (Mungasht, south-west of Mālamīr). The possessions of Hazārasp were extended up to a distance of 4 forsakhs from Isfahan. The caliph al-Nāṣir (575-622/1180-1225) confirmed to Hazárasp the title of Atabeg. On the other side, Hazārasp maintained friendly relations with the Khwarazm-Shah Muhammad and gave his daughter in marriage to his son Ghiyath al-Din (Diuwayn)-Boyle, ii, 382-3, 471). (The *Dishan-ara* mentions two sous of Hazārasp: 'Imād al-Din (d. 646/1248-9) and Nusrat al-Din Kalha (d. in 649/1251?); the former bought Zarda-Küh, where several members of the family were afterwards interred.)

(3) Tikia (cs. 655-6/1257-8), son of Hazārasp and his Salghurid wife, successfully withstood four attacks in him by the Salghurid Atabeg of Fars, who was indignant among other things at the expulsion of the Shul from Luristan. Tikla took from Husain al-Din Khalil (d. 640/1242-3?) certain districts of Lur-i Kücik. He defeated the penerals sent against him from Khūzistān by the caliph. During the Baghdad campaign of Hulagu Khan (655-6/1257-8), Tikla accompanied him in Kitbuka Noyan's division (tunkin). He did not, however, conceal his feelings about the treatment inflicted on the caliph and Muslims. Hülägü took umbrage at this, and Tikla fled to Luristan and shut himself up in Mandjasht. Hûlâgû pardoned him, but later changed his mind and had him executed in Tabris. Tikla was buried at Zarda-Kûh.

(a) Shams al-Dia Alp Arghûn succeeded to his executed brother and ruled for 15 years. He led a nomadic life. His winter residence at Idhadi and at Sas (probably Sasan on the Kārun above Shushtar) and his summer we at Dity-I said (on the upper waters of the Zanda-rūd) and at Bāzuft (source of the Karan).

His son (5) Yasuf Shah had spent his youth with

Abaka Khān (663-80/1265-82) and even after being appointed in his father's stead, remained at the Mongol court with 200 horsemen. He took part in the war against Burnk Khan [q.m.], and distinguished himself in a skirmish with the Daylamis. To the possessions of Yusul Shah, Abaka added Khūzistān, the region of Küh-Gilüya and the towns of Firtizan (7 farsaghs above Islahan) and Diurbadhakan (Gulpāyagān). Yūsuf Shāh went to Kūb-Gliāya and attacked the Shall settled in the modern Mamasani country east of Kuh-Gliuya. After the death of Abaka, Yūsuf Shāh was forced against his will to go with 2,000 cavalry and 1,000 foot to the help of Ahmad Takūdar. The latter was defeated (683/ 1254), and the Lins retreated from Tabas to Natanz across the desert, where the majority died of thirst. After the accession of Arghun, Yusuf Shah went to pay him homage and interceded on behalf of the former vizier Khwadia Shams al-Din, who had taken refuge in Luristan (cf. d'Obsson, iv, 5).

His son (6) Afrāsi yāb sent his brother Ahmad to the court of Arghun while he himself remained in Luristan, where he put to death the members of the former vizier's family. Their relatives having taken refuge in Isfahān, Afrāsiyāb sent his kinsmen in pursuit of them. At this moment arrived the news of the death of Arghda (690/129t). The Lurs killed the Mongol governor of Islahan. Afrasiyab appointed members of his lamily to govern in Hamadan, Fars and in the territories reaching to the Persian Gulf, and even began to march me the capital. The Mongo! general Amir Turak was defeated at Kührüd or Kuhrūd [q.v.] near Kāshān, Gaykhatu Khān sent Mongol troops against Afrasiyab and troops from Lur-i Kücik. Afrasiyab shut himseit in Mandjasht, but after some time went to Gaykhatu who pardoned him. Returning to Luristan, Afrasiyab massacred his own relatives and a number of the notables, Ghazan Khan (694-703/1295-1304) at first showed himself favourable to Afrasiyab, but in 696/1297, on the complaint of the Amir Hurkudak of Fars, Afrasiyab was tried and executed at Mahawand (?) of Farahan.

The rank of Atabeg was next conferred on his brother (7) Nusrat at-Din Ahmad (695-730/1266-1330 or 733/1333), who had spent most of his life = the court of the Ilkhans. According to the Madima's al-ansab he introduced Mongol institutions (ayin-i mughal) into Luristan. Hamd Allah Mustawii praises his able and prodent administration, which repaired the damage done by Afrasiyab. He was a friend of mea of religion and several books were dedicated to him, like the Ta'rikh Mu'djam fi alundi-i muliik al-5Adjain of Fadi Alläh Kazwini. The Madima' al-ansab gives him the title of plr. According to Iba Battūta (Rible, ii, 29-30, tr. Gibb, ii, 287-8), he built 160 madrasas (here = "hermitages"), of which 44 were at Idhadi, and he had roads cut through the mountains.

His son and successor (5) Rukn al-Din Yüsuf Shāh II (733-40/1533-40) was also a just ruler. His lands, according to the Madima' al-ansāb, extended from Başra and Khūzistān to Lālamūstān (?) and Firūzān. He was buried in the madrasa of Ruknābād,

His successor was his son (according to Ibn Battata, his brother) (9) Muraffar al-Din Afrā-aiyāb II (Ahmad). Ibn Battata, travelling via Mādjāl-Rāmur-Tustar, visited the capital Idhadi [q.v.] or Mālamir. He found the prince addicted to wine. The Arab traveller describes the peculiar customs of the Lurs, which he witnessed at the burial of the son of the "sultān". The latter's possessions included Tustar (Shūghtar) and extended to Cariwā'

al-Rukh (the modern Kahyarukh in Čarmahåll west of Fürüzän). During the ten days the Arab traveller took to cover this distance, he found sheiter every night in madrass. At the same time (740) Hamd Allah Mustawil mentions among the possessions of the Great Lur Biabalak (apparently the district to the north-east of Luristân and west of Gulpāyagān).

Next tollows an obscure period. According to the anonymous historian of Mirza Iskandar, the successor of Afrāsiyāb was his son (10) Nawr al-Ward ("rose-bud"), who ruled from 736/1335-6 (?) to 756/ 1355 and dissipated the treasures of his ancestors. According to the Dishan-ara, Muhammad Muzaffar of Fars (713-60/1313-59), learning of his dealings with Aba Ishāk Indlû, had him biladed at Sas la 755/1355. His cousin (the Dithan-dra has "nephew") (II) Shams al-Din Pashang b. Yosuf Shah II (?) succeeded him and ruled from 756/1355 to 780/ 1378. At this time, Lucistan became involved in the civil wars of the Muzallarids (q.v.). When Shah Manşûr, making Shûshtar his headquarters, began a series of raids on the lands of Pashang, Shah Shudia's (elder brother and rival of Mansur, d. 786/1384) came to the help Fighang. We have coins of 762/1361 and 764/1362-3 struck at Idhadi in the of Shudjac (S. Lane-Pools, Cat. of oriental coins in the Brit Mus., vi [London 1881], 235, 237). After the death of Pashang, a struggle began between his two sons, (12) Matik Fir Ahmad and his younger brother (12bis) Malik Hüshang, in which the latter was killed. (According to the anonymous historian of Iskandar, if he has been rightly understood by Howorth, Ahmad and Hüshang were sons of Nawr al-Ward and the former was the immediate successor of his father.) Shah Mansur drove out Pir Ahmad and appointed in his stead a notable named Malik Uways. When Timur passed through Luristan in 795, Pir Ahmad came to meet him at Ram-Hurmus. Timin later received him graciously at Shiraz, confirmed him by a decree (al tamgha) in his bereditary possessions, and allowed him to repatriate 2,000 families of Lurs deported by Shah Mansor. In spite of this, in 798/1395-6 Tlmur took as hostages to Samarkand the brothers of Fir Ahmad and Afrasiyab. After the death of Timur, Mirza Pir Muhammad imprisoned Fir Ahmad in Kuhandiz. He was restored in 8xr/1408-9, but met his end in a popular rising. The son of Pir Ahmad (13) Abû Sacid, kept for two years a hostage at the court of Mirza Iskandar at Shiraz, succeeded his father and died in 820/2417. His son (14) Shah Husaya died in 827/1424 by the hand of his relative (15) Ghiyath al-Dln b. Kawts b. Hüshang (12bis). The latter seized power, but the Timurid Sulfan Ibrāhim b. Shāhrukh sent troops to expel him and thus ended the rule of the Fadlawi family. Later, the power passed into the bands of local notables of the Bakhtiyari tribes (Sharafnāma, i, 48).

LUR-I KÜÜIK, a dynasty of Atābegs [see ATABAK] which ruled in northern and western Luristān between 580/1184 and 1006/1507 with Khurramābād as their capital. The Atābegs were descended from the Lur tribe of Diangra'i (Diangardi?). The dynasty is also known by the name of Khurshidi from the name of the first Atābeg. (It remains to be see if this name is connected with that of Muhammad Khurshid, vizier of the former rulers of Luristān before the rise of the Atābegs of Lurl Buzurg.) After 730/1330, the power passed to another line which later claimed to be of 'Alid descent; at this time also, the title malik succeeded that of atābeg.

The ancestors of the Khurshids had entered the service of Husam al-Din (of the Turk tribe of Shuhli or Shuhla), who ruled Luristan and Khuzistau about the end of the Saldjuk period (co. 550-80/xx55-84?).

(t) Shudja' al-Din Khurshid b. Abl Bakr b, Muhammad b. Khurshid was at first Shifing of a part of Luristan on behalf of Husam al-Din, but after the death of the latter (in 570/2174-3 or 580/1184-5) became independent lord of the whole of Lur-i Kûčik. He waged war on the Diangrawi (the tribe in which I had originated, but which was then being ruled by his rival Surkhab b. 'Ayyar' and besleged their stronghold Diz-i Siyah (in the district of Manrid and in the addyst of Samha?). The inhabitants handed 🖿 Manrid over to him, but the caliph ordered Shudjas al-Din to deliver up to himself the stronghold of Mängarra (Müngerre north of Kilfab). In compensation, Shudiat received the district of Tarāzak in Khūzistān, Shudjār al-Din drove back the Bayat Turks who were ravaging Luristan. He led a nomadic life and spent the summer at Kirlt (in Bala-Giriwa) and the winter at Dulur (Fib-i Luran in Pught-i Kuh?) and at Malah (?). He died a centemarian in 622/1224 and his tomb was venerated by the Lurs. His son Badr was killed by his nephew (2) Sayi al-Din Rustam b. Nur al-Din, who became Atabeg and was a good ruler. Rustam was succeeded by his brothers first (3) Sharaf al-Dia Abû Bakr and next (4) 'Izz al-Din Garshasp. The latter married the widow of Abū Bakr, Malika Khātūn, who was the sister of Sulayman Shāh Aywa, later commander-in-chief of the callph al-Musta'slm (Abits should be aftered to A year, name of a tribe or a district in the time of was last Saldjüks; cf. Rahat al-şudür, ed. ligbāl, 346; Djuwayni-Boyle, ii, 421-2; Nushat al-hulub, ed. Le Strange, 107; Defrémery, Recherches sur quatre princes d'Hamadan, in JA [1847], 177). When (5) Husam al-Din Khalil b. Bade b. Shudjā' killed Garshāsp, a struggle ensued between him and Sulayman Shah (Shihab al-Din?). The Lurs took Bahar (near Hamadan), but finally Khalli was defeated and killed near Shapur-Kh ast in 640/1240.

His brother (6) Badr al-Dîn Mas'ûd went to the court of Mangû and returned in the train of Hûlâgû. This devout man, authority Shāfi'l law, ruled till 658/1260. He showed great kindness to the family of Sulaymân Shāh when the latter was executed at the taking of Baghdād. The of Mas'ûd were executed by Abaka, who appointed as Atabeg (7) Tādi al-Dîn b. Husâm al-Dîn Khalîl, also executed by Abaka in 677/1278-9.

He had two immediate successors, the two man of Masfud of whom (8) Falak al-Din Hasan ruled a part of Luristán (dilár, wilāy) and (8 bis) 'Izz al-Din Husaya ruled the crown domains (indis). The number of their troops was 17,000. They chastised the Bayát and reunited under their control all the lands between Hamadán and Shūshtar and between Isfahān and the Arab lands. Both died in 602/1203.

Gaykhātā appointed as their successor (9) Djamāl al-Dla Khidr b. Tādi al-Dla, who was killed in 693 mar Khurramābād by (10) Husām al-Dla 'Umar b. Shams al-Dla "Danaki" b. Sharat al-Dla b. Tahamtan b. Badr b. Shudjā', who reiled for support on the Mongol tribes settled in the lands adjoining Luristān. The other rulers did not recognise this usurper and be had to make way for (21) Samşām al-Dla Mabmūd b. Nār al-Dla b. 'Izz al-Dla Garshāsp, who siew a certain Shihāb al-Dla liyās and in turn was executed by Ghāzān in 693/1206.

(22) 'Iss al-Din Muhammad b. 'Iss al-Din (8 bis) was a minor, and his cousin Badr al-Din Mas'ūd (son of 8) obtained from Öldjeytü the title Atabeg and ruled over a part of Luristan (dildr), but later 'Isz al-Din fully established his authority. After his death (716/1316 = 720/1320 his widow (13) Dawlat Khatan retained a semblance of authority while the real power was in the hands of the Mongols. Such was the state of affairs when Hamd-Allah Mustawil was writing his Tarrigh-i gueida (ca. 730) 1329-30). Later, the malika (who according to the anonymous historian of Mirzh Iskandar became the wife of Yusuf Shah of the Great Lur) found berself forced to surrender the throne to her brother (14) "Izz al-Din Husayn who received investiture from Abū Sa9d and ruled for 14 years. His son and successor (15) Shudia' al-Din Mahmud was killed by his subjects in 750/1349-50.

(16) The Malik 'Izz al-Din b, Shudja' al-Din was only 12 when his father died. The vicissitudes of his life are known from the record of them in the Zajar-nāms. In 785/1383 the Muzaffarid Shāh Shudias with his army visited Khurramabad and married the daughter of 'lzz al-Din. Another of his daughters was married to Ahmad b. Uwaya Diala'ir. When Timur arrived in Persia in 788/1386, he was told of the depredations of the Lurs of Izz al-Din. Setting out from Firuz-küh, Timur by forced marches reached Luristan. Burūdjird was laid waste, and the fortress of Khurramābād razed to the ground. The ringleaders were thrown down from the tops of the cliffs. The fate of 'Izz al-Din is unknown and we do not know if he was me of the Atabegs of Luristan to whom in 789/1387 Timbr granted an audience at Shiraz, but according to the anonymous historian of Mirzā Iskandar, fizz al-Din was captured in 790/ 1388 in the fortress of Růmiyan (Armiyan, Wamiyan, situated near Burudjird) and deported with his son to Turkestän. At the end of three years both lather and were released. In 793/1391 'Izz al-Din played . part in the aggrandisement of the Muçaffarid Zayn al-'Abidia, and of his old suzerain Shah-Shudja'. When in 795/1393 Timur returned to Persia, he went

from Burudited to Shushtar. Luristan was overrun piece by piece and laid waste by the troops of Mirza "Umar, but '12z al-Din escaped his pursuers. In 798/ 1395-6 prince Muhammad Sultan, governor of Fars, extended his authority over all Luristan and Khūzistăn. În 805/1402-3, we find a mention of the restoration of the fortress of Armiyan (?) Burudfird ordered by Timus, and under 806/1403-4 the Zafar-nama mentions the arrival in Baylakan from Nihawand of a courier bearing the head of 'laz al-Din, whose skin had been stuffed with straw and publicly exposed. His == (17) Sidt Ahmad, whose irregularity in the payment of tribute seems to have provoked the punishment of his father, regained his possessions, after the death of Timur in 807/1405 and ruled till \$15/1412-13 (or \$25/1422). (18) Shah Husayn ("Abbasi", i.e. descendant of 'Abbas b. 'All b. Abl Talib), another son of 'las al-Din, took advantage of the decline of the Timurids = extend his territory. He plundered Hamadan, Gulpāyagān, Isfahan and even undertook an expedition to Shahrazur, where the Baharlu Turks slew him in 871/ 1466-7 (or 873/1468-9). His son (19) Shih Rustam supported Isma'll I; at this period, the lords of the Little Lur had already adopted the theory that they were of 'Alid descent. The son of Rustam (20) Oghur (or Oghuz) accompanied Shāh Tahmāsp en campaign of 940/1533-4 against 'Ubayd Allab Khān, and during his absence his brother (21) Diabangir seized power. He was executed in 949/ 1542-3. The governor (lala) of his son (22) Rustam Shah handed over the latter to Tahmaso Shah, who imprisoned him in Alamút while Muhammadi, another son of Diahangir, was hidden by the Lure at Cangula. An impostor in Luristan gave himself out to be Shih Rustam Tahmasp, then released the true Rustam, who recovered his fief but had to hand over a third of it (do dang) to his brother (22 bis) Muhammadf. At the instigation of the wife of Shah Rustam, the governor of Hamadan seized Muhammadi, who was shut up in Alamut. The sons of Muhammadt plunged Luristan and the adjoining provinces into great disorder. Ten years later Muhammadl escaped, and conquered Luristan while Shah Rustani took refuge at the court of the Shah. Muhammadi established good relations with Talucasp and Isma'il 11, but after their death submitted to the Ottoman Sultan Murad III (982-1003/1374-95), which earned him an extension of his territory by the cantons west of Pusht-i Küh; Mandali, Djesau, Badra'l and Tursak. But relations with the Ottomans soon became strained, and Muhammadi became reconciled with the Safawids.

(24) Shahwardi b. Muhammadi, who had escaped from Baghdad where he was living as a hostage, received investiture from Shah Muhammad Khudabanda after bis father's death. At the time of the occupation of Nihāwand by the Turks, Shāhwardi showed some signs of independence, in 1000/ 1591-2 good relations with Shah 'Abbas reestablished, with whom Shahwardi made the most of his alleged descent from Abbas b. All and his Shi'ism (tashayyo' wa 'Abbasgiri). Shah 'Abbas married his sister and gave him a Safawld princess in marriage. In 1002/1393-4 Shahwardl in a pitched battle killed the governor of Hamadan, Oghurlu Sultan Bayat, who was trying to lovy taxes in Burūdiird. Shah 'Abbas, tilled with wrath, left the Khurāsān front and hastened to Khurramābād. Shāhwardi crossed the Saymara (Karkhā) and escaped to Baghdad. Luristan me given to Sultan Husayn b. Shah Rustam. In 1003/1594-5 Shahwardi was pardoned and restored, but he was not long in relapsing. In 1006/1597-8 Shāh 'Abbās took the field against him a second time. Shāhwardi was besieged and slain in the fortress of Cangula (in Pusht-1 Kūh). Husayn Khān b. Mansūr IIII Salwizi (?) was given Luristān, except Saymara, Hindmas (?) and Pushti-Kūh, which were given to Tahmāsp Kulf Ināniū. This may be regarded as the end of the dynasty of the Atabegs of the Little Lur, although the dynasty of mdis of Luristān (later of Pusht-i-Kūh) claims descent from Husayn Khān, who was a cousin of Shahwardī.

(V. Minorsky)
LURISTÂN, "land of the Lurs", a region
in the south-west of Persia. In, the Mongol
period the terms "Great Lur" and "Little Lur"
roughly covered all the lands inhabited by Lur tribes.
Since the Safawid period, the lands of the Great Lur
have been distinguished by the names of Kûh-Gliù
and Baithtiyāri. At the beginning of the 18th century,
the Mamasani confederation occupied the old
Sphlistân [q.w.] and thus created a third Lur territory
between Küh-Gliù and Shraz.

It is however only since the 15th century that Lur-i Kūćik [q.v.] has been known I Luristān (for greater precision if was called Luristān-i Fayli). In the 17th century, Luristān was divided into two parts: 1. Plsh-Kūh, "country on this side of the mountains" (i.e. east of Kablz-Kūh) and 2. Pusht-i Kūh (country beyond the mountains), i.e. west of Kablz-kūh. At the present day, the term Luristān usually means Plah-kūh, while Pusht-i kūh means the Fayli country.

The Mamasani territory and the Küh-Gilü form part of the province of Fars. The capital of the Marnasani is at Fahliyan, Küh-Gilü (Küh-Dillûya, Küh-Gäiù) stretches from Bäsht (west of Fahliyan) to Bihbahan; this last town is the main centre for the tribes of Küh-Gilü. To the south, the Küh-Gilü'l tribes descend as far as the Persian Gulf. The mountains of Küh-Gilü and the frontier between its tribes and the Bakhtiyari are not yet well-known. The chief rivers of Küh-Gilü are the Ab-i Shirin which is formed by the junction of the Khayrabad and the Zohra, and in its lower muse runs via Zaydan and Hindlyan, and the Ab-i Kurdistan or Diarrahi, one branch of which later runs into the Karûn [q.v.] and the other towards Dawrak. On Küh-GRü, see the valuable Fårs-náma-yi Näsiri of Hasan Fasa'i [q.v. in Suppl.], the itineraries of Stocqueler, Haussknecht (Rowlen in Orient, Map iv), Wells and Herzfeld, and the general account in Bode, i, 251-89; li, 327-98; Ritter, Erdkunds, ix, 132-44, is now very much out of date.

The Bakhtiyāri lands stretch from Cahārmaḥāll (west of Isiahān) to Shūshtar; to the south, the Bakhtiyāri march with the Kūh-Glū, and to the north they go beyond the northern barrier of Luristān (Shuturān-kūh, etc.). They are found at Faraydan, Burburūd, Diāspagh, and in the cantons around Burūdjird (even before 1840 many villages had been purchased bere by Muhammad Taki Khān

LURISTAN

Cahar-Lang). Roughly speaking, the Bakhtiyari occupy the upper basin of the Zanda-rūd and of the Rārūm above Shūshtar. The works of Layard, Sawyer, Mrs. Bishop, Curam etc. give wery accurate picture of this mountainous country, in the centre of which rises the Kūh-i Rang [13,800 feet high) which forms the watershed between the Persian Gulf and the contral Persian plateau. (It may be asked if the name Kūh-i Rang is not the Mongol kūran, "encampment, laager", found in Luristān i)

The frontier between the Bakhtiyari and the Lurs proper follows the western branch of the Åb-i Diz, mimportant tributary of the Kārin. Luristān (Pish-kūh) is bounded on the east and west by the convergent streams of Mah-i Diz and the Kakhra, min the north the range of the Čihil-nā-bālighān, Garrū, etc. separates Luristān from Nihāwand and Sīlākhor (district of Burūdiird). To the west of Karkhā, Pūsht-i Kūh begins. In the northwest, the frontier of Luristān runs to the southwest of the districts of Hulaylān and Harsin, which belongs to

the province of Kirmanshah.

The chief left bank inbutary of the Karkha is the Kashgan (Rawlinson: Kashaghan) which is formed by two arms. The northern arm with its tributaries drains the beautiful plains of Hür-rüd, Alishtar and Khawa. The southern arm, separated from the northern one by the Yafta-küh range, takes the name of the town of Khurramabad [q.v.] near which it paspes. After the confluence of the two arms, the Kashgan, running south-westwards, receives on the left bank the combined waters of the Käwgun and Tāyīn. which flow from Küh-i Haftad Pablū (south of Khurramābād) and the northern slopes of the Küh-i Gird. These two ranges are at right angles to the mountains which follow the right bank of the Ab-i Diz, which they separate from the valley of Karkha. On the right bank the Kashgan receives the Mādiyān rūd, "river of the mare". Above Kashgan, the Karkha receives on its left bank several tribntaries of less importance still little known (Rübär, etc.). Below Kāshgān and also on the left bank, the Karkha receives the Fanl, Laylum (Lohlum) and Ab-i Zal. This last river with its tributeries, Andrak, etc., rises in the southern slopes of the Küh-i Gird. The topography of the right bank of the Ab-i Diz is not well-known. The sources of the Baladrud and its right-bank tributary the Kir-ab lie a considerable distance to the north. The Balad-rud flows into the Ab-I Diz between Dizful and Susa. The Kir-ab receives on its right bank the waters of the Kül-i-āh which come down from the high valley of Mungarra, which with the peaks that surround if form a kind of natural bastion and separate the basin of the Baladrod from that of the Ab-i Zal. The Sabra-yi Lur plain, formerly well-irrigated, lies north of Dizful and south of Kir-ab ("pitch-water"), whose naphta spring has been known since ancient times. It was probably here that Darius settled a colony of Greeks (Ritter, ix, 201).

The interior of Luxistan presents a series of mountain ranges, which stretch north-westwards south-eastwards, the direction usual in Persia, and rise behind the other between the plain of Susiana and the northern barrier (beight about 9,000 feet).

Ancient history. The lands now occupied by the Lur tribes have been inhabited since the period before the arrival of Iranians in them. This region, being at a considerable distance from Assyria, was mainly under the influence of Elam; Susa, where there have been found traces of occupation going back to the third millentum B.C., lies just at the

entrance to the mountains of the Little Lur. The purest traces of the local culture and of this alone found more to the south-east. Just in the Atabegs of the Great Lur had for their capital lethadi [q.v.] or Malarnir, so in very early times, the lords of this district, the kings of Aiapir (Hapirti?), whatever were their relations with the rulers of Susa, had control at least of the Karun valley. The site of Malamir (ci. de Bode, Layard, Jequier in de Morgan, Diligation = Perss, 1902, lil. 133-43, and Hüsing, Der Zagros und seine Volker, Lelpzig 1908, 49-50). with its purely indigenous (Elamite, non-Semitic) inscriptions and bas-reliefs, is an important point. The discovery by E. Herzfeld (Reisebericht, in ZDMG [1926], 259) in the Mamasani region of a has-relief and bricks bearing Elamite characters (1,500-1,000 B.C.) is valuable as indicating the extent of Elamite penetration into the Lur mountains. Kah-Gliu lying between Susiane and Persis may correspond to the still-unknown region of Anghan (Anzan), out of which came the ancestors of Cyrus the Great. On the survival of this name near Shushtar, cf. Grunde, der ivan. Phil., ii, 418 (according to Rawlinson: Assan).

The antiquities of the valley of the Upper Karin (the two Susan, Lurdagan, the mounds of Salm, Tür and Iradi) are insufficiently known (Layard, Sawyer). According to Sawyer, the higher Bakhtiyari lands are "singularly devoid of any ancient landmarks".

Mention should be made of the great importance of Luristan, from at least the later fourth millenium B.C., m a centre for metal-working, with an industry distinguished from other local ones by its greatlyvaried and richly decorated range of bronzework, made by the cire-perdue process. This bronzework has some sub-homan decoration, but is especially notable for animal motifs. This zoomorphic decoration probably stemmed originally from Elam, which much influenced Luristan till the destruction of Elamite political power by Nebuchadnezzar I (cs. 1124-1103 B.C.) of Babylon, after Babylonian influence wisible in Luristan art. The bronze industry continued until the 7th century B.C., in association with equally (ine ironwork; see P. R. S. Moorey, Prehistoric copper and bronze metallurgy in Western Iran (with special reference to Luristan), in Iran, Inal. of the BIPS, vii (1969), 131-53.

The western part of Luristan in the strict sense of the word is known as Masabadhan and Pusht-i Küh. No monuments of very great antiquity have yet been discovered in Plsh-küh except the (Median?) of Se-darán between Müngarra and Khurramābād, see Čirikov, 129. The early inhabitants of Luristan were the Kashshu = Koooniot, who imposed their rule on Babylon between 1760 and 1650 B.C. The Achaemenids paid the Kossaioi for the right of passage by the Babylon-Echatane route. These highlanders temporarily subdued by Alexander the Great, Antigonus, pursued by Eumenes, traversed the heart of the Kossaian country, according to Rawlinson on the route Pul-I-tang-Kaylûn pass-Khurramabad (Ritter, Erdhunde, ix, 335). The Kossaians (who should perhaps be distinguished from the Klowest - Office - Uwadis -Khûz) spoke a language different from that of their neighbours, but in it we already find proper nouns borrowed from Indo-European, Cf. E. Meyer, Gesch. der Altertums, i/2, Borlin 1913, § 455; Hüsing, Der Zagros, 24, and Antran E Les langues du monde, Paris 1925, 283. (The name Kashshu has perhaps survived in that of the river Kashgan.)

It is also probable that northern Luristan was more or less dependent on the land of Ellipi, often LURISTÂN

mentioned by the Assyrians. This region, which was considerably influenced by Media, is now located in the province of Kirmanshah. Ct. Andreas, Alinia, in Pauly-Wissowa¹; Streck, in ZA, xv, 379; Cambridge ancient history, 1924, ii, ct. map.

We know very little about the Marriquol, a people who (Herodotos, v. 49) were bounded on one side by the Armenians and on the other by the Susians (Reinach, Un peuple oublie: les Matiènes, ill Revue des

Etudes Grecques, vii [1894], 313-18).

Here we can only call attention to these various ethnic elements buried in the later strata of Iranian invasions. In the name of Faraydan, a canton in the northeast of Bakhtiyari, we have a reminiscence of the Median tribe of Paraitakenoi (Herodotus, i, 110) and of the province of Hapatrangyh (Strabo, i. 80). which lay between Media and Persia (in Assyrian: Partakka, Partukka; of. Streek, in ZA, xv. 363). The Iranicisation must have been accelerated by the formation of the great empires, Achaemenid, Macedonian, Parthian and lastly Sāsānid. There are many Sāsānid towns in the valley of the Karkhā, Many Sasanid buildings are attributed by the natives to the Atabegs of Luristan, who were certainly nothing more than the restorers. The complicated system of bridges is very remarkable (cf. the photographs in de Morgan, Eindes geogr., ii, and Etudis archeol., Paris 1896-7, 360-74), and the roads which may still be traced the upper summer of the rivers of Susiana. The remains of roads, paved or hewn out of the rock, may be at Tang-i Sawiak (between Bihbahan and Mālamir) near the Sāsāniau bas-reliefs (de Bode, i, 353, 364), to the east and west of Malamir (de Bode, l, 390, ii, 820: diādda-yi alābakān), between Dizfül and Kirab (Rawlinson, A march from Zohab, 93), to the south of Khawa (diadda-yi Khusraw, Crikov, 216-21). All these works are evidence of a systematic and continuous penetration. But since at the end of the 4th/10th century the inhabitants of the plain of Khuzistan had not yet forgotten the Huz language (al-Mukaddasi, 418), colonies of the ancient stocks may have survived in isolated corners of the mountains. The Lur highlands only assumed their present ethnic character under the Atabegs.

The knowledge of the Arab geographers about the Lur country is very summary, although they describe the routes between Khūzistān and Fārs (cf. Schwarz, fran 🖮 Mittelalter, 173-80; Arradjan-Shiraz, 190; Arradian-Sumayram), between Khüzistan and Işfahan (the road started from lahadi; Ibn Khurradadhbib, 57; al-Mukaddasi, 40r) and lastly, between Khūzistān and Djibāt. As to these last routes, 21istakhri, 196, reckons from al-Lur to Shapur-Kh "ast 30 farsakhs, from there to Lashtar (= Alishtar) 12 farsakhs, from there to Nihawand to farsakhs (the toad must be that which follows the upper waters of the Baladrud). A few details of this route are cleared up by al-Mukaddasl, 402, who gives the following eight stages: Karadi [q.v.] Wafrawand Darkan-Khurudh (certainly - Hurud, Hur-rud, north of Khurramābād)—Sābur-Khuwās (- Shāpūr-Kh "āst Khurramābād) — Krkūysh (?) — al-Khān — Razmānan-al-Lur. Al-Mukaddasi, 418, also makes one suspect the existence of a road along IIII Ab-1 Dir: from al-Lur to al-Diz, two stages, from there to Rayagan - stage, from there - Gulpayagan 40 farsakhs through uninhabited country (mafara).

Among the inhabited places in modern Luristan may be noted the following: the town of al-Lur, 2 farsagis north of Dizfül (Kanţarat Andamiah), the site of which should be sought in the plain of Şaḥrā-yi Lur near Şâliḥābād; the town of Lāghtar, now

disappeared, was certainly in the plain of Allshtar; and the town of Shapur-Khwast. The exact location of the latter is important for the comprehension of certain events in the 5th/11th century (1bn al-Athle, ix, 89, 146, 211; x, 166; Ta'rikk-i gusida, 55?). Rawlinson had identified Khurramabad with Shapur-Kh "ast (cf. Le Strange, Lands, 202). The combined evidence of al-Istakhri, 196, 201, of the Nuchal al-hulüb, 70, 176, and particularly of the itinerary of al-Mukaddasi, 401, fully justify Raw-linson's identification (against Le Strange). The change of name, or moving of the site (cf. Schwarz) must have taken place in the 7th/13th century. The Number al-build (740/1340), which does not include Shapur-Kh wast in its enumeration of the towns of the Little Luc, is the first source to mention Khurramābād (a town in ruins). It is, on the other hand, not at all probable that the wildyat of Man-rud, the alleged ancestral home of the Lurs, is near Khurramābād. It should be sought to the north of the town of al-Lur near Man-garra (= Mûngarra), Samhā, mentioned in the To'rikh-i gurida, 548, was in Manrud; its fortress Diz-I Siyab must correspond to the fort of Diz which defends the entrance to Mongarra and was destroyed by the wift of Pusht-i Küh in 1895 (Mann, Die Mundarten der Lurstdmme, 117). Finally, the stronghold of Girit (Ta3rikh-i gualda, 549, 552) is mentioned by Cirikov, 233, among the encampments of the tribe of Papi (to the south of Khurramābād).

Economic conditions. Apart from the Bakhtivari districts near Isfahan, where there are flourishing villages, the Lur territories inhabited by nomads or semi-nomads only export the products of their cattle-rearing. But the fortunes of the part of Luristan lying along the northern rim of the Ahwas plain have been transformed by the development of the cilifields of Lali, Masdiid-i Sulayman, Nalt Safid and Haft Kel from the time of William Knox D'Arcy's oil discoveries at Masdiid-i Sulayman in 1908 and the subsequent development of these oilfields by the Anglo-Persian Oil Company (see Cambridge history of Iran, i, 578 ff.). Also, Luristan is now crossed by the Trans-Iranian Railway, which follows the Ab-i Diz valley northwards to Arak Sultanabad), Kum and Tehran. Already before 1914, surveys were begun by the Persian Railways Syndicate for the Muhammara (later Bendar Shipur)-Dizful-Khurramābād section of what was to be a Trans-Persian Railway, and by the end of 1929 the southern section from Bandar Shapur to Andimishk bad been completed, that one through Luristan being completed in the 1930s. Luristan has thus continued to play a significant role, as it did in clent times, as a region crossed by routes connecting the main urban centres of western Persia.

LURKA, Lorca, a town of Eastern Spain lying between Granada and Murcia and having a population at present of 58,600. It is the ancient Huro — Helicoroca of the Romans. In the Islamic period, it formed part of the kira of Tudmir [q.v.], and was famous both for the richness of its soil and subsoil and for its strategic position. Its high was one of the most substantial in Andalusia. It is situated at 1,200 feet above sea-level on the southern slope of the Sierra del Câno, and dominates the course of the river Guadalentín. Under Arab rule it usually shared the fortunes of Murcia, and reverted to Christian rule in 1266.

LORI [500 101].

LOT, the Biblical Lot (Genesis, xiii, 5-13, xvii-xix). The Kur'an, where his story is told in passages belonging to the second and third Meccan periods, places Ltt among the "envoys" whose career prefigures that of Muhammad = a man in conflict with his compatriots, those whom his message is directly aimed; the crimes of the 'people of Lut" were, besides the refusal to believe, their persistence in vices such as lack of hospitality and homosexual practices, a misconduct punished, in spite of intercession by Ibrabim [q.v.], by the dispatch of angels of destruction who utterly devastated the sinful city, which is not identified by name, simply described = al-mu'tafika (pl. al-mu'tafikāt), a transposition of the Hebrew word manpela ("overturning"), used in the Bible in reference to the

destruction of Sodom and of its three sister cities. The city buried under a shower of marked stones (sidjill); Lut and his family were saved, with the exception of his wife, who disobeyed the prohibition and turned round during the flight. The relevant Kur'anic data have been collected by H. Speyer. Dic biblischen Ersählungen im Qoran, Gräfenhalnichen 1931, repr. Hildesheim 1961, 151-8; and by R. Blachère, Le Coren, major edition, ill, Paris 1951; index, 1203, single-vol. edition, Paris 1957, index, 721; also R. Paret, Der Koran, i. Übersetzung, Stuttgart 1966, 130, ii. Kommentar und Konkordanz, Stuttgart 1970, 165; W. Montgomery Watt, Bell's Introduction to the Our'an, Edinburgh 1970, 130 ff. and index, 227; D. Sidersky, Les origines des légendes musulmanes dans le Coran, Paris 1933, 46-8; presentation in apologetic form by the Muslim scholar 'Abd al-Wahhab b. Sayyid Ahmad al-Nadidjar (ca. 1278-1350/1862-1941; see Zirikli, Aldm. (v. 333). Kisas al-andiya", Cairo 1386/1966, 95, 112-18.

The "traditions" passed on by Kur'anic commentators, historians and compilers of cautionary tales, rely for the most part on Biblical details which are not found in the Revealed Book, on elements borrowed from the Jewish Aggada or treely invented; the injusitous judgments of the people of Usdûm (Sodom), the theme of the bed of Procrustes, emphasis on the wickedness of Lut's wife, names attributed to anonymous characters - the Scriptural account; for details, - the article by Heller in EI1; summary of Jewish legends, with sources, in Ginzberg's The legends of the Jews, Philadelphia 1909-38 (and re-impression) i, 245-7, v. 241, n. 175, not forgetting M. Grunbaum, Neue Beiteage zur semitischen Sagenkunde, Leiden 1893, 132-41. We set forth here only a few references; al-Tabari, Ta/sir, original edn., viii, 164-6, new edn. Där al-Ma'arif, Cairo 1957, xii, 547-53; idem, Anuales, i, 266 ff., 321, 325-43; al-Ya'kabl, Ta'rikk, ed. Houtsma, 22-4. Nadlaf 1384/1964, 17-19, see Smit, Bijbel en Legende, Leiden 1907, 30-2; a later version which [like al-Ya'kübi) follows the Biblical text quite closely, by Rashid al-Din, tr. K. Jahn, Die Geschichte der Kinder Israels, Vienna 1973, 35, 36, 38. Popular and cautionary versions: al-Iha'labi, Kisas al-aubiya', Cairo 1325/1907, 65-7, Cairo 1371/1951, 64-6; al-Kisā'i, Kişaş al-anbiya', ed. I. Eisenberg, Leiden 1922-3, i, 145-9. In hadith as properly defined, Lut appears in reference M Kur'an, XI, 82/80, in m context giving evidence of the modesty of Muhammad; al-Bukhāri, Şahih, Anbiya', 11 (ed. Krehl, ii, 347; sulfani edition, repr. Cairo 1378/1958, iv, 179); Ibn Madia, Sunan, K. al-Filan, 21, ed. M. Fu'ad 'Abd al-Balyī, Cairo 1373/1953, no. 4962, 1335 if.; see Wensinck, Concordance, iii, 163 ff.

On the basis of the proper noun Lüt, and by association with the authentic Arabic root l-w-f (with the sum of "sticking", "adhering"), a group of words was formed to indicate unnature) vice [see LIWAT].

In common with other "prophets" of the Kur'an, the figure of LOt invested with a mystical significance by Ibn 'Arabl [q.u.], who considered him the symbol of the spiritual force that subdues the passions of the concupiscent soul. (Fusis al-hikam, 13, ed. Abu 'I-'Ala' 'Afifi, Beirut 1365/1946, 126-31 and editor's commentary, 155-62). In the same spirit are the reflections of the Indian Suff Shah Wall Allah (1703-62) in his Ta'usi al-shadth firmula hisas al-anisma', abridged tr. J. M. S. Baljon, A mystical interpretation of Prophetic tales by an Indian Muslim, Leidon 1973, 20-2.

(B. HELLER — [G. VAIDA])

LUT B. YAHYA (See ABO MIRSHAP).

LUTE [see AL-COD].

LUTF (A.), the opposite of hiddlin [q.v.]. Derivatives of the root I-f-f are used in the Kurban in two senses, as (a) kind (e.g., XLII, 18) and (b) subtle (XXXI, 15; VI, 103; XXXIII, 34; LXVII, 14; XXII, 62). Senses (a) and (b) are linked by the idea of God organising matters in such way m to bring about a beneficial state of affairs. It is this religious notion which is applied in the Arabic translation of Alexander of Aphrodisias' Fi mabildi al-kull to refer to teleological direction in nature (265), and by Mūsā b. Maymun to refer - God's stratagem in the hardships which he obliges his creatures mendure (iii. 32, 528). The term is applied theologically to the notion of divine grace, favour or help, being developed by the Mu^ctazila to deal with me aspect of human freedom and its relation to divine omnipotence. Divine favour makes it possible for man to act well and avoid evil ('Abd al-Djabbār, Shark, 319). It is not granted to the sinner, whom God neither prevents from acting well and directs to commit evil. 'Abd al-Djabbar, who provides the most systematic treatment of luff in the volume of his encyclopaedia of that name (Mughal, xiii), says that for the Muctazite, divine grace is all that is capable of helping the agent carry out the duties set for him without interfering with his freedom. If a person believes only because he has received a Juff, he is not as deserving as I he did not regulre it. A person who will do the right thing does not require a lass, which is then not necessary. It cannot be true that God necessarily helps all men, since otherwise it would not be possible to sin (Sharb, 520) and there would be no free will. But if man acts well, he is rewarded and helped by God as a consequence; if he sins, he is deprived of God's help (Shark, 520).

Taken more broadly, the description luff may be applied to many aspects of human well-being, mg. health (Mughat, xiii, xx), wisdom, the use of ceason, prophecy and the provision of holy books (Niháya, 4xx). These all help to direct in the right direction without compelling him (Mutaghābih, ii, 734). Hence a rationale is provided also for punishment. God could turn unbelievers into believers, but His favours do not interfere with voluntary belief and food does not grant favours which directly convert unbelievers into believers (Mahālāt, 247, 375; a list of alfāf is provided in Shehrastāni, 55).

Another sense in which last is obligatory (widio) is that where God is "obliged" to provide as much luff as possible to whomever is reponsible for his actions. This doctrine was of strenuously opposed by the Ash ariyya, who apply the term laff ■ all God's acts, bad as well as good (Irshid, 173-4. 265). But for the Mutazila, God is morally obliged send to earth prophets and to arrange for the laws which man ought to follow to be communicated to them. Similarly for the ShIT al-Hill, the institution of the imam, like prophecy, is a "necessary grace" which is imposed on God. Since God has created the world only in the interests of man, he is obliged by a luff wadio to guide his creatures by sending them occasion mediators to make plain His will. The Muctazila thought that man would be capable of social existence without the gift of a prophet or imam-nevertheless, they hold that God is obliged to organise the world well, hence due to a luff wildjib, has to provide mankind with guidance.

(O. N. H. Leaman)

LUTF ALI BEG B. AKA KHAN, Persian anthologist and poet, who is also known by his penname Annar which he adopted after having used the names Wälih and Nakhat previously. He was descended from a prominent Turcoman family belonging to the Begdill tribe of Syria (Begdill-i Shāmin) which had joined the Kizlibash movement [q.v.] in the oth/15th century. Afterwards, the family settled down in Işlahan, Many of his relatives served the later Safawids and Nadlt Shah as administrators and diplomets. Lutf 'All Beg was born on Saturday Rabi' II 1134/7 February 1722 (the date mentioned in the two Bornbay lithographs of the Ataghkade erroneous). The invasion of the Afghans occurring in the same year forced his parents to flee to Kum, where they lived till his father was appointed to the post of governor of Lar and the coast of Fars in ca. 1148/1735-5, and they moved me to Shirae. When his father died at Bandar 'Abbas two years later, Luti All Beg undertook the pligrimage to the Hidjaz and to the holy shrines in 'Irak. During a subsequent journey Mashhad he entered the service of Nadir Shah, whom he accompanied on a campaign in northern Iran. He continued to work for Nadir's successors, but retired in the early years of the Zand period to a life of study and literary pursuits, subsisting on the revenue of a small estate near Kum and living at Işfahân, where peace had been restored by Karlin Khan Zand. However, in 1188/1774-5, he and some of his fellow-poets had to leave the city on account of the oppressive rule of the Zand governor Muhammad Runāni. Luti 'All Beg died in 1195/1781 according to the chronograms which his friends Hātif and Şabāhi wrote for him (see al-Dharifa, ix, Tehran 1332/1953, 3).

Luti 'All Beg's fame rests in particular on the anthology Atashkada, on which he continued to work from about 1174/1760-1 almost till the time of his death. The work is divided into two parts, styled "censers" (midimara). The first part, on the poets of previous times, opens with a section (shu'la) devoted to royal poets. Three further chapters (called akhgar and subdivided into shararas) deal with the poets of Iran, Toran and Hindustan according to the districts and towns of their provenance. An appendix female poets (furugh) has been added to it. The main source for this part of the Atashkada was the Khulasat al-aukfar um-zubdat al-afkar of Taki al-Din Kāshāni. The second midimara, divided into two barious, contains the lives of contemporary poets, many of whom were personal friends of the author. It is preceded by a dedication to Karim Khan Zand and a sketch of the troubled history of Iran from the time of the Afghān invasion onwards. A short autobiography followed by a selection from Adhar's own poetry concludes the work.

The Atashkada was often copied in the early 13th/ 10th century. Lithographs appeared at Calcutta 1249/1833-4, and at Bombay 1277/1860-1 (reprinted Tehran 1337/1958) and 1299/1881-2. An annotated edition by Hasan Sadat Nasiri, of which three volumes were published at Tehran (1336/1957, 1338/ 1959 and 1340/1961), has remained unfinished. N. Bland edited the opening section, the sky is on royal poets (London 1841), and gave an account of the entire work in JRAS, xiv (1843), 345-92. An abridged version, the Tadhkira-yi Ishab, containing the poems only in the alphabetical order of the rhymes, was made by a brother of the author, Ishak Beg 'Udhri (cf. A. Gulcin-i ma'ani, Ta'rikh-i tadhkiraha, i, 182 f.). The existence of a Turkish translation, mentioned by J. H. Kramers (E1), s.v. Luff 'All Beg), has been questioned by Tabsin Yazıcı. For a complete inventory of the biographies occurring in the Atashkada, see E. Sachau - H. Ethé, Calalogus of the Persian manuscrepts in the Bodleian Library,

Oxford 1889, cols. 262-93.

As a poet, Lu(f 'All Beg was also held in high esteem by his contemporaries. Much of his early work was lost when the Bakhtiyari chief 'All Mardan sacked Islahan in 1164/1750. He became a pupil of Mir Sayyid 'All Mushtak (d. 1171/1757-8), who was one of the initiators of the "literary return" (basgasati adabi) to the stylistic standards of early Persian poetry which manifested itself among the poets of Istaban and Shiraz during the Zand period (cl. M. T. Bahår, in Armaghan, = (1331/1932-3), 713 ft.). Apart from a Diman (cf. Bankipore catalogue, ili, Calcutta 1912, 219-21; Storey, i/2, 870; A. Munzawl, Fihrist-i nushkahayi khaffi-yi farsi, ili, 2206 f.), four mathanuis ... known: 1. Yasuf-u Zulaykid, iragments of which - contained in the Ataskkada (for separate manuscripts, see Munzawl, iv, 3331); 2. ■ short poem, known as mathaawi-i Adhae, which he wrote in imitation of a mathematic entitled Atashkada, or Suz-u gudas, by Aka Muhammad Sadik Tafrishl, which seems to have inspired him also in the choice of a title for his anthology (cf. A. Guléln-i ma'ant, in Madjalla-i danishkada-i adabiyyal-i Mashhad, iii [1346/1967-8], 23-52; Munzawi, iv, 3217); 3. 2 Sabiname (cf. Munsawi, iv. 2857); 4. Mughanni-name (cf. ibid., 3225). Less certain is the attribution to this author of two other works: a prose-work, Gandinat al-habb, composed in the manner of Sa'di's Gulistan (mentioned in the tadkhira Andjuman i Khākin, cf. Ibn-l Yasul Shirazi, Fihrist-i Kitabkhana-yi madrasayi 'All-yi Sipahsalar, ii, Tehran 1318/1939, 453) and a tadhkira on contemporary poets entitled Daftar-i muh asman (mentioned by Aka Buzurg al-Tibrani, al-Dhart'a, vii, Nadial-Tehran 1329/1950, 226; cf., bowever, Gulcin-i ma'ani, Ta'rihh-i tadhhiraha, i, 48 note). As it seems, Lut! 'All Beg wrote some poems in Turkish well (cf. M. F. Köprülü, IA, s.v. Azeri, 139b).

Ta'rikh-i tadhkirahā-yi fārsi, Tehran 1348/1969, (J. H. KRAMERS - [], T. P. DE BRUIJE]] LUTF ALI KHAN, the last ruler of the Zand dynasty of Iran. He was born in 1283/1769, the son of Dia fer Khan son of Sadik, younger brother of the founder of the dynasty, Karim Khan [q.v.]. During his father's reign, when the Kadiar armies had overrun most of northern Iran, Luff 'All subjugated Lar and Kirman and for the last time retook Isfahan, but was soon forced back to Shirls. When his father was killed in 1204/1789 in a coup led by Sayd Murad Khan Zand, Lut! 'All fled to Bushire (Bushahr), where he was assisted by the governor Shaykh Nasir, long a loyal vassal of the Zands. Thus reinforced be marched on Shiras, where a fifth column led by the kaldutar [q.v.] (mayor), Hadidji Ibrahim, aided him to overthrow the rebels.

A brave and likeable youth, in contrast to his cruel and treacherous father, Luti 'All was genuinely welcomed by the populace. Though defeated in the field, he held Shiras against a Kadjar assault; the following year he unsuccessfully besieged Kirman, then in 1205/1791 set out to recapture Islahan. However, since his accession he will become openly suspicious of the influential [ladidil lbrahlm, and was induced by whispers of his disloyalty to take with him the kalantar's young son as a hostage. Acting perhaps in self-preservation, Hadidil Ibrahim arrested the Zand officers left in Shiraz and took over the garrison; his brother, who was with Lutt 'Ali's army, formented mutiny from which the young Zand leader and three hundred men fled to Shiraz. Here he found the gates closed against him and was deserted by all but four of his followers. Fleeing again to Bushire, he found that Shaykh Nasir's son and successor had elected w support the kalantar. Nevertheless, he recruited some local support and successively defeated both Zand and Kadiar forces sent against him. Hadidil Ibrahim's appeal to the Kādjār leader to occupy Shīrāz was answered by Agha Muhammad Khan in person with an army of 40,000. Luti 'Alt's small cavalry force defeated the Kädlär vanguard and that night came within hair's preadth of capturing the main camp. In 1207/ 1702 Agha Muhammad entered Shiraz, and Luti 'All was benceforth a fugitive, still mounting guerrilla attacks from temporary bases all over southeastern Iran. Supported successively by chiefs of Jabas and Narmashir, he twice held the city of Kirman; in 1200/1704, after a four-month siege, the Kādiār army was admitted to the town by treachery and Lutf 'All barely escaped to Bam. For their support of his rival, Agha Muhammad wrought a terrible revenge on the people of Kirman [q.v.]. The governor of Bam, fearing a similar fate, betrayed Lutf 'All to the Kadiar leader, who blinded and tortured him before taking him - Tehran for execution in Rabi's Il 1209/November 1794.

As the gallant underdog, Lutf All inspired admiration in contemporaries both Iranian and European, though the Persian chronicles, written under Kädjär patromage, are of necessity more chromspect. Sir Harlord Jones Brydges, who accompanied him during part of his time as a fugitive, and Sir John Malcohn, to whom Hädjdil Ibrāhim later tried to justify his tergiversation, praise the youth's daring and resilience, which indeed imparted a certain nobility to the largely self-inflicted death throes of the Zand dynasty. His alienation of Hädjdil Ibrāhim, however, was symptomatic of the dynasty's failure to live up to its early promise. Karim Khān had been careful to cultivate the trust of the rural and urban

classes in addition to that of his tribal army, whereas his successors, including Lutt 'All, were too intent on feuding among themselves and feuding off the Kädjärs to promote or even protect benefits which the bureaucracy, merchants, artisans peasantry had obtained from Karlin Khan. Having lost the support of the towns, Luti 'All's nomad force disintegrated in the face of a Kädjär army which was, if not militarily, certainly politically and logistically stronger.

LUTFI, 14th and 15th century poet in Caghatay Turkish, and the greatest master of the ghassi before 'All Shir Nawa'l (845-906/1441-1501). The little that is known about his life comes mainly from 15th and 16th century works, especially those of Nawa's, Lutfi was born in Harat, and died and was buried at his home in the nearby suburb of Dih-i Kanar at the of (Muslim) years. Modern scholarly conjecture suggests ca. 768-867/1367-1463 (J. Eckmann); or d. 870/2465-6 or even later (H. F. Hofman). He lived quietly, but contact with the Timurid court is indicated by his dedications of a few poems to princes from Shib Rukh to Husaya Baykara. Nawall, who knew him personally, reports that after studying the secular sciences, Lutil was initiated into Soil mysticism by Shihab al-Dia Khiyābāni, that the poet was a saintly person and was a close friend of Djami, the great Persian poet and mystic of Harac.

Lutil's poetry has been highly esteemed since his own lifetime. There has been general agreement with the judgement of Naw&? who said he was "the Master and King of Speech of his people" (Halde-Fahlasān), "the King of Speech of his time", peerless in Persian and Turkish, but better known for his Turkish poetry (Madjākis al-nafā'is), and the single Turkish poet comparable to the greatest Persian poets (Mušāhamas al-lughatayn). Naw&? even incorporated five complete ghasais of Lutil into his own poems (mušhammas and musaddas).

While Lutfl wrote was kasides will two major mathnawis, his poetic gifts and originality were best displayed in the ghazal and swywgh. In combining the classical Persian lyric tradition with elements of Turkish popular poetry, he produced change of graceful simplicity which concealed a subtle sophistication, while yet retaining some flavour of Turkish folksong. This results in part from his preference for those 'arid metres which corresponded approximately with Turkish syllabic metres, but also from his use of specifically Turkish features, such as proverbs and folk sayings reflecting ancient Turkish customs and beliefs, and of imagery which was often more realistic than that of classical Persian poetry, His verse seems to contain proportionately more words of Turkish origin and less Arabic and Persian loan words than any of his contemporaries or succossors in classical Caghatay. The musicality he achieved is due not only to his exquisite word choice

and sequence, but also to his technical skill in developing such features as the extended radif [q.v.]. The wit and humour displayed in new uses of old images, the enjoyable puns and wordplays in both ghazal and fuyugh, were also not negligible factors in ensuring his continuous popularity for five centuries. His influence is visible in works of such contemporaries as Sakkaki, Atayi and Gada'i and of later poets directly, and even more, indirectly, by way of his influence on Nawa'T's poetry, which was universally admired. Echoes of Lutil - beard even in poets from other linguistic areas, such as the Azeri and Ottoman ones, particularly Fuduli (d. 1556) and the Turkmen ones, especially Makhdum-Kull (18th century). Verses by Lutfi are frequently cited in Caghatay-Ottoman and Caghatay-Persian dictionaries from the 16th century onwards, and are plentiful in anthologies of the mem period.

Literary Works. All Luffi's known works are in Caghatay Turkish, except no. 4 (t) Diwan, At least 20 mss. extant, belonging to five major recensions, but each group contains some material lacking in the others. The total number of poems in not less than 548, of which 378 are ghazals and 112 are swyughs. (Further research may yield more poems.) Of the reconsions, the most reliable is group (a), consisting of 2 mes.; ms. Birnbaum (Toronto) TC: iii (late 15th-enrly 16th century) and British Library, Add. 7914 vi (Hara: 914/1509). The former contains 361 poems (1 munddiat, 1 natt, 297 ghazals, 62 turnghs) and is the longest Diwan of all Lutil mas. The latter lacks the last 107 ghazals. The other groups are (b) Paris, Suppl. Turc 98t and (c) Gotha Tarr (both r6th century, with some similarities); (d) Bursa, Müze 113/156 (16th-17th century). Group (e) comprises all other known mss.: (i) all the mss. in the USSR: Tashkent, Uzbek Academy of Sciences (6 mss.), Navol Museum (1 ms.), Dushanbe, Tajik Academy of Sciences (4 mss.), Leningrad (2 mss., nos. Atog, C1922-the one numbered Brast is an Ottoman poet Lufff); (ii) Istanbul, University Library, T5452; (iii) Tehran, Sipahsalar 174. Group (e) mss. (which may be further subdivided) were all copied in the 18th-20th centuries and show many Uzbek and other local influences. The state of their text is markedly inferior to groups (a)-(d). Hundreds of verses attributed to Lutff appear in ms. anthologies in major libraries, especially in the Uzbek and Tajik academies. Most are quotations from ghatals known from his Diwax. Uyghur script copies of 13 ghazals are found in mess. from the 9th/15th century. A number of verses from Lutti's Diagn appear with minor differences in Sakkāki's Diwān. (2) Gul u Neurile, An allegorical romantic spic in 2,400 mathemy verses, Composed in 814/1411, it is a free version in simple Caghatay, based on the Persian work of this name by Dialal Tabib (composed 794/ 1334). Seven mss. extant (see Hofman, TL). (3) Zafor-nama (not extant). Described by Nawa'l as being a methnauf "translation" of more than 10,000 verses, which never got beyond the draft stage. It was presumably about the exploits of Timur, whose son Shah Rukh commissioned its writing; it was probably based on Sharai al-Din 'All Yazdi's Persian Zafar-nāma. (4) Dissān in Persian, including kasidas and glassis. Apparently not extant, but citations appear in biographical tadhhiras and ms. anthologies.

Editions. (1) Facsimile edition of Bursa ms., Luffi Divam [with introd. by] Ismail H. Ertaylan, Istanbul 1960 (incomplete, unfoliated); (2) the Divam of Luffi, including facsimile of Birnbaum mm TCs iii, ed. E. Birnbaum (in preparation); (3) Lutfiy, Deven; Ged vs.

Naurus (selections, in Cyrillic script, by S. Erkinov), Tashkent 1065.

LUTFI EFENDI, AHMAD, Ottoman court bistoriographer (wakto-nawis). 1. Life. He was born the son of Mehmed Agha, a master sandal-maker, in 1232/1816-17 in the Aladia Hammam quarter of Istanbul. He attended the local Kur'an school and became a #4/is, and also practised music regularly at the house of Zayn al-'Abidin Efendi, Sultan Mahmud II's chief imam. In 1244/1828-9 he was enrolled in the Mathematical College (Hendese-ghane-yi berri), but left it after we year for the madrasa of Amudiazăde Hüseyin Pasha, where he studied Arabic, Persian, tafeir, hadilh and fish. In 1247/1831-2 he embarked on a scholarly career, and in 1252/1836-7 he became head of the body of religious teachers or mudereisis in Istanbul. The following year, he was charged with collating documents for the official records office (Takwim-khāne) and with lecturing before the sultan on selected days in Ramadân. He translated al-Ghazall's Ta'lim al-mula'allim into Turkish, with some additions of his own, as the Tajkim al-mu'allim and presented it to the sultan, now 'Abd al-Medild. He then took up a job in the secretarial office of the Grand Vizier (1258/1842), where he worked as a Persian translator, until Rabis II 1266/February 1850, when he was appointed the itinerant clerkship of the Buildings Council ('Imare medilisi) in the districts of Vidin and Nigh in Rumelia. He returned to Istanbul after a year and appointed first to the head clerkship of the Police Council (Dabliyye medilisi) and then to the Takeim-khane once more, and was charged with the regular and weekly preparation and publication of the official gazette, the Takwim-i wakayi'.

In #265/1849 he was sent temporarily to Philipopolis (Filibe) in Bulgaria for a period of nine months, in order to collect arrears (bakaya) of taxation. Meanwhile, he also held the clerkship of the Investigation Committee (Teflish hay'all) of Anatolia for two years. When this latter post was abolished, he again returned to the Takwim-khane (1269/1852-3). Eventually, in 1278/1861-2, he became a member of the Medical Council (Tibbiyye medilisi) and taught official composition in Turkish (inska? [q.v.]) at the Medical School. Soon afterwards, in addition to becoming a member of the Education Council (Mafarif medilisi) and continuing to edit the Takwim-i wakdrif, he was entrusted with the supervision of government printing. At the end of 1281/beginning of 1865 he became Waki'a-nimis and remained in this job, in which he achieved lame, for many years. However, in 1293/1876 he again returned to the scholarly field, and his mulkiyye rank was changed to the status of the kadilik of Istanbul. The following year he was appointed a member of the Council of State (Shira-yi deelet; in Muharram 1297/December 1879-January 1880 he was promoted to the hadi-Inskerlik of Anatolia; and on ir Mubarram 1299/3 December 1881 to that of Rumelia. In 1304/1887, despite his occupying this latter post, one of the highest ranks in the learned institution, he returned to his previous post in the Council of State.

Lutfi Efendi died at his yell at Boyadiiköy near Istanbul on a Salar 1325/17 March 1907 and was buried in the Sofular Mosque cemetery in the vicinity of Aksaray, Highly literate in Arabic and Persian and skilled in poetry and composition, he had also bean

adherent of the Meylevi dervish order.

2. Works. His most famous work was the continuation of the history of Diewdet Pasha [q.v.], known accordingly as the Luffi Tabrikhi, written in a straightforward style, and utilising information from the Takwim-i makayi' and some official documents. It is in 15 volumes covering the events from the beginning of Muharram 1341/16 August 1825 to the middle of 1293/middle of 1876; the first seven volumes were published between 1290/1873 and 1306/1889 at the Government Press and the Mahmud Bey Press during his own lifetime, and volume viii was published posthumously III 1328/1910 at the Şabāb Press by the court historiographe: 'Abd al-Rahman Sherof Efendi with and additions. The manuscripts of vols. ix-xv, which were presented to the Sultan 'Abd al-Hamid II, were transferred from the Yildiz Library to the Türk Ta'rikh Endjümeni Library, and thence placed in the Türk Tarib Kurumu Library in Ankara; they remain unpublished. The original manuscripts of the first volumes of the Tarikk, together with some other rough drafts of the author's, are in the former Imperial Museum (now Archaeological Museum) Library in Istanbul.

His book Diwante-yi Waki'a-wawis Almad Luffi contains some of his poetry and some history in poetic form; it was printed at Istanbul in 1302/1884-5 and comprises 100 pages. The original manuscript of his Lughat-I kamus, a dictionary of 53,000 words, arranged by him alphabetically from a Turkish translation of the Arabic al-Kamas al-muhit made by the court historiographer "Āṣina [see "Aṣim, AḤMAD, and gamus 3, Turkish lexicography), is in the Archaeological Museum Library; only the first two parts of it, covering the letters all/ and bd2, have been published (in 1282/1865-6 and 1286/1860-70 respectively).

Bibliography: Luffl, Tarihh, i, 1-8, viii, 2-6, xv (= TTK Ankara, ms. no. y 531-7), f. 65a; idem. Diminie, 33. 40: I.M.K. 'Ann al-Mu'le, Ottoman statesman and Grand Vizier, probably an Albanian by origin, born ca. 893/1488 (see M. T.

Cökbilgin, IA, art. Luift Pasa).

As a deuskirme [q.v.] youth, he entered Bayerid II's [q.v.] harem-i khdes, where he received a thorough education in the Islamic sciences. He held the post of čukadar before the accession of Selim I [q.v.], when he graduated (tashra išķmaķ) as a milteferriķa with 50 skies [q.v.] daily, and then held in turn the posts of lashnigir bash! [q.v.], kapudii bashi and mir-i 'alem. His first appointment to service outside the Palace was as sandjak begi [q.v.] of Kastamuni, and he subsequently became beglerbegi of Karaman, Lutfi Pasha biruseli gives these details of his life in the Introduction to his Asay-name (ed. with translation and introduction by R. Tschudi, Das Asafname des Luffi Pascha, Berlin 1910; ed. Shükri Bey, with introduction by 'Ali Emiri, Istanbul 1326/1908), However, does not give the dates of his appointments and omits all details of his life before entering the Palace. He may also have served as sandjak begi first of Aydin and then of Yanya (Ioannina), since Feridum Beg [q.n.] mentions a Lutfi Beg who served at the siege of Rhodes (Rodes [q.v.]) in 928-9/1522 as sandjak begi of Aydin (Feridun Beg, Münshe'at al-sala-Hn, Istanbul 1274/1857, i, 539), and a Lutil Beg who served at the siege of Vienna in 936/2529 as sandiak begi of Yanya (ibid., i, 573). These references may well be to Lutil Pasha, the future Grand Vizier, since he himself claimed to have participated in both these campaigns (Lutfi Pasha, Temirikh-i dl-i 'Othman, ed. "All, Istanbul 1341/1922-3, 3). In 941/1534-5 he became Third Vizier. By this time he had, by his own account, served in Selim I's wars against the Safawids in eastern Anatolia, and against the Mamioks in Syria and Egypt. Under Süleymän I [q.v.], he took part in the campaigns of Belgrade in 927/1521, Rhodes in 928-9/1522, Mahács in 932/1526, Buda and Vienna in 935-6/1529, Güns bi 939/1532 and against the Safawids in 940-2/1533-6. In the latter campaign he served probably me beglerbegi of Karaman, commanding the rearguard of the Ottoman army at Tabriz in Rabic al-Awwal 941/September-October 2534 (Feridum Bog, op. cit., i, 587). During the same campaign he was active in operations around Lake Van, when he commanded the architect Sinan [q.v.] to construct a fleet - Tatvan (Saq, Tadhkirot albunyan, Istanbul 1315/1897-8; quoted in M. Fuad Köprülü, Luffi Paska, in Türkiyyüi Medimü'asi, i [1925], 119-50).

As Third Vizier, Luffi Pasha commanded the fleet which left Istanbul on 1 Dhu 'l-Hididla 943/12 May 2537 to join forces at Avlonya (Valona, Viore) with the army under the Sultan, which had travelled overland. While the Kapudon Paska Khayr al-Din [q.o.] sailed to Egypt to collect provisions, forces under Lutfi Pasha raided the coasts of Apulia, On the return of Khayr al-Din, Andres Doria's attack on two galleys in the command of the hethidda of Gallipoli (Gelibolu (q.v.)), and a second attack on a galley which Lutil Pasha had sont with messages to Coriu (Körfüz [q.v.]), furnished a pretext to attack this island. On 18 Rabit al-Awwal 944/25 August 1537, Ottoman forces under Lutil Pasha landed and the island, but were unable to take the fortress. On the command of Sultan, and despite Lutil and Khayr al-Din Pashas' objections, Ottoman troops began to withdraw 1 Rabit al-Akhir 944/7 September 1537. Lutil Pasha returned to Istanbul with a section of the fleet (see Katib Celebi, Tud/al-kibār fi asfār al-bihār, Istanbul 1329/2911, 48-50).

On the death of Mustafa Pasha on a Muharram 945/30 May 1538, Luttl Pasha replaced him as Second Vizier. In this capacity, he accompanied the army on the campaign Moldavia (Kara Boghdan [see nogupian]). The army left Islanbul on 11 Safar 945/9 July 1538, and crossed the River Prut on a bridge which Sinān had constructed Luttl Pasha's

orders (S&9, loc. cit.).

When Ayes Pasha [q.v.] died on 20 Safar 946/7 July 1539, Lutfi Pasha sucreeded to the Grand Vizierate. In this position he led the aegotiations which ended the war with Venice. By the terms of the peace concluded on so Radjab 947/20 November 1540, Venice ceded Monemvasia and Navplion, in addition to all places lost in the war, and paid an indomnity of 300,000 ducats (200,000 according to Lutil Pasha, Toudribh-i al-i Othman, 384). Lutil Pashs himself received payment of ro,000 ducats from the Venetians (E. Charrière, Négociations de la France dans le Levant, i. Paris 1848, 471). He also headed negotiations with the Habsburgs over Ferdinand's claim to territory in Hungary which Janos Zapolyai had ruled as an Ottoman vassal. The issue eventually led to war, and an Ottoman army left for Hungary in Muharram 948/May 1541. At this moment, however, the Sultan dismissed his Grand Vizier. Although Lutfi Pashe himself represents his removal from office as voluntary retirement to be "secure from the wiles of women" (R. Tschudi, op. cit., Turkish text, 5), it appears to have followed a violent quarrel with his wife, Dewlet Shahi Sultan, the Sultan's sister, whom he had married in 945/2538-9. According to "All [Künk al-akkbde, quoted by Köprülü, in op. cit.), the quarrel followed his wife's objection to his grisly punishment of a prostitute. After his dismissal, Lutfl Pasha retired to his cifflix [q.v.] in Dimetoka.

Lutfl Pasha obviously regarded his administrative activities in the greatest achievement of his vinierate. His Asof-name summarises his views on the principles of sound administration, at the same time mentioning his own reforms. The greatest of these he regarded as the abolition, except in cases of extreme urgency, of the ulab hukmu, whereby state couriers (wiet) could arbitrarily expropriate horses from the populace for their own and their retinues' use. Instead, he established a system of regular staging posts with their own horses (R. Tschudi, op. vit., Turkish text, 10-11; Lutfi Pasha, op. cit., 371-82; see also C. J. Heywood, Some Turkish archival sources for the history of the mentilhane natwork in Rumeli during the eighteenth tentury, in Bofazuli Universitesi Dergiss, iv-v [1976-7], 50 n. 9). In the financial sphere, he claimed to have reduced state expenditure by, among other things, limiting the number of kapikala troops to 15,000, so that income exceeded expenditure. This had not been the case at the time of his appointment (R. Tschudi, op. cif., Turidsh text, 35-40). Evidently to prevent oppressive taxation, he advised against the regular levy of 'avoirid [q.v.] (ibid., 41-2), and recommended that tax-farms (muldiafa) be exploited by salaried officials (emin [q.v.]) rather than by tax-farmers (millerim) (ibid., 39). Further protect individuals against the claims of the state, he ensured that the Treasury did not appropriate inheritances until seven years had elapsed without an hair appearing (ibid., 11-12). In strategic matters he rightly stressed the importance of the Ottoman fleet since the time of Sellm I, and claimed responsibility for establishing mumber of squadrons outside Istanbul and an emin to impervise naval expenditure (ibid., 33; see also C. H. Imber, The many of Suleyman he Magnificent, in Archivum Ottomanicum, vi [1974], 211-83).

An independent witness to Luffi Pasha's reforms is Moses Almosnino of Salonica (ca. 1575-ca. 1580), who reported that he had protected miners against the exploitation of mining concessionaires, and cattle-raisers against drovers and butchers (Moses ben Baruch Almosnino, Externos y grandezas de Constantinopla, Madrid 1638, 130-3). Luffi Pasha's vizierate may also have the promulgation of the kindunding [g.v.] of Süleynän I (U. Heyd, ed. V. L. Ménage, Studies in old Ottoman criminal law. Oxford

1973, 26-7}.

Shortly after his retirement, Lutff Pasha returned to Istanbul to request the Sultan's permission to an on the Pilgrimage, which he performed eventually in 949/1547, before returning again to Dimetoka, where he spent the rest of his life. In retirement, he devoted himself to writing works on morals, fish and theology. He also wrote verse (Schi, Heghl behight, Istanbul 1325/1907, 25; quoted by M. Fuad Köprülü, op. cit.). He himself lists thirteen works in Arabic and six in Turkish (Lutif Pasha, op. cit., 3-4; R. Tschudi, op. cit., pp. XV-XVIII). He does not include the Asaframe, which he may therefore have completed after his History, which dates from after 961/1554. He deed probably in 970/1562-3 in Dimetoka (All, Künh alabhbür; quoted by M. Fuad Köprülü, op. cit.).

In Istanbul he endowed a fountain; in the village of Müslim Edlrue, he endowed a mosque and a mu'allim-hhāns with 200,000 ahles and the income from twenty shops in Editne (M. T. Gökbilgin,

Edirus ve paşa limes, İstanbul 1952, 506-7).

Bibliography: In addition to the works cited

in the text, see J. H. Mordtmann's valuable review of R. Tschudi's edition of the Asaf-name in (C. H. IMBER) 2DMG, lvl (1911), 599-603. LUTPI AL SAYYID. ARMAD, Egyptian scholar, statesman and writer, born in the village of Barkaya, Dakahliyya Province, on 15 January 1872 and died in Cairo on 5 March 1963. His family were rural gentry (atyda), and both his father, al-Sayyid Abū 'All, and IIII grandfather were fumdas. He was educated in the traditional kuttab, the government school in al-Mansura, the Khedivial Secondary School in Cairo and the School of Law in Cairo. The most significant intellectual contacts which he made at the School of Law with Muhammad 'Abduh and Hassuna al-Nawawi. Having graduated in 1894, he entered the legal department of the government service, where he worked until 1903. In 1907, he became editor-inchief of a new newspaper, al-Diarida, which voiced the views of a number of enlightened and liberal asyde and the party which they founded later in 1907, the High al-Umma ("National Party"). Lutfi's writings in al-Djarida from 1907-14 comprise his most important and influential body of work. From 1915-18 he was director of the National

Library, but resigned to act m secretary to the original Wafd of 19x8-19 headed by Sa'd Zaghiol. He soon returned to the National Library, where he began his second substantial series of works, his translations from Aristotle via the French versions of Jules Barthélemy-Saint-Hilaire, From 1925-41 ha was Chancellor of the Egyptian (Inter Cairo) University, with intermissions as Minister of Education (1928-9) and Minister of the Interior (1929). In his later years, he was a member of the Senate, and on retiring from politics, was president of the Academy of Arabic Language until his death. His liberal philosophy was largely the product of his readings in Western philosophers and sociologists from Aristotle to Locke and Bentham, Mill, Spencer, Rousseau, Comte and Le Bon. He saw Egyptian nationality as the result of historical and environmental factors which Egyptianised III who resided permanently in Egypt and committed their destinies to her. Hence he campaigned tirelessly against Pan-Islamic, Pan-Arab and Pan-Ottoman ideologies in al-Disrids, but granted equal worth to Egypt's Pharaoriic and Islamic heritages. Rejecting religion = a basis for nationhood, he insisted that utility - the foundation of all political and social unity. He proclaimed freedom as the right of both the individual and the nation, [11] followed Muhammad 'Abduh's advocacy of a gradualist approach towards a constitutional régime through universal education. By his middle years, he was already called ustddh al-djil ("teacher of the generation"), and his writings - considered a notable contribution in the formation of modern literary Arabic. His autobiography appeared first in al-Muşawwar, Cairo, September-December 1950, and in book form as Kissat hayati, Calro 1962. Selected editorials from at-Djarida have been published in the following collections edited by Isma'll Mazhar: al-Muntakhabit, 2 volt., Cairo 1945; Şafahāt maļwiyya, Cairo 1946; and Ta'ammulat fi 'I-falsufa wa 'I-adab wa 'l-siydsa wa 'l-iditima', Cairo 1946. His translations from Aristotle comprise: "Ilm al-akhlak ila Nihilmākhūs (Nicomachean ethics), Cairo 1924; al-Kuwn wa 'I-fasdd (Generation and corruption), Cairo 1932; 'Ilm al-tabi'a li-Aristufalis (Physics), Cairo 1935; al-Siyāsa li-Arishitālis (Politics), Cairo 1948.

(C. WENDELL)

LUTFIYYA [see SHADHILIYYA].

LOTI (also lati, Lawata-kar) in current Persian strictly speaking in itinerant entertainer accompanied by monkey, bear or goat, which dances to the sound of a drum and coarse songs. This however appears in have been a late restriction of the meaning of the term, deriving perhaps from its

cariler use to describe a jester attached to a royal or princely court. In other contexts, it is equivalent to a loose liver, gambler, wine hibber, and more especially, a paderast. The last meaning lends colour to the generally accepted derivation, through Arabic lift, laundi, from the Prophet Lot, though this has been questioned by some scholars. Another less likely source is the Persian word lift, meaning "viotuals", whence lift — "greedy".

One of the earliest recorded uses of the term in Persian is by the 4th/roth century poet Kisā'l, who associates it with the words tās and makyās, both meaning "catamite". Nāṣir-i Khusraw, writing in the 5th/rath century, uses the term as equivalent to "wine-drinker, thief, whoremonger", while Shami (6th/rath century) warns against commercial dealings with balis, which suggests that the word was by then acquiring its later meaning of "vagabond, wastrel". Distal al-Din Rūmi (7th/rath century) and 'Ubayd Zākānī (8th/rath century), however, use it primarily in the sense of "pederast".

Probably as a result of the association in certain aspects of Suff thought between loose living and the following of the Suff path [see Malanathyra], expressions such as latt-yi Allaht, latt-yi Khuda'i, moreona with the significance of "generous, manly". In current parlance, latt also means "rascal, vagabond", latt-hazar or latt-haza "cheating", particularly in financial matters, latt-hawar kardan "improvidence, wastefulness". On the other hand, latt-gari implies "generosity".

LUWATA (see LAWATA). LUXOR (see al-uksür).

LUZUM MA LA YALZAM, "observing rules that are not prescribed", term commonly used for the adoption of a second, or even a third fourth, invariable consonant preceding the rhyme consonant (rawi) which, at least in classical poetry, remains itself invariable [see Kārīva, lv., 4ra, middle]. The term is also used in dealing with thymed prose (sadj) [q.v.]. In later Arabic and Persian literary theory the term covers not only the classical histin, but also a variety of other devices which have nothing to do with the end rhyme. Common synonyms of lusüm indicate the terms tadmin, tashdid, and tadyis in the sonse of lusüm.

Scholars occupied with rhyme theory point out that the introduction of a second invariable rhyme consonant is rare among the ancient poets; they justify the practice by arguing that some poets chose to regard the suffix at of the third person feminius of the verb in the perfect, the prominal suffixes, -ka, -ki, -kum, -kumi (implicitly, see Ibn 'Abd Rabbih, at-'Ikd, v, 301), -kum, and -kumi mast [see KAFIYA, iv, 412a, middle] which meant that the preceding consonant became rawi and as such had to be invariable in addition to these suffixes thenselves (cf. the explicit by the poet Kuthayyir quoted by Akhtash, Kamifi, 18-19); it also meant that a line ending in the demonstrative akklika should preferencing in the demonstrative akklika should preference.

ably be followed by lines ending in -like, e.g., handliks, and not, for instance, in biks. They mention that adoption a second invariable consonant was sometimes achieved by reduplication of the rhyme consciunt, and that sometimes the second invariable consonant (or the reduplication) was maintained in part of the poem only. They do not offer an explanation for this last phenomenon and seem to be unaware of the fact that ra", lam, and num (less often mim) appear at times to be interchangeable, e.g., djamāliki/bāriki (Ţarafa, Dīwān, ed. D. al-Khatīb and L. al-Şakkal [Damasous 1395/1975], 86-8), kallatifa-dannati (Kuthayyir, Diwan, ed. I. Abbas [Beirut 1391/1971], 95-6, and the lines on p. 107; sec also A. Bloch, in AO, xxi [1953], 230 and n. 31). Poems or fragments of poems ending on -llat(i), -meat(i), and -reat(i) = quoted with special frequency. The question of the origin of the figure thus appears complex. The literary theorists beginning with Ibn al-Mustazz (d. 296,408), Badis, 74-5, who lists the i'ndt (= luxum) as one of the ornaments of style (makdsin, see BADI and IBN AL-MU TAZZ and cf. Israel Oriental Studies, [[1972], 89-90), made no serious attempt to clarify the history of the figure or to explain to what extent the luzion as practised by the poets of their own time was related to the technique of the ancient poets as recorded by the rhyme theorists. This is true also of Abu T-Alà al-Marari (d. 449/1058), even though in the introduction to his Lusumiyydi (a work intended to demanstrate the possibilities of the figure and a curious exposition of the author's views - religion and ethics, see AL-MA'ARRI) he offers m thorough review of thyme theory: Abu 'l-'Ala' seems to suggest that the lusion of later poots was largely independent of these earlier examples (37, IL 1-3) and implicitly denies that the suffix -hum can be taken as wast (51, B. 2-7). lbn 'l-laba' (d. 654/1256), Tab-ir, 519, goes so far as to claim that the luxum in the works of the ancienta was unintentional.

At a later stage, the literary theorists discovered examples of handw in the Kur'ku, but these do not involve doubling of consonants or the repetition of suffixes, except in one case (VII, III, IIII) In Abi 'I-Ispa', Takrir, 518; idem, Bad' al-Kur'an, 229) which is not valid, since it does not appear at the end of the verse and cannot be considered a rhymo. However, the examples from the kadith and the sayings of 'Ali quoted by Yahya b. Hamaa (d. 747/1346 or 249/1348), Tirds, II, 400-1, contain some instances of sadi's with identical consonants preceding pronominal suffixes.

For a while after its first appearance in Ibn al-Mustazz's Bodi' as i'nal al-sha'ir nafsah the figure received little attention from the literary theorists. Kur'anic axamples and one example from poetry appear in Bāķillānī's (d. 403/1013) I'djār al-Kur'ān (ed. A. Şabr [Cairo 1374/1954], 145-6) in a chapter on altarșis mas al-tadinis, but Băkillânl does not mention the term i'nat which one would expect in this context. Abū 'Abd Allah Muhammad b. Ahmad al-Kh"ārazmi (flor, second half of the 4th/10th century) in his Majātik al-Julum (ed. G. van Vloten (Leiden 1895)), defines ("nat as the poet's following self-imposed rules and does not offer any examples. The term seems even to have been forgotten for some time, as appears from the unpublished Manada al-bayan of 'All b. Khalaf (5th/rith century) (see AIUON, zzzvii [1977], 301 and note, and also I. Kratchkovsky in AIEO, = [1962], 34, 108-9): The definition which "All b. Khataf effers is correct, but as a result of a graphic error "tab had by this time been substituted

for \$'ndt; this resulted later in the introduction of a new figure, 'itāb al-mas' nafsahu which found its way into several handbooks (see, for instance, Ibn Abi 'l-Isba', Tahrir, 166-7).

The Khasa'is of Ibn Djinni (d. 392/2002) has a chapter on the lataceun' bimd la yalzam which stands apart from the treatment of the leader in other grammatical and rhetorical studies: It offers a wide variety of examples, mostly from older poets and mostly in the radian metre. Ibn Djiani disregards for does not recognise) some of the rules adopted by others. He accepts the san of the second energetic form of the verb as ratel (see KAPIYA, iv, 413a second half) and ignores the tendency of ancient poets to consider the half of -hume as part of the west (ii, 249); he points to unique instances of the furnise in a poem by 'Abid b. al-Abras where all first hemistichs but one end with the article and in a radias poem by certain Ghayian [b. Hurayth] al-Raban [M. Uilmann, Untersuchungen zur Rafaspoesie Wiesbaden 1966], index), where all lines but me end on word in the genitive which cannot be recognised as such because the kāfiya 🛍 not a kāfiya mutlaka (see KAPIYA, Iv, 412a first half; with a view to the case ending being pronounced in singing (?), cf. H. Birkeland, Attarabische Pausulformen [Oslo 1940], 12-3). Ibn Djinni also notes (ii, 262-3) that Ibn af-Runii (d. ca. 280/893) distinguished himself as a turum poet (see niso Ahū 'Ubayd Allāh Muhammad b. Imtán al-Marzubáni (d. 384/993), Muidiam alaku'arā2, ed. F. Krenkow [Cairo 1354/1935], 289, (1. 9-10), even though he sometimes did no more than maintain the same vowel before the rawl when this was not necessary, or not strictly necessary. In this context he makes a case, though not a well-documented one, for seeing in the luxum of muwallad poets (the term generally refers to early 'Abbasid poets, but also used specifically for 4th/roth century poets) a continuation of tendencies which existed in ancient poetry. He is perhaps the first to accept as a form of lurum the me of diminutives in the thyme, ibn Diant's views may not have been widely known; his observations on 1bn al-Rumi and on the most the diminutive are also found in later authors, but are worded differently.

In several works inspired by al-Kazwini's (d. 739/ 1338) Talkhis al-mijidh [600 AL-KAZWINI (BHATIB DIMASHE)] and in didactic poems on the badi' (badi-(1930) composed between the 8th/14th and 12th/ 18th centuries, the term is applied in a wider sense than before: one speaks of luzum even if only two lines of a poem show - additional invariable consonant (some of the examples quoted by earlier rhyme theorists are from poems that do not show the lusium throughout). The same is true, of course, of the sadi', where often there are no more than two rhyming clauses. There is also question of hunden in internal rhyme, e.g., wa-mi 'shtara 'l-'asala mani 'Ahtara 'l-kasala. 'Abbasi (d. 963/1556), Ma'ahid, iii, 306, mentions a collection of machinal lunumiyya, apparently based on the figure, by Al-Ashtarkuwi (see MAKAMA, and H. Nemah, in JAL, v, 68-92], who died In 538/1143 and quotes some poetry from this author. Moreover, the figure is no longer limited to the rhyme, but involves different kinds of rhetorical games and artifices, such as the avoidance of pointed or unpointed letters - alternating such letters from word to word, the avoidance of labials, the inclusion of a certain letter in every word of the line, the was of all letters of the alphabet in one line, and even graphic devices, such as the omission of connected letters. Suyūti (d. 922/2505) credits himself with having invented the term tadyis are such devices. The first example he mentions, however, is a device which involves the rhyme: The rhyme consonant may be, for instance, the hat, but the poet imposes upon himself to avoid using the pronominal suffixes of the third person singular (presumably even in cases where this would be permissible, the hat is a simple of Suyūti's definition and tadyis as a simple synonym of the other terms listed at the beginning of this article.

In Persian rhetoric and prosody, the terms i'mit and luxum mà lá valtam are used, as in Arabic, for the adoption of a second invariable consonant in prose and in poetry, and the reduplication of the rhyme consonant. In addition, however, the two terms used for the repetition of two or more words in each hemistich or line of poetry, and for the of internal rhyme. Raduyani (middle of the 5th) rith century) denotes the latter use specifically as i'mát ai-karina. Rázi (beginning of the 7th/13th century), al-Musdiam, 386, also applies the term i'ndt to the un of double kafiyas (e.g., diahdu khabarlas man sipar) and points out that most Persian poets adopt in invariable consonant before the 147 of the feminine ending of Arabic words without considering this convention as i'mal or lunion (216-17). Some later poets however disregard this rule, especially in cases where the kafiya proper is followed by a radif, i.e., a word or particle recurring at the end of each line (see E11, s.v. REDIF for a more accurate description which includes the redif in Turkish poetry; see also L. P. Elvell-Sutton, The Persian metres [Cambridge 1976], 225-6, 230). Another case of lumin, according to Rözi (262-3), occurs when the poot maintains the la'sis, i.e., a long a separated from the rawi by a variable vowelled letter, throughout his peem (see Elwell-Sutton, 229-30, 233). Djadjarml [q.v. im Suppl.] (flor. early 8th) 14th century) has collected a number of poems to which forms of lumins have been applied under the heading mainimat in the 10th chapter of his anthology Mu'nis al-ahear wa-daha'ih al-ash'ar (ed. Mir Salib Tabībi, i, Tehran 2337/1958, nan-/d').

M

MA BAD AL-TABRA, or MA BAD AL-LABRATY ITYAT, a translation of the Greek to meta to pooted "the things which come after physical things", i.e. metaphysics, an expression which can have two meanings, each of which envisages a particular conception of that science ("ilm or sind"a). It can either be a discipline which one embarks upon after physics, utilising the results of the natural sciences, or it can be one whose goal lies beyond the apprehendable objects which are the concern of phy-

sics. The two meanings are not mutually self-exclusive, but the first tends to put the accent on the role of experience and of knowledge of physical things in the search for metaphysical realities, whilst the second invites one to enter immediately into the domain of suprasensible principles in order to deduce from them the nature and laws governing beings of the material world.

One should note at the outset the two synonyms of this expression which denote metaphysics in

Arabic: on one side al-ildkiyydi, "the divine things", and on the other al-faisafa al-ald, "the first philosophy", a title which ai-Kindl gave to one of his Rase'il (ci. Rasa'il al-Kindi al-faisafiyya, ed. Abū Rīda, Cairo 1953, i). These two terms borrowed from the Greeks. In Plato, the word Beologia normally denotes metaphysics; in his view, there exists a sphere of the divine (to Octov), . term faken up by Aristotle, who identifies theology. the first philosophy and what we call metaphysics (Metaphysics, 1026, ■ 17-18). The translation uses the curious turn of phrase 'ilm al-ashyd' al-ilahiyyat al-hazet "science of divine things in regard to definition", in which kami seems to correspond to the element λογυτή in θεολογυτή (kami normally translating hoyoc in its some of definition). Ibn Rushd comments in these terms: "Just as the things of nature are those in the definition of which nature is involved, so are the divine things those in the definition of which God is involved" (Tajsir Ma ba'd al-fabi'a, ed. Bouyges, ii, 712). Nevertheless, there does not follow from this that God is the object of metaphysics, neither for Ibn Rushd, who connects this science not with God but with the existence of m incorporasi and immobile substance, this substance being for him al-mandiad fi 'l-habika huwa "-dlawhar "the being in reality" (ibid., 750), nor for Ibn Sina, who thinks that God is not a datum. but can be demonstrated starting from the Necessary Being, Ibn Rushd further follows Aristotle, who brought forward the possibility of a first philosophy (ήπρώτη φιλοσοφία) in 1026 a 23, saying that if there exists no other substance except those constituted by nature, then it is physics which should be the first philosophy, concerning which Ibn Rushd comments thus: "It is equally clear that if there is there a certain substance distinct from the moving substance, this substance which has existence will be the first, and the science which one builds upon it will be the primordial science (al-'ilm al-aldam); it will be the universal science and the first philosophy (Tajsīt, ii, 714). Moreover, for Aristotle, beyond the general idea of the divine there are only the gods of the ancient poets (Hesica) who minto mythological cosmologies remote from demonstrative philosophy. Commenting on the term θεολόγοι (Met., 1000 a 9), Ibn Rushd writes (Tafsir, i, 251), "Those who speak of divine things (al-umar al-itâh(yya) are those who hold forth upon a discourse beyond what man can intelligibly understand (kalámen kháridie) 'amma ya'kiluhu al-insan)". In other words, before speaking philosophically of God, one must make an intelligible conception, and this is the role of metaphysics.

But how should one understand the expression "primordial science" which Ibn Rushd uses? All the question is included there. Indeed, metaphysics comes before the other sciences because it is universal and is concerned with the cause of everything which exists; should one therefore place it in front of the others in research and teaching, or on the contrary keep it back till the end? One may see here merely a difference of method, that of me expository procedure starting from principles and causes, and of process of discovery starting from concrete and apprehensible experiences. This is al-Farabl's approach, who tries by this means to reduce the divergencies separating Plato and Aristotle. He accordingly remarks in his Kitāb at-Djam' be yn ra'ay at-kakimayn (ed. A. Nader, Beirut 1968, 86) that for Plato, the most noble primordial substances are those which are near to the futellest and the soul, whilst for Aris-

totle, the most worthy substances of this name, by anteriorness and by their value (86 'I-tafdil we 'Itagdim) are the first substances, i.e. the individual substances (al-diambhir al-uwal win alaskehas). But the difference arises from what Aristotle then says from the point of view of the logical and physical sciences, whilst Plato speaks from the point of view of metaphysics (fi-md baid al-jabl'a) and theological doctrines (wa-aháwiliki al-ildhiyya). Consequently, one can set oneself within a certain science within another, or start from an or start from another, as a matter of indifference, according to one's intention. In his Falsafat Aristüjälis (ed. Muhsin Mahdi, Boirut 1961), al-Farab! sets forth the Stagiste's thought, following the progressive order of his enquiry in he sees it. After the questions of logic, and with the intention of discovering what makes for perfection in man, Aristotle studies the various questions which concern nature (fabita), the soul (mafs) and the intellect ('all). "He must also examine profoundly the substances of the heavenly bodies; are they nature, soul or intellect, or are they indeed some other, more perfect (akmal) thing; also, we these substances things which are outside physical speculation? The point is that physical speculation only includes what the categories include. Now it is clear that there are other beings outside the categories: the Intellect acting as Agent and the Thing (shay'), which give to the heavenly bodies a perpetual circular movement. This being so, one has to make speculations about the beings which have a more universal (a'amm) field than those about physics" (ibid., 130). "This is why Aristotle explains in the book called Ma ba'd al-tabl' iyyat that he is making speculations and conducting a deep enquiry into beings in a way which differs from physical speculation" (ibid., 132). One notes that al-Farabi admits that one can begin by physics, which does not however prevent him from thinking (in fact, wrongly) (hat Aristotle recognises the existence of a domain of the being which is external and superior to the categories which, according to him, only concern the physical domain. Elsewhere he speaks clearly (131) of a penetrating enquiry into the beings which are above the natural things in the hierarchy of being (fi 'l-maudjudat allatt famt al-labl'iyydt ft rutbat al-marginal.

Ibn Sina and ibn Rushd take up the Aristotellum definition of metaphysics as being the science of the being as such (al-mandidd bi-mā huma mandidd). But what is meant to be understood by this?

1. Ibn Sina's viewpoint. The basic principle is that "the object (manda") of all science is something whose existence is admitted for concuded: ame musallam al-mandiad) to that science" (Shifa', al-Ilāhiyyāt, Cairo 1960, i, 5). It is drawn from the Posterior analytics of Aristotle (72 a 20): "If I say that a thing exists or does not exist, it is a hypothesis". Hence if one says that the object of metaphysics is God - the Prime cause (Musabbib al-ashāb), this is only an hypothesis which must be verified by means of another science. Now there is no other science, necessarily more particular than metaphysics, which is able to guarantee the existence of such-and-such an object. The mandat of a science is the object concerning which this science conducts an enquiry (al-mabbath 'anha). But since God or the Prime cause are not data, they we on the contrary the goal of a metaphysical enquiry (maffilb). Ibn Sina concludes that the object of metaphysics is the being as such which is implied by every science, by every

question, by every thought and by every speech titterance (ibid., 30): It is the quid (ma), the "that which" (alladhi) and the thing (thay). It does not have to be vouched for, since it is the thing itself which vouches for everything, or it is by means of it that one vouches for what one vouches for. This being as such can be divided, without one needing recourse to any category, in several ways: these divisions of it are like intrinsic accidents (kg "l-favoirid al-khdssa), whilst divisions according to categories Eke kinds (ka T-anesa"). It can thus be divided in one and in multiples (al-wakid - al-ka(hir), in force and in action (knowe-fiff), in universal and particular (kulli - djuz'i), in what is eternal and what arises from a temporal origin (kadim muhdath), in what is completed and what is incomplete (tāmm - nāķis), in and effect (fillama Val) and in possible and necessary (mumkin toddib). This list has been made up from the metaphysics of the Shift? (i, 13) and from the Kutab al-Nadjat (ed. Şahrî al-Kurdî, 1938, 199). The last pair of oppositions in this division will muck out the Avicennan ontology through the distinction of the Being necessary by itself (wildlib al-wildlind bidhatthi), which is to be identified with God, and the being possible by itself (mumkin al-wugifid bi-dhatiki), necessary by something outside of itself, i.e. the being of the universe. Consequently, starting from this general ontology, Ibn Sina explains the origins of various beings, first of all the heavenly ones (intellects, apheres, souls of the spheres) by a process of emanation (fayd), as far as the Intellect acting as Agent, the intellect of the sphere of the moon; and then III the sublunary world, which is made out of material elements by a progression from minerals to man, thanks to the shapes received from the Intellect acting as Agent which is Wahib al-super (Dator formarum). Thanks to reason, man is capable of returning to God, to such a point that God is, m the Kur'an says (LVII, 3), the First and the Last. From the domain in metaphysics, one passes on to that of connection with the heavens, then with physics, by a descending movement; then, beginning with connection with minerals, one passes in to that with plants, and from animals to that with the soul, as far m the rational soul, by means of m upward movement which ends up by a mysticism of the mind which corresponds in its point of arrival with that which was metaphysics at its departure point. For Ibn Sina, as for Plato, all reality is legitimately deducible from metaphysical principles, even though the imperfect nature of the human understanding does not in fact allow an integral deduction of the universe.

2. Ibn Rushd's viewpoint. This is a case of recovering the pure Aristotelianism, stripped of all Platonic or Neoplatonic influence. Since being is not a generic concept, it cannot be defined and apprehended in itself, but only by means of categories. Thus for Ibn Rushd, the problem is to know what one can say about it and how one can speak of it. "Aristotle's aim in this book (Δ) is to distinguish the details of the significations to which the names (al-asma) refer, significations which one thinks about in that science (metaphysics) and which hold there the position of the subject of an art (manzila: mawdifsisaca) in relationship to that art. These names are those which are uttered in regard to a single thing according to different points of view (bi-diihāt mukktalifa). This is why he makes out of speculation on the meaning of these section of that science (Tafsir, ii, 475). It is thus that one calls everything connected with health balanced temperament, exercise, remedial measures, "the thing is valid for the name of the being (mandial) in relationship to substance and other categories" (ibid., 1, 303-4). It is possible therefore to have a single science of all the diverse beings, on condition that one understands the names designating them analogically. This is what has been called the analogy of proportionality; being in regard to substance is what being is in regard to substance is what being is in regard to quantity, etc. "Just as the things which are connected (tansaba) with the curative arts fall, on examinations, into one and the same science, i.e. medicise, likewise all the things which are connected with being are the object of speculation in a single science (ibid., i, 307). But metaphysics can also be Justified by relying on the analogy of attribution, substance being the first analogue of being: "Thus the name of being (http://www.), a synonym of mandiad, although it is used of different species of being, is only used for each of them through the fact of the connection which it enjoys with the prime being (al-howiyya at-ald) which is substance". To be first accordingly means here to be the first analogue, "The categories are connected with the substance, not in that they are considered to be their agentive cause any more than their ultimate one, but in the sense that they subsist in it (bič'ima bihi) and that the substance is for them a subject (manylat)" (ibid., 305). Now substance is a basic concept and in the measure that one accordingly brings together the study of being with the study of substance, "since it has been posited that for every unique concept there is a unique science ... there results necessarily that there is a unique science of being" (ibid., 309). Metaphysics, being the study of being as such (Ibn Rushd, who prefers hussiyya to mawgjad, often remarks that its object is al-kuwiyya bi-mā kiya kuwiyya), ought probably to contain within itself all the aspects of being. Nevertheless, being in the shape of the accldent (bi-'l-'arad) and being in thought (fi 'l-fikr) are two defective entitles (nakisatin'). The aim of metaphysics is to examine "the real bolog which exists outside the soul" and it is "the substance which is the basic principle of this being" (al-djawhor huma madda' hadkihi 'I-hawiyya'). This conforms to the lmportance which the substance assumes basically in metaphysical speculation (cf. ibid., ili, 1402). Beginning by the study of substances which are appreheadable by the sense and are mobile and corruptible, and then of substances which have these same characteristics except that they are incorruptible (the heavens), ibn Rusiid hopes to arrive, with Aristotle, at a substance which is not apprehendable by the senses, in incorruptible and is immobile, the Prime Mover, the cause of all the movements of the universe.

Ibn Rughd thus carries beyond the apprahendable world an idea of substance which he has drawn from physics and which seems in him to be the basis of all existence: all that exists is substance, an exact correspondence here below. Ibn Sinā, on the contrary, thinks that substance, like all other categories, must receive the quality of existence in order to exist, and that it can only receive existence by acquiring quantity, quality and all the other categories, for a substance which had neither quantity, quality and so forth, would be nothing. So it cannot in itself be taken in the first analogue or the representative of being conceived as existence. For Ibn Sinā, the Necessary being is not a substance since it exists by itself, the Kayyām of the Kur'ān

(II, 255, III, 2). On the other side, we have seen that the problem for the metaphysician is to know who established the existence of its object. Ibn Sina believes that this object, being implied in all sciences, does not need be to vouched for by one of them. Moreover, it is for metaphysics to provide the role of supplying the other sciences with the basis of their object. Ibn Rushd criticises this viewpoint, but by relying on his own one, namely that the first philosophy poses the question to itself about substance as the first analogue of being, "Ibn Sina, believing in the truth of the doctrine which does not want any of the sciences to set forth its own principles, and taking that simpliciter, believes that it is the task of the person who concerns himself with the first philosophy to give ■ clear exposition of the existence of substance apprehendable by the senses, eternal or not. He say that the natural scientist posits by hypothesis that nature exists (yada'u mad'an anna 'I-fabi'a mawdiada) and that the scholar of divine science is the one who gives the demonstrable proof of its existence" (Tafsie, iii, 1423-4). Ibn Rushd then replies: "Yes, the specialist in the first philosophy seeks for the principles of substance as substance and sets forth clearly that the separateness of substances is the principle of the physical substance. But in making clear this search, he constantly calls for (yanddiru) what physics clearly sets forth, whether in regard to the substance which we be generated and is corruptible, in the first book of the Physics (189 B 30-191 | 34), where it is demonstrated that it is made up of matter and form, or whether in regard to the eternal substance, in Book viii (260 a 20 ff.), where it is set forth that the driving force of that substance is stripped of all matter. Then he clearly lays down that the principles of the substance which are neither the Universal ideas (adkulliyyāt) the Numbers (al-a'dād) [of Plato]" (ibid., 1424-5). One should mention a final divergence between the two philosophers. Ibn Rushd notes that Aristotle, in the tenth book of the Metaphysics, has an enquiry into the unit, the multiple, the identical (huwa huwa), the similar, the opposite and into still further notions "which bring out the general concomitants (al-lamahik al-samma) of the being as such" (Tafsir, iii, 1403). In effect, metaphysics is a speculation about the being as such and about the "things" which are concomitant with it" (al-umile allāķiķa laku) (ibid., iii, 1395). Now we have seen that what is concomitant with being for Ibn Rushd is the division of being for Ibn Sina. It seems that this fundamental divergence holds good for all the other oppositions.

Ibn Sinā's metaphysics is consequently open to region beyond the world, the earth and the heavens; makes mystical system possible. For Iba Rushd, on the contrary, although metaphysics studies the principles of beings which are objects of other sciences, it is not the foundation of those sciences, but their completion. He writes in his Tafsir, ii, 701, "Since ... each science only concerns itself with studying a certain being which is its special object, it is clear that there must necessarily exist a science which studies the absolute being (al-huerly)a al-mutlake); if there were not, our knowledge of things would not be completely exhaustive (lam Instowfa mafrifat al-ashya")" (Tajsir, ii, 701). Furthermore, whilst I'm Rushed seeks for the first cause of the movements of substances apprehendable by the senses, corruptible or incorruptible, and finds it in the immobile Prime Mover, Ibn Sina sets hunself the task of "making an enquiry into the first cause from which every being is brought about by causality (kuila mandjud ma'ldl) in as much as it has been the result of causality, and not simply in as much it is a mobile being (mawdjūd mutaharrik) or a quantifiable being (mawdjūd mutakammim) (Shifa2, Ilāhiyyāt, i, 14). But there is a problem there; it is not possible for metaphysics to speculate on causes in as much as they are causes simpliciter (al-ashab bi-ma hiya ashab muflaka), in the first place because this science treats of notions" "which do not raise the question of proper accidents owed to these causes as such, such me the notions of universal and particular, of act and capability, of possibility and necessity" (ibid., 7); and then because the science of causes taken simpliciter presupposes that the existence of causes has been established for the things which have a cause (ithbat al-asbab li 'l-umur dhandt alasbāb). Ihm Sīnā adopts here a very clear view of the problem of causality: it is not sufficient for the existence of a cause to be demonstrated in the eyes of reason. The existence of causes and effects is not proved by intuition of causality; it comes from the division of being into the necessary and the possible. The first meet is thus the being necessary by itself. This why there exists a being necessary so that all other beings have causes, since these exist even at the time when they are only possibilities. Now if one adopts as the point of departure experience of things apprehendable by the senses, all the causes that one will find are at the same time effects. One would not therefore be able, by tracing back the series of cause-effects, to reach the first cause, whether one went back infinitely or whether one came to a stop, as did Aristotle in his search for the Prime Mover, by an arbitrary decision: dwarpen graywas! On this point, Ibn Sina has set forth a highly original idea in his Ishardt (ed. Sulayman Dunya, Cairo 1958, iii, 454-5). It the position of the cause which is not an effect, in relation to the series of cause-effects. If it forms part of their ensemble (djumla), it is necessarily an extreme finit (tasaf). But if one takes a series made into a hierarchical chain (silsila musattiba) of and effects which is made up only of cause-effects, "there is a need for an external cause III this Insemble, but undoubtedly in continuity with it in regard to limit (ihtādjat ilā silla hhāridja saukā, lākimuhā tattasilu bihā ... jarajim)". Ibn Sinā envisages the case where this succession is infinite, and then the cause-offects would form an infinitely limited ensemble. This ensemble is the universe; God is its "limit", but He is exterior to it. On the contrary, Ibn Rushd's Prime Mover is probably at the peak of the hierarchy of substance, but it is a substance and forms part of the world of substances. Just as metaphysics finishes off the sciences, likewise God supports the universe like the keystone of an arch.

(R. ARNALDEZ)

MA CHUNG-YING (Matthews' Chinese-English Dictionary, Revised American Edition 1969, characters 103. 4310, 1505, 7489), also known as Ga ssuting, or "Little Commander" (Ga is an affectionate diminutive used in colloquial Kansu Chinese—see the Hsin-Hna tra-tien, Peking 1971, 124; Ssu-ling; see Matthews', 103. 5585, 4043), the youngest and best-known of the five Chinese Muslim wastords comprising the "Wu Ma" clique[q.v.] which controlled much of Northwest China during the latter half of the Republican Feriod (1911-49).

Little is known of Ma Chung-ying's early years.

He was born at Linksia (formerly Hochow) in southeastern Kansu, ca. 1910 (there is a contradiction in the Biographical dictionary of Republican China, which holds that Ma was born in 1911, but that he became a junior officer in 1926 "at the age of seventeen"; op. eff., 463, col. 1). Little is known of Ma's immediate family, but it is clear that he shared the same paternal grandfather as the Kansu-Chingbai warlords Ma Pu-ch'ing (Matthews', nos. 4310. 5363, 1168) and Ma Pu-fang (Matthews', nos. 4310. 5363, 1815), and that he was thus a scion of the powerful Ma family of Pich-tsang, a small village some 30 km, west of Linbsia (Mei, op. cit. in Bibl., 660). Ma Chung-ying was also distantly related = the Kansu-Ninghsia warlords Mu Hung-k'uei (Matthews', 4310, 2386, 3652) and Ma Hung-pin (Matthews', nos. 4310, 2386, 5259), the most powerful representatives of the Ma family of Han-chia-chi, a large village some 25 km. south-west of Linhsia. Together these five Hul warlords were to become famous-or infamous as the "Wu Ma" Northwestern Muslim alique.

Ma Chung-ying first entered military service during 1924 when, at about the age of fourteen, he joined the local Muslim militia. One year later, in August 1925, troops of the "Christan General", Feng Yti-hsiang, invaded Kansu. The invading forces, under the command of Feng's subordinate Liu Yü-fen, formed a part of the Northwest Army, more commonly known as the First Knominchtin ("National People's Army"), a vast rabble which is estimated to have numbered in excess of roo,000 men during the late summer of 1925. Feng intended, through his subordinate Liu, to colonise large tracts of Kansu with Knominchim soldiers; he also intended to finance his struggle against the Northeastern warlord Chang Tso-lin with taxes raised and opium cultivated in the Northwest. Not minaturally, these aims found little favour with the people of Kansu, Ninghaia and Chinghai; nor were the local warlords much inclined to support Feng Yu-hsiang.

In 1926, one year after the Kuominchun invasion of Kanse, Ma Chung-ying received his first commission as an officer in the forces commanded by one of his uncles, Ma Ku-chung (Boorman and Howard, op. cit. in Bibl., 463). During the same year, Liu Yilfen, who was in occupation of the provincial capital at Lanchow, was attacked by a combination of local warlords from eastern Kansu (Sheridan, op. cit. in Bibl., 195-6). Fighting was prolonged and severe, but the Muslim warlords of western Kansu were to have remained aloof, from the struggle, and Liu eventually succeeded in reimposing Knominchiin rule on the province. During his conflict, Ma Chungying, still only sixteen - years of age, is said to have "laid siege to and captured Linhsla on his Initiative" (Boorman and Howard, ibid.). Liu Yü-len ordered troops under m command of Ma Lin (a great-uncle of Ma Chung-ying) to recapture Linhsia, but the young soldler easily defeated them, winning for himself a reputation as a military strategist and the nickname "Little Commander". Ma Chung-ying's triumph was short-lived, however, for his uncle and commanding officer Ma Ku-chung had not ordered the occupation of Linbsia, and he dismissed his nephew for insubordination. The "Little Commander" learned this lesson well; be withdrew to the Sining area of Chinghai and began to build up his own forces.

The Kuominchim "pacification" of Kansu left large of the province devastated, but failed to break the rebellious spirit of its people. In 1927

north-western Kansu was racked by a violent earthquake; this, combined with the increased - of good arable land for the cultivation of the opium poppy and arbitrary tax increases imposed by Liu Yü-fen, caused widespread famine. Early in the spring of 1926 the patience of the Northwestern Muskins - out, and the standard of revolt was raised against the Kuominchün by the Muslim leader Ma Ting-hslang (Matthews', nos. 4310, 6404, 3076; - Sheridan, 250). Ma Chung-ying (who according to source had fled to Sining, together with a group of his followers, because of an ifficit affair with a young Muslim girl from strictly orthodox family; Ekvall, op cit. in Bibl., 946) rapidly became involved in this revolt against the Kuominchün. The city of Linhsia, which remained in Knominchun hands, was besieged three times by Muslim forces. Robert Ekvall, su American who travelled through south-eastern Kausu at this time, records that "The revolt had by this time assumed all the aspects of a holy war. Chanting prayers, forty or fifty thousand fighters went into battle with fanatical seal . . . the young rebel leader Ma Chong-ing (sic) seemed to bear ■ charmed life and by his reckless courage gained the utmost in obedience and devotion from his ruffien troops. The Chinese (i.e. the Kuominchim) were panicstricken at the desparate courage of the Moslems, but eventually, by machine-gun fire and light artillery, proved superior" (Ekvall, 946-7). The Kuominchim was unable, however, to crush the Muslim revoit entirely; - sooner had the rebellion been suppressed in one area, than it broke out afresh in another. By September 1928 over 100,000 people had died (Sheridan, loc. cit.). Anti-Kuominchila feeling amongst the Muslims gradually gave way 🖿 racial hostility against all Han Chinese. On 14 February 1929, about 20,000 Muslims forced their way into Tangar, a city of some 5,000 families in western Kansu. An American eyewitness described the scene as follows: "[The Muslims] forced an entrance by ladder over the north wall, Immediately by they began to murder the Chinese in the most brutal way, cutting over the head with swords ... The Muslims were in **i** city only about two hours, but during that time the official figures show more than 2,000 killed, 700 wounded, and 2,000,000 damage" (Sheridan, 251). Kuominchün reprisals against the Muslims were equally bloody. According to American diplomatic reports (see Sheridan, ibid.), the ravages of war and lamine reduced people to cannibalism; between 1926 and 1929 as many a 2,000,000 people may have died. One casualty was Ma Chung-ying's father, who was executed on the orders of Liu Yü-fen in the winter of 1929 (Boorman and Howard, ibid.).

In Ma Chung-ying, his position strengthened by several victories over the forces of the Kuominchiin, approached the Nationalist leader Chiang Kal-shek with a request that his private army should be recognised in a Knomintang frontier unit. At about this time, Feng Yū-haiang declared himself independent of the National Government at Nanking; as a result of this, Ma Chung-ying's distant relative Ma Hung-k'uei, the strongest of "Wu Ma" clique, declared in favour of the nationalist cause. Ma Chungying went to Nanking, where he enrolled briefly at the military academy. In 1930 he returned to Kansu where he was appointed garrison commander at Kanchow (Changyeh) in the far north-west, near the frontier of Sinkiang [q.v.]; from here he controlled a small fief, including the towns of Suchow and An-hsi, which "freed him from any financial

worty and allowed him to prepare his army for an expedition to Sinkiang" (Nyman. op. cit. in Hibl., ror). Before striking out into Singkiang, however, Ma seems to have made mother bid to extend his personal power base in Kansu. Once again he met with failure, this time at the hands of his timele Ma Pu-fang (Norins, op. cit. in Bibl., 4x).

In 1930 Sinkiang, China's largest province, was under the control of Chin Shu-jen, an avaricious and incompetent warlord from Kansu; over 90% of Chin's subjects was Muslims, but the Han Chinese warlord seems to have nurtured a fierce hatred for all Muslims, whether of Hui or Turkic ethnic origin. Chin's anti-Muslim sentiment may well have derived from the various Hui risings in Kansu; certainly, when a combination of famine and war drove starving Han Chinese refugees to flee from his native Kansu to Sinking in the late 1920s, Chin welcomed them with open arms. Less than we km from the northwestern frontier of Ma Chung-ying's fief in Kansu lay the ancient easis city of Komul (Komul [q.v. in Suppl.]). When Chin Shu-jen seized power in Sinkiang during 1928, Komul (Chinese name Hami) was still a semi-independent state, ruled by the aged monarch Maksūd Shāh, the last autonomous Khānate in Central Asia. When Maksud died of old age in 1930, Chin Shu-jen, who held the heir-apparent hostage in Urumehi, the provincial capital, announced the abolition of the Khanate and its full absorption within China. Chinese officials took over the administration of Komul, and Chin began to settle Han Chinese refugees from his native Kansu on arable land expropriated from the indigenous Uyghur [q.r.] farmers. Local unrest grew rapidly, and in 1931, following the abduction of a local Muslim girl by a Han Chinese tax collector, open rebellion broke out.

One of the leaders of the Komul revolt, a Uyghur called Yulbars Khan [q.v.] travelled to Suchow in north-eastern Kansu where he met Ma Chung-ying (now officially Commander of the 36th Division of the Kuomintang, though Yulbars comments that there were so many Mas in this force that it was commonly called the Ma-chia-chiin, or "Ma Household Army"; see Ynibars, op. cit. in Bibl., 87-8). Ma agreed to enter the fray, ostensibly to help his Uyggur co-religionists and in 1932 he led his troops into Sinkiang in an open challenge to Chin Shu-jea. Ma was wounded during the autumn, and withdrew temporarily to Kansu to recuperate. In August 1932 Ma's troops again entered Sinking. Initially, they cooperated with the Uyghurs in their struggle against Chin Shu-jen. Ma's crack cavalry units, generally considered to have been amongst the best troops in China, fought their way to the outskirts of Urumchi before being repulsed by White Russian mercenaries under the command of Chin Shu-jen (see Wu, op. cit. in Bibl., 73-100); meanwhile, Uyghur forces under Yulbars Khān and Khōdja Niyāz Hadidil took control of the greater part of southern Sinklang, and an "East Turkestan Republic" was proclaimed at Käshghar (q.v.).

In April 1933 the incompetent Chin Shu-jen — ousted by Sheng Shih-ta'ai, his Chief-of-Staff. The new warlord, whose home province — Liaoning in the far Northeast, enjoyed the support of a group of some 3,000 battle-hardened Manchurian troops who had been driven into Siberia by the invading Japanese and repatriated to Siberia by the invading Japanese and repatriated to Sinkiang by the Soviet authorities. During the remainder of 1933, Ma Chungying's forces made two further attempts to take Urumchi, and despite judicious use of his White Russian and Manchurian troops, Shang — forced

to appeal to the Soviet Union for aid. In January 1934, Soviet military units entered Sinking and attacked Ma Chung-ying's cavalry with aeroplanes and, apparently, poison gas. The Muslim warford was forced to tall back on Turfan, but instead of withdrawing to his old base in north-eastern Kansu be took the decision to try and hold southern Sinking.

This decision brought the Kansu Muslims into direct conflict with the Uyghur Muslims of Sinkiang, their erstwhile allies. There had been indications of such a split for some time; as soon as fighting m the northern front had become bogged down before Urumchi, units of Ma's forces had advanced into the Tarim Basin where his troops "aroused the antagonism of the Turki natives by looting and plundering" (Boorman and Howard, 464). It rapidly became clear to most of the Uyghur population (though notably not to Yulbars) that Ma was just another Kansu warlord, and not the saviour of the Muslims of Sinkiang they had hoped for. (There was never any question of Ma being viewed as a makel, and there seems to be no reason for assuming that he considered himself m such. Nyman, 101-3, is certainly mistaken in suggesting this.) The retreating Ma Chung-ying fell will on Kashehar, where be destroyed the nascent Islamic "East Turkestan Republic"; III then transferred command of his forces to his brother-in-law, Ma Hu-shan (Matthews', nos. 4310, 2161, 5630), and, in a move which still remains shrouded in mystery, crossed the frontier into the Soviet Union during July 1934. His brother-in-law, Ma Hu-shan, went = to occupy the whole of the southern rim of the Tarim Basin; here, as the "Commander-in-Chief of the 36th Division of the Kuomintang", Ma established a strange Hui-ruled fief on the borders of Tibet. Ma Hu-shan's statelet, "Tunganistan" [q.v.] was to endure until 1937, when his forces melted away and he took refuge in British India.

It is not clear why Ma Chung-ying should have deliberately chosen to enter the Soviet Union when his military position was far from hopeless—after all, he had been driven back from Urumchi by Soviet forces. Ma's eventual fate is uncertain; an article published anonymously in the Journal of the Royal Coural Asian Society during 1935 states that he "died on arrival at Moscow", however, it is more likely that he was held by Stalin as a weapon in against Sheng Shih-ts'ai, the Soviet puppet Sinklang. Ma may have been executed by Stalin. at Sheng's request when the latter visited Moscow in 1938; certainly, he me never seen again, though for many years stories of his imminent return circulated amongst both the Uyghurs of Sinkiang and the Hui of Kansu.

MA HUA-LUNG (Matthews' Chinese-English dictionary, Revised American Edition 1969, characters nos. 4310, 2211, 4258), also known — ch'aocaine (Matthews', —— 4310, 235, 1171), a Chinese Muslim leader and exponent of the "New Teaching" who played an important part in the great mid-13th/19th century Muslim risings against

the Ch'ing dynasty. Mu Hua-lung was

Mu Hua-lung was born at an unknown date during the first half of the 13th/19th century, probably at Ch'in-chi-p'u (Hartmann, op. cit. in Bibl., 14), a walled city in Ninghsla [q.v.] province situated the right bank of the Yellow River some 80 km. south of Ninghsia city (the modern Yinchwan). We know little of Ma's personal background. Po Ching-wei, a member of the Shensi gentry who participated in the struggle against Ma (and therefore a hostile source). states that "Ma Hua-lung's family lived at Chin-chip'u for generations", seemingly, Ma came from well-to-do family background, for he was "the leading rich man in the area, as well as a person with a military title which he earned by substantial contributions to the government". Furthermore, he was a man of considerable political and religious significance, for Po tells us that he was "very much respected and trusted by the Moslems in Ningbaia ... [and] ... he was a sweeping influence over the Moslems of the other provinces too" (Po Ching-wei, Fong-hsi-Is'ao-l'ung-chi, ili, 7-11; cited in Chu, op. cit. in Bibl., 346-7).

In Ma Hua-lung's time, Chin-chl-p'u, said to have been a Muslim centre "for more than a thousand years" (Bales, op. cit. in Bibl., 218), and described the "Medina of Chinese Islam" (Wright, op. cit. in Bibl., 211), indicating a significance secondary

only to that of Hochow (often described as the "Mecca of Chinese Islam"), was a prosperous trading centre which thrived on the and salt trade with Mongolia. Bales, 243, notes that "it was a purely Muslim city and Chinese official was resident there. The officials fived at Lingchow" (a small city some 30 km. to the north).

Ma Hua-lung's lineage is unclear. He does not appear to have been directly related by blood to Ma Ming-hain [q.c.] of An-ting, but he was certainly spiritual descendant of the latter. Muhammad Tawadus (op. cit, in Bibl., 117) states that he was the sixth skayka of the Nakshbandl farika founded by Ma Ming-hein ca. 1175/1761 near Lanchow. Ma Hua-lung's father, Ma Erh (Matthews', 4370, 1751), the fifth shaykh in Ma Ming-bain's silaila, is said to have died "a lingering death" (Wright, 109) at the hands of the Chinese; Ma Hua-lung me thus both a spiritual and a direct blood descendant of Ma Erh, the fifth head of the Nakshbandiyya-Djahrlyya order in Northwest China (see, however, Israell's 1974 thesis, 273-324, for an alternative analysis).

It seems that, after the barsh suppression of "New Teaching" adherents in the Kansu-Chinghal borderlands resulting from the defeat of the 1196/1781 and 1198/1783 Muslim risings, the surviving "New Teaching" leaders moved eastwards towards Ninghsia. According to Fletcher (op. cit. in Bibl., 77), it was Ma Hua-lung who made Chin-chi-p'u into the foremost "New Teaching" centre in all of China. From this bastion he was able mexercise an influence on the Chinese usuma far in excess of that wielded by Ma Ming-hein during his prime, for during the threequarters of a century following the death of the latter, the "New Teaching" had spread from the Kansu-Chinghai border area much of China, Seemingly, Ma Hua-lung played an important part in this process of proselytisation, for in a memorial addressed m the Imperial authorities at Peking requesting the prohibition of the "New Teaching", Tso Tsung-t'ang, the Ch'ing commander who eventually crushed the 1862-78 Muslim rebellion in Northwest China. complained that Ma, who styled himself the Tsing-ta A-hung ("General Grand Mulla", Mathews', nos. 6012, 5043, 1, 2031), had "sent out people to spread this evil religion everywhere". According to Tso, these missionaries, known as hai-li-fei (Matthews', nos. 2014, 3865, 1850, possibly a corruption of the Arabic Sufi me khalifa, I Israeli, op. cil., 1974. 298), were "disguised as businessmen" (Tso Tsungt'ang, Memorials, cited in Chu, op. cit. in Hibl., 1966, 156-8). In fact, Muslim merchants dominated the North China caravan trade, and it is more than probable that many of the "New Teaching" kai-ki-fee were also legitimate merchants. Tso continued: "According to the testimony of lately captured Muslim cobels, there musionaries in the New Teaching in Peking, Tientsin, Heilungklang, Kirin, Shansi and Hupeh" (Tso, Memorials, ibid.); it is also probable that the "New Teaching" had spread across Szechwan (where it was definitely established) to Yunnan [q.v.] where it may have played some part in the "Panthay" (q.v.) Muslim rebellion of Tu Wen-hsiu [q.v.].

During the great Muslim rebellion of 1862-78 [see Al.-SIN], four main centres of Muslim power were to emerge in Northwest China (excluding only the Turkic areas of Sinkiang which were either to pass under the rule of Ya'kūb Beg [q.v.] of Kāshghar [q.v.], or to maintain a precarious independence under incompetent local leadership in Daungaria

(see Bales, 224, "Sketch map of main Muslim contres"). These were: (1) Ma Flua-lung's base at Chinchi-p'u, the chief centre of the "New Teaching"; (a) Hothow and the surrounding area, a predominantly "Old Teaching" centre under the leadership of Ma Chan-so (Matthews', nos. 4310, 125, 59); (3) Haining and the surrounding area, a region of mixed "Old" and "New Teaching" allegiances under the leadership of Ma Kuei-yilan (Matthews', nos. 4310, 3610, 7728); and (4) a region contering upon Suchow. described by Bales, 224, m "non-sectarian", under the leadership of Ma Wen-yu (Matthews', nos. 4310, 7129, 4196). (Note, however, that elsewhere [227], Bales describes both the Hsining and Suchow Muslims as being "mostly inclined to the New Sect".; In marked contrast | these Kansu and Chinghai Muslim leaders, Pai Yen-hu [q.v.], the most important of the Shensi Muslim leaders, was a guerilla fighter with no permanent base. Of this plethora of Muslim leaders, however, it is interesting to note that in the opinion of Tso Tsung-t'ang: "only one man . . . could command followers from Heilungkiang to Sinklang, and he was Ma Hun-lung" (Tso, Memorials, cited in Chu, 1955, 343).

The initial Northwestern Muslim challenge to the Ch'ing Empire came in Shonsi, where between 1862 and 1864 Pai Yen-hu and other local Muslim leaders conducted a fast-moving cavairy campaign against the Manchu general To-lung-a. The Ch'ing forces scored —— early successes in southern Shensi, but in 1864 To-lung-a was killed, and during the following months the Muslim revolt spread with great rapidity across the whole of Northwest China.

During the early years of the revolt, Ma Hua-lung, whose base at Chin-chi-p'u was situated well behind the main battle front in southern Shensi, succeeded in maintaining a precarious neutrality (at least in the eyes of some local Ch'ing officials, Chu, 1955. 345), whilst simultaneously increasing the fortifications around Chin-chi-p'u and building up the armed forces at his command. It was widely rumoured that Hua-lung had masterminded the capture of Ninghsia city by rebel forces in 1863, but some Ch'ing officials still remained unconvinced of Ma's complicity. Tso Tsung-t'ang, the military veteran who was appointed Governor-General of Shensi and Kansu in 1868, with specific orders to crush the Muslim revolt, had no such doubts. Tao "regarded the Chin-chi-p'u centre as one of first importance and determined to concentrate upon the reduction of the Muslims in that area. He had no illusious whatever about Ma Hua-lung, but was certain that he was the ringleader among all the Kansu Muslims, and he determined to proceed on that basis" (Chu, 1955, 346).

Tso estimated that he would require five years to reconquer Shensi and Kansu; he launched his attack in November 1868, aiming primarily to capture Chinchi-p'u, with Hochow = a secondary target. It was savage campaign, with little quarter given or asked. Tso played upon the traditional rivalries between adherents of the "Old" and "New" teachings by giving amnesty to followers of the "Old Teaching" who surrendered (a policy which paid off, for in 1872 Ma Chan-so, commander of the "Old Teaching" centre based - Hochow, surrendered to Tso shortly after inflicting a crushing defeat on the Imperial forces; for his pains he was made a general in Tso's army and went on to play an important part in the "pacification" of Kansu); in marked contrast Tso "never treated with a single 'New Sect' leader, but executed every one that fell into his hands" (Bales, 280),

Throughout 1869, Tso's armies advanced slowly across Shensl and into eastern Kansu, driving the highly-mobile Muslim cavalry of Shensi before them. In early 1870 the Imperial forces arrived before Chinchi-p'u; the assault was to be long and hard, for "over the whole plain was a network of canals, all the villages were fortified, and the Moslems had erected numberless stockades covering every approach to Chinchipu" (Bales, 243; for details of the campaign, see 232-65). Tso built a huge most and accompanying rampart around Chin-ch'l-p'u, and set about reducing the Muslims through a combination of bombardment and starvation. Ma Hus-lung's position was made critical by his earlier decision to send a large force of his followers into Shensi in a bid to draw off Tso's armies from Chin-chi-p'u, action which caused Bales, Tso's biographer, to comment: "Had Ma Hualung enjoyed a reasonable talent for generalship along with his many other endowments, he could have driven Tso Tsung-t'ang out of Kansu, perhaps from Shensi as well, and delivered an irreparable blow to the Imperial cause" (247).

By January 1871 the population of Chin-chi-p's was starving; the defenders had been reduced to cating buman flesh. On II January Ma Hun-lung left his stronghold behind the city walls and presented himself, accompanied by a single servant, at the beadquarters of Liu Chin-t'ang, the Imperial commander. Ma asked that all blame for the resistance at Chin-chi-p'u be laid on him, and that his followers should be spared. After prolonged interrogation by the victorious Ch'ing commanders, Ma was executed, together with twelve members of his immediate family, by the "slicing process"; some eighty of the lesser Muslim leaders were beheaded. Chin-chi-p'u depopulated, and the surviving Muslims were sent, en masse, into exile or slavery. Tso Tsung-t'ang went on to reconquer western Kansu, and by 1873, ten years after the commencement of his offensive in Shoust, he succeeded in reconquering Kashghar, the last major town of Northwest China.

After his execution on a March 1871, Ma Hug-lung became a martyr for followers of the "New Teaching", The victorious Ch'ing forces made strenous attempts to stamp out Ma's adherents (it has been estimated that between 1862 and 1878 the Muslim revolt and the Ch'ing reconquest resulted in over 10 million deaths; Chu, 1966, p. vii), but to no avail. According to W. A. Saunders, a Christian missionary who was active in Kansa during the Republican period, Ma's body was buried at Chen-chi-p'u, but his head was taken, presumably in secret, to Hsitan-hua-kang, near Chang-chia-ch'uan in south-eastern Kansu. When Saunders visited Hsüan-hua-kang in 1934 he found Ma's tomb to "quite an imposing affair of carved brick with a kind of 'Li Pai Sz' (temple) as an entrance" (op. cit. in Bibl., 70). Saunders records that "worship" was made at the tomb every year on Ma Hua-lung's birthday, a practice strongly denounced by local Muslims belonging to the "Old Teaching". It is not known whether Ma's tomb at Hstian-hua-kang still exists.

Bibliography: The most important contemporaneous Chinese sources for the Muslim rebellion of 1862-78 are the complete works of Tso Tsungtang, Tso Wen-hsiang-kung Ch'idan-chi, 1888-97, published together with a biography of Tso written by Lo Cheng-chin, Tso Wen hsiang-kung Nien-p'u; details of these works me to be found in Chu Wendjang's 1966 study of the Muslim rebellion in Northwest China at p. 211. A collection of anecdotes taken from the oral recollections of a Muslim

multi who lived through the great rebellion . child is to be found in Shan Hua-p'u's Shen-Kan Chick-yil-lu, in Pal Shou-i's 1952 collection, iv, 303 ff.; this source, based partially on personal experience and partially on hearsay, is indicative of the paucity of Muslim sources for this period. A further useful contemporaneous Chinese source is Po Ching-wei's Feng-ksi-ts'ao-s'ang-chi, Nanking 1924, the collected works of a member of the Shensi gentry who served with the imperial forces and was present during the siege of Chin-chi-p'u. An interesting, but not always reliable, contemporaneous western source is F. von Richthofen's Baron Richthofen's letters (1870-1872), Peking 1941. See also: H. M. d'Ollone, Rechesches sur les Musulmans Chinois, Paris 1921, esp. 273-4; Wu Tseng-ch'i, Ch'ing-shih kang-yao ("A summary of Ch'ing history", Shanghal 1913, esp. chian 12; M. MA HUAN (Matthews' Chinese-English dictionary, Revised American Edition 1969, characters no. 4370, 2256), Chinese Muslim interpreter and traveller who flourished during the 9th/15th century and who was the author of Ying-yai shingless ("The overall survey of the ocean's shores"), the best-known account of the early and mid-9th/15th century Ming Chinese maritime expeditions to Southeast Asia, South Asia, the Arabian Peninsula and East Africa.

Ma Huan was born ca. 782/1380 in Kuci-chi, a district of Shao-hsing city, Chekiang Province, His home was about 24 miles south-east of Haag-chou, and more 7 miles from the southern shore of Hangchou bay, we of the principal centres of navigation in 9th/15th century China (Mills, Ma Hues [see Bibl.], 34). Me Huan probably from poor background, though "his derogatory description of himself a 'mountain-woodcutter' need not be taken literally" (Mills, loc, cit.), Seemingly, Ma Huan did not belong to a Muslim family, but chose to adopt Islant when a young man-thus his surname "Ma", so common amongst Chinese Muslims, must have been purely coincidental. He must have received good education in Chinese, for "there man classicisms in his book, and he - acquainted with the contents of Wang Ta-yilan's Too-i chih-litch ("A synoptical account of the Islands and their Barbarians", 751/1350), of certain Chinese classics, and of 'Buddhist books' " (Mills). (On the other hand Duyvendak, in his Ma Huan re-examined, 📰 describes Ving-pai sheng-lan m being "written in an almost colloquial style by an unlearned Mohamme-

During his youth Ma Huan seems to have adopted Islam, and to have assumed the tru (courtesy-name) of Trung-tae (Mathews', acs. 6896, 6136); possibly as a result of becoming a Muslim he began a study of Arabic and/or Persian, enabling him to become proficient as a translator and interpreter. As a result of the acquisition of these skills, he was appointed to the staff of the great Chinese Muslim admiral Cheng Ho in 815/1412. It is interesting to note that Ma Huan's appointment came one year before the fourth of Cheng Ho's voyages (816-18/1413-15), the first to sail beyond South Asia to the Persian Gulf.

Ma Huan accompanied Cheng Ho on this fourth voyage—as with the latter's three previous voyages in "maritime unpedition" in every sense of the word; the Chinese Muslim admiral had under his command a fleet of 63 ships bearing 28,560 men. The expedition visited various parts of the Malay Archipelago, Sri Lanka, Bengal, South India, the Maldive Islands and Hormuz in Persia. The young Ma Huan must have been greatly interested in the various lands be saw, for together with his colleague and life-long collaborator Kuo Ch'ung-li (Mathiems', nos. 3746, 2528, 3886), he made local journeys in the various countries he visited, and recorded details of his impressions.

On his return to China in 8:8/r4r5, Ma began work on a book based on the notes made by Kuo Ch'ung-li and himself. In 8:3/r4r6 he completed the first version of his book (he was to make numerous additions and corrections over the years), and wrote a foreword and m commemorative poem. In his 8:3/r4r6 foreword he notes that:

"I collected [notes about] the appearance of the people in each country, the variations of the local customs, the differences in the natural products and the boundary limits. I arranged (my notes) in order so to make book, which I have entitled The overall survey of the Ocean's shores" (Mills, op. cit., 70).

Ma Huan did not accompany Cheng Ho on his lifth expedition of \$20-2/1417-10; he does not explain why. In \$24/1421, however, he once again voyaged with Cheng Ho on his sixth expedition, returning in \$25/1422. In addition to returning to most of those countries visited during the fourth expedition, Chang Ho's sixth expedition took his Huan to Zufar and Aden; me part of the great Chinese fleet (which comprised 41 ships and an unknown number of men) visited Mogadishu and Brava in Somalfa, but Ma Iluan does not seem to have accompanied

this branch expedition. Mills notes that Ma Huan probably added sections on Zufär and Adea to his book after his return to China in 825/1422 [op. oit.,

35).

Ma Huan, although still a relatively young man, probably accepted that his journeys to the Indian Ocean were over when the emperor Jen Tsung forbade further expeditions to that remote region in 828/1424; however, when the Hsüan-te emperor revoked this edict in 834/1430 and ordered the ageing Cheng Ho to undertake his seventh and final expedition to the "Western regions", Ma Huan was once again employed as an interpreter.

Cheng Ho's seventh expedition is better documented than any of the preceding six. We know that more than 200 large ships took part in the voyage, and that a total of 27,550 men sailed with him. The fleet left Nanking in 835/1431, and returned to China in 837/ 1433. Once again, Cheng Ho and/or his emissaries visited Southeast Asia, Bengal, Southern India, the Persian Gulf, the Arabian Peninsula and East Africa. On this voyage we know that Ma Huan sailed with a branch of the main fleet to Bengal, and thence to Kozhikode (Calicut) in South India. It seems very likely that from Kozhikode Ma Huan sent, with six other Muslim emissaries, to Mecca. Mills has calculated that Ma Huan left Kozhikode about mid-836/1432, and arrived in Mecca about three months later; be then spent a further three months in Mecca before rejoining Cheng Ho's main fleet at Kozhikode in 837/1433.

On his return to China, Ma Huan added a lengthy and accurate account of Mecca to his Ying-yai shonglan. He notes that the inhabitants of Tien fang ("the Heavenly Square", a clear reference to the Kaba) are "stalwart and fine looking"; they "bind up their hands", whilst their womenfolk "wear a covering over their hands, and you cannot see their faces" He describes the Haram and the Katha in detail, noting that the pilgrims tear pieces from the hisses (so, the mantle used to cover the Karba) as souvenirs, just moccurs today. He also mentions the Prophet's tomb at Medina, though his error in situating the well Zamzam near the latter rather than at Mecca causes Duyvendak III question whether Ma Huan did, in fact, ever visit the Hijaz (Ma Huan re-examined, 73). An excellent translation of Ma Huan's account of Mecca may be found in Milis, 173-8.

To the best of our knowledge, Ma Huan never again left China. He continued working on the Ying-yai sheng-lan, in collaboration with Kuo Ch'ung-li, and the completed work was eventually published ea. 855/ 1451. Ma Huan is thought to have died some nine years later. Unfortunately, the 1452 edition of Ma Huan's book has long been lost, and our present knowledge of the Ying-yai shang-lan rests on three later editions, all dating from the latter half of the

Ming dynasty (Mills, 37-41).

(A. D. W. FORBES) MA MING-HSIN (Matthews' Chinese-English Dictionary, Revised American Edition 1969, characters nos. 4310, 4534, 2735), also known 🚃 Минамиар Awis, a Chinese Muslim leader of the mid-12th/18th century who was instrumental in the development and spread of the "New Teaching", a neo-orthodox reformist movement in Chinese Islam which swept Northwest China in the latter half of the 12th/18th century, and which played an important part | the great mid-13th/19th century

Muslim revolt of Ma Hua-lung [q.v.].

Ming-hein was born at an unknown date during the first half of the rath/r8th century m An-ting, a small town ____ go km. south-east of Lanchow, the capital of the Chinese province of Kansu [q.t.]. The site of Ma's birthplace makes it probable that he was a Hul (Chinose-speaking) Muslim, though his travels in Turkestan led Hartmann (op. oit. in Bibl., 28, n.) to describe him as a native of that region, whilst his rôle . a religious reformer amongst the Salar Turks [q.v.] of southwestern Kansu and eastern Chinghai has also led to his identification as a Salar (see Mary C. Wright, op. cit., in Bibl., 108). Confusion over Ma's ethnic origins may have been further compounded by his adoption of an Arabic soubriquet, a practice amongst the Hui.

Ma Ming-hain seems to have first come to the attention of the Chinese authorities in 1175/1761, when he returned **M** Kansu after a prolonged period of travel and study in Central Asia and Arabia. During the course of these travels Ma made the pilgrimage to Mecca and visited the Yemen, where he was initiated into the Nakshbandl fariba (Tawadui, op. cit. in Bibl., 125). It seems probable that 🔤 returned to Kansu via the major Nakshbandi centre of Bukhārā, well through the lesser Nakshbandi centres of Kishghar [q.v.] W Yarkand. On his return, Ma proclaimed himself the "Possessor of True Teaching" (Hartmann, in Bibl., 123, n. 128), and armed with a "magnetic personality" (Ford, op. cit. in Bibl., 154) and the prestige naturally accruing to hiddidit in this distant periphery of the Muslim World, 🔤 began to expound a heterodox form of Islam with the avowed aim of reforming the Chinese

Within a short period of time, Ma was expelled from his native An-ting for "causing trouble" (Ford, ibid). He went next to preach amongst the Salars, a Turkic people with m reputation for fierceness and independence who inhabit the bills to the south of the Yellow River in the Chinghai-Kansu borderlands. In the Salar hills, Ma gained the support of two local mulias Su-ssu-shib-san and Hu-ma-liu-hu, His teaching, which rapidly gained widespread popular support, became known as the "New Teaching" lasin chiao, Matthews, nos. 2737, 719) to differentiate it from the various forms of established islamic practice in Kansu, which in turn became known as the "Old Teaching" (las chiao, Matthews, nos. 3833, 719, or chin chiao, nos. 1205, 719). According to Hsti (in Bibl., 23), Ma Ming-hsin's "New Teaching" was distinguished by the following characteristics: (1) loud chanting of the scriptures, as opposed to the soft chanting of the old sect (i.e. followers of the "Old Teaching"); (2) prayers with head-shaking and body movement in dance-like manner, sc. footstamping, hand-waving, and face turning up towards beaven; (3) belief in miracles, visions, apparition of spirits, and prediction of good or bad omens; and (4) the worship of saints or their tombs.

Until receatly, the identity of the "New Teaching", though obviously Suff in inspiration, remained unclear (see Wright, 108, together with relevant footnotes). Recent research undertaken by Saguchi and Fletcher, however, indicates that Ma Ming-hain introduced to Kansu a sub-group of the Nakshbandi farike which practiced dkikr diahri (vocal recollection) as opposed to the dhihr khafi more usually associated with the Nahshbandiyya. This sub-group, which is generally known as the Nakshbandiyya-Djahriyya, can be traced back to Khogja Mahmud Andjir Faghnawl, who introduced the "thike of those who act publicly" (dhikr 'aldmiyya) to the Nakshbandi fariha in ca. 715/1315 (Flotcher, Central Asian Sufism, 79-80). The "New Teaching", or Kansu form of Nekshbandlyya-Djahriyya, seems to have laid great emphasis on karanal (thaumaturgic and charismatic gifts [see KARAMAT); thus Ma Ming-hein came to be regarded as a saint by his followers.

The followers of the "New Teaching" seem to have adopted an agressively militant attitude towards other Muslims. An anonymous government official who participated in the defense of Lanchow during the Muslim rebellion of 1195/1761 notes of the adherents of the "New Teaching" that "When anyone hesitated to join them, they would all rise to attack him, threatening him with sword and spear until he gave way. Even if the rejector were the father and the believers were the sons, the sons would kill the father". (P'ing-Hui chi-lich, Hui-min ch'i-i, iii, 9-10). As a result of this militancy, relations between the "Oid" and "New" factions grew to be extremely bitter.

The Chinese authorities first seem to have become aware of these sectarian tensions during 1176/1762, when leaders of the rival factions in the Salar region laid charges against each other before the Chinese magistrate. The leaders of both groups were found guilty and banished from the area. In 1183/1769 the charges were renewed, and this time the penalties incurred were heavier against the "New Teaching" (Wright, 108). It is not clear whether Ma Ming-hsin was personally involved in either of these incidents.

During this period, the town of Hstar-hua, located in the Salar hills on the right bank of the Yellow River some 95 km. upstream from Hochow, (the modern Linsia), emerged as the centre of the "New Teaching". In 1196/1781 sectarian tension in Hsin-hua boiled over, and followers of the "New Teaching" leader Su-ssu-shi-san attacked and killed at least forty adherents of the "Old Teaching" (Schram, op. cit. in Bibl., 64). Government troops despatched from Lanchow to quell the disturbances warn defeated by Su-ssu-shi-san's followers, and the successful rebels occupied the city of Hochow.

The provincial authorities in Lanchow responded by sending a force of five hundred men to occupy Ti-tac, a small town me the right bank of the Tao River some 85 km. south-east of Hochow. In this action, the provincial forces scored their first real success by capturing Ma Ming-hsin, the founder and spiritual leader of the "New Teaching". Ma was taken to Lanchow, where he was incarcerated; shortly thereafter rebel forces from Hochow, believed to number upwards of 2,000 men, crossed the Tao River and besieged Lanchow. They succeeded in cutting the floating bridge across the Yellow River, thus isolating relief forces from Northern Kansu, and demanded the release of Ma Ming-hsin. The Chinese commandant refused to hand Ma over, but took him to the city walls whonce he might address the besieging forces (de Groot, ob. cit. in Bibl., 312-13). The anonymous government official who witnessed this records that "When Ma Ming-hsin was taken to appear top of the city walls, all the Muslims who saw him from below rolled down from their horses and prostrated themselves on the ground. They called him a saint and wept" (P'ing-Hui chi-lüch, ibid.). This display seems 🔳 have made an adverse impression on the Chinese commandant, who "had him killed at once, in order to keep down sedition within the walls" (de Groot, 314). Ma's son was seemingly killed with him (Schram, wid.).

Ma's death did not bring about the end of the rebellion, but served only to increase the bitterness of his followers. The Chinese troops stationed in Kansu proved incapable of suppressing the rebels, a task which fell initially to Salar followers of the "Old Teaching", later assisted by Mongol troops from Alashan and Chinese troops from Stechwan. Some three months after the murder of Ma Ming-hain, Ch'ing troops surrounded the foremost of the surviving "New Teaching" leaders, the Salar mullé Sussu-shi-san, at his stronghold in the Hua-lin mountains. Su was captured and executed, and with his death the rebellion came to an end. The Chinese authorities banned the "New Teaching" and instituted a series of bloody reprisals against its surviving adherents. An edict issued by Ch'ien-lung after the imperial victory in the Hua-lin mountains exhorts his officials as follows: "Of these rebels not m trace, however slight, must remain. All insurgents yet at liberty shall be hunted out . . . and their wives, daughters and bables now incarcerated in the provincial capital, in Hochow, in Haun-hua and other places, shall | thoroughly examined for the better realisation of this object; and finally, the transports to the pestilential places of banishment shall start with all possible speed" (de Groot, 315). The Ch'ing authorities massacred whole families and clans with "New Teaching" affiliations, but to no avail. The "New Teaching" leaders went underground, and within three years a still bloodier hain-chieo rising, under the leadership of Then Wu [q.v.] broke out in the Kansu-Chinghai region. The "New Teaching" or Ma Ming-hsin was also to prove instrumental in the great mid-13th/19th century rebellion of Ma Hua-lung [q.v.].

Bibliography: Details of contemporaneous

Chinese sources may be found in C. I.. Pickens, Chinese annals, pp. 30-3 of his Annotated bibliography of literature on Islam in China, Hankow 1950; this source is especially useful for details of the 1196-9/1781-4 Muslim risings contained in the Ta-Ch'ing Kao-Isung Shun-huang-ti shih-lu (i.e. the official edicts of the Ch'ien-lung period). See also Wei Yuan, Shong-wu chi ("History of the Imperial wars"), 1842, chiian 7 (cited in Ford, op. sit. below). For further details, see D. D. Leslie, Íslam in China III 1800: I bibliographical guide, in Abr-Nahrain, avl (1976), 25 (Section H. "Imperial Edicts"). Further primary sources, including the P'ing-Hwi chi-likek ("Brief record of the pacification of the Muslims", Kansu, co. 1196/1781) may be found in Pai Shou-i, ed. Hui-min uh'i-i ("The righteous uprisings in the Muslim people"), published in vols., Shanghai 1952, of which vols, ill and iv refer to events in the Chinese northwest during the 18th and 10th centuries.

Secondary sources dating from the late 19th and early 20th centuries include: C. Imbault-Huart, Deux insurrections des Makométans du Kansou, in JA, ser. 8, vol. xiv (x889), 494-525; J. J. M. de Groot, Sectorianism and religious persecution in China, Amsterdam 1903-4; M. Broomhall, Islam in China: a neglected problem, London 1910, see esp. 150-1; H. M. d'Ollone, Recherches sur les musulmans chinois, Paris 1911; and M. Hartmann, Zur Geschichte des Islam in China, Lehrzig 1921. More recent works include Mu Shou-ch'i, Kan-Ning-Ch'ing shih-luch ("A brief history of Kansu, Ninghsia and Chinghai"), Lanchow 1936, ohtlan 18, p. 37; chiian 19, p. 6 etc. (cited in Ford, op. cit. below); in Arabic, Muhammad Tawadus, al-Sin "I-Islām, Cairo 1945; Pal Shou-i, Hui-hui minisu ii hain-sheng ("The rebirth of the Muslim people"), Shanghai 1951, see esp. 46-7; Chu Wendjang, The policy of the Manchu government in the suppression of the Moslem rebellion in Shensi, Kansu and Sinkiang from 1862 to 1878, Ph. D. thesis, Univ. of Washington, 1955 (the greater part of this thesis was later published [see Chu, 1966), but several important appendices were omitted from the published version, most notably Supplement IV, "Ma Hua-lung and the New Sect", which may be found at 343-60 of the unpublished thesis); Mary C. Wright, The last stand of Chinese conservatism: the Tung-Chik restoration, 1869-1874, Stanford 1957, repr. New York 1969, see esp. 107-13 of the 1969 edition; L. J. Schram, The Monguors of the Kansu-Tibetan frontier, in Transactions of the American Philosophical Society, li/3 (1961), 63-5. A particularly important source in Saguchi Toru'a Jühaci-jükyü seiki Higaski Torukisulan shakaishi kenkyü ("The social history of Eastern Yurkestan in the 18th/19th centuries"), Tokyo 1963. Also of importance is Immanuel C. Y. Hau's The Ill crisis: a study of Sino-Russian diplomacy, 1781-1881, Oxford 1965, m esp. 23-4, and 197, n. B. The most recent sources include: Chu Wen-djang, The Moslem rebellion in Northwest China, 1862-78, The Hague-Paris 1966; J. Ford. Some Chinese Muslims of the seventeenth and eighteenth Centuries, in Asian Affairs, lxi/2 N.S. vol. v/11 (1974), 144-56 (for Ma Ming-hsiu, see esp. 153-6); R. Israeli, Chinese versus Muslims: a study of cultural confrontation, Ph.D. thesis, Univ. of California, Berkeley 1974; J. Fletcher, Central Asian Sufism and Ma Ming-hsin's New Teaching, publication unknown, 1976 (?), 75-96; Israeli, Established Islam and marginal Islam in China: from eclecticism to syncretism, I JESHO, xxi/1 (1978), 99-109. (A. D. W. Forbus) MÄ WARÄ At-NAHR (A.) "the land which lies beyond the river", i.e. beyond the Oxus or Amū-Daryā [q.v.], the classical Transoxiana or Transoxania, so-called by the conquering Arabs of the 1st/7th century and after in contrast to Mã dün al-Nahr, the lands of Khurāsān [q.v.] this side of the Oxus, although the term Khurāsān was not

I. THE NAME

infrequently used vaguely to designate all the eastern Islamic lands beyond western Persia.

The frontiers of Ma wara' al-nahr on the north and east were where the power of Islam cassed and depended political conditions; of, the statements of the Arab geographers on Ma wara? al-nahr in G. Le Strange, The lands of the Eastern Caliphate, Cambridge 1905, 433-4; W. Barthold, Turkestan down to the Mongol invasion, London 1928, 64 ff. The phrase Ma wara? al-nabr passed from Arabic Ilterature into Persian. As late as the 9th/15th century, Hafis-! Abrût [q.o.] devotes a special chapter (the last) to Ma wara? alnahr in his geographical work. Under the influence of literary tradition, the phrase Ma wara' al-nahr was used down to quite recent times in Central Asia itself (e.g. by Babur, in his Babur-nama, ed. Beveridge, see index; by Mirzā Haydar Dughlat later in the 10th/16th century in his Tabrikh-i Rashidi, tr. Elias and Ross, A history of the Moghuls, London 1895, 79. 95 IL, 150, etc.; and by the Uzbek Muhammad Salih, of. Spray. knishka Samarkandskii oblasti, v., 240 and passim), although to the people of Central Asia the lands in question were m their side of and not across (W. BARTHOLD) the river.

2. HISTORY

Pre-Islamic Transoxania comprised, in the widest sense, Soghdia (Arabic Swghd [q.v.], essentially the basin of the Zaraishan river) and the lands as far as the Sir Darya basin, northwestwards to Kh "arazm [q.v.] and eastwards to Farghana [q.v.] and across the Tien Shan Mountains into Eastern or Chinese Turkestan (on the general concept of "Turkestan", Eastern and Western, I TURKISTAN). For these regions in classical times, see W. Tomaschek, in PW, il, cols. 2804-13 (Baktra, Baktriane, Baktrianoi), iti, cols. 2406-8 (Chorasmia). All this was still largely an Iranian region, with such Middle Iranian languages flourishing there as Khwarazmian and Soghdian, both written in scripts going back to the Aramaic alphabet; Bactrian in the upper Oxus provinces of Tukhāristiln, Caghāniyān, Khuttal(ān) and Wakhsh [q.ev.], written in a modified Greek alphabet; and Khotanese and Tokharian dialects in the Tarim basin of Eastern Turkestan, written in scripts of Indian origin. In Sogndia, however, the strong cultural influence of Săsânid Persia may have given Persian a footbold in the main cities at least, Narshakhi states that just after the time of the conquest of Bukhārā by Kutayba b. Muslim (sc. in ca. 94/712-13), the people there used Persian (pdrsi) for reciting the Kur'an, though no doubt Soghdian remained for some time to come the main language of daily intercourse (Tabrigh-i Bughara, ed. Mudarris Ridawl, Tehran 1939, 57, tr. R. N. Frye, The history of Bukhara, Cambridge, Mass. 1954, 48). Just over two-and-a-half centuries later, al-Mukaddasi, 315. calls the speech of Bukhārā dari, i.e. Persian; this must nevertheless still refer to urban speech patterns only, for Soghdian lasted much longer in the country-
